3	**Control Structure and Array:** Introduction, Conditional Statements; Simple If-Else; Nested Statements, switch, Loops- For, While, Do-While; Break, Continue, Go-To Statements, Labels, printf, scanf function. Defining an array, processing an array, passing arrays to functions, Multidimensional arrays, Arrays and strings.	[13]
4	**Function and Pointer:** A brief overview, Defining a function, accessing a function, function prototypes, passing arguments to a function, recursion, Pointers: Declaration, operations on pointers, array of pointers, pointers to arrays.	[7]
5	**Advance C Concepts:** Structure, Union, storage classes in C, Concept of files, file access in different modes, reading from and writing into a file, Library Functions.	[6]

Outcome(s): At the end of the course student will be able to:

- Describe the process of problem solving through C.
- Write a justifiable C program for a given algorithm.
- Trace the certain C program manually.

[2]. E. Balagurusamy, Programming in ANSI C, 4th ed., TMH Education, 2008.

CA 19. 107 **Foundation course in Mathematics** **Total Lectures: 40**
Credits :3-1-0-4

Prerequisite(s): Nil

Objective(s):
- To acquire fundamental knowledge of (10+02) higher Mathematics and apply in science and engineering disciplines.

1	**Matrix:** Addition, Subtraction and Multiplication of matrices, column matrix, row matrix, unit matrix, diagonal matrix, zero matrixes.	[6]
2	**Determinants:** Definition, Properties of Determinants, multiplication of Determinants, Value of Determinants up to third order, Minors and Co-factors.	[8]
3	**Algebra:** Factorial Functions, Permutations and Combinations.	[7]
4	**Calculus:** Differentiation, Integration of Standard functions, Definite Integrals.	[11]
5	**Statistics:** Frequency Distribution, Mean, Median, Mode, and Standard Deviation and Variance.	[8]

Outcome(s): After completion of the course, students would be able to apply fundamentals of (10+02) higher mathematical knowledge in science and engineering and also solve curriculum problems.

Text Books:
[1]. R.D. Sharma, 11th and 12th Mathematics, Dhanpatrai Publication, 2018.
[2]. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

Reference Books:

CA 19. 133 Office Automation Laboratory

Total Hours: 26

0-0-4-2

Prerequisite(s): NIL

Objective(s): To familiarize the students in preparation of documents and presentations with office automation tools like, MS Word, MS Excel, MS PowerPoint and MS Access.

MS Word Exercise:

1. Working with Documents., Formatting Documents.
2. Setting Page style.
3. Creating Tables.
4. Drawing.
5. Mail Merging and Printing Documents.

MS Excel Exercise:

6. Spread Sheet & its Applications, Opening Spreadsheet, Menus.
7. Entering & Deleting Data.
8. Setting Formula.
9. Formatting Spreadsheets.
10. Working with sheets.
11. Creating Charts.
12. Using Tools.

MS Access Exercise:

13. Starting Access, Access Screen, Creating a New Database.
14. Creating Tables and Working with Forms.
15. Creating queries.
16. Finding Information in Databases.
17. Creating Reports.
18. Types of Reports.
19. Printing & Print Preview – Importing data from other databases viz. MS Excel etc.

MS Power Point Exercise:

20. Creating a presentation.
21. Formatting a Presentation.
22. Adding Effects to the Presentation.
23. Printing Handouts.

Outcome(s): By learning the course, the students will be able

- to perform documentation
- to perform accounting operations
- to perform presentation skills

CA 19.135 **C Programming Laboratory** **Total Hours: 26**

0-0-4-2

Prerequisite(s): NIL

Objective(s):

- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement the 10 programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement the 8 programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement the 5 programs to cover all possible String operations.
11. Implement the 4 programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement the 5 programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement 4 programs for Reading and writing from/to a file.

Outcome(s): On competition of this course student will be able to:

- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

UC 19.102 Communication Skills **Total Lectures: 26**

2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

Pre-requisite:

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures. [5]
   Technology-based Communication: Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software.
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

3. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
4. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

CA 19. 102 **Operating System** **Total Lectures: 40**
Credits: 3-0-0-3

Prerequisite(s): NIL

Objective(s):

- Understand the fundamental operating system abstractions like processes, threads, files, semaphores, IPC and deadlocks.
- Understand operating system from user's perspective as well as from system's perspective.
- Understand the principles of concurrency and synchronization.
- Understand basic resource management techniques.
- Understand different theoretical principles in depth through hands on high level programming.

1 **Introduction:** Definition and types of operating systems, Batch Systems, multi programming, time sharing, distributed and real-time systems, Operating system structure, Operating System Components and Services, System calls, System Programs, Virtual Machines. **[6]**

2 **Process Management:** Process and Thread Concept, Process States, Process Control Block, Operations with examples from UNIX (fork, exec) and/or Windows, Inter-process communication (shared memory and message passing), Scheduling Algorithms, Performance Evaluation. **[9]**

3 **Process synchronization and Deadlocks:** critical section problems, semaphores, classical Inter process communication problems. **[9]**
Deadlocks-System model, Characterization, Deadlock prevention, Avoidance and Detection, Recovery from deadlock, Combined approach to deadlock handling.

4 **Memory Management:** Logical and Physical Address Space, Swapping, Contiguous Allocation, paging and segmentation, demand paging, virtual memory page replacement algorithms. **[8]**

5 **File and I/O Management:** Directory systems, File System Implementation issue, access methods, Allocation Methods, Free Space Management, Disk Structure, Disk Scheduling, Disk Management, Control of Various Devices, Device Drivers, Interrupt Driven and Poll Driven Data Transfer. **[8]**

Outcome(s): By learning the course, the students will be able to,

- describe, contrast and compare differing structures for operating systems
- understand and analyse theory and implementation of: processes, resource control (concurrency etc.), physical and virtual memory, scheduling, I/O and files

Text Books:

[1]. P. B. Galvin, A. Silberschatz, G. Gagne, Operating System Concepts, 9th ed., Wiley India, 2015.
[2]. Andrew S. Tanenbaum, Modern Operating Systems, 4th ed.,Prentice-Hall Inc., 2015.

Reference Books:

[1]. Deitel, Operating Systems,3rd ed., Pearson Education,2012
[2]. Stallings, Operating Systems: Internals and Design Principles, 7th ed., Pearson education, 2013.

CA 19. 104 **Data Structures** **Total Lectures:40**
Credits 3-0-0-3

Prerequisite(s): CS-19.103 (C- Programming)

Objective(s):
- To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems,
- To promote an analytical and empirical appreciation of the behavior of algorithms using data structures

1. **Introduction:** Overview of data structure, types of data structures and operations. Applications of data structures. [4]
2. **Pointer and dynamic memory allocation:** Pointer declaration and initialization, accessing a variable through its pointer, meaning and advantages of dynamic memory allocation, Memory allocation functions. [9]
3. **Array, Sorting and Searching Techniques:** Representation of single and multidimensional array. Insertion Sort, Selection Sort, Merge Sort, quick sort, Linear Search, Binary Search. [9]
4. **Stack & Queue:** Definition and representation of stack, operations on stack, Infix, Postfix, Prefix Expressions, Conversion from Infix to Postfix (Algorithms only). Types of queues, Primitive Operations on Queues. [9]
5. **Linked List & Tree:** Introduction to Linked List, implementation of Linked List, operations on linked list: creation, deletion, search and display, Tree introduction, Traversal of Binary Trees. [9]

Outcome(s): On the successful completion of the course, the student will be able to:
- be knowledgeable of certain abstract data types (ADT)
- be able to make a critical assessment of different implementations of an ADT
- be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems

Text Books:
[1]. Lipschutz, Data Structures, Schaum's Outline Series, TMH, Revised ed. Feb. 2014.
[2]. Horowitz and Sahani, Fundamentals of Data Structures, 2nd ed., University Press, 2008.

Reference Books:

[2]. M. A. Weiss, Data Structures and Algorithm analysis in C++, 3rd ed., Addison Wesley,

CA 19. 106 System Analysis and Design

Total Lectures:40
Credits : 3-0-0-3

Prerequisite(s): NIL

Objective(s):

- To introduce the concept of system analysis for managing the projects
- To analyze and document systems, design new systems and implement their plans.

1	**Introduction to system:** Definition, characteristics and elements of system, types of system, System development life cycle, Role of system analyst.	**[6]**
2	**System Planning and Initial Investigation:** Introduction, bases for planning in system analysis, initial investigation, fact finding, information gathering, information gathering tools, fact analysis, determination of feasibility.	**[7]**
3	**Structured Analysis and Feasibility Study:** Tools of structured analysis: DFD, data dictionary, flow charts, Gantt charts, decision tree, decision table, structured English, pros and cons of each tool. Feasibility Study Objective, types, Steps in feasibility analysis, feasibility report, oral presentation, cost and benefit analysis, classification of costs and benefits.	**[10]**
4	**Designing:** System Design Objective, logical and physical design, design methodologies, structured design, form-driven methodology (IPO charts), and structured walkthrough. Input/ Output and Form Design: Objectives of input and output design, form design, classifications of forms, requirements of form design.	**[9]**
5	**System Testing and Implementation:** Objectives of testing test plan, testing techniques/types of system tests, quality assurance goals in system life cycle, System implementation.	**[8]**

Outcome(s): By learning the course, the students will be able to,

- Describe different approaches to systems analysis and design.
- Describe the five phases of the systems development life cycle (SDLC).
- Describe in detail the systems planning, systems analysis, systems design, systems implementation, and systems operation and support phases of the SDLC.

Text Books:

[1]. A wad Elias M, System Analysis and Design,,2nd ed., Galgotia Pub.(P) Ltd., 2008

Reference Books:

[2]. M. Lejk and D. David , An Introduction to System Analysis Techniques, 1st ed., PHI, 1998

CA 19.108 **Python Programming** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): C Programming (CA 19.103)

Objective(s): Python is a general-purpose, versatile and popular programming language. It's great as a first language because it is concise and easy to read, and it is also a good language to have in any programmer's stack as it can be used for everything from web development to software development and scientific applications.

1. **Basics of Python Programming**: History of python, installation of python , execution of python program, python character set, token, data type, inbuilt functions in python, operators and expressions, translating mathematical formulae into equivalent python expressions. [7]
2. **Python Program Flow Control** : Conditional blocks using if, else and elif, simple for loops in python For loop using ranges, use of while loops in python Loop, nested loops, break and continue [8]
3. **Functions:** syntax and basics of a function, parameters and arguments in a function, local and global scope of a variable, return statement, recursive function and lambda function [8]
4. **Strings and Lists:** Basic inbuilt python functions for string, immutable strings, strings operators and operations, creating and accessing the elements of the list, python inbuilt functions for lists. [9]
5. **Tuples, sets and dictionary:** creating tuples, inbuilt functions for tuples, operations on tuples, creating sets and set operations, creating dictionary, simple program on dictionary [8]

Outcome(s): Upon completion of this course students will be

- Familiar with Python syntax.
- Able to use python to implement a given logic.

Text Books:

1. John V Guttag, Introduction to Computation and Programming using Python, Prentice Hall of India, 2nd Edition, 2013.
2. Swaroop C H. , A Byte of Python, URL: https://python.swaroopch.com

Reference Books:

1. Zed A. Shaw ,Learn Python the hard way: a very simple introduction to the terrifyingly beautiful world of computers and code, Third edition, 2014.
2. Richard L. Halterman,Learning to Program with python, 2011.
3. Allen Downey ,Think Python How to Think Like a Computer Scientist, Version 2.0.17, Green Tea Press Needham, Massachusetts,2012.

CA 19.134 **Data Structure Laboratory** **Total Hours: 26**

0-0-4-2

Prerequisite(s): CS-19.135 (C Programming Laboratory)

Objective(s):

- To develop skills to design and analyze simple linear and nonlinear data structures
- To Strengthen the ability to identify and apply the suitable data structure for the given real
- world problem
- To Gain knowledge in practical applications of data structures

1. Implement the logic of One Dimensional Array.
2. Implement the logic of Two Dimensional Array.
3. Implement the logic of Linked List and its various operations.
4. Implementation of stack using array and Link List.
5. Implement various stack operations.
6. Implementation the logic of Queue using array.
7. Implement various operations on queue.
8. Implement all the types searching algorithms (minimum 4 programs are desired)
9. Implement all types of sorting algorithms (minimum 5 programs are desired)

Outcome(s): At the end of this course, the student will

- Be able to design and analyze the time and space efficiency of the data structure.
- Be capable to identity the appropriate data structure for given problem.
- Have practical knowledge on the application of data structures.

CA-19.136 **Python Programming Laboratory** **Total Hours:26**

Credit:0-0-4-2

.

Prerequisite: (CS 19.135) C Programming Laboratory

Objectives: The objective of this course is to:

- Become comfortable with Python programming, starting from basics of data types to deep learning.
- Provide the foundation of to explore any expansions of Python whether it is machine learning, deep learning, web development or gaming. It will also put focus to learn various skills to design object-oriented software.

Contents:

- Code different data types and operations on list, dictionaries, sets, String etc
- Code basic programs like factorial, Fibonacci etc. to understand functions and recursions.
- Implement different built-in functions in Python like eval, exec, map, lambda etc.
- Implement the concept of class, objects, inheritance and polymorphism
- Implement constructor and self
- Code programs to implement exceptions and assertions
- Implement regular expressions

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**

2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization **[4]**

2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**

3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**

4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**

5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher,16th Edition, 2014

Reference Books:

1. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
2. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
3. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
4. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

CA 19. 201 **Computer Organization** **Total Lectures:40**
Credits 3-1-0-4

Prerequisite(s): NIL

Objective(s):
- To understand the basics of combinational as well as sequential logic.
- To get familiar for analyzing the performance of digital circuits

1 **Boolean Algebra:** Laws and theorems of Boolean algebra. De-Morgan's theorem, XOR and XNOR gates, Half and Full Adder and Subtractor circuits. **[5]**

2 **Fundamental Concepts:** Products, Sum of products and Product of sums, Form of Boolean expressions, Truth Tables and Karnaugh maps and Karnaugh simplification. Multiplexers, decoders, characteristics of digital integrated digitals. **[8]**

3 **Design of Simple Computer:** Micro Operation, Macro Operation, Bus and Memory Transfers, Arithmetic and Logic Micro Operations, Shift Micro Operation, Instruction and Instruction Types **[8]**

4 **Instruction Cycle:** Timing and Control Instruction Cycle, Memory Reference Instructions, Input Output and Interrupts, Machine Language Instructions **[8]**

5 **I/O and Memory Organization:** Peripheral Devices, Input-Output Interface, Asynchronous Data Transfer, Modes of Transfer, Programmed I/O, Interrupt I/O Direct Memory Access. Memory Hierarchy, Main Memory, Auxiliary Memory, Associative, Cache Memory, Virtual Memory and Memory Management Hardware **[10]**

Outcome(s): After successful completion of the course, student will be able to
- Develop a digital logic and apply it to solve real life problems.
- Analyze, design and implement combinational logic circuits.
- Classify different semiconductor memories.
- Analyze, design and implement sequential logic circuits.

Text Books:
[1].M. Mano, Digital Design, 4th ed., Prentice Hall of India, 2008
[2].R. P. Jain, Modern Digital Electronics, 3rd ed., TMH, 2003.
[3].W. Stallings, Computer Organization and Architecture, 9th ed., Pearson,2013

Reference Books:
[1].J. F.Wakerly, Digital Design, 4th ed, Pearson, 2008.
[2].C.H.Roth. Fundamentals of Logic Design, 6th ed., Thomson Learning, 2013.

CA 19.203 **Database Management System** **3-0-0-3**

Total Lectures:40

Prerequisite(s): Nill

Objective(s): The objective of this Course is to:

- Understand the fundamental concepts of database management.
- Design and Normalize databases.
- Understand transaction processing control.
- Understand basic of object concepts and object relations.
- Understand the role of the DBMS & RDBMS in the organization.

1. **Introduction**: An Overview of Database Management System, Comparison of Database System and File System, Characteristics of Database Approach, DBMS Architecture, Data Models, Schema and Instances, Data Independence. Data Modeling Using Entity Relationship Model: Entity, Entity Types, Entity Set, Notation for ER Diagram, Attributes and Keys, Concepts of Composite, Derived and Multivalued Attributes, Super Key, Candidate Key, Primary Key, Relationships, Relation Types, Weak Entities, Inheritance, Specialization and Generalization. **[10]**
2. **Relational Data Model:** Relational Model Terminology: Domains, Attributes, Tuples, Relations, Characteristics of Relations, Relational Constraints: Domain Constraints, Key Constraints, Relational Database Schema, Relational Database Design By ER To Relational Mapping. Introduction to SQL. **[11]**
3. **Normalization:** Functional Dependencies, Armstrong's Inference Rule, Normal Form up to Boyce Codd Normal Form. **[4]**
4. **Relational Algebra:** Selection, Projection, Set Theoretic Operations Union, Intersection, Set Difference And Division, Inner, Outer, Left Outer, Right Outer and Full Outer Join. **[8]**
5. **Transaction Processing And Concurrency Control:** Definition of Transaction, Desirable ACID Properties, Serializable And Non Serializable Transactions, Concurrency, Lost Update, Dirty Read, Concurrency Control Techniques: Locking, 2PL **[7]**

Outcome(s): After completion of the course, students will be able to:

- Analyze database models & entity relationship models. Understand architecture for database development.
- Design E-R diagram
- Use Structured Query Language (SQL) with complex queries.
- Design and normalize the relations for any organization.

Text Books:
[1] R. Elmasri & S. B. Navathe, Fundamentals of Database Management Systems, 7th ed., Pearson Education, 2016.
[2] R. Ramakrishnan, Database Management Systems, 3rd ed., Tata McGraw Hill, 2008.

Reference Books:

[2] C.J. Date, Database Systems, Tata McGraw Hill, 2nd Edition, 2003.

CA 19. 207 **C++ Programming** **Total Lectures: 40**
Credits: 3-0-0-3

Prerequisite(s): CS-19.103 (C Programming)

Objective(s):
- To get a basic knowledge of object-oriented concepts.
- To master in programming related to classes inheritance using C++.

1	**Introduction to Object Oriented Programming and C++:** Basic concepts of object–oriented programming, Structured versus object- oriented programming, merits and demerits of object oriented methodology. C++ Preprocessor directives, Variables, data types, constants, operators, scope resolution operator, memory management operators, decision and loop control structures, arrays, strings, functions.	**[8]**
2	**Classes and Objects:** Class definition, Structure versus class, accessing member functions within a class, data hiding, arrays within a class, static data and member functions, objects, friend functions and friend classes, constant member functions, pointers to members, constructors and destructor.	**[9]**
3	**Overloading and Exception Handling:** Definition, unary operator overloading, binary operators overloading, overloading of new and delete operators, manipulation of string using operators, type conversion, overloading with friend functions, function overloading, error and exception handling.	**[9]**
4	**Inheritance and Overriding:** Derived and base classes, type of inheritance, derived class constructors and destructor, overriding member functions, public and private inheritance, virtual base classes, abstract classes, this pointer, virtual functions and pure virtual functions, static and dynamic bindings.	**[8]**
5	**Introduction of I/O Streams and the Standard Library:** Header files, I/O stream library, stream I/O for objects, file I/O.	**[6]**

Outcome(s): On the successful completion of the course, the student will be able to:
- To gain the basic knowledge on object oriented concepts.
- To understand the role of inheritance, polymorphism, dynamic binding and generic structures in building reusable code.

Text Books:
[1]. R. Lafore, Object-Oriented Programming in C++, 4th ed.,Pearson Education, 1997.
[2]. Balagurusamy E., Object Oriented Programming With C++, 6th ed., Tata McGraw Hill Publishing Co. Ltd., 2013.

Reference Books:

CA 19. 209 **Discrete Mathematics** **Total Lectures: 40**
3-1-0-4

Prerequisite(s): Nill

Objective(s):
- To Introduce fundamental concepts and applications of discrete structure in the field of computer science

1	**Set Theory:** Definition of Sets, Subsets, Cardinality of Sets, types of sets: Equal Sets, Universal Sets, Finite and Infinite Sets, proper set, power sets, Operations on Sets: Union, Intersection, Complement of Sets, set difference, Cartesian Product, Venn Diagrams, and Algebra of sets, duality, counting principle.	**[10]**
2	**Relations and Functions:** Definition, types of relation, Ordered Pairs, properties of relation, equivalence relations, partial ordering relation. Function: Domain and Range, Onto, Into, and One to One Function, Composite and Inverse Functions.	**[8]**
3	**Algebraic Structures:** Definition of a group, properties of group, different types of group, subgroup, finite, infinitely, countable and Cyclic Groups.	**[8]**
4	**Prepositional Calculus:** Propositions, Logical Connectives: conjunction, disjunction and negation, Truth Tables, Tautologies and Contradictions, Conditional and Bi-conditional statements.	**[8]**
5	**Counting:** Basic principles, permutations, combinations, summations, principle of inclusion and exclusion, pigeon-hole principle.	**[6]**

Outcome(s): On the successful completion of the course, the student will be able to:
- Understand the theory and techniques of logic, graphs and trees, and algebraic systems.
- Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems.

Text Book:
[1]. B. Kolman, C. Robert , S. Busb, C. Ross, Discrete Mathematical Structures, 6th ed., PHI, 2009.
[2]. H. R. Kenneth, Discrete Mathematics and Its Applications, 7th ed., TMH, 2011.

CA-19.233 **Data Base Management Systems Laboratory** **Total Hours: 26**

Credit: 0-0-4-2

Pre-requisites: CS14.111 (Programming Language Laboratory)

Objective: By the end of the practical sessions of this section, students will be able to:

- To learn Databases using a user interface and SQL command.
- To learn Integrity and constraints on databases.
- To understand the working of SQL queries.

Contents: Lab manual based upon the theory course CS 19.203 and to achieve the listed course objectives and outcomes

Outcomes: After undergoing this laboratory module, the students should be able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies.
- Design and implement a database schema for a given problem-domain.
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art
- RDBMS.

CA 19. 235 **C++ Programming Laboratory** **Total Hours: 26**

0-0-4-2

Prerequisite(s): CS-19.135 (C Programming Laboratory)

Objective(s):

- To make students familiar with syntax and structure of C++-programming.
- To learn problem solving techniques using object oriented programming through C++ programs implementation.

1. Implement the logic of Data Types & Operators in C++.
2. Implement the logic of Control Statements in C++.
3. Implement the programs on arrays using C++.
4. Implement the basic logic of class with a function, displaying "Hello World" as output.
5. Implement the use of all types of constructors in object creation. Also covers the concept of destructor to reclaim the resources from object (minimum 3 programs).
6. Implementation of data constant and static keyword in all possible manners.
7. Implementation of all types of inheritance using C++ (min. 3 programs).
8. Implement the logic of Function and operator overloading (min. 2 programs).
9. Implement the logic of Function overriding.
10. Implement the use of access specifiers in C++ for creating class, function and data members (min. 2 programs).
11. Implement the logic of virtual function and virtual class.
12. Implement the use of this pointer to differentiate local data member to object data member.
13. Implement the 3 programs in order to cover all aspects of exception handling in C++.
14. Implementation of abstract class functionality.
15. Implementation of file handling concepts (min. 4 programs).

Outcome(s): On the successful completion of this lab course, the student will be able to:

- To implement features of object oriented programming to solve real world problems.

UC 19.202 **Business Environment** **Total Lectures: 26**
2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]

2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]

3. **Political and legal Environment*:*** Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]

4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]

5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:

3. Business Environment, Francis Cherunilam, 1st Edition, 2018.
4. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:

5. Business Environment, BN Ghosh, OUP, 2015
6. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
7. Business Environment, AC Fernando, Pearson, 2016

CA 19. 204 **Computer Networks** **Total Lectures: 40**
Credits: 3-1-0-4

Prerequisite(s): Nill

Objective(s):
- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To understand fundamentals of computer networks and major routing protocols.

1	**Basic concepts of networks and Layered Architecture:** Computer networks introduction, network topologies, protocols and standards, Client-Server transactions, Network devices: repeaters, bridges, gateway, Routers; categories of networks- LAN, WAN and MAN. Layers and their function, OSI reference model, TCP/IP model, Comparison of models.	**[9]**
2	**Physical layer:** Transmission Media, guided and unguided; Attenuation, Distortion, Noise, Switching.	**[7]**
3	**Data Link Layer:** Functionality, Framing, Encoding Techniques, Design Issue, Error Detection & Correction Codes, MAC.	**[7]**
4	**Network & Transport Layer:** Routing Algorithms (Distance Vector & Link State), IPv4 and IPv6, Connection Oriented and Connection Less services, Sliding Window Protocols.	**[8]**
5	**Application Layer :** Network Security & Privacy, Data Compression & Cryptography, Electronic Mail (SMTP, POP3, IMAP), DNS, FTP, HTTP, telnet etc.	**[9]**

Outcome(s): On successful completion of this course, students will be able to
- Analyze computer network component and devices.
- Synthesize how communication works in a network and internet.
- Formulate the concept of topologies and their applications.
- Analyze protocol at different layers and how they play important role in network implementation.
- Enumerate the layers of OSI and TCP/IP models.

Text Book: [1]. B. A. Forouzan, Data Communications and Networking, 5th ed., Tata McGraw Hill, 2013.

Reference Book: [1]. A. S. Tanenbaum, Computer Networks, 4^{tn} ed., Prentice-Hall of India, 2002.

CA 19. 206 **Computer Graphics** **Total Lectures: 40**
3-1-0-4

Prerequisite(s): CS-19.103 (C Programming)

Objective(s):

- To introduce the students with the graphics mode, with the help of basic algorithms and methodologies.
- The objective of the course is to equip students with fundamental knowledge and basic technical competence in the field of computer graphics.
- Provide an understanding of how a computer draws the fundamental graphics primitives.
- To learn Computer Graphics methodologies/Algorithms and techniques.

1	**Basic Concepts:** Application Areas of Computer Graphics, Graphical User Interface, RGB Color model, CMY color models, Advantages of Computer Graphics.	**[8]**
2	**Graphics Hardware:** Random Scan Displays, Raster Scan Display (with Introduction to Flickering, Interlacing, American Standard Video), Color CRT Monitors, Flat Panel Display (Plasma Panel, Liquid Crystal Display, Electroluminescent Display).	**[7]**
3	**Raster Graphics Algorithms:** Line Drawing Algorithms-DDA, Bresenham's Algorithm, Circle and Ellipse Drawing Algorithms, Filling (Scan-Converting Polygon Filling, Inside Outside Tests Boundary Fill and Area Fill Algorithm). Cohen- Sutherland Algorithm of clipping.	**[12]**
4	**Transformations:** 2-D Transformations (Rotation, Reflection,Shearing, Scaling), Homogeneous Coordinate Representation, and Translation.	**[8]**
5	**Animation Introduction:** Conventional and Computer-Assisted Animation, Animation languages, methods of controlling Animation, basic rules of Animation.	**[5]**

Outcome(s): On successful completion of this course, students will be able to

- Understand basic concepts of computer graphics.
- Acquire knowledge about drawing basic shapes such as lines, circle ellipse, polygon.
- Perform processing of basic shapes by various processing algorithms /techniques.
- Implement two dimensional transformations.

Text Books:

[1]. D. D. Hearn and M. P. Baker, Computer Graphics, 3rd ed., Prentice Hall India, 2011.
[2]. A. Kalbag, Computer graphics & animation, 1st ed., Usborne, 1999.

Reference Books:

[1]. J. D. Foley, A. V. Dam, S. K. Feiner, J. F. Hughes, Computer Graphics Principles and Practice, 2nd ed., Addison Wesley, 1995.
[2]. D. F. Rogers, Procedural Elements for Computer Graphics, 2nd ed., Tata McGraw Hill Publications, 2001.

CA 19. 210 **Java Programming** **Total Lectures: 40**
3-1-0-4

Prerequisite(s): Nill

Objective(s): The objective of this course is to:

- Cover issues related to the definition, creation and usage of classes, objects and methods.
- Discuss the principles of inheritance and polymorphism.
- Provide the foundation of good programming skills by discussing key issues of the design of object- oriented software, including programming design and documentation.

1	**Basics of Java Programming:** Importance of Java, Java Byte code, Java and HTML, the Java buzzwords, using blocks of code, lexical issues, Java Class Libraries. Constants, Variables, Data Types, Operators, Type Conversion in Expression, Mathematical Functions, Decision Control Structure, Loop Control Structure, Arrays.	**[10]**
2	**Class and Inheritance:** Class fundamentals, declaring objects, assigning object reference variables, introducing methods, constructors, the this keyword, garbage collection, the finalize () method, overloading methods, using objects as parameters, returning objects, recursion, introducing access control, understanding static, introducing final, arrays revisited, introducing nested and inner classes, Wrapper Classes. Inheritance: Multilevel hierarchy, method overriding, Abstract classes, Final classes, String Class.	**[10]**
3	**I/O and String Handling:** I/O basics, reading console input, writing console output, the PrintWriter class, reading and writing files, String and StringBuffer class, Various Types of string operations related to both the classes.	**[6]**
4	**Package, Interfaces and Exception Handling:** Packages, importing packages, interfaces, exception-handling fundamentals, exception types, uncaught exceptions, using try and catch, multiple catch clauses, nested try statements, throw, throws, finally, Java's built-in exceptions, creating your own exception subclasses, using exceptions.	**[7]**
5	**Applet Programming:** Applet life cycle, creating executable application, Designing a web page, Applet Tag, Parameter passing in applets, Graphic Class, lines, rectangles, circle and ellipse, polygons.	**[7]**

Outcome(s): Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Develop programs using the in-built Java API and the Java standard class library.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).

Text Book:
[1]. H. Schildt, Java The Complete Reference, 8th ed., Herbert Schildt, 2011.
[2]. J. Jukowski, Mastering Java J2SE 1.4, SYBEX, 2002.

Reference Book:
[1]. A. B. Downey, Think Java: How to Think Like a Computer Scientist, 2011.
[2]. P. Deitel, H. Deitel , Java How To Program, 10th ed., Deitel publication, 2014.

CA 19.234 Internet Laboratory **Total Hours: 26**

0-0-4-2

Prerequisite(s): NIL

Objective(s):

- Understanding of working of internet enabled applications
- Understand the practical aspects of various application layer protocols of TCP/IP Model

1. Describe and demonstrate the use of Web-based e-mail services
2. Configure and use Outlook Express to send, receive, and print e-mail messages
3. Create and maintain an address book in Outlook Express
4. How to formulate an effective Web search strategy to answer research questions
5. Uses of Web search engines, Web directories, and Web meta search engines effectively
6. Use Boolean logic and filtering techniques to improve your Web searches
7. Use advanced search options in Web search engines
8. Demonstrate how to use an FTP client program and Web browser to transfer files
9. Demonstrate navigation of an FTP site using a Web browser
10. Demonstrate how to compress and decompress files and how to check them for viruses
11. Download an FTP client program using a Web browser
12. Install and use a compression program
13. Trace the connection between your computer and a remote computer
14. Demonstrate the working of e-commerce related online operations

Outcome(s): After completion of the course students will be

- Well versed in internet or online related browsing and other functionalities
- To configure FTP and WEB agents properly.
- To understand the working of Mail agent like outlook express.

CS-19.236 **Java Programming Laboratory** **Total Hours:26**

0-0-4-2

.

Prerequisite: CS-19.135 (C Programming Laboratory)

Objectives: The objective of this course is to:

- Become comfortable with object-oriented programming and learn to think in terms of objects.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, documentation.

Contents: Lab manual based upon the theory course CS 19.210 and to achieve the listed course objectives and outcomes.

Outcomes: Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of
- Inheritance, polymorphism, encapsulation and method overloading.
- Create Java application programs
- Use of development environment like Eclipse for collaborative

CA 19.301 **Web Technology** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): Nil

Objective(s):

- Build Web applications. Semantics and syntax of the HTML,Java Scripts and VB Scripts, including discussion on the practical problems that HTML solves. Write server-side scripts to implement dynamic Web pages that interact with databases and files.

1. **Introduction:** Clients, Servers, and Communication, The Internet Basic Internet Protocols, The World Wide Web, HTTP request message, response message, Web Clients Web Servers. [5]

2. **HTML:** HTML Document, Markup Tags (HTML, HEAD, TITLE, BODY, PRE, LIST, HR, BR), Formatting Tags (MARQUEE, BOLD, ITALICS, SUBSCRIPT), Linking, URL, Relative Path Vs Absolute Path names, Images, Tables, Frames, Form Elements (Text, Buttons, List, Reset, Submit, Radio buttons, Checkbox); DHTML: Cascading Style sheets, Dragging, Dropping, Layers, Div tag. [8]

3. **JavaScript:** Declaration and Expressions, Control Structure and Functions, Variable scope Global Vs Local, Object in Java Script: Properties and Methods, Array Object, Date Object, Math Object, String Object, Events in java Script: Onblur, Onclick, on change, on focus, Design of Interactive forms. [9]

4. **VBScript:** Fundamentals, Variables, String, Constant, Date and Time, Arrays, control Structure, Design making, looping, Sub procedure, Object Methods and events, data validation. [7]

5. **XML:** Overview, Comparison of XML and html, components of XML, XML document, XML declaration, Root element, An empty element, attributes, Markup Delimiters, Element Mark Up, Attribute Mark Up, Naming Rules, Character References, Predefined Entities, Entity References, Cdata Sections, Processing Instructions, Document Type Declaration, Welformed and Valid Document, DTD and Validation, Internal DTD Subset, External DTD, Developing DTD, Elements and Attributes Of DTDs:- Empty Element, Only Element, Mixed Elements, Any Element, Creating a valid document from a DTD [11]

Outcome(s): After Successful completion of this course student will be able to:

- Write Java and VB scripts to handle HTML forms
- Write regular expressions including modifiers, operators, and meta-characters.
- Create HTML web pages that use various Scripting functions, and that manipulate files and directories

Text Books:

1. Young M .L, “Internet Millenum Edition” TMH, New Delhi, 2007.

CA 19. 303 **Software Engineering** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): CA 19.103 (C Programming)

Objective(s):

- To know about software requirements specification, requirement elicitation, structured system analysis and introduction of object-oriented analysis and design, design techniques.
- To acquire knowledge on implementation issues such as modularity and coding standards

1. **Introduction:** Software Characteristics, Components and Applications, Software Engineering a layered Technology, Software life cycle models, Waterfall, Prototype, Evolutionary and Spiral Models. [8]
2. **Software Project Management**: Basic Concepts, Project Management: Core functions, support functions, Project Integration Management. [8]
3. **Software Project Planning:** Objectives, decomposition techniques: software sizing, problem based estimation, lines of code based estimation, and function point based estimation, process based estimation, Cost Estimation Models:-COCOMO, Risk Management. [8]
4. **Software Design:** Design Principles, Design Concepts:- abstraction, refinement, modularity, software architecture, structured partitioning, information hiding, effective Modular Design:- functional independence, cohesion and coupling, Object Oriented analysis and Design. [8]
5. **Software Testing:** Testing Fundamentals, Design of Test Cases, White box testing, Basis Path testing, Control structure Testing, Black box testing. [8]

Outcome(s):

- Demonstrate knowledge of the distinction between critical and non-critical systems and ability to manage a project including planning, scheduling and risk assessment/management.
- Author a software requirements document and understanding of the proper contents of a software requirements document.

Text Books:

1. Pressman R.S., "Software Engineering", Tata McGraw Hill Publishing Company Ltd.,8th edition, 2014

Reference Books:

1. Jalote Pankaj,"An Integrated Approach to Software Engineering", NAROSA.3rdedition, 2005.
2. Rajib Mall, Fundamentals of Software Engineering, Prentice-Hall, 2ndedition, 2004.

Develop Web Pages by use of following tags

- Markup Tags
- Formatting Tags
- Frames
- Form Elements

Programs:

- Design web pages based on above Tags.
- Design and formatting a form based on form elements

Develop Web Pages by use of following tags/Concepts

- Cascading Style sheets
- Dragging
- Dropping
- Div tag.

Programs:

- Based on above CSS formatting on HTML scripts.

Develop Web Pages by use of following tags/Concepts

- java Script Declaration and Expressions
- Control Structure and Functions
- Java Script: Properties and Methods
- Array Object
- Date Object
- Math Object
- String Object
- Events in java Script: Onblur, Onclick, on change, on focus.

Develop Web Pages by use of following tags/Concepts

- Form validation through JavaScript
- Program for Event handling
- Working with Date and Time Functions
- Program for calculator

Testing:

- XML components
- DTD
- Creating a Valid Document From a DTD

Programs:

- Basic XML Document
- Access XML document elements through programs

Program Electives

Program Elective-1		
S. No.	**Course Code**	
1.	CA 19.231	Management Information System
2.	CA 19.232	Enterprise Resource Planning
3.	CA 19.237	Software Project Management
Program Elective-2		
S. No.	**CourseCode**	**CourseTitle**
1.	CA 19.263	SystemSoftware
2.	CA 19.265	InternetTechnologies
3.	CA 19.267	NetworkSecurity
4.	CA 19.208	Electronic Commerce
5.	ET 19.471	Cloud Computing (Infosys)
Program Elective3		
1.	CA 19.373	Softwareand CASE Tools
2.	CA 19.375	Bioinformatics
3.	CA 19.377	Geographical Information System
4.	CA 19.369	E-Business
5.	ET 19.465	Agile Software Development (Infosys)
Program Elective4		
1.	CA 19.362	Knowledge Management
2.	CA 19.364	Artificial Intelligence
3.	CA 19.366	Information Security
4.	CA 19.368	CyberLaws
5.	ET 19.362	Mobile Apps Development (Infosys)

CA 19. 231 **Management Information System** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental

Objective(s): To understand how to leverage information systems to effectively operate and grow an enterprise. The course provides a foundation in the theory and practical application of information systems within an organization. Managing, analyzing, designing, and implementing an MIS will be the focus of the course

1	**Introduction:** Elements, characteristics, objectives and importance, relationshipbetween MIS and Computer, role of MIS in the functions of management.	**[6]**
2	**Information:** Classification of information, levels of information,techniques of data collection, quality aspect of information, value of Information	**[8]**
3	**Decision Making:** Decision making concepts, rationality in decision making,decision support system, MIS as a technique for programmed decisions, structured v/s Un-structured decisions, formal vs. informal systems, model of decision making, methods, MIS and role of decision making.	**[8]**
4	**Manager and Computers:** Database concept, database models, database design,RDBMS, MIS and RDBMS, network topology, LAN, MAN, WAN and data communication.	**[9]**
5	**Development and Application of MIS:** Strategic and project planning for MIS, conceptual system design, detailed design, implementation, evaluation and maintenance of the MIS, pitfalls of MIS. MIS for marketing, financial, production management,human resource management.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- understand and articulate fundamental concepts of information technology management.
- assess and apply IT to solve common business problems.
- suggest and defend effective solutions to business problems, and design a database application to solve a business problem.
- discuss the ethical aspects of information technology use in the organization and its governance issues.

[2]. Sadagopan, “Management Information System”, PHI, New Delhi.2010.
[3]. Parker, Case Thomas, “Management Information System: Strategies and Action”, Tata McGraw- Hill Publishing Co. Ltd., New Delhi

CA 19.232 **Enterprise Resource Planning** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental and Networking

Objective(s): This course will enable student understanding of issues and decisions that must be made when embarking upon a ERP selection and implementation journey. It will also lead to an understanding the challenges associated with managing extant ERP systems.

1	**Overview:** Definition, ERP & Business, Evolution of ERP, Need of ERP, Features of ERP, Motivation behind ERP, Technologies & Infrastructure required for ERP, Demerits of ERP, benefits & application, BPR & ERP,ERP Market.	**[6]**
2	**Data Mining & Data Warehousing:** Foundation of Data Mining, scope of Data Mining, Mechanism, Data Mining methods & Algorithms, Relevance of Data Mining to BPR, Database marketing by Data mining. Data warehouse Management System, Business Intelligent system architecture, features, Application, Necessity of Data warehousing, critical factors for the failure of Data warehouse.	**[8]**
3	**Implementation Issues:** Implementation Methodologies, Post Implementation Issue, Hidden Costs of ERP (Training, Testing, Dirty Data), Role of consultant	**[8]**
4	**ERP Module :** BAAN, SAP, ORACLE, People soft, Comparison of major ERP packages	**[9]**
5	**ERP & E-commerce:** Electronic Data Interchange, Advantage of EDI with respect to business, ERP fitness with E-commerce, Post ERP work with E-commerce, ERP & Internet.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Understand and gain insight into process views of organizations and tools and techniquesused to model both as-is and to-be models.
- Apply the process modeling techniques in one or more modeling environments.
- Know and be able to apply key technical terminology in enterprise information systems asthey apply in different ERP products and development methods
- Understand key differences between the major ERP applications (such as SAP R/3, andOracle/PeopleSoft/Sibel) and issues specific to these applications their configuration andmanagement.
- Analyze a current architecture and perform an effective gap analysis before an ERP implementation
- Be able to map enterprise architectural resources to a contemporary Enterprise Architecturemapping tool.

CA 19.237 **Software Project Management** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): (System Analysis and Design)

Objective(s):

- To introduce the concepts of Software Project Management to the students.
- To make the students understand the requirement for project evaluation.
- To make the students understand the requirement for Software quality assurance and project management along with its tools.

1	**Introduction to Software Project Management (SPM) : S**oftware Engineering problem and software product, software product attributes, definition of a Software Project (SP), SP vs. other types of projects activities covered by SPM, categorizing SPs, Project Management cycle, SPM framework, types of project plan	**[10]**
2	**Project Evaluation:** Strategic assessment, technical assessment, cost benefit analysis, cash flow forecasting, cost benefit evaluation techniques, risk evaluation	**[8]**
3	**Activity Planning:** Objectives, project schedule, sequencing and scheduling activities, network planning models, forward pass, backward pass, activity float, shortening project duration, activity on arrow networks.	**[8]**
4	**Managing people and Organizing teams:** Introduction, understanding behaviour, organizational behavior, working in groups, becoming a team, decision making leadership, organizational structures.	[**7**]
5	**Software Quality Assurance and Testing:** Testing principles and objectives, test plan, types and levels of testing, test strategies, program verification and validation, software quality, SEI-CMM,SQA activities, QA organization structure, SQA plan	**[7]**

Outcome(s): After completion of the course, students would be able to:

- Identifying the essential skills required to be an excellent project manager
- Analyzing the main factors influencing project management outcome

Text Books:

CA 19. 263 **System Software** **Total Lectures: 40**

3-0-0-3

Prerequisite(s): Basic concepts of Unix-like systems. Shells and scripting. System-level programming in the C language. Software development tools and techniques.

Objective(s): This course provides an introduction to computer systems and explores the design and implementation issues of System programs that play an important role in program development.

1	**Overview:** Language processors, data structures for language processors, assemblers,macrosandmacroprocessors,compilers,interpreters, linkers and loaders.	**[6]**
2	**Operating System:** Functions of Operating System, Kernel, Shell, Process, Process state diagram, System Calls	**[8]**
3	**Assemblers:** Design of an assembler ,one pass and two pass Assembler, Databases of Assemblers,tableprocessing	**[8]**
4	**MacroProcessors:**Importance of Macro, MacroDefinition,Macro call,Macro Expansion,ConditionalMacroexpansion,Nesting ofMacros,FunctionsofMacro Processor .	**[9]**
5	**Loaders, Linkers and Compilers:**FunctionofLoaders, loaderschemes-compileandgo, general,absolute,subroutinelinkages,relocating loaders,directlinkingloaders, binders, linkingloaders,overlays, dynamicbinders,TypesofCompilers,Phases of compilerdesign,recursion,calland return statements.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Apply knowledge of mathematics, science, and engineering
- Design a system, component, or process to meet desired needs within realistic constraints.
- Identify, formulate, and solve engineering problems Understand the concept of input/output devices of Computers and how it works.

CA 19. 265 **Internet Technologies** **Total Lectures: 40**
Credits 3-0-0-3

Prerequisite(s): Computer Fundamental

Objective(s): Internet Technologies presents the student with an introduction to the Internet and its services, applications and tools

1	**Introduction:** Layering, TCP/IP Layering, Internet Addresses, The Domain Name System,Client ServerModel, PortNumbers,Implementations andApplication, Programminginterfaces.	**[6]**
2	**IP**:TheLinkLayerEthernetandIEEE802EncapsulationTrailerEncapsulation,**SLIP:**SerialLi neIP, Compressed SLIP,**PPP**: Point-to-Point Protocol. TheInternetProtocolIPHeader,IPRouting,SubnetAddressing,SubnetMask, Special CaseIPAddresses.	**[8]**
3	**Introduction toARP**: Address Resolution Protocol and RARP: Reverse Address Resolution Protocol, ARP Packet Format, ProxyARP, RARPPacketFormat.	**[8]**
4	**ICMP**:InternetControlMessageProtocolIntroduction,ICMP,MessageTypes,ICMP Address, Mask Request and Reply , IP Routing RoutingPrinciples, Introduction to Dynamic Routing; . UDP: User Datagram Protocol UDP Header, UDP Checksum; DNS: The Domain Name System DNS Basics, DNS Message Format, security	**[9]**
5	**TCP**: Transmission Control Protocol TCP Services, TCP Header TCP Connection, Establishment and Termination, TCP Timeout and Retransmission, Repacketization; Telnet and Rlogin Remote Login Rlogin Protocol, SMTP Protocol; FTP: File Transfer Protocol and SMTP: Simple Mail Transfer Protocol.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Understand different types of networks, various topologies and application of networks.
- Understand types of addresses, data communication.
- Understand the concept of networking models, protocols, functionality of each layer.
- Learn basic networking hardware and tools.

Text Books:

[1]. Tannenbaum A. S., "Computer Networks", Prentice-Hall India., New Delhi

CA 19.267 **Network Security** **Total Lectures: 40**
Credits 3-0-0-3

Prerequisite(s): Computer Fundamental and Networking,
Basic Mathematics.

Objective(s): Students will learn the basic concepts in computer security including software vulnerability analysis and defense, networking and wireless security, applied cryptography, as well as ethical, legal, social and economic facets of security.

1	**Introduction:** Attacks, Services and Mechanisms, Security Attacks, Security Services, Integrity check, digital Signature, authentication, has algorithms	**[6]**
2	**Secret Key Cryptography:** Block Encryption, DES rounds, S-Boxes IDEA: Overview comparison with DES, Key expansion, IDEA rounds, Uses of Secret key Cryptography; ECB CBC, OFB, CFB, Multiple encryptions DES, Hash Functions and Message Digests: Length of hash, uses, algorithms (MD2, MD4, MD5, SHS) MD2: Algorithm (Padding, checksum, passes.) MD4 and 5: algorithm (padding, stages,digest computation.) SHS: Overview, padding, stages	**[8]**
3	**Public key Cryptography:** Algorithms, examples, Modular arithmetic (addition,multiplication, inverse, and exponentiation) RSA: generating keys, encryption and decryption.Other Algorithms: PKCS, Diffie-Hellman, El-Gamal signatures, DSS, Zero-knowledge signatures	**[8]**
4	**Authentication:** Password Based, Address Based, Cryptographic Authentication. Passwords in distributed systems, on-line vs offline guessing, storing. Cryptographic Authentication:passwords as keys, protocols, KDC's Certification Revocation, Interdomain, groups, delegation. Authentication of People: Verification techniques, passwords, length of passwords, password distribution, smart cards, biometrics, Kerberos: purpose, authentication, serer and ticket granting server, keys and tickets, use of AS and TGS, replicated servers. Kerberos V4: names, inter-realm authentication,Key version numbers. Kerberos V5: names, realms, delegation, forwarding and proxies, ticket lifetimes, revoking tickets, multiple Realms	**[9]**
5	**Network Security:** Electronic mail security, IP security, Network management security.Security for electronic commerce: SSL, SET. System Security: Intruders and Viruses, Firewalls, Intrusion Detection	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Identify the security goals of an information system, point out contradictory goals and suggest compromises.
- Understand of the principles underlying cryptography and cryptanalysis and have a technical understanding of the main cryptographic concepts and technologies.
- Understand the purpose of security protocols and be witness to the difficulties of their verification.

CA 19. 208 **Electronic Commerce** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental

Objective(s): A comprehensive overview of how firms compete in today's environment with a focus on strategic choices and the infrastructures affecting e-commerce including technology, capital, media, and public policy.

1	**Electronic Commerce**: Overview and Scope, Traditional Commerce vs. Electronic Commerce, Impact of E-Commerce, Electronic Markets, Internet Commerce, e-commerce in perspective, Application of E Commerce in Direct Marketing and Selling, advantages and disadvantages, and future of E-commerce	**[6]**
2	**Business strategy in an Electronic Age:** Value Chains, Supply chain, Porter's value chain Model, Inter Organizational value chains, Strategic Business unit chains and industryvalue chains.	**[8]**
3	**Business to Business E-Commerce**: Inter-organizational Transitions, Credit Transaction Trade Cycle, a variety of transactions. Electronic Data Interchange (EDI): Introduction, Benefits of EDI, EDI Technology, EDI standards, EDI Communication, EDI Implementation, EDIagreement, EDIsecurity.	**[8]**
4	**Electronic Payment System:** Introduction, Online Payment System, Prepaid Electronic Payment System, Post Paid Electronic System, E-Cheques, Credit Cards, Smart Cards, E-Purses, DebitCards,LegalRisk of E-Payment System.	**[9]**
5	**Securing NetworkTransaction:** Security Policy, Procedures and Practices, Transaction Security, Cryptography Algorithm, Public Key Algorithm, Authentication Protocol, Digital Signature, E-Mail Security. Different case studies of E commerce	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Illustrate management's role in the networked economy.
- Identify strategies involved in running an e-commerce company.
- Identify factors of successful implementation of an online strategy.
- Compare metrics used to evaluate progress of an e-commerce strategy.
- Summarize the effect of laws and regulations on e-commerce and Internet business.

Text Books:

ET 19.471 **Cloud Computing (Infosys)** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental and Networking
Object Oriented Design and Programming

Objective(s): This course covers a series of current cloud computing technologies, including technologies for Infrastructure as a Service, Platform as a Service, Software as a Service, and Physical Systems as a Service.

1 **Overview of Cloud Computing:** Brief history and evolution - History of Cloud Computing, Evolution of Cloud Computing, Traditional vs. Cloud Computing. Why Cloud Computing, Cloud service models (IaaS, PaaS&SaaS). Cloud deployment models (Public, Private, Hybrid and Community Cloud), Benefits and Challenges of Cloud Computing. Introduction to AWS Public Cloud Vendor. Cost optimization in AWS. **[6]**

2 **Virtualization**: Basics of virtualization, Virtualization technologies, Server virtualization, VM migration techniques, Role of virtualization in Cloud Computing. Introduction to EC2 service of AWS. **[8]**

3 **WWoWorking with Private Cloud**: Private Cloud Definition, Characteristics of rivate Cloud, Private Cloud deployment models, Private Cloud Vendors - CloudStack, OpenStack, Eucalyptus Microsoft, Private Cloud – Benefits and Challenges. Private Cloud implementation in Amazon EC2 service. **[8]**

4 **Working with Public Clouds:** What is Public Cloud, Why Public Cloud, When to opt for Public Cloud, Public Cloud Service Models, and Public Cloud Players. Infrastructure as a Service Offerings, IaaS Vendors, PaaS offerings, PaaS vendors, Software as a Service. Demonstrating public cloud with AWS – Storage and Database services. Private vs. Public Cloud – When to choose. **[9]**

5 **Overview of Cloud Security:** Explain the security concerns in Traditional IT, Introduce challenges in Cloud Computing in terms of Application Security, Server Security, and Network Security. Security reference model, Abuse and Nefarious Use of Cloud Computing, Insecure Interfaces and APIs, Malicious Insiders, Shared Technology Issues, Data Loss or Leakage, Account or Service Hijacking, Unknown Risk Profile, Shared security model between vendor and customer in IAAS/PAAS/SAAS, Implementing security in AWS. Migration paths for cloud, Selection criteria for cloud deployment, Issues/risks in cloud computing, Future technology trends in Cloud Computing. **[9]**

Outcome(s): After completion of the course, students would be able to:

- Understand the concepts of cloud computing
- Understand the advantages and limitations of different cloud architectures.
- Understand the enabling technologies for building cloud systems.
- Understand the concept of security in cloud computing.

Text Books:

[1]. Cloud Computing: Principles and paradigms By Raj Kumar Buyya, James Broberg, AndrezeiM. Goscinski, 2011
[2]. Cloud Computing, By Michael Miller, 2008.

[2]. Rhoton, John, Cloud Computing Architected: Solution Design Handbook.
[3]. Krutz, Ronald L.; Vines, Russell DeanKalakota ,R. and Whinston, A. B.,"Cloud Security: A comprehensive Guide to Secure Cloud Computing", Addison Wesley.

CA 19. 373 **Software and CASE Tools** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental, Computer programming

Objective(s):

- To introduce the concept of software crisis, managing complexity, requirements specification, architectural and detailed design, testing and analysis, software process, and tools and environments.
- Explores concepts and techniques for design and construction of reliable and maintainable software systems in modern high-level languages; program structure and design; program-correctness approaches, including testing; and event-driven programming

1	**Software Engineering Fundamentals :** Definition of software product and process, Software Characteristics, Components, Applications, Layered Technologies, Processes and Product, Methods and Tools, Generic View of Software Engineering, Software Crisis and Software development paradigms	**[6]**
2	**Software Requirements Analysis & Specification:** System specification, Software requirements specification (SRS) standards, Analysis Modeling: Difference between Data and Information, ER Diagram, Dataflow Model, Control Flow Model, Control and Process Specification, Data Dictionary	**[8]**
3	**Software Design:** Software architecture, Modular design - cohesion and coupling, Process-oriented design, Data-oriented design, User-interface design, Real-time software design, introduction to Object Oriented Design	**[8]**
4	**CASE Tools, Coding and Testing:** Computer-aided software engineering, Introduction to CASE, Building Blocks of CASE, Integrated Case Environment, Characteristics of good Programming languages, Introduction to Testing Process, Testing Activities like Unit, Integration & System Testing.	**[9]**
5	**Reengineering, Quality and Metrics:** Business Process Reengineering, Reverse Engineering, Software re-engineerin. SQA-Software Quality Assurance, Software Reliability, Software quality metrics, SQA plan, ISO 9000 and 9001 Quality Standards.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Make independent and critical assessments,
- Identify, formulate and solve problems autonomously, and
- Deal with changes in working life.
- Stay abreast of the development of knowledge, and
- Communicate their knowledge to others, including those who lack specialist knowledge in the field.

Text Books:

[3]. Object-Oriented Analysis and Design: using UML Mike O'Docherty Wiley Publication

CA 19. 375 **Bioinformatics** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Networking
Some knowledge of genetics or molecular biology would be advantageous.

Objective(s): To deliver descriptions of this rapidly evolving field, and facilitate user access to and manipulation of the biological data. This will include descriptions of genetic and biological databases and relevant tools available to retrieve and analyse the information within these.

1	**Biological InformationResources:**Introductionto biological dataand database management,Biologicaldatabases– Protein databanks (Primaryand Secondary databank; Sequence andstructuredatabank), Genomicdatabanks (Sequence and specialized databanks).	**[6]**
2	**SequenceAlignment:**Introduction to biological sequence alignment, Database searching, Algorithm for sequence alignment, Pairwise alignment(Needleman and Wunsch algorithm, Smith-Waterman algorithm),Multiple SequenceAlignment, Concept of Gaps, Gap penalties and scoringmatrices, FASTA,BLAST, Variations ofBLAST, Alignment scores andstatistical significanceof databasesearches	**[8]**
3	**Genomics:** Genome, Gene structure of prokaryotes and eukaryotes, Concept of ORFs, GC-content, Codon Usage, cDNAsand ESTs, Serial analysis of gene expression (Microarrays).	**[8]**
4	**Proteomics:**Introduction to proteome and proteome analysis(2D electrophoresis, Mass spectrophotometry, Proteinmicro array and X-ray crystallography), Algorithm for modeling protein folding.	**[9]**
5	**Phylogenetics:** Introduction to phylogenetics, Parsimony, Molecular phylogenetics, Methods of phylogenetic tree construction	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Explain the basic principles that underpin Bioinformatics analyses, and apply these principles when analysing biological data.
- criticallyanalyse and solve problems in biotechnology.
- Interpret correctly the outputs from tools used to analyse biological data and make meaningful predictions from these outputs.

Text Books:

[1]. Peruski and Peruski: The Internet and the new Biology: tools for Genomic and MolecularResearch, ASM Publishing House, India.

Reference Books:

[1]. Higgins and Taylor, Bioinformatics, Oxford University Press, US.

CA 19. 377 **Geographical Information System** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental
Data Representation
Computer Graphics

Objective(s): This is designed to provide the students with an understanding of the methods and theories of GIS Analysis that will allow students to apply GIS knowledge and skills to everyday life.

1	**Genesis and Progression:** Basic Concepts, Benefits of Computerization of Information, Users of GIS, Introduction to Real World and Data Model, GeometricRepresentationofobjects, LevelsofMeasurement,Applicationsof GIS.	**[6]**
2	**Vector DataModels:** Introduction, Spaghetti Model, Topology Model, Data Compression, StoringVector Data, Compression, StoringVector Data.	**[8]**
3	**RasterDataModels:**NecessityandCharacteristics, Coding and StorageofRaster Data, Compression of Raster Data, Run Length Encoding, Chain Codes, Block Codes, Quad Tree Model, Conversion and Contrast between Vector and Raster Models	**[8]**
4	**Hardware and SoftwareRequirements for GIS:**Basic Hardware Devices viz Computer, VDU, Quantizers, Printers, Plotters, etc. DBMS, Structure of Databases, Multimedia, WWW.	**[9]**
5	**BasicsofDataCollection:**DigitizingMaps,Scanning,ManualDigitizing,Arial Photographs, Photo Interpretation, Remote Sensing, Correction, Surveying	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Summarize GPS elevations and the operating environment for GPS;
- Create spatial data with real time GPS data;
- Recognize discrepancies in data presentations;
- Import GPS data into GIS;
- Evaluate data before transformation for scale and accuracy;

Text Books:

[1]. Bernhardsen Tor, "Geographic Information System: An Introduction", 3rd edition, Wiley Publication

Reference Books:

[1]. Longley Paul, "Geographic Information Systems and Science", 2nd Edition, Wiley Publication

CA 19. 369 **E-Business** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental

Objective(s):

- To introduce the fundamental concepts in the use and application of telecommunications, systems and technology in the e-business environment.
- To introduce new opportunities and expectations created through the use of eBusiness processes enabled by integrating information systems, telecommunications and internet-based technologies.
- To provide hands-on training for designing e-business applications and web sites using the market software packages, web authoring and development tools.

1	**Internet asaBusinessDriver:**Internet,WWW,BenefitsofInternetand WWW,Difference betweene-Commerceande-Business,MobileInternet, Internet Consumers.	**[6]**
2	**Introductiontoe-BusinessTrends:**TrendsDrivinge-Business,Customer Oriented Trends, e-Service Trends, Organizational Trends, Enterprise TechnologyTrendsandGeneral TechnologyTrends	**[8]**
3	**E-BusinessModels:**DisruptiveTechnology,e-BusinessModels,Internet Pricing, e-Cash, Online Retailing, Constructing e-Business ICT Framework.	**[8]**
4	**LeveragingtheWebforMarketing:**BusinessEnhancement,Framework forWebMarketing,WebUsability,ContentManagement,andImpactof Internet on Marketing	**[9]**
5	**Online Resources and Deployment:** Meta Search Engines, Boolean, SearchingonInternet,Best PracticeWeb Searching, TheInvisible Web	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Apply the functions of the various types of hardware, software, telecommunications, security and their uses to enable and support integrated, e-Business processes in any organisation;
- Understand the strategies and approaches for the e-business processes engineering;
- Understand the basic methods and procedures involved in planning and controlling the development and modification of an e-Business system in an organisation; Understand the concept of input/output devices of Computers and how it works.

Text Books:

[1]. Ravi Kalakota, Marcia Robinsion, "E-Business 2.0: Roadmap For Success", 2nd Edition, Pearson.

[2]. Paul Phillips, "E-Business Strategy", 1st edition, TMH.

Reference Books:

[1]. Colin Combe, "Introduction to e-Business", 1st Edition, Routledge

[2]. AzharKozami, "Business Policy and Strategic Management", 2nd Edition, Tata McGrawHill.

ET 19.465 **Agile Software Development** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): Software Engineering

Objective(s):
- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1 **Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools. **[7]**

2 **Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management. **[9]**

3 **Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software. **[10]**

4 **Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control. **[10]**

5 **Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies. **[4]**

Outcome(s): On successful completion of this course, students will be able to
- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Agile.
- Write user stories for project requirements.

Text Books:
[1]. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
[2]. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall
[3]. Lisa Crispin, Janet Gregory, Agile Testing: A Practical Guide for Testers and Agile Teams, Addison Wesley.

Reference Books:

[2]. Mike Cohn, User Stories Applied for Agile Software, Addison Wesley, 2004

CA 19. 362 **Knowledge Management** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Management Information System
Software Engineering
Data Mining and warehousing

Objective(s): To enable students to learn about this practice in the context of managing the design, development and operation of information technologies that can facilitate KM.

1	**Introduction:** Definition, Evolution, Types, Implication for Knowledge Management	**[6]**
2	**LifeCycle:**Challenges,Difference,KnowledgemanagementsystemLifeCycle, Comparative Studies Between SDLC and Knowledge Management System Development, Role ofKnowledgeDeveloper.	**[8]**
3	**Knowledge Creationand Architecture:** Knowledge Codification, Need ofCodification, and KnowledgeTools forCodification, Developer Skills Set.	**[8]**
4	**KnowledgeTransferandInternet:**InternetandKnowledge,E-Business,EthicalandLegalIssues in KnowledgeManagement.	**[9]**
5	**ExecutiveInformationandsupportSystems**:BusinessExpertSystemandAI, OLTO&OLAP;DataWarehousing;DataMarts,DataWarehousearchitecture; Tools fordata warehousing.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Analyze the role of knowledge management in attainment of financial objectives, quality and process improvement, and innovation.
- Apply knowledge management models and technologies to business situations.
- Use a knowledge management system for an organization.
- Create a knowledge management plan to leverage opportunities to create, capture, represent and share knowledge within an organization. Understand the concept of input/output devices of Computers and how it works.

Text Books:
[1]. Awad, Elias M., "Knowledge Management", TMH, New Delhi
[2]. KimizDalkir , Knowledge Management in Theory and Practice - 2nd Ed. MIT Press 2011

Reference Books:
[1]. Inmon, W. H., "Building Data Warehousing", Wiley, New Delhi.
[2]. Han, Jiawei, Kamber, Michelinal, "Data Mining Concepts & Techniques", Harcourt India, New Delhi

CA 19. 364 **Artificial Intelligence** **Total Lectures: 40**

3-0-0-3

Prerequisite(s):
- fundamental concepts in calculus, linear algebra and probability theory, for example, vector, matrix, Bayes' rule, differential
- Programming language

Objective(s): Presentation of artificial intelligence as a coherent body of ideas and methods to acquaint the student with the basic programs in the field and their underlying theory. Students will explore this through problem-solving paradigms, logic and theorem proving, language and image understanding, search and control methods and learning.

1	**OverviewofA.I.:**IntroductiontoAI,ImportanceofAI,AIanditsrelatedfield,AI techniques.	**[6]**
2	**Problemspaceandsearch**:Definingtheproblemasastatespacesearch,Production system and its characteristics,Issues in thedesignof thesearch problem.	**[8]**
3	**Heuristic search techniques** : Generate and test, hill climbing, best first search technique, problem reduction, constraintsatisfaction	**[8]**
4	**GamePlaying**: Minimax, alpha-beta pruning, Predicate logic,representation of simple facts in logic, well formed formula, resolution.	**[9]**
5	**Knowledge representation and Learning** : Definition and importance of knowledge, Knowledge representation, Various approaches used in knowledge representation, Issues in knowledge representation, Introduction learning,Types of learning,Introduction to neuralnetworks.	**[9]**

Outcome(s): After completion of the course, students would be able to:
- Know various AI search algorithms (uninformed, informed, heuristic, constraint satisfaction, genetic algorithms)
- Demonstrate working knowledge in Lisp in order to write simple Lisp programs and explore more sophisticated Lisp code on their own.
- Ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems.

Text Books:
[1]. Rich Elaine and Knight Kevin , Artificial Intelligence, Tata McGraw – Hill, 3rd edition, 2012

Reference Books:
[1]. Russell Stuart and Norvig Peter, Artificial Intelligence: A Modern Approach, Prentice Hall; 3 edition,2009.
[2]. Patterson D.W., "Introduction to AI and Expert Systems", PHI, 1999

CA 19. 366 **Information Security** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental and Networking,
Basic Mathematics.

Objective(s): Students will learn the basic concepts in computer security including software vulnerability analysis and defense, networking and wireless security, applied cryptography, as well as ethical, legal, social and economic facets of security. Students will also learn the fundamental methodology for how to design and analyze security critical systems.

1	**Introduction:**Information,CharacteristicsofInformation,SecurityAttacks, NSTISSC securitymodel, ConceptsofPolicies; procedures;Guidelines andStandards	**[6]**
2	**Cryptography:** ConventionalEncryption Principles, Conventionalencryption algorithms, cipherblockmodesofoperation,locationofencryptiondevices,Publickey cryptography principles, publickeycryptographyalgorithms, digital signatures, digital Certificates.	**[8]**
3	**IPSecurity:**IPSecurity Overview,Architecture,AuthenticationHeader,Encapsulation Security Payload,CombiningSecurity Association,Key Management,Pretty GoodPrivacy, S/Mimeand Types.	**[8]**
4	**WebSecurityandE-Commerce:**WebSecurity Requirement,SSLandTransportLayer Security, Secure Electronic Transactions,Introduction to E-Commerce, Transactionson E- Commerce, Requirement of Securityon E-Commerce.	**[9]**
5	**SystemSecurity**:RecognizedSecurity Threats,Virus,Trojanhorse,Worm,Spyware, Adware,Key Logger,DenialofServices,FirewallDesignPrinciples,TrustedSystems, Common criteria forinformation technologysecurityand evaluation.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Identify the security goals of an information system, point out contradictory goals and suggest compromises.
- Understand of the principles underlying cryptography and cryptanalysis and have a technical understanding of the main cryptographic concepts and technologies available today, including symmetric and asymmetric encryption, hashing, and digital signatures.

Text Books:

[1]. William Stallings ,"Cryptography and Network Principles and Practice", Fourth Edition, Pearson.
[2]. William Stallings, "Network Security Essentials (Applications and Standards)" Pearson.

Reference Books:

[1]. Forouzan, Mukhopadhyay ,"Cryptography & Network Security", , McGrawHill

CA 19. 368 **CyberLaw** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental
Information Security Concept

Objective(s): To give the Students a general knowledge of cyber technology and cyber security. Students will clarify issues of jurisdiction and sovereignty of the internet and be introduced to the basic principles of digital intellectual property, online privacy, and the basic elements of software copyright.

1	**Fundamentals of Cyber Law**: Jurisprudence of Cyber Law- Overview of Computer and WebTechnology-IntroductiontoIndian CyberLaw- Overview of GeneralLaws andProcedures inIndia; Freedomof Expression on theInternet.	**[6]**
2	**E-commerce-LegalIssues:**ElectronicCommerce–DigitalSignature-Meaning; CreationofDigitalSignature;Understanding howdigitalsignatureswork,Rolein InformationTechnology;technicalissues;legalissues;Crimesrelating todigital signature certificates	**[8]**
3	**CyberCrimes:**MeaningofCyberCrimes– CybercrimesunderIPC,Cr.P.CandIndianEvidenceLaw- CybercrimesundertheInformationTechnologyAct,2000	**[8]**
4	**CybercrimesunderInternationalLaw** -HackingChildPornography,Cyber Stalking,Denialofservice Attack,VirusDissemination, Software Piracy,Internet Relay Chat(IRC)Crime,CreditCardFraud,NetExtortion,Phishingetc-Cyber Terrorism - Violation of Privacy on Internet - Data Protection and Privacy	**[9]**
5	**Intellectual Property Issues and Cyberspace : The Indian Perspective;** Overview of Intellectual Property related Legislation-Copyright law &Cyberspace; Trademark law &Cyberspace; Law relating to Semiconductor Layout&Design.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Identify cyber laws and regulatory tools
- Understand the role of government and jurisdiction in technology
- Reflect on cyber laws regarding the internet and IP
- Judge case studies and court outcomes regarding online privacy and cyber security
- Classify cyber privacy, copyright, and software IP

Text Books:

ET 19.362 **Mobile Apps Development** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): CA 19.210 (Java Programming)

Objective(s):
- To learn how mobile apps are different from others traditional apps by learning those aspects of mobile programming that make it unique from other platforms
- Program mobile applications for the Android operating system that use basic and advanced phone features
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout,UI elements, Draw-able,Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and smsapis native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access(via Internet/Intranet)	[15]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobileapps, distributing apps on mobile market place.	[3]

Outcome(s): On successful completion of this course, students will be able to
- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**

2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**

2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**

3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**

4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**

5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

MA 19.101 **Mathematics I** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: (10+2) Higher Secondary Mathematics

1. **Differential Calculus I:** Review of basic concepts, partial differentiation, Euler's theorem on homogeneous functions, Maclaurin's and Taylor's series (one and two variables) and Jacobians. [06]
2. **Differential Calculus II:** Maxima and minima of functions of two variables, asymptotes, Tracing of simple cartesian curves and standard polar curves. [06]
3. **Integral Calculus:** Basics of Beta and Gamma functions, Length of plane curves(cartesian and polar), area bounded by the curves(cartesian and polar), multiple integrals (double and triple integrals, change of order of integration), volumes, conversion from cartesian to polar form, physical interpretations and applications. [12]
4. **Matrix Theory**: Rank of matrix, linear dependence and independence of vectors, solution of system of simultaneous linear equations, Eigen values, Eigen vectors of a matrix, statement of Cayley-Hamilton theorem (without proof) , reduction of a matrix to diagonal form, quadratic forms, linear transformation of a quadratic form, and applications. [08]
5. **Three-dimensional Geometry:** Direction cosines and direction ratios of a straight line, equation of a plane, plane passing through intersections of two planes, equations of straight line, shortest distance between two skew lines, equation of a sphere, intersection of plane and sphere. [08]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Shanti Narayan and Mittal, Analytical Solid Geometry, S. Chand, 2018.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

PY19.101 **Engineering Physics** **Total Lectures: 40**

Pre-requisite: Fundamental knowledge of Basic Physics **3-0-0-3**

Objective:

1. To provide students with a basic understanding of the Physics that may be required by engineers in the course of their careers
2. To enhance knowledge related to lasers and its different components to make it suitable for various purposes
3. To introduce most important concepts of superconductivity, crystallography and fiber optics to the students
4. To introduce the learners to the basics of modern physics and Quantum Mechanics

1. **Modern Physics**: Introduction to Black body radiation spectrum, Photo-electric effect, Compton effect. Wave particle Dualism. de Broglie hypothesis – de Broglie wavelength, extension to electron particle. Davisson and Germer Experiment. Matter waves and their Characteristic properties, Phase velocity, group velocity and Particle velocity, Relation between phase velocity and group velocity, Relation between group velocity and particle velocity. Expression for deBroglie wavelength using group velocity. **[8]**

2. **Quantum Mechanics:** Heisenberg's uncertainity principle and its physical significance. Application of uncertainty principle (Non-existence of electron in the nucleus, explanation for decay and kinetic energy of electron in an atom). Wave function, Properties and physical significance of wave function, Probability density and Normalization of wave function. Setting up of one dimensional time independent Schrodinger wave equation. Eigen values and Eigen functions. Application of Schrodinger wave equation – Energy Eigen values for a free particle. Energy Eigen values and Eigen functions for a particle in a potential well of infinite depth. **[7]**

3. **Electrical Conductivity in Metals**: Free–electron concept. Classical free-electron theory – Assumptions. Drift velocity, Mean collision time and mean free path. Relaxation time. Expression for drift velocity. Expression for electrical conductivity in metals. Effect of impurity and temperature on electrical resistivity of metals. Quantum free-electron theory – Assumptions. Fermi – Dirac Statistics. Fermi-energy, Fermi factor. Density of states (No Derivation). Expression for electrical resistivity / conductivity. Temperature dependence of resistivity of metals. electron in a periodic potential, origin of the energy gap, band theory of solids, distinction of solids into metals, semi-conductors and insulators. **[8]**

4. **Dielectric & Magnetic Properties of Materials**: Dielectric constant and polarization of dielectric materials. Types of polarization. Equation for internal field in liquids and solids (one dimensional). Ferro and Piezo electricity. Frequency dependence of dielectric constant. Important applications of dielectric materials. Classification of dia, para and ferro-magnetic materials. Hysterisis in ferromagnetic materials. Soft and Hard magnetic materials. Applications. **[7]**

5. **Lasers and Optical Fibers**: Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, Construction and working of CO2 laser and semiconductor Laser. Applications of Laser – Laser welding, cutting and drilling. Measurement of atmospheric pollutants. Holography–Principle of Recording and reconstruction of images, applications of holography.
Propagation mechanism in optical fibers. Angle of acceptance. Numerical aperture. Types of optical fibers and modes of propagation. Attenuation. Applications–Block diagram discussion of point to point communication. **[10]**

Outcome: The student will be able to understand many modern devices and technologies based on lasers and optical fibers. Student can also appreciate various material properties which are used in engineering applications and devices.

Text Books:

1. S. O. Pillai, "Solid State Physics", New Age International, Sixth Edition, 2009
2. V. Rajendran, "Engineering Physics," TMH, Fifth Edition , 2013

Reference Book:

1. G. K. Shivkumar, "Engineering Physics," Prism Book Pvt. Ltd.
2. Stephen T. Thornton, "Modern Physics for Scientists and Engineers",Cengage Learning, 4th ed.,2013

CY 19.102 **Environmental Studies** **Total Lectures: 52**

Prerequisite(s): NIL **Credit: 3-1-0-4**

Objective(s):
- To teach the principal resources, renewable energy systems and biosphere.
- To explore the environmental impact of various energy sources and also the effects of different types of pollutants.

1. **Multidisciplinary nature of environmental studies:** Definition, scope and importance, Need for public awareness. [2]

2. **Natural Resources:** Renewable and non-renewable resources: Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. [8]
Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources.
Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

3. **Ecosystems & Biodiversity:** [14]
Ecosystems: Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow and nutrient cycling in the ecosystem. Food chains, food webs and ecological pyramids. Ecological succession
Structure and function of the following ecosystem - Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).
Biodiversity and its conservation: Introduction – Definition, genetic, species and ecosystem diversity. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values. Biodiversity at global, national and local levels. Hot-sports of biodiversity. India as a mega-diversity nation, Threats to biodiversity: habitat loss, illicit poaching, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

4. **Environmental Pollution:** Definition, cause, effects and control measures of : Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes. [8]
Role of an individual in prevention of pollution. Pollution case studies. Disaster management: floods, earthquake, cyclone and landslides.

5. **Social Issues, Human Population and the Environment:** From Unsustainable to Sustainable development: Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people: its problems and concerns. Global Climate Change, global warming, acid rain, ozone layer depletion. Wasteland reclamation. Population growth, variation among nations. Population explosion – Family Welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in Environment and human health. Case Studies.Environment Protection Act 1986. Air (Prevention and Control of Pollution) Act 1981., Water (Prevention and control of Pollution) Act 1974, Wildlife Protection Act 1972., Forest Conservation Act 1980. [13]

Field work [7]
- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

Outcome(s): Upon successful completion of the course, students should be able to:
- Measure environmental variables and interpret results
- Evaluate local, regional and global environmental topics related to resource use and management
- Propose solutions to environmental problems related to resource use and management
- Interpret the results of scientific studies of environmental problems
- Describe threats to global biodiversity, their implications and potential solutions.

Text Books:

1. Erach Bharucha "Environmental Studies", University Grants Commission, 2004.
2. G. Boyle, Renewable energy: Power for a sustainable future'. Oxford University press. 2004.

Reference Books:

1. C. William, P. Saigo, B Woodworth, "Environmental Science: A Global Concern", Sixth Edition McGraw-Hill Higher Education, 2001.
2. R.T. Wright, D.F. Boorse, "Environmental Science" 11th Edn, PHI, 2010.

EE 19.101 **Elements of Electrical Engineering** **Total Lectures: 40**

3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to various concepts and devices of electrical engineering.

Pre-requisite: Nil

1. **DC Circuits:** Electrical circuit elements (R, L and C), voltage and current sources, Ohm's law, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation using mesh and nodal method. Network Theorems - Superposition, Thevenin, Norton and Maximum power transfer Theorems. Time-domain analysis of first-order RL and RC circuits. **[8]**

2. **AC Circuits:** Basic terminologies, representation of sinusoidal waveforms, average, rms and peak values of a.c. quantities, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel). **[8]**

3. **Three Phase A.C. Circuits:** Three phase supply, phase sequence, star connection, delta connection, relationship between phase and line quantities in 3-phase circuits, measurements of three phase power under balanced condition. **[6]**

4. **Transformers:** Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, Transformer testing: open circuit and short circuit test, losses in transformers, regulation and efficiency. Basics of auto-transformer and three-phase transformer connections. **[10]**

5. **Electrical Machines:** DC Machines – construction, functions of each part, working principle, EMF and torque equations, types of dc machines. AC machines – classification of a.c. machines, construction, operating principles of ac machines. **[8]**

Outcome: At the end of this course, students will demonstrate the ability to

- To understand and analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines.

Text Books:

1. Kothari, D. P., and I. J. Nagrath, "Theory and Problems of Basic Electrical Engineering," PHI Learning Pvt. Ltd., 1998.
2. Fitzgerald, Arthur Eugene, David E. Higginbotham, and Arvin Grabel, "Basic electrical engineering," McGraw-Hill Series in Electrical Engineering, Auckland: McGraw-Hill, 1981, 5th ed.(1981).

Reference Books:

1. H.Cotton, "Advanced Electrical Technology," CBS Publication. 1967.
2. Vincent Del Toro, "Electrical Engineering Fundamentals," 2nd Edition PHI Publication. 1972.
Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.101 **Programming Language** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite(s): NIL

Objective(s):
1. To learn principles of programming by the structured native language 'C'.
2. To comprehend the rudiments, constructs, syntax, and statements with essentials of efficient compiling, running and debugging processes.

1. **Introduction:** The role of programming languages, programming paradigms, language description and syntax structure, basics of structured and object-oriented programming, functional programming, logic programming, concurrent programming. [10]
2. **Fundamentals of 'C' language**: Character set, variables data types constants, arithmetic, relational and logical operators, type conversion,increment,decrement, bitwise and assignment operators, conditional expressions, statements and blocks, *if-else*, *switch*, loops-*do-while*, *while*, *for*; *break, continue* and *goto* statements, labels. [10]
3. **Functions, pointers and Arrays**: Basics of functions, automatic, external, static and register variables, scope rules, and header files, recursion and C preprocessor, arrays, pointers and addresses, pointers and arrays address arithmetic, character pointers and functions, pointer arrays, pointers to functions, pointers and multidimensional arrays, command line arguments. [10]
4. **Structures and unions:** Basics of structures and functions, arrays of structures, pointers to structures, self-referential structures, unions. [5]
5. I/O and File Processing: Concept of files, standard input and output, formatted output, file access in different modes, reading from and writing to a file. [5]

Outcome(s): Students would be able to apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

Text Books:
1.Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013,
2.Ravi Sethi & K.V.Viswanatha, Programming Languages-Concepts, and Constructs, Second edition, Pearson Education,2013,

Reference Books:
1.Herbert Schildt, C: The Complete Reference, Fourth Edition, McGraw-Hill Education, 2017
2.E Balagurusamy, Programming in ANSI C, Tata McGraw - Hill Education,6th edition,2012

PY 19.111 **Physics Laboratory** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
2. To apply the analytical techniques and graphical analysis to the experimental data.

List of Experiments:

1. To study of material constant, temperature coefficient of current and planck's constant.
2. To determine the specific resistance of a given wire by using the Carey Foster's bridge.
3. To determine the ballistic constant, K of a moving coil ballistic galvanometer with a standard capacitor of known capacity.
4. To determine the high resistance by the method of leakage of a condenser with the help of ballistic galvanometer.
5. To study the variations of resistivity with temperature and hence determines the energy band gap of the given semiconductor with help of four probe method.
6. To convert a galvanometer into a voltmeter of a given range.
7. To convert a galvanometer into an ammeter of a given ranges.
8. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current and to estimate from it the radius of the coil.

Outcome: Students will be convergent with operation of equipments and verify the principle of Physics by doing the experiments. Students will be able to apply the analytical techniques and graphical analysis for finding out the experimental results.

EE 19.111 **Electrical Laboratory** **0-0-2-1**

Objective: The objective is to provide a basic exposure of installation and operation of electrical equipment.

Prerequisite: Nil

Perform any ten of the list.

1. To Study of the various apparatus used in Electrical Engineering.
2. To perform residential house wiring using fuse, indicator, switch, Socket, plug and lamp.
3. To design a Stair case wiring for illuminating a lamp.
4. To design Tunnel wiring for illuminating three lamps.
5. To construct a fluorescent tube and to measure voltage across tube rod, voltage across choke and current.
6. To conduct the polarity test on the given transformer.
7. To conduct the open circuit & short circuit tests on the given single phase transformer and to determine equivalent circuit parameters.
8. To control the speed of DC machine by field current control method.
9. To control the speed of DC machine by Armature Voltage control method.
10. To measure three phase power by using two wattmeter methods.
11. To verify Superposition Theorem using resistive circuit.
12. To verify Thevenin's Theorem using resistive circuit.

Outcome: Students will be convergent with installation and operation of electrical equipment.

Text Books:

1. J.B. Gupta, Theory and Performance of Electrical Machines, S.K. Kataria and Sons, 3rd Edition, 2002.
2. Kothari, D. P., and I. J. Nagrath. Theory and Problems of Basic Electrical Engineering. PHI Learning Pvt. Ltd., 1998.

Reference Books:

1. P.S. Bimbhra, "Electrical Machinery", Khanna Publishers, 5th Edition, 2013.
2. Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.151 **Programming Language Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): NIL

Objective(s):

- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

List of Practicals

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement programs to cover all possible String operations.
11. Implement programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement programs for Reading and writing from/to a file.

Outcomes On completion of this course student will be able to:

- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner

UC 19.102 **Communication Skills** **Total Lectures: 26**

2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures.**Technology-based Communication:** Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software. [5]
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

1. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
2. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

MA 19.102 **Mathematics II** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: Mathematics I

1. **Computational Methods:** Introduction and importance of numerical analysis, calculus of finite differences, interpolation schemes for equal and unequal intervals (Newton's forward and backward interpolation formulae), divided difference, interpolation for unequal intervals (Newton's divided difference and Lagrange interpolation formulae), Solution of algebraic and transcendental equations by Newton-Raphson method. Applications to Engineering. [12]
2. **Ordinary Differential Equations I:** First order and first degree differential equations (variable separable, homogeneous and non-homogeneous, linear, Bernoulli's equation, and exact equations). [06]
3. **Ordinary Differential Equations II:** Linear differential equations of second order with constant and variable coefficients (complementary functions and particular integrals), and applications. [06]
4. **Partial Differential Equations:** Formation of partial differential equations, Lagrange's multipliers method for solution of first order differential equations, separation of variables for nonlinear differential equations and applications. [06]
5. **Vector Calculus:** Vector and scalar point functions, conservative fields, gradient of scalar point functions, divergence and curl of vector point functions (Solenoidal and irrotational vectors), directional derivative of scalar point functions, work done along a curve, Integration of vectors, line integral (work done), surface integral, volume integral, physical interpretations and applications. [10]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Grewal, B.S. and Grewal, J.S., Higher Engineering Mathematics, Khanna Publishers, Daryaganj, New Delhi, 40th Edition, 2007.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CY 19.101 **Engineering Chemistry** **Total Lectures: 39**

Prerequisite(s): NIL **Credit: 3-0-0-3**

Objective(s):
- To purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers their preparation, properties and uses.
- To develop the basics of protecting engineering materials from the natural forces.
- To understand the present day up-to-date knowledge of the contemporary energy sources.
- To build up the basis of the future Engineering materials like superconductors, conducting organic polymers, Nano materials etc.

1. **Water treatment:** Hardness, types of hardness, degree of hardness and its estimation (EDTA methods). Numerical problems on degree of hardness. Boiler troubles: sludge and scale formation, Prevention of sludge and scale formation in boilers. Softening of hard water (Lime-Soda, Permutit, Ion Exchange and calgon methods). Numerical problems based on water treatment (Lime-Soda process). [8]

2. **Polymers:** Classification, Functionality, Types of polymerization, Mechanism of Addition polymerization. Plastics: thermoplastic and thermosetting resins. Preparation, Properties and Uses of Polyamides, Bakelite, Polyesters, Rubber, Vulcanization of Rubber, Synthetic Rubber viz. Buna-S, Buna-N, Butyl and Neoprene rubbers. Silicones-polysiloxanes and sulphur based polymers. [8]

3. **Electrochemistry and Corrosion:** Electrochemical Changes, Electrochemical cell and its classifications (Galvanic cell, electrolytic cell). Types of electrodes. Origin of electrode potential, Electrochemical Series. Electromotive force, Nernst equation of electrode potential. [8]
Corrosion: Definition and its significance, Theories of corrosion, Mechanism of corrosion, types of corrosion, Corrosion control (Corrosion inhibitors, Cathodic protection - sacrificial anodic and impressed current cathodic protection).

4. **Fuels and Lubricants:** Introduction - Importance of fuels in Industries. Classifications of fuels, Comparison of solid, liquid & solid fuels, Calorific value of a fuel. Determination of calorific value by Bomb calorimeter. Refining and cracking of petroleum, knocking. Octane Number and Cetane Number. L.P.G., Coal gas and Producer gas.**Lubricants:** Introduction and Classification of Lubricants. Properties of Lubricants, Lubricant Oil, Grease, Emulsions. [9]

5. **New Engineering Materials:** Introduction: Superconductors, high and low temperature superconductors, organic electronic materials, Fullerenes and Nano materials, Industrial applications of fullerenes and Nano materials. [6]

Outcome(s): The student will be able to understand the basis of the future Engineering materials like of lubricants, superconductors, conducting polymers, Nano materials etc and purification of the most valuable natural resource of the future-water.

Text Books:
1. Jain and Jain, "Engineering Chemistry," 16th Edition, Dhanpat Rai Publishing Company, 2015.
2. S.S. Dara, "A Text Book of Engineering Chemistry," 12th Edition, S. Chand & Company Limited, 2014.

Reference Books:
1. Peter Atkins, Julio de Paula, and James Keeler, "Atkins' Physical Chemistry" Eleventh Edition, Oxford University Press, 2017.
2. William D. Callister, "Materials Science and Engineering: An Introduction, Eighth Edition, John Wiley & Sons, Inc., 2010.

ME-19.101 **Applied Mechanics** **Total Lectures: 40**
3-1-0-4

Prerequisite Basic Mathematics and Physics

Objectives:
1. This course will help the student to acquire knowledge of basic engineering mechanics concepts and enhance their ability to solve open ended engineering problems.
2. To provide the student with a clear and thorough understanding of the theory and applications of engineering mechanics, covering both statics and dynamics.
3. To provide the student with a thorough understanding of the concept, drawing, and the use of free-body diagrams.
4. To be able to determine the Centre of Gravity and Moments of Inertia of simple geometric shapes and understand the physical applications of these properties.
5. To understand the use and be able to perform calculations related to friction forces in engineering applications.

1. **Introduction:** Idealization of Mechanics, concept of Rigid Body, External Forces (Body forces & surface forces), Laws of Mechanics. **[10]**
Force Systems and Equilibrium: Introduction to vector, Statically Equivalent Force systems, Free Body Diagram, Equations of equilibrium and their applications to various system of forces.

2. **Distributed Forces and Moment Of Inertia:** Centroid of Composite figures, Area Moment of Inertia, Mass Moment of Inertia, Principle axes and Principle Moment of Inertia. **[6]**

3. **Friction:** Introduction of friction, Laws of friction, wedge, screw, belt, rolling friction. **[6]**

4. **Tension, Compression and Shear:** Normal stress and strain, Linear elasticity, Hooke's Law and Poisson's Ratio, Shear stress and shear strain, Relationship between modulus. **[9]**
Beams: Different support & load conditions, SFD, BMD

5. **Kinematics of Particles:** Introduction, Rectilinear motion, Plane curvilinear motion, Rectangular coordinates, Tangential and normal coordinates, polar coordinates, Relative motion (Translating Axes), constrained motion of connected particles. **[9]**
Kinetics of Particles: Introduction, Force, Mass and acceleration, Newton's second law of motion, Equation of motion and solution of problems, Work and Energy, Impulse and Momentum.

Outcome: The students shall develop the ability to identify, formulate, and solve engineering problems related to forces and motion.

Text Books:
1. Hibbeler, Gupta R. C., "Engineering Mechanics," 11th ed., Pearson India, 2010.
2. Merian, J.L, Kraige, L.G., "Engineering Mechanics Vol I & II," 5th edition, Wiley India 2010.

Reference Books:
1. Timoshenko, S, Young, D.H, Rao, J.V, "Engineering Mechanics," 4th edition TMH, 2010.
2. Irving. H. Shames, "Engineering Mechanics," Prentice Hall Book Company, 1966.

EC 19.101 **Basics of Electronics Engineering** **Total Lectures: 40**

3-1-0-4

Prerequisite Basic Knowledge of Engineering and Applied Physics

Objective: To learn the fundamental principle and applications of electronics and communication engineering and devices.

1. **Introduction:** Brief history of major inventions in ECE, Electronic test and measurement equipments, Specifications for electronic components. **[3]**
2. **Semiconductors**: Material and its properties, Formation of energy band diagram, Currents in semiconductors, Fermi-Dirac energy distribution, Types of semiconductors – Intrinsic and Extrinsic, Mass action law, Hall effect. **[5]**
3. **Diodes**: Introduction, Characteristic of ideal and real diode, Current components in diode, load characteristics, Breakdown in diode, Zener diode, Varactor diode, Tunnel diode, Clippers and Clampers, Rectifiers – Half and Full-wave rectifiers. **[8]**
4. **Transistors:** Introduction to pnp and npn transistors, current components, active, cutoff and saturation regions, CC, CB and CE configuration, Operating point, Biasing circuits, Bias Stability, Thermal runway and thermal stability. **[8]**
5. **Signals**: Definition, Classification of signals – Analog and Digital, Deterministic and Random signals, Power and Energy of signals, Bandwidth, Bit and Baud rate. **[4]**
6. **Basics and Applications of Communication**: Definition, Block representation of communication system, Modulation – Definition, Need of modulation, Frequency translation, Types of modulation - Analog and Digital, Multiplexing – TDM and FDM. Introduction to - Optical Fiber, Transmission line, Waveguides, Satellite communication and RADAR. **[12]**

Outcome: Students will be able to understand the basic concepts of Electronic and Communication Engineering and devices .They are able to implement mini projects based on concepts of ECE.

Text Books:

1. George Kennedy, Bernard Davis, “Electronics Communication Systems”, Tata McGraw-Hill, 3rd Edition, 2007.
2. Behrouz Forouzan, “Data Communication and Networking”, McGraw-Hill, 4th Edition, 2006.

Reference Books:

1. David A. Bell, “Electronics Devices and Circuits”, PHI, 4th edition, 2008.
2. Wayne, Tomasi, “Advanced Electronic Communication Systems”, PHI, 6th edition, 2013.
3. Robert L. Boylestad, Louis Nashelsky, “Electronics Devices and Circuits Theory”, Prentice Hall, 10th Edition, 2009.

ME-19.111 **Computer Aided Engineering Drawing** **0-0-4-2**

Objective:

1. To improve the visualization skills.
2. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient.
3. To impart the knowledge on understanding and drawing of simple engineering products.

1. **Introduction to Computer Aided Sketching:** Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practice. Board Drawing vs. Computer- Aided Drawing. Introduction to Solid works Environments. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP &LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, dimensioning, line conventions, material conventions and lettering. [8]

2. **Orthographic Projections** : Horizontal planes, Vertical planes, Front view, Top view, Side view, Projections, First and Third angle of projection, Projections of points, Principles of orthographic projections, Sketching of different views of given objects. Introduction to sketching in Solid works : 2-Dimenional Sketching, Sketching in Solid works, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity. [12]

3. **Projections of Lines, Planes and Solids:** Lines inclined to both the principal planes, projection of Lamina inclined to both principal planes, Projections of solids: Axis inclined to both the reference planes and Intersection of solids. Introduction to part module in Solid works: Extrude, Revolve, Sweep, Hole, Filleting, and Chamfering features. [12]

4. **Sections of solids and sectional orthographic views:** Sectional orthographic projections - Full, Half, Partial, revolved and removed surfaces. Introduction to drawing module in Solid works: Standard 3 views, Auxiliary view, Section View, Projected view. [12]

5. **Isometric Projection:** Terminology, Isometric scale, Box method, Coordinate or offset method, Four-center method, isometric projection of arcs. Solid models practice using Solidworks part module. [8]

Outcomes:

1. Students will be able to improve their visualization skills so that they can apply these skills in developing new products.
2. Students will be able to know and understand the conventions and the methods of engineering drawing using Solid works.
3. Students will be able to prepare simple drawings of engineering products.

Text Books:

1. N.D. Bhatt, "Engineering Drawing", Charotar Publishing House, 2013.
2. Prof. Sham Tickoo, Sandeep Prem Dass “Solid works 2013 for Engineers and Designers” Wiley Publication, 2013.

Reference Books:

1. Randy H. Shih, “Solid works 2013 and Engineering Graphics: An Integrated Approach”, SDC Publications. 2013

CY 19.111 **Engineering Chemistry Laboratory** **Total Hours:26**
Credit: 0-0-2 - 1

Prerequisite(s): NIL

Objective(s):

- To introduce students to water chemistry and purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers, lubricants, fuel and their properties and uses.

LIST OF EXPERIMENTS

Choice of 10-12 experiments from the following

1. To determine the temporary and permanent hardness in the given water sample by complexometric titration using EDTA as standard solution.
2. To determine the percentage of Available Chlorine in the given sample of Bleaching powder. Iodometrically.
3. To determine the alkalinity of water sample.
4. To prepare urea formaldehyde resin.
5. To determine the strength of given HCl solution by titrating it against NaOH solution using pH meter.
6. To determine the strength of given acid solution by titration it against sodium hydroxide solution using conductometer.
7. To determine molecular weight of a polymer using Ostwald viscometer.
8. Determination of viscosity of given lubricating oil by Redwood viscometer.
9. Determination of cloud and pour point of given lubricating oil.
10. Determination of the flash and fire point of given lubricating oil.
11. Determination of acid value of given lubricating oil.
12. To determine the calorific value (HCV) of a sample of fuel.
13. Proximate Analysis of Coal.
14. Determination of the percentage of Fe in the given steel sample.

Outcomes The students will learn to:

- Estimate the Hardness of water, alkalinity of water.
- Familiar with the important practical applications of electrochemistry, lubricants, solids, their properties and applications, and the polymer materials.

ME-19.112 **Mechanical Workshop** **0-0-2-1**

Objectives:

1. Practice on manufacturing of components using workshop trades including fitting, carpentry, sheet metal and welding.
2. Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping.
3. Study and practice on machine tools and their operations.

List of Jobs:

1. **Fitting Shop:** Prepare job that contain various fitting operation like filing, marking, measuring, cutting, drilling etc.
2. **Carpentry Shop:** Making of carpentry joint (T, L joint etc).
3. **Sheet Metal Shop:** Making job from sheet (funnel, tray etc).
4. **Machine Shop:** Perform various operations like, turning, step turning, facing, chamfering, knurling etc on Lathe.

Outcomes:

At the end of the course, the student will be able to:

1. To acquire skills in basic engineering practice.
2. To identify the hand tools and instruments.
3. To acquire measuring skills.
4. To provides the knowledge of job materials in various shops.
5. Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.

Text Books:

1. Hajara Chaudhary, Workshop Technology Vol I & II, Media Promoters and Publishers PVT. LTD, Mumbai.
2. B.S. Raghuvanshi, Workshop Technology, Dhanpat Rai & Sons. New Delhi.

Reference Books:

1. H S Bawa, Workshop Technology, TMH. New Delhi.

EC 19.111 **Electronics Lab** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the theory of Electronics Engineering.
2. To apply the analytical techniques and graphical analysis to the experimental data.
3. To enable the students to simulate and test the Electronics circuits using Multisim software.

Practical to be performed on Hardware:

1. To plot V-I characteristics of junction diode and Zener diode.
2. To design a half wave rectifier with and without filter circuit and find the ripple factor.
3. To design a full wave rectifier with and without filter circuit and find the ripple factor.
4. Study of clipper and clamper circuits and their implementation on breadboard.
5. To plot the characteristics of Transistor under Common Emitter configuration
6. To plot the characteristics of Transistor under Common Base Configuration
7. To plot the characteristics of Transistor under Common Collector configuration
8. To perform soldering and de-soldering to make banana probe, BNC probe and connection on PCB.

Practical to be performed using Multi-Sim Software:

9. An Introduction to Electronic Circuit Simulation using Multi-Sim Software.
10. To verify Ohm's law and Kirchhoff's law.
11. To Simulate half wave and full wave bridge rectifier.
12. To plot V-I characteristics of junction diode.

Outcome: Student will be able to understand the operation of electronic test equipment and hardware/software tools to characterize the behavior of devices and circuits.

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**
2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization **[4]**
2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**
3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**
4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**
5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher, 16th Edition, 2014

Reference Books:

1. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
2. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
3. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
4. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

MA 19.201 **Mathematics III** **Total Lectures: 40**
3-1-0-4

Pre-requisite: Mathematics I and Mathematics II

Objective: To acquire fundamental knowledge of linear programming, numerical methods, complex analysis and integral transform and apply in engineering disciplines.

1. **Linear Programming:** Introduction with formulation; Graphical method; Simplex method, Artificial variable technique (Two phase method, Big –M method); Assignment problem (Hungarian method); Transportation problem (Vogel's approximation method). [12]

2. **Numerical Methods:** Solution of system of equations (Gauss elimination and Gauss - Seidel methods); Solution of algebraic and transcendental equations (Bisection, Ramanujan's and Regula Falsi methods); Solution of ordinary differential equation (Euler's modified, Milne's predictor & corrector, Runge-Kutta method of order four). [08]

3. **Complex Analysis:** Function of complex variable, analytic function, Cauchy- Riemann equations(without proof); Integration of complex functions, line integrals in the complex plane, Cauchy integral theorem(without proof), Cauchy integral formula(without proof), zeros and singularities of complex functions, residues. [08]

4. **Integral Transform I**: Basics of Laplace transform and inverse Laplace transform; First and Second Shifting theorems; Convolution theorem (without proof); Laplace transform of Unit Step function, Dirac Delta function and periodic function. [06]

5. **Integral Transform II**: Solution of ordinary differential equations with initial conditions by Laplace transforms; Fourier series of periodic functions, even and odd functions, Fourier half-range series; Basics of Fourier transforms with properties. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of linear programming, numerical methods, complex analysis and integral transforms in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Sastry S.S., Introductory Methods of Numerical Analysis, 5th Edition, Pearson.
3. Jain R.K. and S.R.K. Iyenger Advanced Engineering Mathematics, Narosa Publishing House, 2003.

EC 19.202 **Digital Electronics** **Total Lectures: 40**

Pre-requisite: Basics of Electronics Engineering **3-0-0-3**

Objective: The aim of this course is to present the principles and techniques of combinational and sequential digital logic design and optimization at a gate level. The use of transistors for building gates is also introduced.

1. **Number Systems and Boolean Algebra:** Introduction to number systems, weighted and non-weighted codes, 1's complement, 2's complement, complement arithmetic, Postulates and theorems of Boolean algebra, Boolean functions, canonical and standard form, simplification of Boolean function using Boolean laws and theorems. [5]
2. **Logic Gates and Simplification of Boolean Functions:** Basic Logic gates, Universal gates, K-map representation, incompletely specified functions, simplification realization with gates, Quine-Mc Cluskey method. [5]
3. **Combinational Logic:** Analysis and design of combinational circuits, half adder and full adder, half subtractor and full subtractor, binary serial and parallel adder, BCD adder, binary multipliers, magnitude comparator, decoders, encoders, multiplexers, de-multiplexers. [10]
4. **Sequential Circuits and Programmable Logic :** Latches, flip-flops, triggering of the flip-flops, master-slave flip-flop, excitation tables, conversion of the flip-flops, analysis and design of clocked sequential circuits, shift registers, counters, PAL, PLA. [10]
5. **Introduction to Verilog HDL:** Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Functional Verification, System Tasks, Programming Language Interface (PLI), Module, Simulation and Synthesis Tools. Gate Level Modeling: Introduction, AND Gate Primitive, Module Structure, Other Gate Primitives, Illustrative Examples, Tri-State Gates, Array of Instances of Primitives, Design of Flip-flops with Gate Primitives, Delays, Strengths and Construction Resolution, Net Types, Design of Basic Circuits. [10]

Outcomes: Upon successful completion of this course, students should be able to:

1. Gain fundamental knowledge of the basic logic gates such as AND, OR, NAND NOR, EX-OR and their implementation in Logic Circuits.
2. Design multipliers, Combinational Circuits and registers.

Text Books:

1. Mano, M. M. and Ciletti, M.D., "Digital Design", Pearson Education, Patparganj, Delhi, 4thEdition, 2009.

2. Floyd, T. L. and Jain, R.P., "Digital Fundamental", Pearson Education, Patparganj, Delhi, 8thEdition, 2009.

References

1. Puri, V. K., "Digital Electronics: Circuits and Systems", Tata McGraw-Hill, Patel Nagar, New Delhi, 4thEdition, 2001.

2. Jain, R. P., "Modern Digital Electronics", Tata McGraw-Hill, Patel Nagar, New Delhi, 4th Ed.

CS 19.201 **Discrete Mathematics** **Total Lectures: 40**
Credit:3-1-0-4

Prerequisite(s): None

Objective(s):
- To Introduce fundamental concepts and applications of discrete structure in the field of computer science

1. **Sets, Relations and Functions**: Set theory, combination of sets, multi-sets, ordered pairs, set identities, relations, operations on relations, properties of relations, composite relations, equality of relations, order of relations, functions, classification of functions, operations on functions, recursively defined functions. [8]
2. **Partially Ordered Sets:** Definition, combination of partial order sets, Hasse diagram, lattices: definition, properties of lattices: bounded, complemented, modular and complete lattice, morphisms of lattices. [6]
3. **Algebraic Structures & Counting:** Groups, subgroups and order, cyclic groups, cosets, Lagrange's theorem, normal subgroups, permutation and symmetric groups, group homomorphisms, rings, fields, basics of linear algebra, integers modulo n. Counting principles, permutations, combinations, summations, principle of inclusion and exclusion, pigeon-hole principle, generating functions and recurrence relations. [10]
4. **Propositional Logic:** Proposition, well formed formula, truth tables, tautology, satisfiability, contradiction, algebra of proposition, theory of inference, natural deduction, predicate logic: first order predicate, well formed formula of predicate, quantifiers, and inference theory of predicate logic. [8]
5. **Graph Theory:** Graphs, types of graphs, subgraphs, Eulerian chains and cycles, Hamiltonian chains and cycles, graph traversal algorithms, chromatic number, plannar graph. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- Understand the theory and techniques of logic, graphs and trees, and algebraic systems.
- Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems.

Text Books:
1. Bernard Kolman, Robert C., Busb Sharon, Cutler Ross, Discrete Mathematical Structures, PHI, 6th Edition, 2009.
2. Kenneth H. Rosen, Discrete Mathematics and Its Applications, Tata McGraw- Hill, 7th Edition, 2011.

Reference Books:
1. Swapan Kumar Chakraborty, BikashKanti Sarkar, Discrete Mathematics, Oxford Higher Education, 2011
2. C. L. Liu, D. P. Mohapatra, Elements of Discrete Mathematics A Computer Oriented Approach, Tata Mcgraw-Hill, 3rd Edition, 2008.
3. Seymour Lipshutz, Marc Lipson, Discrete Mathematics, 3rd edition, 2010

CS -19.203 **Data Structures** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s):
- To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems, and to promote an analytical and empirical appreciation of the behavior of algorithms using data structures

1. **Introduction:** Basic terminology, elementary data organization, algorithm, efficiency of an algorithm, time and space complexity, asymptotic notations, time-space trade- off, abstract data types. [4]
2. **Array & Linked list:** Definition, single and multidimensional arrays, representation of arrays: row major order, and column major order, application of arrays, sparse matrices and their representations. Singly linked lists, doubly linked list, circular linked list, insertion, deletion, traversal, polynomial representation and addition, generalized linked list. [10]
3. **Searching & Sorting:** Sequential search, binary search, comparison and analysis, hash function, collision resolution strategies, insertion sort, selection sort, bubble sort, quick sort, merge sort, heap sort, radix sort. [10]
4. **Stack & Queue:** Primitive stack operations: push and pop array and linked list implementation of stack, application of stack: prefix and postfix expressions, evaluation of postfix expression, recursion, and tower of Hanoi problem. Queue operations, circular queues, array and linked list implementation of queues, dequeue and priority queue [8]
5. **Tree:** Binary trees, binary tree representation, tree traversal algorithms: inorder, preorder and postorder, threaded binary trees, Huffman algorithm, binary search trees AVL trees. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- be knowledgeable of certain abstract data types (ADT)
- be able to make a critical assessment of different implementations of an ADT
- be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems

Text Books:
1.Lipschutz, "Data Structures" Schaum's Outline Series, TMH, Revised Edition Feb. 2014
2. Horowitz and Sahani, Fundamentals of Data Structures, University Press, 2nd Edition, 2008.

Reference Books:

2. D. Samanta, Classic Data Structures, PHI, 2nd Edition, 2009
3. Jean Paul Trembley and Paul G. Sorenson, An Introduction to Data Structures with applications, McGraw Hill, 2nd Edition, 2003.

CS 19.205 **General Purpose Programming** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s): Python is a general-purpose, versatile and popular programming language. It's great as a first language because it is concise and easy to read, and it is also a good language to have in any programmer's stack as it can be used for everything from software development and scientific applications.

1. **Introduction**: The basic elements of python, python syntax, python operators, basic input, branching programs, control structures, strings, tuples, lists, sets, dictionaries and input iteration, Mutability with deferent types, Ranges and iterators [7]
2. **Functions and Module**: Functions and scoping flow of execution, specifications, recursion, global variables, eval &exec , variable arguments, default arguments, system functions and parameters, input and output, modules , making your own module, importing modules. [7]
3. **Classes and Object-Oriented Programming**: Abstract data types and classes, class attribute, instances, constructor, self, inheritance, encapsulation and information hiding, polymorphism, getter & setter [8]
4. **Testing and Debugging**: Exceptions and assertions, types of testing – black-box and glass-box, debugging, handling exceptions, assertions. [6]
5. **Advance Python:** Regular expressions – REs and Python, plotting using matplotlib and Multithreaded Programming, GUI & event handling programming using Tkinter & pygame. Introduction to machine learning and deep learning [12]

Outcome(s): Upon completion of this course students will be

- Familiar with Python syntax.
- Able to use python to implement a given logic.

Text Books:

1. John V Guttag, Introduction to Computation and Programming using Python, Prentice Hall of India, 2nd Edition, 2013.
2. Martin C. Brown, Python: The Complete Reference,Mc Graw Hill, 2018

Reference Books:

1. Zed A. Shaw ,Learn Python the hard way: a very simple introduction to the terrifyingly beautiful world of computers and code, 3rd edition, 2014.
2. Richard L. Halterman,Learning to Program with python, 2011.
3. Allen Downey ,Think Python How to Think Like a Computer Scientist, Version 2.0.17, Green Tea Press Needham, Massachusetts,2012.

CS-19.253 **Data Structures Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): Programming Language Laboratory
Objective(s):

- To develop skills to design and analyze simple linear and nonlinear data structures
- To Strengthen the ability to identify and apply the suitable data structure for the given real world problem
- To Gain knowledge in practical applications of data structures

Contents:

- Implement various operations on arrays
- Implement different operations on different types of link list
- Implement various searching algorithms
- Implement different sorting algorithm and realize their complexities
- Implement Queue and stacks with all the operations
- Implement Binary Tree
- Implement graphs

Outcome(s): At the end of this course, the student will

- Be able to design and analyze the time and space efficiency of the data structure.
- Be capable to identity the appropriate data structure for given problem.
- Have practical knowledge on the application of data structures.

CS-19.255 **General Purpose Programming Lab** **Total Hours:26**

Credit: 0-0-2-1

.

Prerequisite: Programming Lab

Objectives: The objective of this course is to:

- Become comfortable with Python programming, starting from basics of data types to deep learning.
- Provide the foundation of to explore any expansions of Python whether it is machine learning, deep learning, web development or gaming. It will also put focus to learn various skills to design object-oriented software.

- **Contents:**
  - Code different data types and operations on list, dictionaries, sets, String etc
  - Code basic programs like factorial, Fibinocci etc. to understand functions and recursions.
  - Implement different built-in functions in Python like eval, exec, map, lambda etc.
  - Implement the concept of class, objects, inheritance and polymorphism
  - Implement constructor and self
  - Code programs to implement exceptions and assertions
  - Implement regular expressions
  - Implement a small gaming application using Pygame
  - Implement user interface and event handling using TKinter
  - Code programs to implement the logic for machine and deep learning
  - Implement multithreading

Outcomes: Upon completion of this course, students will be:

- Able to develop application in Python
- Able to develop scientific applications for machine learning
- Able to use python to implement a given logic.
- Able to use various Python IDE like Anaconda, Pycharm etc.

UC 19.202 **Business Environment** **Total Lectures: 26**

2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]

2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]

3. **Political and legal Environment*:*** Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]

4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]

5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:

1. Business Environment, Francis Cherunilam, 1st Edition, 2018.
2. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:

1. Business Environment, BN Ghosh, OUP, 2015
2. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
3. Business Environment, AC Fernando, Pearson, 2016

MA 19.202	Statistics and Probability Theory	Total Lectures: 40
		3-1-0-4

Pre-requisite: Mathematics I, Mathematics II, and Mathematics III

Objective: To acquire fundamental knowledge of Statistics and Probability and apply in engineering disciplines.

1.	**Introductory Ideas:** Recapitulation of basics of permutation, combination and probability theory; Law of addition and law of multiplication; Conditional probability; Total probability; Bayes' theorem (with proof)and it's applications.	[08]
2.	**Random Variables and Distribution:** Discrete and continuous random variables; Types of distributions with basic properties; Probability mass and density functions; Cumulative distribution function; Mean, variance and standard deviation of distributions; Discrete types (Binomial and Poisson) and Continuous types (Normal, Uniform and Exponential); Applications of basic ideas of these distributions.	[10]
3.	**Sampling and Testing of Hypothesis:** Sampling distribution of mean and variance; Central limit theorem; Simple and Composite hypothesis; Type I and Type II errors with graphical interpretations; Level of significance and tests of significance for large and small samples with applications.	[08]
4.	**Correlation and Regression:** Simple, partial and multiple correlations; Linear regression with applications.	[06]
5.	**Queuing Theory and Queuing Models:** Birth and death process; Pure birth and pure death process; Classification of queuing models: $[(M/M/1):(FCFS/\infty/\infty)]$, $[(M/M/1):(SIRO/\infty/\infty)]$, $[(M/M/1):(FCFS/N/\infty)]$, $[(M/M/C):(FCFS/\infty/\infty)]$; Applications of queuing models.	[08]

Outcome:	After completion of the course, students would be able to apply the knowledge of Statistics and Probability theory in engineering and solve curriculum problems.
Text Books:	1. S.Palaniammal, Probability and Random Processes, PHI, 2013. 2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.
Reference Books:	1. Papoulis, Probability, Random Variables and Stochastic Processes, TMH, 2018. 2. Gupta & Kapoor, Fundamental of Mathematical Statistics, SCS Publisher, 2002. 3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CS-19.202 **Objected Oriented Programming** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.101(Programming Language)

Objective(s): The objective of this course is to:

- Cover issues related to the definition, creation and usage of classes, objects and methods.
- Discuss the principles of inheritance and polymorphism.
- Provide the foundation of good programming skills by discussing key issues of the design of object- oriented software, including programming design and documentation.
- Cover the basics of API and to explore the java abstract programming interface.

1. **Overview:** Introduction to OOP, OOP concepts, interactive Development Environments: Eclipse/Net Beans, basics of OOP, importance of Java Primitive data types, type casting, arrays, ArrayList, operators and control structures, identifiers, constants and literals. [9]
2. **Classes and Inheritance:** Class fundamentals, objects, constructors, this keyword, garbage collection, the finalize() method, overloading methods, understanding static & final, exploring the string class. Inheritance basics, using super, multilevel hierarchy, constructor in hierarchy, method overriding, dynamic method dispatch, the object class, using abstract classes, interface. [10]
3. **Package, and Exception Handling:** Packages, access protection, importing packages, interfaces, exception-handling fundamentals, exception types, using try and catch, multiple catch clauses, nested try statements, throw, throws, finally, Java's built-in exceptions, user defined exception, assertions [10]
4. **Multithreaded Programming:** The Java thread model, the main thread, creating multiple threads, threads priorities, managing threads, thread class built-in functions. [4]
5. **I/O and String Handling:** I/O basics, reading console input, writing console output, the print writer class, reading and writing files, string constructors, operations on string, string tokenizing, string buffer. [7]

Outcome(s): Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Develop programs using the in-built Java API and the Java standard class library.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).
- Use of development environment like Eclipse for collaborative programming

Text Books:

1. Herbert Schildt, Java The Complete Reference, Herbert Schildt, 8th Edition, 2011.
2. Bert Bates and Kathy Sierra, Head First Java, O'Reilly,2005

Reference Books:

1.Allen B. Downey, Think Java: How to Think Like a Computer Scientist, 2011.
2. Paul Deitel, Harvey Deitel , Java How To Program (Early Objects), 10th Edition, 2014.
3.E. Balaguruswamy, Programing with Java A Primer, Tata Mc. Graw Hill, 2007

CS-19.204 **Database Management Systems** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures).

Objective(s): The objective of this Course is to:

- Understand the fundamental concepts of database management.
- Design and Normalize databases.
- Understand transaction processing control.
- Understand basic of object concepts and object relations.
- Understand the role of the DBMS & RDBMS in the organization.

1. **Introduction & Relational Data Model:** database system concepts and architecture, data modeling using the entity-relationship (ER) model, relational model constraints, relational database schemas, update operations, dealing with constraint violations, relational algebra operations, relational calculus, mapping ER model to relational model. [10]
2. **Structured Query Language (SQL)**: SQL data definition and data types, specifying constraints, schema change statements, basic queries, complex queries, update statements, views. [6]
3. **Database Design:** Functional dependencies and normalization of relational databases, first normal form (1NF), 2NF, 3NF, boyce-codd normal form (BCNF), multi valued dependency, 4NF, join dependency, 5NF. [8]
4. **Transaction Processing:** Introduction, properties, recoverability, serializability, concurrency control techniques: two phase locking protocol, concurrency control based on time-stamp ordering, database recovery techniques: recovery concepts, recovery techniques based on deferred and immediate update, the ARIES recovery algorithm. [8]
5. **Database Security:** Vulnerabilities in database, authentication, SQL injections, Encryptions & public Key infrastructures, privacy issues and preservation process [8]

Outcome(s): After completion of the course, students will be able to:

- Analyze database models & entity relationship models. Understand architecture for database development.
- Design E-R diagram
- Use Structured Query Language (SQL) with complex queries.
- Design and normalize the relations for any organization.
- Understand transaction processing control.

Text Books:

1. Ramez Elmasri & Shamkant B. Navathe, Fundamentals of Database Management Systems, Edition, Pearson Education, 2013.
2. Raghu Ramakrishnan, Database Management Systems, 3rd Edition, Tata McGraw Hill, 2008.

Reference Books:

1. G.W. Hansen, and J.V. Hansen, Database Management and Design, 2nd Edition, Prentice Hall India, 2000.
2. Korth and Schilberschatz, Database System Concepts, 5th Edition, Tata McGraw Hill, 2006.
3. C.J. Date, Database Systems, Tata McGraw Hill, 2nd Edition, 2003.

CS 19.206 **Theory of Computation** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 14.201(Discrete Structures)

Objective(s): The goal of this course is to

- Provide students with an understanding of basic concepts in the theory of computation.
- To understand variety of issues in the mathematical development of computer science theory, particularly finite representations for languages and machines, as well as gain a more formal understanding of algorithms and procedures.

1. **Finite Automata and Regular Expression:** Finite state systems, basic definitions, regular languages and regular expression, finite automata ,Equivalence of DFA and NDFA , Kleen's theorem, pumping lemma for regular sets, regular expression with algebraic method Using Arden's Theorem, closure properties of regular sets, minimization of finite automata, Mealy and Moore machine - conversion of Mealy machine into Moore machine and vice versa. [11]
2. **Context-Free Grammars:** Context-free grammars, union, concatenation of CFG, derivation trees, simplification of context-free grammars, Chomsky normal form, Greibach Normal form, ambiguous context-free grammar. [9]
3. **Context-Free Languages and Pushdown Automata:** Pushdown automata and context-free languages, pumping lemma for CFL, closure properties of CFL, decision, algorithms for CFL. [8]
4. **Turing Machine:** Turing machine model, techniques for Turing machine construction, Turing machines as language acceptor, combining Turing machines, properties of recursive and recursively enumerable languages, universal Turing machine. [8]
5. **Chomsky Hierarchy of Languages:** Regular grammars, unrestricted grammars and Turing machines, context-sensitive grammars and linear bounded automata. [4]

Outcome(s):

- Be able to prove the equivalence of languages described by finite state machines and regular expressions.
- Be able to construct pushdown automata and the equivalent context free grammars.
- Be able to prove the equivalence of languages described by pushdown automata and context free grammars.
- Be able to construct Turing machines and Post machines.
- Be able to prove the equivalence of languages described by Turing machines and Post Machines.

Text Books:

1. Peter Linz, An Introduction to Formal Languages and Automata, Third Edition, Jones and Bartlett, 2016.
2. Hopcroft, Motwani, Ullmann, Introduction to Automata Theory, Languages and Computation, Pearson Education, 2nd Edition, 2005.

Reference Books:

1. Daniel I. A. Cohen, Introduction to Computer Theory, Prentice-Hall, 2nd Edition,1997.
2. Martin, Introduction to Languages and the theory of Computation, Tata McgrawHill, 3rd Edition, 2006
3. Michael Sipser, Introduction to the Theory of Computation, 3rd Edition, Cengage Learning,2013

CS 19.208 **Computer Organization and Architecture** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): EC 19.202 (Digital Electronics) (Optional)

Objective(s):

- To have a thorough understanding of the basic structure and operation of a digital computer.
- To discuss in detail the operation of the arithmetic unit including the algorithms &
- implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- To study the different ways of communicating with I/O devices and standard I/O interfaces. To study the hierarchical memory system including cache memories and virtual memory.

1. **Introduction:** Von-Neuman architecture, register transfer and micro operations: register transfer language, arithmetic micro-operations, logic micro-operations, shift micro-operations, bus and memory transfers, computer organization and design: instruction cycle, computer registers, common bus system, computer instructions, addressing modes, design of a basic computer. General register organization, stack organization, instruction formats, data transfer and manipulation, program control, RISC, CISC [10]
2. **Computer Arithmetic:** Hardware implementation of addition and subtraction, multiplication algorithms, Booths multiplier, array multiplier, division algorithms, floating point arithmetic: floating point representation, add, subtract, multiplication, division. [8]
3. **Memory & I/O Organization:** Memory hierarchy, RAM, ROM chips, memory address map, memory connection, associative memory, cache memory and virtual memory: paging and segmentation, auxiliary memory: magnetic disks, magnetic tapes, Input-output interface, Asynchronous data transfer, modes of transfer, priority interrupt, DMA, IOP. [8]
4. **Hardwired and Microprogrammed Control:** Hardwired control, microprogrammed control: microinstruction, microprogram sequencing, wide-branch addressing, microinstruction with next-address field, prefetching microinstruction. [7]
5. **Pipelining & Parallel Processing:** Pipeline and vector processing: pipeline structure, speedup, efficiency, throughput and bottlenecks, arithmetic pipeline and instruction pipeline. Flynn's Classification performance matrices for parallel system [7]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand basic structure of a digital computer.
- Perform arithmetic operations of binary number system.
- Know the organization of the control unit, arithmetic and logical unit and I/O memory unit

Text Books:

1. M. Morris Mano, Computer System Architecture, Pearson Education, 3rd edition, 2008.
2. Carl Hamacher, ZvonkoVranesic and SafwatZaky, Computer Organization, Tata McGraw Hill, 5th edition, 2002.

Reference Books:

1. Patterson and John L. Hennessy, Computer Organization and Design: The Hardware/ Software interface, Elsevier, 3rd edition, 2005.
2. William Stallings, Computer Organization and Architecture – Designing for Performance, Pearson Education, 6th edition, 2000.
3. Kai Hwang, Advance Computer Architecture,Tata Mc Graw Hill,18th edition,2008

CS-19.252 Object Oriented Programming Lab **Total Hours: 40**

Credit: 0-0-2-1

.

Prerequisite: Programming Lab

Objectives: The objective of this course is to:

- Become comfortable with object-oriented programming and learn to think in terms of objects.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, documentation.

- **Contents:**
  - Code different pattern to understand control structures
  - Code program like factorial, fibinocci etc. to understand functions and recursions.
  - To understand OOP implement an small application with getter and setter method
  - Implement various operators, this keyword and constructors
  - Code different usage of static keyword
  - Implement different types of polymorphism
  - Show different usage of String class using its inbuilt functions
  - Demonstrate abstraction using abstract class and interface.
  - Demonstrate exception handling using all its keywords
  - Demonstrate console I/O and File I/O
  - Implement multithreading using Runnable interface and Thread class

Outcomes: Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of Inheritance, polymorphism, encapsulation and method overloading.
- Create Java application programs
- Use of development environment like Eclipse for collaborative programming/editing.

CS-19.254 **Data Base Management Systems Laboratory** **Total Hours: 40**
Credit: 0-0-2-1

Pre-requisites: CS14.111 (Programming Language Laboratory)

Objective: By the end of the practical sessions of this section, students will be able to:

- Create Databases using a user interface and SQL command.
- Create Integrity and constraints on databases.
- Write SQL queries.
- Provide a practical overview of advanced concepts like triggers, assertion, views, etc.

Contents:

- Creation of Databases
- Implement various Integrity Constraints
- SQL queries to implement DDL
- Implement various queries to implement DML
- Implement logics for PLSQL
- Implement Triggers

Outcomes: After undergoing this laboratory module, the students should be able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies.
- Design and implement a database schema for a given problem-domain.
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS.
- Programming PL/SQL including stored procedures, stored functions, cursors, packages.

RM 19.101 **Research Methodology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. **Introduction:** Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches, Research Process, Validity and Reliability in Research. [6]
2. **Problem Formulation:** Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps. [10]
3. **Research Design:** Research Framework, Meaning & Significance of Research Designs, Features of a good Research Design, Types of Research Design. [10]
4. **Data Analysis and Simulation Tool:** Types of Data, Sources of Data, Methods of Collecting Data, Data Presentation Techniques. Methods of Data Analysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. **Report Writing:** Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:

1. R. Pannershelvam, "Research Methodology" Prentice Hall India, New Delhi, 2nd Edition, 2013.
2. C. R. Kothari, "Research Methodology: Methods and Techniques", New Age International (p) Limited, Publishers New Delhi, 4nd edition, 2018.

Reference Books:

1 William G.Zikmund, “Business Research Methods”, Cengage Learning New Delhi, 8th edition, 2016.
2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

CS 19.301 **Design and Analysis of Algorithms** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): CS-19.201(Discrete Structures), CS-19.203(Data Structures)

Objective(s):

- To learn the algorithm analysis techniques.
- To become familiar with the different algorithm design techniques.
- To understand the limitations of the algorithms power.

1. **Introduction:** Fundamentals of algorithms and problem solving, asymptotic notations, time complexity and analysis of algorithms, solutions of recurrence relations, master theorem and summations techniques. [8]
2. **Analysis of Sorting and Searching Algorithms:** Linear, binary and interpolation search, insertion, selection, merge, quick and heap sort, stability and other issues, hashing. [8]
3. **Algorithm Design Approaches:** Greedy method (knapsack problem, job sequencing problem), dynamic programming (assembly line scheduling, matrix chain multiplication), backtracking (8 queens problem, sum of subsets), branch and bound (0/1 knapsack problem), divide and conquer algorithms (Strassen matrix multiplication), problems based on these design paradigms. [8]
4. **Tree and Graph algorithms:** Spanning trees, Prim and Kruskal's algorithm, Huffman coding, BFS and DFS, disjoint set operations, connected components, shortest path algorithms in a graph such as Dijkstra, Bellman Ford, Warshall's etc. [8]
5. **Complexity Classes:** P,NP,NP hard and NP complete problems, reducibility, decision and optimization problems, examples of NP complete problems such as 3 CNF, clique, vertex cover and traveling salesman problem, basic introduction of approximation algorithms. [8]

Outcome(s): On the successful completion of the course, the student will be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.
- Modify existing algorithms to improve efficiency.

Text Books:

1. Thomas H.Cormen, Charles E.Leiserson, Ronald L. Rivest and Clifford Stein, Introduction to Algorithms, PHI Learning Private Limited, 3rd edition, 2016.
2. Ellis Horowitz, Sarta jSahni, Sanguthevar Rajasekaran, Computer Algorithms, Silicon Press, 2nd edition, 2008.

Reference Books:

1. Anany Levitin, Introduction to the Design and Analysis of Algorithms, Pearson Education, 3rd edition, 2012.
2. Alfred V. Aho, John E. Hopcroft and Jeffrey D. Ullman, Data Structures and Algorithms, Pearson Education, 1st edition, 2006.
3. Donald E. Knuth, The Art of Computer Programming, Volumes 1& 3, Pearson Education, 2009.

CS-19.303 **Operating System** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.208 (Computer Organization & Architecture)

Objective(s):

- Understand the fundamental operating system abstractions like processes, threads, files, semaphores, IPC and deadlocks.
- Understand operating system from user's perspective as well as from system's perspective.
- Understand the principles of concurrency and synchronization.
- Understand basic resource management techniques.

1. **Overview:** Definition, types of operating systems: mainframe, server, multiprocessor, personal computer, real-time, embedded and smart card, system calls and utilities, batch, multiprogramming and multitasking operating system. [3]

2. **File Systems:** File concept, user and system programmer view of file systems, different modules of a file system, disk structure, disk-space allocation methods: contiguous, linked, indexed directory structures, file protection, disk scheduling algorithms. [6]

3. **Process Management:** Process concepts, threads, scheduling concepts, types of schedulers, scheduling algorithms, process state diagram, comparison of various CPU scheduling algorithms, multi-level queue scheduling. [6]

4. **Memory Management:** Logical and physical address spaces, base, limit and relocation registers, address binding, dynamic loading and linking, partitioning, swapping, contiguous memory allocation, non-contiguous memory allocation: segmentation, paging and segmentation. [8]

5. **Process Synchronization and deadlock:** Independent and concurrent processes, shared memory approach and message passing approach, mutual exclusion, synchronization, inter process communication, critical section problem and its solution to semaphores: binary and counting semaphores, wait/signal operations and their implementation, classical problems of synchronization, deadlock. [11]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the primary functionalities of operating system.
- Manage system resources efficiently as an operating system designer.
- Develop new operating systems as well as work on existing ones to develop them further.

Text Books:

1. Galvin, Silberschatz, Gagne, Operating System Concepts, Wiley India, 9th edition, 2015.
2. Stallings, Operating Systems: Internals and Design Principles, Pearson education, 7th edition 2013.

Reference Books:

1. Andrew S. Tanenbaum, Modern Operating Systems - Prentice-Hall, Inc., 4th edition, 2015.
2. Deitel, Operating Systems, Pearson Education , 3rd edition, (2012 reprint).

CS-19.305 **Logic in Computer Science** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS-19.201(Discrete Structures)

Objective(s):

- To introduce the main notions of mathematical logic: logical notations (syntax) and how to assign meaning to them (semantics).
- To study formal frameworks (in the sense of being rigorous as well as in the sense of manipulating "form") for constructing logical arguments (proof theory).
- To study some deductive systems for propositional and first-order logic.
- To introduce the concept of fuzzy logic.

1. **Introduction:** Role of logic in computer science, problem representation, review of the principle of mathematical induction, the principle of structural induction, review of Boolean algebra, language, models, interpretations, validity, proof, decision problems in logic, decidability. [6]
2. **Propositional Logic:** Syntax, semantics, propositional logic as a formal language, natural deduction, normal forms, propositional satisfiability, propositional resolution and tableaux method. [10]
3. **Predicate Logic:** Predicate logic as a formal language, semantics of predicate logic, validity and satisfiability, forward and backward chaining, Skolmization, normal forms, unification, Horn formulas and programs, resolution. [12]
4. **Binary Decision Diagrams:** Representing Boolean functions, algorithms for reduced binary decision diagram (OBDD), reduce, apply, restrict, exists, symbolic model checking. [8]
5. **Fuzzy Logic:** Crisp sets and fuzzy sets, fuzzy membership, operations on fuzzy sets, fuzzy arithmetic, Cartesian product, fuzzy relations, fuzzy propositions, fuzzification and defuzzyfication, engineering applications of fuzzy logic. [4]

Outcome(s): On successful completion of this course, the students will be able to

- Use propositional and first-order logic.
- Apply of logic in specifying properties.
- Develop proof by induction.
- Design binary decision diagrams.
- Identify the scope for fuzzy logic.

Text Books:

1. Huth M and Ryan M, Logic in Computer Science: Modelling and Reasoning about Systems, Cambridge University Press, 2nd edition, 2004.
2. George J Klir and Bo Yuan, Fuzzy Sets and Fuzzy Logic – theory and applications, Prentice Hall, 2000.

Reference Books:

1. Arindama Singh, Logics for Computer Science, Prentice Hall of India, 1st edition, 2004.
2. M. Ben-Ari, Mathematical Logic for Computer Science, Springer, 2nd edition, 2003.
3. Rich E., and Knight K., Artificial Intelligence, Tata McGraw-Hill, 3rd edition, 2009.

CS-19.307 **Computer Graphics and Multimedia** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): MA 19.101 Mathematics-I

Objective(s):

- To understand the basics of various inputs and output computer graphics hardware devices
- To understand an in-depth exploration of fundamental concepts in 2D and 3D computer graphics.
- To study 2D raster graphics techniques, 3D modeling, geometric transformations, 3D viewing and rendering.

1. **Introduction:** Types of computer graphics, Graphic Displays Random scan displays, Raster scan displays, Frame buffer and video controller, Points and lines, Line drawing algorithms, Circle generating algorithms. [8]
2. **Transformations:** Basic transformation, Matrix representations and homogenous coordinates, Composite transformations, Reflections and shearing. [8]
   Windowing and Clipping: Viewing pipeline, Viewing transformations, 2-D Clipping algorithms- Line clipping algorithms such as Cohen Sutherland line clipping algorithm, Liang Barsky algorithm, Line clipping against non-rectangular clip windows; Polygon clipping – Sutherland Hodgeman polygon clipping, Weiler and Atherton polygon clipping, Curve clipping, Text clipping
3. **Three Dimensional:** 3-D geometric primitives, 3-D Object representation, 3-D Transformation, 3-D viewing, projections, 3-D Clipping [8]
4. **Curves and Surfaces:** Quadric surfaces, Spheres, Ellipsoid, Blobby objects, Introductory concepts of Spline, Bspline and Bezier curves and surfaces. Back Face Detection algorithm, Depth buffer method, A- buffer method, Scan line method, basic illumination models– Ambient light, 08 Diffuse reflection, Specular reflection and Phong model. [8]
5. **Multimedia :** Overview, applications, multimedia hardware, multimedia authoring tools, audio format, digital video format, compression techniques JPG, MPEG, basic animation concepts. [8]

Outcome(s): On successful completion of this course, the students will be able to

- To understand the various computer graphics hardware and display technologies.
- 2D and 3D viewing technologies
- Various 2D and 3D objects transformation techniques

Text Books:

1. D.Hearn And P.Baker, Computer Graphics, - Pearson Education -
2. Vaughan T. , Multimedia making it work, TMH 3rd Edition 2002.

Reference Books:

1. Rogers D, Procedural elements for computer graphics, TMH, 2nd Edition 1997.
2. Rogers D, Mathematical elements for computer graphics, TMH, 2nd Edition 2002
3. Mukherjee, Fundamentals of Computer graphics & Multimedia, PHI 3rd Edition 2010.

CS-19.351 **DAA Laboratory** **Total Hrs: 26**

Credit: 0-0-2-1

Prerequisite(s): CS 19.253 (Data Structure Laboratory)

Objective(s):

- To analyze the asymptotic performance/Time complexity of algorithms.
- To demonstrate familiarity with major algorithms and data structures.
- To apply important algorithmic design paradigms, techniques and methods for the solution of real life problems.
- To synthesize efficient algorithms in common engineering design situations.

Contents: Lab manual based upon the theory course CS 14.301 and to achieve the listed course objectives and outcomes.

- To implement and analyze sorting algorithms Insertion, Quick and Merge Sort
- To implement optimal binary search tree
- To implement greedy algorithms Knapsack problem
- To implement Dikshtra and Warshall's Algorithm
- To implement Bellman Ford Algorithm
- To implement DFS and BFS

Outcome(s): On successful completion of this course, the students will be able to

- Understand and analyze the time complexities of sorting algorithms
- Understand and analyze Graph algorithms
- Understand and analyze the DFS and BFS algorithms

CS-19.357 **Computer Graphics and Multimedia Lab** **Total Hours:26**

Credit: 0-0-2-1

Prerequisite(s): CS 14.253(Data Structure Laboratory)

Objective(s):

- To introduce the use of the components of a graphics system and become familiar with building approach of graphics system components and algorithms related with them.
- To learn the basic principles of 3- dimensional computer graphics.
- Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition.

Contents: Lab manual based upon the theory course CS 14.301 and to achieve the listed course objectives and outcomes.

- To implement DDA Brenham's algorithms for line, circle and ellipse drawing
- To implement Mid-Point Circle algorithm.
- To implement Mid-Point Ellipse algorithm
- To perform 2D Transformations such as translation, rotation, scaling, reflection and sharing.
- To implement Cohen–Sutherland 2D clipping and window–viewport mapping.
- To implement Liang Barksy Line Clipping Algorithm.
- To perform 3D Transformations such as translation, rotation and scaling.
- To create motion tween of object and shapes, using a guide layer in Macromedia Flash

Outcome(s): On successful completion of this course, the students will be able to

- To implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
- To describe the importance of viewing and projections.
- To define the fundamentals of animation, virtual reality and its related technologies.

CS-19.302 **Software Engineering** **Total Lectures:40**

Prerequisite(s): CS-19.101 (Programming Language) **Credit:3-0-0-3**

Objective(s):
- To understand the basic software engineering approaches, software development process models, project planning, software size estimation, software effort and cost estimation and risk management.
- To know about software requirements specification, requirement elicitation, structured system analysis and introduction of object-oriented analysis and design, design techniques.
- To acquire knowledge on implementation issues such as modularity and coding standards.

1. **Introduction:** Programs versus software products, software crisis, need for software engineering, attributes of effective software, software myths, software characteristics, and role of management in software development, overview of quality standards like ISO 9001, SEI-CMM. [6]
2. **Software Processes and Requirement Analysis:** Software engineering: a layered technology, the software process, software process models, component based development, problem analysis, requirement engineering, requirement elicitation, requirement analysis, software requirement and specifications, data flow diagrams, data dictionaries, entity-relationship diagrams. [8]
3. **Software Project Planning:** Responsibilities & skills of a project manager, project planning, and project size estimation: LOC, function point & feature point metric, project estimation techniques, COCOMO model, staffing level estimation, scheduling, risk management, software configuration management. [9]
4. **Software Design:** The design process, design principles, design concepts, effective modular design: cohesion & coupling, classification of cohesiveness & coupling, design notations, design techniques, structure charts, introduction to object-oriented design. [8]
5. **Coding and Testing:** Software testing fundamentals, test case design, white box testing:-basis path testing, control structure testing, black box testing: boundary value analysis, equivalence class testing, decision table testing, cause effect graphing, level of testing, debugging, testing tools &standards, testing for client/server architecture, real time systems and GUIs testing. Brief of software re-use, reverse engineering, software re-engineering, agile software engineering. [9]

Outcome(s):

On successful completion of this course, students will be able to
- Demonstrate knowledge of the distinction between critical and non-critical systems and ability to manage a project including planning, scheduling and risk assessment/management.
- Author a software requirements document and understanding of the proper contents of a software requirements document.

Text Books:
1. R. S. Pressman, Software Engineering – A practitioner's approach,Tata-McGraw- Hill Int. Ed., 8th edition, 2014.
2. K. K. Aggarwal, Yogesh Singh, Software Engineering, New Age International, 1st edition, 2008.

Reference Books:
1. Pankaj Jalote, An Integrated Approach to Software Engineering, Narosa Publisher, 3rdedition, 2005.
2. Rajib Mall, Fundamentals of Software Engineering, Prentice-Hall, 2ndedition, 2004.
3. Robert C. Martin, Agile Software Development, Principles, Patterns and Practices, 1st edition, 2002.

CS-19.304 **Compiler Design** **Total Lectures:40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.206 (Theory of Computation)

Objective(s):

- To introduce the major conceptual areas of language translation and compiler design.
- To enrich the knowledge in various phases of compiler, code optimization techniques
- To extend the knowledge of different parsers.
- To provide practical programming skills necessary for construction of a compiler.

1. **Introduction:** Introduction of compiler, compiler structure: analysis-synthesis model of compilation, various phases of a compiler, Symbol table: Role and data structure used for symbols tables . Lexical Analysis: Input buffering, specification & recognition of tokens, error detection & recovery . [8]
2. **Syntax Analysis & Syntax Directed Translation:** Syntax analysis: CFGs, top down parsing, Brute force approach, recursive descent parsing, transformation on the grammars, predictive parsing, bottom up parsing, operator precedence parsing, LR parsers (SLR, LALR, LR), parser generation error detection & recovery. [9]
3. **Syntax Directed Definition**: Construction of syntax trees, bottom up evaluation, S-attribute definition, L-attribute definition, top down translation, bottom up evaluation of inherited attributes, recursive evaluation, analysis of syntax directed definition. [8]
4. **Intermediate Code Generation:** Intermediate code, postfix notation, parse trees & syntax trees, three address code, quadruple & triples, translation of assignment statements, Boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser, more about translation: array references in arithmetic expressions, procedures call, declarations, case statements. [8]
5. **Code Optimization & Code Generation:** Loop optimization, the DAG representation of basic blocks, flow graphs, global data-flow analysis, peephole optimization, generating code from DAG, register allocation and assignment. [7]

Outcome(s): On successful completion of this course, the students will be able to

- Use lexical analyzer and parser generator tools.
- Generate intermediate code.
- Be familiar with register allocation.
- Expose compiler code optimization.

Text Books:

1. A. V. Aho, R. Sethi, and J. D. Ullman. Compilers: Principles, Techniques and Tools, Pearson Education, 2nd edition, 2014.
2. Louden, Compiler Construction: Principles and Practice, Cengage Learning, 1st edition, 1997.

Reference Books:

1. Allen I. Holub, Compiler Design in C, Prentice-Hall Inc., 1st edition, 1994.
2. AW Appel, M Ginsburg, Modern Compiler Implementation in C, Cambridge University Press, 1st edition, 2004.
3. J. R. Levine, T. Mason, D. Brown, Lex and Yacc, O'Reilly, 2nd edition, 2000.

CS-19.306 **Computer Networks** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures)

Objective(s):

- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To construct large-scale computer networks
- To understand fundamentals of computer networks and major protocols.
- To analysis and evaluate major Internet protocols.
- To program simple network applications using socket API
- To learn and adopt newly introduced computer network technologies by themselves.

1. **Introduction:** History and development of computer networks, networks topologies, MANET, categories of networks, layering and protocols. [5]
2. **Physical and MAC Layer:** Different types of transmission media, transmission impairments, encoding schemes (NRZ, NRZI, Manchester, 4B/5B, Manchester etc.), packet and circuit switching. Aloha, CSMA/CA, CSMA/CD protocols, performance evaluation and characteristics. [8]
3. **Data Link Layer:** Framing concept, error detection (parity, CRC), sliding window, stop and wait protocols, stop performance and efficiency. IEEE 802.3, 802.4, 802.5, 802.11, performance evaluation. [10]
4. **Network Layer:** IPv4, IP address classes, classless addressing, IPv6, ARP, RARP, DHCP, ICMP, routing algorithms: distance vector, metrics, RIP, OSPF, BGP, congestion control algorithms, leaky bucket, token bucket. [8]
5. **Transport & Application Layer:** Duties of the transport layer, connection, TCP, TCP services, TCP header, UDP, evaluating protocol such as TCP/UDP using simulator like NS2. DNS, FTP, HTTP, SMTP, POP, basics of network security, cryptography, digital signature and firewall. [9]

Outcome(s): On successful completion of this course, students will be able to

- Analyze computer network component and devices.
- Synthesize how communication works in a network and internet.
- Formulate the concept of topologies and their applications.
- Analyze protocol at different layers and how they play important role in network implementation.

Text Books:

1. Tanenbaum A. S., Computer Networks, Prentice-Hall of India, 5th edition, 2010.
2. Forouzan B. A., Data Communications and Networking, Tata McGraw-Hill, 5th edition, 2013.

Reference Books:

1. Stallings W., Data and Computer Communications, Prentice-Hall of India, 10th edition, 2013.
2. Hayes J. F., Modeling and Analysis of Computer Communication Networks, Plenum Press, 1st edition, 1987.
3. Kurose and Ross, Computer Network: a top-down approach, Pearson 6th edition 2015.

CS-19.308 **Digital Image Processing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS-19.101 (Programming Language)

Objective(s):

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To study the image segmentation and representation techniques
- To study the image representation in form of features and descriptors

1. **Digital Image Fundamentals:** Elements of digital image processing systems, elements of visual perception, brightness, contrast, hue, saturation, mach band effect, color image fundamentals - RGB, HSI models, image sampling, quantization, dither, two-dimensional mathematical preliminaries, 2D transforms - DFT, DCT, KLT, SVD. [7]
2. **Image Enhancement and Restoration:** Histogram equalization and specification techniques, noise distributions, spatial averaging, directional smoothing, median, geometric mean, harmonic mean, contra harmonic mean filters, image restoration - degradation model, unconstrained restoration, inverse filtering, removal of blur caused by uniform linear motion. [7]
3. **Morphological Image Processing:** Basics, structuring element, erosion, dilation, opening, closing, hit-or-miss transform, boundary detection, hole filling, connected components, convex hull, thinning, thickening, skeletons, pruning, and reconstruction by dilation and erosion. [7]
4. **Image Segmentation:** Edge detection, edge linking via Hough transform, thresholding, region based segmentation, region growing, region splitting and merging, and segmentation by morphological watersheds, basic concepts, dam construction, and watershed segmentation algorithm. [7]
5. **Image Representation:** Boundary representation, chain code, polygonal approximation, signature, boundary segments, boundary description, shape number, Fourier descriptor, regional descriptors, and topological features. [6]
6. **Image Compression:**Need for data compression, Huffman, run length encoding, shift codes, arithmetic coding, vector quantization, transform coding, JPEG standard, MPEG. [6]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the basic algorithms used for image processing &image compression with morphological image processing.
- Apply image enhancement and restoration techniques.
- Use image compression and segmentation Techniques.
- Represent features of images.

Text Books:

1. Rafael C. Gonzales, Richard E. Woods, “Digital Image Processing”, Third Edition, Pearson Education, 2010.
2. Anil Jain K. “Fundamentals of Digital Image Processing”, PHI Learning Pvt. Ltd., 2011.

Reference Books:

1. Rafael C. Gonzalez, Richard E. Woods, Steven L. Eddins, “Digital Image Processing Using MATLAB”, Third Edition Tata Mc Graw Hill Pvt. Ltd., 2011.
2. William K Pratt, “Introduction to Digital Image Processing”, CRC Press, 13-Sep-2013.
3. Bernd Jähne, Digital Image Processing, Springer Science & Business Media, 29-Jun-2013.

CS 19.310 **Artificial Intelligence and Machine Learning** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.305 (Logic in Computer Science)

Objective(s):

- To understand the basic problem solving in Artificial Intelligence.
- To learn different blind as well as heuristic search strategies.
- To understand the various ways of knowledge representation in Artificial Intelligence.
- To know the concepts of machine learning.

1. **Overview of Artificial Intelligence:** Introduction to artificial intelligence and intelligent agents, brief history of artificial intelligence, related research fields, AI techniques, AI problems, applications and future of AI. [6]

2. **Problem Solving and Search Techniques:** Basics of problem solving, Problem representation paradigms, defining problem as a state space representation, uninformed search, depth first search, breadth first search, heuristic search, heuristic functions, generate and test, hill climbing, best first search, A* algorithm, problem reduction, AND/OR graph, AO* algorithm. [8]

3. **Knowledge Representation and Logic:** Representation and mappings, procedural versus declarative knowledge, approaches and issues in knowledge representation, first order logic, higher order logic, unification and resolution for performing logical inference, probabilistic logic. [8]

4. **Game Theory:** Minimax search, alpha-beta cutoffs, iterative deepening, references on specific games. [8]

5. **Machine Learning:** Components of learning, supervised learning, unsupervised learning, reinforcement learning, perceptron learning, support vector machines, KNN, learning decision trees, association rule mining, applications in game playing and robot control. [10]

Outcome(s): On successful completion of this course, students will be able to

- Solve the basic problems and apply searching techniques used in Artificial Intelligence.
- To select knowledge representations to solve AI problems.
- Apply various machine learning techniques.

Text Books:

1. Rich E., and Knight K., Artificial Intelligence, Tata McGraw-Hill, 3rd edition, 2009.
2. P. Flach, Machine Learning: The art and science of algorithms that make sense of data, Cambridge University Press, 2012.

Reference Books:

1. Patterson D. W., Introduction to Artificial Intelligence and Expert Systems, Prentice-Hall of India, 1st edition, 2015.
2. George F. Luger, Artificial Intelligence: Structures and Strategies for Complex Problem Solving, Pearson Education, 5th edition, 2009.
3. Russell S., and Norvig P., Artificial Intelligence – A Modern Approach, Prentice-Hall of India, 3rd edition, 2014.

CS-19.354 **Compiler Design Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): CS 19.151(Programming Language Lab.) CS 19.253(Data Structures Lab.)

Objective(s):

- To design and implement a lexical analyzer
- To design and implement a parser
- To design and implement symbol tables
- To understand and design code generation schemes
- To learn the working of some compiler writing tools

Contents:

- To study the Flex environment
- Implementation of Simple Programs using FLEX
- To illustrate the concept of Special Directives in FLEX
- Illustrate the special functions like yymore(), yyless(), unput(), input(), yyterminate(), yyflush buffer
- To implement the Lexical Analyser using FLEX
- To implement syntax analysis programs such as string check, identifier, integer, converting and evaluation of postfix, infix expressions in YACC
- To demonstrate symbol table implementation in YACC and FLEX
- Implementation of intermediate code generation.

Outcome(s): On successful completion of this course, the students will be able to

- Understand the peculiarities of a language translator
- Get the practical approach of how a compiler works
- Work in the development phase of new computer languages in industry
- Understand the working of compiler construction tools
- Visualize and design a new compiler of her own language

CS-19.356 **Computer Network Laboratory** **Credit: 0-0-2-1**

Prerequisite(s): CS 19.101 (Programming Language Lab.), CS 14.253(Data Structures Lab.)

Objective(s):

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming

Contents:

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming
- To demonstrate sending a UDP packet and TCP

Outcome(s): On successful completion of this course, students will be able

- To know how communication works at different layers of TCP/IP model
- To understand practically the purpose of various key protocol.
- To learn how a network can be efficiently deployed.
- To identify and analyze the latest technology with existing one.
- To configure network with client/server programming
- To understand computer network component and devices.

CS-19.358 **Digital Image Processing Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): CS 19.151 (Programming Language Lab.),

Objective(s): The aim of this course is to familiarize students with the implementation in Matlab of the basic techniques for handling images and developing algorithms for image processing (quality enhancement, restoration, coding, compression).

Contents:

- Introduction to MATLAB
- Implementation of Image Transformation Fourier, DCT etc.
- Implantation of Fourier Transformation properties
- Implementation of Image Enhancement operations.
- Implementation of image degradation and restoration methods
- Implementation of image segmentation and morphological operations.

Outcome(s): On successful completion of this course, students will be able

- Learn basic image processing techniques for solving real problems.
- Student will also have sufficient expertise in both the theory of two-dimensional signal processing and its wide range of applications, for example, image restoration, image compression, and image analysis.

CS 19.411 **Data Mining and Warehousing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.204 (Database Management System), CS 19.301 (Design and Analysis of Algorithms), MA 19.202 (Statistics and Probability Theory)

Objective(s):

- Understand the functionality of the various data mining and data warehousing components.
- Appreciate the strengths and limitations of various data mining and data warehousing models.
- Compare the various approaches to data warehousing and data mining implementations
- Describe and utilize a range of techniques for designing data warehousing and data mining systems for real-world applications.

1	**Overview:** Evolution of the database system technology, concept of data mining and warehousing, data warehouse roles and structures, cost of warehousing data, approaches to data exploration and data mining, foundations of data mining, web warehousing, introduction to knowledge management and knowledge bases.	[6]
2	**Data Mining and Data Visualization:** Data mining general approach, classification and clustering, introduction to DM tool (Weka, RapidMiner), techniques used to mine the data, current limitations and challenges to DM, data visualization, visualization tools.	[10]
3	**Data Preprocessing:** Overview, data cleaning, data integration, data reduction strategies, principal component analysis, sampling, histograms, clustering, data cube aggregation, data transformation and discretization.	[8]
4	**Text Mining:** Information retrieval and search, text classification, text clustering, unsupervised learning, mining frequent patterns and correlations, classification concepts, backpropagation, decision tree induction, rule-based classification, clustering basic concepts and methods, K-means centroid-based technique.	[8]
5	**Data Warehouse:** Overview of data warehousing, data marts, data warehouse architecture, multidimensional data model, online analytical processing (OLAP), OLAP operations, data about data - metadata.	[8]

Outcome(s): On successful completion of this course, students will be able to

- Identify, formulate, and solve data science related problems by applying principles of the course.
- Understand both analysis and synthesis in the design process with the help of data mining and data warehousing tools.
- Develop and conduct appropriate experiments, analyze and interpret data, and use data visualization to draw conclusions.
- Function effectively on teams that establish goals, plan tasks, meet deadlines, and analyze risk and uncertainty.

Text Books:

1. George M Marakas, Modern Data Warehousing, Mining and Visualization, Pearson Education, 1st edition, 2002.
2. Mattison R., Web Warehousing and Knowledge Management, Tata McGraw-Hill, 1st edition, 1999.

Reference Books:

1. W.H. Inmon, Buildingthe, Data Warehouse, Wiley Publishing Inc., 3rdedition, 2005.
2. Anahory and Murray, Data Warehousing in the Real World, Pearson Education/Addison Wesley, 1st edition, 1997.
3. Prabhu C.S.R., Data Warehousing, Prentice-Hall of India, 2ndedition, 2002.

CS 19.412 **Big Data and Unstructured Databases** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.204 (Database Management System)

Objective(s): To understand fundamental concept of Big Data and its application in various fields

1	**Data and its Classifications**: Data, information, knowledge and wisdom, digital and analog data, unstructured data, semi-structured data, structured data, sources of data, dealing with unstructured data, data science and responsibilities of data scientists.	[6]
2	**Introduction to Big Data**: Big data, characteristics of big data (volume, velocity, variety), challenges with big data, applications of big data in healthcare, agriculture, education, scientific experiments, advertising, stock market etc., integrity and privacy of big data, big data and cloud computing, big data and IoT.	[8]
3	**Classification of Analytics:** Descriptive, diagnostic, discovery, prescriptive and predictive analytics, big data analytics, semantic analytics, in-memory analytics, analytics and decision making, shared nothing architecture, CAP theorem, parallel and distributed system, massively parallel processing.	[10]
4	**Hadoop and its Architecture**: RDBMS and Hadoop, master slave architecture, HDFS, name node, secondary name node, data node, HDFS client, replica placement strategy, MapReduce, job tracker, task tracker, map phase, reduce phase, shuffle phase, Hadoop 1.0 and Hadoop 2.0, YARN, Installation of Hadoop in pseudo distributed mode and full distributed mode.	[10]
5	**NoSQL Databases**: NoSQL, database scaling, CAP theorem, ACID versus BASE, key-value stores, column-oriented databases, document databases, graph databases, NoSQL challenges.	[6]

Outcome(s): On successful completion of this course, students will be able to

- Apply knowledge of Big Data to solve real life problems in various areas of social importance

Text Books:

1. Seema Acharya, Subhashini Chellapan, “Big Data and Analytics”, Wiley, ISBN:978-81-265-5478-2, 2015
2. Vincenzo Morabito, "Big Data and Analytics: Strategic and Organizational Impacts", Springer, 2015

2. EMC Education Services, “Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data”, John Wiley & Sons, 05-Jan-2015, ISBN: 978-1-118-87613-8
3. Tom White, “Hadoop: The Definitive Guide”, O’Reilly Media, 2012, ISBN: 978-1-449-38973-4

CS 19.413 **Distributed Databases** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.204 (Database Management System)

Objective(s):

- To build on the previous background of database systems by deepening the understanding of the theoretical and practical aspects of the database technologies, showing the need for distributed database technology.
- To introduce the concept and techniques of distributed database including principles, architectures, design, implementation and major domain of application.

1	**Overview:** Features of distributed versus centralized databases, levels of distributed transparency, types of data fragmentation, distributed database access primitives, integrity constraints in distributed databases.	[6]
2	**Distributed Database Design:** A framework for distributed database design, the design of database fragmentation, allocation of fragments, translation of global queries to fragment queries, parametric queries, a framework for query optimization.	[10]
3	**Management of Distributed Transactions:** A framework for transaction management, supporting atomicity of distributed transactions, concurrency control for distributed transactions, architectural aspects of distributed transactions.	[8]
4	**Concurrency Control:** Foundations of distributed concurrency control, distributed deadlocks, concurrency control based on timestamps, basic concepts of reliability, reliability and concurrency control, determining a constant view of the network, checkpoints and cold restart.	[8]
5	**Distributed Database Administration:** Catalog management in distributed databases, authorization and protection, SDD-1 a system for distributed databases, the R* project	[8]

Outcome(s): On successful completion of this course, students will be able to

- Identify the introductory distributed database concepts and its structures.
- Describe terms related to distributed object database design and management.
- Produce the transaction management and query processing techniques in DDBMS.
- Relate the importance and application of emerging database technology.

Text Books:

1. Stefano Ceri and Giuseppe Pelagatti, “Distributed Databases Principles and Systems”, McGraw-Hill, 2013

Reference Books:

1. M Tamar Ozsu and Patrick Valduriez, “Principles of Distributed Database Systems”, Pearson Education, 2011
2. Chanda Ray, “Distributed Database Systems”, Pearson Education, 2009

CS 19.414 **Advanced RDBMS** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.204 (Database Management System)

Objective(s):

- To develop an understanding of the manner in which relational systems are implemented and the implications of the techniques of implementation for database performance.
- To assess the impact of emerging database standards on the facilities which future database management systems will provide

1	**Object and Object-Relational Databases:** Overview of object database concepts, object-relational features, ODMG and ODL, the object query language.	[4]
2	**Extensible Markup Language (XML):** Structured, semi-structured and unstructured data, XML hierarchical data model, XML documents, DTD, XML schema, sorting and extracting XML documents from databases, XML languages, extracting XML documents from relational databases.	[6]
3	**Query Processing and Optimization:** Translating SQL queries into relational algebra, algorithms for external sorting, SELECT, JOIN, PROJECT and set operations, combining operations using pipelining, using heuristics in query optimization, physical database design in relational databases, an overview of database tuning in relational systems.	[10]
4	**Concurrency Control Techniques:** Two-phase locking techniques for concurrency control, concurrency control based on timestamp ordering, multi-version concurrency control techniques, validation concurrency control techniques, granularity of data items and multiple granularity locking, using locks for concurrency control in indexes.	[8]
5	**Database Recovery and Security:** Recovery concepts, NO-UNDO/REDO recovery based on deferred update, recovery techniques based on immediate update, shadow paging, ARIES, recovery in multi database systems, database security issues, access control based on granting and revoking privileges, mandatory access control and role-based access control, SQL injection, encryption and public key infrastructures, privacy issues and preservation, challenges of database security.	[12]

Outcome(s): On successful completion of this course, students will be able to

- Critically assess new developments in database technology
- Interpret and explain the impact of emerging database standards
- Evaluate the contribution of database theory to practical implementations of database management systems.

Text Books:

1. Ramez Elmasri and S B Navathe, "Fundamentals of Database Systems", 6th ed, Addison-Wesley, 2010

1. C J Date, "An Introduction to Database Systems", Pearson Education, 2001
2. Ivan Bayross, "SQL, PL/SQL: The Programming Language of ORACLE", 2nd ed, BPB, 1998

CS 19.415 **Machine Learning with Big Data** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.411 (Data Mining and Warehousing)

Objective(s): To learn the fundamental concept of machine learning and apply the concept of recommendations, clustering and classifications on large scale data sets using mahout.

1	**Introduction**: learning problems, designing learning system, perspectives and issues, concept learning, version spaces and candidate elimination algorithm, inductive bias, decision tree learning, representation, heuristic space search	[8]
2	**Data Mining, Machine Learning:** Data mining, machine learning, statistical modeling, feature extraction, computational approaches to modeling, statistical limits on data mining, statistical limits on data mining, Bonferroni's principle, recommendation engines, clustering and classifications, mahout: Mahout, installation and setting up of Mahout, tackling large scale data with mahout and Hadoop	[8]
3	**Recommendations:** Defining recommendation, running a recommender engine, evaluating a recommender, evaluating precision and recall, evaluating the GroupLens data set, representing preference data, in-memory data models, coping without preference values, user-based recommendation, item-based recommendation, similarity metrics, slope-one recommender, distributing recommendation computations	[8]
4	**Clustering**: Clustering basics, measuring the similarity of items, running a simple clustering example, distance measures, representing data, visualizing vectors, representing text documents as vectors, generating vectors from documents, clustering algorithms in Mahout, k-means clustering, different kinds of clustering problems, fuzzy k-means clustering, model-based clustering, evaluating and improving clustering quality, real-world applications of clustering	[8]
5	**Classifications**: Introduction to classification, Mahout for classification, differences between classification, recommendation, and clustering, applications of classification, working of classification, training a classifier, extracting features to build a Mahout classifier, preprocessing raw data into classifiable data, converting classifiable data into vectors, evaluating and tuning a classifier, deploying a classifier	[8]

Outcome(s): Students would be able to apply learning and knowledge of machine learning techniques in the area of Big Data Analytics using Mahout to solve real life problems.

Text Books:

CS 19.421 **Microprocessor and Assembly Language** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): (Basics of Electronics Engineering), (Digital Electronics)

Objective(s):

- To study architecture and memory management of 8-bit and 16-bit microprocessor (8085 & 8086)
- To study assembly language programming and use it to solve various problems.

1	**Introduction:** Evolution of Microprocessor and its types, 8085 microprocessor architecture, buses, registers, flags, 8085 pin configuration & function.	[6]
2	**8085 Instruction Set:** Addressing modes of 8085, 8085 instruction set, data transfer arithmetic, logical and branch instructions, 8085 interrupt structure, limitations of 8085 microprocessor.	[8]
3	**Interfacing:** Memory mapped I/O, I/O mapped I/O, address decoding, interfacing of memory with 8085, interfacing of I/O with 8085.	[8]
4	**Advance Microprocessors:** 8086 microprocessor architecture, 8086 pin configuration & function, addressing modes of 8086, instruction set of 8086, 8086 interrupts, study of advance processors of the family (8088, 80286, 80386, 80486 and Pentium).	[10]
5	**Assembly Language Programming:** Introduction, assembler directives, looping, condition and jump, subroutines, procedures, macros, parameter passing.	[8]

Outcome(s): On successful completion of this course, students will be able to:

- Draw block diagram of 8085/86 processor and know the pin function
- Know the instruction set and addressing modes
- Write the assembly language program for different problems and know the use of procedures and macros.
- Design interface of memory chips.

Text Books:

2. Ray A K and Bhurchandi K M, "Advanced Microprocessor and Peripherals Architecture, Programming and Interfacing", Tata Mc-Graw Hill, 2006
3. Chhabra, "The Intel 8086/8088 microprocessor architecture programming design & interfacing", Dhanpat Rai Publication

CS 19.422 **Microcontroller and Interfacing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): (Digital Electronics), CS 19.208 (Computer Organization and Architecture)

Objective(s): To learn design and interfacing of microcontroller-based systems.

Covers fundamentals and architecture of the 8051 microcontroller and various interfacings.

1	**Microcontroller:** Types of microcontrollers, examples of popular microcontrollers, selection of a microcontroller, architecture of a microcontroller, family members, microcontroller resources.	[6]
2	**Intel 8051/8031 Family:** 8051 microcontroller, internal and external memories, counters and timers, synchronous serial-cum-asynchronous serial communication, USART interface in Intel 8051, interrupts.	[6]
3	**8051 Family Microcontroller Instruction Set:** Basic assembly language programming, data transfer instructions, data and bit manipulation instructions, arithmetic instructions, instructions for logical operations, program flow control instructions, interrupt control flow instructions.	[10]
4	**Peripherals and Interfacing:** Serial IO USART communication interface 8251, parallel IO port interface 8255, programmable DMA controller 8257, programmable interrupt controller 8259, ADC circuit interfacing, DAC circuit interfacing.	[10]
5	**Digital and Analog Interfacing:** Switch, keypad and keyboard interfacings, LED and LED array, keyboard-cum-display controller 8279, printer interfaces, programmable instruments interface using IEEE 488 GPIB bus, interfacing with flash memory. Analog input interfacing, analog output interfacing.	[8]

Outcome(s): On successful completion of this course, students will be able to:

- Program, build and test a microcontroller system.
- Interface a microcontroller system to user controls and other electronic system.

Text Books:

1. Raj Kamal, "Microcontrollers: Architecture, Programming, Interfacing and System Design", Pearson Education, 2009

Reference Books:

EC 19.416 **Communication Engineering** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): (Digital Electronics), MA 19.202 (Statistics and Probability Theory)

Objective(s):
- To develop a fundamental understanding on communication systems with emphasis on analog modulation techniques
- To appreciate the mathematical concepts that form the foundations of analog and digital communication

1	**Linear Modulation Techniques:** Basic blocks of communication systems, review of signals and systems, linear modulation, time domain and frequency domain description of AM (DSB-FC), DSB-SC, SSB and VSB signals, generation and detection of linear modulation techniques, super-heterodyne receivers and design.	[12]
2	**Angular Modulation Techniques:** Basic concepts, frequency modulation spectrum analysis of FM wave, generation and detection of narrow band and wide band frequency modulation, phase modulation, FM detection techniques-phase locked loops, commercial broadcasting systems.	[8]
3	**Sources of Noise and their Characterization:** Random variables, random process and their characterization, noise in analog communication system, SNR calculations for synchronous detection of DSB and SSB and envelope detection of AM, SNR calculations for angle modulation system, pre-emphasis and de-emphasis, threshold effect in angle modulation.	[8]
4	**Sampling and Pulse Modulation:** Sampling theorem – ideal and natural sampling and reconstruction, pulse-amplitude modulation, pulse-time modulation.	[5]
5	**Digital Communication Techniques:** Sampling theorem and techniques, uniform and non-uniform quantization techniques, PCM, DPCM, DM, and ADM, compression standards.	[7]

Outcome(s): On successful completion of this course, students will be able to:

- Apply the basic knowledge of signals and systems and understand the basics of communication system and analog modulation techniques.
- Evaluate the communication system performance in the presence of noise and summarize the merits and demerits of all the conventional analog modulation system.

Text Books:
1. B P Lathi and Zhi Ding, "Modern Digital and Analog Communication Systems", Oxford university press, 4th Edition
2. S. Haykins, "Communication Systems" (4/e), Wiley

Reference Books:
1. Kennedy, Davis, "Electronic Communication Systems" (4/e), McGraw Hill.
2. P K Ghosh, "Principles of Analog and Digital Communication", Orient Black Swan Publishers Pvt. Ltd., 1st Edition

CS 19.424 **Embedded Systems** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.421 (Microprocessor and Assembly Language), CS 19.422 (Microcontroller and Interfacing)

Objective(s): To develop knowledge about the basic functions of embedded systems.

To develop the ability to write programs in embedded C.

1	**Introduction to Embedded Systems:** Embedded systems, processor embedded into a system, embedded hardware units and devices in a system, embedded software in a system, examples of embedded systems, embedded System-on-Chip (SoC) and use of VLSI circuit design technology, classification of embedded systems.	[8]
2	**Devices and Communication Buses:** IO types and examples, serial communication devices, parallel device ports, wireless devices, timer and counting devices, watchdog timer, real time clock, networked embedded systems, serial bus communication protocols, parallel bus device protocols, Internet enabled systems, wireless and mobile system protocols.	[8]
3	**Device Drivers and Interrupts Service Mechanism:** ISR concept, interrupt sources, interrupt service mechanism, multiple interrupts, context and the periods for context switching, interrupt latency and deadline, classification of processor interrupt service mechanism, direct memory access, device driver programming.	[8]
4	**Embedded Programming:** Software programming in assembly language and in high-level language C, programming basics in embedded C, embedded programming in C++, embedded programming in Java, UML modeling.	[8]
5	**Real Time Systems:** OS services, process management, timer functions, event functions, memory management, real time operating systems (RTOS), interrupt routines in RTOS, RTOS task scheduling, RTOS security issues, case study of RTOS: Windows CE, OSEK and RTLinux.	[8]

Outcome(s): On successful completion of this course, students will be able to:

- Understand and design embedded systems and real-time systems.
- Identify the unique characteristics of real-time system.
- Define the design problems and challenges of real-time system.

Text Books:

1. Raj Kamal, "Embedded Systems: Architecture, Programming and Design", 2nd ed, Tata McGraw Hill, 2008
2. Michael J Pont, "Embedded C", Pearson Education, 2007

Reference Books:

1. David E Simon, "An Embedded Software Primer", Pearson Education
2. M A Mazidi, "The 8051 Microcontroller & Embedded Systems", Pearson Education

EC 19.421 **System Design using HDL** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), Digital Electronics

Objective(s):

- To acquire fundamental knowledge of designing of digital systems using VHDL.
- Students will acquire practical working knowledge of creating digital circuits using commercial Computer-Aided-Design (CAD) tools.

1	**Programmable Logic Design:** ASIC, ROM, PLA, PAL, CPLD and FPGA.	[3]
2	**VHDL Based Design and fundamentals:** An overview of VHDL, role of VHDL in system design, introduction to CAD tools for system design, introduction to Xilinx IDE software, entity and architecture declaration, introduction to behavioural, dataflow and structural models, package, package declarations and package body.	[9]
3	**Basic Elements of VHDL:** Data objects – constant, variable and signal, data types – scalar and composite, predefined operators – logical, relational, shift, adding and multiplying, overloading – literal and operator.	[4]
4	**VHDL Statements:** Process, variable assignment, signal assignment, sequential statements, conditional statements, loop, if, case, next statements, assertion and report statements, signal drivers and signal assignment statements, conditional signal assignments, select and generic, subprograms: application of functions and procedures, overloading and signal assignments, component declaration, component instantiation.	[10]
5	**Combinational and Sequential Circuit Design:** VHDL models of combinational circuits such as adder, multiplexer, de-multiplexer, encoder, decoder, code converters, comparators, parity generators, multipliers and implementation of Boolean functions, VHDL models of sequential such as edge triggered D flip flop, T flip flop and J K flip flop, serial in serial out register, serial in parallel out register, parallel in parallel out register, counter, memory, ALU.	[14]

Outcome(s): On successful completion of this course, students will be able to:

- Identify, formulate, and solve engineering problems
- To use the technique, skills, and modern engineering tools necessary for engineering practice.

Text Books:

1. J. Bhaskar, VHDL Primer, Pearson Education Asia, 3rd Ed
2. Douglas L. Perry, VHDL Programming by Examples, Tata McGraw Hill, 4th Ed.

Reference Books:

1. Digital Design: Principles and Practices by John F. Wakerly
2. Beginner's guide to VHDL by Peter J. Ashenden

CS 19.431 **Advanced Java** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s): This course extends the study of Web Programming Fundamentals. Advanced concepts of program design, implementation and testing will be introduced with J2EE framework. Student will learn various concept of advance Java for implementation of small to medium sized application programs that illustrate professionally acceptable coding and performance standards.

1	**Introduction:** OOPS principle, class and objects, basics of HTML, web development introduction, web framework, J2EE building blocks, web application structure	[4]
2	**Servlets:** Servlet needs, servlet request-response model, servlet life cycle (init, service, doGet, doPost), servlet configuration, scopes (session, request, page), servlet parameters, servlet context, forms processing (get, post), HTTP header processing, HTTP responses.	[10]
3	**Java Server Pages**: JSP life cycle, JSP a servlet, creating dynamic content with use of JSP elements: expressions, scriptlets & declarations, JSP composition, redirecting, forwarding, accessing default objects (request, response, session, application, config, pageContext), error processing with use of JSP, Servlets vs. JSP pages	[10]
4	**Session management**: Http session, the Http session interface session tracking: cookies, hidden fields, cookies and JSP, sending and receiving cookies.	[6]
5	**Using Beans and tag libraries**: Separating presentation and business logic, JSP actions, JavaBeans, working with properties, <jsp:useBean>, <jsp:getProperty> and <jsp:setProperty>,using form parameters with Beans, custom tags, types of tags.	[10]

Outcome(s): Upon successful completion of this course you should be able to:

- Demonstrate knowledge of the advance Java along with object oriented development process and apply this understanding to the analysis and design of solutions for small to medium scale problems.
- Implement web application using all the feature of J2EE covered in the course.

Text Books:

1. Phillip Hanna, Osborne, "JSP 2.0: The Complete Reference", 2nd ed, McGraw-Hill,2003.
2. Martin Bond, Debbie Law, Andy Longshaw, Dan Haywood, Peter Roxburgh, "SAMS Teach Yourself J2EE in 21 Days", 2nd ed, SAMS, 2004.

Reference Books:

1. Bryan Basham, Kathy Sierra & Bert Bets, Head First Servlets and JSP, 2nd Edition, , Oreilly publication, 2008.

CS 19.432 **Web Development with PHP** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.205 (General Purpose Programming), CS 19.202 (Object Oriented Programming)

Objective(s): Build dynamic Web applications. Semantics and syntax of the PHP language, including discussion on the practical problems that PHP solves. Write server-side cross-platform HTML-embedded scripts to implement dynamic Web pages that interact with databases and files.

1	**Introduction:** Introduction to PHP, storing and retrieving data, using arrays, string manipulation and regular expressions, reusing code and writing functions,	[8]
2	**MySQL:** Designing and creating web database, accessing MySQL database from web with PHP, advanced MySQL.	[6]
3	**E-Commerce and Security:** Running an E-Commerce site, E-Commerce security issues, implementing authentication with PHP and MySQL.	[10]
4	**Advanced PHP Techniques:** Interacting with file system and server, using network and protocol functions, managing date and time, generating images, using session control in PHP	[6]
5	**Building Practical PHP and MySQL projects:** Applying software engineering for web development, debugging, building user authentication and personalization, building a shopping cart, building web forms, generating personalized documents in PDF.	[8]

Outcome(s): After Successful completion of this course student will be able to:

- Write PHP scripts to handle HTML forms
- Write regular expressions including modifiers, operators, and meta-characters.
- Create PHP programs that use various PHP library functions, and that manipulate files and directories
- Analyze and solve various database tasks using the PHP language
- Analyze and solve common Web application tasks by writing PHP programs

Text Books:

1. Luke Welling and Laura Thomson, PHP and MySQL Web Development, Addison Wesley, 5th edition, 2017.

Reference Books:

1. Adrian W. West, Practical PHP and MySQL Website Databases, Apress, 4th edition, 2017.

CS 19.441 **Shell Programming** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s):

- To familiarize students with the Unix/Linux environment
- To learn the fundamentals of shell scripting/programming
- To familiarize students with basic Unix/Linux administration

1	**UNIX-Basic Concepts:** Introduction, file systems, visual editors, Unix philosophy and features, understanding the Unix commands and general-purpose utilities and navigating the file system, the shell and kernel.	[8]
2	**UNIX-Advanced Features:** File and directory structures, file systems and peripheral devices, handling ordinary files, file attributes. UNIX system administration, data blocks and i-nodes.	[8]
3	**Unix Editors and Filters:** Vi Editor, simple filters, regular expression and grep family, advanced filters: sed and awk, awk pattern scanning and processing, awk arithmetic, operators and variables.	[8]
4	**Shell Fundamentals:** Command syntax, Shell variables, pattern matching, escaping, command substitution, input /output redirection, pipes, tees,	[6]
5	**Shell Scripting:** Bourne shell, C shell; scripts, meta characters and environment, shell programming and scripts, logical operators, control and looping statements and programs. Shell reliability, maintainability, efficiency, portability and usability.	[10]

Outcome(s): After completion of the course students will be able to

- Work confidently in Unix/Linux environment
- Write shell scripts to automate various tasks
- Master the basics of Unix/Linux administration
- Understand the basic difference between high level programming and shell programming

Text Books:

1. Sumitabha Das, "UNIX", Tata McGraw-Hill, 4th ed, 2011.
2. Cameron Newham, "Learning the bash Shell: Unix Shell Programming", 3rd ed, O'Reilly Media, 2009.

Reference Books:

1. Bill Rosenblatt, "Learning the Korn Shell", O'Reilly Media, 2002.
2. Mark G. Sobell, "A practical guide to Linux commands, editors, and shell programming", 2nd ed, Prentice Hall, 2013.

CS 19.442 **System Programming** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures), CS 19.208 (Computer Organization and Architecture), CS 19.303 (Operating System)

Objective(s): To develop the student the habit of thorough testing and become comfortable in using debugging tools.

To develop software systems that demonstrate the importance of networking technologies.

1	**Overview of System Software:** Introduction, software hierarchy, machine structure, interfaces, address space, computer languages and tools, life cycle of a source program, different views on the meaning of a program, system software development, recent trends in software development, levels of system software, programming languages and language processors, language processing activities, program execution, fundamental of language processing, symbol tables data structures for language processing: search data structures, allocation data structures.	[10]
2	**Assemblers:** Elements of assembly language programming, design of the assembler, assembler design criteria, types of assemblers, two-pass assemblers, one-pass assemblers, single pass assembler for Intel x86 algorithm of single pass assembler, multi-pass assemblers, advanced assembly process, variants of assembler design of two pass assembler.	[8]
3	**Macro and Macro Processors:** Introduction, macro definition and call, macro expansion, nested macro calls, advanced macro facilities, design of a macro pre-processor, design of a macro assembler, functions of a macro processor, basic tasks of a macro processor, design issues of macro processors, features, macro processor design options, two-pass macro processors, one-pass macro processors.	[8]
4	**Linkers and Loaders:** Introduction, relocation of linking concept, design of a linker, self-relocating programs, linking in MS-DOS, linking of overlay structured programs, dynamic linking, loaders, different loading schemes, sequential and direct loaders, compile-and-go loaders, general loader schemes, absolute loaders, relocating loaders, practical relocating loaders, linking loaders, relocating linking loaders, linkers v/s loaders.	[8]
5	**Interpreters & Debuggers:** Benefits of interpretation, overview of interpretation, the java language environment, java virtual machine, types of errors, debugging procedures, classification of debuggers, dynamic/interactive debugger.	[6]

Outcome(s): After completion of the course students will be able to

- understand the execution process of HLL programs.
- understand the working of scanners and parsers
- understand the basic design of various system software.
- implement various system software.

Text Books:

1. D M Dhamdhere, “System Programming”, McGraw Hill, 2011

Reference Books:

1. Leland L Beck, “System Software – An Introduction to System Programming”, 3rd ed, Pearson Education, 2000
2. Santanu Chattopadhyay, “System Software”, Prentice Hall India, 2007

CS 19.443 **Distributed Systems** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.303 (Operating System), CS 19.306 (Computer Networks)

Objective(s): To make students aware of:

- What a distributed system is, its example, use and utilities.
- Hardware and software requirements/constraints for implementation of distributed systems.
- Abstractions like, RMI, distributed objects, RPC, distributed shared memory etc.
- Notion of time in a distributed system.
- Databases in a distributed system.

1	**Introduction:** Characterization of distributed systems, examples of distributed systems, trends of distributed systems, challenges, physical models, architectural models, fundamental models, network principles, internet protocols, case studies.	[6]
2	**Interprocess Communication and Remote Invocation:** The API for the Internet protocols, external data representation and marshalling, multicast communication, network virtualization, introduction to remote invocation, request-reply protocols, remote procedure call, remote method invocation.	[10]
3	**Distributed Objects and Components:** Distributed objects, case study: CORBA, from objects to components, introduction to web services.	[6]
4	**Time and Global States:** Clocks, events and process states, synchronizing physical clocks, logical time and logical clocks, global states, distributed mutual exclusion, coordination and agreement in group communication.	[8]
5	**Transactions and Concurrency Control:** Transactions, nested transactions, locks, optimistic concurrency control, timestamp ordering, flat and nested distributed transactions, atomic commit protocols, distributed deadlocks, transaction recovery.	[10]

Outcome(s): On successful completion of the course the student will be able to:

- Understand the concept of distributed systems.
- Explain the principles underlying the functioning of distributed systems as well as how these principles are applied in distributed systems.
- Comprehend the problems and challenges of distributed systems.
- Understand and estimate the impact of different design choices, system features on distributed systems.

Text Books:

1. George Coulouris, Jean Dollimore, Tim Kindberg, Gordon Blair, "Distributed Systems Concept and Design", Addison Wesley, 5th ed, 2011

Reference Books:

1. Pradeep K Sinha, "Distributed Operating Systems", PHI, 2012
2. Mukesh Singhal, Niranjan Shivrathri, "Advanced Concepts in Operating Systems", TMH, 2010

CS 19.444 **Advanced Computer Architecture** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.208 (Computer Organization and Architecture)

Objective(s):

- To discuss the organization of computer-based systems and how a range of choices are influenced by application.
- To understand the organization and operation of current generation computer systems including multiprocessor and multicore systems.
- To understand the principles of I/O in computer systems including viable mechanism for I/O and secondary storage organization.

1	**Introduction**: Overview of parallel processing and pipelining, study and comparison of uniprocessors and parallel processors, architectural classification, applications of parallel processors, instruction level parallelism, performance matrices and measures, speedup.	[6]
2	**Pipelining:** Principles and implementation of pipelining, classification of pipelining processors, pipeline architecture, general pipelining reservation table, design aspect of arithmetic and instructional pipeline, pipelining hazards and resolving techniques, advanced pipelining techniques, software pipelining, implementation issues.	[8]
3	**Vector and Array Processors**: Vector and array processors, basic vector architecture, issues in vector processing, SIMD computer architecture, masking and data network mechanism, interconnection networks of SIMD, static vs dynamic networks, parallel algorithm for array processors, matrix multiplication, sorting, implementation issues.	[10]
4	**Multiprocessor Architecture**: Multiprocessor architecture, loosely and tightly coupled multiprocessors, characteristics of multiprocessor, inter-processor communication network, memory contention and arbitration techniques, cache coherence, bus snooping, massively parallel processors, inter process communication and synchronization.	[10]
5	**Parallel Algorithms:** Multithreading, synchronous and asynchronous message passing, shared memory, study of parallel programming concepts, parallel algorithm for multiprocessors, operating system for multiprocessors, message passing interfaces, parallel programming languages, Fortran 90, Occam, C-Linda, CCC.	[6]

Outcome(s): On successful completion of this course, students will be able to

- Describe the operation of performance enhancements such as pipelines, dynamic scheduling, branch prediction, cache, and vector processors.
- Describe modern architectures such as RISC, super scalar, multiprocessor and multicore systems.
- Develop applications for high performance computing systems.

Text Books:

1. Kai Hwang, Naresh Jotwani, “Advanced Computer Architecture”, McGraw-Hill Education, 2011.
2. John L Hennessey, David A Patterson, “Computer Architecture – A Quantitative Approach”, Morgan Kaufmann, Elsevier Publishers, 5thedition, 2012.

Reference Books:

1. Kai Hwang, Zhi Wei Xu, “Scalable Parallel Computing”, McGraw Hill,1998.
2. Kai Hwang, Faye A Briggs, “Computer Architecture and Parallel Processing”, McGraw Hill, 1984.

CS 19.445 **Soft Computing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.305 (Logic in Computer Science), CS 19.310 (Artificial Intelligence)

Objective(s):

- To familiarize with soft computing concepts
- To introduce the idea of neural networks, fuzzy logic and use of heuristics based on human experience
- To introduce the concept of genetic algorithm and its applications to soft computing using some applications

1	**Introduction**: Introduction of soft computing, types of soft computing, applications of soft computing, introduction of artificial intelligence, production system, various search techniques, hill climbing, best first search, knowledge representation, monotonic and non-monotonic reasoning.	[8]
2	**Neural Networks:** Structure and function of a single neuron, definition of ANN, characteristics of ANN, applications of ANN, single layer networks, perceptron training algorithm, linear separability, various learning rules, delta rule, ADALINE, MEDALINE, multi-layer networks, activation functions, error back propagation algorithms, characteristics of EBPA.	[8]
3	**Neural Network Architectures**: Counter propagation networks, architecture, functioning, characteristics, Hopfield network, configuration, associative memory, limitations and applications, Hopfield vs Boltzman machine, adaptive resonance theory, architecture, classification, implementation and training	[8]
4	**Fuzzy Logic: Fuzzy** logic, fuzzy set theory, fuzzy set vs crisp set, crisp relation and fuzzy relation, introduction and features of membership functions, fuzzy rule-based system, fuzzy propositions, formation, decomposition and aggregation of fuzzy rules, fuzzy reasoning, fuzzy interference system, fuzzy decision making, applications of fuzzy logic.	[8]
5	**Genetic Algorithms:** Genetic algorithm, fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, genetic modelling, inheritance operator, cross over, inversion and deletion, mutation operator, bitwise operator, generational cycle, convergence of GA, applications and advances in GA, difference and similarities between GA and other traditional methods.	[8]

Outcome(s): On successful completion the students will be able to:

- Identify and describe soft computing techniques and their roles in building intelligent machines
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems
- Apply genetic algorithms to combinatorial optimization problems
- Apply neural networks to pattern classification and regression problems
- Evaluate and compare solutions by various soft computing approaches for a given problem

Text Books:

1. S N Sivanandan and S N Deepa, “Principles of Soft Computing”, Wiley India, 2007
2. J S R Jang, C T Sun and E Mizutani, “Neuro-Fuzzy and Soft Computing”, PHI, 2004

Reference Books:

1. S Rajasekaran and G A V Pai, “Neural Networks, Fuzzy Logic and Genetic Algorithms”, PHI, 2003
2. Timothy J Ross, “Fuzzy Logic with Engineering Applications”, McGraw-Hill, 3rd Edition, 2009
3. Pravir K Chawdhry, Rajkumar Roy, Raj K. Pant, “Soft Computing in Engineering Design and Manufacturing”, Springer, 2012

CS 19.491 **Information Security** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s):

- To provide an understanding of principle concepts, major issues, technologies and basic approaches in information security.
- To develop a basic understanding of cryptography, how it has evolved and some key encryption technologies used today.
- To develop an understanding of security policies (authentication, integrity and confidentiality) as well as protocols to implement such policies in the form of message exchanges.
-

1	**Introduction:** The history of information security, components of information security, the need for security, threats, attacks, legal, ethical and professional issues in information security.	[6]
2	**Risk Management and Planning for Security:** An overview of risk management, risk identification, risk assessment, risk control strategies, information security policy, standards and practices, security education, training and awareness programs.	[8]
3	**Security Technology:** Access control, firewalls, protecting remote connections, intrusion detection and prevention systems, honeypots, honeynets and padded cell system, scanning and analysis tools, biometric access controls.	[10]
4	**Cryptography:** Foundations of cryptography, cipher methods, cryptographic algorithms, cryptographic tools, protocols for secure communications, attacks on cryptosystems.	[10]
5	**Implementing Information Security:** Information security project management, technical aspects of implementation, nontechnical aspects of implementation, information systems security certification and accreditation, positioning and staffing the security function, employment policies and practices, security considerations for nonemployees.	[6]

Outcome(s): On successful completion the students will be able to:

- Identify computer and network security threats, classify the threats and develop a security model to prevent, detect and recover from the attacks.
- Encrypt and decrypt messages using ciphers.
- Develop SSL or Firewall based solutions against security threats, employ access control techniques to the existing computer platforms such as Unix and Windows NT.

Text Books:

1. Michael E Whitman and Herbert J Mattord, "Principles and Practices of Information Security", India edition, Cengage Learning, 2009
2. William Stallings, "Cryptography and Network Security", 4th edition, Prentice Hall, 2005

Reference Books:

1. Mark Stamp, "Information Security: Principles and Practices", 2nd edition, John Wiley & Sons, 2011
2. Mark S Merkow and Jim Breithaupt, "Information Security: Principles and Practices", 2nd edition, Pearson Education, 2014

CS 19.492 **Wireless and Sensor Networks** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s):

- To provide an overview about wireless and sensor networks and emerging technologies
- To study about the network architecture of sensor nodes and its execution environment
- To understand the concepts of communication, MAC and routing protocols in WSN
- To learn about topology control and clustering for localization services with sensor tasking and control
- To study about sensor node hardware and software platforms and understand the simulation and programming techniques

1	**Introduction:** Background of sensor network technology, applications of sensor networks, challenges and hurdles, range of applications, examples of category-2 WSN applications, examples of category-1 WSN applications.	[8]
2	**Basic Wireless Sensor Technology:** Sensor node technology, sensor taxonomy, operating environment, radio technology primer, available wireless technologies, modulation basics.	[8]
3	**Medium Access Control Protocols for WSN:** Introduction, fundamentals of MAC protocols, MAC protocols for WSNs, sensor-MAC case study, IEEE 802.15.4 LR-WPAN standard	[8]
4	**Routing Protocols for WSN:** Data dissemination and gathering, routing challenges and design issues in WSN, routing strategies in WSN, traditional transport control protocols, transport protocol design issues, performance of transport control protocols, traditional network management models, network management design issues.	[10]
5	**Operating Systems for WSN:** Operating system design issues, examples of operating systems: TinyOS, Mate, MagnetOS, MANTIS, OSPM, EYESOS, SenOS, PicOS, performance modeling of WSNs.	[6]

Outcome(s): On successful completion the students will be able to:

- Compare and pick out the right type of software testing process for any given real-world problem
- Carry out the software testing process in efficient way
- Automate the testing process by using several testing tools
- Establish a quality environment as specified in standards for developing quality software
- Analyze and improve the quality procedures based on the past experience

Text Books:

1. Kazem Sohraby, Daniel Minoli, Taieb Znati, “Wireless Sensor Networks”, John Wiley & Sons, Inc., Publication, 2007.

Reference Books:

1. Zhao, Guibas, “Wireless Sensor Networks” , Elsevier, 2004.
2. A.Boukereche, “Handbook of Algorithms for Wireless Networking and Mobile Computing”, Chapman and Hall/CRC Computer and Information Science Series, 2007.

CS 19.493 **Foundations and Applications of IoT** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.303 (Operating System), CS 19.306 (Computer Networks)

Objective(s):

- To introduce the vision and impact of IoT.
- To understand IoT Market perspective.
- To understand the challenges that must be overcome by IoT technology.

1	**Introduction:** The vision-introduction, from M2M to IoT, M2M towards IoT-the global context, a use case example, differing characteristics.	[6]
2	**M2M to IoT – A Market Perspective:** Introduction, some definitions, M2M value chains, IoT value chains, an emerging industrial structure for IoT, the international driven global value chain and global information monopolies, M2M toIoT-an architectural overview, building an architecture, main design principles and needed capabilities, an IoT architecture outline, standards considerations.	[10]
3	**M2M and IoT Technology Fundamentals:** Devices and gateways, local and wide area networking, data management, business processes in IoT, everything as a service (XaaS), M2M and IoT analytics, knowledge management.	[8]
4	**IoT Architecture:** Introduction, state of the art, architecture reference model-introduction, reference model and architecture, IoT reference model.	[6]
5	**IoT Reference Architecture:** IoT reference architecture- introduction, functional view, information view, deployment and operational view, other relevant architectural views, real-world design constraints- introduction, technical design constraints-hardware is popular again, data representation and visualization, interaction and remote control, implementation automation.	[10]

Outcome(s): On successful completion of this course, students will be able to

- Understand the vision of IoT from a global context.
- Determine the Market perspective of IoT.
- Understand the use of Devices, Gateways and Data Management in IoT.
- Build architecture in IoT
- Analyze, design and develop parts of IoT solution

Text Books:

3. Francis daCosta, “Rethinking the Internet of Things: A Scalable Approach to Connecting Everything”, 1st Edition, Apress Publications, 2013

CS 19.494 **Software Defined Networking** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.302 (Software Engineering), CS 19.306 (Computer Networks)

Objective(s):

- To explore the basics of SDN
- To discuss various types plane
- To list out various controllers
- To program a simple SDN

1	**Control and Data Planes**: Introduction, evolution vs revolution, the control plane, data plane, moving information between planes, distributed control planes, convergence time, load balancing, creating the MPLS overlay, centralized control planes, logical vs literal, ATM.LANE, route servers.	[8]
2	**SDN Controllers:** Wire protocol, replication, FAWG, hybrid approaches, SDN controllers, VMware, Nicira, OpenFlow, Mininet, NOX/POX, Trema, Ryu, L3VPN, RSPV-TE problem statement, bin-packing, deadlock, Plexxi, Cisco OnePK.	[8]
3	**Network Programmability:** The management interface, the application-network divide, NETCONF and NETMOD, SNMP, modern programmatic interface, XMPP, JSON, I2RS, OpenStack, CloudStack, Puppet, virtual multitenant data center, SDN solution for data center networks.	[8]
4	**Network Function Virtualization**: Virtualization and data plane I/O, services engineered path, service locations and chaining, NFV at ETSI, non-ETSI NFV work, network topology, LLDP, BGP-TE/LS, ALTO, I2RS topology.	[8]
5	**Building an SDN framework:** Build code first, ask questions later, the Juniper SDN framework, IETF SDN framework, open daylight controller/framework, use cases for bandwidth scheduling, manipulation, data center overlays, big data, NFV, and traffic monitoring.	[8]

Outcome(s): On successful completion the students will be able to:

- Describe the key benefits of SDN
- Describe the data plane
- Configure an SDN friendly network emulator
- Program a simple SDN for a given task using a low-level approach and high-level approach
- Evaluate a sample SDNs performance and reliability

CS 19.495 **Principles and Practices of Secure Computing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks), CS 19.491 (Information Security)

Objective(s):

- To understand the technical realization and security of data and computers.
- To understand the industry security standards, regulatory mandates, audit policies and compliance requirements for cloud-based infrastructures.

1	**Authentication, Access Control and Cryptography:** Identification vs. authentication, authentication based on phrases, biometrics and tokens, multifactor authentication, access control, access policies, role-based access control, problems addressed by encryption, trust and certification, digital signatures.	[8]
2	**Programs and Programming:** Unintentional programming oversights, malicious code – malware, countermeasures, browser attacks, web attacks targeting users, obtaining user or website data, email attacks.	[8]
3	**Operating Systems and Network Security:** Security in operating systems, security in design of operating system, rootkit, threats to network communications, wireless network security, denial of service, distributed denial of service, cryptography in network security, network management.	[10]
4	**Database Security:** Introduction to databases, security requirements of databases, reliability and integrity, database disclosure, data mining and big data.	[6]
5	**Cloud Security:** Cloud computing concepts, risk analysis in cloud computing, cloud security tools and techniques, cloud identity management, securing IaaS, privacy principles and policies.	[8]

Outcome(s): On successful completion the students will be able to:

- Define terms related to computer, data and network security.
- Analyze the offered system and point to the potential safety problems.
- Choose and appropriate engineering approach to solving the security problems in various domains.

Text Books:

1. Charles P Pfleeger, Shari Lawrence Pfleeger and Jonathan Margulies, "Security in Computing", 5th edition, Prentice Hall, 2015.
2. Tim Mather, Subra Kumaraswamy and Shahed Latif, "Cloud Security and Privacy" An Enterprise Perspective on Risk and Compliance", O'Reilly, 2009

2. Chuck Easttom, "Computer Security Fundamentals", 2nd edition, Pearson Education, 2012

CS 19.461 **Cloud Computing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s): To learn how to use cloud services.
To implement virtualization and task scheduling

1	**Overview of Cloud Computing:** Brief history and evolution - history of cloud computing, evolution of cloud computing, traditional vs. cloud computing, cloud service models (IaaS, PaaS & SaaS), cloud deployment models (public, private, hybrid and community cloud), benefits and challenges of cloud computing, introduction to AWS public cloud vendor, cost optimization in AWS, basics of virtualization, virtualization technologies, server virtualization, VM migration techniques, role of virtualization in cloud computing, introduction to EC2 service of AWS.	[10]
2	**Working with Private Cloud:** Private cloud definition, characteristics of private cloud, private cloud deployment models, private cloud vendors - CloudStack, OpenStack, Eucalyptus Microsoft, private cloud – benefits and challenges, private cloud implementation in Amazon EC2 service.	[8]
3	**Working with Public Clouds:** What is public cloud, why public cloud, when to opt for public cloud, public cloud service models, public cloud players, infrastructure as a service offering, IaaS vendors, PaaS offerings, PaaS vendors, software as a service, demonstrating public cloud with AWS – storage and database services, private vs. public cloud – when to choose.	[10]
4	**Overview of Cloud Security:** Explain the security concerns in traditional IT, introduce challenges in cloud computing in terms of application security, server security, network security, security reference model, abuse and nefarious use of cloud computing, insecure interfaces and APIs, malicious insiders, shared technology issues, data loss or leakage, account or service hijacking, unknown risk profile, shared security model between vendor and customer in IaaS/PaaS/SaaS, implementing security in AWS.	[8]
5	**Future directions in Cloud Computing:** When and not to migrate to cloud, migration paths for cloud, selection criteria for cloud deployment, issues/risks in cloud computing, future technology trends in cloud computing.	[4]

Outcome(s): On successful completion the students will be able to:

- Analyze the cloud computing setup with its vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds.

Text Books:

1. Raj Kumar Buyya, James Broberg and Andrezi M Goscinski, “Cloud Computing: Principles and Paradigms”, John Wiley & Sons, 2010
2. Nick Antonopoulos and Lee Gillam, “Cloud computing: Principles, Systems and Applications”, Springer, 2010.

Reference Books:

1. Anthony T Velte, Toby J Velte and Robert Elsenpeter, “Cloud Computing: A Practical Approach”, McGraw Hill, 2010
2. Borko Furht and Armando Escalante (Editors), “Handbook of Cloud Computing”, Springer, 2010
3. Judith Hurwitz, Robin Bllor, Marcia Kaufman and Fern Halper, “Cloud Computing for Dummies”, John Wiley & Sons, 2010.

CS 19.462 **Mobile App Development** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s):

- To learn how mobile apps are different from other traditional apps by learning those aspects of mobile programming that make it unique from other platforms.
- Program mobile applications for the Android operating system that use basic and advanced phone features.
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout, UI elements, Drawable, Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and SMS APIs native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access (via Internet/Intranet)	[14]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobile apps, distributing apps on mobile market place.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

Text Books:

1. Barry Burd, Android Application Development All in One for Dummies, Johen Wiley & Sons Inc., 2011.
2. Anubhav Pradhan, Anil V Deshpandy, Mobile App Development, Edition I

Reference Books:

1. Lauren Darcey, Shane Conder, “Teach Yourself Android Application Development in 24 Hours”, SAMS Publishing, 2012, 2ndEdition , 2012.

CS 19.463 **Agile Software Development** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.302 (Software Engineering)

Objective(s):
- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To learn the essentials of collaboration as they apply to agile methods.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1	**Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools.	[7]
2	**Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management.	[9]
3	**Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk-based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software.	[10]
4	**Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control.	[10]
5	**Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies.	[4]

Outcome(s): On successful completion of this course, students will be able to
- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Scrum.
- Write user stories for project requirements.
- Write test cases for developing features.

Text Books:
1. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
2. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: ET-18.101 **E-Government Processes and Technologies** **3-0-0-3**

Total Lectures: 39

Objectives:

- Support the government departments, in terms of leading or being part of team responsible for, e-Governance project Conceptualization and design .
- Support the government departments in effectively planning and managing various phases of e-Governance project development and implementation
- Leverage the strengths of private sector in e-Governance initiatives through effective procurement approach and manage service delivery throughout project Lifecycle
- Application of learning and good practices in e-Governance projects implementation to minimise the learning curve and to maximise the benefits for the department

1. **Roadmap to e-Government:** Vision and mission of e-government, government to e-government transformation, selection, planning and management of projects, parameters for success and measure of projects, relationship and citizen participation in e-government. [5]
2. **e-Gov 2.0:** Introduction, e-Gov 1.0 v/s e-Gov 2.0, e-Gov 2.0 financial and technology models. [5]
3. **Multiple Standards in ICT and Change Management:** Purpose and rationale for multiple standards, areas having multiple standards, rationale for single standard, introduction to change management, model of change management. [6]
4. **Government Data Centres and Utility Computing :** Elements and complexity of GDCs, virtualization and consolidation of GDCs, architecture of a GDC, utility computing concepts and areas, technical and regulatory issues in utility computing. [7]
5. **Secured Government Information System Architecture:** Introduction, architectural types, processes, security requirements and policies, steps in designing security architecture. [8]
6. **Case Studies of few e-Government Projects:** National Citizen Identity System, land records, urban development management system, e-agriculture, e-procurement, RTO, e-mitra etc. [8]

(The contents in this unit are subject to change as per the evolution and progression of novel e-governance projects).

Outcomes: Will have the understanding and knowledge of the following:

- Better access to information and quality services for citizens
- Simplicity, efficiency and accountability in the government
- Expanded reach of governance
- Enabling Environment for Promoting Economic development
- Enhancing Transparency and Accountability:
- Improving Service Delivery:
- Improving Public Administration

Text Books:

1. Jaijit Bhattacharya, "e-Gov 2.0", 1st edition, Tata McGraw Hill.

2. C.S.R. Prabhu, "e-Governance: Concepts and Case Studies", 2nd edition, PHI.

Reference Books:

1 J. Satyanarayana," e-Government: The Science of the Possible", PHI.

2 Bidisha Chaudhuri, "E-Governance in India: Interlocking Politics, Technology and Culture", 1st edition, Routledge.

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code:
ET- 18.103

Application of Electronics in Everyday Life

3-0-0-3
Total Lectures: 40

Objective: To develop the understanding of Electronics used in daily life as well as understand the principle and working of various instruments used in health care, IoT and communication sector.

1. **ELECTRONICS COMPONENTS:** Resistor and its color code, Capacitor, Inductor, PN diode, Photo Diode, LDR, LED, Zener diode, Varactor diode. **[4]**
2. **ELECTRONICS IN COMMUNICATION:** Telegraph, Telex, Mobile Phone, Optical Fiber, Transmission Line, Waveguides, Satellite Communication, RADAR, 4G system, Internet, Video conferencing, Fax. **[10]**
3. **ELECTRONICS IN HOME CARE:** Basic of electricity and electrical cables, Multi meter and basic electronic component, Power supply, UPS/Inverter, SMPS, Washing machine, Microwave oven, Steam iron, Electric rice cooker, Electric kettle, Induction plate. **[8]**
4. **ELECTRONICS IN IOT:** Introduction, IoT applications for industry: Future Factory Concepts, Smart Objects, Smart Applications, Smart Homes, Structural Monitoring, Buildings, Smart Cities , Transportation Healthcare Warfare, Physical Intrusion Detection, Surveillance. **[10]**
5. **ELECTRONICS IN HEALTHCARE:** ECG, EEG, Defibrillator, Computed Tomography, Magnetic Resonance Imaging, Glucometer, Sphygmomanometer, Digital and Infrared Thermometer. **[8]**

Outcomes:

At the end of this course, the student should be able to

1. Know about fundamentals of Electronic Components.
2. Understand the concept of Communication.
3. Understand the concepts of electronics behind various home appliances.
4. Learn about basics of health care equipment.

Text Books:

1. Ben G. Streetman, Sanjay Kumar Banerjee: Solid state Electronic Device Electronics, Sixth Edition, Prentice Hall.
2. Adel S. Sedra, Kenneth C. Smith: Microelectronic circuit, Sixth Edition, Oxford.
3. Richard. C. Jaeger, "Microelectronic Circuit Design", Tata McGraw-Hill Companies Inc., International Edition.

Reference Books:

1. B. P. Lathi, "Modern Digital and Analog communication Systems", Oxford University Press, 2010.
2. William C. Y. Lee, Mobile cellular telecommunication – Analog and Digital systems, McGraw Hill, 2nd Ed, 2006

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **Energy Sources & Sustainable development** **3-0-0-3**
ET-18.104 **Total Lectures: 39**

Objective(s): *The course is designed to give knowledge of various energy sources and basics of power production techniques. It lays emphasis on basic understanding of green energy technology and its importance for environment and sustainable development.*

1. **World Energy Status:** Present Situation and future Energy Scenario, Evolution of Energy Security; India's Energy Scenario; Introduction to nexus between Energy, Environment, and Sustainable development and Climate Change and societal issues [14]
Conventional Energy Sources: Fossil Fuel, Coal, Oil, Gas, Thermal Power Stations, Hydro power generation, Comparison of various conventional energy systems, their prospects and limitations
Scenario of Green Energy Sources: Difference between conventional and renewable energy systems, Needs and advantages of green energy sources, social implications.

2. **Solar Energy:** Principles of photovoltaic generation of electricity; Silicon cell; Photon absorption; Cell efficiency; Solar cell construction; Types and usage of photovoltaic systems. solar cell modules and arrays, solar cell types, material, applications, advantages and disadvantages, solar energy conversion into heat, types of solar collectors, cylindrical parabolic collector, solar energy thermal storage. [14]
Nuclear Energy: Present Status of Nuclear Power; Nuclear Fission & Fusion, National Nuclear Power Program,, Natural Radioactivity, Radioactive Decay, Radiation Doses, various types of nuclear power plants, Nuclear Reactor Safety, Fusion reactor

3. **Wind Energy:** Energy available from wind, basics of wind energy conversion system, classification, factors influencing wind, wind shear, turbulence, wind speed monitoring, Betz limit, WECS: classification, characteristics, and applications. [6]

Bio Energy: Types of biogas plants, biogas generation, factors affecting biogas generation, advantages and disadvantages, biomass energy, energy plantation, gasification

4. **Ocean Energy:** Ocean energy resources-ocean energy routes - Principles of ocean thermal energy conversion systems- ocean thermal power plants- Principles of ocean wave energy conversion and tidal energy conversion. [5]
Geothermal energy: Introduction, vapor and liquid dominated systems, binary cycle, hot dry rock resources, magma resources, advantages and limitations

Outcome(s): *After learning the subject, student will be able to understand the basic principle of power production from different energy sources. Advantage of renewable and green energy sources for sustainable development and environmental issues related to energy sources and societal implications*

Text Books:

1. S.P. Sukhatme, Solar Energy: principles of Thermal Collection and Storage, Tata McGraw-Hill
2. C. S. Solanki, "Solar Photovoltaics: Fundamental Applications and Technologies, PHI, 2009
3. S. Glasstone & A. Sesonkse, Nuclear Reactor Engineering, CBS, 2004
4. D. A. Spera, Wind Turbine Technology: Fundamental concepts of Wind Turbine Engineering, ASME Press.

Reference Books:

1. Non-conventional energy resources, Shobh Nath Singh, Pearson India
2. Principles of Solar Energy, Frank Krieth& John F Kreider, John Wiley, New York
3. David Bodansky, Nuclear Energy: Principles, Practices and Prospects, Springer 2004.

Mody University

College of Architecture and Design (CAD)

Open Elective in Free hand sketching for all Undergraduate Programmes

3-0-0-3

Paper Code: FH 141
Paper Name: FREEHAND SKETCHING

Learning Objectives:

1. To ensure that students begin to understand pencils, grades, holding to sketch.
2. To provide students an exposure to express with sketching and understand proportions.
3. To gain skill of sketching indoors.
4. To enhance ability to sketch outdoors.
5. To develop rudimentary ability to use pencil as a media in sketching.

CONTENTS

Unit - I. Introduction to Graphic Skills: [04]

Understanding the meaning of graphic skill; basic techniques, types of pencil shades and grades.

Unit - II. Geometry of Objects [10]

Understanding geometry of an Object, Free hand sketching of an object, object in different eye level, Optical illusions, effect of light on object.

Unit –III. Fundamentals of Perspective [05]

Diminution, Foreshortening, convergence, overlapping shades and shadow

Unit - IV. Outdoor Sketching & Indoor Sketching: [10]

Outdoor:

Sketching buildings, road activity, Landscape, Environmental scenes, principles of perspective drawing, natural forms, built form, their texture.

Indoor: [10]

Sketching of an arranged objects, indoor activity, still life, furniture, equipment, understanding depth, light, shade, shadow; memory drawing.

Expected Outcome:

Students learn and able to draw freehand sketch scenes with addition detailing of foreground and background from pencil effectively on paper.

Suggested Readings

- Buildings;Ian Sidaway, : New Holland Publishers.
- Perspective;Milind Mulick,: Jyotsana Prakashan.
- The fundamentals of Water colour Paintings;D.Carter: Arcturus Pubishing Ltd
- Drawing for designers; Koptievsky: Sterling Publishing
- Rendering with pen & Ink; .R.W Gill: Thomas & Hudson
- Drawing and designing with confidence: A step by step guide; M.W Lin: John Wiley & Sons
- Perspective drawing Handbook; Joseph D'Amelio: Dover Publication
- Urban Sketching a complete guide; Thorspecken: Search Press

Evaluation Scheme: 20%=Internal, 80%=End term

MODY UNIVERSITY OF SCIENCE AND TECHONOLOGY

Open Elective CBCS course

Course Title: Vedic Knowledge **3-0-0-3**

Course Code: VK 111

Course Description:

Unit-1 History of Vedic Literature (13)

1. Importance of Vedas in Indian Tradition (भारतीय परम्परा में वेदों का महत्त्व)
2. The emergence of the Vedas (वेदों का आविर्भाव)
3. Introduction of Vedic Svara (वैदिक स्वर परिचय)
4. Definition of Sukta (सूक्त की परिभाषा)
5. Introduction of Rig-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(ऋग्वेद का परिचय -संहिता,ब्राह्मण,आरण्यक एवं उपनिषद -)
6. Introduction of Yajur-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(यजुर्वेद का परिचय - संहिता,ब्राह्मण,आरण्यक एवं उपनिषद)

Unit -2 Suktas related to Rigveda Samhita (Shakalashakha) (11)

1. Lord of fire :	Agnisuktam	(अग्निसूक्तम्-ऋग्वेद 1/1/1-4)
2. Lord 0f creation :	Vishnusuktam	(विष्णुसूक्तम्-ऋग्वेद 7/100/1-3)
3. Lord of omniscient :	Brahmanaspatisuktam	(ब्रह्मणस्पतिसूक्तम् -ऋग्वेद 1/40/1-4)
4. Lord of pre-creation :	Hiranyasuktam	(हिरण्यगर्भसूक्तम्- ऋग्वेद 10/121/1-3)
5. Goddess of Glory :	Shreesuktam	(श्रीसूक्तम्-ऋग्वेद-परिशिष्ट 1-4)

Unit-3 Suktas related to ShuklaYajurved Samhita(Madhyandinashakha) (15)

1. God of wisdom :	Ganapatistavanam	(गणपति-स्तवनम् -यजुर्वेद – 23/19)
2. Identification of nation :	Rashtrageetam	(राष्ट्रगीतम् -यजुर्वेद - 22/22)
3. Good faith :	Svastivachanam	(स्वस्तिवाचनम् -यजुर्वेद-14/19,21-22)
4. Perception power :	Medhasuktam	(मेधासूक्तम् -यजुर्वेद -32/13 -16)

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code:
ET-18.102

Web Designing and Mobile App Development **3-0-0-3**

Total Lectures:40

Objectives: On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. Students will gain the skills and project-based experience needed for entry into web application and development careers.

1. Concept of Internet A brief Introduction to the Internet: Computer Networks, Internet, URL (Uniform Resource Locator), Internet Service Provider, Intranet, Extranet, Virtual Private Network. Application of Internet: World Wide Web, Search Engines, News groups, Electronic Mail, Web Portal, Chat, Video Conferencing, FTP, Remote Login, E-Commerce, E-Learning, EGovernance, E-Banking. [9]

2. Static Web Page Development Basics of HTML: What is Internet Language?, Understanding HTML, Create a Web page, Linking to other Web Pages, Publishing HTML Pages, Text Alignment and Lists, Text Formatting Fonts Control, Email Links and link within a Page, Creating a Table, Creating HTML Forms, Creating Web Page Graphics, Putting Graphics on a Web Page, Custom Backgrounds and Colors, Creating Animated Graphics. [9]

3. Dynamic Web page Development Cascading Style Sheet: CSS, Defining Style with HTML Tags, Features of Style Sheet, Style Properties, Style Classes, External Style Sheet [8]

4. JavaScript Introduction to JavaScript: Writing First Java Script, External JavaScript, Variables: Rules for variable names, Declaring the variable, Assign a value to a variable, Scope of variable, Using Operators, Control Statements, JavaScript loops, JavaScript Functions: Defining a Function, Returning value from function, User define function. [9]

5. Android: Introduction to android OS, Versions of Android, Introduction to Android Studio, Different GUI Elements of Android Programming, WebView, Convert any Website to android apk. [5]

Outcomes:

- Students are able to develop a dynamic webpage by the use of java script and DHTML.
- Students will be able to write a well formed / valid XML document.
- Students will be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.
- Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.

- Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.

Text Books:

2. The Complete Reference JavaScript By Thomas Powell & Fritz Schneider 2nd Edition.
3. Jerome (J.F) DiMarzio "Android A programmer's Guide" Tata McGraw-Hill 2010 Edition.

Reference Books :

1. HTML, DHTML, JavaScript, Perl CGI By Ivan Bayross(BPB) 3rd Edition
2. CSS By Kynn Bartlett(Pearson Education)2nd Edition
3. Introduction to Internet & HTML Scripting By Bhaumik Shroff Books India Publication 3rd Edition.

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY

The Bhagavad-Gita

Pre-requisite(s): Basic interest in Indian culture. Sanskrit verses in *Devanagari* script as well as in transliteration forms are provided for further references only; knowledge of Sanskrit is not required as the medium of instruction is English, however it may be an added advantage. Familiarity with the *Devanagari* script may be useful at times.

Course Objectives: The primary aim of the Bhagavad-Gita Course is to make the glorious 'Gita way of life' accessible to anyone who yearns for it, or is just curious to know more in a convenient yet effective manner. It provides a holistic, insightful coverage of the entire text in a lucid and simple style without compromising on the salient features of this priceless knowledge. Providing inputs in the modern context for continuous improvement it becomes a practical manual to live a transformed life of goodness and greatness. The course seeks to help students negotiate the text independently without referring to the traditional commentaries so as to enable them to experience the richness of the text and its philosophy.

Evaluation Process: The evaluation pattern would have following two components:

1. Internal component of 20 marks, which can be assessed in one of the following ways at the discretion of course coordinator
    a. Assignment
    b. Written test
    c. Presentation
    d. Viva
    e. Model preparation
    f. Practical assignment
2. An end term examination of 80 marks.

Course Description:

BG 111	**The Bhagavad-Gita**	**3-0-0-3**
Introduction: Background of the Mahabharata War, Author (Vedavyasa), Background of the Bhagavad-Gita: knowledge given in the battlefield of life, The role of Gita in our life, Overview of the chapters, The Distress of Arjuna		[03]

Annexure-I

Mody University

Open Elective in English for all Undergraduate Programmes

Paper Code: EL 100 **Credits: 3-0-0-3**
Paper Name: Essential English

Contents:

Reading Comprehension **[11]**
To develop skills such as vocabulary building, efficient reading and note-taking.
Poetry

1. Milton: On His Blindness
2. Shakespeare: Let Me Not to the Marriage of true minds
3. Wordsworth: The Solitary Reaper
4. William Butler Yeats: A Prayer to my daughter
5. Browning: My Last Duchess
6. Nissim Ezekiel: Night of the Scorpion

Prose

(1) Francis Bacon: Of Studies
(2) R.K. Narayan: Engine trouble
(3) O. Henry : The Gift of the Magi
(4) Oscar Wilde : The Nightingale and the Rose

Grammar and Usage **[16]**
Tenses and their different forms (present, past and future), their uses and sequences of tenses. Articles, auxiliaries and modals, Preposition, Rules of conversion form direct to indirect speech, expressions of time and place, questions in indirect speech, commands, requests and advice in indirect speech. Spotting the errors in spelling, tenses, prepositions, articles and how to avoid them.
Business Letter Writing **[6]**
Layout of formal letters, difference between British and American pattern of letter writing and different types of letters (Job application letter, invitation letter, letter of request)
Idioms and Phrasal Verbs: Understanding idioms, collocations, introduction to phrasal verbs, verb and preposition/ adverb combination, usage of idioms and phrasal verbs.
Vocabulary Building: One word for many, Synonyms and Antonyms, words commonly mis-spelt and mis-pronounced. [6]

List of Program Elective Options

CODE	Program Elective Tracks - Industry
Big Data (IBM) - Industry Track	
CS 19.212	Business Intelligence
CS 19.311	Big Data Programming
CS 19.316	Artificial Intelligence
CS 19.416	Predictive Modeling Analytics
Cloud Computing (IBM) - Industry Track	
CS 19.292	Application Security
CS 19.311	Big Data Programming
CS 19.316	Artificial Intelligence
CS 19.496	Block Chain
AI & Deep Learning (IBM)-Industry Track	
CS 19.282	Machine Learning with Python
CS 19.381	Deep Learning
CS 19.316	Artificial Intelligence
CS 19.416	Predictive Modeling Analytics

Code	Industry Electives (Common to All Tracks)
CS 19.461	Cloud Computing (Infosys)
CS 19.462	Mobile App Development (Infosys)
CS 19.463	Agile Software Development (Infosys)
	MOOC-1*
	MOOC-2*
	MOOC-3*
	***Mooc-1 -3 should be selected only in 7th and 8th Semester respectively**

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**

2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**

2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**

3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**

4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**

5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

MA 19.101 **Mathematics I** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: (10+2) Higher Secondary Mathematics

1. **Differential Calculus I:** Review of basic concepts, partial differentiation, Euler's theorem on homogeneous functions, Maclaurin's and Taylor's series (one and two variables) and Jacobians. [06]
2. **Differential Calculus II:** Maxima and minima of functions of two variables, asymptotes, Tracing of simple cartesian curves and standard polar curves. [06]
3. **Integral Calculus:** Basics of Beta and Gamma functions, Length of plane curves(cartesian and polar), area bounded by the curves(cartesian and polar), multiple integrals (double and triple integrals, change of order of integration), volumes, conversion from cartesian to polar form, physical interpretations and applications. [12]
4. **Matrix Theory**: Rank of matrix, linear dependence and independence of vectors, solution of system of simultaneous linear equations, Eigen values, Eigen vectors of a matrix, statement of Cayley-Hamilton theorem (without proof) , reduction of a matrix to diagonal form, quadratic forms, linear transformation of a quadratic form, and applications. [08]
5. **Three-dimensional Geometry:** Direction cosines and direction ratios of a straight line, equation of a plane, plane passing through intersections of two planes, equations of straight line, shortest distance between two skew lines, equation of a sphere, intersection of plane and sphere. [08]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Shanti Narayan and Mittal, Analytical Solid Geometry, S. Chand, 2018.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

PY19.101 **Engineering Physics** **Total Lectures: 40**

Pre-requisite: Fundamental knowledge of Basic Physics **3-0-0-3**

Objective:

1. To provide students with a basic understanding of the Physics that may be required by engineers in the course of their careers
2. To enhance knowledge related to lasers and its different components to make it suitable for various purposes
3. To introduce most important concepts of superconductivity, crystallography and fiber optics to the students
4. To introduce the learners to the basics of modern physics and Quantum Mechanics

1. **Modern Physics**: Introduction to Black body radiation spectrum, Photo-electric effect, Compton effect. Wave particle Dualism. de Broglie hypothesis – de Broglie wavelength, extension to electron particle. Davisson and Germer Experiment. Matter waves and their Characteristic properties, Phase velocity, group velocity and Particle velocity, Relation between phase velocity and group velocity, Relation between group velocity and particle velocity. Expression for deBroglie wavelength using group velocity. **[8]**

2. **Quantum Mechanics:** Heisenberg's uncertainity principle and its physical significance. Application of uncertainty principle (Non-existence of electron in the nucleus, explanation for decay and kinetic energy of electron in an atom). Wave function, Properties and physical significance of wave function, Probability density and Normalization of wave function. Setting up of one dimensional time independent Schrodinger wave equation. Eigen values and Eigen functions. Application of Schrodinger wave equation – Energy Eigen values for a free particle. Energy Eigen values and Eigen functions for a particle in a potential well of infinite depth. **[7]**

3. **Electrical Conductivity in Metals**: Free–electron concept. Classical free-electron theory – Assumptions. Drift velocity, Mean collision time and mean free path. Relaxation time. Expression for drift velocity. Expression for electrical conductivity in metals. Effect of impurity and temperature on electrical resistivity of metals. Quantum free-electron theory – Assumptions. Fermi – Dirac Statistics. Fermi-energy, Fermi factor. Density of states (No Derivation). Expression for electrical resistivity / conductivity. Temperature dependence of resistivity of metals. electron in a periodic potential, origin of the energy gap, band theory of solids, distinction of solids into metals, semi-conductors and insulators. **[8]**

4. **Dielectric & Magnetic Properties of Materials**: Dielectric constant and polarization of dielectric materials. Types of polarization. Equation for internal field in liquids and solids (one dimensional). Ferro and Piezo electricity. Frequency dependence of dielectric constant. Important applications of dielectric materials. Classification of dia, para and ferro-magnetic materials. Hysterisis in ferromagnetic materials. Soft and Hard magnetic materials. Applications. **[7]**

5. **Lasers and Optical Fibers**: Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, Construction and working of CO2 laser and semiconductor Laser. Applications of Laser – Laser welding, cutting and drilling. Measurement of atmospheric pollutants. Holography–Principle of Recording and reconstruction of images, applications of holography.
Propagation mechanism in optical fibers. Angle of acceptance. Numerical aperture. Types of optical fibers and modes of propagation. Attenuation. Applications–Block diagram discussion of point to point communication. **[10]**

Outcome: The student will be able to understand many modern devices and technologies based on lasers and optical fibers. Student can also appreciate various material properties which are used in engineering applications and devices.

Text Books:

1. S. O. Pillai, "Solid State Physics", New Age International, Sixth Edition, 2009
2. V. Rajendran, "Engineering Physics," TMH, Fifth Edition , 2013

Reference Book:

1. G. K. Shivkumar, "Engineering Physics," Prism Book Pvt. Ltd.
2. Stephen T. Thornton, "Modern Physics for Scientists and Engineers",Cengage Learning, 4th ed.,2013

CY 19.102 **Environmental Studies** **Total Lectures: 52**

Prerequisite(s): NIL **Credit: 3-1-0-4**

Objective(s):
- To teach the principal resources, renewable energy systems and biosphere.
- To explore the environmental impact of various energy sources and also the effects of different types of pollutants.

1. **Multidisciplinary nature of environmental studies:** Definition, scope and importance, Need for public awareness. [2]

2. **Natural Resources:** Renewable and non-renewable resources: Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. [8]
Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources.
Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

3. **Ecosystems & Biodiversity:** [14]
Ecosystems: Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow and nutrient cycling in the ecosystem. Food chains, food webs and ecological pyramids. Ecological succession
Structure and function of the following ecosystem - Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).
Biodiversity and its conservation: Introduction – Definition, genetic, species and ecosystem diversity. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values. Biodiversity at global, national and local levels. Hot-sports of biodiversity. India as a mega-diversity nation, Threats to biodiversity: habitat loss, illicit poaching, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

4. **Environmental Pollution:** Definition, cause, effects and control measures of : Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes. [8]
Role of an individual in prevention of pollution. Pollution case studies. Disaster management: floods, earthquake, cyclone and landslides.

5. **Social Issues, Human Population and the Environment:** From Unsustainable to Sustainable development: Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people: its problems and concerns. Global Climate Change, global warming, acid rain, ozone layer depletion. Wasteland reclamation. Population growth, variation among nations. Population explosion – Family Welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in Environment and human health. Case Studies.Environment Protection Act 1986. Air (Prevention and Control of Pollution) Act 1981., Water (Prevention and control of Pollution) Act 1974, Wildlife Protection Act 1972., Forest Conservation Act 1980. [13]

Field work [7]
- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

Outcome(s): Upon successful completion of the course, students should be able to:
- Measure environmental variables and interpret results
- Evaluate local, regional and global environmental topics related to resource use and management
- Propose solutions to environmental problems related to resource use and management
- Interpret the results of scientific studies of environmental problems
- Describe threats to global biodiversity, their implications and potential solutions.

Text Books:

1. Erach Bharucha "Environmental Studies", University Grants Commission, 2004.
2. G. Boyle, Renewable energy: Power for a sustainable future'. Oxford University press. 2004.

Reference Books:

1. C. William, P. Saigo, B Woodworth, "Environmental Science: A Global Concern", Sixth Edition McGraw-Hill Higher Education, 2001.
2. R.T. Wright, D.F. Boorse, "Environmental Science" 11th Edn, PHI, 2010.

EE 19.101 **Elements of Electrical Engineering** **Total Lectures: 40**

3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to various concepts and devices of electrical engineering.

Pre-requisite: Nil

1. **DC Circuits:** Electrical circuit elements (R, L and C), voltage and current sources, Ohm's law, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation using mesh and nodal method. Network Theorems - Superposition, Thevenin, Norton and Maximum power transfer Theorems. Time-domain analysis of first-order RL and RC circuits. **[8]**

2. **AC Circuits:** Basic terminologies, representation of sinusoidal waveforms, average, rms and peak values of a.c. quantities, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel). **[8]**

3. **Three Phase A.C. Circuits:** Three phase supply, phase sequence, star connection, delta connection, relationship between phase and line quantities in 3-phase circuits, measurements of three phase power under balanced condition. **[6]**

4. **Transformers:** Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, Transformer testing: open circuit and short circuit test, losses in transformers, regulation and efficiency. Basics of auto-transformer and three-phase transformer connections. **[10]**

5. **Electrical Machines:** DC Machines – construction, functions of each part, working principle, EMF and torque equations, types of dc machines. AC machines – classification of a.c. machines, construction, operating principles of ac machines. **[8]**

Outcome: At the end of this course, students will demonstrate the ability to

- To understand and analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines.

Text Books:

1. Kothari, D. P., and I. J. Nagrath, "Theory and Problems of Basic Electrical Engineering," PHI Learning Pvt. Ltd., 1998.
2. Fitzgerald, Arthur Eugene, David E. Higginbotham, and Arvin Grabel, "Basic electrical engineering," McGraw-Hill Series in Electrical Engineering, Auckland: McGraw-Hill, 1981, 5th ed.(1981).

Reference Books:

1. H.Cotton, "Advanced Electrical Technology," CBS Publication. 1967.
2. Vincent Del Toro, "Electrical Engineering Fundamentals," 2nd Edition PHI Publication. 1972.
Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.101 **Programming Language** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite(s): NIL

Objective(s):
1. To learn principles of programming by the structured native language 'C'.
2. To comprehend the rudiments, constructs, syntax, and statements with essentials of efficient compiling, running and debugging processes.

1. **Introduction:** The role of programming languages, programming paradigms, language description and syntax structure, basics of structured and object-oriented programming, functional programming, logic programming, concurrent programming. [10]
2. **Fundamentals of 'C' language**: Character set, variables data types constants, arithmetic, relational and logical operators, type conversion,increment,decrement, bitwise and assignment operators, conditional expressions, statements and blocks, *if-else*, *switch*, loops-*do-while*, *while*, *for*; *break, continue* and *goto* statements, labels. [10]
3. **Functions, pointers and Arrays**: Basics of functions, automatic, external, static and register variables, scope rules, and header files, recursion and C preprocessor, arrays, pointers and addresses, pointers and arrays address arithmetic, character pointers and functions, pointer arrays, pointers to functions, pointers and multidimensional arrays, command line arguments. [10]
4. **Structures and unions:** Basics of structures and functions, arrays of structures, pointers to structures, self-referential structures, unions. [5]
5. I/O and File Processing: Concept of files, standard input and output, formatted output, file access in different modes, reading from and writing to a file. [5]

Outcome(s): Students would be able to apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

Text Books:
1.Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013,
2.Ravi Sethi & K.V.Viswanatha, Programming Languages-Concepts, and Constructs, Second edition, Pearson Education,2013,

Reference Books:
1.Herbert Schildt, C: The Complete Reference, Fourth Edition, McGraw-Hill Education, 2017
2.E Balagurusamy, Programming in ANSI C, Tata McGraw - Hill Education,6th edition,2012

CS 19.103 **Software Foundation and Programming I with C** **Total Lectures: 40**

Prerequisite(s): C Programming , Fundamental of Computers **Credit: 3-0-0-3**

Objective(s): To understand the advanced concept of c programming to solve the real world programming problems.

1. **Pointers in C** : Pointers, declaring pointer variables, dereferencing and address of operators, pointer expression and pointer arithmetic, null pointers, generic pointers, passing arguments to function using pointers, pointers and array, handling multidimensional array using pointers, passing an array to a function, pointers and strings, array of pointers, pointer-to-pointer, function pointers, dynamic memory allocation functions- malloc( ), calloc ( ) , realloc ( ), free( ), drawbacks of pointers-memory leak, dangling pointer, memory corruption [9]
2. **File Handling in C :** Streams-stdin, stdout and stderr, types of files-text file and binary file, file pointer, file modes-r,w,a,rb,wb and ab, file handling functions-fopen( ), fclose(), fscanf( ), fread( ), fgetc( ), fgets( ), fprintf( ), fputc( ), fputs( ), fwrite( ), ferror( ), feof( ), fseek( ), ftell( ), rewind ( ), fgetpos( ), fsetpos( ) , remove( ) , rename ( ) [5]
3. **Searching and Sorting-** Searching techniques- linear search, binary search, hashing, sorting techniques-bubble sort, insertion sort, selection sort, quick sort, merge sort, heap sort, shell sort, radix sort, bucket sort [6]
4. **Stack, Queue and Linked List :** Introduction to data structures, linear and non-linear data structures, stack, push and pop operations on stack, application of stacks, queue, circular queue, priority queue, deque, insertion and deletion operations in queue, linked list, single linked list, circular linked list, double linked list, insertion, deletion and searching in linked list, application of linked lists [12]
5. **Trees and Graphs :**Binary tree, Binary search tree, AVL tree, Red-Black tree, Splay tree, B+ tree, insertion , deletion and searching operations on trees, graph terminologies, operations of graphs [8]

Outcome(s): Upon successful completion of the course ,students will be able to

-solve complex programming problems using the concepts of pointers
- handle various file operations in c for real world applications
- implement various data structures using c language

Text Books:

1. Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013
2. D. Samantha, Classic Data Structures, Second edition, PHI learning, 2013

Reference Books:

1. Aaron M. Tenebaum, Yedidyah Langsam and Moshe J. Augenstein, Data Structures Using C and C++, PHI, 2nd Edition, 2012
2. D. Samanta, Classic Data Structures, PHI, 2nd Edition, 2009
3. Jean Paul Trembley and Paul G. Sorenson, An Introduction to Data Structures with applications, McGraw Hill, 2nd Edition, 2003

PY 19.111 **Physics Laboratory** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
2. To apply the analytical techniques and graphical analysis to the experimental data.

List of Experiments:

1. To study of material constant, temperature coefficient of current and planck's constant.
2. To determine the specific resistance of a given wire by using the Carey Foster's bridge.
3. To determine the ballistic constant, K of a moving coil ballistic galvanometer with a standard capacitor of known capacity.
4. To determine the high resistance by the method of leakage of a condenser with the help of ballistic galvanometer.
5. To study the variations of resistivity with temperature and hence determines the energy band gap of the given semiconductor with help of four probe method.
6. To convert a galvanometer into a voltmeter of a given range.
7. To convert a galvanometer into an ammeter of a given ranges.
8. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current and to estimate from it the radius of the coil.

Outcome: Students will be convergent with operation of equipments and verify the principle of Physics by doing the experiments. Students will be able to apply the analytical techniques and graphical analysis for finding out the experimental results.

EE 19.111 **Electrical Laboratory** **0-0-2-1**

Objective: The objective is to provide a basic exposure of installation and operation of electrical equipment.

Prerequisite: Nil

Perform any ten of the list.

1. To Study of the various apparatus used in Electrical Engineering.
2. To perform residential house wiring using fuse, indicator, switch, Socket, plug and lamp.
3. To design a Stair case wiring for illuminating a lamp.
4. To design Tunnel wiring for illuminating three lamps.
5. To construct a fluorescent tube and to measure voltage across tube rod, voltage across choke and current.
6. To conduct the polarity test on the given transformer.
7. To conduct the open circuit & short circuit tests on the given single phase transformer and to determine equivalent circuit parameters.
8. To control the speed of DC machine by field current control method.
9. To control the speed of DC machine by Armature Voltage control method.
10. To measure three phase power by using two wattmeter methods.
11. To verify Superposition Theorem using resistive circuit.
12. To verify Thevenin's Theorem using resistive circuit.

Outcome: Students will be convergent with installation and operation of electrical equipment.

Text Books:

1. J.B. Gupta, Theory and Performance of Electrical Machines, S.K. Kataria and Sons, 3rd Edition, 2002.
2. Kothari, D. P., and I. J. Nagrath. Theory and Problems of Basic Electrical Engineering. PHI Learning Pvt. Ltd., 1998.

Reference Books:

1. P.S. Bimbhra, "Electrical Machinery", Khanna Publishers, 5th Edition, 2013.
2. Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.151 **Programming Language Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): NIL

Objective(s):

- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

List of Practicals

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement programs to cover all possible String operations.
11. Implement programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement programs for Reading and writing from/to a file.

Outcomes On completion of this course student will be able to:

- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner

UC 19.102 **Communication Skills** **Total Lectures: 26**

2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures.**Technology-based Communication:** Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software. [5]
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

1. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
2. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

MA 19.102 **Mathematics II** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: Mathematics I

1. **Computational Methods:** Introduction and importance of numerical analysis, calculus of finite differences, interpolation schemes for equal and unequal intervals (Newton's forward and backward interpolation formulae), divided difference, interpolation for unequal intervals (Newton's divided difference and Lagrange interpolation formulae), Solution of algebraic and transcendental equations by Newton-Raphson method. Applications to Engineering. [12]
2. **Ordinary Differential Equations I:** First order and first degree differential equations (variable separable, homogeneous and non-homogeneous, linear, Bernoulli's equation, and exact equations). [06]
3. **Ordinary Differential Equations II:** Linear differential equations of second order with constant and variable coefficients (complementary functions and particular integrals), and applications. [06]
4. **Partial Differential Equations:** Formation of partial differential equations, Lagrange's multipliers method for solution of first order differential equations, separation of variables for nonlinear differential equations and applications. [06]
5. **Vector Calculus:** Vector and scalar point functions, conservative fields, gradient of scalar point functions, divergence and curl of vector point functions (Solenoidal and irrotational vectors), directional derivative of scalar point functions, work done along a curve, Integration of vectors, line integral (work done), surface integral, volume integral, physical interpretations and applications. [10]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Grewal, B.S. and Grewal, J.S., Higher Engineering Mathematics, Khanna Publishers, Daryaganj, New Delhi, 40th Edition, 2007.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CY 19.101 **Engineering Chemistry** **Total Lectures: 39**

Prerequisite(s): NIL **Credit: 3-0-0-3**

Objective(s):
- To purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers their preparation, properties and uses.
- To develop the basics of protecting engineering materials from the natural forces.
- To understand the present day up-to-date knowledge of the contemporary energy sources.
- To build up the basis of the future Engineering materials like superconductors, conducting organic polymers, Nano materials etc.

1. **Water treatment:** Hardness, types of hardness, degree of hardness and its estimation (EDTA methods). Numerical problems on degree of hardness. Boiler troubles: sludge and scale formation, Prevention of sludge and scale formation in boilers. Softening of hard water (Lime-Soda, Permutit, Ion Exchange and calgon methods). Numerical problems based on water treatment (Lime-Soda process). [8]

2. **Polymers:** Classification, Functionality, Types of polymerization, Mechanism of Addition polymerization. Plastics: thermoplastic and thermosetting resins. Preparation, Properties and Uses of Polyamides, Bakelite, Polyesters, Rubber, Vulcanization of Rubber, Synthetic Rubber viz. Buna-S, Buna-N, Butyl and Neoprene rubbers. Silicones-polysiloxanes and sulphur based polymers. [8]

3. **Electrochemistry and Corrosion:** Electrochemical Changes, Electrochemical cell and its classifications (Galvanic cell, electrolytic cell). Types of electrodes. Origin of electrode potential, Electrochemical Series. Electromotive force, Nernst equation of electrode potential. **Corrosion:** Definition and its significance, Theories of corrosion, Mechanism of corrosion, types of corrosion, Corrosion control (Corrosion inhibitors, Cathodic protection - sacrificial anodic and impressed current cathodic protection). [8]

4. **Fuels and Lubricants:** Introduction - Importance of fuels in Industries. Classifications of fuels, Comparison of solid, liquid & solid fuels, Calorific value of a fuel. Determination of calorific value by Bomb calorimeter. Refining and cracking of petroleum, knocking. Octane Number and Cetane Number. L.P.G., Coal gas and Producer gas.**Lubricants:** Introduction and Classification of Lubricants. Properties of Lubricants, Lubricant Oil, Grease, Emulsions. [9]

5. **New Engineering Materials:** Introduction: Superconductors, high and low temperature superconductors, organic electronic materials, Fullerenes and Nano materials, Industrial applications of fullerenes and Nano materials. [6]

Outcome(s): The student will be able to understand the basis of the future Engineering materials like of lubricants, superconductors, conducting polymers, Nano materials etc and purification of the most valuable natural resource of the future-water.

Text Books:
1. Jain and Jain, "Engineering Chemistry," 16th Edition, Dhanpat Rai Publishing Company, 2015.
2. S.S. Dara, "A Text Book of Engineering Chemistry," 12th Edition, S. Chand & Company Limited, 2014.

Reference Books:
1. Peter Atkins, Julio de Paula, and James Keeler, "Atkins' Physical Chemistry" Eleventh Edition, Oxford University Press, 2017.
2. William D. Callister, "Materials Science and Engineering: An Introduction, Eighth Edition, John Wiley & Sons, Inc., 2010.

ME-19.101 **Applied Mechanics** **Total Lectures: 40**
3-1-0-4

Prerequisite Basic Mathematics and Physics

Objectives:
1. This course will help the student to acquire knowledge of basic engineering mechanics concepts and enhance their ability to solve open ended engineering problems.
2. To provide the student with a clear and thorough understanding of the theory and applications of engineering mechanics, covering both statics and dynamics.
3. To provide the student with a thorough understanding of the concept, drawing, and the use of free-body diagrams.
4. To be able to determine the Centre of Gravity and Moments of Inertia of simple geometric shapes and understand the physical applications of these properties.
5. To understand the use and be able to perform calculations related to friction forces in engineering applications.

1. **Introduction:** Idealization of Mechanics, concept of Rigid Body, External Forces (Body forces & surface forces), Laws of Mechanics. **[10]**
Force Systems and Equilibrium: Introduction to vector, Statically Equivalent Force systems, Free Body Diagram, Equations of equilibrium and their applications to various system of forces.

2. **Distributed Forces and Moment Of Inertia:** Centroid of Composite figures, Area Moment of Inertia, Mass Moment of Inertia, Principle axes and Principle Moment of Inertia. **[6]**

3. **Friction:** Introduction of friction, Laws of friction, wedge, screw, belt, rolling friction. **[6]**

4. **Tension, Compression and Shear:** Normal stress and strain, Linear elasticity, Hooke's Law and Poisson's Ratio, Shear stress and shear strain, Relationship between modulus. **[9]**
Beams: Different support & load conditions, SFD, BMD

5. **Kinematics of Particles:** Introduction, Rectilinear motion, Plane curvilinear motion, Rectangular coordinates, Tangential and normal coordinates, polar coordinates, Relative motion (Translating Axes), constrained motion of connected particles. **[9]**
Kinetics of Particles: Introduction, Force, Mass and acceleration, Newton's second law of motion, Equation of motion and solution of problems, Work and Energy, Impulse and Momentum.

Outcome: The students shall develop the ability to identify, formulate, and solve engineering problems related to forces and motion.

Text Books:
1. Hibbeler, Gupta R. C., "Engineering Mechanics," 11th ed., Pearson India, 2010.
2. Merian, J.L, Kraige, L.G., "Engineering Mechanics Vol I & II," 5th edition, Wiley India 2010.

Reference Books:
1. Timoshenko, S, Young, D.H, Rao, J.V, "Engineering Mechanics," 4th edition TMH, 2010.
2. Irving. H. Shames, "Engineering Mechanics," Prentice Hall Book Company, 1966.

EC 19.101 **Basics of Electronics Engineering** **Total Lectures: 40**

3-1-0-4

Prerequisite Basic Knowledge of Engineering and Applied Physics

Objective: To learn the fundamental principle and applications of electronics and communication engineering and devices.

1. **Introduction:** Brief history of major inventions in ECE, Electronic test and measurement equipments, Specifications for electronic components. **[3]**
2. **Semiconductors**: Material and its properties, Formation of energy band diagram, Currents in semiconductors, Fermi-Dirac energy distribution, Types of semiconductors – Intrinsic and Extrinsic, Mass action law, Hall effect. **[5]**
3. **Diodes**: Introduction, Characteristic of ideal and real diode, Current components in diode, load characteristics, Breakdown in diode, Zener diode, Varactor diode, Tunnel diode, Clippers and Clampers, Rectifiers – Half and Full-wave rectifiers. **[8]**
4. **Transistors:** Introduction to pnp and npn transistors, current components, active, cutoff and saturation regions, CC, CB and CE configuration, Operating point, Biasing circuits, Bias Stability, Thermal runway and thermal stability. **[8]**
5. **Signals**: Definition, Classification of signals – Analog and Digital, Deterministic and Random signals, Power and Energy of signals, Bandwidth, Bit and Baud rate. **[4]**
6. **Basics and Applications of Communication**: Definition, Block representation of communication system, Modulation – Definition, Need of modulation, Frequency translation, Types of modulation - Analog and Digital, Multiplexing – TDM and FDM. Introduction to - Optical Fiber, Transmission line, Waveguides, Satellite communication and RADAR. **[12]**

Outcome: Students will be able to understand the basic concepts of Electronic and Communication Engineering and devices .They are able to implement mini projects based on concepts of ECE.

Text Books:

1. George Kennedy, Bernard Davis, “Electronics Communication Systems”, Tata McGraw-Hill, 3rd Edition, 2007.
2. Behrouz Forouzan, “Data Communication and Networking”, McGraw-Hill, 4th Edition, 2006.

Reference Books:

1. David A. Bell, “Electronics Devices and Circuits”, PHI, 4th edition, 2008.
2. Wayne, Tomasi, “Advanced Electronic Communication Systems”, PHI, 6th edition, 2013.
3. Robert L. Boylestad, Louis Nashelsky, “Electronics Devices and Circuits Theory”, Prentice Hall, 10th Edition, 2009.

CS 19.102 **Advance Object Oriented Programming** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): NIL

Objective(s):

- Provide the foundation of good programming skills by discussing key issues of the design of object-oriented software, including programming design and documentation.
- Cover the basics of API and to explore the java abstract programming interface.

1. **Basic OOPS and Core Java:** Core object concepts (Encapsulation, Abstraction, Polymorphism, Classes, Messages Association, Interfaces), Concept of inheritance. Derived class and based class. Managing memory with garbage collector, abstraction, access specifiers, Collection framework, keywords (static, final, abstract etc.), Swing API. [12]
2. **Java Database Connectivity (JDBC):** accessing data from tables: Joining, manipulating Databases with JDBC, Prepared Statements, Transaction Processing. [4]
3. **Modeling & Practice:** UML diagrams (structural & behavioral), ER diagrams, Data Flow Diagrams (DFD), logical complexity, effective modularization. Case study: automation tools, agile testing strategy, agile sprints. [6]
4. **Servlets and Java Server Pages (JSP):** Servlet Overview and Architecture, Interface Servlet and the Servlet Life Cycle, Handling HTTP get Requests, Handling HTTP post Requests, Redirecting Requests to Other Resources, using cookies. Introduction, Java Server Pages Overview, A First Java Server Page Example, Implicit Objects, Scripting, Standard Actions, Directives, Custom Tag Libraries. [13]
5. **Introduction to Application Development:** Introduction to android platform, Creating application template, adding activity, intent, services to application, using Google map API. [5]

Outcome(s):

- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Develop programs using the in-built Java API and the Java standard class library.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).

Text Books:

1. Herbert Schildt, Java The Complete Reference, Herbert Schildt, 8th Edition, 2011.
2. Bert Bates and Kathy Sierra, Head First Java, O'Reilly,2005

Reference Books:

1. Advanced Java 2 Platform HOW TO PROGRAM by H. M.Deitel, P. J. Deitel, S. E. Santry – PrenticeHall
2. Beginning Java™ EE 6 Platform with GlassFish 3 From Novice to Professional by Antonio Goncalves– Apress publication

ME-19.111 **Computer Aided Engineering Drawing** **0-0-4-2**

Objective:

1. To improve the visualization skills.
2. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient.
3. To impart the knowledge on understanding and drawing of simple engineering products.

1. **Introduction to Computer Aided Sketching:** Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practice. Board Drawing vs. Computer- Aided Drawing. Introduction to Solid works Environments. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP &LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, dimensioning, line conventions, material conventions and lettering. [8]

2. **Orthographic Projections** : Horizontal planes, Vertical planes, Front view, Top view, Side view, Projections, First and Third angle of projection, Projections of points, Principles of orthographic projections, Sketching of different views of given objects. Introduction to sketching in Solid works : 2-Dimenional Sketching, Sketching in Solid works, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity. [12]

3. **Projections of Lines, Planes and Solids:** Lines inclined to both the principal planes, projection of Lamina inclined to both principal planes, Projections of solids: Axis inclined to both the reference planes and Intersection of solids. Introduction to part module in Solid works: Extrude, Revolve, Sweep, Hole, Filleting, and Chamfering features. [12]

4. **Sections of solids and sectional orthographic views:** Sectional orthographic projections - Full, Half, Partial, revolved and removed surfaces. Introduction to drawing module in Solid works: Standard 3 views, Auxiliary view, Section View, Projected view. [12]

5. **Isometric Projection:** Terminology, Isometric scale, Box method, Coordinate or offset method, Four-center method, isometric projection of arcs. Solid models practice using Solidworks part module. [8]

Outcomes:

1. Students will be able to improve their visualization skills so that they can apply these skills in developing new products.
2. Students will be able to know and understand the conventions and the methods of engineering drawing using Solid works.
3. Students will be able to prepare simple drawings of engineering products.

Text Books:

1. N.D. Bhatt, "Engineering Drawing", Charotar Publishing House, 2013.
2. Prof. Sham Tickoo, Sandeep Prem Dass “Solid works 2013 for Engineers and Designers” Wiley Publication, 2013.

Reference Books:

1. Randy H. Shih, “Solid works 2013 and Engineering Graphics: An Integrated Approach”, SDC Publications. 2013

CY 19.111 **Engineering Chemistry Laboratory** **Total Hours:26**
Credit: 0-0-2 - 1

Prerequisite(s): NIL

Objective(s):

- To introduce students to water chemistry and purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers, lubricants, fuel and their properties and uses.

LIST OF EXPERIMENTS

Choice of 10-12 experiments from the following

1. To determine the temporary and permanent hardness in the given water sample by complexometric titration using EDTA as standard solution.
2. To determine the percentage of Available Chlorine in the given sample of Bleaching powder. Iodometrically.
3. To determine the alkalinity of water sample.
4. To prepare urea formaldehyde resin.
5. To determine the strength of given HCl solution by titrating it against NaOH solution using pH meter.
6. To determine the strength of given acid solution by titration it against sodium hydroxide solution using conductometer.
7. To determine molecular weight of a polymer using Ostwald viscometer.
8. Determination of viscosity of given lubricating oil by Redwood viscometer.
9. Determination of cloud and pour point of given lubricating oil.
10. Determination of the flash and fire point of given lubricating oil.
11. Determination of acid value of given lubricating oil.
12. To determine the calorific value (HCV) of a sample of fuel.
13. Proximate Analysis of Coal.
14. Determination of the percentage of Fe in the given steel sample.

Outcomes The students will learn to:

- Estimate the Hardness of water, alkalinity of water.
- Familiar with the important practical applications of electrochemistry, lubricants, solids, their properties and applications, and the polymer materials.

ME-19.112 **Mechanical Workshop** **0-0-2-1**

Objectives:

1. Practice on manufacturing of components using workshop trades including fitting, carpentry, sheet metal and welding.
2. Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping.
3. Study and practice on machine tools and their operations.

List of Jobs:

1. **Fitting Shop:** Prepare job that contain various fitting operation like filing, marking, measuring, cutting, drilling etc.
2. **Carpentry Shop:** Making of carpentry joint (T, L joint etc).
3. **Sheet Metal Shop:** Making job from sheet (funnel, tray etc).
4. **Machine Shop:** Perform various operations like, turning, step turning, facing, chamfering, knurling etc on Lathe.

Outcomes:

At the end of the course, the student will be able to:

1. To acquire skills in basic engineering practice.
2. To identify the hand tools and instruments.
3. To acquire measuring skills.
4. To provides the knowledge of job materials in various shops.
5. Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.

Text Books:

1. Hajara Chaudhary, Workshop Technology Vol I & II, Media Promoters and Publishers PVT. LTD, Mumbai.
2. B.S. Raghuvanshi, Workshop Technology, Dhanpat Rai & Sons. New Delhi.

Reference Books:

1. H S Bawa, Workshop Technology, TMH. New Delhi.

EC 19.111 **Electronics Lab** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the theory of Electronics Engineering.
2. To apply the analytical techniques and graphical analysis to the experimental data.
3. To enable the students to simulate and test the Electronics circuits using Multisim software.

Practical to be performed on Hardware:

1. To plot V-I characteristics of junction diode and Zener diode.
2. To design a half wave rectifier with and without filter circuit and find the ripple factor.
3. To design a full wave rectifier with and without filter circuit and find the ripple factor.
4. Study of clipper and clamper circuits and their implementation on breadboard.
5. To plot the characteristics of Transistor under Common Emitter configuration
6. To plot the characteristics of Transistor under Common Base Configuration
7. To plot the characteristics of Transistor under Common Collector configuration
8. To perform soldering and de-soldering to make banana probe, BNC probe and connection on PCB.

Practical to be performed using Multi-Sim Software:

9. An Introduction to Electronic Circuit Simulation using Multi-Sim Software.
10. To verify Ohm's law and Kirchhoff's law.
11. To Simulate half wave and full wave bridge rectifier.
12. To plot V-I characteristics of junction diode.

Outcome: Student will be able to understand the operation of electronic test equipment and hardware/software tools to characterize the behavior of devices and circuits.

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**
2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization **[4]**
2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**
3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**
4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**
5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher, 16th Edition, 2014

Reference Books:

1. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
2. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
3. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
4. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

MA 19.201 **Mathematics III** **Total Lectures: 40**

3-1-0-4

Pre-requisite: Mathematics I and Mathematics II

Objective: To acquire fundamental knowledge of linear programming, numerical methods, complex analysis and integral transform and apply in engineering disciplines.

1. **Linear Programming:** Introduction with formulation; Graphical method; Simplex method, Artificial variable technique (Two phase method, Big –M method); Assignment problem (Hungarian method); Transportation problem (Vogel's approximation method). [12]

2. **Numerical Methods:** Solution of system of equations (Gauss elimination and Gauss - Seidel methods); Solution of algebraic and transcendental equations (Bisection, Ramanujan's and Regula Falsi methods); Solution of ordinary differential equation (Euler's modified, Milne's predictor & corrector, Runge-Kutta method of order four). [08]

3. **Complex Analysis:** Function of complex variable, analytic function, Cauchy- Riemann equations(without proof); Integration of complex functions, line integrals in the complex plane, Cauchy integral theorem(without proof), Cauchy integral formula(without proof), zeros and singularities of complex functions, residues. [08]

4. **Integral Transform I**: Basics of Laplace transform and inverse Laplace transform; First and Second Shifting theorems; Convolution theorem (without proof); Laplace transform of Unit Step function, Dirac Delta function and periodic function. [06]

5. **Integral Transform II**: Solution of ordinary differential equations with initial conditions by Laplace transforms; Fourier series of periodic functions, even and odd functions, Fourier half-range series; Basics of Fourier transforms with properties. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of linear programming, numerical methods, complex analysis and integral transforms in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Sastry S.S., Introductory Methods of Numerical Analysis, 5th Edition, Pearson.
3. Jain R.K. and S.R.K. Iyenger Advanced Engineering Mathematics, Narosa Publishing House, 2003.

CS 19.201 **Discrete Mathematics** **Total Lectures: 40**
Credit:3-1-0-4

Prerequisite(s): None

Objective(s):
- To Introduce fundamental concepts and applications of discrete structure in the field of computer science

1. **Sets, Relations and Functions**: Set theory, combination of sets, multi-sets, ordered pairs, set identities, relations, operations on relations, properties of relations, composite relations, equality of relations, order of relations, functions, classification of functions, operations on functions, recursively defined functions. [8]
2. **Partially Ordered Sets:** Definition, combination of partial order sets, Hasse diagram, lattices: definition, properties of lattices: bounded, complemented, modular and complete lattice, morphisms of lattices. [6]
3. **Algebraic Structures & Counting:** Groups, subgroups and order, cyclic groups, cosets, Lagrange's theorem, normal subgroups, permutation and symmetric groups, group homomorphisms, rings, fields, basics of linear algebra, integers modulo n. Counting principles, permutations, combinations, summations, principle of inclusion and exclusion, pigeon-hole principle, generating functions and recurrence relations. [10]
4. **Propositional Logic:** Proposition, well formed formula, truth tables, tautology, satisfiability, contradiction, algebra of proposition, theory of inference, natural deduction, predicate logic: first order predicate, well formed formula of predicate, quantifiers, and inference theory of predicate logic. [8]
5. **Graph Theory:** Graphs, types of graphs, subgraphs, Eulerian chains and cycles, Hamiltonian chains and cycles, graph traversal algorithms, chromatic number, plannar graph. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- Understand the theory and techniques of logic, graphs and trees, and algebraic systems.
- Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems.

Text Books:
1. Bernard Kolman, Robert C., Busb Sharon, Cutler Ross, Discrete Mathematical Structures, PHI, 6th Edition, 2009.
2. Kenneth H. Rosen, Discrete Mathematics and Its Applications, Tata McGraw- Hill, 7th Edition, 2011.

Reference Books:
1. Swapan Kumar Chakraborty, BikashKanti Sarkar, Discrete Mathematics, Oxford Higher Education, 2011
2. C. L. Liu, D. P. Mohapatra, Elements of Discrete Mathematics A Computer Oriented Approach, Tata Mcgraw-Hill, 3rd Edition, 2008.
3. Seymour Lipshutz, Marc Lipson, Discrete Mathematics, 3rd edition, 2010

CS -19.203 **Data Structures** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s):
- To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems, and to promote an analytical and empirical appreciation of the behavior of algorithms using data structures

1. **Introduction:** Basic terminology, elementary data organization, algorithm, efficiency of an algorithm, time and space complexity, asymptotic notations, time-space trade- off, abstract data types. [4]
2. **Array & Linked list:** Definition, single and multidimensional arrays, representation of arrays: row major order, and column major order, application of arrays, sparse matrices and their representations. Singly linked lists, doubly linked list, circular linked list, insertion, deletion, traversal, polynomial representation and addition, generalized linked list. [10]
3. **Searching & Sorting:** Sequential search, binary search, comparison and analysis, hash function, collision resolution strategies, insertion sort, selection sort, bubble sort, quick sort, merge sort, heap sort, radix sort. [10]
4. **Stack & Queue:** Primitive stack operations: push and pop array and linked list implementation of stack, application of stack: prefix and postfix expressions, evaluation of postfix expression, recursion, and tower of Hanoi problem. Queue operations, circular queues, array and linked list implementation of queues, dequeue and priority queue [8]
5. **Tree:** Binary trees, binary tree representation, tree traversal algorithms: inorder, preorder and postorder, threaded binary trees, Huffman algorithm, binary search trees AVL trees. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- be knowledgeable of certain abstract data types (ADT)
- be able to make a critical assessment of different implementations of an ADT
- be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems

Text Books:
1.Lipschutz, "Data Structures" Schaum's Outline Series, TMH, Revised Edition Feb. 2014
2. Horowitz and Sahani, Fundamentals of Data Structures, University Press, 2nd Edition, 2008.

Reference Books:
1.Aaron M. Tenenbaum, YedidyahLangsam and Moshe J. Augenstein, Data Structures Using C and C++, PHI, 2nd Edition, 2012.
2. D. Samanta, Classic Data Structures, PHI, 2nd Edition, 2009
3. Jean Paul Trembley and Paul G. Sorenson, An Introduction to Data Structures with applications, McGraw Hill, 2nd Edition, 2003.

CS-19.204 **Database Management Systems** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures).

Objective(s): The objective of this Course is to:

- Understand the fundamental concepts of database management.
- Design and Normalize databases.
- Understand transaction processing control.
- Understand basic of object concepts and object relations.
- Understand the role of the DBMS & RDBMS in the organization.

1. **Introduction & Relational Data Model:** database system concepts and architecture, data modeling using the entity-relationship (ER) model, relational model constraints, relational database schemas, update operations, dealing with constraint violations, relational algebra operations, relational calculus, mapping ER model to relational model. [10]
2. **Structured Query Language (SQL)**: SQL data definition and data types, specifying constraints, schema change statements, basic queries, complex queries, update statements, views. [6]
3. **Database Design:** Functional dependencies and normalization of relational databases, first normal form (1NF), 2NF, 3NF, boyce-codd normal form (BCNF), multi valued dependency, 4NF, join dependency, 5NF. [8]
4. **Transaction Processing:** Introduction, properties, recoverability, serializability, concurrency control techniques: two phase locking protocol, concurrency control based on time-stamp ordering, database recovery techniques: recovery concepts, recovery techniques based on deferred and immediate update, the ARIES recovery algorithm. [8]
5. **Database Security:** Vulnerabilities in database, authentication, SQL injections, Encryptions & public Key infrastructures, privacy issues and preservation process [8]

Outcome(s): After completion of the course, students will be able to:

- Analyze database models & entity relationship models. Understand architecture for database development.
- Design E-R diagram
- Use Structured Query Language (SQL) with complex queries.
- Design and normalize the relations for any organization.
- Understand transaction processing control.

Text Books:

1. Ramez Elmasri & Shamkant B. Navathe, Fundamentals of Database Management Systems, Edition, Pearson Education, 2013.
2. Raghu Ramakrishnan, Database Management Systems, 3rd Edition, Tata McGraw Hill, 2008.

Reference Books:

1. G.W. Hansen, and J.V. Hansen, Database Management and Design, 2nd Edition, Prentice Hall India, 2000.
2. Korth and Schilberschatz, Database System Concepts, 5th Edition, Tata McGraw Hill, 2006.
3. C.J. Date, Database Systems, Tata McGraw Hill, 2nd Edition, 2003.

CS 19.205 **General Purpose Programming** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s): Python is a general-purpose, versatile and popular programming language. It's great as a first language because it is concise and easy to read, and it is also a good language to have in any programmer's stack as it can be used for everything from software development and scientific applications.

1. **Introduction**: The basic elements of python, python syntax, python operators, basic input, branching programs, control structures, strings, tuples, lists, sets, dictionaries and input iteration, Mutability with deferent types, Ranges and iterators [7]
2. **Functions and Module**: Functions and scoping flow of execution, specifications, recursion, global variables, eval &exec , variable arguments, default arguments, system functions and parameters, input and output, modules , making your own module, importing modules. [7]
3. **Classes and Object-Oriented Programming**: Abstract data types and classes, class attribute, instances, constructor, self, inheritance, encapsulation and information hiding, polymorphism, getter & setter [8]
4. **Testing and Debugging**: Exceptions and assertions, types of testing – black-box and glass-box, debugging, handling exceptions, assertions. [6]
5. **Advance Python:** Regular expressions – REs and Python, plotting using matplotlib and Multithreaded Programming, GUI & event handling programming using Tkinter & pygame. Introduction to machine learning and deep learning [12]

Outcome(s): Upon completion of this course students will be

- Familiar with Python syntax.
- Able to use python to implement a given logic.

Text Books:

1. John V Guttag, Introduction to Computation and Programming using Python, Prentice Hall of India, 2nd Edition, 2013.
2. Martin C. Brown, Python: The Complete Reference,Mc Graw Hill, 2018

Reference Books:

1. Zed A. Shaw ,Learn Python the hard way: a very simple introduction to the terrifyingly beautiful world of computers and code, 3rd edition, 2014.
2. Richard L. Halterman,Learning to Program with python, 2011.
3. Allen Downey ,Think Python How to Think Like a Computer Scientist, Version 2.0.17, Green Tea Press Needham, Massachusetts,2012.

CS-19.207 **Application Development for Cloud** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): Basic knowledge of JavaScript. • Basic knowledge of Eclipse-based development tools • Basic understanding of HTML • Basic understanding of the IBM Skills Academy learning environment • Basic understanding of the IBM Skills Academy Cloud hands-on labs platform

Objective(s):
To Define cloud computing
• To Describe the choices that are available to developers when creating cloud applications
• To Describe infrastructure as a service, platform as a service, and software as a service
• To Describe IBM Cloud
• To Describe the architecture of IBM Cloud

1.	**Cloud Application Foundations**: Introduction to HTML5 and JavaScript Programming, JavaScript programming for web applications, HTML5 features,Exersices: Working with JavaScript in HTML documents, Working with HTML5 features	[8]
2.	**Cloud Application Developer**: Essentials of Cloud Application Development, Introduction to cloud computing and IBM Cloud, Getting started with IBM Cloud, Developing IBM Cloud applications on a local workstation, Adopt a DevOps approach by using IBM Cloud Continuous Delivery, REST architecture and Watson APIs, Introduction to data services in IBM Cloud, IBM Cloud mobile backend as a service, Exercise: IBM Cloud command line interface (CLI),	[12]
3	**Cloud Application Development:** Develop IBM Cloud applications with Eclipse, Developing IBM Cloud applications with IBM Cloud Continuous Delivery, IBM Cloud with Cloudant,Build a mobile application by using Kinetise	[8]
4.	**Developing Cloud Applications with SDK for Node.js**: Introduction to server-side JavaScript, Asynchronous I/O with callback programming, Express web application framework, Exercise :Developing a Hello World Node.js app on IBM Cloud, Understanding asynchronous callback,	[7]
5.	**Application Development:** Creating your first express application, Understanding asynchronous callback Building a rich UI application by using AngularJS with Node.js	[5]

Outcome(s): On the successful completion of the course, the student will be able to:
- Understand asynchronous callbacks and be able to write the code in a Node.js application
- Understand Express routing
- Understand IBM Watson Natural Language Understanding service
- Use the Fetch API to interact with back-end web services

Text Books: David E. Sarnya, Implementing and Developing Cloud Computing Applications, CRC Press, 2nd Edition, 2011.

CS-19.253 **Data Structures Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): Programming Language Laboratory
Objective(s):

- To develop skills to design and analyze simple linear and nonlinear data structures
- To Strengthen the ability to identify and apply the suitable data structure for the given real world problem
- To Gain knowledge in practical applications of data structures

Contents:

- Implement various operations on arrays
- Implement different operations on different types of link list
- Implement various searching algorithms
- Implement different sorting algorithm and realize their complexities
- Implement Queue and stacks with all the operations
- Implement Binary Tree
- Implement graphs

Outcome(s): At the end of this course, the student will

- Be able to design and analyze the time and space efficiency of the data structure.
- Be capable to identity the appropriate data structure for given problem.
- Have practical knowledge on the application of data structures.

CS-19.254 **Data Base Management Systems Laboratory** **Total Hours: 40**
Credit: 0-0-2-1

Pre-requisites: CS14.111 (Programming Language Laboratory)

Objective: By the end of the practical sessions of this section, students will be able to:

- Create Databases using a user interface and SQL command.
- Create Integrity and constraints on databases.
- Write SQL queries.
- Provide a practical overview of advanced concepts like triggers, assertion, views, etc.

Contents:

- Creation of Databases
- Implement various Integrity Constraints
- SQL queries to implement DDL
- Implement various queries to implement DML
- Implement logics for PLSQL
- Implement Triggers

Outcomes: After undergoing this laboratory module, the students should be able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies.
- Design and implement a database schema for a given problem-domain.
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS.
- Programming PL/SQL including stored procedures, stored functions, cursors, packages.

CS-19.255 **General Purpose Programming Lab** **Total Hours:26**

Credit: 0-0-2-1

.

Prerequisite: Programming Lab

Objectives: The objective of this course is to:

- Become comfortable with Python programming, starting from basics of data types to deep learning.
- Provide the foundation of to explore any expansions of Python whether it is machine learning, deep learning, web development or gaming. It will also put focus to learn various skills to design object-oriented software.

- **Contents:**
  - Code different data types and operations on list, dictionaries, sets, String etc
  - Code basic programs like factorial, Fibinocci etc. to understand functions and recursions.
  - Implement different built-in functions in Python like eval, exec, map, lambda etc.
  - Implement the concept of class, objects, inheritance and polymorphism
  - Implement constructor and self
  - Code programs to implement exceptions and assertions
  - Implement regular expressions
  - Implement a small gaming application using Pygame
  - Implement user interface and event handling using TKinter
  - Code programs to implement the logic for machine and deep learning
  - Implement multithreading

Outcomes: Upon completion of this course, students will be:

- Able to develop application in Python
- Able to develop scientific applications for machine learning
- Able to use python to implement a given logic.
- Able to use various Python IDE like Anaconda, Pycharm etc.

UC 19.202 **Business Environment** **Total Lectures: 26**

2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]

2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]

3. **Political and legal Environment*:*** Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]

4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]

5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:

1. Business Environment, Francis Cherunilam, 1st Edition, 2018.
2. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:

1. Business Environment, BN Ghosh, OUP, 2015
2. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
3. Business Environment, AC Fernando, Pearson, 2016

MA 19.202	Statistics and Probability Theory	Total Lectures: 40
		3-1-0-4

Pre-requisite: Mathematics I, Mathematics II, and Mathematics III

Objective: To acquire fundamental knowledge of Statistics and Probability and apply in engineering disciplines.

1.	**Introductory Ideas:** Recapitulation of basics of permutation, combination and probability theory; Law of addition and law of multiplication; Conditional probability; Total probability; Bayes' theorem (with proof)and it's applications.	[08]
2.	**Random Variables and Distribution:** Discrete and continuous random variables; Types of distributions with basic properties; Probability mass and density functions; Cumulative distribution function; Mean, variance and standard deviation of distributions; Discrete types (Binomial and Poisson) and Continuous types (Normal, Uniform and Exponential); Applications of basic ideas of these distributions.	[10]
3.	**Sampling and Testing of Hypothesis:** Sampling distribution of mean and variance; Central limit theorem; Simple and Composite hypothesis; Type I and Type II errors with graphical interpretations; Level of significance and tests of significance for large and small samples with applications.	[08]
4.	**Correlation and Regression:** Simple, partial and multiple correlations; Linear regression with applications.	[06]
5.	**Queuing Theory and Queuing Models:** Birth and death process; Pure birth and pure death process; Classification of queuing models: $[(M/M/1):(FCFS/\infty/\infty)]$, $[(M/M/1):(SIRO/\infty/\infty)]$, $[(M/M/1):(FCFS/N/\infty)]$, $[(M/M/C):(FCFS/\infty/\infty)]$; Applications of queuing models.	[08]

Outcome:	After completion of the course, students would be able to apply the knowledge of Statistics and Probability theory in engineering and solve curriculum problems.
Text Books:	1. S.Palaniammal, Probability and Random Processes, PHI, 2013. 2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.
Reference Books:	1. Papoulis, Probability, Random Variables and Stochastic Processes, TMH, 2018. 2. Gupta & Kapoor, Fundamental of Mathematical Statistics, SCS Publisher, 2002. 3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

EC 19.202 **Digital Electronics** **Total Lectures: 40**

Pre-requisite: Basics of Electronics Engineering **3-0-0-3**

Objective: The aim of this course is to present the principles and techniques of combinational and sequential digital logic design and optimization at a gate level. The use of transistors for building gates is also introduced.

1. **Number Systems and Boolean Algebra:** Introduction to number systems, weighted and non-weighted codes, 1's complement, 2's complement, complement arithmetic, Postulates and theorems of Boolean algebra, Boolean functions, canonical and standard form, simplification of Boolean function using Boolean laws and theorems. [5]
2. **Logic Gates and Simplification of Boolean Functions:** Basic Logic gates, Universal gates, K-map representation, incompletely specified functions, simplification realization with gates, Quine-Mc Cluskey method. [5]
3. **Combinational Logic:** Analysis and design of combinational circuits, half adder and full adder, half subtractor and full subtractor, binary serial and parallel adder, BCD adder, binary multipliers, magnitude comparator, decoders, encoders, multiplexers, de-multiplexers. [10]
4. **Sequential Circuits and Programmable Logic :** Latches, flip-flops, triggering of the flip-flops, master-slave flip-flop, excitation tables, conversion of the flip-flops, analysis and design of clocked sequential circuits, shift registers, counters, PAL, PLA. [10]
5. **Introduction to Verilog HDL:** Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Functional Verification, System Tasks, Programming Language Interface (PLI), Module, Simulation and Synthesis Tools. Gate Level Modeling: Introduction, AND Gate Primitive, Module Structure, Other Gate Primitives, Illustrative Examples, Tri-State Gates, Array of Instances of Primitives, Design of Flip-flops with Gate Primitives, Delays, Strengths and Construction Resolution, Net Types, Design of Basic Circuits. [10]

Outcomes: Upon successful completion of this course, students should be able to:

1. Gain fundamental knowledge of the basic logic gates such as AND, OR, NAND NOR, EX-OR and their implementation in Logic Circuits.
2. Design multipliers, Combinational Circuits and registers.

Text Books:

1. Mano, M. M. and Ciletti, M.D., "Digital Design", Pearson Education, Patparganj, Delhi, 4thEdition, 2009.

2. Floyd, T. L. and Jain, R.P., "Digital Fundamental", Pearson Education, Patparganj, Delhi, 8thEdition, 2009.

References

1. Puri, V. K., "Digital Electronics: Circuits and Systems", Tata McGraw-Hill, Patel Nagar, New Delhi, 4thEdition, 2001.

CS 19.206 **Theory of Computation** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 14.201(Discrete Structures)

Objective(s): The goal of this course is to

- Provide students with an understanding of basic concepts in the theory of computation.
- To understand variety of issues in the mathematical development of computer science theory, particularly finite representations for languages and machines, as well as gain a more formal understanding of algorithms and procedures.

1. **Finite Automata and Regular Expression:** Finite state systems, basic definitions, regular languages and regular expression, finite automata ,Equivalence of DFA and NDFA , Kleen's theorem, pumping lemma for regular sets, regular expression with algebraic method Using Arden's Theorem, closure properties of regular sets, minimization of finite automata, Mealy and Moore machine - conversion of Mealy machine into Moore machine and vice versa. [11]
2. **Context-Free Grammars:** Context-free grammars, union, concatenation of CFG, derivation trees, simplification of context-free grammars, Chomsky normal form, Greibach Normal form, ambiguous context-free grammar. [9]
3. **Context-Free Languages and Pushdown Automata:** Pushdown automata and context-free languages, pumping lemma for CFL, closure properties of CFL, decision, algorithms for CFL. [8]
4. **Turing Machine:** Turing machine model, techniques for Turing machine construction, Turing machines as language acceptor, combining Turing machines, properties of recursive and recursively enumerable languages, universal Turing machine. [8]
5. **Chomsky Hierarchy of Languages:** Regular grammars, unrestricted grammars and Turing machines, context-sensitive grammars and linear bounded automata. [4]

Outcome(s):

- Be able to prove the equivalence of languages described by finite state machines and regular expressions.
- Be able to construct pushdown automata and the equivalent context free grammars.
- Be able to prove the equivalence of languages described by pushdown automata and context free grammars.
- Be able to construct Turing machines and Post machines.
- Be able to prove the equivalence of languages described by Turing machines and Post Machines.

Text Books:

1. Peter Linz, An Introduction to Formal Languages and Automata, Third Edition, Jones and Bartlett, 2016.
2. Hopcroft, Motwani, Ullmann, Introduction to Automata Theory, Languages and Computation, Pearson Education, 2nd Edition, 2005.

Reference Books:

2. Martin, Introduction to Languages and the theory of Computation, Tata McgrawHill, 3rd Edition, 2006
3. Michael Sipser, Introduction to the Theory of Computation, 3rd Edition, Cengage Learning,2013

CS 19.208 **Computer Organization and Architecture** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): EC 19.202 (Digital Electronics) (Optional)

Objective(s):

- To have a thorough understanding of the basic structure and operation of a digital computer.
- To discuss in detail the operation of the arithmetic unit including the algorithms &
- implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- To study the different ways of communicating with I/O devices and standard I/O interfaces. To study the hierarchical memory system including cache memories and virtual memory.

1. **Introduction:** Von-Neuman architecture, register transfer and micro operations: register transfer language, arithmetic micro-operations, logic micro-operations, shift micro-operations, bus and memory transfers, computer organization and design: instruction cycle, computer registers, common bus system, computer instructions, addressing modes, design of a basic computer. General register organization, stack organization, instruction formats, data transfer and manipulation, program control, RISC, CISC [10]
2. **Computer Arithmetic:** Hardware implementation of addition and subtraction, multiplication algorithms, Booths multiplier, array multiplier, division algorithms, floating point arithmetic: floating point representation, add, subtract, multiplication, division. [8]
3. **Memory & I/O Organization:** Memory hierarchy, RAM, ROM chips, memory address map, memory connection, associative memory, cache memory and virtual memory: paging and segmentation, auxiliary memory: magnetic disks, magnetic tapes, Input-output interface, Asynchronous data transfer, modes of transfer, priority interrupt, DMA, IOP. [8]
4. **Hardwired and Microprogrammed Control:** Hardwired control, microprogrammed control: microinstruction, microprogram sequencing, wide-branch addressing, microinstruction with next-address field, prefetching microinstruction. [7]
5. **Pipelining & Parallel Processing:** Pipeline and vector processing: pipeline structure, speedup, efficiency, throughput and bottlenecks, arithmetic pipeline and instruction pipeline. Flynn's Classification performance matrices for parallel system [7]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand basic structure of a digital computer.
- Perform arithmetic operations of binary number system.
- Know the organization of the control unit, arithmetic and logical unit and I/O memory unit

Text Books:

1. M. Morris Mano, Computer System Architecture, Pearson Education, 3rd edition, 2008.
2. Carl Hamacher, ZvonkoVranesic and SafwatZaky, Computer Organization, Tata McGraw Hill, 5th edition, 2002.

3. Kai Hwang, Advance Computer Architecture,Tata Mc Graw Hill,18th edition,2008

CS 19.210 **Essentials of Software Engineering (OOAD & SW Lifecycle)** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite(s): Object Oriented Technologies

Objective(s):

- To acquire fundamental knowledge of Software designing using UML.

1. **Software Engineering Overview:** Best Practices of Software Engineering Concepts of Object Orientation Essentials of Visual Modeling Requirements Overview [12]
2. **Requirement analysis**: Analysis and Design Overview Architectural Analysis Use-Case Analysis Identify Design Elements [8]
3. **Design analysis**: Identify Design Mechanisms Describe the Run-time Architecture Describe Distribution Use-Case Design Object store Mechanism Security Mechanism. [8]
4. **Testing:** software testing fundamentals, test case design, white box testing, basis path testing, control structure testing, black box testing, [6]
5. **UML and mapping**: UML to C++ Mapping, UML to Java Mapping, UML to Visual Basic Map, UML to Visual Basic Map [6]

Outcome(s):

- After completion of this course student get the understandings of object-oriented analysis and design concepts, as well as hands-on practical experience applying the techniques within a use-case-driven, architecture-centric, and iterative development process.

Text Books:

1. Pressman R.S., “Software Engineering”, Tata McGraw Hill Publishing Company Ltd., New Delhi.
2. Sommerville, Ian “Software Engineering”, Pearson Education

Reference Books:

1. Jalote Pankaj, “An Integrated Approach to Software Engineering”, NAROSA.
2. Fairely, R.E., “Software Engineering Concepts”, McGraw-Hill

EC-19.224 **Digital Electronics Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Pre-requisite: Basics of Electronics Engineering

Objective: This lab course develops skills for implementing and analyzing digital electronic circuits, with applications to electronics design. It is also designed to enhance problem solving ability through steadily increasing problem complexity.

1 To study the use of General Purpose Digital Trainer and familiarization with the digital IC Data-Books.

2 To study AND, OR. NOT, NAND, NOR, EX-OR gates and their specified experiments.

3 To set up a 4-bit Binary Counter (74LS93) to demonstrate its sequence of Counting.

4 To study the characteristics curve of TTL and CMOS logic gates.

5 To design and test 4-bit Adder and Subtractor circuits.

6 To compare the magnitude of two 4-bit Binary Numbers A and B.

7 Design a combinational circuit with 4 inputs and 4-outputs that converts a 4-bit Gray Code to an equivalent 4-bit Binary number.

8 Design and implement a BCD to Seven Segment Decoder / Driver.

9 To design and implement a 2 to 1 multiplexer.

10 To design and implement a 1:2 & 1:4 de multiplexer.

11 To investigate the operation of various flip flops SR, JK, T and D using gates and FF ICs.

12 To design and implement Adders and Subtractors using Verilog HDL

13 To design and implement Multiplexers/De-Multiplexers using Verilog HDL

14 To design and implement Filp-Flops using Verilog HDL

Outcomes:

1. The background provided in this laboratory may effectively be utilized for the understanding of advanced courses such as VLSI Design and for the designing of complex circuitry.
2. Gain a hands-on experience in carrying out key operations needed to assemble circuits on breadboard.
3. This subject is directly applicable to industrial IC design and provides a strong background for more advanced courses.
4. This lab will be useful in the designing of hardware projects using Verilog HDL

RM 19.101 **Research Methodology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. **Introduction:** Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches, Research Process, Validity and Reliability in Research. [6]
2. **Problem Formulation:** Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps. [10]
3. **Research Design:** Research Framework, Meaning & Significance of Research Designs, Features of a good Research Design, Types of Research Design. [10]
4. **Data Analysis and Simulation Tool:** Types of Data, Sources of Data, Methods of Collecting Data, Data Presentation Techniques. Methods of Data Analysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. **Report Writing:** Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:

1. R. Pannershelvam, "Research Methodology" Prentice Hall India, New Delhi, 2nd Edition, 2013.
2. C. R. Kothari, "Research Methodology: Methods and Techniques", New Age International (p) Limited, Publishers New Delhi, 4nd edition, 2018.

Reference Books:

1 William G.Zikmund, “Business Research Methods”, Cengage Learning New Delhi, 8th edition, 2016.
2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

CS 19.301 **Design and Analysis of Algorithms** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): CS-19.201(Discrete Structures), CS-19.203(Data Structures)

Objective(s):

- To learn the algorithm analysis techniques.
- To become familiar with the different algorithm design techniques.
- To understand the limitations of the algorithms power.

1. **Introduction:** Fundamentals of algorithms and problem solving, asymptotic notations, time complexity and analysis of algorithms, solutions of recurrence relations, master theorem and summations techniques. [8]
2. **Analysis of Sorting and Searching Algorithms:** Linear, binary and interpolation search, insertion, selection, merge, quick and heap sort, stability and other issues, hashing. [8]
3. **Algorithm Design Approaches:** Greedy method (knapsack problem, job sequencing problem), dynamic programming (assembly line scheduling, matrix chain multiplication), backtracking (8 queens problem, sum of subsets), branch and bound (0/1 knapsack problem), divide and conquer algorithms (Strassen matrix multiplication), problems based on these design paradigms. [8]
4. **Tree and Graph algorithms:** Spanning trees, Prim and Kruskal's algorithm, Huffman coding, BFS and DFS, disjoint set operations, connected components, shortest path algorithms in a graph such as Dijkstra, Bellman Ford, Warshall's etc. [8]
5. **Complexity Classes:** P,NP,NP hard and NP complete problems, reducibility, decision and optimization problems, examples of NP complete problems such as 3 CNF, clique, vertex cover and traveling salesman problem, basic introduction of approximation algorithms. [8]

Outcome(s): On the successful completion of the course, the student will be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.
- Modify existing algorithms to improve efficiency.

Text Books:

1. Thomas H.Cormen, Charles E.Leiserson, Ronald L. Rivest and Clifford Stein, Introduction to Algorithms, PHI Learning Private Limited, 3rd edition, 2016.
2. Ellis Horowitz, Sarta jSahni, Sanguthevar Rajasekaran, Computer Algorithms, Silicon Press, 2nd edition, 2008.

Reference Books:

1. Anany Levitin, Introduction to the Design and Analysis of Algorithms, Pearson Education, 3rd edition, 2012.
2. Alfred V. Aho, John E. Hopcroft and Jeffrey D. Ullman, Data Structures and Algorithms, Pearson Education, 1st edition, 2006.
3. Donald E. Knuth, The Art of Computer Programming, Volumes 1& 3, Pearson Education, 2009.

CS-19.303 **Operating System** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.208 (Computer Organization & Architecture)

Objective(s):

- Understand the fundamental operating system abstractions like processes, threads, files, semaphores, IPC and deadlocks.
- Understand operating system from user's perspective as well as from system's perspective.
- Understand the principles of concurrency and synchronization.
- Understand basic resource management techniques.

1. **Overview:** Definition, types of operating systems: mainframe, server, multiprocessor, personal computer, real-time, embedded and smart card, system calls and utilities, batch, multiprogramming and multitasking operating system. [3]

2. **File Systems:** File concept, user and system programmer view of file systems, different modules of a file system, disk structure, disk-space allocation methods: contiguous, linked, indexed directory structures, file protection, disk scheduling algorithms. [6]

3. **Process Management:** Process concepts, threads, scheduling concepts, types of schedulers, scheduling algorithms, process state diagram, comparison of various CPU scheduling algorithms, multi-level queue scheduling. [6]

4. **Memory Management:** Logical and physical address spaces, base, limit and relocation registers, address binding, dynamic loading and linking, partitioning, swapping, contiguous memory allocation, non-contiguous memory allocation: segmentation, paging and segmentation. [8]

5. **Process Synchronization and deadlock:** Independent and concurrent processes, shared memory approach and message passing approach, mutual exclusion, synchronization, inter process communication, critical section problem and its solution to semaphores: binary and counting semaphores, wait/signal operations and their implementation, classical problems of synchronization, deadlock. [11]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the primary functionalities of operating system.
- Manage system resources efficiently as an operating system designer.
- Develop new operating systems as well as work on existing ones to develop them further.

Text Books:

1. Galvin, Silberschatz, Gagne, Operating System Concepts, Wiley India, 9th edition, 2015.
2. Stallings, Operating Systems: Internals and Design Principles, Pearson education, 7th edition 2013.

Reference Books:

1. Andrew S. Tanenbaum, Modern Operating Systems - Prentice-Hall, Inc., 4th edition, 2015.
2. Deitel, Operating Systems, Pearson Education , 3rd edition, (2012 reprint).

CS-19.305 **Logic in Computer Science** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS-19.201(Discrete Structures)

Objective(s):

- To introduce the main notions of mathematical logic: logical notations (syntax) and how to assign meaning to them (semantics).
- To study formal frameworks (in the sense of being rigorous as well as in the sense of manipulating "form") for constructing logical arguments (proof theory).
- To study some deductive systems for propositional and first-order logic.
- To introduce the concept of fuzzy logic.

1. **Introduction:** Role of logic in computer science, problem representation, review of the principle of mathematical induction, the principle of structural induction, review of Boolean algebra, language, models, interpretations, validity, proof, decision problems in logic, decidability. [6]
2. **Propositional Logic:** Syntax, semantics, propositional logic as a formal language, natural deduction, normal forms, propositional satisfiability, propositional resolution and tableaux method. [10]
3. **Predicate Logic:** Predicate logic as a formal language, semantics of predicate logic, validity and satisfiability, forward and backward chaining, Skolmization, normal forms, unification, Horn formulas and programs, resolution. [12]
4. **Binary Decision Diagrams:** Representing Boolean functions, algorithms for reduced binary decision diagram (OBDD), reduce, apply, restrict, exists, symbolic model checking. [8]
5. **Fuzzy Logic:** Crisp sets and fuzzy sets, fuzzy membership, operations on fuzzy sets, fuzzy arithmetic, Cartesian product, fuzzy relations, fuzzy propositions, fuzzification and defuzzyfication, engineering applications of fuzzy logic. [4]

Outcome(s): On successful completion of this course, the students will be able to

- Use propositional and first-order logic.
- Apply of logic in specifying properties.
- Develop proof by induction.
- Design binary decision diagrams.
- Identify the scope for fuzzy logic.

Text Books:

1. Huth M and Ryan M, Logic in Computer Science: Modelling and Reasoning about Systems, Cambridge University Press, 2nd edition, 2004.
2. George J Klir and Bo Yuan, Fuzzy Sets and Fuzzy Logic – theory and applications, Prentice Hall, 2000.

Reference Books:

1. Arindama Singh, Logics for Computer Science, Prentice Hall of India, 1st edition, 2004.
2. M. Ben-Ari, Mathematical Logic for Computer Science, Springer, 2nd edition, 2003.
3. Rich E., and Knight K., Artificial Intelligence, Tata McGraw-Hill, 3rd edition, 2009.

CS-19.351 **DAA Laboratory** **Total Hrs: 26**

Credit: 0-0-2-1

Prerequisite(s): CS 19.253 (Data Structure Laboratory)

Objective(s):

- To analyze the asymptotic performance/Time complexity of algorithms.
- To demonstrate familiarity with major algorithms and data structures.
- To apply important algorithmic design paradigms, techniques and methods for the solution of real life problems.
- To synthesize efficient algorithms in common engineering design situations.

Contents: Lab manual based upon the theory course CS 14.301 and to achieve the listed course objectives and outcomes.

- To implement and analyze sorting algorithms Insertion, Quick and Merge Sort
- To implement optimal binary search tree
- To implement greedy algorithms Knapsack problem
- To implement Dikshtra and Warshall's Algorithm
- To implement Bellman Ford Algorithm
- To implement DFS and BFS

Outcome(s): On successful completion of this course, the students will be able to

- Understand and analyze the time complexities of sorting algorithms
- Understand and analyze Graph algorithms
- Understand and analyze the DFS and BFS algorithms

CS-19.353 **Operating System Laboratory** **Total Hours: 26**

Credit: 0-0-2-1

Prerequisite(s): CS 19.151 (Programming Language Lab.) CS 19.253(Data Structures Lab)

Objective(s):

- Learn basic operating system abstractions like process, file, page etc. through hands on programming.
- Comprehend problems of resource sharing in operating system and develop software solutions for the same.
- Work in groups to come out with solutions that require collective application of skills learnt.

Lab manual based upon the theory subject and to achieve the listed course objectives and outcomes.

- To simulate multi-level queue scheduling algorithm
- To simulate the Sequential and Indexed allocation
- To simulate the MVT and MFT memory management techniques
- To simulate the following contiguous memory allocation techniques
  a) Worst-fit b) Best-fit c) First-fit.
- To simulate paging technique of memory management
- To simulate Bankers algorithm for the purpose of deadlock avoidance
- To simulate disk scheduling algorithms a) FCFS b) SCAN c) C-SCAN

Outcome(s): On successful completion of this course, the students will be able to

- Simulate different operating system scenarios like, process scheduling, memory management, disk scheduling, page replacement and deadlocks.
- Comprehend real life issues in operating system design and would design software level solutions for the same.
- Work in a group to come out with piecemeal solutions individually for a large problem in operating system and would be able enough to make handshaking between different modules to develop a single solution for the same.

CS 19.312 **Soft Computing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.305(Logic in Computer Science)

Objective(s):

- To familiarize with soft computing concepts
- To introduce the idea of neural networks, fuzzy logic and use of heuristics based on human experience
- To introduce the concept of genetic algorithm and its applications to soft computing using some applications

1. **Introduction**: Introduction of soft computing, types of soft computing, applications of soft computing, introduction of artificial intelligence, production system, various search techniques, hill climbing, best first search, knowledge representation, monotonic and non-monotonic reasoning. [8]
2. **Neural Networks:**Structure and function of a single neuron, definition of ANN, characteristics of ANN, applications of ANN, single layer networks, perceptron training algorithm, linear separability, various learning rules, delta rule, ADALINE, MEDALINE, multi-layer networks, activation functions, error back propagation algorithms, characteristics of EBPA. [8]
3. **Neral Network Architectures**: Counter propagation networks, architecture, functioning, characteristics, Hopfield network, configuration, associative memory, limitations and applications, Hopfield vs Boltzman machine, adaptive resonance theory, architecture, classification, implementation and training [8]
4. **Fuzzy Logic :**Fuzzy logic, fuzzy set theory, fuzzy set vs crisp set, crisp relation and fuzzy relation, introduction and features of membership functions, fuzzy rule based system, fuzzy propositions, formation, decomposition and aggregation of fuzzy rules, fuzzy reasoning, fuzzy interference system, fuzzy decision making, applications of fuzzy logic. [8]
5. **Genetic Algorithms :**Genetic algorithm, fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, genetic modelling, inheritance operator, cross over, inversion and deletion, mutation operator, bitwise operator, generational cycle, convergence of GA, applications and advances in GA, difference and similarities between GA and other traditional methods. [8]

Outcome(s): On successful completion the students will be able to:

- Identify and describe soft computing techniques and their roles in building intelligent machines
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems
- Apply genetic algorithms to combinatorial optimization problems
- Apply neural networks to pattern classification and regression problems
- Evaluate and compare solutions by various soft computing approaches for a given problem

Text Books:

1. S. N. Sivanandan and S.N. Deepa, “Principles of Soft Computing”, Wiley India, 2007
2. J.S.R.Jang, C.T.Sun and E. Mizutani, “Neuro-Fuzzy and Soft Computing”, PHI, 2004
3. Pravir K. Chawdhry, Rajkumar Roy, Raj K. Pant “Soft Computing in Engineering Design and Manufacturing”Springer, 2012.

Reference Books:

1. S. Rajasekaran and G.A.V. Pai, “Neural Networks, Fuzzy Logic and Genetic Algorithms”, PHI, 2003
2. Timothy J.Ross, “Fuzzy Logic with Engineering Applications”, McGraw-Hill, 3rdEdition, 2009.
3. Davis E. Goldberg, “Genetic Algorithms: Search, Optimization and Machine Learning”, Pearson Education , 2006

CS-19.304 **Compiler Design** **Total Lectures:40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.206 (Theory of Computation)

Objective(s):

- To introduce the major conceptual areas of language translation and compiler design.
- To enrich the knowledge in various phases of compiler, code optimization techniques
- To extend the knowledge of different parsers.
- To provide practical programming skills necessary for construction of a compiler.

1. **Introduction:** Introduction of compiler, compiler structure: analysis-synthesis model of compilation, various phases of a compiler, Symbol table: Role and data structure used for symbols tables . Lexical Analysis: Input buffering, specification & recognition of tokens, error detection & recovery . [8]
2. **Syntax Analysis & Syntax Directed Translation:** Syntax analysis: CFGs, top down parsing, Brute force approach, recursive descent parsing, transformation on the grammars, predictive parsing, bottom up parsing, operator precedence parsing, LR parsers (SLR, LALR, LR), parser generation error detection & recovery. [9]
3. **Syntax Directed Definition**: Construction of syntax trees, bottom up evaluation, S-attribute definition, L-attribute definition, top down translation, bottom up evaluation of inherited attributes, recursive evaluation, analysis of syntax directed definition. [8]
4. **Intermediate Code Generation:** Intermediate code, postfix notation, parse trees & syntax trees, three address code, quadruple & triples, translation of assignment statements, Boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser, more about translation: array references in arithmetic expressions, procedures call, declarations, case statements. [8]
5. **Code Optimization & Code Generation:** Loop optimization, the DAG representation of basic blocks, flow graphs, global data-flow analysis, peephole optimization, generating code from DAG, register allocation and assignment. [7]

Outcome(s): On successful completion of this course, the students will be able to

- Use lexical analyzer and parser generator tools.
- Generate intermediate code.
- Be familiar with register allocation.
- Expose compiler code optimization.

Text Books:

1. A. V. Aho, R. Sethi, and J. D. Ullman. Compilers: Principles, Techniques and Tools, Pearson Education, 2nd edition, 2014.
2. Louden, Compiler Construction: Principles and Practice, Cengage Learning, 1st edition, 1997.

Reference Books:

1. Allen I. Holub, Compiler Design in C, Prentice-Hall Inc., 1st edition, 1994.
2. AW Appel, M Ginsburg, Modern Compiler Implementation in C, Cambridge University Press, 1st edition, 2004.
3. J. R. Levine, T. Mason, D. Brown, Lex and Yacc, O'Reilly, 2nd edition, 2000.

CS-19.306 **Computer Networks** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures)

Objective(s):

- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To construct large-scale computer networks
- To understand fundamentals of computer networks and major protocols.
- To analysis and evaluate major Internet protocols.
- To program simple network applications using socket API
- To learn and adopt newly introduced computer network technologies by themselves.

1. **Introduction:** History and development of computer networks, networks topologies, MANET, categories of networks, layering and protocols. [5]
2. **Physical and MAC Layer:** Different types of transmission media, transmission impairments, encoding schemes (NRZ, NRZI, Manchester, 4B/5B, Manchester etc.), packet and circuit switching. Aloha, CSMA/CA, CSMA/CD protocols, performance evaluation and characteristics. [8]
3. **Data Link Layer:** Framing concept, error detection (parity, CRC), sliding window, stop and wait protocols, stop performance and efficiency. IEEE 802.3, 802.4, 802.5, 802.11, performance evaluation. [10]
4. **Network Layer:** IPv4, IP address classes, classless addressing, IPv6, ARP, RARP, DHCP, ICMP, routing algorithms: distance vector, metrics, RIP, OSPF, BGP, congestion control algorithms, leaky bucket, token bucket. [8]
5. **Transport & Application Layer:** Duties of the transport layer, connection, TCP, TCP services, TCP header, UDP, evaluating protocol such as TCP/UDP using simulator like NS2. DNS, FTP, HTTP, SMTP, POP, basics of network security, cryptography, digital signature and firewall. [9]

Outcome(s): On successful completion of this course, students will be able to

- Analyze computer network component and devices.
- Synthesize how communication works in a network and internet.
- Formulate the concept of topologies and their applications.
- Analyze protocol at different layers and how they play important role in network implementation.

Text Books:

1. Tanenbaum A. S., Computer Networks, Prentice-Hall of India, 5th edition, 2010.
2. Forouzan B. A., Data Communications and Networking, Tata McGraw-Hill, 5th edition, 2013.

Reference Books:

1. Stallings W., Data and Computer Communications, Prentice-Hall of India, 10th edition, 2013.
2. Hayes J. F., Modeling and Analysis of Computer Communication Networks, Plenum Press, 1st edition, 1987.
3. Kurose and Ross, Computer Network: a top-down approach, Pearson 6th edition 2015.

CS-19.308 **Digital Image Processing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS-19.101 (Programming Language)

Objective(s):

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To study the image segmentation and representation techniques
- To study the image representation in form of features and descriptors

1. **Digital Image Fundamentals:** Elements of digital image processing systems, elements of visual perception, brightness, contrast, hue, saturation, mach band effect, color image fundamentals - RGB, HSI models, image sampling, quantization, dither, two-dimensional mathematical preliminaries, 2D transforms - DFT, DCT, KLT, SVD. [7]
2. **Image Enhancement and Restoration:** Histogram equalization and specification techniques, noise distributions, spatial averaging, directional smoothing, median, geometric mean, harmonic mean, contra harmonic mean filters, image restoration - degradation model, unconstrained restoration, inverse filtering, removal of blur caused by uniform linear motion. [7]
3. **Morphological Image Processing:** Basics, structuring element, erosion, dilation, opening, closing, hit-or-miss transform, boundary detection, hole filling, connected components, convex hull, thinning, thickening, skeletons, pruning, and reconstruction by dilation and erosion. [7]
4. **Image Segmentation:** Edge detection, edge linking via Hough transform, thresholding, region based segmentation, region growing, region splitting and merging, and segmentation by morphological watersheds, basic concepts, dam construction, and watershed segmentation algorithm. [7]
5. **Image Representation:** Boundary representation, chain code, polygonal approximation, signature, boundary segments, boundary description, shape number, Fourier descriptor, regional descriptors, and topological features. [6]
6. **Image Compression:**Need for data compression, Huffman, run length encoding, shift codes, arithmetic coding, vector quantization, transform coding, JPEG standard, MPEG. [6]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the basic algorithms used for image processing &image compression with morphological image processing.
- Apply image enhancement and restoration techniques.
- Use image compression and segmentation Techniques.
- Represent features of images.

Text Books:

1. Rafael C. Gonzales, Richard E. Woods, “Digital Image Processing”, Third Edition, Pearson Education, 2010.
2. Anil Jain K. “Fundamentals of Digital Image Processing”, PHI Learning Pvt. Ltd., 2011.

Reference Books:

1. Rafael C. Gonzalez, Richard E. Woods, Steven L. Eddins, “Digital Image Processing Using MATLAB”, Third Edition Tata Mc Graw Hill Pvt. Ltd., 2011.
2. William K Pratt, “Introduction to Digital Image Processing”, CRC Press, 13-Sep-2013.
3. Bernd Jähne, Digital Image Processing, Springer Science & Business Media, 29-Jun-2013.

CS-19.354 **Compiler Design Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): CS 19.151(Programming Language Lab.) CS 19.253(Data Structures Lab.)

Objective(s):

- To design and implement a lexical analyzer
- To design and implement a parser
- To design and implement symbol tables
- To understand and design code generation schemes
- To learn the working of some compiler writing tools

Contents:

- To study the Flex environment
- Implementation of Simple Programs using FLEX
- To illustrate the concept of Special Directives in FLEX
- Illustrate the special functions like yymore(), yyless(), unput(), input(), yyterminate(), yyflush buffer
- To implement the Lexical Analyser using FLEX
- To implement syntax analysis programs such as string check, identifier, integer, converting and evaluation of postfix, infix expressions in YACC
- To demonstrate symbol table implementation in YACC and FLEX
- Implementation of intermediate code generation.

Outcome(s): On successful completion of this course, the students will be able to

- Understand the peculiarities of a language translator
- Get the practical approach of how a compiler works
- Work in the development phase of new computer languages in industry
- Understand the working of compiler construction tools
- Visualize and design a new compiler of her own language

CS-19.356 **Computer Network Laboratory** **Credit: 0-0-2-1**

Prerequisite(s): CS 19.101 (Programming Language Lab.), CS 14.253(Data Structures Lab.)

Objective(s):

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming

Contents:

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming
- To demonstrate sending a UDP packet and TCP

Outcome(s): On successful completion of this course, students will be able

- To know how communication works at different layers of TCP/IP model
- To understand practically the purpose of various key protocol.
- To learn how a network can be efficiently deployed.
- To identify and analyze the latest technology with existing one.
- To configure network with client/server programming
- To understand computer network component and devices.

CS-19.358 **Digital Image Processing Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): CS 19.151 (Programming Language Lab.),

Objective(s): The aim of this course is to familiarize students with the implementation in Matlab of the basic techniques for handling images and developing algorithms for image processing (quality enhancement, restoration, coding, compression).

Contents:

- Introduction to MATLAB
- Implementation of Image Transformation Fourier, DCT etc.
- Implantation of Fourier Transformation properties
- Implementation of Image Enhancement operations.
- Implementation of image degradation and restoration methods
- Implementation of image segmentation and morphological operations.

Outcome(s): On successful completion of this course, students will be able

- Learn basic image processing techniques for solving real problems.
- Student will also have sufficient expertise in both the theory of two-dimensional signal processing and its wide range of applications, for example, image restoration, image compression, and image analysis.

CS 19.212 **Business Intelligence** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.207 Application Development for cloud

Objective(s):

- To Understand how analytics provided a solution to industries using real case studies
- To Explain what is analytics, the various types of analytics, and how to apply it
- To Understand how a business analysis software works, and its architecture
- To Describe a reporting application, its interface, and the different report types
- To Create different types of advanced reports
- To Understand Active Reports and how to create them

1. **Business Analytics Overview**: Analytics overview, Analytics trends: past, present & future, Towards a predictive enterprise, Analytics: Industry domains, Case studies and solutions. [5]
2. **Business Intelligence and Analytics 101 and Business analytics foundations**: Business Intelligence and Analytics 101, IBM Cognos Analytics for Consumers, Business analysis solution for consumers. [7]
3. **Business intelligence analyst:** IBM Cognos Analytics: Author Reports Fundamentals, Introduction to IBM Cognos Analytics, Create list reports, Focus reports using filters, Create crosstab reports, Present data graphically, Focus reports using prompts, Extend reports using calculations, Use additional report building techniques, Customize reports with conditional formatting, Drill-through definitions, Enhance report layout, Overview of IBM Cognos Analytics [12]
4. **IBM Cognos Analytics: Author Reports Advanced & Active Reports:** Create query models, Create reports based on query relationships, Create advanced dynamic reports, Design effective prompts, Create additional advanced reports, Examine the report specification, Distribute reports through bursting, Enhance user interaction with HTML. [11]
5. **IBM Cognos Analytics: Author:** Introduction to IBM Cognos Active Reports, Use Active Report connections, Active Report charts, visualizations, and decks. [5]

Outcome(s):

- Describe a reporting application, its interface, and the different report types
- Create different types of advanced reports
- Understand Active Reports and how to create them

Text Books: IBM Study Material.

Reference Books:

1. Liautaud, Bernard, and Mark Hammond. e-Business intelligence: turning information into knowledge into profit. McGraw-Hill, Inc., 2000.
2. Anandarajan, Murugan, Asokan Anandarajan, and Cadambi A. Srinivasan, eds. Business intelligence techniques: a perspective from accounting and finance. Springer Science & Business Media, 2012.
3. Michalewicz, Zbigniew, et al. Adaptive business intelligence. Springer Berlin Heidelberg, 2006.

CS-19.311 **Big Data Programming** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): Basic knowledge of Linux , SQL, Hadoop technologies, data science,

Objective(s):

- To Understand what Big Data is
- To understand how the growth of interconnected devices helps big data.
- To Learning the tools that will enable to continue big data education after the course

1. **Big Data Overview**: Introduction to Big Data, Introduction to the Big Data Ecosystem, Introduction to Hortonworks Data Platform (HDP), Apache Ambari, Hadoop and HDFS, MapReduce and YARN, Apache Spark, Storing and quering data, ZooKeeper, Slider, and Knox, Loading data with Sqoop, Security and Governance, Stream Computing, Exercise: Exploration of the lab environment. [10]
2. **Exploration of the lab environment:** Managing Hadoop clusters with Apache Ambar, File access and basic commands with HDFS, Running MapReduce and YARN jobs, Creating and coding a simple MapReduce job, Working with a Spark RDD with Scala, Using Hive to access Hadoop/HBase data, Explore Zookeeper, Moving data into HDFS with Sqoop, [10]
3. **Introduction to Data Science**: Data Science and Data Science Notebooks, Data Science with Open Source Tools, Exercise: Moving data into HDFS with Sqoop [5]
4. **Big SQL**: Using Big SQL to access data residing in the HDFS, Creating Big SQL schemas and tables, File formats and querying Big SQL tables, Managing the Big SQL Server, Configuring Big SQL security, Data federation with Big SQL, Exercise: Connecting to the IBM Big SQL Server, Creating and managing Big SQL schemas and tables, Querying Big SQL tables, Managing the Big SQL Server, Configuring Big SQL security, Configuring impersonation in Big SQL, Using Fluid Query with Big SQL. [9]
5. **IBM Watson Studio:** Introduction to IBM Watson Studio, Analyzing data with Watson Studio,Exersice: Getting started with Watson Studio, Analyzing data with Watson Studio. [6]

Outcome(s): On the successful completion of the course, the student will be able to:

- Hadoop and the Hadoop Distributed File System
- Analyze the time and space complexity of algorithms.
- Apache Spark.
- ZooKeeper, Slider, and Knox

Text Books:

1. Fan, Jianqing, Fang Han, and Han Liu. "Challenges of big data analysis." National science review 1.2 (2014): 293-314.

Reference Books:

1. Holmes, Alex. Hadoop in practice. Manning Publications Co., 2012.

CS 19.316 **Artificial Intelligence** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.311 Big Data Programming

Objective(s):

- To Describe the field of AI and its subfields machine learning, NLP and computer vision
- To Describe the types of AI
- To Describe the types of machine learning: Supervise learning, unsupervised learning, and deep learning
- To Describe the purpose of training the various Watson services to adapt them to a closed-domain
- To Use Watson API Explorer to interact with the Watson services REST API, to rest your calls to the

1. **Artificial intelligence overview**: Introduction to Artificial Intelligence, Machine Learning, Natural Language Processing, Computer vision, Cognitive Computing. [5]
2. **Artificial intelligence foundations**: Introduction to IBM Watson, Evolution from DeepQA to Watson services on IBM Cloud, Build with Watson, Exploring Watson services with Watson API Explorer. [10]
3. **Artificial intelligence analyst:** Introduction to Natural Language Processing, Pipeline and concepts, NLP and IBM Watson, Exercises on Ingest, Convert, Enrich, and Query with Watson Discovery Service. [10]
4. **Chatbots:** Introduction to Chatbots, Chatbot fundamentals, IBM Watson conversation service. [8]
5. **Computer Vision:** Introduction to Computer Vision, Computer Vision fundamentals, IBM Watson Visual Recognition service, Exercise on Classifying images with Watson Visual Recognition. [7]

Outcome(s):

- Understand the relationship between AI and NLP
- Know the history and advancement of Computer Vision
- Understand Computer Vision components
- Learn about the Vision services that are available from IBM Watson.

Text Books:

1. Russell, Stuart J., and Peter Norvig. Artificial intelligence: a modern approach. Malaysia; Pearson Education Limited,, 2016.

Reference Books:

1. Michalski, Ryszard S., Jaime G. Carbonell, and Tom M. Mitchell, eds. Machine learning: An artificial intelligence approach. Springer Science & Business Media, 2013.
2. Nilsson, Nils J. Principles of artificial intelligence. Morgan Kaufmann, 2014.

CS-19.416 **Predictive Modeling Analytics** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): Cs 19.316 Artificial Intelligence

Objective(s):

- To understand how analytics provided a solution to industries using real case studies
- To Explain what is analytics, the various types of analytics, and how to apply it
- To Improve efficiency, sample records, and work with sequence data
- To Integrate and collect data
- To Understand the principles of data mining

1. **Business Analytics Overview**: Analytics overview, Analytics trends, Towards a predictive enterprise, Analytics: Industry domains , Case studies and solutions. Business Intelligence and Analytics. [5]
2. **Introduction to A Predictive Analytics Platform & Data Mining**: Introduction to data mining, Working with modeler, A Data-mining tour ,Collecting initial data , Understanding your data ,Setting the unit of analysis ,Integrating data ,Deriving and reclassifying fields, Looking for relationships ,Introduction to modeling , Exercise: On the basis of all above topics. [10]
3. **Advanced data preparation**: Using functions, Data transformations, Working with sequence data, Sampling records, Improving efficiency. Exercise on the basis of all above topics. [10]
4. **Automated Data Mining**: Introduction to data mining ,The basics of using a modeler ,Reading data files , Data exploration , Automated data preparation ,Data partitioning, Predictor selection for modeling ,Automated models for categorical targets , Model evaluation , Automated models for continuous targets. [5]
5. **Deploying models Exercise :**Adding nodes and creating streams in the modeler ,Reading a data file and typing the data in the source node , Review missing values in modeler and use the data audit node on the charity data , Practice using the ADP node to prepare data for modeling ,Use a partition node to split the charity data for modeling ,Use the feature selection node to select fields and predict a response ,Using the auto classifier node to construct a model in order to predict a response, Evaluate the model created to predict the field response ,Develop a model to predict the total spending , Use a scoring stream to make predictions [10]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand the principles of data mining
- Use the user interface of modeler to create basic program streams
- User a partition node to create training and testing data subsets
- Use a model to score new data

Text Books:

1. Frees, Edward W., Richard A. Derrig, and Glenn Meyers, eds. Predictive modeling applications in actuarial science. Vol. 1. Cambridge University Press, 2014.

CS 19.292 **Application Security** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s):

Objective(s):

- To Describe the emerging threats and leaks as the world is becoming digitalized
- To Understand the security dynamics of securing the enterprise
- To Understand relational database concepts and how to work with database objects
- To Describe how to work with select statements, DML statements, and multiple tables
- support etc.)
- To Understand glass box scanning, content based scanning, and troubleshooting

1. **Cyber Security Overview**: Emerging threats and leaks as the world is becoming digitalized, The changing dynamics of securing the enterprise, A new approach to security, The foundation of approach to security the enterprise, IT Security Frameworks, Security Intelligence as a foundation of all security programs, IBM Security. [5]
2. **Application Security Foundations**: SQL Fundamentals, Relational database concepts, Working with database objects, Reading data, Inserting, updating, and deleting data, Working with multiple tables, exercises on Relational database exercise, Creating, modifying and deleting database objects ,Inserting, updating, and deleting data. [9]
3. **Introduction to HTML5 and JavaScript Programming:** HTML5 overview, JavaScript programming for web applications, HTML5 features, Working with JavaScript in HTML documents, Working with HTML5 features. [9]
4. **Web Application Security Fundamentals:** The web application security problem, Web application basics, Injection flaws, Broken authentication and session management, Cross-Site scripting, Insecure direct object reference, Security misconfiguration, Sensitive data exposure, Missing function level access control, Cross-site request forgery (CSRF), Using components with known vulnerabilities, Unvalidate redirects and forwards, Integrating security in the software development lifecycle [9]
5. **Web Application Security Solution Fundamentals:** Web application security overview, Installation and setup, Preparing for scan, Configuring first scan, Reviewing the results, Reporting, Logging in and managing sessions, Configuring explore options, Optimizing your scan, Glass box scanning, Content-based scanning, Reviewing scan coverage, Scanning web services, Extending the security web application solution, Troubleshooting, [8]

Outcome(s):

- Understand relational database concepts and how to work with database objects
- Describe how to work with select statements, DML statements, and multiple tables
- Understand how to use JOINs in SQL
- Understand the basics of HTML5 (objectives, document types that are supported, browser support etc.)

Text Books:

CS 19.496 **Block Chain** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.292 Application Security

Objective(s):

- To Explain block chain and how it is applied across industries
- To Understand the benefits of a blockchain platform
- To Explain what is Hyper ledger Composer, how it fits into blockchain, and its applications
- To Explain the elements of a business network, the role of channels, and how the world state is maintained
- To Understand block chain deployment, security and integration capabilities

1. **Blockchain overview**: What is Blockchain? The business backdrop, The problem area, Relation to Bitcoin, Difference between Bitcoin and Blockchain, Requirements for a blockchain in a business environment, Requirements deep dive, Apply blockchain to business, Why blockchain is relevant for business, Consensus: Shared Reference Data Example, Provenance: Supply Chain Example, Immutability: Audit and Compliance Example, Finality: Letter of Credit Example, Industry Use Cases, Hyperledger Composer, Hyperledger Fabric, Blockchain for Financial Services [10]
2. **Blockchain Foundations**: HTML5 overview, JavaScript programming for web applications, HTML5 features, Working with HTML 5 features, Node.js, Server-Side JavaScript, Creating a Node.js Web Application, Asynchronous I/O with callback programming, Refactor weather project, , Working with JavaScript in HTML documents. [8]
3. **Docker Essentials** : Introduction to Docker, Add value CI/CD with Docker Images, Introduction to Orchestration, Get started with Kubernetes, Virtual machines, containers, and Kubernetes, Relationship between Kubernetes and containers, Deploy an application with IBM Watson services. [8]
4. **Blockchain Developer:** Blockchain Overview, Introducing Hyperledger Composer, Understanding Blockchain Solution Architecture, Blockchain in-depth, Hyperledger Fabric Application Development, Understanding Blockchain Deployment Options, Understanding Blockchain Security, Blockchain Integrated, Applying blockchain concepts to the vehicle manufacture lifecycle use case, [8]
5. **User Application:** Developing a blockchain user application with Hyperledger Composer SDK, Developing a client application for Hyperledger Fabric, Integrating blockchain with other systems, [6]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand blockchain and how it is applied across industries
- Understand the role of a shared ledger
- Understand the benefits of a blockchain platform
- Understand what is Hyperledger Composer, how it fits into blockchain, and its applications
- Understand the blockchain solution architecture

Text Books:

1. Wattenhofer R. The science of the blockchain. CreateSpace Independent Publishing Platform; 2016 Jan 27.

Reference Books:

1. Swan, Melanie. Blockchain: Blueprint for a new economy. " O'Reilly Media, Inc.", 2015.
2. Mougayar, William. The business blockchain: promise, practice, and application of the next Internet technology. John Wiley & Sons, 2016.

CS 19.461 **Cloud Computing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s): To learn how to use cloud services.
To implement virtualization and task scheduling

1	**Overview of Cloud Computing:** Brief history and evolution - history of cloud computing, evolution of cloud computing, traditional vs. cloud computing, cloud service models (IaaS, PaaS & SaaS), cloud deployment models (public, private, hybrid and community cloud), benefits and challenges of cloud computing, introduction to AWS public cloud vendor, cost optimization in AWS, basics of virtualization, virtualization technologies, server virtualization, VM migration techniques, role of virtualization in cloud computing, introduction to EC2 service of AWS.	[10]
2	**Working with Private Cloud:** Private cloud definition, characteristics of private cloud, private cloud deployment models, private cloud vendors - CloudStack, OpenStack, Eucalyptus Microsoft, private cloud – benefits and challenges, private cloud implementation in Amazon EC2 service.	[8]
3	**Working with Public Clouds:** What is public cloud, why public cloud, when to opt for public cloud, public cloud service models, public cloud players, infrastructure as a service offering, IaaS vendors, PaaS offerings, PaaS vendors, software as a service, demonstrating public cloud with AWS – storage and database services, private vs. public cloud – when to choose.	[10]
4	**Overview of Cloud Security:** Explain the security concerns in traditional IT, introduce challenges in cloud computing in terms of application security, server security, network security, security reference model, abuse and nefarious use of cloud computing, insecure interfaces and APIs, malicious insiders, shared technology issues, data loss or leakage, account or service hijacking, unknown risk profile, shared security model between vendor and customer in IaaS/PaaS/SaaS, implementing security in AWS.	[8]
5	**Future directions in Cloud Computing:** When and not to migrate to cloud, migration paths for cloud, selection criteria for cloud deployment, issues/risks in cloud computing, future technology trends in cloud computing.	[4]

Outcome(s): On successful completion the students will be able to:

- Analyze the cloud computing setup with its vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds.

Text Books:

1. Raj Kumar Buyya, James Broberg and Andrezi M Goscinski, “Cloud Computing: Principles and Paradigms”, John Wiley & Sons, 2010
2. Nick Antonopoulos and Lee Gillam, “Cloud computing: Principles, Systems and Applications”, Springer, 2010.

Reference Books:

1. Anthony T Velte, Toby J Velte and Robert Elsenpeter, “Cloud Computing: A Practical Approach”, McGraw Hill, 2010
2. Borko Furht and Armando Escalante (Editors), “Handbook of Cloud Computing”, Springer, 2010
3. Judith Hurwitz, Robin Bllor, Marcia Kaufman and Fern Halper, “Cloud Computing for Dummies”, John Wiley & Sons, 2010.

CS 19.462 **Mobile App Development** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s):

- To learn how mobile apps are different from other traditional apps by learning those aspects of mobile programming that make it unique from other platforms.
- Program mobile applications for the Android operating system that use basic and advanced phone features.
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout, UI elements, Drawable, Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and SMS APIs native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access (via Internet/Intranet)	[14]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobile apps, distributing apps on mobile market place.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

Text Books:

1. Barry Burd, Android Application Development All in One for Dummies, Johen Wiley & Sons Inc., 2011.
2. Anubhav Pradhan, Anil V Deshpandy, Mobile App Development, Edition I

Reference Books:

1. Lauren Darcey, Shane Conder, “Teach Yourself Android Application Development in 24 Hours”, SAMS Publishing, 2012, 2ndEdition , 2012.

CS 19.463 **Agile Software Development** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.302 (Software Engineering)

Objective(s):

- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To learn the essentials of collaboration as they apply to agile methods.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1	**Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools.	[7]
2	**Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management.	[9]
3	**Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk-based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software.	[10]
4	**Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control.	[10]
5	**Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Scrum.
- Write user stories for project requirements.
- Write test cases for developing features.

Text Books:

1. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
2. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: ET-18.101 **E-Government Processes and Technologies** **3-0-0-3**

Total Lectures: 39

Objectives:

- Support the government departments, in terms of leading or being part of team responsible for, e-Governance project Conceptualization and design .
- Support the government departments in effectively planning and managing various phases of e-Governance project development and implementation
- Leverage the strengths of private sector in e-Governance initiatives through effective procurement approach and manage service delivery throughout project Lifecycle
- Application of learning and good practices in e-Governance projects implementation to minimise the learning curve and to maximise the benefits for the department

1. **Roadmap to e-Government:** Vision and mission of e-government, government to e-government transformation, selection, planning and management of projects, parameters for success and measure of projects, relationship and citizen participation in e-government. [5]
2. **e-Gov 2.0:** Introduction, e-Gov 1.0 v/s e-Gov 2.0, e-Gov 2.0 financial and technology models. [5]
3. **Multiple Standards in ICT and Change Management:** Purpose and rationale for multiple standards, areas having multiple standards, rationale for single standard, introduction to change management, model of change management. [6]
4. **Government Data Centres and Utility Computing :** Elements and complexity of GDCs, virtualization and consolidation of GDCs, architecture of a GDC, utility computing concepts and areas, technical and regulatory issues in utility computing. [7]
5. **Secured Government Information System Architecture:** Introduction, architectural types, processes, security requirements and policies, steps in designing security architecture. [8]
6. **Case Studies of few e-Government Projects:** National Citizen Identity System, land records, urban development management system, e-agriculture, e-procurement, RTO, e-mitra etc. [8]

(The contents in this unit are subject to change as per the evolution and progression of novel e-governance projects).

Outcomes: Will have the understanding and knowledge of the following:

- Better access to information and quality services for citizens
- Simplicity, efficiency and accountability in the government
- Expanded reach of governance
- Enabling Environment for Promoting Economic development
- Enhancing Transparency and Accountability:
- Improving Service Delivery:
- Improving Public Administration

Text Books:

1. Jaijit Bhattacharya, "e-Gov 2.0", 1st edition, Tata McGraw Hill.

2. C.S.R. Prabhu, "e-Governance: Concepts and Case Studies", 2nd edition, PHI.

Reference Books:

1 J. Satyanarayana," e-Government: The Science of the Possible", PHI.

2 Bidisha Chaudhuri, "E-Governance in India: Interlocking Politics, Technology and Culture", 1st edition, Routledge.

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code:
ET- 18.103

Application of Electronics in Everyday Life

3-0-0-3
Total Lectures: 40

Objective: To develop the understanding of Electronics used in daily life as well as understand the principle and working of various instruments used in health care, IoT and communication sector.

1. **ELECTRONICS COMPONENTS:** Resistor and its color code, Capacitor, Inductor, PN diode, Photo Diode, LDR, LED, Zener diode, Varactor diode. **[4]**
2. **ELECTRONICS IN COMMUNICATION:** Telegraph, Telex, Mobile Phone, Optical Fiber, Transmission Line, Waveguides, Satellite Communication, RADAR, 4G system, Internet, Video conferencing, Fax. **[10]**
3. **ELECTRONICS IN HOME CARE:** Basic of electricity and electrical cables, Multi meter and basic electronic component, Power supply, UPS/Inverter, SMPS, Washing machine, Microwave oven, Steam iron, Electric rice cooker, Electric kettle, Induction plate. **[8]**
4. **ELECTRONICS IN IOT:** Introduction, IoT applications for industry: Future Factory Concepts, Smart Objects, Smart Applications, Smart Homes, Structural Monitoring, Buildings, Smart Cities , Transportation Healthcare Warfare, Physical Intrusion Detection, Surveillance. **[10]**
5. **ELECTRONICS IN HEALTHCARE:** ECG, EEG, Defibrillator, Computed Tomography, Magnetic Resonance Imaging, Glucometer, Sphygmomanometer, Digital and Infrared Thermometer. **[8]**

Outcomes:

At the end of this course, the student should be able to

1. Know about fundamentals of Electronic Components.
2. Understand the concept of Communication.
3. Understand the concepts of electronics behind various home appliances.
4. Learn about basics of health care equipment.

Text Books:

1. Ben G. Streetman, Sanjay Kumar Banerjee: Solid state Electronic Device Electronics, Sixth Edition, Prentice Hall.
2. Adel S. Sedra, Kenneth C. Smith: Microelectronic circuit, Sixth Edition, Oxford.
3. Richard. C. Jaeger, "Microelectronic Circuit Design", Tata McGraw-Hill Companies Inc., International Edition.

Reference Books:

1. B. P. Lathi, "Modern Digital and Analog communication Systems", Oxford University Press, 2010.
2. William C. Y. Lee, Mobile cellular telecommunication – Analog and Digital systems, McGraw Hill, 2nd Ed, 2006

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **Energy Sources & Sustainable development** **3-0-0-3**
ET-18.104 **Total Lectures: 39**

Objective(s): *The course is designed to give knowledge of various energy sources and basics of power production techniques. It lays emphasis on basic understanding of green energy technology and its importance for environment and sustainable development.*

1. **World Energy Status:** Present Situation and future Energy Scenario, Evolution of Energy Security; India's Energy Scenario; Introduction to nexus between Energy, Environment, and Sustainable development and Climate Change and societal issues [14]
Conventional Energy Sources: Fossil Fuel, Coal, Oil, Gas, Thermal Power Stations, Hydro power generation, Comparison of various conventional energy systems, their prospects and limitations
Scenario of Green Energy Sources: Difference between conventional and renewable energy systems, Needs and advantages of green energy sources, social implications.

2. **Solar Energy:** Principles of photovoltaic generation of electricity; Silicon cell; Photon absorption; Cell efficiency; Solar cell construction; Types and usage of photovoltaic systems. solar cell modules and arrays, solar cell types, material, applications, advantages and disadvantages, solar energy conversion into heat, types of solar collectors, cylindrical parabolic collector, solar energy thermal storage. [14]
Nuclear Energy: Present Status of Nuclear Power; Nuclear Fission & Fusion, National Nuclear Power Program,, Natural Radioactivity, Radioactive Decay, Radiation Doses, various types of nuclear power plants, Nuclear Reactor Safety, Fusion reactor

3. **Wind Energy:** Energy available from wind, basics of wind energy conversion system, classification, factors influencing wind, wind shear, turbulence, wind speed monitoring, Betz limit, WECS: classification, characteristics, and applications. [6]

Bio Energy: Types of biogas plants, biogas generation, factors affecting biogas generation, advantages and disadvantages, biomass energy, energy plantation, gasification

4. **Ocean Energy:** Ocean energy resources-ocean energy routes - Principles of ocean thermal energy conversion systems- ocean thermal power plants- Principles of ocean wave energy conversion and tidal energy conversion. [5]
Geothermal energy: Introduction, vapor and liquid dominated systems, binary cycle, hot dry rock resources, magma resources, advantages and limitations

Outcome(s): *After learning the subject, student will be able to understand the basic principle of power production from different energy sources. Advantage of renewable and green energy sources for sustainable development and environmental issues related to energy sources and societal implications*

Text Books:

1. S.P. Sukhatme, Solar Energy: principles of Thermal Collection and Storage, Tata McGraw-Hill
2. C. S. Solanki, "Solar Photovoltaics: Fundamental Applications and Technologies, PHI, 2009
3. S. Glasstone & A. Sesonkse, Nuclear Reactor Engineering, CBS, 2004
4. D. A. Spera, Wind Turbine Technology: Fundamental concepts of Wind Turbine Engineering, ASME Press.

Reference Books:

1. Non-conventional energy resources, Shobh Nath Singh, Pearson India
2. Principles of Solar Energy, Frank Krieth& John F Kreider, John Wiley, New York
3. David Bodansky, Nuclear Energy: Principles, Practices and Prospects, Springer 2004.

Mody University

College of Architecture and Design (CAD)

Open Elective in Free hand sketching for all Undergraduate Programmes

3-0-0-3

Paper Code: FH 141
Paper Name: FREEHAND SKETCHING

Learning Objectives:

1. To ensure that students begin to understand pencils, grades, holding to sketch.
2. To provide students an exposure to express with sketching and understand proportions.
3. To gain skill of sketching indoors.
4. To enhance ability to sketch outdoors.
5. To develop rudimentary ability to use pencil as a media in sketching.

CONTENTS

Unit - I. Introduction to Graphic Skills: [04]

Understanding the meaning of graphic skill; basic techniques, types of pencil shades and grades.

Unit - II. Geometry of Objects [10]

Understanding geometry of an Object, Free hand sketching of an object, object in different eye level, Optical illusions, effect of light on object.

Unit –III. Fundamentals of Perspective [05]

Diminution, Foreshortening, convergence, overlapping shades and shadow

Unit - IV. Outdoor Sketching & Indoor Sketching: [10]

Outdoor:

Sketching buildings, road activity, Landscape, Environmental scenes, principles of perspective drawing, natural forms, built form, their texture.

Indoor: [10]

Sketching of an arranged objects, indoor activity, still life, furniture, equipment, understanding depth, light, shade, shadow; memory drawing.

Expected Outcome:

Students learn and able to draw freehand sketch scenes with addition detailing of foreground and background from pencil effectively on paper.

Suggested Readings

- Buildings;Ian Sidaway, : New Holland Publishers.
- Perspective;Milind Mulick,: Jyotsana Prakashan.
- The fundamentals of Water colour Paintings;D.Carter: Arcturus Pubishing Ltd
- Drawing for designers; Koptievsky: Sterling Publishing
- Rendering with pen & Ink; .R.W Gill: Thomas & Hudson
- Drawing and designing with confidence: A step by step guide; M.W Lin: John Wiley & Sons
- Perspective drawing Handbook; Joseph D'Amelio: Dover Publication
- Urban Sketching a complete guide; Thorspecken: Search Press

Evaluation Scheme: 20%=Internal, 80%=End term

MODY UNIVERSITY OF SCIENCE AND TECHONOLOGY

Open Elective CBCS course

Course Title: Vedic Knowledge **3-0-0-3**

Course Code: VK 111

Course Description:

Unit-1 History of Vedic Literature (13)

1. Importance of Vedas in Indian Tradition (भारतीय परम्परा में वेदों का महत्त्व)
2. The emergence of the Vedas (वेदों का आविर्भाव)
3. Introduction of Vedic Svara (वैदिक स्वर परिचय)
4. Definition of Sukta (सूक्त की परिभाषा)
5. Introduction of Rig-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(ऋग्वेद का परिचय -संहिता,ब्राह्मण,आरण्यक एवं उपनिषद -)
6. Introduction of Yajur-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(यजुर्वेद का परिचय - संहिता,ब्राह्मण,आरण्यक एवं उपनिषद)

Unit -2 Suktas related to Rigveda Samhita (Shakalashakha) (11)

1. Lord of fire :	Agnisuktam	(अग्निसूक्तम्-ऋग्वेद 1/1/1-4)
2. Lord 0f creation :	Vishnusuktam	(विष्णुसूक्तम्-ऋग्वेद 7/100/1-3)
3. Lord of omniscient :	Brahmanaspatisuktam	(ब्रह्मणस्पतिसूक्तम् -ऋग्वेद 1/40/1-4)
4. Lord of pre-creation :	Hiranyasuktam	(हिरण्यगर्भसूक्तम्- ऋग्वेद 10/121/1-3)
5. Goddess of Glory :	Shreesuktam	(श्रीसूक्तम्-ऋग्वेद-परिशिष्ट 1-4)

Unit-3 Suktas related to ShuklaYajurved Samhita(Madhyandinashakha) (15)

1. God of wisdom :	Ganapatistavanam	(गणपति-स्तवनम् -यजुर्वेद – 23/19)
2. Identification of nation :	Rashtrageetam	(राष्ट्रगीतम् -यजुर्वेद - 22/22)
3. Good faith :	Svastivachanam	(स्वस्तिवाचनम् -यजुर्वेद-14/19,21-22)
4. Perception power :	Medhasuktam	(मेधासूक्तम् -यजुर्वेद -32/13 -16)
5. Concept of mind :	Shivasuktam	(शिवसंकल्पसूक्तम् -यजुर्वेद -34/1-6)
6. Origin of creation :	Purushasuktam	(पुरुषसूक्तम् (यजुर्वेद-31/1-4,7,16)
7. Goddess of learning :	Sarasvati-stavanam	(सरस्वती-स्तवनम् (यजुर्वेद -20/84-86)
8. Serenity Prayer of Yajurveda :	Shaantipaathah	(शान्तिपाठः - यजुर्वेद -36/17)

Text books :-

1.Vedic Sukta Sangrha: (Code No.1885) 7th Edn. Pub. Gita Press Gorakhpur

(वैदिकसूक्त-संग्रह – प्रकाशक - गीताप्रेस, गोरखपुर)

2. Vedic Sukta Sangrha: Acharya Bheshraja Sharma First Edn. Pub. Hansa prakashan Jaipura (वैदिकसूक्तसंग्रह - आचार्य भेषराज शर्मा, हंसा प्रकाशन, जयपुर)

3. Vedic Sangraha: Dr. Krishna Lal First Edn. Pub.Istarna book Linkarsa Delhi. (वैदिक संग्रह डा कृष्ण लाल ,ईस्टर्न बुक लिंकर्स , दिल्ली)

Reference books:-

1. RigvedaSamhita: Acharya Shri Ram Sharma Publishers-Yuganirmana Yojana, Mathura U.P. (ऋग्वेदसंहिता - आचार्य श्रीराम शर्मा प्रकाशक युग निर्माण योजना मथुरा उ.प्र)

2. Yjurveda: Acharya ShriRam Sharma Publishers Yuganirmana Yojana,Mathura U.P. (यजुर्वेदसंहिता- आचार्य श्रीराम शर्मा प्रकाशक युग निर्माण योजना मथुरा उ.प्र)

3. Vedas: The source of Ultimate science: Dr. Shri Ram Varma, Nag Publishers Delhi.

4. Vedic Sahitya ka Itihasa aur sanskriti: Shri Baldeva upadhyaay Publishers Sharadasansthan Varanasi .U.P.

5. Vedic dicsnory: Bhagavad Datta and Hansaraja Publishers- VishvBharti Anusandhan prishada Gyanpura U.P. (वैदिककोश - भगवद दत्त एवं हंसराज प्रकाशक –विश्वभारती अनुसंधान परिषद् ज्ञानपुर उ.प्र.)

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code:
ET-18.102

Web Designing and Mobile App Development **3-0-0-3**

Total Lectures:40

Objectives: On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. Students will gain the skills and project-based experience needed for entry into web application and development careers.

1. Concept of Internet A brief Introduction to the Internet: Computer Networks, Internet, URL (Uniform Resource Locator), Internet Service Provider, Intranet, Extranet, Virtual Private Network. Application of Internet: World Wide Web, Search Engines, News groups, Electronic Mail, Web Portal, Chat, Video Conferencing, FTP, Remote Login, E-Commerce, E-Learning, EGovernance, E-Banking. [9]

2. Static Web Page Development Basics of HTML: What is Internet Language?, Understanding HTML, Create a Web page, Linking to other Web Pages, Publishing HTML Pages, Text Alignment and Lists, Text Formatting Fonts Control, Email Links and link within a Page, Creating a Table, Creating HTML Forms, Creating Web Page Graphics, Putting Graphics on a Web Page, Custom Backgrounds and Colors, Creating Animated Graphics. [9]

3. Dynamic Web page Development Cascading Style Sheet: CSS, Defining Style with HTML Tags, Features of Style Sheet, Style Properties, Style Classes, External Style Sheet [8]

4. JavaScript Introduction to JavaScript: Writing First Java Script, External JavaScript, Variables: Rules for variable names, Declaring the variable, Assign a value to a variable, Scope of variable, Using Operators, Control Statements, JavaScript loops, JavaScript Functions: Defining a Function, Returning value from function, User define function. [9]

5. Android: Introduction to android OS, Versions of Android, Introduction to Android Studio, Different GUI Elements of Android Programming, WebView, Convert any Website to android apk. [5]

Outcomes:

- Students are able to develop a dynamic webpage by the use of java script and DHTML.
- Students will be able to write a well formed / valid XML document.
- Students will be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.
- Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.

- Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.

Text Books:

1. Teach Yourself HTML 4 in 24 Hours By Dick Oliver (Tech media) 4th edition
2. The Complete Reference JavaScript By Thomas Powell & Fritz Schneider 2nd Edition.
3. Jerome (J.F) DiMarzio "Android A programmer's Guide" Tata McGraw-Hill 2010 Edition.

Reference Books :

1. HTML, DHTML, JavaScript, Perl CGI By Ivan Bayross(BPB) 3rd Edition
2. CSS By Kynn Bartlett(Pearson Education)2nd Edition
3. Introduction to Internet & HTML Scripting By Bhaumik Shroff Books India Publication 3rd Edition.

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY

The Bhagavad-Gita

Pre-requisite(s): Basic interest in Indian culture. Sanskrit verses in *Devanagari* script as well as in transliteration forms are provided for further references only; knowledge of Sanskrit is not required as the medium of instruction is English, however it may be an added advantage. Familiarity with the *Devanagari* script may be useful at times.

Course Objectives: The primary aim of the Bhagavad-Gita Course is to make the glorious 'Gita way of life' accessible to anyone who yearns for it, or is just curious to know more in a convenient yet effective manner. It provides a holistic, insightful coverage of the entire text in a lucid and simple style without compromising on the salient features of this priceless knowledge. Providing inputs in the modern context for continuous improvement it becomes a practical manual to live a transformed life of goodness and greatness. The course seeks to help students negotiate the text independently without referring to the traditional commentaries so as to enable them to experience the richness of the text and its philosophy.

Evaluation Process: The evaluation pattern would have following two components:

1. Internal component of 20 marks, which can be assessed in one of the following ways at the discretion of course coordinator
    a. Assignment
    b. Written test
    c. Presentation
    d. Viva
    e. Model preparation
    f. Practical assignment
2. An end term examination of 80 marks.

Course Description:

BG 111	**The Bhagavad-Gita**	**3-0-0-3**
Introduction: Background of the Mahabharata War, Author (Vedavyasa), Background of the Bhagavad-Gita: knowledge given in the battlefield of life, The role of Gita in our life, Overview of the chapters, The Distress of Arjuna		[03]
Cognitive and Emotive Apparatus: Hierarchy of senses, *manas, buddhi* and *ātman*- III.42, XV.7 Role of the ātman-XV.7, XV.9 Mind as a product of prakṛti VII.4 Properties of three modes and their impact on the mind-XIII. 5-6; XIV.5-8, 11-13; XIV.17		[08]
Controlling the Mind: Confusion and conflict: Nature of conflict I.1; IV.16; I.45; II.6 Causal factors-Ignorance-II.41; *Indriya*-II.60, Mind-II.67; *Rajoguṇa*-III.36-39; XVI.21; Weakness of mind- II.3; IV.5		[09]

Means of controlling the mind: Meditation–difficulties –VI.34-35; procedure VI.11-14 Balanced life- III.8; VI.16-17 Diet control- XVII. 8-10 Physical and mental discipline – XVII. 14-19, VI. 36.	
Means of Conflict Resolution: Importance of knowledge – II. 52 ; IV.38-39; IV.42 Clarity of *buddhi* – XVIII.30-32 Process of decision making – XVIII.63 Control over senses – II.59, 64 Surrender of doer-ship –XVIII .13-16; V.8-9 Desirelessness- II.48; II.55 Putting others before self – III.25	[10]
Self Management through Devotion: Surrender of ego – II.7 ; IX.27; VIII.7; XI.55 ; II.47 Abandoning frivolous debates – VII.21, IV.11; IX.26 Acquisition of moral qualities - XII.11; XII.13-19 **Conclusion:** Arjuna's realization, Lasting property, Total victory- XVIII.73,78	[09]

Text Book:

Srimad Bhagavadgita(with English Translation and Transliteration, Code 1411), Gita Press, Gorakhpur

Reference Books:

1. Shrimadbhagavadgitarahasya or Karmayogashastra: The Hindu Philosophy of Life, Ethics, and Religion (Original Sanskrit Stanzas with English Translation), Balgangadhar Tilak & Balchandra Sitaram Sukthankar, J.S. Tilak & S.S. Tilak
2. Shrimadbhagavadgita-Tattvavivechani (English Commentary by Jayadayal Goyandaka), Gita Press, Gorakhpur
3. Shrimadbhagavadgita:A Guide to Daily Living (English Translation and notes by Pushpa Anand), Arpana Publications
4. Shrimadbhagavadgita:The Blessed Lord's Song Paramananda, The Vedanta Centre
5. The Art of Man Making (114 short talks on the Bhagavadgita), Chinmayananda, Central Chinmay Mission Trust, Mumbai
6. Essays on the Gita, Shri Aurobindo, Shri Aurobindo Ashram, Pondicherry
7. Managing One-Self (Shrimadbhagavadgita: Theory & Practice), Panchamukhi V.R., Panchamukhi Indological Research Centre, New Delhi & Amar Granth Publications, Delhi
8. Science of Bhagavadgita (A Study of Ancient Wisdom through Modern Science),Virajeshwar, Himalayan Books, Connaught Place, New Delhi

Annexure-I

Mody University

Open Elective in English for all Undergraduate Programmes

Paper Code: EL 100 **Credits: 3-0-0-3**
Paper Name: Essential English

Contents:

Reading Comprehension **[11]**
To develop skills such as vocabulary building, efficient reading and note-taking.
Poetry

1. Milton: On His Blindness
2. Shakespeare: Let Me Not to the Marriage of true minds
3. Wordsworth: The Solitary Reaper
4. William Butler Yeats: A Prayer to my daughter
5. Browning: My Last Duchess
6. Nissim Ezekiel: Night of the Scorpion

Prose

(1) Francis Bacon: Of Studies
(2) R.K. Narayan: Engine trouble
(3) O. Henry : The Gift of the Magi
(4) Oscar Wilde : The Nightingale and the Rose

Grammar and Usage **[16]**
Tenses and their different forms (present, past and future), their uses and sequences of tenses. Articles, auxiliaries and modals, Preposition, Rules of conversion form direct to indirect speech, expressions of time and place, questions in indirect speech, commands, requests and advice in indirect speech. Spotting the errors in spelling, tenses, prepositions, articles and how to avoid them.
Business Letter Writing **[6]**
Layout of formal letters, difference between British and American pattern of letter writing and different types of letters (Job application letter, invitation letter, letter of request)
Idioms and Phrasal Verbs: Understanding idioms, collocations, introduction to phrasal verbs, verb and preposition/ adverb combination, usage of idioms and phrasal verbs.
Vocabulary Building: One word for many, Synonyms and Antonyms, words commonly mis-spelt and mis-pronounced. [6]

MODY UNIVERSITY OF SCIENCE & TECHNOLOGY
College of Fashion Design & Merchandising
Bachelors of Design (Fashion Design) BFD
Autumn (2015-16)
First Year
FOUNDATION PROGRAMME

Total L & P: 45

Title of Course: Fashion in Everyday Life **3-0-0-3**
Semester: Autumn
Course Code: FD 115
Pre-requisite(s): Basic interest in fashion and trends

Course Objectives: This course will give the students overview of fashion and its use in everyday life considering trends, forecast; body anatomy, colour preferences and styling techniques. The course will also elaborate on fashion market segments while giving an idea on leading fashion brands, designers and trendsetting celebrities

Course Description:

- Basic Introduction to Fashion: Brief Introduction to fashion and regularly used fashion terminologies, Overview of types of clothing such as Formal Wear, Casual Wear, Evening Wear, Ethnic Wear, Traditional Wear etc., Fun facts related to fashion **(3)**
- Body Analysis: Triangular figure study, Eight headed figure, Hour glass structure, Vital statistics, Clothing suggestions as per body types **(3)**
- Practical Colour Study in Fashion: Colour selection in clothing as per skin – tones for day wear and evening wear **(6)**
- Styling tips with ensembles – An introduction to fashion styling, Exploring various mix and match combinations like print plain combination, combining ethnic and western fashion elements, etc. - **GO, get the desired look!!** **(5)**
- Fashion Market Segments – A brief insight to different consumer market segments in fashion such as Haute Couture, Pret a Porter (Ready to Wear), Semi Couture, Premium Fashion, High Street fashion, Street fashion, Bridge Fashion, Fast fashion, etc. in context of products, features and service **(3)**
- Fashion Brands – To Study and compare national and international women's wear fashion brands such as Prada, Dior, Chanel, LVMH, Zara, Aldo, Biba, W, Elle, Aakruti, FabIndia, AND, etc. across market segments and their incorporation by consumers in everyday life **(5)**
- Fashion Designers – A brief look into the profile and work of renowned Indian and International fashion designers like Manish Malhotra, Sabyasachi Mukherjee, Manish Arora, Ritu Beri, Ritu Kumar, Coco Chanel, Yves Saint Laurent, Giorgio Armani, Christian Dior, Prada, etc. who changed the fashion industry **(10)**

- Trailblazers of Fashion: To study the role of celebrities (David Beckham, Lady Gaga, Sonam Kapoor, Hrithik Roshan, etc.) red carpets (Oscars, Golden Globes, Filmfare Awards, IIFA, etc.) movies (Piku, Tanu Weds Manu, Dil Dhakadne Do, Devil Wears Prada, etc.) television series (Sex and the City, Gossip Girls, Two Broke Girls, Roadies, Splitsvilla, etc.) on the fashion trends at Indian and Global level **(10)**

Learning Outcomes:

- Demonstrate a basic knowledge of fashion and common fashion terms
- Understand clothing selection with respect to body type and colour tones while applying basic styling tips to get desired looks
- Explore and evaluate different fashion brands, fashion designers and other popular influencers of fashion

8. Mark Tungate, UK. 2008. *Fashion Brands.* Kogan Page Limited

Evaluation Process:

Course Work: 50% weightage. It includes Quiz
Exam: 50% weightage. It includes running jury of fashion display

Other Study Material:

1) Websites: www.highheelconfidential.com, www.theblondesalad.com, www.stylebubble.co.uk , www.weworewhat.com, www.wendyslookbook.com
2) Handouts: As indicated by the course instructor
3) Magazine & Other Reading Material: Vogue, GQ, Elle, Harper Bazaar, Jaipur Times

Mody University of Science and Technology

Open Elective in Law for all Undergraduate Programmes
Choice Based Credit System (CBCS)

Paper Code: LF 100 **Credits: 3-0-0-3**

Paper Name: Gender Justice and the Law

Position of Women in Vedic, Post Vedic & Medieval period	[03]
Constitutional Provisions and Gender Justice – Relevant provisions relating to women in Fundamental Rights, Directive Principles of State Policy and Fundamental Duties etc. under the Indian Constitution	[06]
Laws Relating to Marriage, Divorce, Maintenance, Adoption and Succession under the relevant personal laws with special emphasis on Women and Maintenance under Code of Criminal Procedure, 1973	[12]
Provisions under the Indian Penal Code, 1860 (Sec. 292, 293, 294, 304B, 326A, 326B, 354, 354A, 354B, 354C, 354D, 370, 370A, 375, 376, 376A to 376E,359 to 374, 494,495 497, 498A, 507 & 509)	[10]
Provisions under the Code of Criminal Procedure,1973- relating arrest, search & seizure	
Socio-Legal position of women and the law – Dowry Prohibition Act, 1961 – Protection of Woman against Domestic Violence Act, 2005, The Prohibition of Child Marriage Act, 2006	[06]
Free Legal Aid for Women	[02]

CS 19.433 **E-Commerce and E-Business** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s):

- To introduce the fundamental principles of E-Business and E-Commerce and the role of management.
- To develop an enhanced knowledge among students of the potential of information technology to enable E-Business.
- To understand the application of tools and services to the development of small-scale E-Commerce applications.

1	**Introduction to E-Commerce and E-Business:** Meaning and concept, E-Commerce vs. traditional commerce, media convergence business applications and need for E-Commerce, E-Business basics, network and electronic transactions.	[8]
2	**The Internet Environment for E-Commerce:** B2B, B2C, providers and vendors, EDI, UN/EDIFACT standard, identification and tracking tools for E-Commerce, overview of Internet bandwidth and technological issues.	[8]
3	**Security Framework:** Security concerns, security solutions, cryptography, digital signature, PKCS, protocol for secure messaging, key management, SET protocols, E-cash over the Internet.	[6]
4	**Legal Issues:** Paper document vs. electronic documents, technology for authenticating electronic document, laws for E-Commerce, EDI interchange agreement, legal issues for internet commerce, cyber security, cybercrimes.	[6]
5	**Case Study:** Designing and building E-Commerce website, managing products, database, shopping cart applications, integrating mobile E-Commerce, payment gateway, tracking orders, study of Amazon and eBay.	[12]

Outcome(s): On successful completion the students will be able to:

- Recognize the fundamental principles of E-Business and E-Commerce.
- Examine applications of E-Commerce in relation to the applied strategic.
- Explain the added value, risks and barriers in the adoption of E-Business and E-Commerce.

Text Books:

1. K K Bajaj and D Nag, “E-Commerce: The Cutting Edge of Business”, 2nd edition, Tata McGraw Hill, 2009
2. H Chan, R Lee, T Dillon and E Chang, “E-Commerce: Fundamentals and Applicaiotns”, Willey India, 2008

Reference Books:

1. P T Joseph, “E-Commerce – An Indian Perspective”, 3rd edition, PHI, 2008
2. A Kahate, “Cryptography and Network Security”, 4th edition, Tata McGraw Hill, 2008
3. J Botha and C Bothma, “Managing E-Commerce in Business”, 2nd edition, Juta & Company, 2008

CS 19.434 **Social Media and Digital Marketing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.433 (E-Commerce and E-Business)

Objective(s): To examine and explore the role and importance of social media and digital marketing in today's rapidly changing business environment. It also focuses on how digital marketing can be utilized by organizations and how its effectiveness can measured.

1	**Social Media and Customer Engagement:** The social feedback cycle, the social web and engagement, the operations and marketing connections, social interactions, customer relationships, outreach and influencer relation, social business and measurement, employees as change agents.	[6]
2	**The Social Business Ecosystem:** Social profiles, social applications, using brand outposts and communities, the social ecosystem.	[4]
3	**Social Technology and Business Decisions:** Create a social business, understand the conversations that matters, social CRM and decision support, social analytics, web analytics, business analytics, best practices in social business.	[8]
4	**Social Business Building Blocks:** Engagement on the social web, engagement as a customer activity, engagement as a business activity, extend engagement, social CRM and business design, building a social CRM program, enterprise 2.0 and Internet collaboration, build on existing social objects, create new social objects, use social objects in business, use the social graph in business, measure the social graph.	[10]
5	**Digital Marketing:** Digital marketing strategy, user experience design, online advertising, affiliate marketing, video marketing, email marketing, mobile marketing, data analytics.	[12]

Outcome(s): On successful completion the students will be able to:

- Explain the role and importance of digital marketing in a rapidly changing business landscape.
- Discuss the key elements of social media marketing strategy
- Illustrate how the effectiveness of a digital marketing campaign can be measured

Text Books:

1. Dave Evans and Jake McKee, "Social Media Marketing: The Next Generation of Business Engagement", Wiley Publishing, 2010
2. Rob Stokes, "eMarketing: The Essential Guide to Marketing in a Digital World", 5th edition, Quirk Education, 2013

Reference Books:

1. McDonald Malcolm and Wilson Hugh, "E-Marketing: Improving Marketing Effectiveness in a Digital World", Prentice Hall, 1999
2. Ryan Deiss and Russ Henneberry, "Digital Marketing for Dummies", Wiley, 2017

CS 19.435 **Search Engine Optimization** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.433 (E-Business and E-Commerce)

Objective(s): To introduce the foundational elements of how search engines work.

Discuss core SEO strategies and tactics used to drive more organic search results to specific website or set of websites.

1	**Introduction:** Choose a topic, find your target audience, set a budget, set goals, put a team together, keep up with industry news, and attend an industry conference, introduction to keyword generation, using the word tracker keyword suggestion tool, google trends tool, creating pages, optimize meta description and keyword tags, optimize images, create link and validate html.	[4]
2	**Creating Contents and Communities:** Introduction write for people, not search engines, avoid duplicate contents, keep content current, optimize non-html document, creating communities, create a blog with wordpress, blogger, tumblr.	[10]
3	**Using Google Analytics:** Introduction create account, install tracking code, exclude your IP address with filter, track external links, automate reporting, set up e-commerce tracking, tracking code in thank you page, and third-party shopping cart.	[10]
4	**Social Media Optimization:** Introduction, network with facebook, google+, facebook business pages, facebook ads, microblog with twitter, network with webmaster world, paper click campaign, adwords account, bidding strategies, PPC reports.	[8]
5	**Optimization for Search Engines:** Introduction, blogpost for Technorati, google images, exposure on ask.com, drive traffic, eBay auctions, local search and local page, media ranking, offsite ranking, SEO tools, plugins and comparison tools, WordPress SEO plugin by Yoast.	[8]

Outcome(s): On successful completion the students will be able to:

- Critique the role of advertisements and corporate funding in the development of search.
- Write their own content for a website that will improve search results
- Compare and contrast the functionality of search engine algorithms update.

Text Books:

1. Kristopher B. Jones, “Search Engine Optimization”, Wiley India Pvt. Ltd, 3rd Edition, 2013

Reference Books:

1. Eric Enge, Stephan Spencer, Rand Fishkin and Jessie C Stricchiola, “The Art of SEO: Mastering Search Engine Optimization”, O'Reilly, 2009
2. Jerri L. Ledford, “SEO: Search Engine Optimization Bible”, 2nd Edition, Wiley India, 2009
3. John I Jerkovic, “SEO Warrior: Essential Techniques for Increasing Web Visibility”, O'Reilly, 2009

CS 19.461 **Cloud Computing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s): To learn how to use cloud services.
To implement virtualization and task scheduling

1	**Overview of Cloud Computing:** Brief history and evolution - history of cloud computing, evolution of cloud computing, traditional vs. cloud computing, cloud service models (IaaS, PaaS & SaaS), cloud deployment models (public, private, hybrid and community cloud), benefits and challenges of cloud computing, introduction to AWS public cloud vendor, cost optimization in AWS, basics of virtualization, virtualization technologies, server virtualization, VM migration techniques, role of virtualization in cloud computing, introduction to EC2 service of AWS.	[10]
2	**Working with Private Cloud:** Private cloud definition, characteristics of private cloud, private cloud deployment models, private cloud vendors - CloudStack, OpenStack, Eucalyptus Microsoft, private cloud – benefits and challenges, private cloud implementation in Amazon EC2 service.	[8]
3	**Working with Public Clouds:** What is public cloud, why public cloud, when to opt for public cloud, public cloud service models, public cloud players, infrastructure as a service offering, IaaS vendors, PaaS offerings, PaaS vendors, software as a service, demonstrating public cloud with AWS – storage and database services, private vs. public cloud – when to choose.	[10]
4	**Overview of Cloud Security:** Explain the security concerns in traditional IT, introduce challenges in cloud computing in terms of application security, server security, network security, security reference model, abuse and nefarious use of cloud computing, insecure interfaces and APIs, malicious insiders, shared technology issues, data loss or leakage, account or service hijacking, unknown risk profile, shared security model between vendor and customer in IaaS/PaaS/SaaS, implementing security in AWS.	[8]
5	**Future directions in Cloud Computing:** When and not to migrate to cloud, migration paths for cloud, selection criteria for cloud deployment, issues/risks in cloud computing, future technology trends in cloud computing.	[4]

Outcome(s): On successful completion the students will be able to:

- Analyze the cloud computing setup with its vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds.

Text Books:

1. Raj Kumar Buyya, James Broberg and Andrezi M Goscinski, “Cloud Computing: Principles and Paradigms”, John Wiley & Sons, 2010
2. Nick Antonopoulos and Lee Gillam, “Cloud computing: Principles, Systems and Applications”, Springer, 2010.

Reference Books:

1. Anthony T Velte, Toby J Velte and Robert Elsenpeter, “Cloud Computing: A Practical Approach”, McGraw Hill, 2010
2. Borko Furht and Armando Escalante (Editors), “Handbook of Cloud Computing”, Springer, 2010
3. Judith Hurwitz, Robin Bllor, Marcia Kaufman and Fern Halper, “Cloud Computing for Dummies”, John Wiley & Sons, 2010.

CS 19.462 **Mobile App Development** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s):

- To learn how mobile apps are different from other traditional apps by learning those aspects of mobile programming that make it unique from other platforms.
- Program mobile applications for the Android operating system that use basic and advanced phone features.
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout, UI elements, Drawable, Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and SMS APIs native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access (via Internet/Intranet)	[14]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobile apps, distributing apps on mobile market place.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

Text Books:

1. Barry Burd, Android Application Development All in One for Dummies, Johen Wiley & Sons Inc., 2011.
2. Anubhav Pradhan, Anil V Deshpandy, Mobile App Development, Edition I

Reference Books:

1. Lauren Darcey, Shane Conder, “Teach Yourself Android Application Development in 24 Hours”, SAMS Publishing, 2012, 2ndEdition , 2012.

CS 19.463 **Agile Software Development** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.302 (Software Engineering)

Objective(s):

- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To learn the essentials of collaboration as they apply to agile methods.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1	**Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools.	[7]
2	**Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management.	[9]
3	**Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk-based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software.	[10]
4	**Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control.	[10]
5	**Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Scrum.
- Write user stories for project requirements.
- Write test cases for developing features.

Text Books:

1. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
2. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall

Detailed course syllabus for First Semester- M. Tech (NST)

MA 521 Engineering Mathematics and Numerical Analysis 3-1-0-4

1. Ordinary Differential Equations: Ordinary differential Equations of first order and first Degree (Equations in which variables are separable, homogeneous, linear, exact), linear differential equations with constant coefficients and variable coefficient . **[10]**

2. Partial Differential Equations: First order partial differential equations with constant coefficients (variables separation method), one dimensional heat and wave equation, Laplace equation in two dimension, power series solution of differential equation (Frobenius method). **[08]**

3. Special Functions: Bessel's function and equation, Legendre function, Green function **[06]**

4. Numerical Methods: Use of interpolation formula (equal and unequal intervals), numerical integration (Trapezoidal and Simpson's rules), numerical differentiation, solution of linear system of equation (Gauss elimination and Gauss Seidel method), solution of nonlinear equation (Bisection method, Regula Falsi and Newton's Raphson method),numerical solution of ordinary differential equation (Predictor - Corrector methods, Runga-Kutta method). **[16]**

Text Books:

1. E. Kreyzig , Advanced Engineering Mathematics" 2nd edition, John Wiley & Sons, 2004
2. B. V. Ramana, Higher Engineering Mathematics, McGraw-Hill, New Delhi
3. S.S. Sastry, Introductory Methods of Numerical Analysis, PHI, 5th edition,2012

Reference Books:

1 S.C. Chapara and, R. P. Canale, Numerical methods for Engineers", 2nd Edition, Tata McGraw-Hill, New Delhi, 2002

3. Ram Babu, Numerical Methods, Pearson Publication, New Delhi, 2010

NU 501 Quantum Mechanics and Electrodynamics 3-1-0-4

Quantum Mechanics

1. Origin of quantum theory and related experiments, wave-particle duality, wave function and its Born interpretation, uncertainty principle, Schrodinger equation, wave functions, wave packets, probability amplitudes, solutions to Schrodinger equation in one dimensions; Barrier penetration, Potential wells, Simple harmonic oscillator, Schrodinger equation in three dimensions. [**7**]
2. Formalism of quantum mechanics; Liner vector space, Function spaces, Hilbert space formalism, inner product and probability, completeness of Eigen functions, delta functions, Bra & Ket notation, matrix representation of an operator, change of basis, unitary transformations. [**6**]
3. General treatment of angular momentum, spin, identical particles; SHM problem by operator method; Pauli exclusion principle; Scattering theory; some calculations, Perturbation theory, WKB approximation. [**7**]

Electrodynamics

4. Coulomb law and electrostatics, Laplace and Poisson equations, Maxwell's equations, partial polarization, Lorentz force, Poynting theorem. Scalar and vector potentials, Gauge transformations and gauge invariance. [**5**]
5. Special theory of relativity, four vectors, Field tensor, Relativistic formulation of electrodynamics, Maxwell equations in covariant form [**4**]
6. Relativistic charged particle in an electromagnetic field, Motion in uniform electric and magnetic fields and combinations of E and B fields, Non uniform static magnetic field [**4**]
7. Green's function for wave equation (relativistic), Radiation from localized moving charges, Multi pole expansion, dipole and quadrupole radiation, Radiation from accelerated charge [**4**]
8. Power radiated by point charge, Larmor's formula, Angular distribution of power, Bremsstrahlung and synchrotron radiation, Dispersion theory, Radiative reaction, Radiative damping [**5**]

Text Books:

1. Griffiths D. J., Introduction to Quantum Mechanics, 2nd edition, Pearson, 2009.
2. Griffiths D. J., Introduction to Electrodynamics, 3rd edition, Prentice Hall India, 1999.

NU 503 **Nuclear Physics** **3-1-0-4**

1. **Introduction:** Basic properties of the nucleus and nuclear radiations **[4]**

2. **Two Nucleon Problem:** The Two Nucleon Problem, Quadrupole & Magnetic moments of Deuteron, S_{12} operator, Existence of non-central forces. Deuteron bound state wave function & energy **[7]**

3. **Nuclear Forces:** np scattering cross-section, ortho & para hydrogen states, Nuclear forces, spin dependence, pp scattering, Existence of repulsive core inside a nucleon**. [7]**

4. **Nuclear Stability:** Binding energy and nuclear stability. **[4]**

5. **Nuclear Reactions:** Kinematics, Direct and Compound Nucleus Reactions, Energetic and general cross section behavior in nuclear reactions**.** **[6]**

6. **Radioactive Decays:** Alpha decay, Beta decay, Fermi's theory of beta decay, determination of mass of neutrino and Gamma decay **[6]**

7. **Nuclear Models:** Liquid drop Model, Nuclear Fission, Shell Model, Spin-Orbit interaction. Application of Shell Model **[6]**

Text Book:

Reference Book:

1. Bernard L. Cohen, *Concepts of Nuclear Physics*. New York: McGraw-Hill, (1971)

NU 505 **Nuclear Reactor Theory** **3-1-0-4**

1. **Basics Neutron Physics Concepts:** Neutron and its properties, Neutron and its interaction with matter, Neutron sources, Neutron-nuclear interaction cross sections, Reaction rate density, macroscopic cross section and mean free path. Cross-sections of elements, compounds and mixtures **[7]**
2. **Nuclear Fission**: Fissile and fertile atoms, conversion of fertile into fissile atoms, Fission power, fission chain, control of fission chain, Core physics involving criticality with introduction of four factor formula, Effective multiplication factor, concept of criticality, sub criticality and super criticality, conversion/ breeding ratio, fuel burn-up, Energy release from fission, Neutron yield, Energy distribution among fission neutrons and fragments. **[7]**
3. **Slowing Down and Energy Dependence:** Mechanism of energy loss by scattering collisions, Neutron Slowing-down and Thermalization, Neutron lethargy and average logarithmic decrement, Moderating ratio **[5]**
4. **Neutron Transport equation and Neutron diffusion equation**: Dependence of neutron flux on space, energy, direction and time, Boltzmann equation, Neutron balance equation, Simplified diffusion equation through Fick's law, Diffusion equation in Multiplying and non-multiplying media , Neutron slowing down-moderators-Fermi age model, Slowing down length, Migration length, One group Diffusion equation for finite bare homogeneous reactor, Critical equation and Reactor Buckling, Critical size and Geometrical Buckling (Cube and Semi-Cubic shape, sphere, cylinder), Critical volume and critical mass calculations, Reference to multi group approach, Reflected reactors, reflector saving, flux flattening, Heterogeneous reactors **[16]**
5. **Reactor Kinetics:** Time dependent diffusion equation, Point kinetics, Prompt neutrons, Delayed neutron precursors, Reactor period, period versus reactivity, In hour formula, Short term & long term variation of reactivity, Fission Product Poisoning **[5]**

Text Books:

1. J. R. Lamarsh**,** *Introduction to Nuclear Reactor Theory*, Addison- Wesley Publishing Company ,1966

Reference Book:

1. W. M. Stacey, Nuclear Reactor Physics (Second edition), Wiley- VCH verlag GmbH, 2007

NU 507 Radiation Physics & Instrumentation 3-1-0-4

1. **Radiation**: Ionizing and non ionizing radiation, Natural and artificial radiation, Exposure and dose, units, Absorbed dose, effective dose, radiation sources, synchrotron radiation sources, Biological effects of ionizing radiation, Radiation protection standards and their implementation **[6]**
2. **Interaction of radiation with matter**: Interaction of charged particles, gamma rays, and neutrons with matter, energy loss of heavy charged particles in matter, electronic stopping power (Bohr, and Bethe-Bloch formulae), energy loss of electrons and positrons, Bragg curve, energy straggling, Range and Range straggling, energy loss by Bremsstrahlung radiation, Cerenkov radiation, photoelectric absorption, Compton scattering, pair production, Attenuation, Neutron elastic scattering, inelastic scattering, radiative capture, (n, p), (n, 2n), (n, α), (n, fission) reactions **[8]**

3. **Radiation Detectors**: Gas-filled ionization detectors-Ionization chambers, proportional counters and GM counters, Pulse height spectra and energy resolution. Working of a p-n junction detector, partially and totally depleted detectors, surface barrier detectors, Lithium drifted Silicon detectors (Si(Li)), high-purity Germanium(HPGe) gamma detectors, typical gamma-ray spectrum with an HPGe detector, Scintillation mechanism in inorganic crystal scintillators and organic scintillators, Characteristics and operation of alkali halide scintillators with details of NaI(Tl),Photomultiplier tubes. Pulse height spectrum using a monoenergetic gamma ray source, TLD, Production and detection of neutrons-typical neutron sources, slow neutron detection, BF3 counter, boron-lined proportional counter, boron loaded scintillators, Lithium containing slow eutron detectors, He proportional counters, fission counters, time of flight techniques **[16]**
4. **Reactor Instrumentation**: General considerations – Reactor Nuclear Instrumentation systems– an overview – pressurized water nuclear instrumentation, boiling water reactor nuclear instrumentation, In core detectors, self powered neutron detectors, detectors based on beta decay, detectors based on secondary electrons from gamma decay **[5]**
5. **Shielding & protection against radiation exposure**: Radiation Shielding, Different Geometric configurations, Requirement for Shielding, Biological shielding, Thermal shielding, Shielding Materials for Different Types of Radiation, Criterion for Selecting Shielding Material, External radiation protection, Internal radiation protection **[5]**

Text Book:

NU 509 Simulation Methods 2-0-0-2

1. **Finite Difference Method:** Forward difference, Back-ward difference, Central difference, Differential coefficients of various orders and their equivalent finite difference forms with associated errors. Classification of second order differential equations-elliptic, parabolic and hyperbolic equations, Case studies of the three different equations and converting equations in finite difference form, Dirichlet and Neumann boundary conditions and conversion of the boundary conditions to finite difference forms to solve the differential equations of various types **[8]**

2. **Finite Volume Method**: Introduction to finite volume method, Application of boundary conditions, Expression of heat conduction at specified boundary conditions, Applications of finite volume method **[4]**

3. **Finite Element Method**: Introduction, Steps of solution procedure in FEM, Formulation of finite element equations, Galerkin Method, Variational Formulation, Application of FEM to problems related to Nuclear Engineering **[4]**

4. **Monte Carlo Simulation Techniques:** Introduction - Monte Carlo Methods, Random number generation, Monte Carlo Techniques, Crude Monte Carlo, Acceptance – Rejection Monte Carlo, Stratified Sampling, Importance of Sampling, Program Implementation, Other Applications for Monte Carlo Techniques **[4]**

Text Books:

NU 511 Modeling & Simulation Lab 0-0-4-2

Programs will be implemented using MATLAB/ FORTRAN

1. Write a program to implement Simpson's $1/3^{rd}$ rule for integration.
2. Write a program to implement Gauss Elimination Method to solve a system of equation.
3. Write a program to solve 1-dimensional heat transfer problem using symmetric banded matrix.
4. Write a program to solve 1-dimensional heat flow equation using Gauss Elimination Method.
5. Write a program to solve 2-dimensional heat flow equation using Gauss Elimination Method.
6. Write a program to solve 3-dimensional heat flow equation using Gauss Elimination Method
7. Write a program to solve heat transfer problem using FEM
8. Write a program to do stress calculations using FEM
9. Write a program to do structural Analysis using FEM
10. Introduction to CANDU Simulator

Suggested Books:

1. O.C. Zienkiewicz, R. L. Taylor, J.Z. Zhu, Finite Element Method: Its Basis and Fundamental, 6^{th} ed., Tata Mc Graw Hill, 2005

2. Getting Started with MATLAB: A Quick Introduction for Scientists and Engineers by Rudra Pratap

NU 513 Integrated Engineering Lab 0-0-4-2

1. To measure temperature using different types of measurement devices.
   a) J and K type thermometer b) Bimetal and gas (vapour) pressure thermometer
   c) PT 100 platinum resistance thermometer (four wire); d) NTC thermistor

2. To study and determine the various properties of steam with steam generator

3. To study and determine the performance characteristics of Francis Turbine

   a) At different flow rates b) At different guide vane setting
   c) To determine the overall conversion efficiency of fluid to mechanical energy
   d) To compare experimental results with theoretical results

4. To study and determine the performance characteristics of Centrifugal Pump.

   a) To plot a graph between head v/s flow. b) To plot a graph between efficiency v/s flow
   c) To study non dimensional characteristics d) To demonstrate Cavitations

5. To study and determine the performance characteristics of Positive displacement pumps

6. To Study Bourdon tube pressure gauge.

7. To demonstrate and measure the change in friction factor from laminar to turbulent.

8. To study friction loss in pipe .

   a) To investigate laminar and turbulent flow in pipe.
   b) To verify Poiseulle's Equation and the coefficient of viscosity for water in the laminar flow region.

9. Experiments related to A.C. Machines

   a) To demonstrate and measure the change in friction factor from laminar to turbulent.
   b) To determine the Regulation of 3φ Alternator by ZPF Method.
   c) Determination of Regulation of Alternator by EMF and MMF Method.
   d) To determine the performance characteristics of 3φ squirrel cage induction motor by direct loading method.

10. Experiments related to Instrumentation Lab

   a) Study of characteristics of Platinum RTD and Thermistor.
   b) Study of input-output characteristics of LVDT.

c) Study of characteristics of NTC Thermistor.

d) To measure unknown resistance using Wheat stone Bridge

e) To measure unknown inductance, capacitance and resistance using Maxwell Bridge.

Suggested Books:

1. S. Som and G. Biswas, "Introduction to Fluid Mechanics and Fluid Machines", 2nd ed., Tata McGraw-Hill, 2007

2. David A. Bell, Electronic Instrumentation and Measurements, 2nd Ed, PHI, New Delhi, 2008.

3. Y. A. Cengal and M. A. Boles, "Thermodynamics: An Engineering Approach", McGraw Hill, 6th ed. 2008.

Mody University of Science & Technology
Lakshmangarh (Sikar)

Detailed syllabus for First year M. Tech. (Nuclear Science and Technology)

Semester II

Subject Code	Subject	Credits
NU 502	Nuclear Power Engineering	4
NU 504	Plasma Physics and Nuclear Fusion	4
NU 506	Nuclear Engineering Materials	4
NU 508	Fluid dynamics and Heat Transfer	4
NU 510	Radiation Technology and its applications	4
NU 512	Nuclear Measurement Lab	3
NU 514	Plasma Laboratory	1
	Total Credits	**24**

Detailed course syllabus for Second Semester- M. Tech (NST)

NU 502 Nuclear Power Engineering 3-1-0-4

1. Principles of the conversion of nuclear energy to useful power, various types of nuclear power plants that have been designed, built and operated. Advanced future types of nuclear power plants that are in the design or developing stages. **[5]**

2. Reactor designs of power plants, their energy conversion principles, cycles and load-following characteristics, Economics of nuclear vs. other types of power plants. Power plant design and utility industries, reactivity coefficients. **[5]**

3. Problems involving core hydrodynamics of boiling-water reactors, their void and pressure coefficients, stability, and their effects on the design of the balance-of-plant. Detailed features of pressurized water reactor components, including steam generators, pressurizers and chemical-shim control systems, nuclear reactor plant design. **[8]**

4. Problems related to features of gas-cooled reactor cycles and components, and compare/contrast those features with those of conventional LWRs. Examples include, but are not limited to, fuel geometries (hex vs rod vs pebble-bed), fuel type (uranium vs thorium) and coolant type (helium vs water). **[7]**

5. Economics of nuclear power plants, accounting for capital costs, fuel costs and O&M (operations and maintenance) costs, as well as environmental aspects - sustainability, proliferation, safety. Compare and contrast the relative merits of different types of power plants. **[5]**

6. Nuclear Radiation Safety: Integration of reactor physics and engineering sciences into nuclear power plant design. Topics include materials issues in plant design and operations, aspects of thermal design, fuel depletion and fission-product poisoning, and temperature effects on reactivity. Safety considerations in regulations and operations, such as the evolution of the regulatory process, the concept of defense in depth, General Design Criteria, accident analysis, probabilistic risk assessment, and risk-informed regulations. **[10]**

Text Books:

1. M. M. El-Wakil, *Nuclear Energy Conversion,* American Nuclear Society; Revised edition, 1982
2. John R. Lamarsh and Anthony J. Baratta, *Introduction to Nuclear Engineering*, 3rd Edition, Prentice Hall, 2001
3. S. Glasstone & A. Sessonske, *Nuclear Reactor Engineering*, Vol. I and Vol. II , CBS Publishers & Distributors, New Delhi, 2009

Reference Books:

1. J. F Harve., Pressure Vessel Design, CBS Publication, 2001
2. Beach F., Modern Power Station Practice - Volume D - Electrical System & Equipment, British Electrical International, 3rd ed., Pergamon Press, 1992

NU 504 Plasma Physics and Nuclear Fusion Reactor 3-1-0-4

1. **Introduction to Plasma:** Fourth state of matter, Debye shielding, Collective behaviour, Plasma frequency, Plasma in nature and Laboratory, Ionization and Recombination, Coulomb collision, Diffusion, Ambi polar diffusion, diffusion in magnetic field, Plasma Transport processes, Radiations from plasmas, Plasma Sheath **[10]**

2. **Single particle motions**: Charged particle motion in uniform E and B fields, guiding center approximations, diamagnetism, drift velocities, Adiabatic invariants and magnetic mirrors, particle orbits in Tokamaks **[6]**

3. **Plasma Theory:** Introduction to kinetic theory, Boltzmann equation, Vlasov plasma model, Fluid model from kinetic model, MHD equation, Concept of magnetic pressure, Frozen field lines, Plasma equilibrium and stability analysis **[6]**

4. **Wave propagation in Plasma**: Waves in plasma, electron plasma waves and Landau damping and instabilities in plasma, e. m wave propagation in un magnetized plasma, e. m. wave propagation in a magnetic field, RF plasma heating **[6]**
5. **Fusion power generation**: Fusion cross-sections and consequent conditions required for ignition and energy production, Lawson criterion, Plasma confinement approaches, Open and closed magnetic systems, Tokamak and stellators, ICF **[6]**

6. **Fusion technology**: Plasma heating by neutral beams and RF, Blanket and First wall design, Diverter, ITER project, Safety/ environmental considerations **[6]**

Text Books:

1. F. F. Chen, Introduction to Plasma Physics, 2nd edition, Plenum Press, 1984
2. T. J. Dolan, Fusion Research, Pergamon Press, 1982

2. J. A. Bittencourt, Fundamentals of Plasma Physics, 3rd edition, Springer Int. edition, 2004

NU 506 Nuclear Engineering Materials 3-1-0-4

1. **Mechanical Properties of Materials:** Fundamentals of materials, Defects & Diffusion in solids, Dislocations and its effects on materials, Dislocation theory, stress fields, strain energy, Basics of fracture and corrosion in materials **[8]**

2. **Nuclear Fuels:** Extraction process of Uranium, Properties of Uranium metal, UO_2 and UC**.** **[8]**

3. **Fuel elements:** Thermal properties, Stress analysis of fuel elements, Fuel Chemistry, Solid fission products, swelling and fission gas bubbles, Fission gas release, corrosion in nuclear reactors, primary failure modes of fuel elements, fabrication of nuclear fuels, production of heavy water. **[8]**

4. **Radiation damage:** Stages of formation of a displacement cascade, Kinchin-Pease model and various modifications, DPA and DPA rate, computer simulations of radiation damage. **[8]**

5. **Radiation effects:** Fundamentals of phase transformations (nucleation, spinodal decomposition & order-disorder), void swelling and its effects on material properties, theory of radiation-induced segregation and precipitation. **[8]**

Text Books:

1. P. D Wilson., Nuclear Fuel Cycle: From ore to wastes, Oxford Press, 1996

2. D. R. Olander., Fundamental aspects of nuclear reactor fuel elements, Report No. TID-26711-P1. Technical Information Center, Office of Public Affairs, Energy Research and Development Administration, Oak Ridge, TN (U.S.A.),1985

NU 508 Fluid Dynamics and Heat Transfer 3-1-0-4

I. Navier-Stokes Equations, Classification of partial differential equations and boundary conditions **[7]**

II. Flow classifications, flow properties, turbulent flow analysis **[6]**

III. Application of FEM & FVM method in heat conduction in multi dimensional system, stability analysis, numerical methods for inviscid flows **[8]**

IV. Viscous laminar flows, compressible flows, turbulent flows, Convection, Conduction and Radiation Heat Transfer **[8]**

V. Critical Thickness of Insulation, Variable Thermal Conductivity, Conduction Heat Transfer with Internal Heat Generation, Heat Exchanger, Pressure Drop Analysis. **[6]**

VI. Fuel, Clad and Coolant Temperatures, Sub channel Analysis of Rod Bundle Fuels, Hotspot and Hot channel Factors, Coolant Channel Orificing, Two-phase Flow and Boiling, Critical Heat Flux **[5]**

Text Books:

1. James George Knudsen, Donald La Verne Katz, Fluid Dynamics and Heat Transfer, Mc Graw Hill, 1958

2. John Grimson, Advanced Fluid Dynamics and Heat Transfer, Mc Graw Hill, 1971

3. M. M. El-Wakil, Nuclear Heat Transport, McGraw Hill Book Co., New York, 1985

2. R. T. Lahey and F. J. Moody, The Thermal-Hydraulics of Boiling Water Nuclear Reactor, 2nd Edition, 1993

NU 510 Radiation Technology and its Applications 3-1-0-4

1. Radioisotopes Engineering and Industrial applications

Applications using gamma ray attenuation, Applications using gamma ray scattering, Borehole logging, Radio gauging principles, Alpha particle gauges based on transmissions, Scattering and ionization effects. Beta transmission gauges for measurements of sheets thickness, density and composition analysis. X-ray fluorescence principles, Neutron gauges, Well logging, Gamma and neutron radiography. Radioisotope power packs. High level radio-isotope applications including radiation therapy sterilization plants, radiation processing and food irradiation. **[15]**

2. Medical applications

Projection imaging, imaging with external radiation and internal radiation, computerized tomography, positron emission tomography, magnetic resonance imaging, radiation therapy – using photons and electrons, radionuclides, neutrons and heavy charged particles. **[10]**

3. Nuclear techniques for materials analysis

Basic principles of materials analysis, basic requirements for the technique, nuclear techniques for elemental analysis, main nuclear processes useful for materials analysis, the quantitative estimate, Rutherford back scattering (RBS) and elastic recoil detection analysis(ERDA), Nuclear reaction analysis – principle of the technique and required instrumentation, Nuclear reactions suitable for nuclear reaction analysis, neutron activation analysis, PIXE and XRF techniques. **[15]**

Text Books:

1. G. Foldiak, *Industrial Application of Radioisotopes*, Elsevier, New York, 1986.
2. Robin P. Gardner and R. L. Ely, *Radioisotope Measurement & Applications in Engineering,*
3. G. A. Johanson and Peter Jackson., *Radioisotope Gauges for Industrial Process Measurement,* John Wiley & Sons.

Reference Books:

2. John Lilley, *Nuclear Physics, Principles and Application*, John Wiley, 2002

NU 512 **Nuclear Measurement Lab** **0-0-6-3**

List of experiments

1. Characteristics and dead time of a G.M. counter. Counting statistics using a GM counter.
2. Gamma ray absorption in lead/aluminum using a GM counter.
3. Determination of end point energy of β–particles by absorption method using a GM counter.
4. Determination of half-life of 116 In using a GM counter.
5. Determination of gamma-ray energy by using a scintillation detector.
6. Determination of the energy resolution of a Si-surface Barrier detector with an 241Am alpha-source.
7. Determination of beta end-point energy from Fermi-Curie plot using an Anthracene scintillation detector.
8. Determination of the photo peak efficiency of a NaI (Tl) scintillation detector as a function of gamma ray energy.
9. Determination of the energies of gamma rays using an HPGe detector.
10. Study of γ-γ directional correlation using a 60Co source and a pair of scintillation detectors.
11. Study of angular distribution of Compton scattered gamma rays using a scintillation spectrometer and deduction of total scattering cross section.
12. Determination of rest mass of electron by measuring the energy of Compton scattered gamma rays using a scintillation spectrometer.

.

Suggested Books:

1. G.F. Knoll, *Radiation Detection and Measurement*, 3rd Edition, John Wiley and Sons, 2000
2. S. S. Kapoor and V. S. Ramamurthy, *Nuclear Radiation Detectors*, Wiley Eastern Limited, New Delhi, 1986
3. William R. Leo, *Techniques for Nuclear and Particle Physics Experiments: A How-to Approach*, 2nd revised edition, Springer-Verlag, New York Inc., 1994

NU- 514 **Plasma Laboratory** **0-0-2-1**

List of Plasma Experiments

1. Glow discharge characteristic- Paschen curve
2. Density and electron temperature measurement using Langmuir probes in the glow Discharge
3. To study the conditions of striations in Plasma
4. Plasma confinement studies using magnetic field
5. Dielectric barrier discharge- plasma generation at atmospheric pressure
6. Ion acoustic wave propagation in plasma

Mody University of Science & Technology
Lakshmangarh (Sikar)

Detailed syllabus for Second year M. Tech. (Nuclear Science and Technology)

Semester III

Subject Code	Subject	Credits
NU 601	Fast Breeder Reactor	3
NU 603	Nuclear Waste storage and Management	3
NU 605	Nuclear security, safety and safeguards	3
NU 607	Seminar	2
NU 609	Preliminary Dissertation	10
	Total Credits	**21**

NU-601 Fast Breeder Reactor 2-1-0-3

1. **Core Physics:** criticality, control rod calculations, excess reactivity computations, enrichment requirements, fuel burn-up and fission product formation. [5]
2. **Thermal Hydraulics**: convective and/or boiling heat transfer at fuel element surface, conductive heat transfer inside elements, pressure drops, heat exchanger calculations, thermodynamic cycle efficiency, steam turbine reheat and regeneration, preheating and inlet sub cooling, fuel chemistry. [4]
3. **Materials:** selection of fuel and cladding, corrosion, pressure vessel materials, post irradiation examination of nuclear fuels. [3]
4. **Pressure Vessel:** stress calculations, materials selection/thicknesses, ASME codes. [3]
5. **Safety:** Safety design principles, Safety in operation, temperature and void coefficients, emergency cooling, hazards considerations. Thermal limits on reactor performance, thermal converters, and fast breeders. [4]
6. **Fast breeder Reactor:** Breeding requirements and fast reactors, Fast reactor system features, Oxide fuels in fast reactors, Carbide/Nitride fuels in fast reactors, Metal fuel development (emphasis on U-Pu-Zr), Zr-Nb applications in reactors. [3]
7. **Fast reactor physics**, Four-group flux and adjoint flux distributions, Reactivity and stability, System response to accident initiators, Fast reactor thermal hydraulics: sodium heat transfer, Natural circulation in fast reactors, SGTR mitigation. [3]
8. Solve problems related to conversion, breeding and doubling times of fast breeder reactors. Difference in neutron spectrum and fuel type between a fast reactor and a LWR affect fast reactor physics and performance. Examples include, but are not limited to, fast reactor kinetics, sodium void coefficients and designs to suppress reactivity excursions. Describe methods of direct nuclear energy conversion such as thermionic, thermoelectric, betavoltaic and fission-electric cells. [5]

Text Books:

4. J.C. Collier, *Convective Boiling and Condensation*, McGraw Hill (1972).

NU–603 Nuclear Waste Storage and Management 2-1-0-3

1. **Introduction to Nuclear Radioactive Waste:**
   Nuclear decay law, naturally occurring radioactive materials, background radiation, nuclear fuel cycle **[5]**

2. **Nuclear Waste and Classification:**
   Low, intermediate and high level nuclear waste, Short-lived waste radionuclides and long-lived waste radionuclides, high-level waste from reprocessing of spent fuel **[5]**

3. **Treatment of Radioactive Waste:**
   Pre-treatment of radioactive wastes, treatment of liquid and solid radioactive wastes, hydraulic cements in waste immobilization and cementation technology. **[5]**

4. **Radioactive waste immobilization:**
   Vitrification technology, long term durability of silicate glasses, Ceramic and metallic matrices **[4]**

5. **Nuclear waste storage and disposal:** Deep geologic disposal, Repository Requirements and site selection, The multi-barrier concept, Design principles and evaluation methods for geologic waste disposal systems, Regulatory environment and community Issues, International scenarios for permanent disposal **[6]**

6. **Nuclear Waste radionuclide migration in environment**: Fundamental processes and governing equations of radionuclide transport in the environment. Potential environmental impact and assessment of overall Repository performance **[5]**

NU-605 Nuclear Security, Safety and Safeguards 2-1-0-3

Unit I

Introduction to nuclear security; International and national legal framework regulating of nuclear security; Vulnerability assessment of physical protection systems; Risk assessment and management of State nuclear security measures; Threat assessment; **[5]**

Unit II

Physical protection systems design and evaluation; Physical protection technologies and equipment; Transport security for nuclear and other radioactive material; Nuclear forensics, Nuclear security culture. **[8]**

Unit III

Nuclear security at major public events; Infrastructure and procedures for detection and response to incidents involving nuclear or other radioactive material out of regulatory control; Cooperation of stakeholders at national and international level; IT/cyber security. **[8]**

Unit IV

Nuclear power plant safety requirements, Basic concepts in safety and reliability, Conceptual design of safety systems, Risk and reliability analysis of systems, PSA, DSA, Nuclear Safeguard, Nuclear material accountancy and inventory control of radioactive material.

[9]

M.Tech. VLSI Design

Two-Year Programme

Academic Curriculum (2019-20 Batch Onwards)

List of Electives

Autumn Semester (Elective I)

1.	EC 19.551	Design of Digital Systems
2.	EC 19.553	ASIC Design
3.	EC 19.555	Advanced Digital Communication
4.	EC 19.557	RF and Microwave Engineering

Spring Semester (Elective II)

5.	EC 19.552	VLSI Physical Design and Design Automation
6.	EC 19.554	MEMS and Microsystems (Elective II)
7.	EC 19.556	Advanced Wireless Communication
8.	EC 19.558	Advanced Antenna & Wave Propagation

Spring Semester (Elective III)

9.	EC 19.560	Low power VLSI Technology
10.	EC 19.562	Mixed-Signal Systems
11.	EC19.564	Advanced Digital Signal Processing
12.	EC19.566	Wireless Sensor Networks

EC 19.541	**Semiconductor Device Models for Circuit Simulation**	**3-1-0-4**
	Total Lectures:	**40**

Objectives: To provide foundation in various semiconductor device models.

Pre-requisite: **Semiconductor Devices and Circuits**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to Diode Models:** Principle of circuit simulation and its objectives. Introductions to SPICE- DC, small signal, large signal, high frequency, noise models of diodes and measurement of diode model parameters.	**[10]**
2.	**Bipolar Junction Transistor Models:** DC, small signal, high frequency and noise models of bipolar junction transistors, extraction of bipolar junction transistor model parameters.	**[8]**
3.	**MOSFET Models:** DC, small signal, high frequency and noise model of MOSFETs. MOSFET channel mobility model, level-1 and level-2 large signal MOSFET Models.	**[10]**
4.	**MOSFET Scaling and other Effects:** Devices scaling, short and narrow channel MOSFETs. Extraction of MOSFET model parameters.	**[6]**
5.	**Devices Models:** JFET, Heterojunction FET, Heterojunction bipolar transistor and MESFETs, JFET and MESFET model parameters.	**[6]**

Course Outcomes: At the end of the course student will be able

1. Explain the equations, approximations and techniques available for deriving a model with specified properties, for a general device characteristic with known qualitative theory.
2. Apply suitable approximations and techniques to derive the model referred to above starting from drift-diffusion transport equations.
3. Simulate characteristics of a simple device using MATLAB, SPICE.
4. Explain how the equations get lengthy and parameters increase in number while developing a compact model

Text Books:

1. Dasgupta, Nandita, and Amitava Dasgupta. *Semiconductor devices: modelling and technology*. PHI Learning Pvt. Ltd., 2004.
2. Streetman, Ben G., and Sanjay Kumar Banerjee. *Solid State Electronic Devices: Global Edition*. Pearson education, 2016.

Reference Books:

1. Adir Bar-Lev. *Semiconductors and electronic devices*. Prentice-Hall International.

EC 19.542 **Analog VLSI Design** **3-1-0-4**

Total Lectures: 40

Objectives:

- To develop the ability design and analyze MOS based Analog VLSI circuits to draw the equivalent circuits of MOS based Analog VLSI and analyze their performance.
- To develop the skills to design analog VLSI circuits for a given specification.

Pre-requisite: **Electronics Devices and Circuits, Network Theory**

Unit No.	Course Contents	Lecture Hours
1.	**Basic consideration in analog VLSI design**: Basic Concepts, Common Source Stage, Source Follower, Common Gate Stage, Cascode Stage.	**[8]**
2.	**Differential Amplifiers**: Single Ended and Differential Operation, Basic Differential Pair, Common-Mode Response, Differential Pair with MOS loads, Gilbert Cell. Passive and Active Current Mirrors – Basic Current Mirrors, Cascode Current Mirrors, Active Current Mirrors.	**[8]**
3.	**Frequency Response of Amplifiers**: General Considerations, Common Source Stage, Source Followers, Common Gate Stage, Cascode Stage, Differential Pair. Noise – Types of Noise, Representation of Noise in circuits, Noise in single stage amplifiers, Noise in Differential Pairs. CMOS comparators.	**[8]**
4.	**Feedback Amplifiers**: General Considerations, Feedback Topologies, Effect of Loading. Operational Amplifiers – General Considerations, One Stage Op Amps, Two Stage Op Amps, Gain Boosting, Common – Mode Feedback, Input Range limitations, Slew Rate, Power Supply Rejection, Noise in Op Amps. Stability and Frequency Compensation. Mixed signal circuits.	**[8]**
5.	**MOS circuit components:** Switched capacitor filters realization by MOS technology.	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Draw the equivalent circuits of MOS based Analog VLSI and analyze their performance.
2. Design analog VLSI circuits for a given specification.
3. Analyse the frequency response of the different configurations of an amplifier.
4. Understand the feedback topologies involved in the amplifier design.
5. Appreciate the design features of the differential amplifiers.

Text Books:

1. Razavi, Behzad. *Design of Analog CMOS Integrated Circuits*. McGraw-Hill Higher Education, 2001.
2. Johns, David A., and Ken Martin. *Analog integrated circuit design*. John Wiley & Sons, 2008.

Reference Books:

1. Gray, Paul R., et al. *Analysis and design of analog integrated circuits*. Wiley, 2001.

EC 19.543	VLSI Fabrication Technology	3-1-0-4
	Total Lectures:	**40**

Objectives: To provide rigorous foundation in MOS and CMOS fabrication process.

Pre-requisite: **Semiconductor Physics**

Unit No.	Course Contents	Lecture Hours
1.	**Crystal Growth and Oxidation:** Electron grade silicon. Crystal growth. Wafer preparation. Vapour phase and molecular beam epitaxy. SOI. Epitaxial evaluation. Oxidation techniques, systems and properties. Oxidation defects.	**[8]**
2.	**Lithography:** Optical, electron, X-ray and ion lithography methods. Plasma properties, size, control, etch mechanism, etch techniques and equipment's.	**[8]**
3.	**Deposition:** Deposition process and methods. Diffusion in solids. Diffusion equation and diffusion mechanisms.	**[8]**
4.	**Process Simulation:** Ion implantation and metallization. Process simulation of ion implementation, diffusion, oxidation, epitaxy, lithography, etching and deposition. NMOS, CMOS, MOS memory and bipolar IC technologies. IC fabrication.	**[8]**
5.	**Packaging**: Analytical and assembly techniques. Packaging of VLSI devices.	**[8]**

Course Outcomes: At the end of the course student will be able

1. Appreciate the various techniques involved in the VLSI fabrication process.
2. Understand the different lithography methods and etching process.
3. Appreciate the deposition and diffusion mechanisms.
4. Analyze the fabrication of NMOS, CMOS memory and bipolar devices
5. Understand the nuances of assembly and packaging of VLSI devices.

Text Books:

1. S. M. Sze. *VLSI Technology*. Second Edition, McGraw-Hill 2017.
2. Gandhi, Sorab K. *VLSI fabrication principles: silicon and gallium arsenide*. Vol. 117. John Wiley, 2003.

Reference Books:

1. Wolf, Wayne. *Modern VLSI design: systems on silicon*. Prentice-Hall, Inc., 2002.
2. A.I.C.T.E, Design and Fabrication Technology, A.I.C.T.E, Bangalore, 2001.

EC 19.544 **VLSI Systems and Subsystems** **3-1-0-4**

Total Lectures: 40

Objectives:

- To prepare the student to understand the HDL language feature to realize the complex digital systems.
- To design and simulate sequential and concurrent techniques in HDL
- To explain modeling of digital systems using HDL and design methodology
- Understand the concepts of Memories and Programmable logic
- Understand the concepts of Physical Design Process such as partitioning, Floorplanning, Placement and Routing.

Pre-requisite: **Digital VLSI Design**

Unit No.	Course Contents	Lecture Hours
1.	**System specification using HDL:** Basic Concepts, Structural Gate-Level Modeling, Switch-Level Modeling, Behavioral and RTL Modeling.	**[8]**
2.	**General VLSI Components:** Multiplexers, Binary Decoders, Equality Detectors and Comparators, Priority Encoder, Shift and Rotation Operations, Latches and Flip-flops, Registers.	**[8]**
3.	**Arithmetic circuits in CMOS VLSI:** Bit Adder Circuits, Ripple carry adders, Carry-Look Ahead Adders, High speed adders, Multipliers.	**[8]**
4.	**Memories and Programmable logic:** SRAM, SRAM arrays DRAM, ROM arrays, Logic arrays.	**[8]**
5.	**System level physical design:** Interconnect Delay Modeling, Interconnect Scaling, Floorplaning and Routing, Input and Output Circuits, VLSI clocking and system design. Reliability and testing of VLSI circuits	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Model, simulate, verify, and synthesize with hardware description languages.
2. Understand and use major syntactic elements of HDL - entities, architectures, processes, functions, common concurrent statements, and common sequential statements
3. Design digital logic circuits in different types of modeling
4. Demonstrate timing and resource usage associated with modeling approach.
5. Use computer-aided design tools for design of complex digital logic circuits.

Text Books:

1. Uyemura, John P. *Introduction to VLSI circuits and systems*. John Wiley, 2002.
2. Wolf, Wayne. *Modern VLSI design: system-on-chip design*. Pearson Education, 2002.

Reference Books:

1. Hill, Frederick J., Gerald R. Peterson, and Fredrick J. Hill. *Computer aided logical design with emphasis on VLSI*. Vol. 4. New York: Wiley, 1993.

EC 19.545 **Elements of Digital VLSI Design** **3-1-0-4**

Total Lectures: 40

Objectives:

- To provide rigorous foundation in MOS and CMOS digital circuits
- To train the students in transistor budgets, clock speeds and the growing challenges of power consumption and productivity

Pre-requisite: **Electronics Devices and Circuits**

Unit No.	Course Contents	Lecture Hours
1.	**CMOS Technology:** CMOS Technology & Device Scaling, Stick Diagram, Layout and Full Custom Mask Design, CMOS process enhancement, Technology related CAD issues.	**[8]**
2.	**Introduction to CMOS circuits:** MOS inverters : Static and Dynamic Characteristics, Inverter Delay and Power Dissipation, Interconnect delay	**[8]**
3.	**MOS Logic Circuits:** Combinational MOS Logic Circuits, Sequential MOS Logic Circuits, Circuit characterization and performance estimation: Delay estimation, Logical effort and transistor sizing, Power dissipation, Interconnect design margin, Reliability.	**[10]**
4.	**VLSI Circuits:** Dynamic Logic Circuits, Low power VLSI Circuits	**[8]**
5.	**Advance VLSI Circuits:** Introduction to BiCMOS Circuits, Introduction to FPGA and ASICS.	**[6]**

Course Outcomes:

At the end of the course student will be able

1. Implement the logic circuits using MOS and CMOS technology.
2. Analyze various circuit configurations and their applications
3. Analyze the merits of circuits according to the technology and applications change.
4. Design low power CMOS VLSI circuits.
5. understand the rapid advances in CMOS Technology

Text Books:

1. Kang, Sung-Mo, Yusuf Leblebici, and Chulwoo Kim. *CMOS digital integrated circuits: analysis & design*. McGraw-Hill Higher Education, 2014.
2. Weste, Neil HE, and Kainran Eshraghian. *Principles of CMOS VLSI design: A systems perspective*. Pearson Education Asia, 2001.

Reference Books:

1. Baker, Jacob R., Harry W. Li, and David E. Boyce. *CMOS Circuit Design, Layout and Simulation*, Prentice-Hall of India, 2000.

EC 19.546	Embedded System Design	3-1-0-4
	Total Lectures:	**40**

Objectives:

- To learn basics of embedded hardware and software
- To understand the basics of the Embedded Processor Architecture and Microcontrollers
- To Understand the issues related to Embedded software Architecture & Development

Pre-requisite: **Microcontroller and Interfacing**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to Embedded System & Design Concepts:** Introduction & examples of embedded system, Concept of embedded system design , design challenges, processor technology & IC technology, Embedded processor & general purpose processor, trades-offs, development phase of embedded system & use of software tools for development of embedded system.	**[4]**
2.	**Embedded Processor Architecture/Microcontrollers:** Role of processor selection in embedded system, overviews of 8-bits/16-bits/32-bits microcontrollers, 8051 microcontroller: Architecture, basic assembly language programming concepts, instruction sets, addressing modes, logical operations, arithmetic operations, branching instructions, Boolean instructions, subroutines, timing subroutine, serial data communication & interrupt process, assembly language programming examples	**[12]**
3.	**Interfacing, programming & real-time applications:** Memory & I/O interfacing, Timer & counter operation & Programming, Serial communication, & interrupt handling, LCD & keyboard interfacing, DS 12887 RTC interfacing, interfacing ADC/DAC, real world interfacing & applications.	**[12]**
4.	**Embedded software Architecture & Development:** Challenges & issues in an embedded software development, real-time programming language & embedded OS, Embedded software architecture: Round-Robin, Round-Robin with interrupt, RTOS architecture, tasks & tasks states, priority based scheduling, Semaphore & shared data, timer function, memory management, encapsulating semaphore & queue, hard real-time scheduling consideration, saving memory space & power. Embedded software development process & tools.	**[6]**
5.	**Networks for Embedded system:** 12C two wire busses, the can bus, SHARC link ports, Ethernet, Myrinet, IEEE 1451.1 & IEEE 1451.2 plugs & play standards, embedded TCP/IP	**[6]**

Course Outcomes: At the end of the course student will be able Understand the embedded systems and embedded software architecture

Text Books:

1. Simon, David E. *An embedded software primer*. Vol. 1. Addison-Wesley Professional, 1999.
2. Ali, Mazidi Muhammad. *The 8051 Microcontroller and Embedded Systems: Using Assembly and C*. Pearson Education India, 2007.
3. Vahid, Frank, and Tony Givargis. *Embedded system design: a unified hardware/software introduction*. Vol. 52. New York: Wiley, 2002.

Reference Books:

1. Shibu K V. *Introduction to Embedded Systems*. Tata McGraw Hill Education Private Limited, 2009

EC 19.551	**Design of Digital Systems (Elective I)**	**3-1-0-4**
	Total Lectures:	**40**

Objectives:

- To get an idea about designing complex, high speed digital systems and how to

Pre-requisite: **Digital Electronics**

Unit No.	Course Contents	Lecture Hours
1.	**Mapping algorithms into Architectures:** Data path synthesis, control structures, critical path and worst case timing analysis. FSM and Hazards.	**[8]**
2.	**Combinational network delay:** Power and energy optimization in combinational logic circuit. Sequential machine design styles. Rules for clocking. Performance analysis.	**[8]**
3.	**Sequencing static circuits:** Circuit design of latches and flip-flops. Static sequencing element methodology. Sequencing dynamic circuits. Synchronizers.	**[8]**
4.	**Data path and array subsystems:** Addition / Subtraction, Comparators, counters, coding, multiplication and division. SRAM, DRAM, ROM, serial access memory, context addressable memory.	**[8]**
5.	**Reconfigurable Computing:** Fine grain and Coarse grain architectures, Configuration architectures-Single context, Multi context, partially reconfigurable, Pipeline reconfigurable, Block Configurable, Parallel processing.	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Identify mapping algorithms into architectures.
2. Summarize various delays in combinational circuit and its optimization methods.
3. Summarize circuit design of latches and flip-flops.
4. Construct combinational and sequential circuits of medium complexity that is based on VLSIs, and programmable logic devices.
5. Summarize the advanced topics such as reconfigurable computing, partially reconfigurable, Pipeline reconfigurable architectures and block configurable.

Text Books:

1. Weste, Neil HE, and David Harris. *CMOS VLSI design: a circuits and systems perspective*. Pearson Education India, 2015.
2. Wolf, Wayne. *FPGA-based system design*. Pearson education, 2004.

Reference Books:

1. John F. Wakerly. *Digital Design: Principles and Practices*. Prentice Hall.

EC 19.552	VLSI Physical Design and Design Automation (Elective II)	3-1-0-4

Total Lectures: 40

Objectives:

- To learn basics of embedded hardware and software
- To understand the basics of the Embedded Processor Architecture and Microcontrollers
- To Understand the issues related to Embedded software Architecture & Development

Pre-requisite: **Elements of VLSI Design**

Unit No.	Course Contents	Lecture Hours
1.	**VLSI design automation tools-** algorithms and system design. Structural and logic design. Transistor level design. Layout design. Verification methods. Design management tools.	**[6]**
2.	**Placement and Routing:** Layout compaction, placement and routing. Design rules, symbolic layout. Applications of compaction. Formulation methods. Algorithms for constrained graph compaction. Circuit representation. Wire length estimation. Placement algorithms. Partitioning algorithms.	**[10]**
3.	**Floor planning and routing-** floor planning concepts. Shape functions and floor planning sizing. Local routing. Area routing. Channel routing, global routing and its algorithms.	**[8]**
4.	**Simulation and logic synthesis-** gate level and switch level modeling and simulation. Introduction to combinational logic synthesis. ROBDD principles, implementation, construction and manipulation. Two level logic synthesis.	**[8]**
5.	**High-level synthesis-** hardware model for high level synthesis. Internal representation of input algorithms. Allocation, assignment and scheduling. Scheduling algorithms. Aspects of assignment. High level transformations.	**[8]**

Course Outcomes: At the end of the course student will be able

1. Students are able to know how to place the blocks and how to partition the blocks while for designing the layout for IC.
2. Students are able to solve the performance issues in circuit layout.
3. Students are able to analyze physical design problems and Employ appropriate automation algorithms for partitioning, floor planning, placement and routing

Text Books:

1. S.H. Gerez. *Algorithms for VLSI Design Automation*. John Wiley, 1998.
2. N.A.Sherwani. *Algorithms for VLSI Physical Design Automation*. Kluwer, 1999.

Reference Books:

1. R. Geiger, P. Allen, and N. R Strader. *VLSI Design Techniques for Analog and Digital Circuits*. McGraw-Hill, New York, 1990.

EC 19.553	ASIC Design (Elective I)	3-1-0-4
	Total Lectures:	**40**

Objectives:

- To prepare the student to be an entry-level industrial standard ASIC or FPGA designer.
- To give the student an understanding of issues and tools related to ASIC/FPGA design and implementation.
- To give the student an understanding of basics of System on Chip and Platform based design.
- To give the student an understanding of High performance algorithms

Pre-requisite: **Digital Electronics**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to Technology**: Types of ASICs, VLSI Design flow, Design and Layout Rules, Programmable ASICs - Antifuse, SRAM, EPROM, EEPROM based ASICs. Programmable ASIC logic cells and I/O cells. Programmable interconnects. Advanced FPGAs and CPLDs and Soft-core processors.	**[8]**
2.	**ASIC physical design issues**: System Partitioning, Floorplanning and Placement. Algorithms: K-L, FM, Simulated annealing algorithms. Full Custom Design: Basics, Needs & Applications. Schematic and layout basics, Full Custom Design Flow.	**[8]**
3.	**Semicustom Approach:** Synthesis (RTL to GATE netlist) - Introduction to Constraints (SDC), Introduction to Static Timing Analysis (STA). Place and Route (Logical to Physical Implementation): Floorplan and Power-Plan, Placement, Clock Tree Synthesis (clock planning), Routing, Timing Optimization, GDS generation.	**[8]**
4.	**Extraction**: Logical equivalence and STA: Parasitic Extraction Flow, STA: Timing Flow, LEC: Introduction, flow and Tools used. Physical Verification: Introduction, DRC, LVS and basics of DFM.	**[8]**
5.	**System-On-Chip Design** - SoC Design Flow, Platform-based and IP based SoC Designs, Basic Concepts of Bus-Based Communication Architectures. High performance algorithms for ASICs/ SoCs as case studies – Canonic Signed Digit Arithmetic, KCM, Distributed Arithmetic, High performance digital filters for sigma-delta ADC.	**[8]**

Course Outcomes: At the end of the course student will be able

1. Demonstrate VLSI tool-flow and appreciate FPGA and CPLD architectures
2. Understand the issues involved in ASIC design, including technology choice, design management and tool-flow.
3. Understand the algorithms used for ASIC construction.
4. understand Semicustom Design Flow and Tool used - from RTL to GDS and Logical to Physical Implementation
5. understand the basics of System on Chip and on chip communication architectures appreciate high performance algorithms for ASICs

Text Books:

1. Smith, Michael John Sebastian. *Application-specific integrated circuits*. Vol. 7. Reading, MA: Addison-Wesley, 2003.
2. Pasricha, Sudeep, and Nikil Dutt. *On-chip communication architectures: system on chip interconnect*. Morgan Kaufmann, 2010.

Reference Books:

Gerez, Sabih H. *Algorithms for VLSI design automation*. John Wiley & Sons, Inc., 1999.

EC 19.554 **MEMS and Microsystems (Elective II)** **3-1-0-4**

Total Lectures: 40

Objectives:
- To learn basics of MEMS and Microsystems

Pre-requisite: **Electronic Devices**

Unit No.	Course Contents	Lecture Hours
1.	**Overview of Mems and Microsystems:** Mems And Microsystems, Evolution of micro fabrication, Microsystems and miniaturization, Application of Microsystems, Markets for Microsystems	**[8]**
2.	**Working Principles of Microsystems:** Introduction, MEMS and Micro actuators, Microfluidics, Micro actuators with Mechanical inertia	**[8]**
3.	**Engineering Science for Microsystems Design:** Introduction, Molecular theory of matter and intermolecular forces, Doping of semiconductor, Plasma physics, Electrochemistry	**[8]**
4.	**Thermo-fluid Engineering and Microsystems Design:** Introduction, Clock Skew and Sequential Circuit Performance, Clock Generation and Synchronization	**[8]**
5.	**Designing Arithmetic Building Blocks:** Introduction, Basic equation in continuum fluid dynamics, Laminar fluid flow in circular conduits, Computational fluid dynamics, incompressible fluid flow in micro-conduits	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Understand the products and materials used in MEMS and Micro sensors.
2. Use the reconfigurable design implementation in MEMS.
3. Apply different bio medical applications

Text Books:

1. Tai-Ran Hsu, *MEMS and Microsystems*, 2nd Edition, Wiley, 2008.
2. Mohamad Gad El Hak, *MEMS Design and Fabrication*, 2nd Edition, CRC Press, 2006.

Reference Books:

1. Vijay. K. Varadan, K.J. Vinoy, and K.A. Jose, *RF MEMS and their Applications*, Wiley-India, 2011.

EC 19.555	Advanced Digital Communication (Elective I)	3-1-0-4
	Total Lectures:	**40**

Objectives:

- To give the student an understanding of issues related to Channel models and Modulation Schemes.
- To give the student an understanding of issues related to Digital Communications through Fading Channels.

Pre-requisite: **Digital Communication**

Unit No.	Course Contents	Lecture Hours
1.	**Channel models and Modulation Schemes:** Digital communication system model, communication channels and their characteristics, mathematical models for communication channels, AWGN channel, Probability and Stochastic Processes. Selected modulation schemes, digital PAM, PSK, QAM and FSK modulations, geometric (signal space) representation of modulated signals, Spectral Characteristics of Digitally Modulated Signals.	**[12]**
2.	**Receivers for AWGN channel**: Demodulation by correlation and matched filter receiver, detection by maximum likelihood detectors, performance analysis of optimum receiver for selected modulation schemes over AWGN channel.	**[6]**
3.	**Channel Capacity and Coding:** Channel capacity, Channel capacity with Orthogonal Signals, Random Selection of Codes – probabilistic approach and algebraic approach, Linear Block Codes, Cyclic Codes, Convolutional Codes, Soft-Decision Decoding and Hard-Decision Decoding	**[8]**
4.	**Channels and Mutual Information:** Channel capacity theorem (without proof), uncoded performance and Shannon limit, Information channels, probability relations in a channel, *a priori* and *a posteriori* entropies, generalization of Shannon's first theorem, mutual information, conditional mutual information, noiseless and deterministic channels, cascaded channels.	**[8]**
5.	**Digital Communications through Fading Channels:** Characterization of multipath fading channels, channel correlation and power spectra, statistical models of fading channels, frequency-nonselective, slowly fading, fast fading models, diversity techniques, digital signaling over fading channel, coded waveforms for fading channels, multiple antenna systems.	**[8]**

Course Outcomes: At the end of the course student will be able understand different digital modulation techniques, fading effects and information theory

Text Books:

1. John G. Proakis, *Digital Communications*, McGraw-Hill International Edition (4th Edition)
2. Bernard Sklar, Pabitra Kumar Ray, *Digital Communications – Fundamentals and Applications*, Pearson (2nd Edition)

Reference Books:

1. B. P. Lathi, Zhi Ding, *Modern Digital and Analog Communication Systems*, Oxford (International 4th Edition)

EC 19.556	**Advanced Wireless Communication (Elective II)**	**3-1-0-4**
	Total Lectures:	**40**

Objectives:

- To give the student an understanding of issues related to Wireless Channel Characteristics and Fading Channel Capacity and Diversity Techniques.
- To give the student an understanding of issues related to Modulation, Detection and Multiple access for wireless communication.

Pre-requisite: **Digital Communication**

Unit No.	**Course Contents**	**Lecture Hours**
1.	**Introduction:** Recent wireless systems and applications, cellular system concept and design fundamentals, dynamic resource allocation, frequency re-use concepts in time, frequency and code-division systems, improving coverage and capacity in cellular system-cell-splitting, microcell &picocell zone concept.	**[8]**
2.	**Wireless Channel Characteristics:** Concept of wireless channels- time varying channel impulse function. Basic propagation mechanisms- path loss and shadowing, outdoor and indoor propagation model- Okumura, Hata models, partition loss, log-distance loss, large-scale and small-scale propagation, multipath fading, outage probability, correlation, power-spectral density, average fade duration, channel coherency-coherence time and coherence bandwidth, Doppler shift.	**[8]**
3.	**Fading Channel Capacity And Diversity Techniques:** Capacity of AWGN and fading channels, MIMO-channel capacity, error probability over fading channels, diversity techniques to remove fading effects- space, time, frequency, polarization and transmit diversity techniques.	**[8]**
4.	**Channel coding for wireless communication:** coding as a means of time diversity, multiple- antennas coding, Alamouti codes, space- time block codes, design principle, coded modulation in MIMO frequency-selective channels, OFDM-MIMO system.	**[8]**
5.	**Modulation, Detection and Multiple access for wireless communication:** signal-space analysis, PSK, FSK, MSK, QAM modulation and signal constellation , multi-dimensional signals, orthogonal expansion of signals, spread spectrum modulation techniques-DS-SS & FH-SS in AWGN channels, multiple access techniques- FDMA, TDMA, spread – spectra multiple access, CDMA, space- division multiple access.	**[8]**

Course Outcomes:

At the end of the course student will be able

Understand different digital Wireless Channel Characteristics, Fading Channel Capacity And Diversity Techniques, Channel coding for wireless communication, Detection and Multiple access for wireless communication.

Text Books:

1. Andrea Goldsmith, *Wireless Communications*, Cambridge University Press, 2007.
2. Theodore S Rappaport, *Wireless Communication*, Pearson Education, Asia, New Delhi, 2002.

EC 19.557	RF and Microwave Engineering (Elective I)	3-1-0-4
	Total Lectures :	**40**

Objective 1. To Understand the basics of RF passive components and circuits.
2. To Analyze and evaluate the RF circuits using various RF circuit tools.

Pre-requisite Basic understanding of Electromagnetic field theory and Low frequency Electronics

Unit No.	Course Contents	
1.	**Two Port Network Theory:** Review of Low frequency parameters: Impedance, Admittance, ABCD parameters, High Frequency parameters, Formulation of S parameters, Properties of S parameters, Reciprocal and lossless Network, Transmission matrix, RF behavior of Resistors, Capacitors and Inductors.	**[8]**
2.	**Passive Microwave Devices:** Terminations, Attenuators, Phase shifters, Directional couplers, Hybrid Junctions, Power dividers, Circulator, Isolator, Impedance matching devices: Tuning screw, Stub and quarter wave transformers.	**[8]**
3.	**Microwave Generation:** Review of conventional vacuum Triodes, Tetrodes and Pentodes, High frequency effects in vacuum Tubes, Gunn diode oscillator, Varactor diode. Theory and application of Two cavity Klystron Amplifier, Reflex Klystron oscillator, Traveling wave tube amplifier, Magnetron oscillator using Cylindrical, Linear, Coaxial Voltage tunable Magnetrons, Backward wave Crossed field amplifier and oscillator.	**[10]**
4.	**Filters:** Analysis of periodic structures, filter design by insertion loss method, maximally flat and Chebyshev designs.	**[6]**
5.	**Microwave Measurements:** Measuring Instruments : Principle of operation and application of VSWR meter, Power meter, Spectrum analyzer, Network analyzer, Measurement of Impedance, Frequency, Power, VSWR, Q-factor, Dielectric constant, Scattering coefficients, Attenuation, S-parameters.	**[8]**

Outcome Student will be able to understand the fundamentals of RF and Microwave Engineering. They are also able to design and analyze the RF passive circuit using various RF circuit tools.

Text Books:

1. Collin, R.E., "*Foundations for Microwave Engineering*", 2nd Ed., John Wiley & Sons, 2000.
2. Pozar, D.M., "*Microwave Engineering*", 3rd Ed., John Wiley & Sons, 2004.

Reference Books:

1. Edwards, T.C. and Steer M.B., "*Foundations for Interconnects and Microstrip Design*", 3rd Ed., John Wiley & Sons, 2001.
2. Ludwig, R. and Bretchko, P., "*RF Circuit Design*", 2nd Ed., Pearson Education, 2000.
3. Hunter, I., "*Theory and Design of Microwave Filters*", 3rd Ed., IEE Press., 2001.

EC 19.558	**Advanced Antenna & Wave Propagation**	**(Elective II)**	**3-1-0-4**
		Total Lectures :	**40**

Objective 1. To Understand the basics of advanced antenna systems.
2. To Analyze different wave propagations.

Pre-requisite Basic understanding of Electromagnetic field theory

Unit No.	**Course Contents**	
1.	**Introduction of Antenna & its Parameters:** Reciprocity theorem, Review of microwave antennas-Parabolic Reflector, Cassegrain feeds, Horn Antennas, Open-ended wave guides, lens antennas, Dielectric rod Antennas, Antennas for mobile communication.	**[9]**
2.	**Frequency-independent antennas:** Scattering and diffraction. Internal-equation methods, current distribution: Self and mutual impedances, arrays: design and synthesis.	**[7]**
3.	**Different Antennas and their Characterization:** Full wave analysis of Microstrip Antenna (MSA),Active Integrated MSA, Compact MSA with enhanced gain, Broadband Antenna(MSA), Dual frequency & Dual polarized MSA. Antenna Measurements, Standardization and characterization of antennas, Anechoic Chamber, Open-air test range.	**[10]**
4.	**Review of Modes of Propagation:** Surface wave, Ground wave, Sky wave, Space wave, Troposphere propagation.	**[6]**
5.	**Propagation**: Propagation over plane-Earth, Spherical Earth, Refraction, Anomalous Propagation, Diffraction, Modified refractive index- Its effects on wave propagation, Duct and other nonstandard propagation. Environmental noise, Radiation Hazards.	**[8]**

Outcome Student will be able to understand the fundamentals of advanced antennas. They are also able to analyze different wave propagations.

Text Books:

1. R.E Collin, *Antennas & Radio Wave Propagation*, Mc-Graw Hill
2. R. Garg, P. Bhartia , InduBhal& A. Ittipibom, Microstrip, *Antenna Design Handbook*, Artech house
3. Jordan &Balmain, *Electromagnetic Waves and Radiating Systems*, PHI

Reference Books:

1. M. Dolukhanov, *Propagation of Radio Waves*, Mir Publication
2. Girish Kumar & K.P.Roy, *Broad band Microstrip Antenna*, Artech House
3. Kin. Lu. Wong, *Compact and Broadband Microstrip Antenna*, John Wiley & Sons

EC 19.560 **Low Power VLSI Technology (Elective III)** **3-1-0-4**

Total Lectures: 40

Objectives:

- To expose the students to the low voltage device modeling, low voltage, low power VLSI CMOS circuit design.

Pre-requisite: **Elements of VLSI Design**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to low power VLSI technology**: Voltage scaling and power-delay tradeoff, Sources of Power Dissipation, Static Power Dissipation, Active Power Dissipation Designing for Low Power, Circuit Techniques For Leakage Power Reduction	**[8]**
2.	**Threshold Voltage Scaling:** Multi-threshold CMOS, Standard Adder Cells, CMOS Adders Architectures, Low Voltage Low Power Design Techniques, Current Mode Adders	**[8]**
3.	**Dynamic Logic Circuits:** Variable threshold CMOS. Estimation and optimization of switching activity. Various problems associated with dynamic logic circuits. Differential, BiCMOS and low voltage dynamic logic circuits	**[8]**
4.	**Switched Capacitance:** Reduction of switched capacitance. Adiabatic logic circuits. Basic background on testing, Unsuitable design techniques for safety-critical applications, Low power and safely operating circuits, Case study – A Low power subsystem design	**[8]**
5.	**Low-Power Memories:** Sources of power dissipation in SRAMs, Low power SRAM circuit techniques, Sources of power dissipation in DRAMs, Low power DRAM circuit techniques, DC-DC converters. Low-power architecture.	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Identify clearly the sources of power consumption in a given VLSI Circuit
2. Analyze and estimate dynamic and leakage power components in a DSM VLSI circuit
3. Choose different types of SRAMs/ DRAMs for Low power applications
4. Design low power arithmetic circuits and systems
5. Decide at which level of abstraction it is advantageous to implement low power techniques in a VLSI system design

Text Books:

1. Yeo K., Rofail S. S., and Goh W. *CMOS/BiCMOS ULSI Low Voltage, Low Power*. Pearsons Education Asia, 2003.
2. Weste N. H. *Principles of CMOS VLSI Design* Pearsons Education Asia, 2001.

Reference Books:

1. Geiger R. L. *VLSI Design Techniques for Analog and Digital Circuits*. McGraw-Hill, New York, 1990.

EC 19.562 **Mixed-Signal Systems (Elective III)** **3-1-0-4**

Total Lectures: 40

Objectives:

- To make the students to understand the design and performance measures concept of mixed signal circuit.

Pre-requisite: **Analog VLSI Design**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to Mixed-Signal Systems:** Concepts of Mixed-Signal Design and Performance Measures. Fundamentals of Data Converters. Nyquist Rate Converters and Over sampling Converters.	**[4]**
2.	**Design methodology** for mixed signal IC design using gm/Id concept.	**[8]**
3.	**Static and dynamic logic**, OTA-C circuits. Silicon compilers.	**[8]**
4.	**CMOS Digital Circuits Design:** Design of MOSFET Switches and Switched-Capacitor Circuits, Layout Considerations.	**[10]**
5.	**Filter design strategies.** Design of frequency and Q tunable continuous time filters, Image processing.	**[10]**

Course Outcomes:

At the end of the course student will be able

1. Appreciate the fundamentals of data converters and also optimized their performances.
2. Understand the design methodology for mixed signal IC design using gm/Id concept.
3. Analyze the design of current mirrors and operational amplifiers
4. Design the CMOS digital circuits and implement its layout.
5. Design the frequency and Q tunable time domain filters.

Text Books:

1. R. Jacob Baker, Harry W. Li, David E. Boyce, CMOS, Circuit Design, Layout, and Simulation, Wiley-IEEE Press, 1998
2. David A. Johns and Ken Martin, Analog Integrated Circuit Design, John Wiley and Sons, 1997.

Reference Books:

1. Christoph G. *Languages for System Specification - Selected Contributions on UML, SystemC*. System Verilog, Mixed-Signal Systems, and Property Specifications from FDL'03, Springer Publisher, 1996.
2. Nishath K. V. *Simulation Techniques and Solutions for Mixed-signal Coupling in Integrated Circuits*. Springer Publisher, 1994.

EC 19.564 **Advanced Digital Signal Processing (Elective III)** **3-1-0-4**

Total Lectures: 40

Objectives:

- To give the student an understanding of issues related to Filter Structure and Design and Finite Word-length Effects.
- To give the student an understanding of Multi-rate DSP and Wavelets

Pre-requisite: **Digital Signal Processing**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction:** Analog versus digital signal processing, Sampling and sampling theorem, Quantization, AD- and DA-conversion, AD- and DA hardware realizations, Digital signal processors.	**[4]**
2.	**Filter Structure and Design:** Short review of DFT and FFT, DCT, IIR and FIR, block diagram representation of filters, IIR and FIR structures, design aspects of digital filters, IIR filter design methods - Impulse Invariance method, Bilinear transformation, Butterworth and Chebyshev approximation, FIR filter design – Rectangular window, Kaiser window, comparison between IIR and FIR filters.	**[8]**
3.	**Finite Word-length Effects:** quantization of fixed-point and floating-point numbers, analysis of coefficient quantization effects, noise analysis in A/D conversion, analysis of round-off errors, dynamic range scaling, SNR in low-order IIR filters, low-sensitivity digital filters, limit cycles, limit-cycle free structures.	**[10]**
4.	**Multi-rate DSP:** Up-sampler and down-sampler, filters in sampling rate alternation systems; multi-stage design of decimator and interpolator, polyphase decomposition; arbitrary sampling rate converter, Lagrange interpolation, digital filter banks, uniform DFT filter banks, Nyquist filters, quadrature-mirror filter banks, perfect reconstruction two-channel FIR filter banks, multi-level filter banks.	**[10]**
5.	**Wavelets:** Wavelet Analysis, The Continuous Wavelet Transform, scaling, shifting scale and frequency, The Discrete Wavelet Transform, One Stage filtering, Approximation and Details, Filter bank analysis, Multilevel Decomposition, Number of levels, Wavelet reconstruction, Reconstruction filter- Reconstructing Approximations and details, Multilevel Reconstruction, Wavelet packet synthesis, Typical Applications.	**[8]**

Course Outcomes:

At the end of the course student will be able

Understand different filter Structure and Design and Finite Word-length Effects, Multi-rate DSP and Wavelets.

Text Books:

1. S. K. Mitra, *Digital Signal Processing*, McGraw Hill
2. Martin Vetterli & Jelena Kovacevic, *Wavelets and Subband Coding*, PHI
3. Oppenheim, Wilsky & Nawab, *Signals and Systems*, PHI

Reference Books:

1. Simon Haykin & Bary Van Veen, *Signals and Systems*, Wiley Eastern
2. Lathi, Bhagwandas Pannalal. *Signal processing and linear systems*. New York: Oxford University Press, 1998.

EC 19.566 **Wireless Sensor Networks (Elective III)** **3-1-0-4**

Total Lectures: 40

Objectives:

- To give the student an understanding of issues related to Wireless Sensor Networks.
- To give the student an understanding of Sensor Tasking and Control and Operating Systems for WSNs.

Pre-requisite: **Digital Communication**

Unit No.	Course Contents	Lecture Hours
1.	**Overview of Wireless Sensor Networks (WSNs):** Introduction, Constraints and Challenges, Advantages of Sensor Networks, Sensor Network Applications, Key definitions of Sensor Networks. Wireless Sensor Technological Background: Wireless Communication Technology, Hardware and Software Platforms.	**[8]**
2.	**Networking Sensors:** Medium Access Control – The S-MAC Protocol, The IEEE 802.15.4 Standard, Zigbee Standard; Geographic, Energy-Aware Routing – Unicast Geographic Routing, Routing on a Curve, Energy-Minimizing Broadcast, Energy-Aware Routing to a Region; Attribute-Based Routing – Directed Diffusion, Rumor Routing.	**[10]**
3.	**Infrastructure Establishment:** Topology Control, Clustering, Time Synchronization, Localization and Localization Services.	**[8]**
4.	**Sensor Tasking and Control:** Task-Driven Sensing, Roles of Sensor Nodes and Utilities, Information-Based Sensor Tasking, Joint Routing and Information Aggregation.	**[6]**
5.	**Operating Systems for WSNs:** Introduction, Operating System Design Issues, Examples of Operating Systems – TinyOS, Mate, MagnetOS, EYES OS, Node-Level Simulators – ns-2, TOSSIM.	**[8]**

Course Outcomes:

At the end of the course student will be able

Understand the Networking Sensors, Infrastructure Establishment, Sensor Tasking and Control.

Text Books:

1. Sohraby, Kazem, Daniel Minoli, and Taieb Znati. *Wireless sensor networks: technology, protocols, and applications*. John Wiley & Sons, 2007.
2. Zhao, Feng, Leonidas J. Guibas, and Leonidas Guibas. *Wireless sensor networks: an information processing approach*. Morgan Kaufmann, 2004.

Reference Books:

1. Zaman, Noor, ed. *Wireless Sensor Networks and Energy Efficiency: Protocols, Routing and Management: Protocols, Routing and Management*. IGI Global, 2012.
2. Raghavendra, Cauligi S., Krishna M. Sivalingam, and Taieb Znati, eds. Wireless sensor networks. Springer, 2006.

MA 19.509	Advanced Mathematics	3-1-0-4
	Total Lectures:	**40**

Objectives: To acquire fundamental knowledge computational numerical techniques and fundamentals of statistics and probability and apply in inter-disciplinary engineering disciplines.

Prerequisite: **Engineering Mathematics**

Unit No.	Course Contents	Lecture Hours
1.	**Computer based numerical methods:** Methods for numerical solution of algebraic and transcendental equations: Direct methods e.g. Bisection method, Regula-Falsi method; Iterative method e.g. Newton-Raphson method. Methods for the solution of simultaneous linear equations: Direct methods e.g. Gauss elimination method; Iterative method e.g. Gauss-Seidel method, Jacobi method.	**[8]**
2.	**Finite difference** table for equal and unequal intervals in the independent variable values. Newton's forward and backward interpolation formula; Newton's interpolation formula for divided differences. Numerical differentiation.	**[8]**
3.	**Numerical Integration methods:** Simpson's rules, Trapezoidal rule and Romberg's method. Numerical solution of ordinary differential equations: Euler method, Modified Euler method and Runge-Kutta methods. Numerical solution of elliptic and parabolic differential equations using finite difference approach.	**[8]**
4.	**Statistics and Probability:**Concept of random variable, total and conditional probability, Bayes' theorem, probability distributions and probability density functions, moments and moment generating functions. Some theoretical probability distributions such as binomial, Poisson, normal, uniform, exponential, rectangular, χ^2, t, F.	**[8]**
5.	**Sampling theory:** sampling distributions and sampling techniques. Estimation theory, Point and Interval estimation of mean and variance of data. Testing of hypotheses. Simple and Composite hypothesis. Correlation and Regression. Multiple and Partial correlation and regression. Concepts of stochastic processes with special reference to Monte Carlo methods.	**[8]**

Course Outcomes: After completion of the course, students would be able to apply the knowledge of computational numerical techniques with statistics and probability theory in inter-disciplinary engineering and solve curriculum problems.

Text Books:

1. Shastri S.S., *Introductory Method of Numerical Analysis, Prentice-Hall of India*, 3rd Ed., 2002.
2. Trivedi K.S., *Probability and Statistics with Reliability Queuing and Computer Science Application*, Prentice-Hall of India, 2002.

Reference Books:

1. Papoulis, Probability, *Random Variables and Stochastic Processes*, TMH, 2018.
2. Gupta & Kapoor, *Fundamental of Mathematical Statistics, SCS Publisher*, 2002.
3. Dass and Verma, *Higher Engineering Mathematics*, S.Chand, 2019.

* **Theory:** Assignments and regularity will be evaluated out of 10(ten) marks in a semester.

****Theory :** Two mid-term examinations of 20 (twenty) marks each.

******* The student may decide to take HS 501 in the even semester as an optional paper by consulting the course coordinator. If a student opts to take this paper, the appropriate credit shall be added to her account.

CS 19.521 **Big Data Analytics** **Total Lectures: 40**

Credit:3-1-0-4

Prerequisite: Data Mining, Database Management Systems

Objective(s):

- To learn Big Data characteristics
- To learn Hadoop architecture and functioning of Map-Reduce.
- To learn other Big data tools like HIVE, HIVEQL and HBASE.

1. **INTRODUCTION: D**istributed file system – Big Data and its importance, four Vs, drivers for Big data, Big data analytics, Big data applications, algorithms using map reduce, matrix-vector multiplication by Map Reduce. [8]

2. **Introduction to HADOOP:** Apache HADOOP & HADOOP ecosystem , moving data in and out of Hadoop , understanding inputs and outputs of MapReduce , data serialization [8]

3. **HADOOP Architecture:** HADOOP architecture, HADOOP storage: HDFS, common HADOOP shell commands , anatomy of file write and read., namenode, secondary namenode, and datanode, HADOOP MapReduce paradigm, map and reduce tasks, job, task trackers ,cluster setup, SSH & HADOOP configuration, HDFS administering, monitoring & maintenance. [8]

4. **HADOOP Ecosystem and YARN**: HADOOP ecosystem components, schedulers, fair and capacity, HADOOP 2.0 new features, namenode, high availability, HDFS federation, mrv2, YARN, running mrv1 in YARN. [8]

5. **HIVE and HIVEQL, HBASE**: HIVE architecture and installation, comparison with traditional database, hiveql, querying data, sorting and aggregating, map reduce scripts, joins & subqueries, Hbase concepts, advanced usage, schema design, advance indexing - Pig, Zookeeper - how it helps in monitoring a cluster, Hbase uses Zookeeper and how to build applications with Zookeeper. [8]

Outcome(s): The students will be able to carry out research in Big Data using the latest tools.

Text Books:

[2] Jy Liebowitz, Big Data and Business analytics, CRC press, 2013.

CS 19.511 **Ad hoc Sensor Networks** **Total Lectures: 40**

Prerequisite: Computer Networks **Credit: 3-1-0-4**

Objective(s):

- To learn the Ad hoc networks and related protocols
- To learn QoS parameters of Ad hoc network
- To learn the basic principles of sensor networks
- To understand the functionality of wireless sensor network and respective securities issues

1	**Ad hoc Networks:** Introduction and Definitions, Ad hoc Network Applications, Design Challenges. Routing in Mobile Ad hoc Networks: Introduction, Flooding, Proactive Routing, On Demand Routing, Proactive Versus on demand Debate, Location based Routing.	[7]
2	**Multicasting and Transport layer Protocols in Ad hoc Networks:** Introduction, Classifications of Protocols, Multicasting Protocols, Broadcasting. Protocol Comparisons, Overarching Issues. Transport layer Protocols in Ad hoc Networks: Introduction, TCP and Ad hoc Networks, Transport Layer for Ad hoc Networks: Overview, Modified TCP, TCP-aware Cross-layered Solutions. Ad hoc Transport Protocol.	[9]
3	**QoS Issue in Ad hoc Networks:** Introduction, Definition of QoS, Medium Access Layer, QoS Routing, Inter- Layer Design Approaches. Security in Mobile Ad hoc Networks: Vulnerabilities of Mobile Ad hoc Networks, Potential Attacks, Attack Prevention Techniques. Intrusion Detection Techniques.	[8]
4	**Overview of Wireless Sensor Networks (WSNs)**: Introduction, Constraints and Challenges, Advantages of Sensor Networks, Sensor Network Applications' Routing Protocols: Geographic, Energy-Aware Routing – Unicast Geographic Routing, Routing on a Curve, Energy-Minimizing Broadcast, Energy-Aware Routing to a Region; Attribute-Based Routing – Directed Diffusion, Rumor Routing.	[10]
5	**Security in WSNs:** Introduction: IEEE 802.11b Security Mechanisms, WEP Security Issues, WEP Improvements, Wireless Security Threats and Risks: Types of Security Threats, Physical Security of Wireless Devices, WLAN Attacks. Risk Mitigation and Countermeasures: Basic Countermeasures, AAA Infrastructure Solutions, Additional Enhancements.	[6]

Outcome(s): On successful completion of this course, students will be able to
Understand the basic working of sensor networks
Understand security aspects of WSN

Text Books:

[2] Zhao, Guibas, "Wireless Sensor Networks" , Elsevier, 2004.

CS 19.515 **Machine Learning** **Total Lectures: 40**

Credit:3-1-0-4

Prerequisite: Artificial Intelligence

Objective(s):

- To learn the Machine learning concepts.
- To learn different models of Machine learning.

1. **Foundations of Learning:** Components of learning, learning models, geometric models, probabilistic models, logic models, grouping and grading, learning versus design, supervised learning, unsupervised learning, reinforcement learning , theory of learning, feasibility of learning, error and noise, training versus testing, theory of generalization, generalization bound, approximation generalization trade off, bias and variance, learning curve. [8]

2. **Linear Models:** Linear classification, univariate linear regression, multivariate linear regression, regularized regression, logistic regression, perceptron, multilayer neural networks, learning neural networks structures, support vector machines, soft margin SVM, going beyond linearity, generalization and overfitting, regularization, validation. [8]

3. **Distance-based Models:** Nearest neighbour models, K-means clustering, hierarchical clustering, k-d trees, locality sensitive hashing, non-parametric regression, ensemble learning, bagging and random forests, boosting, meta learning. [8]

4. **Tree and Rule Models:** Decision trees, learning decision trees, ranking and probability estimation trees, regression trees, clustering trees, learning ordered rule lists, learning unordered rule lists, descriptive rule learning, association rule mining, first-order rule learning. [8]

5. **Reinforcement Learning:** Passive reinforcement learning, direct utility estimation, adaptive dynamic programming, temporal-difference learning, active reinforcement learning, exploration, learning an action utility function, generalization in reinforcement learning, policy search, applications in game playing, applications in robot control. . [8]

Outcome(s): Students will be able to

- Compare and apply Machine learning models for different problems.
- Carry out research in the area of Machine learning.

Text Books:

CS 19.523 **Operations Research** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite: Engineering Mathematics

Objective(s): To learn major Operations research techniques.

1. **Introduction to Operation Research:** Origins of or, nature, impact and phases of OR, solving the OR Model , operation research as tool for decision support system, productivity improvement, overview of OR research techniques. [6]

2. **Linear Programming Extensions:** Formulation of linear programming problem, linear programming models, assumptions of linear programming, graphical method of solving LP problem, Simplex method for solving LP problem, special cases in Simplex method application. Formulation of transportation problem, types of transportation problems, methods of initial feasible solution, methods of optimum solution, unbalanced transportation problem, assignment problem, transshipment model. [14]

3. **Decision, Game & Queueing Theory:** Formulation of two person, zero-sum games, solving simple games, mixed strategies, non-zero sum games, basic structure & components of decision, decision criteria, decision trees, basic characteristics of queueing system, terminologies & notation, Poisson process of queueing, M/M/1 system queueing model. queueing decision models. [8]

4. **Hybrid OR Models, Project Management PERT & CPM:** Assumption and comparison PERT & CPM, algorithms of PERT CPM techniques, fundamentals of network model, guidelines for network construction, critical path analysis, methods based on time estimates to find critical paths, concept of slack & oats in network analysis, Project Evaluation & Review Techniques (PERT) [6]

5. **Dynamic Programming:** Terminologies, multi decision process, Bellman's principles of optimality, characteristics of dynamic programming problems, dynamic programming algorithms, solving LPP using dynamic programming, recent applications of dynamic programming in OR. [6]

Outcome(s): Students will be able to apply Operation Research techniques relevant to their area of research.

Text Books:

[1] Hamdy A Taha, Operations Research: An Introduction, Pearson education India, 8th Edition, 2011.

[2] Frederick S. Hillier, Gerald J. Lieberman, Introduction to Operations Research, 8th edition McGraw-Hill, 2001.

Reference Books:

RM 19.101 **Research Methodology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. **Introduction**: Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches, Research Process, Validity and Reliability in Research. [6]
2. **Problem Formulation**: Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps. [10]
3. **Research Design**: Research Framework, Meaning &Significance of Research Designs, Features of a good Research Design, Types of Research Design. [10]
4. **Data Analysis and Simulation Tool**: Types of Data, Sources of Data, Methods of Collecting Data, Data Presentation Techniques. Methods of Data Analysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. **Report Writing**: Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:

1. R.Pannershelvam, "ResearchMethodology" PrenticeHall India, New Delhi, 2nd Edition, 2013.
2. C.R.Kothari,"ResearchMethodology: MethodsandTechniques",New Age International (p) Limited,Publishers New Delhi, 4ndedition,2018.

2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

CS 19.517 Ad-hoc Sensor Networks Laboratory Total Hours: 26

Credit: 0-0-2-1

Prerequisite: Computer Network

Objectives: The objective of this course is to:

- Become comfortable with network simulation
- Provide the foundation of to explore simulation of various types networks.

Contents:

- Basics of Network Simulation
- Simulating a Local Area Network
- Measuring Network Performance
- Simulation of a Satellite Network
- Simulating a Wi-Fi Network
- Simulating a Wi-MAX Network
- Simulating a Mobile Ad-hoc Network
- Simulating a Wireless Sensor Network
- Setting up a Bluetooth Network
- Setting up a Zig-Bee Network

Outcomes: Upon completion of this course, students will be:

- Able to simulate different types of networks and performance measures of network
- Able to setting up Bluetooth and Zig-Bee network

CS 19.525 **Machine Learning Lab** **Total Hours: 26**

Credit: 0-0-2-1

Prerequisite: Artificial Intelligence

Objective(s): To learn the implementation of different Machine learning models.

Contents:

Experiments based upon basic learning models, classification, generalization.

Experiments based upon linear models of learning.

Experiments based upon distance models.

Experiments based upon tree and rule models.

Experiments based upon reinforcement learning.

Outcome(s): Students will be able to apply and compare different Machine learning models.

CS 19.527 **Operations Research Lab** **Total Hours: 26**

Credit: 0-0-2-1

Prerequisite: Engineering Mathematics

Objective(s): To implement the Operations Research techniques.

Contents:

Experiments based upon linear programming.

Experiments on Simplex method.

Experiments based upon Assignment problem and Transportation model.

Experiments based upon Game theory and Queuing theory.

Experiments based upon CPM/PERT.

Experiments based upon dynamic programming.

Outcome(s): Students will be able to implement and analyze different OR techniques.

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**

2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

Pre-requisite:

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**

2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**

3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**

4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**

5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

CS 19.506 **Distributed Operating Systems** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite: Operating System

Objective(s):

- To learn the operating system and distributed computing environment
- To learn remote procedure call and Remote method invocation.
- To learn the principles of distributed shared memory
- To learn distributed file system..

1 **Introduction and distributed computing environment**: Definition, Evolution of distributed computing system, Distributed computing system models- Minicomputer model, workstation model, workstation –server model, processor –pool model, hybrid model. Advantages of distributed operating system. [8]

Design issues of distributed operating system- Transparency, Reliability, concurrency, scalability, heterogeneity, openness, security.

2 **Message Passing:** Introduction, issues in IPC by message passing, Synchronization, buffering –null buffer, single message buffer, unbounded capacity buffer, finite bound buffer. Multi datagram message, encoding and decoding of message data. Process addressing, failure handling, group communication. [6]

3 **Remote Procedure call and Remote Method Invocation:** RPC model, Transparency of RPC, Implementing RPC mechanism, Stub generation, RPC Messages, Parameter passing, semantics, call semantics. Communication protocols for RPC-request protocol, request/reply protocol, request/reply/acknowledge protocol, RPC heterogeneous environment, Light weight RPC. Remote Method Invocation(RMI) : Introduction, communication between distributed objects, design issues for RMI implementation of RMI , clock synchronization, logical clock- Lamport time stamps, deadlock, election algorithms- Bully algorithm, Ring algorithm , distributed transactions. [15]

4 **Distributed shared memory:** Introduction, message passing vs DSM, implementation approaches to DSM, design and implementation issues- Structure and synchronization model. Granularity, Structure of shared memory space, consistency model, replacement strategy, thrashing. [8]

5 **Distributed File System:** Design, implementation, trends in distributed file system. [7]

Outcome(s): On successful completion of this course, students will be able to

- Understand the primary functionalities of operating system.
- Understand Message passing efficiently in an operating system environment
- Develop new operating systems as well as work on existing ones to develop them further

Text Books:

[1] Pradeep K. Sinha, "Distributed Operating Systems: Concepts and Design", Prentice-Hall of India, 3rd Printing, October 2001 .
[2] Andrew S. Tanenbaum and Maarten van Steen, " Distributed Systems", PHI, second Printing, July 2003.

Reference Books:

[1] G. Coulorius, J. Dollimore and T. Kinderberg, "Distributed Systems: Concepts and Design", fourth edition, Addison Wesley, May 2005.

CS 19.508 **Soft Computing Paradigms** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite: Artificial Intelligence

Objective(s):

- To familiarize with soft computing concepts
- To introduce the idea of artificial neural networks, fuzzy logic and use of heuristics based on human experience
- To introduce the concept of genetic algorithm and its applications to soft computing using some applications

1. **Artificial Neural Networks:** Definition, benefits of Artificial Neural Networks, terminology, neuron models, activation function, network architectures, learning process, types of learning: Hebbian, competitive, error-correction, Boltzmann learning. [8]

2. **Types of Neural Networks:** Feed forward neural network: Single layer perceptron, limitations, multi layer perceptron, back propagation algorithm, practical considerations, radial basis function network. Recurrent networks: Hopfield network, NARX model, state space model, recurrent multi layer, perceptron, second order networks. Self-organizing map, and principal component analysis. [12]

3. **Fuzzy Logic and applications :** Basic concepts of fuzzy logic, crisp sets and fuzzy sets, operations and properties of crisp sets and fuzzy sets, crisp and fuzzy relations, fuzzy rules, fuzzification and defuzzification. Pattern recognition, control engineering, image processing, neuro fuzzy application. [10]

4. **Genetic Algorithms:** Basic concepts, working principles, genetic operators, genetic programming, parsing trees and mathematical foundation of genetic algorithm. . Other optimization methods: Swarm Intelligence, ant colony optimization. [6]

5. **Hybrid Systems:** Neuro genetic systems, fuzzy genetic systems and neuro fuzzy genetic systems, applications. [4]

Outcome(s): On successful completion the students will be able to:

- Identify and describe soft computing techniques and their roles in building intelligent machines
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems
- Apply genetic algorithms to combinatorial optimization problems
- Apply neural networks to pattern classification and regression problems
- Evaluate and compare solutions by various soft computing approaches for a given problem

Text Books:

[3] D.E. GoldBerg, "Genetic Algorithms in Search, Optimization and Machine Learning", Pearson Education, 2009.

[4] S. Rajsekaran, G. A. Vijayalaxmi Pai, "Neural Networks, Fuzzy Logic and Genetic Algorithms: Synthesis and Application", Prentice Hall, 2010

CS 19.510 **Digital Image Processing and Analysis** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite: Computer Programming, Computer Graphics

Objective(s):

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To study the image segmentation and representation techniques
- To study the image representation in form of features and descriptors

1. **Image Representation:** Sampling, Quantization, Image Basis Function, Image Types, Fourier Transform, Discrete Cosine Transform, Walsh- Hadamard Transform, Wavelet Transform, Principal Component Analysis [6]

2. **Image Enhancement and Restoration:** Contrast Stretching, Histogram Specification, Histogram Equalization, Enhancement Using Arithmetic/Logic Operations, Smoothing Sharpening, Low-Pass Filters, High-Pass Filters, Bandpass Filters, Homomorphic Filtering, Restoration Process Model, Noise Models, Inverse Filtering , Minimum Mean-Square Error Restoration. [8]

3. **Image Morphology**: Introduction, Logic Operations Involving Binary Images, Dilation and Erosion, Opening And Closing, Boundary Extraction, Region Filling, Extraction of Connected Components, Convex Hull, Thinning, Thickening. [5]

4. **Image Segmentation:** Region Extraction, Pixel-Based Approach, Thresholding, Edge And Line Detection, Pattern Fitting Approach, Hough Transform, Radon Transform, Edge Linking And Edge Following, Edge, Corner Detection**.** [6]

5. **Pattern Recognition , Compression and Feature Extraction** [15]
Recognition: Deterministic Methods, Clustering, Neural Network, Template Matching, Statistical Classification, Syntactic Recognition, Tree Search, Graph Matching.Image Compression: Information Content of an Image, Lossless and Lossy Compression Algorithms, Compression Standards. Feature Extraction: Representation, Topological Attributes, Geometric Attributes, spatial Moments, Texture, Boundary Based Description, Region Based Description, Intensity Based and Relational Description.

Outcome(s): On successful completion of this course, students will be able to

- Discuss digital image fundamentals.
- Apply image enhancement and restoration techniques.
- Use image compression, segmentation and features extraction Techniques.

Text Books:

[1] Gonzaloz R. C. and Woods R.E., “Digital Image Processing”, Prentice Hall 2002.

CS 19.512 **Advances in Database Management Systems** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite: Database Management System

Objective(s): The objectives of this Course are :

- To learn object relational databases
- To learn query processing and optimization
- To learn database recovery and database security
- To learn distributed databases

1. **Object and Object-Relational Databases:** Introduction, Object relational features, Object database extensions to SQL, ODMG object model and the object definition language (ODL) [8]

2. **Query Processing and Optimization:** Translating SQL queries into relational algebra. Algorithms for external sorting, select, join, project and set operations. Implementing aggregate operations and outer joins. Combining operations using pipelining, heuristic query optimization, selectivity and cost estimates in query optimization, semantic query optimization. [8]

3. **Database Recovery:** Recovery concepts, no-undo/redo recovery based on deferred update, recovery techniques based on immediate update, shadow paging, ARIES algorithm, recovery in multi database systems, database backup and recovery from catastrophic failures. [8]

4. **Database Security:** Security issues, granting and revoking privileges, role based access control for multilevel security, SQL injection, statistical database security, flow control, encryption and public key infrastructures, privacy issues and preservation, challenges of database security**.** [8]

5. **Distributed Databases:** Distributed database architecture, fragmentation, and query processing and optimization management in distributed databases. Database concepts, types, distributed distribution and allocation techniques, in distributed databases, transaction [8]

Outcome(s): After completion of the course, students will be able to:

- Understand object and object relational databases.
- Understand Structured Query Language (SQL) with query optimization.
- Understand issues in database recovery and database security

Text Books:

[1] Elmasri, Navathe, "Fundamentals of Database systems", Addison Wesley, sixth ed, 2010.

[2] Raghu Ramakrishnan, Gehrke, "Database Management systems", McGraw Hill, third ed, 2009.

Reference Books:

CS 19.514 Distributed Operating Systems Laboratory Total Hours: 26

Credit: 0-0-2-1

Prerequisite: Operating System Laboratory

Objectives: The objective of this course is to:

- To develop skills to design and analyze Inter process communication in shared memory
- To Strengthen the ability to implement Operating system in distributed environment

Contents:

- Study of UNIX commands with all their important options
- Study system calls related to process & process control
- Study system calls related to semaphore
- Inter process communication using shared memory
- Incrementing a counter in shared memory
- Implement concurrent echo client-server application
- Implement a distributed chat server using TCP sockets in java.
- Simulation of Distributed mutual exclusion in java.
- Write a program to implement RPC in "C"
- Implement „Java RMI" mechanism for accessing methods of remote systems.
- Write a program to simulate the functionality of Lamport's Logical clock in C.
- Write a program to Implement Vector clock in C.

Objectives:

Upon completion of this course, students will be able to :

- Understand process and process control and semaphore
- Understand working of client server application
- Understand working of TCP sockets in Java

CS 19.516 Digital Image Processing and Analysis Laboratory Total Hours: 26

Credit: 0-0-2-1

Prerequisite: Computer Programming Laboratory

Objectives:

The objective of this course is to:

- To learn MATLAB environment for image processing
- To learn various types of functions Image restoration, Region extraction and features extraction.

Contents:

- Overview of MATLAB environment, Programming, Data types, Structure, Arithmetic Logical operations, Cell arrays, Script files, Functions.
- Implement following image processing concepts using MATLAB.
- Fourier transform, discrete cosine transform, Walsh- Hadamard transforms and principal component analysis.
- Contrast Stretching, Histogram Equalization, and Enhancement using Arithmetic/Logic Operations.
- Smoothing, Mean filter, Ordered Statistic Filter, Sharpening, Low-pass, High-pass filters, Bandpass and Homomorphic Filtering.
- Image Restoration using Inverse filtering, Minimum Mean-square Error Restoration.
- Logic Operations involving Binary Images, Dilation and Erosion, Opening and Closing, Boundary Extraction, Region Filing, Extraction of Connected Components, Convex Hull, Thinning, Thickening.
- Region Extraction, Thresholding, Edge and Line Detection using gradient operators, Hough transform, Radon transform.
- Object representation, topological attributes, Extraction of object by Boundary based descriptors.
- Feature Extraction of object by Region based descriptors.
- Object recognition problem with preprocessing, segmentation, feature extraction, and classification steps.

Outcomes:

On successful completion of this course, students will be able to

- Implement digital image processing fundamentals.
- Apply image enhancement and restoration techniques.

Use image compression, segmentation and features extraction Techniques

CS 19.518 Advanced Database Management Systems Laboratory

Total Hours:26

Credit: 0-0-2-1

Prerequisite: DBMS laboratory

Objectives:

The objectives of this course are:

- To learn object relational databases
- To develop skill to design and analyze cost functions and query optimization
- To implement horizontal and vertical fragmentation

Contents:

- Lab Exercises based on Developing objects, member functions and implementing Object oriented features in SQL
- Lab Exercises based on Developing cost functions and optimizing SQL Queries
- Lab Exercises based on developing strategies for physical database design and tuning in relational systems
- Lab exercises based implementing horizontal fragmentation, vertical fragmentation, total replication and partial replication in distributed database systems.

Outcomes:

After completion of the course, students will be able to:

- Understand total replication and partial replication in distributed database
- Understand Structured Query Language (SQL) with query optimization.

CS 19.563 **Advances in Distributed Computing** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Computer network, Computer Architecture, Distributed System

Objective(s): The objectives of this Course are :

- To learn distributed systems and distributed computing
- To learn synchronous and asynchronous system
- To learn fault tolerant and non-fault tolerant systems.
- To learn synchronous shared memory systems.

1. **Introduction:** Distributed Systems, Cluster Computing, Supercomputing, Cloud Computing. [6]
2. **Synchronous networks and Fault-tolerant Systems:** Leader election in synchronous ring networks. Leader election in rings. Basic computational tasks in general synchronous networks: leader election. Fault-tolerant Systems: Consensus, Link failures: the two generals problem. Process failures (stopping, Byzantine). Algorithms for agreement with stopping and Byzantine failures. Exponential information gathering. [12]
3. **Asynchronous distributed computing and Non-fault-tolerant Systems:** Formal modeling of asynchronous systems using interacting state machines (I/O automata). Proving correctness of distributed algorithms. Non-fault-tolerant Systems: Algorithms for asynchronous networks. Leader election. [10]
4. **Time, clocks, and the ordering of events:** State-machine simulation. Vector timestamps. Stable property detection. Distributed termination. Global snapshots. Deadlock detection, Synchronizers: Synchronizer applications. Synchronous vs. Asynchronous distributed systems. [12]
5. **Asynchronous shared-memory systems and Locking:** The mutual exclusion problem. Mutual exclusion algorithms. Bounds on shared memory for mutual exclusion. Resource allocation. The Dining Philosophers problem. Locking: Locking algorithms, optimistic algorithms, lock-free algorithms, lazy algorithms, Load scheduling and balancing techniques. [12]

Outcome(s): On successful completion the students will be able to:

- Understand distributed algorithms for synchronous and asynchronous distributed computing
- Understand various synchronizer applications with synchronous and asynchronous systems..

Text Books:

[1] Lynch, Nancy, “Distributed Algorithms”, Burlington, MA: Morgan Kaufmann, 1996. ISBN: 9781558603486.

[2] George Coulouris, Jean Dollimore, Tim Kindberg, “Distributed Systems, Concept and Design”, 3rd Edition, Pearson Education, 2005.

Reference Books:

[2] Randy Chow, Theodore Johnson, “Distributed Operating Systems and Algorithm Analysis”, Pearson, 2009.

[3] Mukesh Singhal, Niranjan G. Shivaratri, Niranjan Shivaratri, “Advanced Concepts in Operating Systems”, TMH, 1994.

[4] Sunita Mahajan, Seema Shah, “Distributed Computing”, Oxford University Press,2010

CS 19.565 **Advanced Compiler Construction** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Compiler design, Theory of automata

Objective(s):

- To learn the major conceptual areas of language translation and compiler design.
- To learn the knowledge in code optimization and register allocation techniques
- To extend the knowledge of different parsers.
- To provide practical programming skills necessary for construction of a compiler.

1. **Advanced Issues in Elementary topics:** Compiler, phases and passes, finite state machines, regular expressions and their applications to lexical analysis, implementation of lexical analyzer using FLEX, CFG, bottom-up and top-down parsers, implementation of parsers using YACC. [10]

2. **Symbol Table Structure and Intermediate Representations:** Storage classes, visibility and lifetime. Symbol attributes and symbol table entries, local symbol table management, and global symbol table structure, storage binding and symbolic registers. Intermediate Representations: Issues in designing intermediate languages, High level, medium level, low level and multi-level intermediate languages. Representing all intermediate languages in informal compiler algorithm notation (ICAN). [14]

3. **Code Optimization:** Introduction, early optimization, redundancy elimination. Loop optimization: Induction variable optimizations, bounds checking elimination. Procedure optimization: Tail-call optimization and Tail-recursion optimization, procedure integration, In-line expansion, leaf routine optimization and shrink wrapping. [8]

4. **Register Allocation**: Register allocation and assignment, local methods, graph coloring, priority based graph coloring. Code Scheduling: Instruction Scheduling, Speculative loads and boosting, speculative scheduling, trace scheduling, percolation scheduling. [12]

5. **Inter procedural Analysis and Optimization** Call graph, inter procedural data flow analysis, constant propagation, alias analysis, optimizations and register allocation. [8]

Outcome(s): On successful completion of this course, the students will be able to

- Use lexical analyzer and parser generator tools.
- Generate intermediate code.
- Be familiar with register allocation. and compiler code optimization

Text Books:

[1] Steven S. Muchnik, “Advanced Compiler Design Implementation”, Morgan Kauffman publishers, 2005.

[2] Alfred Aho, Monica Lam, Ravi Sethi, Jeffrey Ullman, “Compilers: Principles, Techniques, and Tools”, Second edition, Addison-Wesley, 2006.

Reference Books:

[2] Fisher, Faraboschi, Young, “Embedded Computing - A VLIW Approach to Architecture, Compilers, and Tools”, Morgan Kaufmann, 2005.

CS 19.567 **Bioinformatics** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Computer Programming, DBMS

Objective(s):

- To learn the basics of bioinformatics
- To learn the bioinformatics databases and web techniques
- To extend the knowledge bioinformatics and distributed computing

1. **Introduction to Bioinformatics:** Definition and History of Bioinformatics, Internet and Bioinformatics, Introduction to Data Mining, Applications of Data Mining to Bioinformatics Problems and Applications of Bioinformatics. [6]

2. **Bioinformatics Databases:** Introduction, Nucleotide sequence database - Protein sequence databases, Sequence motif databases, Protein structure databases, other relevant databases. Data storage and retrieval and Interoperability: Flat files, relational, object oriented databases and controlled vocabularies. File Format (Genbank, DDBJ, FASTA, PDB, SwissProt).Introduction to Metadata and search; Indices, Boolean, Fuzzy, Neighboring search. The challenges of data exchange and integration. Ontologies, interchange languages and standardization efforts. General Introduction to XML, UMLS, CORBA, PYTHON. [19]

3. **Sequence Alignments and Visualization:** Introduction to Sequences, alignments and Dynamic Programming; Local alignment and Global alignment (algorithm and example),Pairwise alignment (BLAST and FASTA Algorithm) and multiple sequence alignment (Clustal W algorithm).Methods for presenting large quantities of biological data: sequence viewers (Artemis, SeqVISTA), 3D structure viewers (Rasmol, SPDBv, Chime, Cn3D, PyMol), Anatomical visualization. [16]

4. **Bioinformatics and Web Techniques:** Clustal V, Clustal W 1.7, RasMol, Oligo, Molscript, Tree view, Alscript, Genetic Analysis Software, Phylip. Semantic Web Techniques: Bridging databases, browsing space of information, life sciences identifiers, RDF data representation. [10]

5. **Bioinformatics and Distributed Computing:** Java Distributed computing platform, DPRml, DSEARCH. [5]

Outcome(s): On successful completion of the course, the students will be able to

- Use different bioinformatics databases and web techniques
- Understand sequence alignment algorithms

Text Books:

[1] Dan E. Krane ,"Fundamental Concepts of Bioinformatics", third edition, Pearson Education, 2009.

[2] Claverie, J.M. and Notredame C. ," Bioinformatics for Dummies", Wiley Editor , January 2003.

[1] Shalini Suri, "Bioinformatics", APH Publishing Corporation, 2006.

CS 19.569 **Advanced Computer Graphics** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Computer Graphics

Objective(s):

- To introduce the students with the principles of animation
- The objective of the course is to equip students with fundamental knowledge and technical competence in the field of computer graphics.
- Provide an understanding of rendering and 3D modeling.
- To learn three dimensional object representation.

1. **3D Transformation and Viewing**: 3D transformation, composite transformation, viewing pipeline, parallel and perspective projection, visible surface detection: classification of visible surface detection algorithms, back face detection, depth buffer method, A-buffer method, scan-line method, depth sorting method. [7]

2. **Animation:** Introduction of computer Animation, Principles of Animation, Keyframing, Kino-dynamics Planning- motion blending, skinning-skeleton animation, rigid skinning ,linear skinning, dual skinning, physics modeling-Physics-based animation, rigid body systems, articulated rigid bodies, forward and inverse dynamics. [7]

3. **Rendering:** Basic concepts of graphics models-illumination& reflection models Shading-Scanning polygons, Gourad and Phong shading , texture mapping- bump & environmental maps , mipmaps , shading languages-vertex shedders and fragment shedders. [12]

4. **Modeling:** Representation, Using homogeneous Coordinate systems, Modeling process, terrain-representation, methods , fault formation & weather, plants modeling , animals modeling. [12]

5. **Surface Representation:** Three dimensional object representation –polygon representations, implicit representation , Beziers ,B-splines-basis function, knot insertion, conversion , rational B-splines (NURBS)-properties and examples , evaluators, subdivision surfaces-coarse mesh and subdivision rule, types of subdivisions , Voxels . [14]

Outcome(s): On successful completion of this course, students will be able to.

- Perform 3D transformation and viewing techniques.
- Understand various styles of animation.
- Acquire knowledge about illumination models, color models and surface rendering.

Text Books:

[3] James D.Foley, Andries van Dam, Steven K. Feiner, John F. Hughes , “Computer Graphics , Principles & Practice”, 3rd Edition, Pearson Prentice Hall, 2013

CS 19.571 **Advances in Algorithm Design** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Data Structures, Design and Analysis of Algorithm

Objective(s):

- To learn the algorithm analysis techniques.
- To become familiar with the different algorithm design techniques.
- To understand the limitations of the algorithms complexity

1. **Pattern matching algorithms:** Finite automata and regular expression, recognition of regular expression patterns, recognition of substrings, Two – way deterministic pushdown automata, position trees and substring identifiers. [11]

2. **Computability theory:** Turing machines, variants of Turing machines, Hilbert‟s problem, decidable languages, the halting problem, Un-decidable problems from language theory, mapping reducibility, the recursion theorem, decidability of logical theories, Turing reducibility, definition of information. [11]

3. **Fast Fourier Transform and Polynomials:** Representation of polynomials, the DFT and FFT algorithms, efficient FFT implementation, the FFT using bit operations, products of polynomials, the Schonhage – Strassen integer multiplication algorithm. [11]

4. **Randomized Algorithm and Parallel Algorithm:** Monte-Carlo algorithm, Las-Vegas algorithm, Game tree evaluation, De-randomization. Models for parallel computation basic techniques; Parallel matrix algorithms: matrix-vector multiplication, matrix multiplication, triangular system solution, sorting networks-parallel merging networks, zero –one principle. [8]

5. **Complexity theory:** Time complexity, the classes P,NP,NP complete and NP hard, Hierarchy theorems, Relativization, Circuit Complexity, approximation algorithms, probabilistic algorithms, circuit complexity, alteration, interactive proof systems, parallel computation, cryptography. [11]

Outcome(s): On the successful completion of the course, the student will be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.

CS 19.562 **Mobile Cloud Computing** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Computer Networks, Cloud Computing

Objective(s):

- To learn the cloud services and requirements of cloud
- To become familiar with different cloud models and solutions
- To learn mobile computing architectures

1. **Introduction:** Cloud, Business and IT Perspective, Virtualization, Cloud Services Requirements, Cloud And Dynamic Infrastructure, Cloud Computing Characteristics, Cloud Adoption. [8]
2. **Cloud at a Service:** Internet Software Evolution, Web Services Deliver from the Cloud, Communication-as-a-Service, Infrastructure-as-a-Service, Monitoring-as-a-Service, Platform-as-a-Service, Software-as-a-Service, Building Cloud Network. [8]
3. **Cloud Models and Solutions:** Cloud Models, Cloud Characteristics, Measured Service, Security in a Public Cloud, Public Verses Private Clouds, Cloud Infrastructure Self Service. Cloud Solutions: Cloud Ecosystem, Cloud Business Process Management, Cloud Service Management, Cloud Stack, Computing On Demand, Cloud Sourcing. [16]
4. **Cloud Offerings and Virtualization technology:** Virtual Desktop Infrastructure, Storage Cloud. Cloud Virtualization technology: Virtualization, Virtualization Benefits, Server Virtualization, Hypervisor Management Software, Virtualized Data Center. [12]
5. **Mobile Computing:** Motivation, Applications, Architectures, Platforms For Mobile Cloud Computing, Windows Phone, Android, IPhone, Popular Mobile Apps, 3G, 4G, Bluetooth, Wi-Fi. [8]

Outcomes(s): On the successful completion of the course, the student will be able to:

- To understand the cloud infrastructure
- To understand the different services provided by cloud.
- To understand mobile computing

CS 19.564 **Machine Intelligence and Robotics** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Artificial Intelligence

Objective(s):

- To learn artificial intelligence and knowledge representation
- To become familiar with knowledge organization and control strategies
- To learn robotics and robot programming

1. **Introduction:** Importance of AI, Knowledge Based System, Knowledge organization & manipulation, Conceptual Introduction to LISP and other AI programming Languages. [10]

2. **Knowledge Representation:** Syntax, Semantics, Inference Rules, Non-deductive Inference methods, and representations using rules. Forward chaining and backward chaining. Fuzzy Logic & Natural languages computations. Probabilistic Reasoning. Object Oriented Representation. [10]

3. **Knowledge Organization & Manipulation:** Search & control strategies, matching techniques, knowledge organization & management, Genetic Algorithms based search techniques. [10]

4. **Robotics:** Types of Robots, spatial transformation and kinematics of open chain linkages. Mobile robots, Actuators, sensors, programming and control. Applications - motion planning, grasping and industrial automation. [12]

5. **Robot Programming:** Languages, characteristics of Languages, Position Specification, Motion Specification. Robot Program synthesis, Programming solution using VAL Robot programming Language, Artificial Intelligence, search strategies, Heuristic search, Rule based problem solving, Knowledge Representation, Robot programming using LEGO robots. [10]

Outcomes(s): On the successful completion of the course, the student will be able to:

- To understand robot programming using LEGO NXT EV3
- To understand VAL robot programming language
- • To understand knowledge representation and AI Programming Languages.

Text Books:

CS 19.566 **Natural Language Processing** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Artificial Intelligence

Objective(s):

- To learn language modeling, syntactic analysis and parsing
- To learn semantic analysis and parsing
- To learn robotics and robot programming

1. **Language Modelling and Syntactic Analysis :** Definition, Origin of NLP, Language and Knowledge, The challenges of NLP, Language and Grammar, NLP application, Successful early NLP systems, Information retrieval. Various grammar-based language models, statistical language models. [16]

   Word Level Analysis and Syntactic Analysis: Introduction, Regular Expressions, Finite State Automata, Morphological Parsing, Spelling Error Detection and correction, words and words classes, Part-of-speech tagging . Context Free grammar, Constituency, Parsing, Probability Parsing.

2. **Semantic Analysis and Discourse Processing:** Introduction, Meaning Representation, Lexical Semantics, Ambiguity, word sense Disambiguation. Cohesion, Reference Resolution, Discourse Coherence and Structure. [8]

3. **Natural Language generation and Machine Translation:** Introduction, Architecture of NLG systems, Generation task and representation, Problems in Machine Translations, Machine Translation approaches, Direct Machine Translation, Rule based machine translation, corpus-based MT, Semantic or knowledge based MT systems. [10]

4. **Application and Lexical Resources:** Speech Recognition and Synthesis, Information Retrieval Systems, Information Extraction, Automatic Text Summarization, Question-Answering; Resources**:** WordNet, FrameNet, Stemmers, Part-of Speech Tagger. [10]

5. **NLP with Python:** Introduction, Processing Raw Text, Writing Structured Program, Categorizing and Tagging words, learning to Classify Text, Analyzing Sentence Structure. [8]

Outcome(s): On the successful completion of the course, the student will be able to:

- To understand Implementation of Natural language processing using Python
- To understand VAL robot programming language
- To understand knowledge representation and AI Programming Languages.

Text Books:

[1] Steven Bird, Ewan Klein and Edward Loper, "Natural Language Processing with Python", O" Reilly Media , 2009.

Reference Books:

CS 19.568 **Advanced Software Engineering** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Software Engineering

Objective(s):

- To understand the software engineering approaches, software development process models, project planning, software size estimation, software effort and cost estimation and risk management.
- To acquire knowledge on implementation issues in software design..
- To learn coding style guidelines and standard and software testing, different type of testing strategies and their application in real time system.
- To study object oriented system analysis, design and testing.

1. **Introduction:** Software life cycle models, Waterfall, Prototype, Evolutionary and Spiral Models, Overview of Quality Standards like ISO 9001, SEI – CMM, Software Requirements analysis & specifications, Software Project Management. [10]
2. **Fundamental issues in software design:** Goodness of design, cohesions, coupling, Classification of Cohesiveness & Coupling, Function-oriented design: structured analysis and design. [8]
3. **Software Testing:** Testing process, Design of test cases, functional testing: Boundary value analysis, Equivalence class testing, Decision table testing, Cause effect graphing, Structural testing, Path Testing, Data flow and mutation testing, Unit Testing, Integration and System Testing, Debugging, Alpha & Beta Testing, Regression Testing, Testing Tools & Standards. [8]
4. **Object Oriented System Analysis. Design and Testing:** Object oriented and object basics, object oriented system development cycle, process framework of OOSAD, unified approach UML, UML Diagrams: class diagram, use-case diagram, behavior diagram, OOAP, OOD and OODBMS. [16]

   Object-Oriented Testing: Testing Object Oriented Systems overview. Broadening the View of Testing, Testing OOA and OOD Models, Object-Oriented Testing Strategies, Test Case Design for OO Software , Testing Methods Applicable at the Class Level.
5. **Advanced Topics in Software Engineering:** Overview of Formal Methods, Cleanroom Software Engineering, Component-Based Software Engineering, Client-Server Software Engineering, Web Engineering, Reengineering, Computer-Aided Software Engineering, and the Road Ahead. [10]

Outcome(s): On successful completion of this course, students will be able to

- Demonstrate knowledge of the distinction between critical and non-critical systems and ability to manage a project including planning, scheduling and risk assessment/management.
- Demonstrate proficiency of different life cycle models.
- Identify specific components of a software design that can be targeted for reuse.
- Demonstrate proficiency in software development cost estimation, software testing plan and advanced topics of software engineering.

CS 19.570 **Mathematical Modeling** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Engineering Mathematics

Objective(s):

- To acquire knowledge about basics of various mathematical models
- To learn methods of model fitting
- To study modeling with differential equations

1. **Introduction :** Basics of modeling, mathematical models, Modeling change with difference equations, Approximate change with difference equations, solutions to dynamical systems, systems of difference equations. Modeling using proportionality, modeling using geometric similarity. [12]

2. **Model fitting and Experimental modeling** : Fitting models to data graphically, analytic method of model fitting, applying the least square criterion, choosing a best model, one term models , high order polynomial models, smoothing of low order polynomial models, cubic spline models. [10]

3. **Simulation modeling:** Introduction, simulating deterministic behavior: area under a curve, generating random numbers, simulates probabilistic behavior, queuing models. Introduction to some simulators. [10]

4. **Discrete modeling:** Probability modeling with discrete systems, linear regression, an overview of discrete optimization modeling, linear programming: geometric and algebraic solutions, simplex method. [10]

5. **Modeling with differential equations:** Introduction, population growth, graphical solutions of autonomous differential equations, numerical approximation methods, graphical solutions of autonomous systems of First order differential equations. [10]

Outcome(s): On successful completion of this course, students will be able to

- Understand simulation modeling and discrete optimization modeling
- Understand queueing models and low order polynomial models

Master of Computer Applications (M.C.A.) (Lateral Entry)
Two -Year Programme
Academic Curriculum (2019 – 21 onwards)

List of Program Electives		
Program Elective I		
S. No.	Course Code	Course Title
1.	CA 19.630	Advanced DBMS
2.	CA 19.631	Real Time Systems
3.	CA 19.632	Software Project Management
4.	ET 19.465	Agile Software Development (Infosys)
Program Elective II		
1.	CA 19.642	Digital Image Processing
2.	CA 19.644	Artificial Intelligence
3.	CA19. 646	Parallel Processing
4.	ET 19.471	Cloud computing (Infosys)

Program Elective III		
1.	CA 19.741	Advanced Data Structures
2.	CA 19.745	Compiler Design
3.	CA 19.747	Neural Network
4.	ET 19.362	Mobile Apps Development (Infosys)

CA 19.507 **Information Systems** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Nil

Objective(s):
1. To Identify and utilize information and computer system components and peripherals;
2. To Demonstrate knowledge of basic system software and application software;
3. To identify and apply the steps involved in analyzing Information Technology (IT) solutions;
4. To demonstrate ability to use networks, world-wide web, and other communication tools in a variety of settings;

1. **Information:**Concepts,Information: a quality product, Classification of information, Methods of data and Information collection, Value of information, General model of a human as a information processor, Summary of information concepts and their implications, organization and information, MIS and Information concepts. [8]
2. **Information Systems, Organizations, management and Strategy:** Organisations and Information Systems, how information system impact organizations and business firms, Type of Information System, Managerial Challenges of Information Technology. Components of information System, Information System Activities. [8]
3. **Information Systems for Functional Areas:** Information for financial, Marketing, Inventory control, Production function, Personnel function, Cases related to information, requirement for above functional areas. [8]
4. **Computer Concepts & Peripherals:** Need of computer Literacy, Use and Definition of Computer, Generation of Computer, Classification of Computer, Peripherals: Input, output and storage technologies. [7]
5. **Computer System & System Software:** Brief history of Computer Hardware, Type of Computer System, Microcomputer System, Mainframe Computer System, System Software: Definition, operating system, programming language, web languages and services, Programming software. [9]

Outcome(s): course provides an overview of business information systems. Topics include hardware and software fundamentals, use of software packages, effective use of networks, Internet, and other communication tools, the design of management information systems, as well as the ethical use of computers in business and society.

Text Books:
1. Steven Alter “Information Systems the foundation of E-Business”, 4th Edition Person education, 2010.
2. Brien James A. O’andMarakasGeorge M., “Management Information System” 9th Edition, Tata McGraw Hill Education Private Limited, 2010.

Reference Books:
1. RajaramanV. “Analysis and Design of Information System”, Prentice-Hall of India, 3rd Edition, 1996.
2. BasandraSuresh K. “Management Information System”, Wheeler Publication, 2003.

CA 19.508	**Theory of Computation**	**Total Lectures: 40**
		Credit: 3-1-0-4
Prerequisite(s):	Elementary Mathematics	
Objective(s):	The goal of this course is to • Provide students with an understanding of basic concepts in the theory of computation. To understand variety of issues in the mathematical development of computer science theory, particularly finite representations for languages and machines, as well as gain a more formal understanding of algorithms and procedures.	
1.	**Finite Automata and Regular Expression:** Finite State Systems, Basic definitions, Regular Languages and Regular Expressions, Finite Automata, Kleen theorem, Arden's theorem, Mealy and Moore Machine and their Conversion, Pumping Lemma for Regular Sets, Decision Algorithms, Myhill-Nerode theorem and Minimization of finite automata.	[12]
2.	**Context-Free Grammars:** Context-Free Grammars, Union, Concatenation of CFGs, Derivation Trees, Simplification of Context-Free Grammars, Chomsky Normal Form, Greibach Normal Form, Ambiguous Grammar, Inherently Ambiguous Context-Free Languages.	[9]
3.	**Context-Free Languages and Pushdown Automata:** Pushdown Automata andContext Free Languages, Pumping Lemma for CFL, Closure Properties of CFL and Decision Algorithms for CFL.	[6]
4.	**Turing Machine:** Turing Machine Model, Techniques for Turing Machine Construction, Turing Machines as Language Acceptor, Combining Turing Machines, Properties of Recursive And Recursively Enumerable Languages and Universal Turing Machine.	[8]
5.	**Chomsky Hierarchy of Languages:** Regular Grammars, Unrestricted Grammars and Turing Machines, Context-Sensitive Grammars and Linear Bounded Automata.	[5]
Outcome(s):	• Be able to prove the equivalence of languages described by finite state machines and regular expressions. • Be able to construct pushdown automata and the equivalent context free grammars. • Be able to construct Turing machines and Post machines	
Text Books:	1. Martin John C. "Introduction to languages and the theory of computation", 4th edition, McGraw-Hill, 2003 2. Peter linz , "An introduction to Formal Languages and Automata" , Narosa Publishing House, sixth edition, 2010.	
Reference Books:	1. Hopcroft John E., Motwani Rajeev and Jeffery Ullman D. , "Introduction to Automata Theory, Languages, and Computation", 3rd edition, Narosa Publishing House, 2006. 2. Sipser Michael, "Introduction to Theory of Computation", 1st edition, Cengage Learning, 2012.	

CA 19.509	**C Programming**	**Total Lectures: 40**
		Credit: 3-0-0-3
Prerequisite(s):	Nil	
Objective(s):	• To learn the basics of programming skills through C-Programming language. • To understand the fundamentals concepts like syntax, and statements with essentials of efficient compiling, running and debugging processes.	
1.	**Introduction:** Brief History, Library& Linking, Compilation & Execution, Data Types, Operator and Expression Identifier, Keyword and Token, Constant, Data Declaration and Definition, Operators and Expression,Precedence & Associability of Operators.	[7]
2.	**Control and Loop Statement:** Introduction, Selection Statements, If, TheConditional Expression, switch, Iteration Statements: for loop, while loop, do-While loop, Jump, Goto label, break and continue, exit() function.	[7]
3.	**Array, Function and String:** Definition, declaration and Types of Array, Operation and application of array, Brief introduction on string header files and applications of strings. Function, argument passing, scope of variable, call byreference and call by value, recursion, passing array to function.	[5]
4.	**Structure, Union and Pointer:** Definition, Declaration and Initialization, AccessingStructure members, Arrays of Structure, Passing Structure to function,Structure to Pointer, Union. Definition, declaration, Pointer to Pointer, NULL Pointer, De-referencing Pointer, array to pointer (1-D array ,2-D array) pointer array, function to pointer.	[12]
5.	**File handling and Storage Classes:** Introduction, Defining and Opening a File in read and writes mode, Closing a file and ending of file, Enumerated data types, Error Handling During I/O Operation Random Access to Files, Command Line Arguments. Storage Classes, Preprocessor Directive.	[9]
Outcome(s):	At the end of the course student will be able to: • Describe the process of problem solving through C. • Write a justifiable C program for a given algorithm. • Trace the certain C program manually.	
Text Books:	1. Scheldt Herbert, "C The Complete Reference" Tata McGraw hill 6th edition,2010. 2. Kernighan & Ritchie, "C Programming Language" Prentice Hall Second Edition, 1988	
Reference Books:	1. Kanetkar Y.P., "Let us C Solutions" 10th edition, BPB publication, 2010. 2. Balaguruswamy E., "Programming in ANSI C "5th Edition Tata McGraw-Hill Education, 2004.	

CA 19.510	**C++ Programming**	**Total Lectures: 40**
		Credit: 3-0-0-3
Prerequisite(s):	Know any programming language	
Objective(s):	• To get a basic knowledge of object-oriented concepts. • To master in programming related to classes inheritance using C++.	
1.	**Introduction:** Overview of oops, Differences between OOP and Procedure Oriented programming, Structure of a C/C++ program, Differences betweenC/C++, Data Types in C++, Identifier and Keywords, Constants,C++ Operators,TypeConversion,Variable declaration, statements, Expressions, Features of iostream.h,InputandOutput, Conditional Expression,Loop statements, Jump statements.	[7]
2.	**Data Abstraction, Polymorphism and Inheritance:**Class Definition, Controlling access to other functions, Memory Allocation, Different Types of Constructors, Destructor,Dynamic Creation and Destruction of Objects,Overloading functions and operators, Overloading New and Delete operators. Derived Classes, Syntax of, Base Class, Types of Inheritance, Overloading Inherited Member Function.	[12]
3.	**Virtual functions and polymorphism:** Static and Dynamic bindings,virtual functions, dynamic binding through virtual functions,virtual function call mechanism, implications of polymorphic use of classes , virtual destructors ,calling virtual functions in a base class constructor.	[6]
4.	**I/O and Templates:** Standard I/O Using C functions, stream I/O in C++, formatted I/O, File I/O, generic Classes in C++, Necessity of Templates , generic classes using Macros, class templates, Function Templates, Advantages of Templates.	[8]
5.	**Exception and File Handling:** Benefits of exception handling, troubles with standard C functions , exception handling mechanism in C++, hierarchy of file stream classes, opening and closing files, file modes, testing for errors,file pointers and their manipulations, ASCII & Binary files, sequential and random access files.	[7]
Outcome(s):	On the successful completion of the course, the student will be able to: • To gain the basic knowledge on object oriented concepts. • To understand the role of inheritance, polymorphism, dynamic binding and generic structures in building reusable code	
Text Books:	1. Schildt Herbert, C++: The Complete Reference ,4th edition, Tata Mcgraw Hills, 2003. 2. Balagurusamy E., Object Oriented Programming With C++,4thedition, Tata Mcgraw Hills, 2013.	
Reference Books:	1. Lafore Robert, Object-Oriented Programming in C++, 4th edition, Galgotia publications,2001. 2. Prata Stephen, C++ Primer Plus, 6th edition , Pearson publication,2011.	

CA 19.511	**Digital Electronics**	**Total Lectures: 40**
		Credit: 3-1-0-4
Prerequisite(s):	NIL	
Objective(s):	• To understand the basics of combinational as well as sequential logic. • To get familiar for analyzing the performance of digital circuits	
1.	**Number Systems and Codes:** Introduction to number systems, weighted and non-weighted codes, 1's complement, 2's complement, complement arithmetic.	[2]
2.	**Logic Gates and Introduction to Boolean Algebra:** basic logic gates, derived logic gates, block diagrams and truth tables; logic diagrams from Boolean expression and vice versa Postulates and theorems of Boolean algebra, Boolean functions, canonical and standard form, simplification of Boolean function using Boolean laws and theorems.	[7]
3.	**Simplification of Boolean Functions and Combinational Circuits:** K-map representation, incompletely specified functions, simplification realization with gates, Quine-McCluskey method. half adder and full adder, half subtractor and full subtractor, binary serial and parallel adder, magnitude comparator, decoders, encoders, multiplexers, de multiplexers	[13]
4.	**Sequential Circuits:** Latches, flip-flops, triggering of the flip-flops, master-slave flip- flop, excitation tables, conversion of the flip-flops, analysis and design of clocked sequential circuits, shift registers, counters.	[12]
5.	**Logic Families:** Logic gate characteristics (propagation delay, speed, noise margin, fan- in, fan-out, power dissipation), standard logic families (RTL, DCTL, TTL, ECL, MOS)	[6]
Outcome(s):	After successful completion of the course, student will be able to • Develop a digital logic and apply it to solve real life problems. • Analyze, design and implement combinational logic circuits. • Classify different semiconductor memories	
Text Books:	1. Mano, M. M. and Ciletti, M.D., "Digital Design", Pearson Education, Delhi, 4thEdition, 2009. 2. Floyd, T. L. and Jain, R.P., "Digital Fundamental", Pearson Education, Delhi, 8thEdition, 2009. 3. Tocci, R. J., Widmer, N. And Moss, G., "Digital System: Principles and Applications", PearsonEducation, Delhi, 10thEdition, 2007.

X., "Digital Design: Basic Concepts and Principles", CRC Press Taylor &Francis Group, Printed in India by Saurabh Printers, 2nd Indian reprint, 2010. 3. Jain, R. P., "Modern Digital Electronics", Tata McGraw-Hill, Patel Nagar, New Delhi, 4thedition,1999.	

CA 19.512	**Systems Analysis and Design**	**Total Lectures: 40**
		Credit: 3-0-0-3
Prerequisite(s):	NIL	
Objective(s):	• To introduce the concept of system analysis for managing the projects • To analyze and document systems, design new systems and implement their plans	
1.	**System Concepts:** Definition, characteristics and elements, Types of system, problems in system development, principles of system building, components and types of information system and computer based information systems.	[9]
2.	**Systems Analysis and System Models:** Role of systems Analyst, system planning , information gathering tools for determining information requirements, cost/benefit analysis System Development Life Cycle (SDLC), Prototype, Prototype tools and strategy.	[11]
3.	**Feasibility Study and Structured Analysis:** System performance constraints, specific system objectives, steps in feasibility analysis, feasibility report, Definition, Tools of Structured Analysis: data flow diagram decision tree and decision table.	[8]
4.	**System Design:** Process and stages in design, input/output and form design, control design, design of database interactions.	[6]
5.	**System implementation:** System testing and quality assurance, implementation and system maintenance, hardware and software selection, system security and recovery.	[6]
Outcome(s):	By learning the course, the students will be able to, • Describe different approaches to systems analysis and design. • Describe the five phases of the systems development life cycle (SDLC). • Describe in detail the systems planning, systems analysis, systems design, systems implementation, and systems operation and support phases of the SDLC.	
Text Books:	1. Awad, Elis M. , " Systems Analysis and Design", Galgotia Publications Pvt. Lid, New Delhi, 1997. 2. Senn, James A., "Analysis & Design of Information ", McGraw Hill Education (india) Pvt. Ltd., New Delhi, 2005.	
Reference Books:	1. Goyal, Arunesh , " Systems Analysis and Design", PHI Learning Pvt. Ltd., New Delhi, 2011. 2. Hoffer, J. A., George, J. F. and Valacich, J. S., " Modern Systems Analysis & Design", Pearson Education(Singapore) Pvt. Ltd., Delhi,2005.	

CA 19.513	**Mathematical Foundation of Computers**	**Total Lectures: 40**
		Credit: 3-1-0-4
Prerequisite(s):	Elementary Mathematics	
Objective(s):	To acquire fundamental knowledge of higher Mathematics and apply in Science and engineering disciplines.	
1.	**Matrix Theory:** Introduction to the matrix theory, types of matrices, inverse of matrices, rank of matrices, solving system of linear equations.	[10]
2.	**Eigen Values:** Eigen values and Eigen vectors, Sparse matrix, diagonalization and triangulization of matrices.	[6]
3.	**Three-dimensional geometry and Vector calculus:** Basic concepts of three-dimensional geometry (viz. direction cosines and direction ratios), equation of aplane and of a straight line. Basic concepts of vectors, gradient, divergence and curl of a vector.	[8]
4.	**Calculus:** Introduction of differential and integral calculus, derivatives of various types of functions, basic idea of differential equations, solutions of ordinary differential equations with constant coefficients.	[10]
5.	**Complex Algebra:** Introduction to the complex algebra, complex numbers, geometrical representation of complex numbers, Argand diagram, De-Moirvre'stheorem.	[6]
Outcome(s):	After completion of the course, students would be able to apply fundamentals of higher mathematical knowledge in science and engineering and also solve curriculum problems.	
Text Books:	1. Ramana B. V. , " Higher Engineering Mathematics", Tata McGraw – Hill PublishingCompany Ltd., P 1390, 2nd edition, 2001 2. Babu Ram, "Engineering Mathematics", Pearson, New Delhi, 2010. 3. Narayan Shanti, "Analytical Solid Geometry", S Chand & Company, New Delhi, 1988.	
Reference Books:	1. Grewal B. S. and Grewal J. S. , "Higher Engineering Mathematics" , Khanna Publishers,New Delhi, P. 1390, 40th edition,2004 2. KreyszigErrwin, "Engineering Mathematics", John Wiley& Sons, New York, , p. 1639, 9th Edition,1998.	

CA 19.514	**Operating system**	**Total Lectures: 40**
		Credit: 3-0-0-3
Prerequisite(s):	NIL	
Objective(s):	• Understand the fundamental operating system abstractions like processes, threads, files, semaphores, IPC and deadlocks. • Understand operating system from user's perspective as well as from system's perspective. • Understand the principles of concurrency and synchronization. • Understand basic resource management techniques.	
1.	**Introduction: Overview, Evolution,Types, operating system functions andcharacteristics.**	[3]
2.	**Process Management and Memory Management:** The process concept, operating system services for process management, scheduling algorithms and multiple processor scheduling. Storage allocation methods, paging, segmentation, virtual memory concept, demand paging, page replacement algorithms and trashing.	[10]
3.	**Input /Output and File Systems:** Hardware organization, device scheduling policies, Functions of file systems, file access and allocation methods, directory systems, structured organizations, directory and file protection mechanisms and implementation issues. Device dependent and device independent software.	[7]
4.	**Deadlocks and Process Synchronization:** Characterization, prevention and avoidance, deadlock detection and recovery and practical consideration. Critical section problem, semaphores, classical process co-ordination problems and their solutions, inter process communication and message-passing mechanisms. Client-server modeling, RPC, threads.	[10]
5.	**Protection & Security:** Goals of Protection, Principles of Protection. Domain of protection Access Matrix, Implementation of Access Matrix. Access control, Revocation of Access Rights. Capability- Based systems, Language - Based Protection, Security problem, program threats, system and network threats cryptography as a security tool, user authentication, implementing security defenses, fire walling to protect systems.	[9]
Outcome(s):	By learning the course, the students will be able to, describe, contrast and compare differing structures for operating systems understand and analyse theory and implementation of: processes, resource control (concurrency etc.), physical and virtual memory, scheduling, I/O and files	
Text Books:	1. Silberschatz A., and Galvin P.B., Operating System Concepts, John Wiley &Sons, 6th Edition, 2005. 2. Tanenbaum A.S., Modern Operating Systems, Pearson Education Asia, 4th Edition, 2003	
Reference Books:	3. Stallings W., Operating Systems, Pearson Education Asia, 5thEdition, 2008. 4. Tanenbaum A.S. and Woodhull A. S., Operating Systems- Design and Implementation, Pearson Education Asia, 2nd Edition, 2009.	

CA 19.515	**Business Accounting**	**Total Lectures: 40**
		Credit: 3-0-0-3
Prerequisite(s):	NIL	
Objective(s):	To understand the Fundamentals of Accounting and computerized accounting.	
1.	**Fundamentals of Accounting:** Meaning, Scope and objective of accounting, Accounting principles, Accounting concepts and conventions, Double entry system.	[5]
2.	**Financial Accounting:** Rules for Journalisation, Posting in ledger, Trial balance, Preparation of financial statement: Trading account, Profit and loss account, Balance sheet;Analysis of financial statement.	[10]
3.	**Management Accounting:** Concept andobjectives of Management Accounting, Ratio Analysis: Objectives, Advantages and limitations,Types of ratios; Funds flow analysis and Cash flow analysis, Capital budgeting.	[10]
4.	**Cost Accounting:** Concept and principles, Classification and elements of cost, Techniques of Cost Accounting: Marginal costing, Standard costing, Budgetary Control -Types of budgets, Preparation of budgets; Working capital.	[12]
5.	**Computerized Accounting:** Uses of Microsoft Excel in accounting, analysis of balance sheet with excel Tally software-application.	[3]
Outcome(s):	By learning the course, the students will be able to, Understand the accounting, Financial, Management and computerized accounting principles.	
Text Books:	1. Bhattacharya A. K, Financial accounting, Prentice Hall of India, 3rd edition, 2006. 2. Khan M.Y. and Jain P.K., Management Accounting, Tata McGraw-Hill Education,2006 3. SaxenaV.K. &VashistC.D., Advanced Cost and Management Accounting, Sultan Chand and Sons, 2002.	
Reference Books:	1. Jain S.P &NarangK. L, Financial Accounting, Kalyani Publications, 2013. 2. Kulkarni.Mahesh, Management Accounting, Career Publications, 2008. 3.PatankarSanjay, Management Accounting, NiraliPrakashan, 2010. 4. MaheshwariS. N., Management Accounting and Financial Control, S. Chand & Company, 1996. 5. Gupta S.P., Management Accounting, SahityaBhawan, 2nd Edition, 2000.	

CA 19.516	**Data Structures**	**Total Lectures: 40**
		Credit: 3-0-0-3
Prerequisite(s):	C Programming	
Objective(s):	• To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems, • To promote an analytical and empirical appreciation of the behavior of algorithms using data structures.	
1.	**Introduction:** Data Structure definition, Requirement of different Data Structures, Abstract Data Type, Analysis of Algorithm	[3]
2.	**Linear Data Structure:** One and Two-dimensional Arrays, Array Representation, Selection Sort, Bubble Sort, Quick Sort, Heap Sort and Merge Sort,SequentialSearch, Binary Search. Linked List and itsrepresentations, Operations on LinkedList, Types of Linked List, Stack and its representation, Operations on Stack,Queue and its representation, Operations on Queue, Applications of these data structures.	[15]
3.	**Tree :** Binary Tree and its travesals (Breadth-First, Depth-First), Expression Trees (Infix, Prefix, Postfix Traversals), Binary Search Trees, Heaps,AVL Tree	[12]
4.	**Graph:** Matrix Representation, List representation and applications, Minimum Spanning Tree finding algorithms, Shortest Path finding algorithms.	[5]
5.	**Hashing Techniques:** Hash Function, Address Calculation Techniques, Common Hashing Functions, Collision Resolution, Linear Probing, Double Hashing, Bucket Hashing, Deletion and Rehashing.	[5]
Outcome(s):	On the successful completion of the course, the student will be able to: • be knowledgeable of certain abstract data types (ADT) • be able to make a critical assessment of different implementations of an ADT • be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems	
Text Books:	1. Horowitz and Sahani, "Fundamental of data structures",Galgotia Publication,1998. 2. Lipschutz, "Data Structures Schaum's Outline Series", Tata Mcgraw Hills,2006.	
Reference Books:	1. TenenbaumAaron M., YedidyahLangsam and Moshe J. Augenstein "Data 2. Kruse R. etal, "Data Structures and Program Design in C", Pearson Education,2007.	

CA 19.518	**Discrete Mathematics and Probability Theory**	**Total Lectures: 40**
		Credit: 3-1-0-4
Prerequisite(s):	NIL	
Objective(s):	To Introduce fundamental concepts and applications of discrete structure in the field of computer science	
1.	**Set Theory:** Sets, Venn-diagrams, algebra of sets, finger sets, binary relations and equivalence relations.	[7]
2.	**Probability Theory:** Fundamentals, Addition and multiplication of probability,Bayes theorem, Binomial, Poisson and normal distribution.	[6]
3.	**Graph Theory:** Introduction, graph, undirected graph, simple, multiple graph and pseudo graph, walk, path, cycle and connectivity, sub-graph, types of graph, isomorphic graph and representation of graph in computer memory.	[9]
4.	**Mathematical Logic:** Prepositional calculus, basic logical operations, statements generated by set conditional statements, converse inverse and contraposition statements.	[9]
5.	**Prepositional Calculus**: Propositions, Logical Connectives: conjunction, disjunction and negation, Truth Tables, Tautologies and Contradictions, Conditional and Bi-conditional statements.	[9]
Outcome(s):	On successful completion of this course, the students will be able to • Use propositional and first-order logic. • Apply of logic in specifying properties. • Develop proof by induction. • Design binary decision diagrams. • Identify the scope for fuzzy logic.	
Text Books:	1. Huth M and Ryan M, Logic in Computer Science: Modelling and Reasoning about Systems, Cambridge University Press, 2nd edition, 2004. 2. George J Klir and Bo Yuan, Fuzzy Sets and Fuzzy Logic – theory and applications, Prentice Hall, 2000.	
Reference Books:	1. Arindama Singh, Logics for Computer Science, Prentice Hall of India, 1st edition, 2004. 2. M. Ben-Ari, Mathematical Logic for Computer Science, Springer, 2nd edition, 2003. 3. Rich E., and Knight K., Artificial Intelligence, Tata McGraw-Hill, 3rd edition, 2009.	

CA 19.525 **Digital Electronics Laboratory** **Total Hours: 26**

Credit: 0-0-4-2

Prerequisite(s): NIL

Objective(s): This lab course develops skills for implementing and analyzing digital electronic circuits, with applications to electronics design. It is also designed to enhance problem solving ability through steadily increasing problem complexity.

Contents:

1. To study the use of General Purpose Digital Trainer and familiarization with the digital IC Data-Books.
2. To study AND, OR. NOT, NAND, NOR, EX-OR gates and their specified experiments.
3. To set up a 4-bit Binary Counter (74LS93) to demonstrate its sequence of Counting.
4. To study the characteristics curve of TTL and CMOS logic gates.
5. To design and test 4-bit Adder and Subtractor circuits.
6. Design a combinational circuit with 4 inputs and 4-outputs that converts a 4-bit Gray Code to an equivalent 4-bit Binary number.
7. Design and implement a BCD to Seven Segment Decoder / Driver.
8. To design and implement a 2 to 1 multiplexer.
9. To design and implement a 1:2 & 1:4 de multiplexer.
10. To investigate the operation of various flip flops SR, JK, T and D using gates and FF ICs.
11. To study the following application of shift register using IC 74LS164 and 74LS194 (Shift Right Logic, Shift Left Logic, Parallel Load).
12. Design and test arithmetic and logic circuit using combinational circuit (logic circuit, multiplexer and 4-bit binary adder/ full adder. (Already covered in experiment no.6, 10 &11)
13. Design and test a 4-bit Up Down binary counter. (Already covered in experiment no.3)

Outcome(s):

1. The background provided in this laboratory may effectively be utilized for the understanding of advanced courses such as VLSI Design and for the designing of complex circuitry.
2. Gain a hands-on experience in carrying out key operations needed to assemble circuits on breadboard.

NOTE:

All experiments are to be performed on either physical apparatuses or on digital electronics simulator like Virtual Bread Board etc.

CA 19.527 **C Programming Laboratory** **Total Hours: 26**

Credit: 0-0-4-2

Prerequisite(s): NIL

Objective(s): To learn the basics of programming skills through C-Programming language.
To understand the fundamentals concepts like syntax, and statements with essentials of efficient compiling, running and debugging processes.

Contents

1. **Testing**

   Data Types & Operators, Control Statements,Arrays,Strings,Apply logic to print different patterns(at least 5).Max and min of a given list of numbers, their sum and average, Result of a student using switch-case, Implementing matrix operations, Searching and Sorting, String Manipulations, Program to understand the decision making constructs and find the roots of a quadratic equation,Program to understand the implementation of library function.

2. **Functions, Pointers, Structure and Union**

   Function & Function Calling, Storage Classes, Function Declaration and Definition, Function call by value and call by reference,Illustration of storage classes, Pointer, Structure, Union

3. **File Handling**

   Program to Create a File & Store Information,Program to illustrate Reading of Data from a File and to delete or replace a specific Line from a Text File, Program to Create Employee Record and Update it

Outcome(s): At the end of the course student will be able to:

- Describe the process of problem solving through C.
- Write a justifiable C program for a given algorithm.
- Trace the certain C program manually.

CA 19.528 **C++ Programming Lab** **Total Hours: 26**

Credit: 0-0-4-2

Prerequisite(s): C Programming Laboratory

Objective(s):

- To make students familiar with syntax and structure of C++-programming.

To learn problem solving techniques using object oriented programming through C++ programs implementation.

Contents:

1. **Introduction to C++**
   - Apply logic to print different patterns (atleast 3)
   - Find average, minimum and maximum of array elements.
2. **Classes and Object, Inheritance and Polymorphism**

   To demonstrate classes and different types of constructors.
   - Application programs based on above elements in different areas of computing like Science, Business, Mathematics and other manual processes.

   Show function overloading to calculate the area of different shapes.
   - Write a program in c++ which implements the concept of different types of inheritance, virtual base class. Initialize the data using constructor.
   - Write a program that handles three exceptions.
4. **I/O handling**
   - Reads one line at a time from an ASCII file, Stores the individual words in an array and prints the words in reverse order (one word per line)
   - Application programs based on above elements in different areas of computing like Science, Business, Mathematics and other manual processes.
5. **Templates**
   - Programs to demonstrate different templates.
   - Application programs based on above elements in different areas of computing like Science, Business, Mathematics and other manual processes.

Outcome(s): On the successful completion of this lab course, the student will be able to:

- To implement features of object oriented programming to solve real world problems.

CA 19.529 **Data Structures Laboratory** **Total Hours: 26**

Credit: 0-0-4-2

Prerequisite(s): C Language

Objective(s): To develop skills to design and analyze simple linear and nonlinear data structures

Contents: To Strengthen the ability to identify and apply the suitable data structure for the given real world problem

1. **Arrays**
    1. To implement the array concepts for matrix applications.
    2. To implement the 1-D, 2-D and 3-D array concepts for data storage and retrieval.
2. **Linked List Testing:**
    1. To implement various operations over the linked list.
    2. To implement variations of linked list e.g. Circular linked list.
    3. To implement various operations over the stack.
    4. To demonstrate applications of stack e.g. infix to prefix conversion.
3. **Queue Testing:**
    1. To implement various operations over the queue.
    2. To demonstrate variations of queue e.g. dequeue.
4. **Tree Testing:**
    - To demonstrate variations of Tree e.g. binary search tree.
    - To implement different operations on Tree (traversal,insertion,deletion).
5. **Graph Testing:**
    - To implement various traversing of Graph.
    - To demonstrate applications of Graph.
6. **Searching Testing:**

    To implement searching algorithms.
7. **Sorting Testing:**
    - Bubble Sort, Insertion Sort, Selection Sort, Heap Sort and Quick Sort.

Outcome(s): At the end of this course, the student will

Be able to design and analyze the time and space efficiency of the data structure.
Be capable to identity the appropriate data structure for given problem.

CA19.607 **Database Management Systems** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): NIL

Objective(s): The objective of this Course is to:

- Understand the fundamental concepts of database management.
- Design and Normalize databases.
- Understand transaction processing control.
- Understand basic of object concepts and object relations.
- Understand the role of the DBMS, RDBMS& ODBMS in the organization

1. **Introduction**: Databases and database users, database system concepts and architecture, data modeling using the Entity-Relationship (ER) model, Enhanced Entity Relationship model. [6]
2. **Relational Data Model**: Concepts, relational model constraints, relational database schemas, update operations, dealing with constraint violations, relational algebra operations, relational calculus, mapping ER model to relational model.
   Structured Query Language (SQL): SQL data definition and data types, specifying constraints, schema change statements, basic queries, complex queries, update statements, views [12]
3. **Database Design**: Functional dependencies and normalization of relational databases, First Normal Form (1NF), 2NF, 3NF, Boyce-Codd normal form (BCNF), multivalued dependency, 4NF. [6]
4. **TransactionProcessing**:Introduction,properties,recoverability,serializability. Concurrency control techniques: Two phase locking protocol, database recovery techniques: Recovery concepts, recovery techniques based on deferred and immediate update [8]
5. **Object and Object-Relational Databases**: Concepts for object databases, object database standards and design, object relational systems, object relational features, object database extensions to SQL, ODMG object model and the object definition language (ODL) [8]

Outcome(s): After completion ofthecourse, students willbe able to:

- Analyze database models & entity relationship models. Understand architecture for database development.
- Design E-R diagram
- Use Structured Query Language (SQL) with complex queries.
- Design and normalize the relations for any organization.
- Understand transaction processing control.
- Understand Object Oriented databases

[2] R. Ramakrishnan, DatabaseManagementSystems, 3rd Edition, Tata McGraw Hill, 2008.

Reference Books:

[1] Korth and Schilberschatz, Database System Concepts, 6th Edition, Tata McGraw Hill, 2011.
[2] C.J. Date, Database Systems, Tata McGraw Hill, 2nd Edition, 2003.

CA 19.603 **Design and Analysis of Algorithms** **Total Lectures: 40**
Credit:3-1-0-4

Prerequisite(s): CA19.516(Data Structures)

Objective(s):
- To learn the algorithm analysis techniques.
- To become familiar with the different algorithm design techniques.
- To understand the limitations of the algorithms power.

1. **Introduction:** Fundamentals of algorithms and problem solving, asymptotic notations, time complexity and analysis of algorithms, solutions of recurrence relations, master theorem and summations techniques. [8]
2. **Analysis of Sorting and Searching Algorithms:** Linear, binary and interpolation search, insertion, selection, merge, quick and heap sort, stability and other issues, hashing. [8]
3. **Algorithm Design Approaches:** Greedy method (knapsack problem, job sequencing problem), dynamic programming (assembly line scheduling, matrix chain multiplication), backtracking (8 queens problem, sum of subsets), branch and bound (0/1 knapsack problem), divide and conquer algorithms (Strassen matrix multiplication), problems based on these design paradigms. [8]
4. **Tree and Graph algorithms:** Spanning trees, Prim and Kruskal's algorithm, Huffman coding, BFS and DFS, disjoint set operations, connected components, shortest path algorithms in a graph such as Dijkstra, Bellman Ford, Warshall's etc. [8]
5. **Complexity Classes:** P,NP,NP hard and NP complete problems, reducibility, decision and optimization problems, examples of NP complete problems such as 3 CNF, clique, vertex cover and traveling salesman problem, basic introduction of approximation algorithms. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.
- Modify existing algorithms to improve efficiency.

Text Books:

1. T. H.Cormen, C. E.Leiserson, R. L. Rivest and C. Stein, Introduction to Algorithms, PHI Learning Private Limited, 3rd edition, 2016.
2. E. Horowitz, S.Sahni, S.Rajasekaran, Computer Algorithms, Silicon Press, 2nd edition, 2008.

Reference Books:

1. A. Levitin, Introduction to the Design and Analysis of Algorithms, Pearson Education, 3rd edition, 2012.
2. A. V. Aho, John E. Hopcroft and Jeffrey D. Ullman, Data Structures and Algorithms, Pearson Education, 1st edition, 2006.
3. D. E. Knuth, The Art of Computer Programming, Volumes 1& 3, Pearson Education, 2009.
4. S. S. Skiena, The Algorithm Design Manual, Springer, 2nd edition, 2008.

CA 19.609 **Java Programming** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CA 19.509 (C-Programming)

Objective(s):

- Cover issues related to the definition, creation and usage of classes, objects and methods.
- Discuss the principles of inheritance and polymorphism.
- Provide the foundation of good programming skills by discussing key issues of the design of object- oriented software, including programming design and documentation.
- Cover the basics of API and to explore the java abstract programming interface.

1. **Overview:**IntroductiontoJava,importanceofJava, interactiveDevelopmentEnvironments: Eclipse/Net Beans, basics of OOP. [10]
   DataTypes,Variable, andArrays:Primitivedatatypes,typecasting,arrays,operatorsand control structures, identifiers, constants and literals
2. **Classes and Objects:** Class fundamentals, declaringobjects, assigning object reference variables, introducing methods, constructors,this keyword,garbagecollection,the finalize()method, overloading methods, using objects as parameters and return type, introducing accesscontrol,understanding static, introducing final,introducing nestedandinnerclasses, exploringthe stringclass, usingcommand-linearguments. [10]
3. **Inheritance:**Inheritancebasics,usingsuper,multilevelhierarchy,constructorinhierarchy, methodoverriding,dynamicmethoddispatch,usingabstractclasses,usingfinalin inheritance, the objectclass. [4]
4. **Package, Interfaces and Exception Handling:** Packages, access protection, importing packages,interfaces,exception-handlingfundamentals,exceptiontypes,usingtry andcatch, multiplecatchclauses,nestedtrystatements,throw,throws,finally,JAVA'sbuilt-in exceptions, userdefinedexception. [8]
5. **MultithreadedProgramming:**TheJavathreadmodel,themainthread,creatingmultiple threads, threads priorities, managingthreads, thread class built-in functions. [8]
   I/O and String Handling: I/O basics, reading console input, writing console output, the print writer class, reading and writing files, string constructors, operations on string, string tokenizing, string buffer.

Outcome(s): Upon completion ofthis course, studentsareableto:

- Understand the concepts of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
- Identifyclasses, objects,membersofaclassandthe relationships amongthem needed for aspecificproblem.
- Develop programs using the in-built JavaAPIandtheJavastandardclass library.
- CreateJavaapplicationprogramsusingsoundOOPpractices(e.g.,interfacesandAPIs) andproperprogramstructuring(e.g.,byusingaccesscontrolidentifies,automatic documentation throughcomments, error exception handling).
- Useof development environment like Eclipse forcollaborativeprogramming

CA 19.605 **Computer Communications Networks** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CA 19.204 (Computer Networks)

Objective(s):

- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To construct large-scale computer networks
- To understand fundamentals of computer networks and major protocols.
- To analyze and evaluate major Internet protocols.
- To program simple network applications using socket API
- To learn and adopt newly introduced computer network technologies by themselves.

1. **Introduction to Network Model:** History and development of computer networks, categories of networks, layering and protocols. [8]
   Physical Layer: Different types of transmission media, transmission impairments, encoding schemes (NRZ, NRZI, Manchester, 4B/5B, Manchester etc.)
2. **Data Link Layer:** Framing concept, Aloha, CSMA/CA, CSMA/CD protocols, performance evaluation and characteristics, error detection (parity, CRC), sliding window, stop and wait protocols,stop performance and efficiency,packet and circuit switching. [8]
3. **Local Area Network and Network Layer:** IEEE 802.3, 802.4, 802.5, 802.11, performance evaluation.IPv4, IP address classes, classless addressing, IPv6, ARP, RARP, DHCP, ICMP, routing algorithms: distance vector, metrics, RIP, OSPF, BGP, congestion control algorithms, leaky bucket, token bucket. [10]
4. **Transport Layer:** Duties of the transport layer, connection, TCP, TCP services, TCP header, UDP, evaluating protocol such as TCP/UDP using simulator like NS2. [6]
5. **Application Layer:** DNS, FTP, HTTP, SMTP, POP, basics of network security (cryptography, digital signature and firewall). [8]

Outcome(s): On successful completion of this course, students will be able to

- Analyze computer network component and devices.
- Synthesize how communication works in a network and internet.
- Formulate the concept of topologies and their applications.
- Analyze protocol at different layers and how they play important role in network implementation.
- Identify and analyze the latest technology with existing one.
- Enumerate the layers of OSI and TCP/IP models.
- Configure network and wireless technology including client/server programming.

CA 19.629 **Computer Organization and Architecture** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CA19.511 (Digital Electronics)

Objective(s):

- To have a thorough understandingofthebasicstructure and operation ofamodern digitalcomputer.
- To discuss in detail the operation of the arithmetic unit including the algorithms &implementation of fixed-point and floating-point representation
- TostudythedifferentwaysofcommunicatingwithI/OdevicesandstandardI/Ointerfaces.
- Tostudythehierarchicalmemorysystemincludingcachememoriesandvirtualmemory.

1. **Principles of Computer Organization:** Introduction to computer architecture, central processing unit, machine language instructions, addressing modes, instruction types, instruction set selection, instruction cycle and execution cycle, floatingpointrepresentation. [6]

2. **Processor and ALU Design:** Computer arithmetic and ALU design,control unit, data path and control path design, microprogramming versus hardware control, RISC vs CISC [8]

3. **Memory Organization:** Memory subsystem, storage technologies, memory arrayorganization, memory hierarchy interleaving, cache and virtual memories and architectural aids to implement these. [6]

4. **Input-Output Organization:**Input-output devices and characteristics, bus interface, data transfer techniques, I/O interrupts. [4]

5. **Advance computer Architecture**: Overview of parallel processing and pipelining, Superscalar processors,study and comparison of uni-processors and parallel processors, speedup.Pipelining: Principles and implementation of pipelining, classification of pipelining processors, pipeline architecture, general pipelining reservation table, design aspect of arithmetic and instructional pipeline, pipelining hazards and resolving techniques. [16]

Outcome(s): On successful completion of this course, students will be able to

- Understand basic structure of a digital computer.
- Perform arithmetic operations of binary number system.
- Know the organization of the control unit, arithmetic and logical unit, memory unit and the
- Describe the operation of performance enhancements such as pipelines, dynamic scheduling, branch prediction, cache, and vector processors.
- Describe modern architectures such as RISC, super scalar

ELECTIVES

CA19.630 **ADVANCED DBMS** **3-0-0-3**

Total Lectures :40

Prerequisite(s): CA 19.607 (Database Management Systems)

Objectives:

- To cover and impart knowledge of various aspects of a Data Base Management systems like, databases, different database models, how transaction is managed, query is processed and different types data [8]

1. **Object based databases:** Introduction, OODM, OODB, OODBMS, ODMG, ORDBMS, ORDBMS design [8]
2. **Parallel and distributed databases:** Introduction, advantages and disadvantages, architecture, Parallel data processing and query parallelism. [8]
3. **Distributed databases:**Introduction, Properties, types, advantages, disadvantages, architecture, design, query processing, concurrency control, recovery control [8]
4. **XML Databases:** XML Databases: XML Data Model – DTD - XML Schema - XML Querying – Web Databases – JDBC – Information Retrieval – Data Warehousing – Data mining. [8]
5. **Emerging Database Technologies:** Internet databases, digital libraries, multimedia databases, mobile [8]

Outcome:

- Design and normalize the relations for any organization.
- Understand transaction processing control.
- Understand Object Oriented databases

Text Books:

[1] **Korth,**"Database Systems Concepts, Design and Applications", 1st Ed., Pearson Ed., 2016

Reference Books:

[1] C. J. Date, "An Introduction to Database Systems", 7th Ed., Narosa Publishing, 2004

[2] Elmsari and Navathe, "Fundamentals of Database Systmes", 4th Ed., A. Wesley, 2004

CA 19.631 **Real Time Systems** **3-0-0-3**

Total Lectures :40

Prerequisite(s): **CA 19.201(Computer Architecture)**

Objectives:

- Real-time scheduling andschedulability analysis
- Formal specification and verification of timing constraints and properties
- Design methods for real-time systems
- Development and implementation of new techniques to advance the state-of-the-art real-time systems research

1. **Introduction:** Issues in Real Time Computing, Structure of a Real Time System. Task Classes, Performance Measures for Real Time Systems, Estimating Program Run times. Task Assignment and Scheduling -Classical Uniprocessor scheduling algorithms, Task Assignment,Mode Changes, and Fault Tolerant Scheduling. [8]
2. **Programming Language and Tools**: Desired Language characteristics, Data Typing, Control structures,Facilitating Hierarchical Decomposition, Packages, Run-time (Exception) Error handling, Overloading andGenerics, Multitasking, Low Level programming, Task scheduling,Timing Specifications, Programming Environments, Run-time Support. [8]
3. **Real time Databases**: Basic Definition, Real time Vs General Purpose Databases, MainMemoryDatabases,Transaction priorities, Transaction Aborts, Concurrency Control Issues, Disk Scheduling Algorithms, Two-phase Approach to improve Predictability, Maintaining Serialization Consistency, Databases for Hard Real Time systems. [8]
4. **Real-Time Communication:** Communications Media, Network Topologies Protocols, Fault Tolerant Routing. Fault Tolerance Techniques - Fault Types, Fault Detection. Fault Error containment Redundancy, Data Diversity, Reversal Checks, Integrated Failure handling. [8]
5. **Reliability Evaluation Techniques:** Obtaining Parameter Values, Reliability Models for Hardware Redundancy, Software Error models. Clock Synchronization - Clock, A Nonfault-Tolerant Synchronization Algorithm, Impact of Faults, Fault Tolerant Synchronization in Hardware, Fault Tolerant Synchronization in Software. [8]

Outcomes:

- Fundamental principles for programming of real time systems with time and resource limitations.
- Foundation for programming languages developed for real time programming.
- Use of real time system programming languages and real time operating systems for real time applications.
- Analyse real time systems with regard to keeping time and resource restrictions.

Text Books:

[1] C.M. Krishna, Kang G. Shin, “Real-Time Systems”, McGraw-Hill International Editions,1997

[2] J. S. Liu, Real Time Systems, Pearson Education, 2004

Reference Books:

[1] S. Bennett, “Real Time Computer Control-An Introduction”,Second edition Perntice Hall PTR,1994.

CA 19.632 **Software Project Management** **3-0-0-3**

Total Lectures: 40

Prerequisite(s): CA 19.634 (Software Engineering)

Objectives:

- Understand the fundamental principles of Software Project management
- To gain good knowledge of responsibilities of project manager and how to handle these.
- Be familiar with the different methods and techniques used for project management.

1. **Introduction To Software Project Management:** Project Definition, Contract Management Activities Covered By Software Project Management, Overview Of Project Planning, Stepwise Project Planning. [6]

2. **Project Evaluation :** Strategic Assessment, Technical Assessment, Cost Benefit Analysis, Cash Flow Forecasting, Cost Benefit Evaluation Techniques, Risk Evaluation. [6]

3. **Activity Planning:** Objectives, Project Schedule, Sequencing and Scheduling Activities, Network Planning Models, Forward Pass, Backward Pass, Activity Float, Shortening Project Duration, Activity on Arrow Networks, Risk Management, Nature Of Risk, Types Of Risk, Managing Risk, Hazard Identification, Hazard Analysis, Risk Planning and Control. [9]

4. **Monitoring And Control:** Creating Framework, Collecting the data Visualizing Progress, Cost Monitoring, Earned Value, PriortizingMonitoring, Getting Project Back To Target, Change Control, Managing Contracts – Introduction, Types Of Contract, Stages In Contract Placement, Typical Terms Of A Contract, Contract Management – Acceptance. [9]

5. **Managing People And Organizing Teams:**Introduction , Understanding Behavior, Organizational Behaviour: A Background, Selecting The Right Person For The Job, Instruction In The Best Methods, Motivation, The Oldman, Hackman Job Characteristics Model, Working In Groups, Becoming A Team, Decision Making. [10]

Outcomes:

- Student will have good knowledge of the issues and challenges faced while doing the Software project Management and will also be able to understand why majority of the software projects fails and how that failure probability can be reduced effectively.
- Will be able to do the Project Scheduling, tracking, Risk analysis, Quality management and Project Cost estimation using different techniques.

Text Books:

[1] Bob Hughes, Mikecotterell, “Software Project Management”, Third Edition, Tata McGraw Hill,2011.

[2] R.Gopalaswamy, "Managing Global Projects", Tata McGraw Hill,2001.

[2] Royce, “Software Project Management”, Pearson Education,2005

ET 19.465 **Agile Software Development** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): Software Engineering, System Analysis and Design

Objective(s):
- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To learn the essentials of collaboration as they apply to agile methods.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1	**Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools.	[7]
2	**Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management.	[9]
3	**Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk-based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software.	[10]
4	**Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control.	[10]
5	**Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies.	[4]

Outcome(s): On successful completion of this course, students will be able to
- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Scrum.
- Write user stories for project requirements.
- Write test cases for developing features.

Text Books:

1. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
2. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall

labs

CA 19.621 Data Base Management Systems Laboratory Credit:0-0-4-2

Pre-requisites: C-Programming, and DBMS

Objective: Bytheend ofthe practical sessions of this section,studentswillbe able to:

- Create Databases usingauserinterfaceand SQLcommand.
- CreateIntegrityand constraints on databases.
- Write SQLqueries.
- Provideapracticaloverviewofadvancedconceptsliketriggers,assertion, views, etc.

Contents: Labmanualbaseduponthetheorycourse CA 19.607andtoachievethelisted courseobjectives andoutcomes

Outcomes: After undergoingthislaboratorymodule, thestudentsshouldbe able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies.
- Designand implement adatabaseschemafor a given problem-domain.
- Populate and queryadatabaseusingSQLDML/DDLcommands.
- Declareandenforceintegrityconstraintsonadatabaseusingastate-of-the-art
- RDBMS.
- ProgrammingPL/SQLincludingstoredprocedures,storedfunctions,cursors, packages.

CA 19.623 Computer Communications NetworkLaboratory 0-0-4-2

Prerequisite(s): Programming Language Lab., Data Structures Lab.

Objective(s):

- To implementing the client/server model with its application aspects.
- Sniffing packets in network as a network analyzer
- To implement protocols at various types communicating protocols
- To implement socket programming application with inbuilt API
- To code error correction and detection technique like CRC, checksum and parity

Contents: Lab manual based upon the theory course CA 19.605 and to achieve the listed course objectives and outcomes

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming
- To demonstrate sending a UDP packet and TCP

Outcome(s): On successful completion of this course, students will be able

- To know how communication works at different layers of TCP/IP model
- To understand practically the purpose of various key protocol.
- To learn how a network can be efficiently deployed.
- To identify and analyze the latest technology with existing one.
- To configure network with client/server programming
- To understand computer network component and devices.

CA19.625Java Programming Lab **Credit:0-0-4-2**

.

Prerequisite: C++Programming Lab.

Objectives: Theobjectiveof this course is to:

- Become comfortable with object-oriented programming and learn to think in terms of objects.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, documentation.

Contents: Lab manual based upon the theory course CS 14.207 and to achieve the listed course objectives and outcomes.

Outcomes: Upon completion ofthis course, students areableto:

- Understand the concepts of OOP as well as the purpose and usage principles of
- Inheritance, polymorphism, encapsulation and method overloading.
- Create Java application programs
- Use of development environment like Eclipse for collaborative programming/editing.

Spring Semester

CA 19.606 **Cryptography & Network Security** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite(s): CA 19.204(Computer Networks)

Objective(s):

- To understand the classical encryption and decryption algorithms, their techniques as well cryptanalysis.
- To acquire basic knowledge of finite fields and number theory.
- To understand the various block ciphers, stream cipher models, principles of public key cryptosystems, hash functions and digital signatures.
- To understand the different authentication techniques.

1. **General Overview and Classical Cryptography:** General overview of threats, risks and consequences, sources of threats, attacks, classification and preventive measures, introduction to some simple ciphers such as shift cipher, substitution cipher, affine cipher, Vigener cipher, hill cipher, permutation cipher and stream ciphers. [8]

2. **Symmetric/Secret Key Cryptography:** Block ciphers and their principles- boxes, P-boxes, DES, 3 DES, AES. [6]

3. **Key Exchange/Distribution Schemes:** Diffie - Hellman key exchange, man- in- the-middle attack, Fiat-Naor key distribution, Needham – Schroeder scheme and attack possible on it, Kerberos. [7]

4. **Asymmetric Key/Public Key Cryptosystems:** RSA description, different attacks on RSA and remedies, other public keycryptosystems such as ElGamal and Rabin cryptosystems and possible attacks on them. [7]

5. **Digital Signature Schemes:**Security requirements for digital signatures, ElGamal digital signature scheme and its security analysis, the digital signature algorithm (DSA), Schnorr digital signature scheme, provably secure signature schemes and undeniable signatures. Network Security: Electronic mail security, IP security, Network management security.SSL, SET Indruders and Viruses, Firewalls, Intrusion Detection. [12]

Outcome(s): On successful completion of this course, students will be able to :

- Analyze the security threats.
- Design robust cryptographic algorithms.

Text Books:

[1] A. Kahate, Cryptography and Network Security, Tata McGraw Hill,2nd Edition, 2008

[2] William Stallings, Cryptography and Network Security: Principles and Practice, Pearson Education, 7th edition 2017

Reference Books:

[1] Jonathan Katz , Yehuda Lindell, Introduction to Modern Cryptography, (Cryptography and Network Security Series), Chapman and Hall/CRC; 2nd edition, 2014.

[2]Wenbo Mao, Modern Cryptography Theory & Practice, 1st edition, 2004.

CA 19.608 **Management Information Systems** **3-0-0-3**

Total Lectures:40

Prerequisite(s): CA 19.106 (System Analysis and Design)

Objective(s):

- To introduce the concept of system analysis for managing the projects
- To analyze and document systems, design new systems and implement their plans.
- Understanding paradigm shift to E-enterprise
- Applications of IS and IT to management functions of the industry

1.	**MIS and Enterprise:**Management Information System(MIS) concepts, definition, role, impact, management as a control system, MIS: A support to the management, goals, objectives and target, MIS for a digital firm, E-Business Enterprise: A digital firm-organization of business in digital firm, E-business, E-commerce, real time enterprise.	[8]
2.	**Strategic management of business performance:** Concept of corporate planning, essentiality of strategic planning, development of business strategies, types of strategies, short range planning, tools of planning,MIS: Strategic business planning.	[6]
3.	**Information andKnowledge:** Information Concepts, Classification of information,System Engineering: Analysis and Design- System concepts, system control, types of system, handling system complexity, system development model, Relationship between Information and Knowledge.	[8]
4.	**Development and implementation of MIS:** Determining the information requirement, Development and implementation of the MIS,Management of information, Quality of MIS, Business process reengineering.	[8]
5.	**Application of Management Information Systems:** Applications in manufacturing sector-personnel management, financial management, production management, raw material management, marketing management, applications in service sector, Decision support system.	[10]

Outcome(s): By learning the course, the students will be able to

- Learn MIS and enterprise and strategic management of business performance.
- Learn management information system and its application
- Develop and implementation of MIS

Text Books:

[1] W. S.Jawadekar, Management Information Systems, , New York, 4th ed, 2009..

Reference Books:

[1] J. A.O' Brien, Management Information Systems, McGraw-Hill, 2004.

[2] Davis G. B., and Olson M. H., Management Information Systems, Tata McGraw-Hill,1985.

CA 19. 610 **Mobile Computing** **3-0-0-3**

Total Lectures:40

Prerequisite(s):
- To learn GSM , HLR-VLR CDMA, GPRS
- To learn database management issues

Objective(s):
- To learn how mobile computing are different from others traditional computing by learning thoseaspects of mobile programming that make it unique from other platforms
- Program mobile applications for the Android operating system that use basic and advanced phone features.

1.	**Introduction:** Issues in mobile computing, overview of wireless telephony: cellular concept, GSM: air-interface, channel structure, location management: HLR-VLR, hierarchical, handoffs, channel allocation in cellular systems, CDMA, GPRS	[8]
2.	**Wireless Networking:** Wireless LAN Overview: MAC issues, IEEE 802.11, Blue Tooth,Wireless multiple access protocols, TCP over wireless, Wireless applications, data broadcasting, Mobile IP, WAP: Architecture, protocol stack, application environment, applications.	[8]
3.	**Data Management Issues**: Data replication for mobile computers, adaptive clustering for mobile wireless networks, File system, Disconnected operations.	[8]
4.	**Mobile Agents computing**: Security and fault tolerance, transaction processing in mobile computing environment.	[8]
5.	**Ad Hoc Networks**: Localization, MAC issues, Routing protocols, global state routing (GSR), Destination sequenced distance vector routing (DSDV), Dynamic source routing (DSR), Ad Hoc on demand distance vector routing (AODV), Temporary ordered routing algorithm (TORA),QoS in Ad Hoc Networks, applications.	[8]

Outcome(s):
- Understanding of Ad Hoc Networks and wireless networking and its applications
- Understanding of CDMA, GPRS

Text Books:
[1] J. Schiller, "Mobile Communications", Addison Wesley, 2003.
[2] S. T. Rappaport, Wireless communications: principles and practice. Vol. 2. New Jersey: prentice hall PTR, 1996.

Reference Books:

[2] Perkins Charles, "Ad hoc Networks", Addison Wesley,2001.

CA 19.634 **Software Engineering** **Total Lectures:40**

Credit:3-0-0-3

Prerequisite(s): NIL

Objective(s):

- To understand the basic software engineering approaches, software development process models, project planning, software size estimation, software effort and cost estimation and risk management.
- To know about software requirements specification, requirement elicitation, structured system analysis and introduction of object-oriented analysis and design, design techniques.
- To acquire knowledge on implementation issues such as modularity and coding standards.
- To learn coding style guidelines and standard and software testing, different type of testing strategies and their application in real time system.
- To study web based-system and application, software re-use, software re-engineering, agile software engineering, software engineering and testing tools.
- To develop teamwork and have project based experience.

1. **Introduction:** Software crisis, Software engineeringApproach and Challenges, Software development process models with comparison: Waterfall, Rapid Prototyping, Spiral, Iterative, V-shape and Evolutionary Model, SEI-CMM. [6]

2. **Software Processes and Requirement Analysis:** Software engineering: a layered technology requirement elicitation, requirement analysis, software requirement and specifications, data flow diagrams, data dictionaries, entity-relationship diagrams. Software Measurement, planning schedule, Risk management,Quality Assurance. [10]

3. **Software Design and Estimation Techniques:** Introduction to object-oriented design, Function and Object Oriented Design concepts, Verification and Validations, Software size and cost estimation Techniques: Size oriented Metrix, FPA and COCOMO. [8]

4. **Testing:** Software testing fundamentals, test case design, white box testing:-basis path testing, control structure testing, black box testing: boundary value analysis, equivalence class testing, decision table testing, cause effect graphing, debugging, testing tools & standards, testing for client/server architecture, [9]

5. **Special Topics:**Brief of software re-use, reverse engineering, software re-engineering, agile software engineering, CASE Tools. [7]

Outcome(s):

- Demonstrate knowledge of the distinction between critical and non-critical systems and ability to manage a project including planning, scheduling and risk assessment/management.
- Author a software requirements document and understanding of the proper contents of a software requirements document.
- Demonstrate proficiency of different life cycle models.
- Identify specific components of a software design that can be targeted for reuse.

Demonstrate proficiency in software development cost estimation, software testing plan and advanced topics of software engineering.

Text Books:

[1] R. S. Pressman, Software Engineering – A practitioner's approach,Tata-McGraw- Hill Int. Ed., 8th edition, 2014.

[2] K. K. Aggarwal, Yogesh Singh, Software Engineering, New Age International, 1st edition, 2008.

Reference Books:

[1] Pankaj Jalote, An Integrated Approach to Software Engineering, Narosa Publisher, 3rdedition, 2005.

[2] Rajib Mall, Fundamentals of Software Engineering, Prentice-Hall, 2ndedition, 2004

ELECTIVES

CA19.642 **Digital Image Processing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CA19.103 (C-Programming)

Objective(s):

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To study the image segmentation and representation techniques
- To study the image representation in form of features and descriptors

1. **Digital Image Fundamentals:** Elements of digital image processing systems, elements of visual perception, brightness, contrast, hue, saturation, mach band effect, color image fundamentals - RGB, HSI models, image sampling, quantization, dither, two-dimensional mathematical preliminaries, 2D transforms - DFT, DCT, KLT, SVD. [8]
2. **Image Enhancement and Restoration:** Histogram equalization and specification techniques, noise distributions, spatial averaging, directional smoothing, median, geometric mean, harmonic mean, contra harmonic mean filters, image restoration - degradation model, unconstrained restoration, inverse filtering, removal of blur caused by uniform linear motion. [8]
3. **Morphological Image Processing:** Basics, structuring element, erosion, dilation, opening, closing, hit-or-miss transform, boundary detection, hole filling, connected components, convex hull, thinning, thickening, skeletons, pruning, and reconstruction by dilation and erosion. [8]
4. **Image Segmentation:** Edge detection, edge linking via Hough transform, thresholding, region based segmentation, region growing, region splitting and merging, and segmentation by morphological watersheds, basic concepts, dam construction, and watershed segmentation algorithm. [8]
5. **Image Representation:** Boundary representation, chain code, polygonal approximation, signature, boundary segments, boundary description, shape number, Fourier descriptor, regional descriptors, and topological features. [8]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the basic algorithms used for image processing &image compression with morphological image processing.
- Apply image enhancement and restoration techniques.
- Use image compression and segmentation Techniques.
- Represent features of images.

Text Books:

.

CA 19. 644 **Artificial Intelligence** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Nil

Objective(s):

- To understand the basic problem solving in Artificial Intelligence.
- To learn different blind as well as heuristic search strategies.
- To understand the various ways of knowledge representation in Artificial Intelligence.

1	**OverviewofA.I.:**IntroductiontoAI,ImportanceofAI,AIanditsrelatedfield,AI techniques.	[4]
2	**Problem space and search:** Defining the problem as a state space search, Production system and its characteristics, Issues in the design of the search problem.	[6]
3	**Heuristic search techniques:** Generate and test, hill climbing, best first search technique, problem reduction, constraint satisfaction	[7]
4	**Game Playing and Predicate Logic:** Minimax, alpha-beta pruning. Predicate logic definition, representation of simple facts in logic, well-formed formula, resolution.	[11]
5	**Knowledge representation and Learning:** Definition and importance of knowledge, Knowledge representation, Various approaches used in knowledge representation, Issues in knowledge representation.Introduction to learning, Types of learning, Introduction to neural networks.	[12]

Outcome(s): On successful completion of this course, students will be able to

- Solve the basic problems and apply searching techniques used in Artificial Intelligence.
- To select knowledge representations to solve AI problems.
- Apply various game playing algorithms.

Text Books:

[1]. R. Elaine and K. Knight, Artificial Intelligence, 3rd ed., Tata McGraw Hill, 2012

[2]. D. W. Patterson, Introduction to AI and Expert Systems, PHI, 1999

CA19.646 **Parallel Processing** **3-0-0-3**

Total Lectures: 40

Prerequisite(s): CA 19.201(Computer Architecture)

Objective(s):

- To understand parallel processing and Array processing and their applications
- To understand multiprocessors and multicomputer
- To understand parallel programming languages

1.	**Parallel Processing:** Introduction, data and control parallelism,(concurrency, scalability,speedup, Amolahl's Law), PRAM model of parallel computation, parallel algorithm design	[8]
2.	**Multiprocessors andMulticomputers:** Processor organization, shared memory and message passing systems, message passing interface programming with respect to PARAM 10000.	[9]
3.	**Array Processing:** SIMD array processing, communications, SIMD interconnectionnetworks, algorithms for array processing.	[8]
4.	**Applications:** Parallel algorithms for matrix multiplication, fast Fourier transform, linearsystems, sorting, numerical integration, and optimization.	[7]
5.	**Parallel Programming Languages:** C, C++ and high performance FORTRAN.	[8]

Outcome(s):

- Understanding of parallel processing and array processing
- Understanding of multiprocessors and multicomputers
- Understanding programs of parallel programming languages.

ET 19.471 **Cloud Computing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s): To learn how to use cloud services.
To implement virtualization and task scheduling

1	**Overview of Cloud Computing:** Brief history and evolution - history of cloud computing, evolution of cloud computing, traditional vs. cloud computing, cloud service models (IaaS, PaaS & SaaS), cloud deployment models (public, private, hybrid and community cloud), benefits and challenges of cloud computing, introduction to AWS public cloud vendor, cost optimization in AWS, basics of virtualization, virtualization technologies, server virtualization, VM migration techniques, role of virtualization in cloud computing, introduction to EC2 service of AWS.	[10]
2	**Working with Private Cloud:** Private cloud definition, characteristics of private cloud, private cloud deployment models, private cloud vendors - CloudStack, OpenStack, Eucalyptus Microsoft, private cloud – benefits and challenges, private cloud implementation in Amazon EC2 service.	[8]
3	**Working with Public Clouds:** What is public cloud, why public cloud, when to opt for public cloud, public cloud service models, public cloud players, infrastructure as a service offering, IaaS vendors, PaaS offerings, PaaS vendors, software as a service, demonstrating public cloud with AWS – storage and database services, private vs. public cloud – when to choose.	[10]
4	**Overview of Cloud Security:** Explain the security concerns in traditional IT, introduce challenges in cloud computing in terms of application security, server security, network security, security reference model, abuse and nefarious use of cloud computing, insecure interfaces and APIs, malicious insiders, shared technology issues, data loss or leakage, account or service hijacking, unknown risk profile, shared security model between vendor and customer in IaaS/PaaS/SaaS, implementing security in AWS.	[8]
5	**Future directions in Cloud Computing:** When and not to migrate to cloud, migration paths for cloud, selection criteria for cloud deployment, issues/risks in cloud computing, future technology trends in cloud computing.	[4]

Outcome(s):

On successful completion the students will be able to:

- Analyze the cloud computing setup with its vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds.

2. Nick Antonopoulos and Lee Gillam, “Cloud computing: Principles, Systems and Applications”, Springer, 2010.

Reference Books:

1. Anthony T Velte, Toby J Velte and Robert Elsenpeter, “Cloud Computing: A Practical Approach”, McGraw Hill, 2010
2. BorkoFurht and Armando Escalante (Editors), “Handbook of Cloud Computing”, Springer, 2010
3. Judith Hurwitz, Robin Bllor, Marcia Kaufman and Fern Halper, “Cloud Computing for Dummies”, John Wiley & Sons, 2010.

Labs

CA 19.626 **Software Engineering Laboratory** **Credit:0-0-4-2**

Prerequisite(s): CA 19.103(C-Programming)

Objective(s):

- Studying various phases of software development life cycle.
- Problem definition of any system (e.g. ATM system,health care, airlines, banking, insurance, retail, education or latest systems).
- Feasibility study of the system.
- Identifying the requirements from problem statements(IEEE Std:830-1993)
- Requirements, categorization of requirements, functional requirements, identifying functional requirements, nonfunctional requirements.
- data flow diagram, graphical notations for data flow diagram, explanation of symbols used in DFD, context diagram and leveling DFD.
- Entity Relationship Model, entity set and relationship set , attributes of entity ,keys ,ER diagram ,graphical notations for ER , estimation of projects, project metrics.
- Project estimation techniques ,COCOMO , Calculate effort using FP oriented estimation model , LOC based estimation for size oriented metrics
- Designing test suites, unit testing, integration testing, system testing, black box testing, and white box testing.
- Use some of the tools that are used in the different software development stages.

Contents:

Lab manual based upon the theory course CS 14.302 and to achieve the listed course Objectives and outcomes.

Outcome(s): **On successful completion of this lab, students will be able to**

- Plan a software engineering process life cycle (SDLC Models) , including the specification, design, implementation, and testing of software systems that meet specification, performance,
  maintenance and quality requirements
- Elicit, analyze and specify software requirements through a productive working relationship with various stakeholders of the project.
- Analyze and translate a specification into a design, and then realize that design practically, using an appropriate software engineering methodology and students are also able to calculate the approximate cost, time estimation of the project or system.
- Develop the code from the design and effectively apply relevant standards and perform testing, and quality management and practice, and students are also able to remove some errors, bugs, of the project or system.
- Use modern engineering tools necessary for software project management, time management.
- Apply software engineering principle for developing real life web and mobile applications.

CA19.628 **Mobile Application Development Laboratory** **0-0-4-2**

Prerequisite(s): **CA 19.103(C-Programming)**

Objective(s):

- **To learn mobile app development**
- **To learn SQLite**

Contents: **To Implement**

1. Android setting up development environment:Dalvik Virtual Machine & .apk file extension
2. Fundamentals: Basic Building blocks - Activities,Services, Broadcast Receiver Receivers & Content providers, UI Components - Views & notifications, Components for communication -Intents & Intent Filters, Android API levels (versions & version names)
3. Emulator-Android Virtual Device: Launching emulator, Editing emulator settings, Emulator shortcuts, Logcat usage, Introduction to DDMS, Second App:- (switching between activities),Develop an app for demonstrating the communication between Intents
4. Basic UI design: Form widgets,Text Fields, Layouts [dip, dp, sip, sp] versus px, Menu, Option menu, Context menu, Sub menu, menu from xml, menu via code
5. Intents (in detail): Explicit Intents, Implicit intents, Examples
6. Styles & Themes: Styles.xml o drawable resources for shapes, gradients (selectors),style attribute in layout file, Applying themes via code and manifest file
7. SQLite Programming:SQLiteOpenHelper, SQLiteDatabse, Cursor, Reading and updating Contacts,Reading bookmarks
8. Notifications: Broadcast Receivers, Services and notifications, Toast, Alarms

Outcome(s):

- To develop mobile applications using android environment
- To understand and implement programs using SQLite

3rd Year MCA Autumn Semester

CA 19.715 **Computer Graphics** **3-1-0-4**

Total Lectures: 40

Prerequisite(s): CA 19.103 (C-Programming)

Objective(s):

- To introduce the students with the graphics mode, with the help of basic algorithms and methodologies.
- The objective of the course is to equip students with fundamental knowledge and basic technical competence in the field of computer graphics.
- Provide an understanding of how a computer draws the fundamental graphics primitives.
- To learn Computer Graphics methodologies/Algorithms and techniques.

1	**Basic Concepts:** Application Areas of Computer Graphics, Graphical User Interface, RGB Color model, CMY color models, Advantages of Computer Graphics.	**[8]**
2	**Graphics Hardware:** Random Scan Displays, Raster Scan Display (with Introduction to Flickering, Interlacing, American Standard Video), Color CRT Monitors, Flat Panel Display (Plasma Panel, Liquid Crystal Display, Electroluminescent Display).	**[7]**
3	**Raster Graphics Algorithms:** Line Drawing Algorithms-DDA, Bresenham's Algorithm, Circle and Ellipse Drawing Algorithms, Filling (Scan-Converting Polygon Filling, Inside Outside Tests Boundary Fill and Area Fill Algorithm). Cohen- Sutherland Algorithm of clipping.	**[12]**
4	**Transformations:** 2-D Transformations (Rotation, Reflection,Shearing, Scaling), Homogeneous Coordinate Representation, and Translation.	**[8]**
5	**Animation Introduction:** Conventional and Computer-Assisted Animation, Animation languages, methods of controlling Animation, basic rules of Animation.	**[5]**

Outcome(s): On successful completion of this course, students will be able to

- Understand basic concepts of computer graphics.
- Acquire knowledge about drawing basic shapes such as lines, circle ellipse, polygon.
- Perform processing of basic shapes by various processing algorithms /techniques.
- Implement two dimensional transformations.

Text Books:

[2]. D. F. Rogers, Procedural Elements for Computer Graphics, 2nd ed., Tata McGraw Hill Publications, 2001.

CA 19.709 **Distributed Systems** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): CA 19.102(Operating Systems), CA 19.204 (Computer Networks)

Objective(s): To make students aware of:

- What a distributed system is, its example, use and utilities.
- Hardware and software requirements/constraints for implementation of distributed systems.
- Abstractions like, RMI, distributed objects, RPC, distributed shared memory etc.
- Notion of time in a distributed system.
- Databases in a distributed system.

1. **Characterization of Distributed Systems:** Definition, distributed systems-Internet, intranet, mobile, ubiquitous computing, resource sharing and World Wide Web challenges-heterogeneity, openness, security scalability failure handling concurrency and transparency. [8]
2. **System Models:** Architecture models- software layers, system architecture, variations on client-server model, interfaces, design requirement for distributed architectures, fundamental and interaction models, and failure and security models. [8]
3. **Distributed Object and Remote Invocation:** Introduction to remote method invocation (RMI) and interface in distributed systems, communication between distributed objects-objects model, distributed objects, distributed objects model and design issues for RMI, implementation of RMI and distributed garbage collection, remote procedures call. [8]
4. **Time and Global State:** Clocks, events and process states, synchronizing physical clocks-synchronization in a synchronous system, Cristian method for synchronizing clocks, Berkley algorithm, network time protocol, global state and consistent cuts. [8]
5. **Distributed Shared Memory:** Introduction, message passing versus DSM, implementation approaches to DSM, design and implementation issues-structure and synchronization model. [8]

Outcome(s): On successful completion of the course the student will be able to:

- Understand the concept of distributed systems.
- Explain the principles underlying the functioning of distributed systems as well as how these principles are applied in distributed systems.
- Comprehend the problems and challenges of distributed systems.
- Understand and estimate the impact of different design choices, system features on distributed systems.

Text Books:

[1] Colouris, “Distributed Systems Concepts and Design”, Addison Wesley, 5th edition, 2011.
[2] George Coulouris, Jean Dollimore, Tim Kindberg, Gordon Blair,"Distributed Systems" , Pearson Education Limited, 2013

Reference Books:

CA 19.711 **Data Mining and Warehousing** **3-0-0-3**

Prerequisite(s): **NILTotal Lectures:40**

Objective(s):

- **To learn data mining and warehousing and knowledge base**
- **To learn data marts OLAP**

1. **Overview:** Concept of data mining and warehousing, data warehouse roles and structures, cost of warehousing data, roots of data mining, approaches to data exploration and data mining, foundations of data mining, web warehousing, web-warehousing for business applications and consumers, introduction to knowledge management, data warehouses and knowledge bases. [8]
2. **Data Warehouse:** Theory of data warehousing, barriers to successful data warehousing, bad data warehousing approaches, stores, warehouse and marts, data warehouse architecture, data about data - metadata, metadata extraction, implementing the data warehouse, data warehouse technologies. [8]
3. **Data Mining and Data Visualization:** Data mining, OLAP, techniques used to mine the data, market basket analysis, current limitations and challenges to DM, data visualization. [8]
4. **Designing and Building the Data Warehouse:** Theenterprise model approach of data mining design, data warehouse project plan, analysis and design tools, data warehouse architecture, specification and development. [8]
5. **Web-Based Query and Reporting:** Delivering information over the web, query and reporting tools and business value, architectural approaches to delivering query capabilitiesover the web. Web Based Statistical Analysis and Data Mining: Analytical tools, business value from analytical tools, [8]

Outcome(s):

- To understand data mining and data warehousing
- To understand and use tools for data mining

Text Books:

[1] Marakas G. M., "Modern Data Warehousing, Mining and Visualisation", Pearson Education Asia, 2003.
[2] Mattison R., "Web Warehousing and Knowledge Management", Tata McGraw-Hill,2002.

Reference Books:

ELECTIVES

CA 19.741 **Design and Analysis of Algorithms** **Total Lectures: 40Credit:3-0-0-3**

Prerequisite(s): CA-19.209(Discrete Mathematics), CA-19.104 (Data Structures)

Objective(s):

- To learn the algorithm analysis techniques.
- To become familiar with the different algorithm design techniques.
- To understand the limitations of the algorithms power.

1. **Introduction:** Fundamentals of algorithms and problem solving, asymptotic notations, time complexity and analysis of algorithms, solutions of recurrence relations, master theorem and summations techniques. [8]
2. **Analysis of Sorting and Searching Algorithms:** Linear, binary and interpolation search, insertion, selection, merge, quick and heap sort, stability and other issues, hashing. [8]
3. **Algorithm Design Approaches:** Greedy method (knapsack problem, job sequencing problem), dynamic programming (assembly line scheduling, matrix chain multiplication), backtracking (8 queens problem, sum of subsets), branch and bound (0/1 knapsack problem), divide and conquer algorithms (Strassen matrix multiplication), problems based on these design paradigms. [8]
4. **Tree and Graph algorithms:** Spanning trees, Prim and Kruskal's algorithm, Huffman coding, BFS and DFS, disjoint set operations, connected components, shortest path algorithms in a graph such as Dijkstra, Bellman Ford, Warshall's etc. [8]
5. **Complexity Classes:** P,NP,NP hard and NP complete problems, reducibility, decision and optimization problems, examples of NP complete problems such as 3 CNF, clique, vertex cover and traveling salesman problem, basic introduction of approximation algorithms. [8]

Outcome(s): On the successful completion of the course, the student will be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.
- Modify existing algorithms to improve efficiency.

Text Books:

[1] Thomas H.Cormen, Charles E.Leiserson, Ronald L. Rivest and Clifford Stein, Introduction to Algorithms, PHI Learning Private Limited, 3rd edition, 2016.

CA 19.745 **Compiler Design** **Total Lectures:40**
Credit: 3-0-0-3

Prerequisite(s): NIL

Objective(s):

- To introduce the major conceptual areas of language translation and compiler design.
- To enrich the knowledge in various phases of compiler, code optimization techniques
- To extend the knowledge of different parsers.
- To provide practical programming skills necessary for construction of a compiler.

1. **Introduction:** Introduction of compiler, compiler structure: analysis-synthesis model of compilation, various phases of a compiler, Symbol table: Role and data structure used for symbols tables .Lexical Analysis: Input buffering, specification & recognition of tokens, error detection &recovery . [8]
2. **Syntax Analysis & Syntax Directed Translation:** Syntax analysis: CFGs, top down parsing, Brute force approach, recursive descent parsing, transformation on the grammars, predictive parsing, bottom up parsing, operator precedence parsing, LR parsers (SLR, LALR, LR), parser generation error detection & recovery. [9]
3. **Syntax Directed Definition**: Construction of syntax trees, bottom up evaluation, S-attribute definition, L-attribute definition, top down translation, bottom up evaluation of inherited attributes, recursive evaluation, analysis of syntax directed definition. [8]
4. **Intermediate Code Generation:** Intermediate code, postfix notation, parse trees & syntax trees, three address code, quadruple & triples, translation of assignment statements, Boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser, more about translation: array references in arithmetic expressions, procedures call, declarations, case statements. [8]
5. **Code Optimization & Code Generation:** Loop optimization, the DAG representation of basic blocks, flow graphs, global data-flow analysis, peephole optimization, generating code from DAG, register allocation and assignment. [7]

Outcome(s): On successful completion of this course, the students will be able to

- Use lexical analyzer and parser generator tools.
- Generate intermediate code.
- Be familiar with register allocation.
- Expose compiler code optimization.

Text Books:

1. A. V. Aho, R. Sethi, and J. D. Ullman. Compilers: Principles, Techniques and Tools, Pearson Education, 2nd edition, 2014.

3. J. R. Levine, T. Mason, D. Brown, Lex and Yacc, O'Reilly, 2nd edition, 2000.

CA 19.747 **Neural Network** **3-0-0-3**

Total Lectures:40

Prerequisite(s): CA 19.603(Design and Analysis of Algorithms)

Objective(s):

- To understand neural network and its algorithms
- To understand competitive learning neural network
- To understand activation and synaptic dynamics

1.	**Introduction :** Features , structure and working of Biological Neural Network Trends in Computing Comparison of BNN and ANN, History of neural network research, characteristics of neural networks terminology, models of neuron McCulloch – Pitts model, Perceptron, Adaline model, Basic learning laws, Topology of neural network architecture.	[8]
2.	**Back Propagation Networks :** Architecture of feed forward network, single layer ANN, multilayer perceptron, back propagation learning, input - hidden and output layer computation, backpropagation algorithm, applications, selection of tuning parameters in BPN, Numbers of hidden nodes, learning	[8]
3.	**Activation and Synaptic Dynamics :** Introduction, Activation Dynamics models, synaptic Dynamics models, stability and convergence, recall in neural networks.	[5]
4.	**Basic functional units of ANN for pattern recognition tasks:** Basic feedforward, Basic feed back and basic competitive learning neural network. Pattern association, pattern classification and pattern mapping tasks.	[8]
5.	**Competitive learning neural networks :** Components of CL network pattern clustering and feature mapping network, ART networks, Features of ART models, character recognition using ART network. Applications of ANN :Pattern classification – Recognition of Olympic games symbols, Recognition of printed Characters. Neocognitron.	[11]

Outcome(s):

- Understanding of neural network and its algorithms
- Understanding of ART model and use that network.

Text Books:

[1] b. Yegnanarayana., “Artificial Neural Networks”, PHI,1999
[2] S. R. Sekaran , P. Vijayalakshmi, “Neural networks, Fuzzy logic and Genetic Algorithms”, PHI.

Reference Books:

[1] 1 S. Kumar, “Neural Networks”, PHI, 2013.

CS 19.362 **Mobile App Development** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s):

- To learn how mobile apps are different from other traditional apps by learning those aspects of mobile programming that make it unique from other platforms.
- Program mobile applications for the Android operating system that use basic and advanced phone features.
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout, UI elements, Drawable, Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and SMS APIs native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access (via Internet/Intranet)	[14]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobile apps, distributing apps on mobile market place.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

Text Books:

1. Barry Burd, Android Application Development All in One for Dummies, Johen Wiley & Sons Inc., 2011.
2. Anubhav Pradhan, Anil V Deshpandy, Mobile App Development, Edition I

Reference Books:

RM 19.101 **Research Methodology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. **Introduction**: Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches,ResearchProcess,ValidityandReliabilityin Research. [6]
2. **ProblemFormulation**:Identification,Selection andFormulation ofa ResearchProblem, Criteria ofagoodResearchProblem,Reviewof Literature, Research Gaps. [10]
3. **Research Design**:ResearchFramework, Meaning &SignificanceofResearchDesigns,Featuresofa goodResearch Design, Types of Research Design. [10]
4. **Data Analysis and Simulation Tool**:TypesofData,Sources of Data, Methods of CollectingData,DataPresentation Techniques.Methodsof DataAnalysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. **ReportWriting**:Types of Reports,Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:

1. R.Pannershelvam, "ResearchMethodology" PrenticeHall India, New Delhi, 2nd Edition, 2013.
2. C.R.Kothari,"ResearchMethodology: MethodsandTechniques",New Age International (p) Limited,Publishers New Delhi, 4ndedition,2018.

2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

labs

CA 19.725 **Computer Graphics Laboratory** **0-0-4-2**

Objective(s):

- To introduce the students with the graphics mode, with the help of basic algorithms and methodologies.
- The objective of the course is to equip students with fundamental knowledge and basic technical competence in the field of computer graphics.
- Provide an understanding of how a computer draws the fundamental graphics primitives.
- To learn Computer Graphics methodologies/Algorithms and techniques and their implementations.

Contents:

Introduction to computer graphics graphics systems Testing

- Demonstration of graphics display devices, IO devices.
- Initialization of graphic in 'C'.
- Use of graphics primitives – line, circle, rectangle, arc, etc.

Scan conversion Testing

- Line drawing algorithms (DDA, Bresenham, mid-point).
- Circle generation algorithm (Bresenham, mid-point)
- Ellipse generation algorithm
- Filling algorithm (boundary fill, flood fill, scan line polygon fill)

2D & 3D transformation Testing

- Translation
- Rotation
- Scaling
- Reflection
- Shearing

2D viewing & clipping Testing

- Line clipping algorithm (Cohen Sutherland, Liang Barsky)
- Polygon clipping (Sutherland Hodgeman, Weiler and Atherton)

Outcome:

- To implement concepts of computer graphics.
- To draw basic shapes such as lines, circle ellipse, polygon.
- Perform processing of basic shapes by various processing algorithms /techniques.
- Implement two and three dimensional transformations.
- Implement algorithms of clipping.

CA 19.727 **PHP Laboratory**

Credit:0-0-4-2

.

Prerequisite: Programming Language Laboratory

Objectives: Theobjectiveof this course is to:

- Become comfortable with PHP programming, starting from basics of data types to deep learning.
- Provide the foundation of to explore any expansions of PHP whether it is machine learning, deep learning, web development or gaming.

Contents:

- Code different data types and operations.
- Code basic programs like factorial, Fibinocci etc. to understand functions and recursions.
- Implement different built-in functions in PHP
- Code programs to implement web sites.
- Implement regular expressions
- Implement a small gaming application.
- Implement user interface.

Outcomes: Upon completion ofthis course, students will be:

- Able to develop application in PHP
- Able to develop Web Site
- Able to use PHP to implement a given logic.

Mody University of Science & Technology, Lakshmangarh (Sikar)

College of Engineering & Technology

Course structure for

PhD

CS 702 **Advances in Computer Science and Engineering** **Total Lectures: 52**
4-0-0-4

Prerequisite(s): Knowledge of core subjects of computer science and engineering.

Objective(s): To strengthen the knowledge of core subjects of computer science and engineering.
To provide research orientation to the students and latest developments in core areas.

1. **Digital Computer Organization and Architecture:** Boolean algebra, Combinational and sequential circuits. Minimization, Number representations and computer arithmetic (fixed and floating point), Machine instructions and addressing modes, ALU, data-path and control unit, Instruction pipelining, memory hierarchy: cache, main memory and secondary storage; I/O interface (interrupt and DMA mode). [10]
2. **Data Structures and Algorithms:** Arrays, stacks, queues, linked lists, trees, binary search, trees, binary heaps, graphs, recursion, searching, sorting, hashing, asymptotic worst case time and space complexity, algorithm design techniques: greedy, dynamic programming and divide-and-conquer, graph search, minimum spanning trees, shortest paths, programming in C. [10]
3. **Theory of computer science and compiler design:** Regular expressions and finite automata, context-free grammars and push-down automata, regular and context-free languages, pumping lemma, Turing machines and undecidability, compiler design: lexical analysis, parsing, syntax-directed translation, runtime environments, intermediate code generation. [10]
4. **Operating System:** Processes, threads, inter-process communication, concurrency and synchronization, deadlock, CPU scheduling, memory management and virtual memory, file systems. [6]
5. **Databases:** ER-model, relational model: relational algebra, tuple calculus, SQL, Integrity constraints, normal forms, file organization, indexing (e.g., B and B+ trees), transactions and concurrency control. [6]
6. **Computer Networks:** Concept of layering. LAN technologies (Ethernet), flow and error control techniques, switching. IPv4/IPv6, routers and routing algorithms (distance vector, link state), TCP/UDP and sockets, congestion control, Application layer protocols (DNS, SMTP, POP, FTP, HTTP), basics of Wi-Fi, network security: authentication, basics of public key and private key cryptography, digital signatures and certificates, firewalls. [10]

Outcome(s): This course supports the achievement of the following outcomes:

1. Ability to apply knowledge of advanced principles of computing to the analysis of computer engineering problems.
2. Ability to apply the appropriate industry practices, emerging technologies, state-of-the-art design techniques, software tools, and research methods for solving engineering problems.
3. Ability to maintain life-long learning and continue to be motivated to learn new subjects.

Reference Books:

1. M. Morris Mano, "Computer System Architecture", Pearson Education, 3rd edition, 2008.
2. Thomas H. Cormen, "Introduction to Algorithms", PHI, 3rd edition, 2012.
3. John E. Hopcroft, Rajeev Motwani, J D Ullman, "Introduction to Automata Theory, Languages and Computation", Pearson, 3rd edition.
4. A V Aho, R Sethi, J D Ullman, "Compilers: Principles, Techniques and Tools", Pearson, 2nd edition, 2014.
5. Galvin, Silberschatz, Gagne, "Operating System Concepts", Wiley India, 9th edition, 2015.
6. Navathe, "Fundamentals of Database Systems", Addison Wesley, 5th edition, 2007.
7. Tanenbaum, "Computer Networks", PHI, 4th edition, 2002

EC702 Advances in Electronics & Communication Engineering **Total Lectures:52**

3-1-0-4

Objective: The course focuses on the basic theory and techniques used in the area of digital signal processing, VLSI design, Microwave Engineering, Antenna & Wave Propagation and Digital Data communication. It also offers a profound understanding of the design, analysis and applications of some complex circuits and devices with the help of computer aided simulation and synthesis tool for hardware design.

Prerequisite:
Basic understanding of core engineering courses given in the syllabus, is required.

VLSI Design Technology

MOS modeling and performance parameters, Design aspects: Review of MOS transistor models , Concept of Scaling and deep submicron VLSI design, Low Power VLSI design, Issues related to high speed VLSI Design (CMOS technology), New trends in Digital VLSI design, Example of Mixed VLSI Design, Advanced Testing and Verification Approaches, Wafer cleaning processes and wet chemical etching techniques. Introduction to hardware description languages (VHDL), logic, circuit and layout verification. MEMS **[10]**

Microwave & Radar Engineering

Maxwell's Equation, Wave Equation and Boundary conditions, Transmission lines, Microwave Passive Components, Measurements of Wavelength, Frequency, Impedance, SWR etc., Q of Cavity, Microwave Linear Beam Tubes, Reflex Klystron. Traveling Wave Tube, Transferred Electron Devices, Principle of operation of Radar, Radar equation, CW and Frequency Modulated Radar, MTI and Pulse Doppler Radar **[12]**

Antenna & Wave Propagation

Introduction of Antenna & its parameters. Reciprocity theorem, Review of microwave antennas- Parabolic Reflector, Cassegrain feeds, Horn Antennas, Open-ended wave guides, lens antennas, Dielectric rod Antennas, Antennas for mobile communication. Frequency- independent antennas, Scattering and diffraction. Internal-equation methods, current distribution: Self and mutual impedances. **[10]**

Digital Data Communications

Local Area networks:- token ring, Ethernet, Traditional, Fast and GIGA bit Ethernet, FDDI, DIGITAL MULTIPLEXING :- TDM , T1 carrier , CCITT , CODECS, COMBO CHIPS , North American Hierarchy , Line Encoding , T-carrier , Frame Synchronization Inter Leaving Statistical TDM FDM , Hierarchy ,Wave Division Multiplexing . **[10]**

Signal Processing

Multi-rate Digital Signal Processing: Introduction, Decimation by a Factor D, Interpolation by a Factor I, Sampling Rate Conversion by a Rational Factor I/D, Filter Design and Implementation for sampling rate Conversion. Linear Prediction And Optimum Linear Filters: Forward and backward linear prediction; Properties of the linear prediction – error filters; Applications of linear prediction., Solution of the Normal Equations, Properties of linear prediction-Error Filter, AR Lattice and ARMA Lattice-Ladder Filters. Power Spectral Estimation: Principle and traditional methods of spectral estimation; Modern methods of parametric estimation; Applications of spectral analysis,. **[10]**

Course Outcomes:

This course supports the achievement of the following outcomes:

1. Ability to apply knowledge of advanced principles to the analysis of electrical and computer engineering problems.
2. Ability to apply the appropriate industry practices, emerging technologies, state-of-the-art design techniques, software tools, and research methods for solving engineering problems.
3. Ability to use the appropriate state-of-the-art engineering references and resources, including IEEE research journals and industry publications, needed to find the best solutions to electrical and computer engineering problems.
4. Ability to maintain life-long learning and continue to be motivated to learn new subjects.
5. Ability to be competitive in the engineering job market.

Text books

1. R.E Collin, "Antennas & Radio Wave Propagation", Mc-Graw Hill
2. D M Pozar,"Microwave Engineering", JohnWilley & Sons
3. Proakis, Rader, Ling, and Nikias, Advanced digital signal processing, Macmillan, 1992
4. John P. Uyemura : Introduction to VLSI Circuits and Systems, John Wiley & Sons,Inc, 2002
5. Electronic communication systems, fundamentals through advanced - W. TOMASI, Pearson 4th Edition.
6. Introduction to Radar, M. I. Skolnik, McGraw Hill.

Reference books

2. Data communication and networking - B.A. Forouzen
3. Kin. Lu. Wong, "Compact and Broadband Microstrip Antenna", John Wiley & Sons
4. S. Stergiopoulos (editor), "Advanced Signal Processing Handbook: Theory and Implementation for Radar, Sonar, and Medical Imaging Real-Time Systems", CRC Press LLC, 2001.
5. Neil Weste and David Harris, "CMOS VLSI Design ", 4thEd., Addison Wesley, 2011.

EE 702 **Advances in Electrical Engineering** **Total Lectures: 52**

4-0-0-4

Objective: To provide an exposure on the basic principles and techniques used in the area of ultra-capacitor, control systems and its sliding modes control, Smart Grid, Renewable Energy Integration. It also offers a profound understanding of the design, analysis and applications of Smart Grid, Renewable Energy integration with the help of computer aided simulation and synthesis tools / ETAP Software.

Pre-requisite: Basic understanding of core engineering courses given in the syllabus is required.

1. **Ultra- Capacitor:** Introduction, History, Basic principles of Ultracapacitors, Principles and energy storage mechanism, EC vs. Aluminum (Al) electrolytic capacitors, Capacitors vs. batteries, Benefits and limitations of Ultracapacitors, Ultracapacitor vs. Flywheels, Applications, Cell voltage, Comparison with battery or other energy storage devices, Cost of EC capacitors, Electrochemical Double Layer Capacitor: basic construction, Components of Ultracapacitor, EC capacitor sizes, Future of energy storage industry, Uninterruptible power supply and backup power. [8]
2. **Applications & Future Scenario of Ultra- Capacitor:** Modern day applications of Ultra capacitor, Future application growth, New material developments, Cost reduction, Ultra capacitor may overtake batteries, Market trends, ultra capacitors in the grid, Vehicular applications, Ultra capacitors in wind turbines, Water Desalination/Purification, New Ultra capacitor work at constant voltage, Electrochemical flow Ultra capacitor, Micro Ultra capacitor, Ultra capacitor for resistance welding. [8]
3. **Advanced control systems :** Introduction, Intuitive theory of sliding mode control, Sliding Surface, sliding mode, concept of equivalent control, sliding mode equations, sliding mode observer/differentiator, second order sliding mode. [7]
4. **Classical sliding modes:** Introduction, state feedback sliding mode control: Regular form, Eigen valve placement, quadratic minimization. State feedback control laws design: Single input system, multi-input system, unmatched uncertainty, output tracking with integral action. Output based hyper plane design, control law development. Integral sliding mode control: Problem formulations, control design objective, ISM control design. [8]
5. **Smart Grid:** Introduction, Characteristics of Smart Grid, Traditional Grid Versus Smart Grid, Evolution of Smart Grid, Components of Smart Grid, The Environmental Impacts of Smart Grid, Technologies Required for Smart Grid. [8]
6. **Renewable Energy Integration:** Introduction, Solar Energy, Wind Energy, Distributed Energy Resources Integration Challenges, Forecasting and Scheduling, Impacts of Renewable Energy into the Grid. [8]
7. **Smart Meter:** Details Description of Smart Meter, Benefits of Smart Meter, Technical Configurations of Smart Meter, Components of Smart Meter Network in Distribution System, Characteristics, Communication Protocols. [5]

Course Outcomes: This course helps our students to apply the knowledge of advanced principles, state of -the-art design techniques, software tools, and research methods for solving challenges of Smart Grid, Renewable Energy Integration and ultra capacitor.

Text Books:

1. R. P. Deshpande, "Ultra -capacitors: Future of Energy Storage", Mc-Graw Hill Education.
2. C-Edwards & S.K. Spurgeon, "Sliding mode control: Theory & Application", Taylor & Francis, 1998.

3. Shawkat Ali A. B. M., Smart Grids Opportunities, Developments and Trends, Springer-Verlag, London , 2013

Reference Books:

1. B. E. Conway, "Electrochemical Super capacitors: Scientific Fundamentals and Technological Applications", Kluwer Academic / Plenum Publishers (1999)
2. Utkin V.I., "Sliding modes in control & optimization", Springer-verlay, 1992.
3. Momoh James., Smart Grid Fundamentals of Design and Analysis, John Wiley &Sons, Inc., Hoboken, New Jersey, 2012

ET 901 **Research Methodology** **4-0-0-4**

1. **Introduction:** meaning of research, objectives, motivation for research, types of research, research approaches, research process, validity and reliability in research. [02]

2. **Problem formulation:** identification, selection & formulation of a research problem, objectives of formulation, criteria of a good research problem, review of literature. [03]

3. **Research design:** research framework, meaning & significance of research designs, features of a good research design, types of research design. [04]

4. Data for research: types of data, sources of data, methods of collecting data, data presentation techniques. Methods of data analysis. [10]
*Use of SPSS and MATLAB tools for data analysis.

5. **Mathematical background for research:** approaches to probability, probability distributions; binomial, Poisson, uniform, exponential and normal distributions. Review of basic statistical measures; measures of central tendency, measures of variation. Sampling methods, correlation analysis, simple regression, multiple regression, time series analysis, cluster analysis, clustering techniques. Queuing theory; introduction, simple Markovian queuing models. [10]

6. **Algorithmic Research:** introduction, types of algorithmic research problems, types of solution procedures, steps of development of algorithm. [04]

7. **Simulation:** introduction, need for simulation, simulation analysis of a case study. [03]

8. **Thesis writing:** format; general format of cover page, dedication, certificate, declaration, acknowledgement, abstract, list of contents, list of figures, list of tables, appendices, and references. Contents of thesis; background to research, literature review, problem statement, objectives of research, rationale for the study, motivation to the study, methods, definitions, research models, research design & analysis, results, findings, implications, contributions, significance of research, future directions, and conclusion. [04]
*Practical classes to be taken.

Reference Books.

1. Mr. R. Pannershelvam, "Research Methodology", Prentice Hall India, 2006.
2. Mr. C. R. Kothari, "Research Methodology : Methods and Techniques", Second edition, New Age International Publishers, 2006.
3. Mr. Ranjit Kumar, “Research Methodology: A step by step guide for beginners” , Second edition, Pearson, 2006

ME 702 **Advances in Mechanical Engineering** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite(s): M.Tech./M.E. or equivalent degree in Mechanical Engineering, Production Engineering, Industrial Engineering, Metallurgical Engineering and knowledge of core subjects in these stream.

Objective(s):

- *To strengthen the knowledge of core subjects of mechanical engineering.*
- *To provide research orientation to the students and latest developments in core areas.*

1. Advanced Theory of Elasticity (3-dimensional problems): **[10]**

Theories of Stress and strain, Transformation of stress and strain, Linear stress-strain temperature relations, Applications of energy methods, Torsion (Narrow rectangular cross Section, Hollow thin wall torsion members) Bending (Unsymmetrical bending, Curved beam**),** Plates.

2. Experimental Stress Analysis: **[6]**

Strain Measurement Methods: Various types of strain gauges, Electrical Resistance strain gauges, semiconductor strain gauges, strain gauge circuits

3. Advances in Production & Industrial Engineering : **[10]**

Friction, Explosive welding, under water welding, Methods of measuring welding defects by Radiographs, Ultrasonic flow detector and metallurgical analysis to prevent-premature failure. Atomic emission spectrometer, Residual stress analysis in Welding, Solid Phase Welding and Cold Pressure welding. Full mould casting, Continuous Casting, Shape Casting, Casting Defects, Solidification process in casting. Metal cutting principles & design of machine tools, Conversion of cutting tool nomenclature, Thin and thick zone model. Trends towards development of new metal cutting processes including dry machining and environmentally conscious machining.

ERP and Supply Chain Management (ERPSCM), the emergence and need for ERP concept; Modules and Architectures of a typical ERP System, Selection and implementation of ERP Systems; **[6]**

4. Introduction to Optimization Techniques: **[6]**

Engineering application of Optimization, Formulation of design problems as mathematical programming problems, classification of optimization problems.

5. Advance Thermodynamics **[6]**

Thermodynamics Relations:- Mathematical theorems, Maxwell relations, T-ds equations, Energy Equations, General Relations involving internal energy, enthalpy & entropy, Thermodynamics Relations involving specific heat , Clapeyron equation, Joule Thomson Coefficient,

6. Convective Heat Transfer: Introduction to convection, review of conservation equations - Forced convection in laminar flow - Exact and approximate solutions of Boundary layer energy equation for plane isothermal plate in longitudinal flow - problems. **[8]**

Forced convection heat transfer in laminar tube flow - forced convection in turbulent flow – Internal Flows-Correlations-Problems

Outcome(s): *This course supports the achievement of the following outcomes*

- *Current trends in the rapidly evolving field*
- *The intellectual and philosophical framework necessary to explore wide spectrum of research in mechanical engineering.*
- *To contribute to expanding the frontiers of knowledge and to provide research training.*
- *Ability to apply the appropriate industry practices, emerging technologies, state-of-the-art design techniques, and research methods for solving engineering problems*

Text Books:

5. Rao S. S, "Engineering Optimization- Theory and Practice", New Age International
6. Nag P. K, "Basic and Applied thermodynamics", TMH, Latest Edition
7. William M. Kays, Michael E. Crawford, "Convective Heat Transfer"**,** McGraw-Hill Publishers.

Reference Books:

1. Boresi & Sidebottom, "Advanced Mechanics of materials", Wiley International.
2. Garg and Venkitakrishnan, "Enterprise Resource Planning: Concepts and Practice", 2nd Ed, PHI
3. G.F. Benidict, "Advanced Manufacturing Processes",Marcel Deker Publisher.
4. Van Wylen G.H. & Sonntag R.E, "Fundamentals of Classical Thermodynamics", John Wiley & Sons.

NT-702 Advances in Nanoscience and Technology Total 52 lectures
3-1-0-4

Objective: The course focuses on the basic theory and techniques used in the area of nano Science & Technology. The paper covers important areas and gives profound understanding about nano world, synthesis of nano materials, various characterization techniques for nano materials and applications of nano Science & technology in the area of modern electronics, medical sciences and environmental sciences. It may guide and help the student in deciding about the research area in which he/ she may like to contribute further.

Pre-requisite:
Basic understanding of core science and engineering courses given in the syllabus

Course Outcomes:

This course supports the achievement of the following outcomes:

1. Ability to apply knowledge of advanced principles to the analysis of nano science & technological problems.
2. Ability to apply the appropriate industry practices, emerging technologies, state-of-the-art design techniques, software tools, and research methods for solving engineering problems
3. Ability to use the appropriate state-of-the-art engineering references and resources, including IEEE research journals and industry publications, needed to find the best solutions to nano science & technology problems.
4. Ability to maintain life-long learning and continue to be motivated to learn new subjects.
5. Ability to be competitive in the innovative research areas and relevant job market.

Syllabus details

1. Nano World : [12]

Introduction, History of nanomaterials, what is nano? Beginning of Nanoscience, Moore,s law, Nanoscience: The multidisciplinary science, Different types of nanomaterials, Properties of nanomaterials, Zero dimensional, one-dimensional and two dimensional nanostructures-clusters of metals and semiconductors, nanwires, Size dependent properties-size dependent absorption spectra-phonons in nanostructures, seeing nano-objects

2. Synthesis of Nanomaterials: [16]

Physical Methods: Top-down and bottom-up approach, Inert gas condensation, Arc discharge, RF-plasma, Plasma arc technique, Ion sputtering, Laser ablation, Laser pyrolysis, Ball Milling, Molecular beam epitaxial, Chemical vapour deposition method and other variants, Electro deposition.

Chemical Methods: Chemical reduction method, Sol- gel, Micelles and microemulsions, Solvothermal synthesis, hydrothermal methods, photochemical synthesis, electrochemical synthesis, Thermolysis routes, Sonochemical routes, Liquid-liquid interface, Self-assembly, self-assembled monolayers (SAMs). Langmuir-Blodgett (LB) films, clusters, colloids, zeolites, template synthesis, organic block copolymers, porous silicon, and Pulsed electrochemical deposition. Nanoporous Materials, Silicon, Zeolites, mesoporous materials, nanomembranes and carbon nanotubes, AgX photography, smart sunglasses, and transparent conducting oxides, molecular sieves, nanosponges.

Biological Methods of Synthesis: Use of bacteria, fungi, Actinomycetes for nanoparticle synthesis, Magnetotactic bacteria for natural synthesis of magnetic nanoparticles; Mechanism of formation; Viruses as components for the formation of nanostructured materials; Synthesis process and application, Role of plants in nanoparticle synthesis

3. Characterization Techniques : [12]

X-ray diffraction, Scanning Probe Microscopy, SEM, TEM, Optical microscope and their description, operational principle and application for analysis of nanomaterials, UV-VIS-IR Spectrophotometers, Principle of operation and application for band gap measurements, Magnetic and electrical measurements. Lithographic Techniques: AFM based nanolithography and nanomanipulation, E beam lithography and SEM based nanolithography and nanomanipulation, Ion beam lithography, oxidation and metallization. Mask and its application. Deep UV lithography, X-ray based lithography

4. Applications of Nanomaterials: [12]

Electronic Applications:

Applications of nano for IC chips, STM based lithography-Molecular electronics- LEDs- Memories – CNT and Graphene based Electronic devices - transistor based sensors and its general applications- Applications of Nanomaterials in Space

Applications of Nanomagnetic materials

Nanomagnetism- Bionanomagnetism- type of magnet materials –tag and drag drug delivery – hyperthermia- hypothermia-MRI

Environmental Applications:

Bioremediation- removal of bacteria and microbes- sensors for DNA- Proteins, and Biological applications – self assembly systems- tissue culture- nanopharma

Text Books:

1. Nanoworld: An introduction to Nanoscience and technology – C N R Rao
2. A Textbook of Nanoscience and Technology: T. Pradeep
3. Nano: The Essentials-T. Pradeep
4. Introduction to Nanotechnology, Wiley, Charles P. Poole Jr. & Frank J. Owens
5. Lehninger Principles of Biochemistry, Sixth Edition, Nelson and Cox, W.H. Freeman and Company

References:

1. Physical Chemistry: Gilbert W. Castellan
2. Physical Chemistry of Surfaces: Authur W. Adamson, Alice P. Gast
3. The Chemistry of Nanomaterials: Synthesis, Properties and Applications, C. N. R. Rao, Achim Müller, A. K. Cheetham, Wiley
4. NANO: The Next Generation-Mohan Sundar Rajan, National Book Trust, India

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**
2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

Pre-requisite:

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**
2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**
3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**
4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**
5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

MA 19.101 **Mathematics I** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: (10+2) Higher Secondary Mathematics

1. **Differential Calculus I:** Review of basic concepts, partial differentiation, Euler's theorem on homogeneous functions, Maclaurin's and Taylor's series (one and two variables) and Jacobians. [06]
2. **Differential Calculus II:** Maxima and minima of functions of two variables, asymptotes, Tracing of simple cartesian curves and standard polar curves. [06]
3. **Integral Calculus:** Basics of Beta and Gamma functions, Length of plane curves(cartesian and polar), area bounded by the curves(cartesian and polar), multiple integrals (double and triple integrals, change of order of integration), volumes, conversion from cartesian to polar form, physical interpretations and applications. [12]
4. **Matrix Theory**: Rank of matrix, linear dependence and independence of vectors, solution of system of simultaneous linear equations, Eigen values, Eigen vectors of a matrix, statement of Cayley-Hamilton theorem (without proof) , reduction of a matrix to diagonal form, quadratic forms, linear transformation of a quadratic form, and applications. [08]
5. **Three-dimensional Geometry:** Direction cosines and direction ratios of a straight line, equation of a plane, plane passing through intersections of two planes, equations of straight line, shortest distance between two skew lines, equation of a sphere, intersection of plane and sphere. [08]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Shanti Narayan and Mittal, Analytical Solid Geometry, S. Chand, 2018.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CY 19.101 **Engineering Chemistry** **Total Lectures: 39**

Credit: 3-0-0-3

Prerequisite(s): NIL

Objective(s):
- To purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers their preparation, properties and uses.
- To develop the basics of protecting engineering materials from the natural forces.
- To understand the present day up-to-date knowledge of the contemporary energy sources.
- To build up the basis of the future Engineering materials like superconductors, conducting organic polymers, Nano materials etc.

1. **Water treatment:** Hardness, types of hardness, degree of hardness and its estimation (EDTA methods). Numerical problems on degree of hardness. Boiler troubles: sludge and scale formation, Prevention of sludge and scale formation in boilers. Softening of hard water (Lime-Soda, Permutit, Ion Exchange and calgon methods). Numerical problems based on water treatment (Lime-Soda process). [8]

2. **Polymers:** Classification, Functionality, Types of polymerization, Mechanism of Addition polymerization. Plastics: thermoplastic and thermosetting resins. Preparation, Properties and Uses of Polyamides, Bakelite, Polyesters, Rubber, Vulcanization of Rubber, Synthetic Rubber viz. Buna-S, Buna-N, Butyl and Neoprene rubbers. Silicones-polysiloxanes and sulphur based polymers. [8]

3. **Electrochemistry and Corrosion:** Electrochemical Changes, Electrochemical cell and its classifications (Galvanic cell, electrolytic cell). Types of electrodes. Origin of electrode potential, Electrochemical Series. Electromotive force, Nernst equation of electrode potential. [8]
Corrosion: Definition and its significance, Theories of corrosion, Mechanism of corrosion, types of corrosion, Corrosion control (Corrosion inhibitors, Cathodic protection - sacrificial anodic and impressed current cathodic protection).

4. **Fuels and Lubricants:** Introduction - Importance of fuels in Industries. Classifications of fuels, Comparison of solid, liquid & solid fuels, Calorific value of a fuel. Determination of calorific value by Bomb calorimeter. Refining and cracking of petroleum, knocking. Octane Number and Cetane Number. L.P.G., Coal gas and Producer gas. [9]
Lubricants: Introduction and Classification of Lubricants. Properties of Lubricants, Lubricant Oil, Grease, Emulsions.

5. **New Engineering Materials:** Introduction: Superconductors, high and low temperature superconductors, organic electronic materials, Fullerenes and Nano materials, Industrial applications of fullerenes and Nano materials. [6]

Outcome(s): The student will be able to understand the basis of the future Engineering materials like of lubricants, superconductors, conducting polymers, Nano materials etc and purification of the most valuable natural resource of the future-water.

Text Books:
1. Jain and Jain, "Engineering Chemistry," 16th Edition, Dhanpat Rai Publishing Company, 2015.
2. S.S. Dara, "A Text Book of Engineering Chemistry," 12th Edition, S. Chand & Company Limited, 2014.

Reference Books:

1. Peter Atkins, Julio de Paula, and James Keeler, "Atkins' Physical Chemistry" Eleventh Edition, Oxford University Press, 2017.
2. William D. Callister, "Materials Science and Engineering: An Introduction, Eighth Edition, John Wiley & Sons, Inc., 2010.

ME-19.101 **Applied Mechanics** **Total Lectures: 40**
3-1-0-4

Prerequisite Basic Mathematics and Physics

Objectives:
1. This course will help the student to acquire knowledge of basic engineering mechanics concepts and enhance their ability to solve open ended engineering problems.
2. To provide the student with a clear and thorough understanding of the theory and applications of engineering mechanics, covering both statics and dynamics.
3. To provide the student with a thorough understanding of the concept, drawing, and the use of free-body diagrams.
4. To be able to determine the Centre of Gravity and Moments of Inertia of simple geometric shapes and understand the physical applications of these properties.
5. To understand the use and be able to perform calculations related to friction forces in engineering applications.

1. **Introduction:** Idealization of Mechanics, concept of Rigid Body, External Forces (Body forces & surface forces), Laws of Mechanics. **[10]**
Force Systems and Equilibrium: Introduction to vector, Statically Equivalent Force systems, Free Body Diagram, Equations of equilibrium and their applications to various system of forces.

2. **Distributed Forces and Moment Of Inertia:** Centroid of Composite figures, Area Moment of Inertia, Mass Moment of Inertia, Principle axes and Principle Moment of Inertia. **[6]**

3. **Friction:** Introduction of friction, Laws of friction, wedge, screw, belt, rolling friction. **[6]**

4. **Tension, Compression and Shear:** Normal stress and strain, Linear elasticity, Hooke's Law and Poisson's Ratio, Shear stress and shear strain, Relationship between modulus. **[9]**
Beams: Different support & load conditions, SFD, BMD

5. **Kinematics of Particles:** Introduction, Rectilinear motion, Plane curvilinear motion, Rectangular coordinates, Tangential and normal coordinates, polar coordinates, Relative motion (Translating Axes), constrained motion of connected particles. **[9]**
Kinetics of Particles: Introduction, Force, Mass and acceleration, Newton's second law of motion, Equation of motion and solution of problems, Work and Energy, Impulse and Momentum.

Outcome: The students shall develop the ability to identify, formulate, and solve engineering problems related to forces and motion.

Text Books:
1. Hibbeler, Gupta R. C., "Engineering Mechanics," 11th ed., Pearson India, 2010.
2. Merian, J.L, Kraige, L.G., "Engineering Mechanics Vol I & II," 5th edition, Wiley India 2010.

Reference Books:
1. Timoshenko, S, Young, D.H, Rao, J.V, "Engineering Mechanics," 4th edition TMH, 2010.
2. Irving. H. Shames, "Engineering Mechanics," Prentice Hall Book Company, 1966.

EC 19.101 **Basics of Electronics Engineering** **Total Lectures: 40**

3-1-0-4

Prerequisite Basic Knowledge of Engineering and Applied Physics

Objective: To learn the fundamental principle and applications of electronics and communication engineering and devices.

1. **Introduction:** Brief history of major inventions in ECE, Electronic test and measurement equipments, Specifications for electronic components. **[3]**
2. **Semiconductors**: Material and its properties, Formation of energy band diagram, Currents in semiconductors, Fermi-Dirac energy distribution, Types of semiconductors – Intrinsic and Extrinsic, Mass action law, Hall effect. **[5]**
3. **Diodes**: Introduction, Characteristic of ideal and real diode, Current components in diode, load characteristics, Breakdown in diode, Zener diode, Varactor diode, Tunnel diode, Clippers and Clampers, Rectifiers – Half and Full-wave rectifiers. **[8]**
4. **Transistors:** Introduction to pnp and npn transistors, current components, active, cutoff and saturation regions, CC, CB and CE configuration, Operating point, Biasing circuits, Bias Stability, Thermal runway and thermal stability. **[8]**
5. **Basics and Applications of Communication**: Definition, Block representation of communication system, Modulation – Definition, Need of modulation, Frequency translation, Types of modulation - Analog and Digital, Multiplexing – TDM and FDM. Introduction to - Optical Fiber, Transmission line, Waveguides, Satellite communication and RADAR. **[12]**

Outcome: Students will be able to understand the basic concepts of Electronic and Communication Engineering and devices .They are able to implement mini projects based on concepts of ECE.

Text Books:

1. George Kennedy, Bernard Davis, “Electronics Communication Systems”, Tata McGraw-Hill, 3rd Edition, 2007.
2. Behrouz Forouzan, “Data Communication and Networking”, McGraw-Hill, 4th Edition, 2006.

Reference Books:

1. David A. Bell, “Electronics Devices and Circuits”, PHI, 4th edition, 2008.
2. Wayne, Tomasi, “Advanced Electronic Communication Systems”, PHI, 6th edition, 2013.
3. Robert L. Boylestad, Louis Nashelsky, “Electronics Devices and Circuits Theory”, Prentice Hall, 10th Edition, 2009.

ME 19.111 **Computer Aided Engineering Drawing** **0-0-4-2**

Objective:

1. To improve the visualization skills.
2. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient.
3. To impart the knowledge on understanding and drawing of simple engineering products.

1. **Introduction to Computer Aided Sketching:** Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practice. Board Drawing vs. Computer- Aided Drawing. Introduction to Solid works Environments. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP &LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, dimensioning, line conventions, material conventions and lettering. [8]

2. **Orthographic Projections** : Horizontal planes, Vertical planes, Front view, Top view, Side view, Projections, First and Third angle of projection, Projections of points, Principles of orthographic projections, Sketching of different views of given objects. Introduction to sketching in Solid works : 2-Dimenional Sketching, Sketching in Solid works, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity. [12]

3. **Projections of Lines, Planes and Solids:** Lines inclined to both the principal planes, projection of Lamina inclined to both principal planes, Projections of solids: Axis inclined to both the reference planes and Intersection of solids. Introduction to part module in Solid works: Extrude, Revolve, Sweep, Hole, Filleting, and Chamfering features. [12]

4. **Sections of solids and sectional orthographic views:** Sectional orthographic projections - Full, Half, Partial, revolved and removed surfaces. Introduction to drawing module in Solid works: Standard 3 views, Auxiliary view, Section View, Projected view. [12]

5. **Isometric Projection:** Terminology, Isometric scale, Box method, Coordinate or offset method, Four-center method, isometric projection of arcs. Solid models practice using Solidworks part module. [8]

Outcomes:

1. Students will be able to improve their visualization skills so that they can apply these skills in developing new products.
2. Students will be able to know and understand the conventions and the methods of engineering drawing using Solid works.
3. Students will be able to prepare simple drawings of engineering products.

Text Books:

1. N.D. Bhatt, "Engineering Drawing", Charotar Publishing House, 2013.
2. Prof. Sham Tickoo, Sandeep Prem Dass “Solid works 2013 for Engineers and Designers” Wiley Publication, 2013.

Reference Books:

1. Randy H. Shih, “Solid works 2013 and Engineering Graphics: An Integrated Approach”, SDC Publications. 2013

CY 19.111 **Chemistry Laboratory** **Total Hours:26**
Credit: 0-0-2 - 1

Prerequisite(s): NIL

Objective(s):

- To introduce students to water chemistry and purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers, lubricants, fuel and their properties and uses.

LIST OF EXPERIMENTS

Choice of 10-12 experiments from the following

1. To determine the temporary and permanent hardness in the given water sample by complexometric titration using EDTA as standard solution.
2. To determine the percentage of Available Chlorine in the given sample of Bleaching powder. Iodometrically.
3. To determine the alkalinity of water sample.
4. To prepare urea formaldehyde resin.
5. To determine the strength of given HCl solution by titrating it against NaOH solution using pH meter.
6. To determine the strength of given acid solution by titration it against sodium hydroxide solution using conductometer.
7. To determine molecular weight of a polymer using Ostwald viscometer.
8. Determination of viscosity of given lubricating oil by Redwood viscometer.
9. Determination of cloud and pour point of given lubricating oil.
10. Determination of the flash and fire point of given lubricating oil.
11. Determination of acid value of given lubricating oil.
12. To determine the calorific value (HCV) of a sample of fuel.
13. Proximate Analysis of Coal.
14. Determination of the percentage of Fe in the given steel sample.

Outcomes The students will learn to:

- Estimate the Hardness of water, alkalinity of water.
- Familiar with the important practical applications of electrochemistry, lubricants, solids, their properties and applications, and the polymer materials.

EC 19.111 **Electronics Laboratory** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the theory of Electronics Engineering.
2. To apply the analytical techniques and graphical analysis to the experimental data.
3. To enable the students to simulate and test the Electronics circuits using Multisim software.

Practical to be performed on Hardware:

1. To plot V-I characteristics of junction diode and Zener diode.

2. To design a half wave rectifier with and without filter circuit and find the ripple factor.

3. To design a full wave rectifier with and without filter circuit and find the ripple factor.

4. Study of clipper and clamper circuits and their implementation on breadboard.

5. To plot the characteristics of Transistor under Common Emitter configuration

6. To plot the characteristics of Transistor under Common Base Configuration

7. To plot the characteristics of Transistor under Common Collector configuration

8. To perform soldering and de-soldering to make banana probe, BNC probe and connection on PCB.

Practical to be performed using Multi-Sim Software:

9. An Introduction to Electronic Circuit Simulation using Multi-Sim Software.

10. To verify Ohm's law and Kirchhoff's law.

11. To Simulate half wave and full wave bridge rectifier.

12. To plot V-I characteristics of junction diode.

Outcome: Student will be able to understand the operation of electronic test equipment and hardware/software tools to characterize the behavior of devices and circuits.

UC 19.102 **Communication Skills** **Total Lectures: 26**
2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

Pre-requisite:

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures. [5]
   Technology-based Communication: Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software.
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

3. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
4. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

CY 19.102 **Environmental Studies** **Total Lectures: 52**

Credit: 3-1-0-4

Prerequisite(s): NIL

Objective(s):
- To teach the principal resources, renewable energy systems and biosphere.
- To explore the environmental impact of various energy sources and also the effects of different types of pollutants.

1. **Multidisciplinary nature of environmental studies:** Definition, scope and importance, Need for public awareness. [2]

2. **Natural Resources:** Renewable and non-renewable resources: Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. [8]
Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources.
Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

3. **Ecosystems & Biodiversity:** [14]
Ecosystems: Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow and nutrient cycling in the ecosystem. Food chains, food webs and ecological pyramids. Ecological succession
Structure and function of the following ecosystem - Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).
Biodiversity and its conservation: Introduction – Definition, genetic, species and ecosystem diversity. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values. Biodiversity at global, national and local levels. Hot-sports of biodiversity. India as a mega-diversity nation, Threats to biodiversity: habitat loss, illicit poaching, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

4. **Environmental Pollution:** Definition, cause, effects and control measures of : Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes. [8]
Role of an individual in prevention of pollution. Pollution case studies. Disaster management: floods, earthquake, cyclone and landslides.

5. **Social Issues, Human Population and the Environment:** From Unsustainable to Sustainable development: Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people: its problems and concerns. Global Climate Change, global warming, acid rain, ozone layer depletion. Wasteland reclamation. Population growth, variation among nations. Population explosion – Family Welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. [13]

Women and Child Welfare. Role of Information Technology in Environment and human health. Case Studies.
Environment Protection Act 1986. Air (Prevention and Control of Pollution) Act 1981., Water (Prevention and control of Pollution) Act 1974, Wildlife Protection Act 1972., Forest Conservation Act 1980.

Field work [7]

- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

Outcome(s): Upon successful completion of the course, students should be able to:

- Measure environmental variables and interpret results
- Evaluate local, regional and global environmental topics related to resource use and management
- Propose solutions to environmental problems related to resource use and management
- Interpret the results of scientific studies of environmental problems
- Describe threats to global biodiversity, their implications and potential solutions.

Text Books:

1. Erach Bharucha "Environmental Studies", University Grants Commission, 2004.
2. G. Boyle, Renewable energy: Power for a sustainable future'. Oxford University press. 2004.

Reference Books:

1. C. William, P. Saigo, B Woodworth, "Environmental Science: A Global Concern", Sixth Edition McGraw-Hill Higher Education, 2001.
2. R.T. Wright, D.F. Boorse, "Environmental Science" 11th Edn, PHI, 2010.

MA 19.102 **Mathematics II** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: Mathematics I

1. **Computational Methods:** Introduction and importance of numerical analysis, calculus of finite differences, interpolation schemes for equal and unequal intervals (Newton's forward and backward interpolation formulae), divided difference, interpolation for unequal intervals (Newton's divided difference and Lagrange interpolation formulae), Solution of algebraic and transcendental equations by Newton-Raphson method. Applications to Engineering. [12]
2. **Ordinary Differential Equations I:** First order and first degree differential equations (variable separable, homogeneous and non-homogeneous, linear, Bernoulli's equation, and exact equations). [06]
3. **Ordinary Differential Equations II:** Linear differential equations of second order with constant and variable coefficients (complementary functions and particular integrals), and applications. [06]
4. **Partial Differential Equations:** Formation of partial differential equations, Lagrange's multipliers method for solution of first order differential equations, separation of variables for nonlinear differential equations and applications. [06]
5. **Vector Calculus:** Vector and scalar point functions, conservative fields, gradient of scalar point functions, divergence and curl of vector point functions (Solenoidal and irrotational vectors), directional derivative of scalar point functions, work done along a curve, Integration of vectors, line integral (work done), surface integral, volume integral, physical interpretations and applications. [10]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Grewal, B.S. and Grewal, J.S., Higher Engineering Mathematics, Khanna Publishers, Daryaganj, New Delhi, 40th Edition, 2007.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

PY 19.101 **Engineering Physics** **Total Lectures: 40**

3-0-0-3

Pre-requisite: Fundamental knowledge of Basic Physics

Objective:
1. To provide students with a basic understanding of the Physics that may be required by engineers in the course of their careers
2. To enhance knowledge related to lasers and its different components to make it suitable for various purposes
3. To introduce most important concepts of superconductivity, crystallography and fiber optics to the students
4. To introduce the learners to the basics of modern physics and Quantum Mechanics

1. **Modern Physics**: Introduction to Black body radiation spectrum, Photo-electric effect, Compton effect. Wave particle Dualism. de Broglie hypothesis – de Broglie wavelength, extension to electron particle. Davisson and Germer Experiment. **[8]**
Matter waves and their Characteristic properties, Phase velocity, group velocity and Particle velocity, Relation between phase velocity and group velocity, Relation between group velocity and particle velocity. Expression for deBroglie wavelength using group velocity.

2. **Quantum Mechanics:** Heisenberg's uncertainity principle and its physical significance. Application of uncertainty principle (Non-existence of electron in the nucleus, explanation for decay and kinetic energy of electron in an atom). Wave function, Properties and physical significance of wave function, Probability density and Normalization of wave function. Setting up of one dimensional time independent Schrodinger wave equation. Eigen values and Eigen functions. Application of Schrodinger wave equation – Energy Eigen values for a free particle. Energy Eigen values and Eigen functions for a particle in a potential well of infinite depth. **[7]**

3. **Electrical Conductivity in Metals**: Free–electron concept. Classical free-electron theory – Assumptions. Drift velocity, Mean collision time and mean free path. Relaxation time. Expression for drift velocity. Expression for electrical conductivity in metals. Effect of impurity and temperature on electrical resistivity of metals. **[8]**
Quantum free-electron theory – Assumptions. Fermi – Dirac Statistics. Fermi-energy, Fermi factor. Density of states (No Derivation). Expression for electrical resistivity / conductivity. Temperature dependence of resistivity of metals. electron in a periodic potential, origin of the energy gap, band theory of solids, distinction of solids into metals, semi-conductors and insulators.

4. **Dielectric & Magnetic Properties of Materials**: Dielectric constant and polarization of dielectric materials. Types of polarization. Equation for internal field in liquids and solids (one dimensional). Ferro and Piezo electricity. Frequency dependence of dielectric constant. Important applications of dielectric materials. Classification of dia, para and ferro-magnetic materials. Hysterisis in ferromagnetic materials. Soft and Hard magnetic materials. Applications. **[7]**

5. **Lasers and Optical Fibers**: Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, Construction and working of CO2 laser and semiconductor Laser. Applications of Laser – Laser welding, cutting and drilling. **[10]**
Measurement of atmospheric pollutants. Holography–Principle of Recording and

reconstruction of images, applications of holography.
Propagation mechanism in optical fibers. Angle of acceptance. Numerical aperture. Types of optical fibers and modes of propagation. Attenuation. Applications–Block diagram discussion of point to point communication.

Outcome: The student will be able to understand many modern devices and technologies based on lasers and optical fibers. Student can also appreciate various material properties which are used in engineering applications and devices.

Text Books:

1. S. O. Pillai, "Solid State Physics", New Age International, Sixth Edition, 2009
2. V. Rajendran, "Engineering Physics," TMH, Fifth Edition , 2013

Reference Book:

1. G. K. Shivkumar, "Engineering Physics," Prism Book Pvt. Ltd.
2. Stephen T. Thornton, "Modern Physics for Scientists and Engineers",Cengage Learning, 4th ed.,2013

EE 19.101 **Elements of Electrical Engineering** **Total Lectures: 40**
3-1-0-4

Objective: This course facilitates the students to get a comprehensive exposure to various concepts and devices of electrical engineering.

Pre-requisite: Nil

1. **DC Circuits:** Electrical circuit elements (R, L and C), voltage and current sources, Ohm's law, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation using mesh and nodal method. Network Theorems - Superposition, Thevenin, Norton and Maximum power transfer Theorems. Time-domain analysis of first-order RL and RC circuits. **[8]**

2. **AC Circuits:** Basic terminologies, representation of sinusoidal waveforms, average, rms and peak values of a.c. quantities, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel). **[8]**

3. **Three Phase A.C. Circuits:** Three phase supply, phase sequence, star connection, delta connection, relationship between phase and line quantities in 3-phase circuits, measurements of three phase power under balanced condition. **[6]**

4. **Transformers:** Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, Transformer testing: open circuit and short circuit test, losses in transformers, regulation and efficiency. Basics of auto-transformer and three-phase transformer connections. **[10]**

5. **Electrical Machines:** DC Machines – construction, functions of each part, working principle, EMF and torque equations, types of dc machines. AC machines – classification of a.c. machines, construction, operating principles of ac machines. **[8]**

Outcome: At the end of this course, students will demonstrate the ability to

- To understand and analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines.

Text Books:

1. Kothari, D. P., and I. J. Nagrath, "Theory and Problems of Basic Electrical Engineering," PHI Learning Pvt. Ltd., 1998.
2. Fitzgerald, Arthur Eugene, David E. Higginbotham, and Arvin Grabel, "Basic electrical engineering," McGraw-Hill Series in Electrical Engineering, Auckland: McGraw-Hill, 1981, 5th ed.(1981).

Reference Books:

1. H.Cotton, "Advanced Electrical Technology," CBS Publication. 1967.
2. Vincent Del Toro, "Electrical Engineering Fundamentals," 2nd Edition PHI Publication. 1972.
Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.101 **Programming Language** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite(s): NIL

Objective(s):
1. To learn principles of programming by the structured native language 'C'.
2. To comprehend the rudiments, constructs, syntax, and statements with essentials of efficient compiling, running and debugging processes.

1. **Introduction:** The role of programming languages, programming paradigms, language description and syntax structure, basics of structured and object-oriented programming, functional programming, logic programming, concurrent programming. [10]
2. **Fundamentals of 'C' language**: Character set, variables data types constants, arithmetic, relational and logical operators, type conversion,increment,decrement, bitwise and assignment operators, conditional expressions, statements and blocks, *if-else*, *switch*, loops-*do-while*, *while*, *for*; *break*, *continue* and *goto* statements, labels. [10]
3. **Functions, pointers and Arrays**: Basics of functions, automatic, external, static and register variables, scope rules, and header files, recursion and C preprocessor, arrays, pointers and addresses, pointers and arrays address arithmetic, character pointers and functions, pointer arrays, pointers to functions, pointers and multidimensional arrays, command line arguments. [10]
4. **Structures and unions:** Basics of structures and functions, arrays of structures, pointers to structures, self-referential structures, unions. [5]
5. I/O and File Processing: Concept of files, standard input and output, formatted output, file access in different modes, reading from and writing to a file. [5]

Outcome(s): Students would be able to apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

Text Books:
1.Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013,
2.Ravi Sethi & K.V.Viswanatha, Programming Languages-Concepts, and Constructs, Second edition, Pearson Education,2013,

Reference Books:
1.Herbert Schildt, C: The Complete Reference, Fourth Edition, McGraw-Hill Education, 2017
2.E Balagurusamy, Programming in ANSI C, Tata McGraw - Hill Education,6th edition,2012

CS 19.151 **Programming Language Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): NIL

Objective(s):

- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

List of Practicals

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement programs to cover all possible String operations.
11. Implement programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement programs for Reading and writing from/to a file.

Outcomes On completion of this course student will be able to:

- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner

PY 19.111 **Physics Laboratory** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
2. To apply the analytical techniques and graphical analysis to the experimental data.

List of Experiments:

1. To study of material constant, temperature coefficient of current and planck's constant.

2. To determine the specific resistance of a given wire by using the Carey Foster's bridge.

3. To determine the ballistic constant, K of a moving coil ballistic galvanometer with a standard capacitor of known capacity.

4. To determine the high resistance by the method of leakage of a condenser with the help of ballistic galvanometer.

5. To study the variations of resistivity with temperature and hence determines the energy band gap of the given semiconductor with help of four probe method.

6. To convert a galvanometer into a voltmeter of a given range.

7. To convert a galvanometer into an ammeter of a given ranges.

8. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current and to estimate from it the radius of the coil.

Outcome: Students will be convergent with operation of equipments and verify the principle of Physics by doing the experiments. Students will be able to apply the analytical techniques and graphical analysis for finding out the experimental results.

ME-19.112 **Mechanical Workshop** **0-0-2-1**

Objectives:

1. Practice on manufacturing of components using workshop trades including fitting, carpentry, sheet metal and welding.
2. Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping.
3. Study and practice on machine tools and their operations.

List of Jobs:

1. **Fitting Shop:** Prepare job that contain various fitting operation like filing, marking, measuring, cutting, drilling etc.
2. **Carpentry Shop:** Making of carpentry joint (T, L joint etc).
3. **Sheet Metal Shop:** Making job from sheet (funnel, tray etc).
4. **Machine Shop:** Perform various operations like, turning, step turning, facing, chamfering, knurling etc on Lathe.

Outcomes: At the end of the course, the student will be able to:

1. To acquire skills in basic engineering practice.
2. To identify the hand tools and instruments.
3. To acquire measuring skills.
4. To provides the knowledge of job materials in various shops.
5. Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.

Text Books:

1. Hajara Chaudhary, Workshop Technology Vol I & II, Media Promoters and Publishers PVT. LTD, Mumbai.
2. B.S. Raghuvanshi, Workshop Technology, Dhanpat Rai & Sons. New Delhi.

Reference Books:

1. H S Bawa, Workshop Technology, TMH. New Delhi.

EE 19.111 **Electrical Laboratory** **0-0-2-1**

Objective: The objective is to provide a basic exposure of installation and operation of electrical equipment.

Prerequisite: Nil

Perform any ten of the list.

1. To Study of the various apparatus used in Electrical Engineering.
2. To perform residential house wiring using fuse, indicator, switch, Socket, plug and lamp.
3. To design a Stair case wiring for illuminating a lamp.
4. To design Tunnel wiring for illuminating three lamps.
5. To construct a fluorescent tube and to measure voltage across tube rod, voltage across choke and current.
6. To conduct the polarity test on the given transformer.
7. To conduct the open circuit & short circuit tests on the given single phase transformer and to determine equivalent circuit parameters.
8. To control the speed of DC machine by field current control method.
9. To control the speed of DC machine by Armature Voltage control method.
10. To measure three phase power by using two wattmeter methods.
11. To verify Superposition Theorem using resistive circuit.
12. To verify Thevenin's Theorem using resistive circuit.

Outcome: Students will be convergent with installation and operation of electrical equipment.

Text Books:
1. J.B. Gupta, Theory and Performance of Electrical Machines, S.K. Kataria and Sons, 3rd Edition, 2002.
2. Kothari, D. P., and I. J. Nagrath. Theory and Problems of Basic Electrical Engineering. PHI Learning Pvt. Ltd., 1998.

Reference Books:
1. P.S. Bimbhra, "Electrical Machinery", Khanna Publishers, 5th Edition, 2013.
2. Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**
2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization **[4]**

2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**

3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**

4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**
5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

5. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
6. Stephen P.Robbins "Organizational Behavior" Pearson Publisher,16th Edition, 2014

Reference Books:

3. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
4. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
5. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
6. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

MA 19.201 **Mathematics III** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of linear programming, numerical methods, complex analysis and integral transform and apply in engineering disciplines.

Pre-requisite: Mathematics I and Mathematics II

1. **Linear Programming:** Introduction with formulation; Graphical method; Simplex method, Artificial variable technique (Two phase method, Big –M method); Assignment problem (Hungarian method); Transportation problem (Vogel's approximation method). [12]

2. **Numerical Methods:** Solution of system of equations (Gauss elimination and Gauss -Seidel methods); Solution of algebraic and transcendental equations (Bisection, Ramanujan's and Regula Falsi methods); Solution of ordinary differential equation (Euler's modified, Milne's predictor & corrector, Runge-Kutta method of order four). [08]

3. **Complex Analysis:** Function of complex variable, analytic function, Cauchy- Riemann equations(without proof); Integration of complex functions, line integrals in the complex plane, Cauchy integral theorem(without proof), Cauchy integral formula(without proof), zeros and singularities of complex functions, residues. [08]

4. **Integral Transform I**: Basics of Laplace transform and inverse Laplace transform; First and Second Shifting theorems; Convolution theorem (without proof); Laplace transform of Unit Step function, Dirac Delta function and periodic function. [06]

5. **Integral Transform II**: Solution of ordinary differential equations with initial conditions by Laplace transforms; Fourier series of periodic functions, even and odd functions, Fourier half-range series; Basics of Fourier transforms with properties. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of linear programming, numerical methods, complex analysis and integral transforms in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.

Reference Books:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Sastry S.S., Introductory Methods of Numerical Analysis, 5th Edition, Pearson.
3. Jain R.K. and S.R.K. Iyenger Advanced Engineering Mathematics, Narosa Publishing House, 2003.

EC 19.201	Electronic Devices and Circuits	Total Lectures: 40 3-0-0-3

Objective To acquire fundamental knowledge of operation, design and application of various Electronic devices and circuits.

Pre-requisite Basic Electronics and Physics of electron.

1. **Junction Diode:** Junction breakdown**,** Current components in a p-n diode, Quantitative analysis of p-n diode characteristics and equivalent circuit, diode resistance, interconnections of diodes, transition and diffusion capacitance. [6]

2. **Transistors**: Operation of transistor, transistor current components, transistor circuit configurations, transistor biasing schemes and operating point stabilization, hybrid-pi model of BJT, low and high frequency models of JFET, MOS Devices - NMOS, PMOS and CMOS [11]

3. **Small Signal Amplifiers at Low Frequency:** Coupling schemes for multistage amplifiers, frequency response of coupled amplifier, RC coupled transistor amplifier, transformer coupled transistor amplifier, cascode circuits, Differential amplifier, Darlington amplifier. [7]

4. **Power Amplifiers:** Power amplifier circuits, class-A, class-B, class-AB, class-C, push pull amplifiers- class-A, class-B, Class- AB, complementary symmetry push-pull and quasi-complementary symmetry, push-pull amplifiers. [8]

5. **Oscillators:** Classification criterion for oscillation, tuned collector, Hartley, Colpitts, RC phase shift, Wien bridge and crystal oscillators, astable, monostable and bistable multivibrators, Schmitt trigger [8]

Outcome: After completion of this course, students would be able to understand the working phenomena and applications of various electronic devices and circuits. Knowledge gained from this course would also be utilized to design different electronic circuits and devices.

Text Books:

1. Robert L. Boylestad & Louis Nashelsky, Electronic Devices and Circuit Theory, Pearson Education, 11th Edition, 2013.
2. Thomas L. Floyd, Electronic Devices, Pearson Education, 10th Edition , 2018.

Reference Books:

1. Bell, David A., Operational Amplifiers & Linear ICS, Prentice Hall of India, 3rd Edition, 2018.
2. J. Millman & C. C. Halkias, Electronic Devices and Circuits, McGraw Hill

EE 19.203 **Network Analysis & Synthesis** **Total Lectures: 40**
3-0-0-3

Objective: This course helps in analysis of A.C & D.C circuits and it also help to design the circuit models for the minor and major projects.

Pre-requisite: Elements of Electrical Engineering

1. **Network Theorems:** Superposition theorem, Thevenin theorem, Norton theorem, Maximum power transfer theorem, Reciprocity theorem, Compensation theorem. Analysis with dependent current and voltage sources. Node and Mesh Analysis. Concept of duality and dual networks. [10]

2. **Solution of First and Second Order Networks:** Solution of first and second order differential equations for Series and parallel R-L, R-C, RL-C circuits, initial and final conditions in network elements, forced and free response, time constants, steady state and transient state response. Mutual coupled circuits, Dot Convention in coupled circuits, Ideal Transformer. [8]
3. **Electrical Circuit Analysis Using Laplace Transforms:** Review of Laplace Transform, Analysis of electrical circuits using Laplace Transform for standard inputs, convolution integral, inverse Laplace transform, transformed network with initial conditions. Transfer function representation. Poles and Zeros. Frequency response (magnitude and phase plots), series and parallel resonances. [8]
4. **Two Port Network:** Two Port Networks, terminal pairs, relationship of two port variables, impedance parameters, admittance parameters, transmission parameters and hybrid parameters, interconnections of two port networks. [6]

5. **Synthesis of Passive Network:** Hurwitz polynomials, positive real functions, elementary synthesis procedures, properties of LC immittance function, synthesis of LC driving point immittance, properties of RC driving point impedances, synthesis of RC impedances or RL admittances, properties of RL impedances and RC admittances, synthesis of RLC functions. [8]

Outcome: At the end of this course, students will demonstrate the ability to

- Apply network theorems for the analysis of electrical circuits.
- Obtain the transient and steady-state response of electrical circuits.
- Analyse circuits in the sinusoidal steady-state (single-phase and three-phase).
- Analyse two port circuit behavior.

Text Books:

1. M. E. Van Valkenburg, “Network Analysis”, Prentice Hall, 2006.
2. D. Roy Choudhury, “Networks and Systems”, New Age International Publications, 1998.

Reference Books:

1. W. H. Hayt and J. E. Kemmerly, “Engineering Circuit Analysis”, McGraw Hill Education, 2013.
2. C. K. Alexander and M. N. O. Sadiku, “Electric Circuits”, McGraw Hill Education, 2004.
3. K. V. V. Murthy and M. S. Kamath, “Basic Circuit Analysis”, Jaico Publishers, 1999.

EC 19.203 **Semiconductor Physics** **Total Lectures: 40**

3-1-0-4

Objective: The aim of the course is to develop physics and engineering strategies of semiconductor materials and to discuss their functionalities in modern electronic and optoelectronic devices

Pre-requisites : Basic Modern physics , Optics

1	**Introduction** - Solids, Crystals and Electronic grade materials, Formation of energy bands in solids, Concept of hole, Density of states and Fermi level, Intrinsic and extrinsic semiconductors, Direct and indirect semiconductors Recombination and Generation of carriers,	[8]
2	**Fermi distribution and energy** - Density of states - Valance and conduction band density of states - intrinsic carrier concentration - intrinsic Fermi level. Extrinsic semiconductors: n and p type doping - Densities of carriers in extrinsic semiconductors and their temperature dependence - extrinsic semiconductor Fermi energy level - Degenerate and non - degenerate semiconductors - Bandgap Engineering.	[8]
3	**Carrier transport –** Drift and Diffusion: Equations of state – Continuity and Poisson equation, Carrier transport by Drift: Low field, High field and very high field (Impact ionization) - Einstein relation, phonon scattering. Macroscopic transport: Carrier transport by Diffusion	[8]
4	**Generation and recombination** - Electron - hole pair: band to band (direct and indirect band gap transitions) and intra band (impurity related) transitions, free - carrier & phonon transitions. Excitons: Origin, electronic levels and properties Radiative and nonradiative recombination (Shockley - Read - Hall and Auger) processes. Carrier transport - continuity equations. Optical constants: Kramers - Kronig relations.	[8]
5	**Optical processes in semiconductor**, choice of materials for LED, LED power and efficiency, LED structures - Planar LED, Dome LED, Surface Emitting LED, Edge Emitting LED, Optical detection principle, quantum efficiency, Photoconductor, p-n photodiode, p-i-n photodioe, APD, Heterojunction diode, optocouplers.	[8]

Outcome: This course will provide the students with a basic understanding of the physics and principles of semiconductor material.

Text Books:

1. Kevin F Brennan, The Physics of Semiconductors, Cambridge Univ. Press, 2012.
2. Peter Y Yu and Manuel Cardona, Fundamentals of Semiconductors, Springer, 4th Edition, 2010.

Reference Books

1. D. A. Neamen, Semiconductor Physics and Devices, 3rd Ed., Tata McGraw-Hill, 2003.
2. S.M. Sze, Physics of Semiconductor Devices, John Willey, 3rd Ed., 2007.

CS 19.203 **Data Structures** **Total Lectures: 40**

Credit:3-0-0-3

Pre-requisite(s): CS 19.101 (Programming Language)

Objective(s):

- To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems, and to promote an analytical and empirical appreciation of the behavior of algorithms using data structures

1. **Introduction:** Basic terminology, elementary data organization, algorithm, efficiency of an algorithm, time and space complexity, asymptotic notations, time-space trade- off, abstract data types. [4]
2. **Array & Linked list:** Definition, single and multidimensional arrays, representation of arrays: row major order, and column major order, application of arrays, sparse matrices and their representations. Singly linked lists, doubly linked list, circular linked list, insertion, deletion, traversal, polynomial representation and addition, generalized linked list. [10]
3. **Searching & Sorting:** Sequential search, binary search, comparison and analysis, hash function, collision resolution strategies, insertion sort, selection sort, bubble sort, quick sort, merge sort, heap sort, radix sort. [10]
4. **Stack & Queue:** Primitive stack operations: push and pop array and linked list implementation of stack, application of stack: prefix and postfix expressions, evaluation of postfix expression, recursion, and tower of Hanoi problem. Queue operations, circular queues, array and linked list implementation of queues, dequeue and priority queue [8]
5. **Tree:** Binary trees, binary tree representation, tree traversal algorithms: inorder, preorder and postorder, threaded binary trees, Huffman algorithm, binary search trees AVL trees. [8]

Outcome(s): On the successful completion of the course, the student will be able to:

- be knowledgeable of certain abstract data types (ADT)
- be able to make a critical assessment of different implementations of an ADT
- be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems

Text Books:

1.Lipschutz, "Data Structures" Schaum's Outline Series, TMH, Revised Edition Feb. 2014

2. Horowitz and Sahani, Fundamentals of Data Structures, University Press, 2nd Edition, 2008.

Reference Books:

1.Aaron M. Tenenbaum, YedidyahLangsam and Moshe J. Augenstein, Data Structures Using C and C++, PHI, 2nd Edition, 2012.

2. D. Samanta, Classic Data Structures, PHI, 2nd Edition, 2009

3. Jean Paul Trembley and Paul G. Sorenson, An Introduction to Data Structures with applications, McGraw Hill, 2nd Edition, 2003.

Total Hours: 26

CS 19.253 **Data Structures Laboratory** **Credit: 0-0-2-1**

Pre-requisite(s): Programming Language Laboratory (CS 19.151)

Objective(s):

- To develop skills to design and analyze simple linear and nonlinear data structures
- To Strengthen the ability to identify and apply the suitable data structure for the given real world problem
- To Gain knowledge in practical applications of data structures

Contents:

- Implement various operations on arrays
- Code different operations on different types of link list
- Implement various searching algorithms
- Implement different sorting algorithm and realize their complexities
- Implement Queue and stacks with all the operations
- Implement Binary Tree
- Implement graphs

Outcome(s): At the end of this course, the student will

- Be able to design and analyze the time and space efficiency of the data structure.
- Be capable to identity the appropriate data structure for given problem.
- Have practical knowledge on the application of data structures.

EC 19.221 **Electronics Devices and Circuits Laboratory** **Total Hours: 26**
0-0-2-1

Objective: To acquire fundamental knowledge of operation, design and application of various Electronic devices and circuits by doing the experiments.

Pre-requisite: Electronic Workshop

1. To plot the diode characteristics and its dynamic resistance and cut-in Voltage.
2. Plot the characteristics of a Zener diode and find its dynamic resistance under reverse biased condition. Plot the Line-Regulation and Load-Regulation curve using Zener diode.
3. (a) To implement a diode clipper circuit which clips the positive peak of the input voltage (i) By 1V and (ii) By 3V? (For given sinusoidal input $V_{pp} = 4V, 1kH$).
   (b) To implement a diode clipper circuit which clips the negative peak of the input voltage (i)By 1.5V and (ii)By 2.5V.(For given sinusoidal input $V_{pp} = 4V, 1kH$).
4. (a) To implement a diode clamper circuit which clamps the positive peak of the input voltage to(i)zero reference voltage and (ii)a given voltage $1V$. (For given square wave input $V_{pp} = 10V, 1kH$).
   (b) To implement a diode clamper circuit which clamps the negative peak of the input voltage to(i)zero reference voltage and (ii)a given voltage 1.5V.(For given square wave input $V_{pp} = 10V, 1kH$.
5. To plot the frequency response of a emitter follower.(For given sinusoidal input $V_{pp} = 3V, 1kH$.
6. Design a Half Wave Rectifier circuit with and without capacitor filter, measure the rms and Dc values of output voltage and calculate the ripple factor for given sinusoidal input $V_{pp} = 10V, 1kH$.
7. To plot the input and output characteristics of a transistor in CE Configuration.
8. Design a two stage RC coupled transistor amplifier and calculate the gain. (for given sinusoidal input $V_{pp} = 200mV, 1kHz$).
9. To plot the characteristics of a UJT and find its peak voltage, peak current and valley voltage. Design a relaxation oscillator determine the frequency of oscillation and compare the practical frequency obtained with the theoretical frequency.
10. To plot the Transfer characteristics (for$V_{DS} = 5V$)and Drain (for $V_{GS} = -1V$) characteristics of a JFET in CS Configuration.

Outcome: After completion of this lab course, students would be able to demonstrate the working phenomena and applications of various electronic devices and circuits. Knowledge gained from this course would also be utilized to design different electronic circuits and devices.

EE 19.223 **Network Analysis and Synthesis Laboratory** **Total Hours: 26**

0-0-2-1

Objective: This Lab course helps us to gain basic knowledge of principle, operation, application and design/verification of various Electrical components /devices/ circuits/theorems by conducting the experiments.

Prerequisite: Basics of Electronics Engineering, Elements of Electrical Engineering

Perform any ten of the list.

1. To study the series and parallel connected resistive circuits
2. To study the equivalent star of a delta connected resistive circuit and also the equivalent delta of a star connected resistive circuit.
3. To verify the Kirchhoff's current Law and Kirchhoff's Voltage law.
4. To verify the superposition theorem using resistive circuit.
5. To verify the Reciprocity Theorem using resistive circuit.
6. To verify the Thevenin's Theorem using resistive circuit.
7. To verify of Norton's Theorem using resistive circuit.
8. To verify of Maximum Power Transfer Theorem using resistive circuit.
9. To determine Z-parameter, Y-parameter and ABCD parameter of a given Two-port network.
10. To design a zero PCB for a given circuit to verify the Thevenin's Theorem.
11. To find out the time- constant of RL-series circuit when connected to step function.
12. To find out the time constant of RC-series circuit when connected to step function.

Outcome: After completion of this lab course, students would be able to demonstrate the working phenomena and applications of various electrical components and circuits. Knowledge gained from this course would also be utilized in designing different electrical circuits/theorems and devices.

UC 19.202 **Business Environment** **Total Lectures: 26**
2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]

2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]

3. **Political and legal Environment*:*** Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]

4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]

5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:
7. Business Environment, Francis Cherunilam, 1st Edition, 2018.
8. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:
7. Business Environment, BN Ghosh, OUP, 2015
8. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
9. Business Environment, AC Fernando, Pearson, 2016

EC 19.202	Digital Electronics	Total Lectures: 40
Objective:	The aim of this course is to present the principles and techniques of combinational and sequential digital logic design and optimization at a gate level. The use of transistors for building gates is also introduced.	**3-0-0-3**
Pre-requisite:	Basics of Electronics Engineering	

1. **Number Systems and Boolean Algebra:** Introduction to number systems, weighted and non-weighted codes, 1's complement, 2's complement, complement arithmetic, Postulates and theorems of Boolean algebra, Boolean functions, canonical and standard form, simplification of Boolean function using Boolean laws and theorems. [5]
2. **Logic Gates and Simplification of Boolean Functions:** Basic Logic gates, Universal gates, K-map representation, incompletely specified functions, simplification realization with gates, Quine-Mc Cluskey method. [5]
3. **Combinational Logic:** Analysis and design of combinational circuits, half adder and full adder, half subtractor and full subtractor, binary serial and parallel adder, BCD adder, binary multipliers, magnitude comparator, decoders, encoders, multiplexers, de-multiplexers. [10]
4. **Sequential Circuits and Programmable Logic :** Latches, flip-flops, triggering of the flip-flops, master-slave flip-flop, excitation tables, conversion of the flip-flops, analysis and design of clocked sequential circuits, shift registers, counters, PAL, PLA. [10]
5. **Introduction to Verilog HDL:** Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Functional Verification, System Tasks, Programming Language Interface (PLI), Module, Simulation and Synthesis Tools. Gate Level Modeling: Introduction, AND Gate Primitive, Module Structure, Other Gate Primitives, Illustrative Examples, Tri-State Gates, Array of Instances of Primitives, Design of Flip-flops with Gate
Primitives, Delays, Strengths and Construction Resolution, Net Types, Design of Basic Circuits. [10]

Outcomes: Upon successful completion of this course, students should be able to:

1. Gain fundamental knowledge of the basic logic gates such as AND, OR, NAND NOR, EX-OR and their implementation in Logic Circuits.
2. Design multipliers, Combinational Circuits and registers.

Text Books:
1. M. M. Mano and M. D. Ciletti, Digital Design, Pearson Education, 4th Edition, 2009.
2. T. L. Floyd and R.P. Jain, Digital Fundamental, Pearson Education, 8th Edition, 2009.

References

EC 19.204	Integrated Circuits and Applications	Total Lectures: 40
		3-0-0-3

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: Electronics Devices and Circuits

1. **Differential Amplifier:** Operational amplifier, bipolar and FET differential amplifiers, constant current source, current mirror, level translator, block diagram of operational amplifier, frequency response and stability, operational amplifier parameters, offset compensation techniques. [5]
2. **Application of Op-amp:** Inverting and non-inverting amplifiers, voltage follower, integrator and differentiator circuits, instrumentation amplifier, current to voltage converter and voltage to current converter, voltage to frequency conversion, analog simulation of differential equations using operational amplifiers. [5]
3. **Oscillators and Active Filters:** Phase shift, Wein bridge, quadrature, square wave, triangular wave, saw tooth wave and voltage controlled oscillator, Low pass, high pass, band pass and band reject filters, designing of second order filters using Butterworth approximations, higher order filters and state variable filters. [15]
4. **ICs and Applications:** Clipping and clamping circuits, comparator, LM-311 comparator, schmitt trigger, log and antilog amplifiers, half and full wave rectification, IC-8038, IC LF-398, IC-555. [5]
5. **Voltage Regulator and PLL:** Voltage regulator IC-723, switching regulators, regulator IC series 78xx, 79xx, building blocks of PLL, IC-565 and its applications, four-quadrant multiplier and its applications. [10]

Outcomes: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:
1. R. A. Gayakwad, Op-Amps and Linear Integrated Circuits, PHI, New Delhi, 3rd Edition.
2. B. P. Singh and Rekha Singh, Electronic Devices and Integrated Circuit", Pearson Education, 2003.

Reference Books:
1. R. F. Coughlin and F. F. Driscoll, Operational Amplifiers & Integrated Circuits, Pearson Education, 5th Edition, 2001.
2. S. Franco, Design with Operational Amplifiers and Analog Integrated Circuits, Pearson Education, 3rd Edition, 2003.

EC 19.206	Principles of Electromagnetics	Total Lectures: 40
Objective:	To develop the understanding of basics concepts of electromagnetic field theory and its applications.	**3-0-0-3**
Pre-requisite:	Basic understanding of laws of Physics and Mathematics	

1. **Introduction:** Transformation of a point and a vector in different coordinate systems, Differential length, area, volume Physical meaning of gradient, divergence and curl, Laplacian of a scalar, Divergence theorem, Stoke's theorem, review of electrostatic and magneto static fields. [5]
2. **Time Varying Fields and Maxwell's Equations:** Faraday's law of electromagnetic induction, Maxwell's equations in integral and differential form, potential functions, electromagnetic boundary conditions. [5]
3. **Electromagnetic Waves:** Introduction, Helmholtz wave equation, Wave equations and their solutions for free space, lossy dielectric, Lossless dielectrics and good conductor medium, Poynting vector and the flow of power. Reflection of plane wave at dielectric media and conducting surfaces for normal incidence. [15]
4. **Transmission lines:** Types of transmission lines, transmission line parameters, two conductor transmission line equations, input impedance, standing wave ratio and power of transmission lines, smith chart, transmission line impedance matching techniques. [5]
5. **Guiding Structures:** General wave behaviors along uniform guiding structure, rectangular and circular wave guides, wave propagation in rectangular and cylindrical cavity resonators. [10]

Outcomes: After completion of the course, students would be able to apply Knowledge of electromagnetic principles in engineering and solve curriculum problems.

Text Books:
1. Matthew N. O. Sadiku, Principles of Electromagnetics, Oxford University Press, 4th Edition, 2015.
2. William H. Hayt: Engineering Electromagnetic, TMH, 8th Edition, 2013.

Reference Books:
1. David J. Griffiths, Introduction to Electrodynamics (Third Edition); Pearson Education, 4th Edition, 2013.
2. M. L. Sisodia and G. S. Raghuvanshi, Microwave Circuits and Passive Devices, New Age Publication, 1987.

CS 19.205 **Objected Oriented Programming** **Total Lectures: 40**

3-0-0-3

Objective: The objective of this course is to:

1. cover issues related to the definition, creation and usage of classes, objects and methods.
2. Discuss the principles of inheritance and polymorphism.
3. Provide the foundation of good programming skills by discussing key issues of the design of object- oriented software, including programming design and documentation.
4. Cover the basics of API and to explore the java abstract programming interface.

Pre-requisite: Programming Language

1. **Overview:** Introduction to OOP, OOP concepts, interactive Development Environments: Eclipse/Net Beans, basics of OOP, importance of Java Primitive data types, type casting, arrays, ArrayList, operators and control structures, identifiers, constants and literals. [9]

2. **Classes and Inheritance:** Class fundamentals, objects, constructors, this keyword, garbage collection, the finalize() method, overloading methods, understanding static & final, exploring the string class. Inheritance basics, using super, multilevel hierarchy, constructor in hierarchy, method overriding, dynamic method dispatch, the object class, using abstract classes, interface. [10]

3. **Package, and Exception Handling:** Packages, access protection, importing packages, interfaces, exception-handling fundamentals, exception types, using try and catch, multiple catch clauses, nested try statements, throw, throws, finally, Java's built-in exceptions, user defined exception, assertions [10]

4. **Multithreaded Programming:** The Java thread model, the main thread, creating multiple threads, threads priorities, managing threads, thread class built-in functions. [4]

5. **I/O and String Handling:** I/O basics, reading console input, writing console output, the print writer class, reading and writing files, string constructors, operations on string, string tokenizing, string buffer. [7]

Outcome: Upon completion of this course, students are able to:

1. Understand the concepts of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
2. Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
3. Develop programs using the in-built Java API and the Java standard class library.
4. Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).
5. Use of development environment like Eclipse for collaborative programming

Text Books:

1. Herbert Schildt, Java the Complete Reference, Herbert Schildt, 8th Edition, 2011.
2. Bert Bates and Kathy Sierra, Head First Java, O'Reilly,2005

Reference Books:

1. Allen B. Downey, Think Java: How to Think Like a Computer Scientist, 2011.
2. Paul Deitel, Harvey Deitel, Java How To Program (Early Objects), 10th Edition, 2014.
3. E. Balaguruswamy, Programing with Java A Primer, Tata Mc. Graw Hill, 2007

MA 19.202 **Statistics and Probability Theory** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Statistics and Probability and apply in engineering disciplines.

Pre-requisite: Mathematics I, Mathematics II, and Mathematics III

1. **Introductory Ideas:** Recapitulation of basics of permutation, combination and probability theory; Law of addition and law of multiplication; Conditional probability; Total probability; Bayes' theorem (with proof)and it's applications. [08]
2. **Random Variables and Distribution:** Discrete and continuous random variables; Types of distributions with basic properties; Probability mass and density functions; Cumulative distribution function; Mean, variance and standard deviation of distributions; Discrete types (Binomial and Poisson) and Continuous types (Normal, Uniform and Exponential); Applications of basic ideas of these distributions. [10]
3. **Sampling and Testing of Hypothesis:** Sampling distribution of mean and variance; Central limit theorem; Simple and Composite hypothesis; Type I and Type II errors with graphical interpretations; Level of significance and tests of significance for large and small samples with applications. [08]
4. **Correlation and Regression:** Simple, partial and multiple correlations; Linear regression with applications. [06]
5. **Queuing Theory and Queuing Models:** Birth and death process; Pure birth and pure death process; Classification of queuing models: $[(M/M/1):(FCFS/\infty/\infty)]$, $[(M/M/1):(SIRO/\infty/\infty)]$, $[(M/M/1):(FCFS/N/\infty)]$, $[(M/M/C):(FCFS/\infty/\infty)]$; Applications of queuing models. [08]

Outcome: After completion of the course, students would be able to apply the knowledge of Statistics and Probability theory in engineering and solve curriculum problems.

Text Books:

9. S.Palaniammal, Probability and Random Processes, PHI, 2013.
10. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.

Reference Books:

1. Papoulis, Probability, Random Variables and Stochastic Processes, TMH, 2018.
2. Gupta & Kapoor, Fundamental of Mathematical Statistics, SCS Publisher, 2002.
3. Dass and Verma, Higher Engineering Mathematics, S. Chand, 2019.

EC 19.222 **Integrated Circuits and Applications Laboratory** **Total Hours: 26**
0-0-2-1

Objective: This lab course develops skills for implementing and analyzing electronic circuits, with applications to electronics design. It is also designed to enhance problem solving ability through steadily increasing problem complexity.

Pre-requisite: Electronic Devices and Circuits

1. To measure the following parameters of IC-741-
(a) Slew rate (b) CMRR

2. Implement the circuits to show the application of op-amp as-
(a) Summing amplifier (inverting)
(b) Difference amplifier (c) Algebraic adder

3. (a) Design an ideal inverting integrator to integrate a square wave of frequency, f ≥ 1KHz.
(b) Design a non-ideal non-inverting differentiator to differentiate a triangular wave of frequency, f ≥ 1KHz.

4. To plot the frequency response of -
(a) 1st order Low-Pass active filter
(b) 1st order High-Pass active filter

5. Design a second order band pass filter with cut off frequencies 200Hz and 1kHz and a gain of 4db. Plot its frequency response and hence find the Q of this filter.

6. Design the following circuit using IC 555 timer-
(a) Monostable Multivibrator to generate a pulse of 0.11 ms.
(b) Astable Multivibrator with 50% duty cycle.

7. Design op-amp based circuits to realize Wein Bridge oscillator.

8. To study application of IC 555 as-
(a) VCO (b) Schmitt-trigger circuit for square wave generator

9. To measure free running frequency, lock range and capture range of the given PLL circuit using IC-565.

10. Verify the line regulation and load regulation using IC 723.

Outcomes: Upon successful completion of this course, students should be able to:

1. Design Band pass and Band Stop filters for the given specifications
2. Design Oscillators and Multivibrators

EC 19.224 **Digital Electronics Laboratory** **Total Hours: 26**
0-0-2-1

Objective: This lab course develops skills for implementing and analyzing digital electronic circuits, with applications to electronics design. It is also designed to enhance problem solving ability through steadily increasing problem complexity.

Pre-requisite: Basics of Electronics Engineering

1 To study the use of General Purpose Digital Trainer and familiarization with the digital IC Data-Books.

2 To study AND, OR. NOT, NAND, NOR, EX-OR gates and their specified experiments.

3 To set up a 4-bit Binary Counter (74LS93) to demonstrate its sequence of Counting.

4 To study the characteristics curve of TTL and CMOS logic gates.

5 To design and test 4-bit Adder and Subtractor circuits.

6 To compare the magnitude of two 4-bit Binary Numbers A and B.

7 Design a combinational circuit with 4 inputs and 4-outputs that converts a 4-bit Gray Code to an equivalent 4-bit Binary number.

8 Design and implement a BCD to Seven Segment Decoder / Driver.

9 To design and implement a 2 to 1 multiplexer.

10 To design and implement a 1:2 & 1:4 de multiplexer.

11 To investigate the operation of various flip flops SR, JK, T and D using gates and FF ICs.

12 To design and implement Adders and Subtractors using Verilog HDL

13 To design and implement Multiplexers/De-Multiplexers using Verilog HDL

14 To design and implement Filp-Flops using Verilog HDL

Outcomes:

1. The background provided in this laboratory may effectively be utilized for the understanding of advanced courses such as VLSI Design and for the designing of complex circuitry.
2. Gain a hands-on experience in carrying out key operations needed to assemble circuits on breadboard.
3. This subject is directly applicable to industrial IC design and provides a strong background for more advanced courses.
4. This lab will be useful in the designing of hardware projects using Verilog HDL

CS 19.252 **Object Oriented Programming Laboratory** **Total Hours: 26**
0-0-2-1

Pre-requisite: Programming Lab **(CS 19.151)**

Objectives: The objective of this course is to:

- Become comfortable with object-oriented programming and learn to think in terms of objects.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, documentation.

Contents:

1. Code different pattern to understand control structures
2. Code program like factorial, fibinocci etc. to understand functions and recursions.
3. To understand OOP implement an small application with getter and setter method
4. Implement various operators, this keyword and constructors
5. Code different usage of static keyword
6. Implement different types of polymorphism
7. Show different usage of String class using its inbuilt functions
8. Demonstrate abstraction using abstract class and interface.
9. Demonstrate exception handling using all its keywords
10. Demonstrate console I/O and File I/O
11. Implement multithreading using Runnable interface and Thread class

Outcomes: Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of Inheritance, polymorphism, encapsulation and method overloading.
- Create Java application programs
- Use of development environment like Eclipse for collaborative programming/editing.

EC 19.301 **Microprocessor and Microcontroller** **Total Lectures: 40**
3-0-0-3

Objective: To develop an in-depth understanding of the operation of microprocessors and microcontrollers, machine language programming & interfacing techniques.

Pre-requisite: Digital Electronics

1. **The 8086 Microprocessor Architecture :** Architecture, details of sub-blocks such as EU, BIU; memory segmentation and physical address computations, pin diagram and description of various signals, minimum and maximum mode of operations, supporting chips viz. 8284, 8288 and memory mapping [8]

2. **Programming of 8086:** Addressing modes of 8086, instruction set of 8086, assembly language programming, counters and time delays, stack structure of 8086 and subroutine. [7]

3. **Interfacing of 8085 / 8086 with Programmable Chips:** Interfacing of 8255 Programmable peripheral interface, 8251 USART, 8253/8254 Programmable Interval Timer and Direct Memory Access Controller 8237/8257 DMA, 8259 Programmable Interrupt Controller. [8]

4. **Introduction to Microcontrollers, Architecture and Memory Interfacing:** Overview of the 8051 family, 8051 Microcontroller's Architecture, Pin configuration, Common memory types and Tradeoffs, External Memory interfacing. [7]

5. **Programming and Interfacing of 8051:** Addressing modes of 8051, instruction set of 8051, assembly language programming of 8051, stack structure of 8085, delays, and subroutines, Applications of interrupts, timer/counter and serial port, Components of Integrated Development Environment for software development, Interfacing of 8051 with sensors, Keyboard, ADC, DAC, LCD, Stepper Motor and D.C motor [10]

Outcomes: Upon completion of this course, the student will be able to:

1. The student will learn the internal organization of some popular microprocessors and microcontrollers.
2. The student will learn hardware and software interaction and integration and memory.

Text Books:

1. Ramesh S. Gaonkar, Microprocessor Architecture, Programming and Application with the 8085, Penram International Publishing, 6th Edition, 2013.
2. M. A. Mazidi, The 8051 Microcontroller & Embedded Systems, Pearson Education, 2nd Edition, 2006.

Reference Books:

1. I. Scott McKenzie and Raphael C.W. Phan, The 8051 Microcontroller, Pearson Education, 4th Edition, 2007.
2. D. V. Hall, Microprocessors and Interfacings; TMH, 3rd Edition, 2012.

EC 19.303 **Principles of Analog Communication** **Total Lectures: 40**
3-0-0-3

Objective:
1. To develop a fundamental understanding on communication systems with emphasis on analog modulation techniques.
2. To appreciate the mathematical concepts that form the foundations of analog communication

Pre-requisite: Statistics and Probability Theory

1. **Linear Modulation Techniques:** Basic blocks of communication systems, Review of signals and systems, Linear Modulation, Time domain and frequency domain description of AM (DSB-FC), DSB-SC, SSB and VSB signals. Generation and detection of linear modulation techniques, Super-heterodyne receivers and design. [12]
2. **Angular Modulation Techniques:** Basic concepts, Frequency Modulation Spectrum Analysis of FM Wave, Generation and detection of narrow band and wide band frequency modulation, Phase modulation, FM detection techniques-phase locked loops, Commercial broadcasting systems. [8]
3. **Sources of Noise and their characterization:** Random Variables, Random process and their characterization. Noise in Analog communication System. SNR calculations for synchronous detection of DSB and SSB and envelope detection of AM, SNR calculations for angle modulation system. Pre-emphasis and de-emphasis. Threshold effect in angle modulation. [8]
4. **Multiplexing and Multiple Access Techniques:** Frequency division Multiplexing, time division multiplexing, multiple access techniques. [5]
5. **Sampling and Pulse Modulation:** Sampling theorem – ideal and natural sampling and reconstruction, Pulse-Amplitude Modulation, Pulse-Time Modulation. [7]

Outcome: Upon completion of this course, the student will be able to:
1. Apply the basic knowledge of signals and systems and understand the basics of communication system and analog modulation techniques.
2. Evaluate the communication system performance in the presence of noise and summarize the merits and demerits of all the conventional analog modulation system.

Text Books:
1. B P Lathi, Zhi Ding, Modern Digital and Analog Communication Systems, Oxford university press, 4th Edition, 2009.
2. Taub and Schilling, Principles of Communication Systems, TMH, 4th Edition, 2013.

Reference Books:
1. Kennedy, Davis, Electronic Communication Systems , TMH, 6th Edition, 2017.
2. S. Haykins, Communication Systems , Wiley , 5th Edition, 2009.

EC 19.305 **Signal Processing and Applications** **Total Lectures: 40**
3–0–0-3

Objective:

- To understand the fundamental characteristics of continuous- and discrete-time signals and systems in terms of both the time and transform domains and to develop the mathematical skills to solve problems involving convolution and sampling.

Pre-requisite: Mathematics I, Statistics and Probability Theory

1. **Representation and classification of Signals**: Signal classification - Continuous and discrete time, Periodic - aperiodic, even - odd, energy - power, Deterministic - random, real valued - complex exponential, sinusoidal, time scaling, time shifting, Sampling and discrete time processing of continuous-time signals, Concept of frequency in continuous-time and discrete-time signals. [6]
2. **Basics of Systems and Transformation**: Properties of systems – linearity, time invariant, causal, stable, inverse, static and dynamic, system impulse response, convolution, correlation, Transformation - Fourier series, continuous time and discrete time Fourier transform, Laplace transform, z-transform, its properties, limitations and inverse transforms, pole – zero concept, computation of impulse response and transfer function using transforms. [6]
3. **Analysis of Continuous time and discrete time systems:** Block diagram representation, linear time-invariant (LTI) systems, interconnection of LTI Systems, discrete time systems and their types, systems with finite and infinite duration impulse response, recursive and non-recursive structures, system realizations in direct , transpose, cascade and parallel forms. [8]
4. **DFT, FFT and DCT Algorithms:** Discrete Fourier transform (DFT), linear convolution using DFT, efficient computation of the DFT - Fast Fourier transform (FFT) algorithms, radix-2 & 4 FFT algorithms, discrete cosine transform (DCT) - DCT-1 and DCT-2, energy compaction property of DCT. [10]
5. **Digital Filter Design:** Review of analog filters – comb and notch types, Design of infinite Impulse Response (IIR) filter from analog filters - Bilinear and Impulse invariant transformation, Finite Impulse Response (FIR) filter - amplitude & phase responses, linear phase filters, transversal filters, windowing techniques, comparison between IIR and FIR filters. [10]

Outcome: After completion of the course, students will be able to

- Understand the process of sampling and spectral characteristics of periodic and aperiodic signals using Fourier analysis and determine the response of LTI system using Fourier analysis convolution.

Text Books:

1. A.V. Oppenheim, A.S. Willsky and S.H. Nawab, Signals and Systems, PHI, 2nd Edition, 1997.
2. S. K. Mitra, Digital Signal Processing A Computer Based Approach, Tata McGraw-Hill, 4th Edition, 2013.

Reference Books:

1. Michel J. Robert, Fundamentals of Signals and Systems, MGH International Edition, 2008.
2. John G. Proakis, Dimitris G. Manolakis, Digital Signal Processing, Principles, Algorithms, and Applications, Pearson Education, 4th Edition, 2012.

EE 19. 303 **Control System Engineering** **Total Lectures: 40**

3-0-0-3

Objective: The student gains the knowledge of the fundamental principles of analog and digital control system engineering, time response and frequency response analysis with its practical implementation. This course helps in understanding the design of Compensator and PID controller for the Automatic control of Industry.

Pre-requisite: Mathematics, Network Analysis & Synthesis

1. **Introduction:** Industrial control examples. Mathematical models of physical systems. Control hardware and their models. Transfer function models of linear time-invariant systems. Feedback Control: Open-Loop and Closed-loop systems. Benefits of feedback. [8]
2. **Reduction Techniques:** Block diagram reduction and signal flow graph representation of systems. [4]
3. **Time Domain Analysis:** Standard test signals, time response of 1^{st} and 2^{nd} order systems for standard test inputs, time domain design specifications i.e. rise time, peak time, delay time, peak overshoot, settling time and steady state error etc., different types of feedback systems, Steady state errors for unit step, unit ramp and unit parabolic inputs. **C**oncept of stability: conditions for stable system, relative and marginal stability, Routh-Hurwitz criterion. Root-Locus technique. Construction of Root-loci. [12]
4. **Frequency Domain Analysis:** Relationship between time and frequency response. Polar plots. Bode plots. Nyquist stability criterion. Relative stability using Nyquist criterion – gain and phase margin. Introduction to Controller Design: Frequency-domain methods of design. Application of conventional Controllers, Lead and Lag compensation in designs. Analog and Digital implementation of controllers. [12]
5. **State Variables:** Analysis of systems, state vector, state space, advantages of state space techniques, state space representation, State variable analysis and design. [4]

Outcome: At the end of this course, students will demonstrate the ability to

- Understand the concept of stability and its assessment for linear-time invariant systems.
- Design simple feedback controllers.
- Knowledge of stability analysis and improvement of stability for control system.
- Benefit the graduates who wish to work in core sector industry as most of the core sector is state-of-art control.

Text Books:

1. K. Ogata, "Modern Control Engineering," Pearson Education/Prentice Hall of India, 4^{th} Edition, 2003.
2. I. J. Nagrath and M. Gopal, "Control System Engineering," New Age International Publishers, 2^{nd} Edition, 2003.

Reference Books:

1. Syed Hasan Saeed, "Automatic Control Systems (with MATLAB Programs)," S.K. Kataria & Sons Publishers, 6^{th} Edition, 2008.
2. Samarjit Ghosh, "Control Systems: Theory and Applications," Pearson Education, 2^{nd} Edition, 2012.

EC 19.307 **Microwave Engineering** **Total Lectures: 40**
3-0-0-3

Objective: To acquire fundamental knowledge of Microwave and apply in engineering applications.

Pre-requisite: Electromagnetic Field Theory

1. **Introduction:** Microwaves, Generation: Brief idea of microwave tubes and microwave solid state devices, properties and applications. [3]

2. **Microwave Circuits:** Equivalent voltage and current definition in waveguides, concept of impedance, impedance matrix, admittance matrix, scattering matrix and transmission matrix**.** [7]

3. **Microwave Passive Devices:** Excitation of waveguides through probes, loops and apertures. Terminations: matched loads and short, attenuators, phase shifters, two hole directional coupler, E-plane tee, H-plane tee, magic tee, microwave propagation in ferrites, isolators and circulators. [10]

4. **Microwave Active Devices:** Reflex Klystron, Two cavity Klystron, Travelling Wave Tubes, Magnetrons, Gyrotron, construction, operation and practical applications of Gunn diode, Tunnel diode and IMPATT diode**.** [14]

5. **Microwave Measurements:** Detection of microwaves, measurement of microwave power, impedance, frequency, VSWR, Q-factor and scattering parameters. [6]

Outcome: After completion of the course, students would be able to apply microwave concepts and equations in engineering and solve voltage and current equations.

Text Books:

1. David M. Pozar, Microwave Engineering, John Willey & sons, 3rd Edition, 2005.
2. Samuel Y. Liao, Microwave devices and Circuits, Pearson Education, 3rd Edition, 2008.

Reference Books:

1. Annapurna Das & Sisir K Das, Microwave Engineering, Tata McGraw-Hill, 3rd Edition, 2014.
2. M. L. Sisodia and G. S. Raghuvanshi, Microwave Circuits and Passive Devices, New Age Publication, 1st Edition, 2017.

EC 19.321 **Analog Communication Laboratory** **Total Hours: 26**
0-0-2-1

Objective: The educational objectives of the Analog Communication Lab course are:

1. Graduates who desire to pursue an engineering career in Communication arena will be widely employed in positions they find appropriate and desirable.
2. Graduates who desire to pursue higher degrees will be successful in gaining admission and advancing in programs they find appropriate and desirable.

Pre-requisite: Principles of Analog Communication

1. To Generate an AM signal and measure the depth of modulation using a CRO.
2. Implement an AM Modulator and demodulator circuits and verify its waveform and calculate its modulation index.
3. Implement FM generator circuit and observe variation with modulating signal.
4. Implement a circuit of Pulse Width Modulator with IC-555.
5. Implement a circuit to show the application of IC-555 as Pulse Position Modulator.
6. To observe the effect of pre-emphasis and de-emphasis on given input signal
7. Implement the PLL circuit to find its capture range and lock range.
8. Study of Time Division Multiplexing and demultiplexing (TDM- PAM) (ST 2102)
9. To understand the AM Signal modulation and demodulation. (MULTISIM)
10. To understand the FM Modulation and detection. (MULTISIM)

Outcome: Ability to apply knowledge of mathematics, basic science, and engineering to solve problems encompassing fundamental areas of Analog Communication.

EC 19.323 **Digital Signal Processing Laboratory** **Total Hours: 26**
0-0-2-1

Objective: The lab aims to introduce the mathematical approach to manipulate discrete time signals, which are useful to learn digital tele-communication.

Pre-requisite: Signal Processing and Applications

1. **Using the MATLAB**

i) Generation of the basic signals such as unit impulse, unit step, unit ramp, exponential, sine and cosine etc.
ii) Study of linear convolution
iii) Study of impulse response of the causal LTI System
iv) Study of DFT
v) Study of circular convolution
vi) Study of FIR filter response
vii) Study of IIR filter response
vii) Study of FFT

2. **Using the TMS320C67XX Processor**

i) Wave generation
ii) Linear Convolution
iii) Circular Convolution
iv) DFT
v) Impulse Response of systems

Outcome:

1. Analyze discrete-time systems in both time & transform domain and also through pole-zero placement.
2. Analyze discrete-time signals and systems using DFT and FFT
3. Design and implement digital finite impulse response (FIR) filters.
4. Design and implement digital infinite impulse response (IIR) filters.

EC 19.325 **Microprocessor and Microcontroller Laboratory** **Total Hours: 26**

0-0-2-1

Objective: To introduce to students the basics of 8086 microprocessor, assembling language programming and interfacing with various modules.

Pre-requisite: Microprocessor and Microcontroller

1 **[a]** Write a program for 8085 microprocessor to move a eight bit number in register A, B, C and D. Verify the content of all the registers after execution of program.
Also find out the followings:
(i) Total number of bytes required for the program
(ii) Hex code of each instruction used in the program

[b] Load a eight bit number stored in memory location 4000H into register A. Now load the content of A in B and in memory location 5000H. Verify the contents of A, B and memory location 5000H.

2 **[a]** Write a program to perform multiplication of two 8 bit numbers using 8085 microprocessor.

[b] Let two numbers are stored at memory locations 2000H and 2001H. Write a program for 8085 microprocessor to perform following actions:
If 1st number > 2nd number then store 00H at 3000
If 1st number < 2nd number then store FFH at 3000
If 1st number = 2nd number then store 99H at 3000

3 **[a]** Write an assembly language program for 8086 microprocessor to find out the smallest number from a series of five eight bit numbers and store it at memory location 2000H: 2000H.

[b] Write an assembly language program for 8086 microprocessor to find out the largest number from a series of five eight bit numbers and store it at memory location 2000H: 2000H.

4 **[a]** Write a program to arrange the series of four eight bit numbers in ascending order.

[b] Write a program to arrange the series of four eight bit numbers in descending order.

5 Interface three LEDs with 8086 Kit to form traffic light control logic.

6 Interface a buzzer with 8086 microprocessor with the help of relay and write a program to control the ON-OFF sound from the buzzer.

7 Interface a DC motor with 8086 microprocessor and write a program to control its operation.

8 a) Introduction to Keil µVision Integrated Design Environment software.
b) Write an ALP for 8051 to move a block of five bytes stored from locations 30H to 40H of internal RAM.

9 a) Write an ALP for 8051 to move a block of five bytes stored from address 3000H of external data memory to address 40H of internal RAM.
b) Write an ALP for 8051 to move a block of five bytes stored from address 40H of internal RAM to address 3000H of external data memory.

10 a) Three 8 bit numbers are stored at internal RAM locations 30H, 31H and 32H. Find out the largest number and store it at internal RAM location 40H.
b) Three 8 bit numbers are stored at internal RAM locations 30H, 31H and 32H. Find out the smallest number and store it at internal RAM location 40H.

Outcome: After the basic knowledge of microprocessor and microcontroller interfacing and their applications, the student will be able to:

1. Analyze and apply working of 8086.
2. Compare the various interface techniques. Analyze and apply the working of 8255, 8279, 8259, 8251, 8257 ICs and design and develop the programs.
3. Learning the Communication Standards.

RM 19.101 **Research Methodology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. **Introduction:** Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches, Research Process, Validity and Reliability in Research. [6]
2. **Problem Formulation:** Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps. [10]
3. **Research Design:** Research Framework, Meaning & Significance of Research Designs, Features of a good Research Design, Types of Research Design. [10]
4. **Data Analysis and Simulation Tool:** Types of Data, Sources of Data, Methods of Collecting Data, Data Presentation Techniques. Methods of Data Analysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. **Report Writing:** Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

2. C. R. Kothari, "Research Methodology: Methods and Techniques", New Age International (p) Limited, Publishers New Delhi, 4nd edition, 2018.

Reference Books:

1 William G.Zikmund, “Business Research Methods”, Cengage Learning New Delhi, 8th edition, 2016.
2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

EC 19.302 **VLSI Design** **Total Lectures: 40**

3-0-0-3

Objective:
1. Graduates who desire to pursue an engineering career in VLSI Design arena will be widely employed in positions they find appropriate and desirable.
2. G Graduates who desire to pursue higher degrees will be successful in gaining mission and advancing in programs they find appropriate and desirable.

Pre-requisites: Electronics Devices and Circuits, Digital Electronics.

1. **Basic VLSI Design Issues:** IC design techniques- hierarchical design, design abstraction and computer-aided design [4]

2. **MOS Transistor Theory:** Current-voltage characteristics of MOSFETS, threshold voltage and body effect, MOSFET design equations, second order effects, MOSFET capacitances [8]

3. **NMOS and CMOS Inverter:** NMOS and CMOS inverters, W/L ratio for NMOS and CMOS inverters, β_n/β_p ratio, noise margin, NMOS and CMOS Voltage transfer Characteristics, CMOS delay and power dissipation [8]

4. **MOS Inverter's Switching Characteristics:** Calculation of delay times, Inverter design with delay constraints [6]

5. **Stick Diagram & VLSI Circuit Design Techniques:** Stick diagrams, CMOS design style, design rules: lambda based design rules, layout design, Inverter equivalent of series and parallel MOS circuits, logic design with delay and power constraints, worst case design, complex logic design [14]

Outcomes:
1. Ability to apply knowledge of mathematics, basic science, and engineering to solve problems encompassing fundamental areas of VLSI design.
2. Ability to apply in-depth knowledge of VLSI design principles, systems, and devices to the solution of real time problems.
3. Ability to design and evaluate a component or system to meet desired needs within the field of VLSI design.

Text Books:
1. Douglas A. Pucknell & Kamran Eshraghian, Basic VLSI Design, PHI, 3rd Edition, 2011.
2. Neil H.E. Weste, David Harris, Ayan Banerjee, CMOS VLSI Design, A Circuits and Systems Perspective, Pearson Education, 4th Edition, 2011.

Reference Books:
1. Jab M. Rabaey, Anantha Chandra Kasan, Borivoje Nikolic, Digital Integrated Circuits - A Design Perspective, PHI, 2nd Edition, 2012.
2. Michal John Sebastian Smith, Application-Specific Integrated Circuits, Pearson Education, 6th Edition, 2009.

EC 19.304 **Advance Radio Access Network (ARAN)** **Total Lectures: 40**
3-0-0-3

Objective: To acquire skills on different legacy and advance RAN's Architecture, Design & Optimization along with latest industries concepts on 5G, IOT, Volte, RAN Cloud etc.

Prerequisite: Digital Modulation Techniques & Data Transmission, Antenna and Wave Propagation, Basics of Mobile Communication

1. **Basics of Mobile Communication:** Microwave Theory, Propagation Models, Modulation Theory, Antenna Theory [4]
2. **Introduction to RAN:** Telecom E2E approach, RAN Life Cycle**,** RF basics,. Latest Industry Concepts – 5G, IOT, Volte, RAN Cloud [4]
3. **RAN Overview**: Introduction to Cellular Concepts, Introduction to Power Control, Introduction to Protocol Stacks, GSM, WCDMA, LTE (Overview, Architecture, Air Interface), Generalized Call Flows [12]
4. **RAN Design:** RF Design Overview, Initial Radio Network Design (Link Budget, Radio Network Dimensioning & Nominal Design), Final Radio Network Design, Radio Planning Tools & IBS Introduction, Radio Propagation Model Tuning, LRAN Initial Radio Network Design (Sample Report) [10]
5. **RAN Optimization:** Pre Launch Optimization (Process Overview, Introduction to Drive Testing (Data Collection Methodology, Data Post Processing),Post Launch Optimization, (Process Overview, Introduction to Counters and OSS, KPI Improvement Methodology) [10]

Outcome: After completion of this course, students would be able to

- Understand the industry level ways of working of RAN with different design and optimization techniques.
- Students will get heads up in terms of upcoming advance technology concepts.

Text Books:

1. Ericsson Academy (Ericsson Internal)
   - Air Interface
   - Protocol and Procedures
   - GSM, UMTS, LTE Fundamentals
   - RAN Design & Performance Management.
2. Andrea Goldsmith, "Wireless Communications", Cambridge University Press, 2007.

Reference Books:

1. John G. Prokis and Masoud Salehi, Digital Communication, McGraw-Hill, 5th Edition, 2008.
2. J. Schiller, Mobile communications, Pearson, 2nd Edition, 2004.

EC 19.306 **Digital Communication** **Total Lectures: 40**

3-0-0-3

Objective: The objective of this course is to introduce the students to the basic concepts of digital communication. The aim of this course is to study the fundamental aspects of digital communication systems. The understanding of the fundamentals of digital communication by studying theory, numerical and implementation of circuits.

Pre-requisite: Basics of Communication Systems and Techniques.

1. **Model of a Communication System:** Introduction, advantages of digital communication over analog communication, probability theory random process and random variables. **[6]**

2. **Digital Communication Techniques:** Sampling theorem and techniques, uniform and non-uniform quantization techniques, PCM, DPCM, DM, and ADM, compression standards **[8]**

3. **Multiplexing:** time division multiplexing and synchronization, Digital multiplexing hierarchy, Electrical representation of binary sequences Bandwidth requirement of PCM. **[2]**

4. **Information Theory and Coding:** Channel capacity, Shannon capacity, source entropy, Shannon-Fano, Huffman coding, linear block codes and syndrome decoding, cyclic codes, BCH codes, convolution, Viterbi coding and decoding. **[10]**

5. **Digital Modulation Techniques:** Base-band transmission, inter-symbol interference and adaptive equalization, digital modulation and demodulation techniques, bandwidth consideration of different digital modulation schemes, matched filter and probability of error analysis, carrier and timing recovery techniques. **[14]**

Outcome: After completion of the course, students will be able to

1. The students can understand the concepts of digital communication.
2. They acquire and apply the knowledge to implement the concepts for designing an efficient communication system.
3. They become able to identify, analyse and implement new ideas in digital communication systems for proposing alternate solutions.

Text Books:

1. B. P. Lathi, Modern Digital and Analog communication Systems, Oxford University Press, 4th Edition, 2018.
2. Taub and Schilling, Principles of Communication Systems, TMH, 4th Edition, 2013.

Reference Books:

1. Kennedy, Davis, Electronic Communication Systems , TMH, 6th Edition, 2017.
2. S. Haykins, Communication Systems , Wiley , 5th Edition, 2009.

EC 19. 308 **Antenna and Wave Propagation** **Total Lectures: 40**
3-0-0-3

Objective: To impart knowledge on basics of antenna theory and to analyze and design a start of art antenna for wireless communications and RADAR.

Pre-requisite: Principles of Electromagnetics & Microwave Engineering

1. **Introduction**: Basic properties of transmitting, and receiving antenna, gain, bandwidth, and polarization, Effective aperture and Friss transmission formula. [4]

2. **Physical Concept of Radiation:** Retarded potentials hertzian dipole, antenna parameters, radiation pattern, gain, directivity, effective aperture, reciprocity and radiation from dipoles of arbitrary length. [6]

3. **Theory of Array Antenna: A**rrays of point sources, Endfire and Broadside arrays, Log-periodic, Yagi-uda arrays, Analysis of Rhombic antenna. Design of Rhombic Antennas, Loop Antenna: Radiation from small loop and its radiation resistance. Helical antenna: Normal and axial mode operation. synthesis of antenna arrays using Schelkunoff polynomial method, Woodward-Lawson method. [10]

4. **Frequency Independent Antenna:** Slot, horn antenna, parabolic antenna, aperture antennas and microstrip antenna: Basic characteristics of microstrip antennas, feeding methods, methods of analysis, design of rectangular and circular patch antennas. [8]

5. **Wave Propagation:** Propagation in free space. Propagation around the earth, surface wave propagation, structure of the ionosphere, Sky wave propagation- propagation of plane waves in ionized medium, Determination of critical frequency, MUF. Fading, troposphere propagation, Super refraction, antenna for aeronautical mobile systems, cell-site and mobile antenna, adaptive antennas. [12]

Outcomes: After completion of the course, students will be able to

1. Select the appropriate portion of electromagnetic theory and its application to antennas.
2. Distinguish the receiving antennas from transmitting antennas, analyze and justify their characteristics.
3. Assess the need for antenna arrays and mathematically analyze the types of antenna arrays.
4. Distinguish primary from secondary antennas and analyze their characteristics by applying optics and acoustics principles.
5. Outline the factors involved in the propagation of radio waves using practical antennas.

Text Books:

1. C. A. Balanis, Antenna Theory and Design, John Wiley & Sons, 3rd Ed, 2005.
2. W. L. Stutzman, and G. A. Thiele, Antenna Theory and Design, John Wiley & Sons, 2nd Ed, 1998.

Reference Books:

1. R. E. Collin, Antennas and Radio Wave Propagation, Tata McGraw-Hill, 5th Edition, 2017.
2. K.D. Prasad, Antenna and Wave Propagation, Satya Prakashan, 3rd Edition, 2003

EE 19.304 **Power Electronics** **Total Lectures: 40**
3-0-0-3

Objective:
- To introduce to students the theory and applications of power electronics systems for high efficiency, renewable and energy saving conversion systems
- To prepare students to know the characteristics of different power electronics switches, drivers and selection of components for different applications
- To develop students with an understanding of the switching behavior and design of power electronics circuits such as DC/DC, AC/DC, DC/AC and AC/AC converters

Prerequisite: Network Analysis and Synthesis, Basics of Electronics Engineering, Engineering Mathematics

1. **Introduction to Power Devices:** Review of power semiconductor devices, SCR, Static and dynamic characteristics, Turn-on and Turn-off methods and circuits, Ratings and protection of SCRs, Series and parallel operation of thyristor, Other members of thyristor family. [8]
2. **Controlled AC to DC Converter:** Principle of phase control, Single phase half wave circuit with different types of loads, Single phase and three phase semi converter and full converter bridge circuits, Single phase dual converters and their operation with circulating and non-circulating currents. [10]
3. **Controlled AC to AC Converter:** AC Voltage Controllers - Types of single-phase voltage controllers, Single phase voltage controller with R and RL type of loads, gate pulse requirements to trigger the SCRs of ac voltage controllers. Cycloconverters - Principles of operation, Single phase to single phase step up and step down cycloconverters. Three phase to single phase cycloconverter. [10]
4. **Controlled DC to DC Converter:** Introduction to dc chopper, Principle of chopper operation, Control strategies, Types of choppers and its operation. [5]
5. **Controlled DC to AC Converter:** Introduction to inverter, Single phase VSI: half bridge and full bridge inverters. Three phase bridge inverters with 180 degree and 120 degree modes of operation, Series and parallel inverters, Introduction to current source inverters. [7]

Outcome:
- The student will be able to understand the principle of operation of commonly employed power electronic converters
- The student will be capable of analyzing non-linear circuits with several power electronic switches
- The student will be equipped to take up advanced courses in Power Electronics and its application areas

Text Books:
1. Rashid, M., "Power Electronics", Prentice Hall of India Private Limited, 4th Edition, 2006.
2. P.S. Bimbhra, "Power Electronics," Khanna publishers, 5th edition, 2012.

Reference Books:
1. Mohan, N., Undel, T.M. and Robbins, W. P., "Power Electronics: Converter Applications and Design," John Wiley and Sons, 3rd Edition, 2007.
2. Jain, A., "Power Electronics and its Applications," Penram International Publishing (India) Pvt. Ltd., 4th Edition, 2008.
3. Dubey, G.K., Doradla, S.R., Joshi, A. and Sinha, R.N.K., "Thyristoried Power Controllers," New Age International (P) Limited, Publishers, 2nd Edition, 2004.

EC 19.322 **VLSI Laboratory** **Total Hours: 26**
0-0-2-1

Objective: To introduce various aspects of VLSI circuits and their design.

Pre-requisite: Digital Electronics, Electronics Devices and Circuits

Using the Tanner EDA tools

i) Study the V-I characteristics of NMOS transistor

ii) Study of different invertor designs
   a) Resistive load inverter
   b) NMOS load inverter
   c) PMOS load inverter
   d) CMOS inverter

iii) Implement and verify the functionality for the following using CMOS technology
   a) Two input NAND gate
   b) Two input NOR gate

iv) Implement and verify the functionality for a Boolean function using CMOS technology.

v) Draw the layout for the following and verify its functionality.
   a) CMOS inverter
   b) two input NAND gate
   c) two input NOR gate
   d)

vi) Draw and verify the layout the following function

$$X = \overline{(AB + D + EF)}$$

vii) Study of different design styles

vii) Implementation of minor project based on VLSI

Outcome: Generalize the design techniques and analyze the characteristics of VLSI circuits such as area, speed and power dissipation

EC 19.324 **Microwave and Antenna Laboratory** **Total Hours: 26**

0-0-2-1

Pre-requisite: Microwave Engineering , Antenna & Wave Propagation

1. To draw the mode characteristics of reflex klystron tube and determine it's electronic tuning range.

2. To determine the frequency and wavelength in a rectangular waveguide for dominant mode. Also verify the waveguide law.

3. To obtain the following for Gunn diode :-
   (A) V-I characteristics
   (B) Out power and frequency as a function of input voltage.

4. To Draw the radiation pattern and find the Front to back ratio, VSWR, half power beam width of following antennas using S 45 Antenna Set-up
   (A) Dipole L/2 (B) Slotted Cylindrical (C) Yagi 5Element (D) Loop Square (E) Quad Loop

5. To determine following parameter of Isolator and Circulator :-
   (A) Insertion loss (B) Isolation (C) Input VSWR

6. To determine the following parameter of Magic Tee :-
   (A) Insertion loss (B) Isolation
   (C) Input VSWR (D) Coupling factor

7. To determine the following parameter of directional coupler :-
   (A) Insertion loss
   (B) Main line and auxiliary line VSWR
   (C) Coupling factor
   (D) Isolation
   (E) Directivity

8. To Draw the radiation patter n and find the Front to back ratio, VSWR, half power beam width of following antenna using S-54 Antenna Set-up
   (A) Dipole L/2,L (B) Rectangular Slot (C) Broad side Array (D) Log Periodic Array (E) End-Fire Array (F) Discone (G) Helical (H) Vertical

9. To Draw the radiation pattern and find the Front to back ratio, VSWR, half power beam width of following antenna using S-99 Antenna Set-up
   (A) Printed Dipole Antenna (B) Shielded Loop Antenna (C) Log-Periodic (D) Broad side Array (E) End Fire Array(F) Micro strip (G) Patch Circularly Polarized (H) Spiral Antenna

10 To Determine the impedance of unknown load with the help of smith chart.

Outcome: After completion of the course, students would be able to work with different active and passive devices.

EC 19. 326 **Digital Communication Laboratory** **Total Hours 0-0-2-1**

Objective: The objectives of the Digital Communication laboratory are:

a) To allow the students to perform experiments that demonstrate the theory of digital communication systems that will be discussed in the lecture course.
b) To introduce the students to some of the electronic components that makes up digital communication systems.

Pre-requisite: The basic knowledge of different electronic components like resistors, capacitors, transformers, LEDs and devices like CRO, Power Supply, Function Generator, Multimeters.

1 Study of PSK modulation and demodulation.

2 To generate a pulse Amplitude Modulation and Demodulation

3 Measurement of Numerical Aperture of a Fiber Using Optical Fiber Trainer Kit & Measure the Bending Loss.

4 Study of FSK Modulation and demodulation

5 (a) To generate a PCM signal and demodulate it.
(b) To Study Parity error and hamming code.

6 Study of Time Division Multiplexing and de-multiplexing (TDM- PAM).

7 Study of Delta modulation and demodulation

8 To Understand the Basic concept of satellite communication
(a) Establish a direct communication link between Transmitter and receiver using Tone Signal.
(b) To Transmit and receive wave form (Sine wave) through satellite link.

9 Study of AM receiver and Transmitter

10 To generate the FM signal and demodulate it

Outcome: The students will understand the basic facts and concepts of digital communication by performing experiments.

EC 19.411 **Telecommunication Switching Systems** **Total Lectures: 40**

3-0-0-3

Objectives:
1. To acquire knowledge on simple telephone communication and basics of switching system.
2. To get acquainted with electromechanical switching systems.
3. To gain knowledge on digital switching systems, stored program control system, traffic engineering, telephone networks and ISDN.
4. To apply the knowledge of Telecommunication Switching in designing switching systems.

Pre-requisite: Analog communication

1. **Introduction to Switching Systems:** Introduction, simple telephone communication, basics of switching system
2. **Electromechanical Switching Systems: Introduction to Strowger switching system,** Crossbar switching systems, single stage and multistage switching systems, common control, pulse dialling, tone dialling.
3. **Digital Switching Systems:** Stored Program Control, centralised SPC, distributed SPC, software architecture, application software, space division, and time division switching, time multiplexed space division, time multiplexed time division switching and combination switching.
4. **Traffic Engineering:** Erlang's equation, blocking probability and B-D equation.
5. **Telephone Networks:** Subscriber loop, digital subscriber loop, high speed digital transmission over subscriber line, wire-in, wire-less media, coaxial cables, optical fibre cables, microwave propagation, satellite transmission, numbering plan, charging plan, Inchannel signalling, common channel signalling.
6. **ISDN and ATM Standards:** ISDN architecture, channels, interfaces, protocol, B-ISDN architecture, frame relay, ATM protocols

Outcomes: Once the student has successfully completed this course, he/she will be able to answer the following questions or perform following activities:

1. Able to explain the basic concepts of telecommunication Switching Systems.
2. Able to describe different mechanical and electronic switching systems, telephone networks.

Able to design various switching systems.

Text Books:
1. Thiagarajan Viswanathan, Telecommunication Switching Systems and Networks, PHI, 2nd Edition, 2015.
2. J. E. Flood, Telecommunication Switching, Traffic and Networks, Pearson Education, 1st Edition, 1999.

References:
1. John C. Bellamy, Digital Telephony, Wiley Publications, 3rd Edition, 2000.

EC 19.412 **Wireless Networks** **Total Lectures: 40**

3-0-0-3

Objectives: To acquire fundamental knowledge of various types of wireless networks and apply them to wireless communication applications.

Pre-requisite: Analog Communication, Digital Communication

1. **Introduction:** Introduction to wireless networks, Wireless communication systems – Paging system, cordless telephone system, cellular telephone system [4]
2. **Basics of cellular communication systems:** Frequency reuse, channel assignment, call handoff, interference and system capacity, Mobile radio propagation – path loss and fading, 2G, 2.5 G and 3G wireless networks [10]
3. **Multiple Access Techniques:** Frequency Hopped Multiple Access, Code Division Multiple Access, Hybrid Spread Spectrum Multiple Access, Packet Radio, Carrier Sense Multiple Access, Reservation Protocol [10]
4. **Equalization, Diversity and Channel Coding:** Fundamentals of equalization, Linear equalization, Nonlinear equalization, Diversity techniques – space diversity, time diversity, frequency diversity, polarization diversity, RAKE receiver, Block code and convolution code. [8]
5. **Wireless Networking:** Wireless local area network, RF and IR WLAN, advantages and applications, IEEE 802.11, IEEE 802.16, HYPERLAN, Bluetooth, WiMax, Ultra-Wide Band communication. [8]

Outcomes: After completion of the course, students would be able

1. To apply wireless communication concepts and ideas to engineering applications and
2. To develop high performance wireless communication network.

Text Books:

1. T. S. Rappaport, Wireless Communication, Principles and Practice, Pearson Education, 2nd Edition, , 2009
2. Upena Dalal, Wireless Communication, Oxford University Press, 1st Ed., 2009.

References:

1. Jochen Schiller, Mobile Communications, , Pearson Education, 2nd Edition, 2012
2. Vijay Garg, Wireless Communications and Networking, First Edition, Elsevier, 1st Edition, 2007.

EC 19.413 **Fiber Optics Communication** **Total Lectures: 40**

3-0-0-3

Objectives:
1. To acquire knowledge on basics of Optical Fibers.
2. To get acquainted with different types of optical fiber.
3. To gain knowledge on transmission characteristics of optical fiber, fabrication, cabling, jointing techniques.
4. To apply the knowledge of optical fiber communication in designing fiber optic systems for communication.

Pre-requisite: Analog Communication

1. **Basic Concepts of Optical Communication:** Introduction to wave propagation in planar optical waveguides, ray theory, introduction to electromagnetic mode theory, phase and group velocity. [9]

2. **Fiber Configurations and Mode Theory:** Wave propagation in cylindrical fibers, modes and mode coupling, step and graded index fibers, single-mode fibers. [5]

3. **Signal Degradation in Optical Fibers:** Introduction to transmission characteristics of fibers, attenuation, material absorption and scattering loss, bend loss, dispersion, intra modal and intermodal dispersion in step and graded index fibers, overall dispersion in single and multi-mode fibers. [9]

4. **Fiber Fabrication and Fiber Joints:** Preparation of different types of fibers, optical fiber cables and stability of characteristics, Fiber alignment, fiber splices, connectors, couplers. [10]

5. **Optical Fiber Communication Systems:** Fiber amplifiers system, description of an optical fiber communication system, system design, power budget, hybrid fiber coaxial system and WDM technology. [7]

Outcomes: Once the student has successfully completed this course, he/she will be able to answer the following questions or perform following activities:
1. Able to explain the basic concepts of Optical Fiber Systems. Able to describe different mechanical and electronic switching systems, telephone networks.
2. Able to describe different types of fibers, losses, dispersion, jointing techniques, fabrication, cabling etc.
3. Able to design various fiber optic communication systems.

Text Books:
1. John M. Senior, Optical Fiber communications, Pearson Education, 3rd Edition, 2009.
2. Gerd keiser, Optical Fiber communication, Tata McGraw Hill, 5th Edition, 2013.

EC 19.414 **Business Support System – Intelligent Network (BSS-IN)** **Total Lecture: 40**

Objectives: 1. To acquire knowledge on advanced intelligent networks **3-0-0-3**
2. To get acquainted with different protocols like TCP/IP/SCTP.

Pre-requisites: Linux Basic, Database Basic, TCP/IP Basic.

1	**Introduction to Telecom Market:** Customer and Vendors, How Adds and promotion benefits, Statistics (Postpaid/Prepaid).	**[2]**
2	**GSM Basic and Evolution:** Architecture, Call Flows (Cover RAN/CORE/IN), OSI/SS7 Basic, Evolution (2G to 5G)	**[4]**
3	**Intelligent Network Overview:** Common Charging Architecture - High Level Common Architecture, Charging Mechanisms, Charging Functions- Offline Charging Funtions; Offline Charging Funtions; Architecture Mapping ,Charging Principles; Charging data generation and quota supervision; Charging information utilization, OCS - Required Functionality, OCS - Reference Model/Architecture, OCS Rating Function, OCS Functionality Message Flows, OCS CDRs, Policy Control And Charging; Reference Architecture; Policy Control Requirements; Reference Points; Functional Entities; PCC Rules; QoS Rules; PCC Procedure and Flows, Refill And voucher management, Subscriber/Customer management - Customer Care	**[11]**
4	**Unit 4**: **Billing Mediation and Provisioning Basic** CDR, UDR, TAP files, RAP files, NRTRDE, Billing System architecture (Mediation, usage and tariff database, formatting and rating processes, invoice generation),Types of usage (duration, volume, QoS, day and time, number of events, type of service),Types of rating (batch rating, pre-event rating, post-event rating, backwards rating, prepaid balance management, spending control/unbilled limit), Standard rating functions (staircase, offset, linear), Parameters of billing (usage & recurring &onetime charges, discounts & fees & taxes),Types of billing (regular, on-demand, immediate, simulation, information), Different product features (supports MVNO, real-time discounts, cross discounts, shared balances, multiple balances), Different marketing tools (business partners, bundles and counters, F&F, free units, discounts), Typical Telecom Environment: Multivendor environment, Std Protocols & proprietary Interfaces, Integration challenges, File Mediation fundamentals: ASN.1, Need, Typical Use Cases, Architecture, Event Mediation fundamentals: Diameter, 3GPP, Need, Typical Use Cases, Architecture Provisioning fundamentals: MML, CAI, CAI-3G etc, Need, Typical Use Cases, Architecture	**[12]**
5	**Protocols/Tools and 3PP Services integration with BSS :** TCP/IP/SCTP; Stack Description ; Connection Flow; Messages Flow; Use Cases ,SIGTRAN/SS7; Stack Description; Connection Flow; Messages Flow; Use Cases, DIAMETER; Stack Description; Connection Flow ;Messages Flow; Use Cases, CAMEL ; Stack Description; Connection Flow ;Messages Flow ;Use Cases, Integration With CRBT/MoMo, IVR Services, Practical Example/Use Cases.	**[11]**

Outcomes: After completion of the course, students would be able to
1. apply knowledge on advanced intelligent networks and ideas to engineering applications
2. describe intelligent networks, Protocols/Tools

EC 19.415 **Cellular and Satellite Communication** **Total Lectures: 40**

3-0-0-3

Objective:
1. The student gains the knowledge of the fundamental principles of cellular and satellite communication techniques and basic information about the cellular communication with their practical implementation.
2. This course helps in understanding the design of transmitter and receiver models for the cellular industry as well as defense application.

Pre-requisite: Analog Communication, Digital Communication

1.	**Cellular Communication:** Introduction to cellular communication systems and review of mobile radio propagation	[6]
2.	**Digital Cellular System:** Cellular concept, digital cellular mobile system, GSM architecture, GSM technologies, micro-cellular systems, third generation mobile communication systems and personal communication system.	[8]
3.	**Access Techniques:** Multiple access in cellular system, spread spectrum multiple access, code division multiple access, CDMA standard and IS-95.	[8]
4.	**Communication Satellite and Satellite Link Access:** Orbital mechanism and look angle determination of a satellite, spacecraft subsystem, launching of satellite, communication subsystem and transponder, Satellite link design, multi-beam and regenerative satellite, analog and digital multiple accessing in satellite.	[12]
5.	**Communication Satellite System:** Earth station, VSAT terminals, INTELSAT, INMARSAT, INSAT system and their applications, global mobile satellite system.	[6]

Outcomes:
1. The student will be able to get concepts of cellular communication systems and various satellites.
2. The student will analyze and have to design the different circuits for transmission and reception of signals for cellular communication.

Text Books:
1. Timothy Pratt and Charles W. Bostian, Satellite Communication, Wiley, 1st Edition, 2003.
2. T. S. Rappaport, Wireless Communication, Principles and Practice, 2nd Edition, Pearson Education, 2009.

Reference Books:
1. Ray E. Sheriff, Y. Fun Hu, Mobile Satellite Communication Networks, John Willey & Sons, Edition 3, 2003.
2. Madhavendra Richharia, Satellite Communications Systems: Design Principles, McGraw-Hill, Edition 2, 1999.

EC 19.421 **System Design Using HDL** **Total Lectures: 40**

3-0-0-3

Objective:
1. To acquire fundamental knowledge of designing of digital systems using VHDL.
2. Students will acquire practical working knowledge of creating digital circuits using commercial Computer-Aided-Design (CAD) tools.

Pre-requisite: Knowledge of digital logic and digital circuits are highly desired.

1. **Programmable Logic Design:** ASIC, ROM, PLA, PAL, CPLD and FPGA. [3]
2. **VHDL Based Design and fundamentals:** An overview of VHDL, Role of VHDL in system design, Introduction to CAD tools for system design, Introduction to Xilinx IDE software. Entity and architecture declaration, Introduction to behavioural, dataflow and structural models, package, package declarations and package body. [9]
3. **Basic Elements of VHDL:** Data objects – constant, variable and signal, Data types – scalar and composite, Predefined Operators – logical, relational, shift, adding and multiplying, Overloading – literal and operator. [4]
4. **VHDL Statements:** Process, variable assignment, signal assignment, sequential statements, conditional statements, loop**,** if, case, next statements, assertion and report statements, signal drivers and signal assignment statements, conditional signal assignments, select and generic, Subprograms: Application of functions and procedures, Overloading and signal assignments, Component declaration, Component instantiation. [10]
5. **Combinational and Sequential Circuit Design:** VHDL models of combinational circuits such as Adder, Multiplexer, De-multiplexer, Encoder, Decoder, Code converters, Comparators, Parity generators, Multipliers and implementation of Boolean functions, VHDL Models of sequential such as edge triggered D flip flop, T flip flop and J K flip flop, serial in serial out register, serial in parallel out register, parallel in parallel out register, counter, memory, ALU. [14]

Outcomes: After completion of the course, students would be able to:
1. Identify, formulate, and solve engineering problems
2. To use the technique, skills, and modern engineering tools necessary for engineering practice.

Text Books:
1. J. Bhaskar, VHDL Primer, Pearson Education Asia, 3rd Ed
2. Douglas L. Perry, VHDL Programming by Examples, Tata McGraw Hill, 4th Ed.

EC 19.422 **Nano Electronic Devices** **Total Lectures: 40**

3-0-0-3

Objective: In this course modeling aspects of Nano electronic devices are discussed from perspective of circuit applications.

Prerequisite: Electronic Devices and Circuits

3.	**Shrink-down approaches:** Introduction, CMOS Scaling, short channel effects	[2]
4.	**Nano Scale Devices:** The nanoscale MOSFET, Fin FETs, Vertical MOSFETs, limits to scaling, system integration limits (interconnect issues etc.), Resonant Tunneling Transistors.	[10]
5.	**Atoms-up approaches:** Molecular electronics involving single molecules as electronic devices, transport in molecular structures, molecular systems as alternatives to conventional electronics (advantages and limitations), Materials for nanoelectronics, nanostructures.	[8]
6.	**Nano-Fabrication and Characterization:** Photolithography, Electron beam Lithography, Advanced Nano-Lithography, Thin-Film Technology, MBE, CVD, PECVD, Atomic Force Microscope, Electron Microscopy (TEM, SEM), Photon Spectroscopy	[10]
7.	**Carbon nanotube electronics & Printed Electronics:** band structure & transport, Overview of Flexible/Printed Electronics: OLEDs, OFETs, Organic Solar Cells, spintronics devices.	[10]

Outcomes: Once the student has successfully completed this course, he/she will be able to answer the following questions or perform following activities:

1. Able to explain the basic concepts of Nano scale devices
2. Able to describe different nano fabrication technologies like lithography, photo lithography etc.

Text Books:

1. Introduction to Nanotechnology, C.P. Poole Jr., F.J. Owens, Wiley (2003), C.P. Poole Jr., F.J. Owens, Wiley (2003).
2. Nano electronics and Information Technology (Advanced Electronic Materials and Novel Devices), Waser Ranier ,Wiley-VCH,2003 .

References:

1. Fundamentals of nano electronics by George W Hanson Pearson publications, India 2008

EC 19.423 **Embedded and Real Time Operating Systems** **Total Lectures: 40**

3-0-0-3

Objective:
1. To provide broad understanding of the requirements of Real Time Operating Systems.
2. To make the student understand, applications of these Real Time features using case studies.

Prerequisite: Computer Organization

1.	**Introduction:** Introduction to UNIX/LINUX, Overview of Commands, File I/O, (open, create, close, lseek, read, write), Process Control (fork, vfork, exit, wait, waitpid, exec).	[5]
2.	**Real Time Operating Systems**: Brief History of OS, Defining RTOS, The Scheduler, Objects, Services, Characteristics of RTOS, Defining a Task, asks States and Scheduling, Task Operations, Structure, Synchronization, Communication and Concurrency. Defining Semaphores, Operations and Use, Defining Message Queue, States, Content, Storage, Operations and Use	[10]
3.	**Objects, Services and I/O**: Pipes, Event Registers, Signals, Other Building Blocks, Component Configuration, Basic I/O Concepts, I/O Subsystem	[10]
4.	**Exceptions, Interrupts and Timers**: Exceptions, Interrupts, Applications, Processing of Exceptions and Spurious Interrupts, Real Time Clocks, Programmable Timers, Timer Interrupt Service Routines (ISR), Soft Timers, Operations.	[10]
5.	**Case Studies of RTOS**: RT Linux, MicroC/OS-II, Vx Works, Embedded Linux, and Tiny OS.	[5]

Outcomes:
1. Be able to explain real-time concepts such as preemptive multitasking, task priorities, priority inversions, mutual exclusion, context switching, and synchronization, interrupt latency and response time, and semaphores.
2. Able describe how a real-time operating system kernel is implemented.
3. Explain how the real-time operating system implements time management.

Text Books:
1. Qing Li, Real Time Concepts for Embedded Systems, Elsevier, 2011.
2. Rajkamal, Embedded Systems- Architecture, Programming and Design, 2007, TMH.

References:
1. Sri ram V Iyer, Pankaj Gupta, Embedded real time systems programming, TMH, 2004.
2. frank Vahid, Tony D. Givargis, Embedded system design- A unified hardware/software introduction, John Willey, 2002.

EC 19.424 **Advanced Embedded Systems** **Total Lectures: 40**

3-0-0-3

Objective:
1. To teach the Fundamentals on design attributes of functional units of a Processor
2. To discuss on Hardware software partitioning in system design
3. To teach intra & Inter processor Communications
4. To discuss strategies for processor Communications

Prerequisite: Microprocessor Programming and Interfacing

1.	**Introduction to Embedded Hardware and Software:** Terminology – Gates – Timing diagram – Memory – Microprocessor buses – Direct memory access – Interrupts – Built interrupts – Interrupts basis – Shared data problems – Interrupt latency - Embedded system evolution trends – Interrupt routines in an RTOS environment.	[8]
2.	**System Modelling with Hardware/Software Partitioning:** Embedded systems, Hardware/Software Co-Design, Co-Design for System Specification and modelling- Single-processor Architectures	[6]
3.	**Memory:** Memory write ability and storage performance – Memory types – composing memory – Advance RAM interfacing communication basic –	[8]
4.	**Microprocessor interfacing**: I/O addressing – Interrupts – Direct memory access – Arbitration multilevel bus architecture – Serial protocol – Parallel protocols – Wireless protocols – Digital camera example.	[8]
5.	**Concurrent Process Models and Hardware Software Co-Design:** Modes of operation – Finite state machines – Models – HCFSL and state charts language – state machine models – Concurrent process model – Concurrent process – Communication among process –Synchronization among process – Implementation – Data Flow model. Design technology – Automation synthesis – Hardware software co-simulation – IP cores – Design Process Model.	[10]

Outcomes: After completing this module, students will be expected to be able to:
1. Implement a RTOS based embedded system and uunderstand the embedded systems design process.
2. Define a specification for an embedded system.
3. Design an embedded system based on a specification.

Text Books:
1. David. E. Simon, An Embedded Software Primer, Pearson Education, 2001.
2. Frank Vahid and Tony Gwargie, Embedded System Design, John Wiley & sons, 2002.

References:
1. Tammy Noergaard, Embedded System Architecture, A comprehensive Guide for Engineers and Programmers, Elsevier, 2006
2. Raj Kamal, Embedded Systems- Architecture, Programming and Design, Tata McGraw Hill, 2006.

EC 19.425 **ASIC Design** **Total Lectures: 40**

3-0-0-3

Objective: The educational objectives of the ASIC design course are:

1. Graduates who desire to pursue an engineering career in VLSI Design arena will be widely employed in positions they find appropriate and desirable.
2. Graduates who desire to pursue higher degrees will be successful in gaining admission and advancing in programs they find appropriate and desirable

Prerequisite: VLSI Design

1.	**Introduction to ASICs:** Types of ASICs, Design flow, CAD tools used in ASIC design.	[6]
2.	**CMOS logic cells:** Combinational logic cells, Sequential Logic cells, Data path Logic cells, I/O cells, Cell compilers.	[8]
3.	**ASIC Library Design:** Transistor as resistors, Transistor as parasitic capacitance, Logic Effort, library cell design, library architecture.	[8]
4.	**Gate Design**: Gate array cell design, standard cell design, data path cell design.	[6]
5.	**Programmable ASICs:** Antifuse, Static RAM, EPROM, EEPROM technology, Practical issues. DC output, AC output, DC input, AC input, Clock input, Power input, Xilinx I/O Block, Actel ACT routing resources, Elmore's constant.	[12]

Outcomes:

1. Ability to apply in-depth knowledge of VLSI design principles, systems, and devices to the solution of real time problems.
2. Ability to design and evaluate a component or system to meet desired needs within the field of VLSI design.
3. Ability to function as a member of a multidisciplinary team in the solution of engineering problems such as providing CAD solution for device fabrications.

Text Books:

1. Michael John Sebastin Smith, Application - Specific Integrated Circuits – Pearson Education, 6th Ed., 2009.
2. Farzad Nekoogar and Faranak Nekoogar, From ASICs to SOCs: A Practical Approach, Prentice Hall PTR, 2003.

References:

2. Andrew Brown, VLSI Circuits and Systems in Silicon, McGraw Hill, 1991.

EC 19.431 **Transform Techniques** **Total Lectures: 40**

3-0-0-3

Objective:
1. To provide broad understanding of the Transforms.
2. To make the student understand, applications of Continuous and Discrete wavelet transforms

Prerequisite: Signal Processing and Applications

1.	**Transforms:** Walsh, Hadamard, Haar and Slant Transforms, DCT, DST, KLT,– definition, properties and applications	[10]
2.	**Continuous Wavelet Transform (CWT):** Short comings of STFT, Need for wavelets, Wavelet Basis Concept of Scale and its relation with frequency, Continuous time wavelet Transform Equation- Series Expansion using Wavelets- CWT- Tiling of time scale plane for CWT.	[8]
3.	**Multi Rate Analysis:** Need for Scaling function – Multi Resolution Analysis, Two-Channel Filter Banks, Perfect Reconstruction Condition, Relationship between Filter Banks and Wavelet Basis.	[8]
4.	**Discrete Wavelet Transform (DWT):** DWT, Structure of DWT Filter Banks, Daubechies Wavelet Function, Applications of DWT.	[8]
5.	**Special Topics:** Wavelet Packet Transform, Multidimensional Wavelets, Bi-orthogonal basis- BSplines, Lifting Scheme of Wavelet Generation, Multi Wavelets	[6]

Outcomes: Ability to apply in-depth knowledge of Transforms and wavelets to the solution of real time problems.

Text Books:
1. Raghuveer M. Rao and Ajit S. Bopardikar, Wavelet Transforms-Introduction theory and applications, Pearson Education, Asia, New Delhi, 2003.
2. Soman. K. P, Ramachandran. K.I, Insight into Wavelets from Theory to practice, Prentice Hall India, First Edition, 2004.

EC 19.432 **Digital Image Processing** **Total Lectures: 40**

3-0-0-3

Objective:
1. To provide broad understanding of the Transforms.
2. To make the student understand, applications of Continuous and Discrete wavelet transforms

Prerequisite: Signal Processing and Applications

1.	**Introduction Digital Image processing:** Origin, fundamental steps, Component of Image processing system, Fundamental of digital image: visual perception, Image sensing and acquisition, sampling and quantization, Some Basic Relationships between Pixels Mathematical tools used in image processing.	[6]
2.	**Image Transforms:** Two-dimensional orthogonal & unitary transforms, Properties of unitary transforms, two dimensional discrete Fourier transform, discrete cosine transform, sine transform, Hadamard transform, Haar transform, Slant transform, KL transform	[7]
3.	**Image Enhancement:** Image Enhancement in Spatial domain, Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Image Enhancement in the Frequency Domain, Smoothing Frequency-Domain Filters, Sharpening Frequency Domain Filters, Homomorphic Filtering.	[10]
4.	**Image Restoration:** A Model of the Image Degradation/Restoration Process, Noise Models, Restoration in the Presence of Noise Only-Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Constrained Least Squares Filtering, Geometric Mean Filter, Geometric Transformations.	[10]
5.	**Color Image Processing:** Color Fundamentals, Color Models, Pseudocolor Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening.	[7]

Outcomes:
1. Be able to explain several image enhancement techniques in spatial domain and frequency domain.
2. Able describe noise models and filtering techniques.

Text Books:
1. Digital Image Processing - Rafael C. Gonzalez and Richard E. Woods, 2 Edition, Pearson Education, 2001.
2. Fundamentals of Digital Image Processing - Anil K. Jain, Pearson Education, PHI, 2001

References:
1. Chanda and D. Dutta Majumdar “Digital Image Processing and Analysis”, PHI, 2003

EC 19.433	Adaptive Signal Processing	Total Lectures: 40

3-0-0-3

Objective:
1. This course treats adaptive signal processing algorithms for extracting relevant information from noisy signals.
2. The emphasis is on recursive, model based estimation methods for time-varying systems.

Prerequisite: Signal Processing and Applications

1.	**Introduction:** Definition and characteristics, general properties open and closed loop adaptation.	[1]
2.	**Adaptive Linear Combiner:** General description, input signal and Weight vectors, desired response and error performance function, gradient and minimum mean square. Theory of Adaptation with Stationary Signals: Input correlation matrix, Eigenvalues and eigenvectors of the correlation matrix, and their geometrical significance. Basic ideas of gradient search methods, gradient search by Newton's method and method of steepest descent, gradient component estimation by derivative measurement, effects of gradient noise, on weight vector solution, excess MSE, time constant and misadjustment, performance comparison of Newton and S.D. methods.	[12]
3.	**Adaptive Algorithms:** Least mean square algorithm, convergence, learning curve noise in Weight vector misadjustment and performances of LMS algorithms, sequential regression algorithm, adaptive recursive LMS algorithm, random search algorithm.	[10]
4.	**Recursive Least Square Algorithm:** Preliminaries, matrix inversion lemma, exponentially weighted RLS algorithm, update recursion for the sum of weighted error squares, convergence analysis of RLS algorithm	[8]
5.	**Adaptive Filter Structures:** Lattice structures, all poles and all zeroes versions, adaptive lattice predictor. Lattice LMS algorithms, and lattice SER algorithms, adaptive filters with orthogonal signals, DFT and lattice preprocessors	[9]

Outcomes:
1. Design and apply optimal minimum mean square estimators and in particular linear estimators. To understand and compute their expected performance and verify it.
2. Design, implement and apply Wiener filters (FIR, non-causal, causal) and evaluate their performance.
3. Design, implement and apply LMS, RLS, and Kalman filters to given applications.

Text Books:
1. Widrow and Stearns, Adaptive Signal Processing, Pearson Education, 1999.
2. Simon Haykin, Adaptive Filter Theory, Pearson Education, 2008.

References:
1. Cowan & Grant, Adaptive Filters, Prentice Hall, 1985.
2. John R. Treichler, Theory and Design of Adaptive Filters, PHI, 1987.

EC 19.434 **Speech Processing** **Total Lectures: 40**

3-0-0-3

Objective:
1. This course treats speech processing algorithms for extracting relevant information from noisy signals.
2. The emphasis is on Linear Predictive Coding, Homomorphic Speech Processing

Prerequisite: Signal Processing and Applications

1.	**Fundamentals of Digital Speech Processing:** Anatomy & Physiology of Speech Organs, The process of Speech Production, Acoustic Phonetics, Articulatory Phonetics, The Acoustic Theory of Speech Production- Uniform lossless tube model, effect of losses in vocal tract, effect of radiation at lips, Digital models for speech signals.	[8]
2.	**Time Domain Models for Speech Processing:** Introduction- Window considerations, Short time energy and average magnitude Short time average zero crossing rate, Speech vs Silence discrimination using energy and zero crossing, Pitch period estimation using a parallel processing approach, The short time autocorrelation function, The short time average magnitude difference function, Pitch period estimation using the autocorrelation function.	[10]
3.	**Linear Predictive Coding (LPC) Analysis:** Basic principles of Linear Predictive Analysis: The Autocorrelation Method, The Covariance Method, Solution of LPC Equations: Cholesky Decomposition Solution for Covariance Method, Durbin's Recursive Solution for the Autocorrelation Equations, Comparison between the Methods of Solution of the LPC Analysis Equations, Applications of LPC Parameters: Pitch Detection using LPC Parameters, Formant Analysis using LPC Parameters.	[10]
4.	**Homomorphic Speech Processing:** Introduction, Homomorphic Systems for Convolution: Properties of the Complex Cepstrum, Computational Considerations, The Complex Cepstrum of Speech, Pitch Detection, Formant Estimation, The Homomorphic Vocoder.	[7]
5.	**Speech Enhancement:** Nature of interfering sounds, Speech enhancement techniques: Single Microphone Approach: spectral subtraction, Enhancement by re-synthesis, Comb filter, Wiener filter, Multi microphone Approach.	[5]

Outcomes:
1. Design and apply optimal Linear Predictive Coding. To understand and compute their expected performance and verify it.
2. Design, implement and apply Speech Enhancement techniques and evaluate their performance.

Text Books:
1. L. R. Rabiner and S. W. Schafer, Digital Processing of Speech Signals, Pearson Education.
2. Douglas O'Shaughnessy, Speech Communications: Human & Machine, 2nd Edition, Wiley India, 2000.

References:
1. Thomas F. Quateri, Discrete Time Speech Signal Processing: Principles and Practice, 1st Edition, PE.
2. Ben Gold & Nelson Morgan, Speech & Audio Signal Processing, 1st Edition, Wiley.

EC 19.435 **Digital Signal Processors and Architecture** **Total Lectures: 40**

3-0-0-3

Objective: To give an exposure to the various fixed point & a floating point DSP architectures and to develop applications using these processors

Prerequisite: Signal Processing and Applications

1.	**Introduction to Digital Signal Processing:** Introduction, A Digital signal Processing System, The sampling process, Discrete time sequences, Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), Linear time invariant systems, Digital filters, Decimation and interpolation, Analysis and Design tool for DSP systems -MATLAB	[8]
2.	**Computational Accuracy in DSP Implementations:** Number formats for signals and coefficients in DSP systems, Dynamic Range and Precision, Sources of error in DSP implementations, A / D Conversion errors, DSP Computational errors, D/A Conversion Errors, Compensating filter.	[8]
3.	**Architectures for Programmable DSP Devices and Pipelining:** Basic Architectural features, DSP Computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability and Program Execution, Speed Issues, Features for External interfacing. Execution Control and Pipelining: Hardware looping, Interrupts, stacks, Relative branch support, Pipelining and Performance, Pipeline depth, interlocking, branching effects, Interrupt effects, Pipeline Programming models.	[12]
4.	**Programmable Digital Signal Processors:** Commercial Digital signal -Processing Devices, Data Addressing modes of TMS320C54XX DSPs, Data Addressing modes of TMS320C54XX Processors, Memory Space of TMS320C54XX Processors, Program Control, TMS320C54XX instructions and programming, On -Chip Peripherals, Interrupts of TM320C54XX Processors, Pipeline Operation of TM320C54XX Processors.	[6]
5.	**Interfacing Memory and I/O Peripherals to Programmable DSP Devices:** Memory space organization, External bus interfacing signals, Memory Interface, Parallel I/O interface, Programmed I/O Interupts and I/O, Direct memory access (DMA), A Multichannel buffered serial port (McBSP), McBSP Programming, a CODEC interface circuit, CODEC programming, A CODEC DSP interface example.	[6]

Outcomes: By the end of the course the student will be able to:

1. Recognize the fundamentals of fixed and floating point architectures of various DSPs.
2. Learn the architecture details and instruction sets of fixed and floating point DSPs
3. Infer about the control instructions, interrupts, and pipeline operations.

Text Books:

1. Avtar Singh and S. Srinivasan, Digital Signal Processing, Thomson Publications, 2004.
2. B. Venkata Ramani and M. Bhaskar, Digital Signal Processors, Architecture, Programming and Applications, TMH, 2004.

Date: 12.06.2019

Department of Electrical Engineering

Minutes of meeting of the **Board of Studies (B.O.S) in Electrical Engineering Department, SET,** Mody University of Science and Technology held on 12.06.2019 at 10.45 AM in the conference room of AB Building.

Members:

1. Dr. V. K. Jain (Chairman)
2. Dr. Dheerendra Singh, BITS, Pilani (Academic Expert, External Member-BOS)
3. Mr. Bharat Maria, PGCOIL, Sikar (Industry Expert, External Member-BOS)
4. Dr. Sudhir Y Kumar (Member)
5. Dr. Thoudam Paraskumar Singh (Member Secretary)
6. Dr. Sunita Kumari (Member)

The following points were discussed and approved:

1. The members of BOS noted and approve the course structure and course curriculum of **B.Tech. program in Electrical Engineering (2019-2020 Onwards)** of the 4-year program in the Department of Electrical Engineering as per the guidelines of AICTE, ABET/IET/Mody University Model.
2. The members of BOS noted and approve the course structure and course curriculum of **M.Tech. program in Renewable Energy (2019-2020 Onwards)** of the 2-year program in the Department of Electrical Engineering as per the guidelines of AICTE, ABET/IET/Mody University Model.
3. The BOS directed to place the approval before the next UGPC/PGRPC.

Meeting ended with the vote of thanks to the chair.

Dr. Thoudam Paraskumar Singh	Dr. Sudhir Y Kumar	Dr. V. K. Jain
(Member Secretary-BOS)	(Head, EE, SET)	(Chairman-BOS)

Attendance Sheet

A meeting of board of studies (B.O.S) in Electrical Engineering Department, SET held on 12.06.2019 at 10.45 AM in the conference room of AB Building to discuss and finalize the following agenda items.

1. To finalize and approve the course structure and curriculum of **B. Tech. program in Electrical Engineering (2019-2020 Onwards)** of the 4-year program in the Department of Electrical Engineering as per the guidelines of AICTE, ABET/IET/Mody University Model.
2. To finalize and approve the course structure and curriculum of **M. Tech. program in Renewable Energy (2019-2020 Onwards)** of the 2-year program in the Department of Electrical Engineering as per the guidelines of AICTE, ABET/IET/Mody University Model.
3. Any other matter with the permission of the Chair.

Members:

1. Dr. V. K. Jain (Chairman)
2. Dr. Dheerendra Singh, BITS, Pilani (Academic Expert, External Member-BOS)
3. Mr. Bharat Maria, PGCOIL, Sikar (Industry Expert, External Member-BOS)

List of Program Elective Options

Code	Elective Tracks
Electrical Engineering (Core)	
EE 19.401	Electric Drives and Control
EE 19.403	High Voltage Engineering
EE 19.405	Nonlinear Control system
EE 19.402	Smart Grid
EE 19.404	Advanced Electric Drives
Power Electronics, Drives and Robotics	
EE 19.401	Electric Drives and Control
EE 19.407	Robotic Engineering
EE 19.409	Power Electronics in Renewable Energy Technology
EE 19.406	Robotic Drives System
EE 19.404	Advanced Electric Drives
Control and Automation	
EE 19.401	Electric Drives and Control
EE 19.411	Industrial Automation and Control
EE 19.405	Nonlinear Control system
EE 19.408	PLC and Automation
EE 19.404	Advanced Electric Drives
Renewable Energy	
EE 19.401	Electric Drives and Control
EE 19.413	Solar PV Technology
EE 19.415	Wind Energy System
EE 19.402	Smart Grid
EE 19.410	Energy Storage Systems

Program Electives Optional (Common to All Tracks)
MOOC-1*
MOOC-2*
***MOOC-1 and MOOC-2 should be selected only in 7thand 8thSemester respectively**

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**
2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

Pre-requisite:

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**
2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**
3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**
4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**
5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

MA 19.101 **Mathematics I** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: (10+2) Higher Secondary Mathematics

1. **Differential Calculus I:** Review of basic concepts, partial differentiation, Euler's theorem on homogeneous functions, Maclaurin's and Taylor's series (one and two variables) and Jacobians. [06]
2. **Differential Calculus II:** Maxima and minima of functions of two variables, asymptotes, Tracing of simple cartesian curves and standard polar curves. [06]
3. **Integral Calculus:** Basics of Beta and Gamma functions, Length of plane curves(cartesian and polar), area bounded by the curves(cartesian and polar), multiple integrals (double and triple integrals, change of order of integration), volumes, conversion from cartesian to polar form, physical interpretations and applications. [12]
4. **Matrix Theory**: Rank of matrix, linear dependence and independence of vectors, solution of system of simultaneous linear equations, Eigen values, Eigen vectors of a matrix, statement of Cayley-Hamilton theorem (without proof) , reduction of a matrix to diagonal form, quadratic forms, linear transformation of a quadratic form, and applications. [08]
5. **Three-dimensional Geometry:** Direction cosines and direction ratios of a straight line, equation of a plane, plane passing through intersections of two planes, equations of straight line, shortest distance between two skew lines, equation of a sphere, intersection of plane and sphere. [08]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Shanti Narayan and Mittal, Analytical Solid Geometry, S. Chand, 2018.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CY 19.101 **Engineering Chemistry** **Total Lectures: 39**

3-0-0-3

Prerequisite(s): NIL

Objective(s):

- To purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers their preparation, properties and uses.
- To develop the basics of protecting engineering materials from the natural forces.
- To understand the present day up-to-date knowledge of the contemporary energy sources.
- To build up the basis of the future Engineering materials like superconductors, conducting organic polymers, Nano materials etc.

1. **Water treatment:** Hardness, types of hardness, degree of hardness and its estimation (EDTA methods). Numerical problems on degree of hardness. Boiler troubles: sludge and scale formation, Prevention of sludge and scale formation in boilers. Softening of hard water (Lime-Soda, Permutit, Ion Exchange and calgon methods). Numerical problems based on water treatment (Lime-Soda process). [8]

2. **Polymers:** Classification, Functionality, Types of polymerization, Mechanism of Addition polymerization. Plastics: thermoplastic and thermosetting resins. Preparation, Properties and Uses of Polyamides, Bakelite, Polyesters, Rubber, Vulcanization of Rubber, Synthetic Rubber viz. Buna-S, Buna-N, Butyl and Neoprene rubbers. Silicones-polysiloxanes and sulphur based polymers. [8]

3. **Electrochemistry and Corrosion:** Electrochemical Changes, Electrochemical cell and its classifications (Galvanic cell, electrolytic cell). Types of electrodes. Origin of electrode potential, Electrochemical Series. Electromotive force, Nernst equation of electrode potential. [8]
Corrosion: Definition and its significance, Theories of corrosion, Mechanism of corrosion, types of corrosion, Corrosion control (Corrosion inhibitors, Cathodic protection - sacrificial anodic and impressed current cathodic protection).

4. **Fuels and Lubricants:** Introduction - Importance of fuels in Industries. Classifications of fuels, Comparison of solid, liquid & solid fuels, Calorific value of a fuel. Determination of calorific value by Bomb calorimeter. Refining and cracking of petroleum, knocking. Octane Number and Cetane Number. L.P.G., Coal gas and Producer gas. [9]
Lubricants: Introduction and Classification of Lubricants. Properties of Lubricants, Lubricant Oil, Grease, Emulsions.

5. **New Engineering Materials:** Introduction: Superconductors, high and low temperature superconductors, organic electronic materials, Fullerenes and Nano materials, Industrial applications of fullerenes and Nano materials. [6]

Outcome(s): The student will be able to understand the basis of the future Engineering materials like of lubricants, superconductors, conducting polymers, Nano materials etc and purification of the most valuable natural resource of the future-water.

Text Books:

1. Jain and Jain, "Engineering Chemistry," 16th Edition, Dhanpat Rai Publishing Company, 2015.
2. S.S. Dara, "A Text Book of Engineering Chemistry," 12th Edition, S. Chand & Company Limited, 2014.

Reference Books:

1. Peter Atkins, Julio de Paula, and James Keeler, "Atkins' Physical Chemistry" Eleventh Edition, Oxford University Press, 2017.
2. William D. Callister, "Materials Science and Engineering: An Introduction, Eighth Edition, John Wiley & Sons, Inc., 2010.

ME 19.101 **Applied Mechanics** **Total Lectures: 40**
3-1-0-4

Prerequisite Basic Mathematics and Physics

Objectives:
1. This course will help the student to acquire knowledge of basic engineering mechanics concepts and enhance their ability to solve open ended engineering problems.
2. To provide the student with a clear and thorough understanding of the theory and applications of engineering mechanics, covering both statics and dynamics.
3. To provide the student with a thorough understanding of the concept, drawing, and the use of free-body diagrams.
4. To be able to determine the Centre of Gravity and Moments of Inertia of simple geometric shapes and understand the physical applications of these properties.
5. To understand the use and be able to perform calculations related to friction forces in engineering applications.

1. **Introduction:** Idealization of Mechanics, concept of Rigid Body, External Forces (Body forces & surface forces), Laws of Mechanics. **[10]**
   Force Systems and Equilibrium: Introduction to vector, Statically Equivalent Force systems, Free Body Diagram, Equations of equilibrium and their applications to various system of forces.
2. **Distributed Forces and Moment Of Inertia:** Centroid of Composite figures, Area Moment of Inertia, Mass Moment of Inertia, Principle axes and Principle Moment of Inertia. **[6]**
3. **Friction:** Introduction of friction, Laws of friction, wedge, screw, belt, rolling friction. **[6]**
4. **Tension, Compression and Shear:** Normal stress and strain, Linear elasticity, Hooke's Law and Poisson's Ratio, Shear stress and shear strain, Relationship between modulus. **[9]**
   Beams: Different support & load conditions, SFD, BMD
5. **Kinematics of Particles:** Introduction, Rectilinear motion, Plane curvilinear motion, Rectangular coordinates, Tangential and normal coordinates, polar coordinates, Relative motion (Translating Axes), constrained motion of connected particles. **[9]**
   Kinetics of Particles: Introduction, Force, Mass and acceleration, Newton's second law of motion, Equation of motion and solution of problems, Work and Energy, Impulse and Momentum.

Outcome: The students shall develop the ability to identify, formulate, and solve engineering problems related to forces and motion.

Text Books:
1. Hibbeler, Gupta R. C., "Engineering Mechanics," 11th ed., Pearson India, 2010.
2. Merian, J.L, Kraige, L.G., "Engineering Mechanics Vol I & II," 5th edition, Wiley India 2010.

Reference Books:
1. Timoshenko, S, Young, D.H, Rao, J.V, "Engineering Mechanics," 4th edition TMH, 2010.
2. Irving. H. Shames, "Engineering Mechanics," Prentice Hall Book Company, 1966.

EC 19.101 **Basics of Electronics Engineering** **Total Lectures: 40**

3-1-0-4

Prerequisite Basic Knowledge of Engineering and Applied Physics

Objective: To learn the fundamental principle and applications of electronics and communication engineering and devices.

1. **Introduction:** Brief history of major inventions in ECE, Electronic test and measurement equipments, Specifications for electronic components. **[3]**

2. **Semiconductors**: Material and its properties, Formation of energy band diagram, Currents in semiconductors, Fermi-Dirac energy distribution, Types of semiconductors – Intrinsic and Extrinsic, Mass action law, Hall effect. **[5]**

3. **Diodes**: Introduction, Characteristic of ideal and real diode, Current components in diode, load characteristics, Breakdown in diode, Zener diode, Varactor diode, Tunnel diode, Clippers and Clampers, Rectifiers – Half and Full-wave rectifiers. **[8]**

4. **Transistors:** Introduction to pnp and npn transistors, current components, active, cutoff and saturation regions, CC, CB and CE configuration, Operating point, Biasing circuits, Bias Stability, Thermal runway and thermal stability. **[8]**

5. **Signals**: Definition, Classification of signals – Analog and Digital, Deterministic and Random signals, Power and Energy of signals, Bandwidth, Bit and Baud rate. **[4]**

6. **Basics and Applications of Communication**: Definition, Block representation of communication system, Modulation – Definition, Need of modulation, Frequency translation, Types of modulation - Analog and Digital, Multiplexing – TDM and FDM. Introduction to - Optical Fiber, Transmission line, Waveguides, Satellite communication and RADAR. **[12]**

Outcome: Students will be able to understand the basic concepts of Electronic and Communication Engineering and devices .They are able to implement mini projects based on concepts of ECE.

Text Books:

1. George Kennedy, Bernard Davis, “Electronics Communication Systems”, Tata McGraw-Hill, 3rd Edition, 2007.
2. Behrouz Forouzan, “Data Communication and Networking”, McGraw-Hill, 4th Edition, 2006.

Reference Books:

1. David A. Bell, “Electronics Devices and Circuits”, PHI, 4th edition, 2008.
2. Wayne, Tomasi, “Advanced Electronic Communication Systems”, PHI, 6th edition, 2013.
3. Robert L. Boylestad, Louis Nashelsky, “Electronics Devices and Circuits Theory”, Prentice Hall, 10th Edition, 2009.

ME 19.111 **Computer Aided Engineering Drawing** **Total Hours: 26**
0-0-4-2

Objective:
1. To improve the visualization skills.
2. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient.
3. To impart the knowledge on understanding and drawing of simple engineering products.

1. **Introduction to Computer Aided Sketching:** Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practice. Board Drawing vs. Computer- Aided Drawing. Introduction to Solid works Environments. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP &LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, dimensioning, line conventions, material conventions and lettering. [8]
2. **Orthographic Projections** : Horizontal planes, Vertical planes, Front view, Top view, Side view, Projections, First and Third angle of projection, Projections of points, Principles of orthographic projections, Sketching of different views of given objects. Introduction to sketching in Solid works : 2-Dimenional Sketching, Sketching in Solid works, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity. [12]
3. **Projections of Lines, Planes and Solids:** Lines inclined to both the principal planes, projection of Lamina inclined to both principal planes, Projections of solids: Axis inclined to both the reference planes and Intersection of solids. Introduction to part module in Solid works: Extrude, Revolve, Sweep, Hole, Filleting, and Chamfering features. [12]
4. **Sections of solids and sectional orthographic views:** Sectional orthographic projections - Full, Half, Partial, revolved and removed surfaces. Introduction to drawing module in Solid works: Standard 3 views, Auxiliary view, Section View, Projected view. [12]
5. **Isometric Projection:** Terminology, Isometric scale, Box method, Coordinate or offset method, Four-center method, isometric projection of arcs. Solid models practice using Solid works part module. [8]

Outcomes:
1. Students will be able to improve their visualization skills so that they can apply these skills in developing new products.
2. Students will be able to know and understand the conventions and the methods of engineering drawing using Solid works.
3. Students will be able to prepare simple drawings of engineering products.

Text Books:
1. N.D. Bhatt, "Engineering Drawing", Charotar Publishing House, 2013.
2. Prof. Sham Tickoo, Sandeep Prem Dass "Solid works 2013 for Engineers and Designers" Wiley Publication, 2013.

Reference Books:
1. Randy H. Shih, "Solid works 2013 and Engineering Graphics: An Integrated Approach", SDC Publications. 2013

CY 19.111 **Chemistry Laboratory** **Total Hours:26**
0-0-2 - 1

Prerequisite(s): NIL

Objective(s):
- To introduce students to water chemistry and purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers, lubricants, fuel and their properties and uses.

LIST OF EXPERIMENTS

Choice of 10-12 experiments from the following

1. To determine the temporary and permanent hardness in the given water sample by complexometric titration using EDTA as standard solution.
2. To determine the percentage of Available Chlorine in the given sample of Bleaching powder. Iodometrically.
3. To determine the alkalinity of water sample.
4. To prepare urea formaldehyde resin.
5. To determine the strength of given HCl solution by titrating it against NaOH solution using pH meter.
6. To determine the strength of given acid solution by titration it against sodium hydroxide solution using conductometer.
7. To determine molecular weight of a polymer using Ostwald viscometer.
8. Determination of viscosity of given lubricating oil by Redwood viscometer.
9. Determination of cloud and pour point of given lubricating oil.
10. Determination of the flash and fire point of given lubricating oil.
11. Determination of acid value of given lubricating oil.
12. To determine the calorific value (HCV) of a sample of fuel.
13. Proximate Analysis of Coal.
14. Determination of the percentage of Fe in the given steel sample.

Outcomes The students will learn to:
- Estimate the Hardness of water, alkalinity of water.
- Familiar with the important practical applications of electrochemistry, lubricants, solids, their properties and applications, and the polymer materials.

EC 19.111 **Electronics Laboratory** **Total Hours: 26**

0-0-2-1

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the theory of Electronics Engineering.
2. To apply the analytical techniques and graphical analysis to the experimental data.
3. To enable the students to simulate and test the Electronics circuits using Multisim software.

Prerequisite: Nil

Practical to be performed on Hardware:

1. To plot V-I characteristics of junction diode and Zener diode.
2. To design a half wave rectifier with and without filter circuit and find the ripple factor.
3. To design a full wave rectifier with and without filter circuit and find the ripple factor.
4. Study of clipper and clamper circuits and their implementation on breadboard.
5. To plot the characteristics of Transistor under Common Emitter configuration
6. To plot the characteristics of Transistor under Common Base Configuration
7. To plot the characteristics of Transistor under Common Collector configuration
8. To perform soldering and de-soldering to make banana probe, BNC probe and connection on PCB.

Practical to be performed using Multi-Sim Software:

9. An Introduction to Electronic Circuit Simulation using Multi-Sim Software.
10. To verify Ohm's law and Kirchhoff's law.
11. To Simulate half wave and full wave bridge rectifier.
12. To plot V-I characteristics of junction diode.

Outcome: Student will be able to understand the operation of electronic test equipment and hardware/software tools to characterize the behavior of devices and circuits.

UC 19.102 **Communication Skills** **Total Lectures: 26**
2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

Pre-requisite:

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures. **Technology-based Communication:** Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software. [5]
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

CY 19.102 **Environmental Studies** **Total Lectures: 52**

3-1-0-4

Prerequisite(s): NIL

Objective(s):

- To teach the principal resources, renewable energy systems and biosphere.
- To explore the environmental impact of various energy sources and also the effects of different types of pollutants.

1. **Multidisciplinary nature of environmental studies:** Definition, scope and importance, Need for public awareness. [2]

2. **Natural Resources:** Renewable and non-renewable resources: Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. [8]
   Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
   Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
   Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
   Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources.
   Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

3. **Ecosystems & Biodiversity:** [14]
   Ecosystems: Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow and nutrient cycling in the ecosystem. Food chains, food webs and ecological pyramids. Ecological succession Structure and function of the following ecosystem - Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).
   Biodiversity and its conservation: Introduction – Definition, genetic, species and ecosystem diversity. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values. Biodiversity at global, national and local levels. Hot-sports of biodiversity. India as a mega-diversity nation, Threats to biodiversity: habitat loss, illicit poaching, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

4. **Environmental Pollution:** Definition, cause, effects and control measures of : Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes. [8]
   Role of an individual in prevention of pollution. Pollution case studies. Disaster management: floods, earthquake, cyclone and landslides.

5. **Social Issues, Human Population and the Environment:** From Unsustainable to Sustainable development: Urban problems related to energy, Water conservation, [13]

rain water harvesting, watershed management, Resettlement and rehabilitation of people: its problems and concerns. Global Climate Change, global warming, acid rain, ozone layer depletion. Wasteland reclamation. Population growth, variation among nations. Population explosion – Family Welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS.
Women and Child Welfare. Role of Information Technology in Environment and human health. Case Studies.
Environment Protection Act 1986. Air (Prevention and Control of Pollution) Act 1981., Water (Prevention and control of Pollution) Act 1974, Wildlife Protection Act 1972., Forest Conservation Act 1980.

Field work [7]

- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

Outcome(s): Upon successful completion of the course, students should be able to:

- Measure environmental variables and interpret results
- Evaluate local, regional and global environmental topics related to resource use and management
- Propose solutions to environmental problems related to resource use and management
- Interpret the results of scientific studies of environmental problems
- Describe threats to global biodiversity, their implications and potential solutions.

Text Books:

1. Erach Bharucha “Environmental Studies”, University Grants Commission, 2004.
2. G. Boyle, Renewable energy: Power for a sustainable future’. Oxford University press. 2004.

MA 19.102 **Mathematics II** **Total Lectures: 40**
3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: Mathematics I

1. **Computational Methods:** Introduction and importance of numerical analysis, calculus of finite differences, interpolation schemes for equal and unequal intervals (Newton's forward and backward interpolation formulae), divided difference, interpolation for unequal intervals (Newton's divided difference and Lagrange interpolation formulae), Solution of algebraic and transcendental equations by Newton-Raphson method. Applications to Engineering. [12]
2. **Ordinary Differential Equations I:** First order and first degree differential equations (variable separable, homogeneous and non-homogeneous, linear, Bernoulli's equation, and exact equations). [06]
3. **Ordinary Differential Equations II:** Linear differential equations of second order with constant and variable coefficients (complementary functions and particular integrals), and applications. [06]
4. **Partial Differential Equations:** Formation of partial differential equations, Lagrange's multipliers method for solution of first order differential equations, separation of variables for nonlinear differential equations and applications. [06]
5. **Vector Calculus:** Vector and scalar point functions, conservative fields, gradient of scalar point functions, divergence and curl of vector point functions (Solenoidal and irrotational vectors), directional derivative of scalar point functions, work done along a curve, Integration of vectors, line integral (work done), surface integral, volume integral, physical interpretations and applications. [10]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Grewal, B.S. and Grewal, J.S., Higher Engineering Mathematics, Khanna Publishers, Daryaganj, New Delhi, 40th Edition, 2007.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

PY19.101 **Engineering Physics** **Total Lectures: 40**

3-0-0-3

Pre-requisite: Fundamental knowledge of Basic Physics

Objective:

1. To provide students with a basic understanding of the Physics that may be required by engineers in the course of their careers
2. To enhance knowledge related to lasers and its different components to make it suitable for various purposes
3. To introduce most important concepts of superconductivity, crystallography and fiber optics to the students
4. To introduce the learners to the basics of modern physics and Quantum Mechanics

1. **Modern Physics**: Introduction to Black body radiation spectrum, Photo-electric effect, Compton effect. Wave particle Dualism. de Broglie hypothesis – de Broglie wavelength, extension to electron particle. Davisson and Germer Experiment. Matter waves and their Characteristic properties, Phase velocity, group velocity and Particle velocity, Relation between phase velocity and group velocity, Relation between group velocity and particle velocity. Expression for deBroglie wavelength using group velocity. **[8]**

2. **Quantum Mechanics:** Heisenberg's uncertainity principle and its physical significance. Application of uncertainty principle (Non-existence of electron in the nucleus, explanation for decay and kinetic energy of electron in an atom). Wave function, Properties and physical significance of wave function, Probability density and Normalization of wave function. Setting up of one dimensional time independent Schrodinger wave equation. Eigen values and Eigen functions. Application of Schrodinger wave equation – Energy Eigen values for a free particle. Energy Eigen values and Eigen functions for a particle in a potential well of infinite depth. **[7]**

3. **Electrical Conductivity in Metals**: Free–electron concept. Classical free-electron theory – Assumptions. Drift velocity, Mean collision time and mean free path. Relaxation time. Expression for drift velocity. Expression for electrical conductivity in metals. Effect of impurity and temperature on electrical resistivity of metals. Quantum free-electron theory – Assumptions. Fermi – Dirac Statistics. Fermi-energy, Fermi factor. Density of states (No Derivation). Expression for electrical resistivity / conductivity. Temperature dependence of resistivity of metals. electron in a periodic potential, origin of the energy gap, band theory of solids, distinction of solids into metals, semi-conductors and insulators. **[8]**

4. **Dielectric & Magnetic Properties of Materials**: Dielectric constant and polarization of dielectric materials. Types of polarization. Equation for internal field in liquids and solids (one dimensional). Ferro and Piezo electricity. Frequency dependence of dielectric constant. Important applications of dielectric materials. Classification of dia, para and ferro-magnetic materials. Hysterisis in ferromagnetic materials. Soft and Hard magnetic materials. Applications. **[7]**

5. **Lasers and Optical Fibers**: Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, Construction and working of CO2 laser and semiconductor Laser. Applications of Laser – Laser welding, cutting and drilling. **[10]**
Measurement of atmospheric pollutants. Holography–Principle of Recording and reconstruction of images, applications of holography.
Propagation mechanism in optical fibers. Angle of acceptance. Numerical aperture. Types of optical fibers and modes of propagation. Attenuation. Applications–Block diagram discussion of point to point communication.

Outcome: The student will be able to understand many modern devices and technologies based on lasers and optical fibers. Student can also appreciate various material properties which are used in engineering applications and devices.

Text Books:
1. S. O. Pillai, "Solid State Physics", New Age International, Sixth Edition, 2009
2. V. Rajendran, "Engineering Physics," TMH, Fifth Edition , 2013

Reference Book:
1. G. K. Shivkumar, "Engineering Physics," Prism Book Pvt. Ltd.
2. Stephen T. Thornton, "Modern Physics for Scientists and Engineers",Cengage Learning, 4th ed.,2013

EE 19.101 **Elements of Electrical Engineering** **Total Lectures: 40**
3-1-0-4

Objective: This course facilitates the students to get a comprehensive exposure to various concepts and devices of electrical engineering.

Pre-requisite: Nil

1. **DC Circuits:** Electrical circuit elements (R, L and C), voltage and current sources, Ohm's law, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation using mesh and nodal method. Network Theorems - Superposition, Thevenin, Norton and Maximum power transfer Theorems. Time-domain analysis of first-order RL and RC circuits. [8]
2. **AC Circuits:** Basic terminologies, representation of sinusoidal waveforms, average, rms and peak values of a.c. quantities, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel). [8]
3. **Three Phase A.C. Circuits:** Three phase supply, phase sequence, star connection, delta connection, relationship between phase and line quantities in 3-phase circuits, measurements of three phase power under balanced condition. [6]
4. **Transformers:** Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, Transformer testing: open circuit and short circuit test, losses in transformers, regulation and efficiency. Basics of auto-transformer and three-phase transformer connections. [10]
5. **Electrical Machines:** DC Machines – construction, functions of each part, working principle, EMF and torque equations, types of dc machines. AC machines – classification of a.c. machines, construction, operating principles of ac machines. [8]

Outcome: At the end of this course, students will demonstrate the ability to

- To understand and analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines.

Text Books:

1. Kothari, D. P., and I. J. Nagrath, "Theory and Problems of Basic Electrical Engineering," PHI Learning Pvt. Ltd., 1998.
2. Fitzgerald, Arthur Eugene, David E. Higginbotham, and Arvin Grabel, "Basic electrical engineering," McGraw-Hill Series in Electrical Engineering, Auckland: McGraw-Hill, 1981, 5th ed.(1981).

Reference Books:

1. H.Cotton, "Advanced Electrical Technology," CBS Publication. 1967.

CS 19.101 **Programming Language** **Total Lectures: 40**

3-1-0-4

Prerequisite(s): NIL

Objective(s):
1. To learn principles of programming by the structured native language 'C'.
2. To comprehend the rudiments, constructs, syntax, and statements with essentials of efficient compiling, running and debugging processes.

1. **Introduction:** The role of programming languages, programming paradigms, language description and syntax structure, basics of structured and object-oriented programming, functional programming, logic programming, concurrent programming. [10]
2. **Fundamentals of 'C' language**: Character set, variables data types constants, arithmetic, relational and logical operators, type conversion,increment,decrement, bitwise and assignment operators, conditional expressions, statements and blocks, *if-else*, *switch*, loops-*do-while*, *while*, *for*; *break, continue* and *goto* statements, labels. [10]
3. **Functions, pointers and Arrays**: Basics of functions, automatic, external, static and register variables, scope rules, and header files, recursion and C preprocessor, arrays, pointers and addresses, pointers and arrays address arithmetic, character pointers and functions, pointer arrays, pointers to functions, pointers and multidimensional arrays, command line arguments. [10]
4. **Structures and unions:** Basics of structures and functions, arrays of structures, pointers to structures, self-referential structures, unions. [5]
5. I/O and File Processing: Concept of files, standard input and output, formatted output, file access in different modes, reading from and writing to a file. [5]

Outcome(s): Students would be able to apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

Text Books:
1. Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013,
2. Ravi Sethi & K.V.Viswanatha, Programming Languages-Concepts, and Constructs, Second edition, Pearson Education,2013,

Reference Books:
1. Herbert Schildt, C: The Complete Reference, Fourth Edition, McGraw-Hill Education, 2017
2. E Balagurusamy, Programming in ANSI C, Tata McGraw - Hill Education,6th edition, 2012

CS 19.151 **Programming Language Laboratory** **Total Hours: 26**

0-0-2-1

Objective:
- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

Prerequisite: Nil

List of Practicals

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement programs to cover all possible String operations.
11. Implement programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement programs for Reading and writing from/to a file.

Outcome: On completion of this course student will be able to:
- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner

PY 19.111 **Physics Laboratory** **Total Hours: 26**
0-0-2-1

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
2. To apply the analytical techniques and graphical analysis to the experimental data.

List of Experiments:

1. To study of material constant, temperature coefficient of current and planck's constant.
2. To determine the specific resistance of a given wire by using the Carey Foster's bridge.
3. To determine the ballistic constant, K of a moving coil ballistic galvanometer with a standard capacitor of known capacity.
4. To determine the high resistance by the method of leakage of a condenser with the help of ballistic galvanometer.
5. To study the variations of resistivity with temperature and hence determines the energy band gap of the given semiconductor with help of four probe method.
6. To convert a galvanometer into a voltmeter of a given range.
7. To convert a galvanometer into an ammeter of a given ranges.
8. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current and to estimate from it the radius of the coil.

Outcome: Students will be convergent with operation of equipments and verify the principle of Physics by doing the experiments. Students will be able to apply the analytical techniques and graphical analysis for finding out the experimental results.

EE 19.111 **Electrical Laboratory** **Total Hours: 26**

0-0-2-1

Objective: The objective is to provide a basic exposure of installation and operation of electrical equipment.

Prerequisite: Nil

Perform any ten of the list.

1. To Study of the various apparatus used in Electrical Engineering.
2. To perform residential house wiring using fuse, indicator, switch, Socket, plug and lamp.
3. To design a Stair case wiring for illuminating a lamp.
4. To design Tunnel wiring for illuminating three lamps.
5. To construct a fluorescent tube and to measure voltage across tube rod, voltage across choke and current.
6. To conduct the polarity test on the given transformer.
7. To conduct the open circuit & short circuit tests on the given single phase transformer and to determine equivalent circuit parameters.
8. To control the speed of DC machine by field current control method.
9. To control the speed of DC machine by Armature Voltage control method.
10. To measure three phase power by using two wattmeter methods.
11. To verify Superposition Theorem using resistive circuit.
12. To verify Thevenin's Theorem using resistive circuit.

Outcome: Students will be convergent with installation and operation of electrical equipment.

ME 19.112	Mechanical Workshop	Total Hours:26 0-0-2-1

Objectives:

1. Practice on manufacturing of components using workshop trades including fitting, carpentry, sheet metal and welding.
2. Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping.
3. Study and practice on machine tools and their operations.

List of Jobs:

1. **Fitting Shop:** Prepare job that contain various fitting operation like filing, marking, measuring, cutting, drilling etc.
2. **Carpentry Shop:** Making of carpentry joint (T, L joint etc).
3. **Sheet Metal Shop:** Making job from sheet (funnel, tray etc).
4. **Machine Shop:** Perform various operations like, turning, step turning, facing, chamfering, knurling etc on Lathe.

Outcomes:

At the end of the course, the student will be able to:

1. To acquire skills in basic engineering practice.
2. To identify the hand tools and instruments.
3. To acquire measuring skills.
4. To provides the knowledge of job materials in various shops.
5. Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.

Text Books:

1. Hajara Chaudhary, Workshop Technology Vol I & II, Media Promoters and Publishers PVT. LTD, Mumbai.
2. B.S. Raghuvanshi, Workshop Technology, Dhanpat Rai & Sons. New Delhi.

Reference Books:

1. H S Bawa, Workshop Technology, TMH. New Delhi.

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**
2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession-Management as social System Concepts of management-Administration-Organization **[4]**
2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**
3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**
4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**
5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher,16th Edition, 2014

Reference Books:

3. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
1. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
2. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
3. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

EE 19.201 **Electrical Machines-I** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to the working principles, construction details and performance of D.C machines and Transformer.

Pre-requisite: Elements of Electrical Engineering

1. **Basic Concepts of Electrical Machines:** Introduction, Electromagnetic induction, flux linkage, statistically and dynamically induced emf, Classification and description of electrical machines, Generator and motor principles, Leakage flux, Losses and efficiency, Rating and loss dissipation, Electrical and mechanical degrees, Heating and cooling of electrical machines. [8]

2. **Introduction to D.C. Machines:** Constructional parts of d.c. machines and their function, Principle of operation, Armature winding: Lap and wave, Simplex and duplex, Method of excitation, Classification, Derivation of emf and torque equations, Process of commutation, Armature reaction, Interpoles, Compensating winding and equalizer rings. [6]

3. **D.C. Generators:** Operating characteristics: Magnetization, Internal and external characteristics, Critical resistance and critical speed, Process of building up of voltage, Causes of failure of voltage build-up and remedies, Parallel operation of d.c. generators, Applications. [7]

4. **D.C. Motors:** Basic equation for voltage, Power, Torque and speed, Condition for maximum power, Operating characteristics: Torque-current, Speed-current and Torque-speed characteristics. Comparison, Starters, Speed control methods, testing of d.c. machines: Swinburne, Hopkinson's and Series field tests. Calculation of efficiency, Applications. [7]

5. **Transformers:** Principle, construction and operation of single-phase transformers, equivalent circuit, phasor diagram, voltage regulation, losses and efficiency Testing - open circuit and short circuit tests, polarity test, back-to-back test, separation of hysteresis and eddy current losses. Three-phase transformer - construction, types of connection and their comparative features, Parallel operation of single-phase and three-phase transformers, Autotransformers - construction, principle, applications and comparison with two winding transformer, Three-winding transformers. Cooling of transformers. [12]

Outcome: At the end of this course, students will demonstrate the ability to

- Understand the concepts of magnetic circuits.
- Understand the operation of dc machines.
- Analyse the differences in operation of different dc machine configurations.
- Analyse single phase and three phase transformers circuits.

Text Books:

1. A. E. Fitzgerald and C. Kingsley, "Electric Machinery", New York, McGraw Hill Education, 2013.
2. A. E. Clayton and N. N. Hancock, "Performance and design of DC machines", CBS Publishers, 2004.

Reference Books:

1. M. G. Say, "Performance and design of AC machines", CBS Publishers, 2002.
2. P. S. Bimbhra, "Electrical Machinery", Khanna Publishers, 2011.
3. I. J. Nagrath and D. P. Kothari, "Electric Machines", McGraw Hill Education, 2010.

EE 19.203 **Network Analysis and Synthesis** **Total Lectures: 40**
3-0-0-3

Objective: This course helps students in analyzing the A.C & D.C circuits and it also provides design exposure to circuit models for minor and major projects.

Pre-requisite: Elements of Electrical Engineering (EE 19.101)

1. **Network Theorems:** Superposition theorem, Thevenin theorem, Norton theorem, Maximum power transfer theorem, Reciprocity theorem, Compensation theorem. Analysis with dependent current and voltage sources. Node and Mesh Analysis. Concept of duality and dual networks. [10]
2. **Solution of First and Second Order Networks:** Solution of first and second order differential equations for Series and parallel R-L, R-C, RL-C circuits, initial and final conditions in network elements, forced and free response, time constants, steady state and transient state response. Mutual coupled circuits, Dot Convention in coupled circuits, Ideal Transformer. [8]
3. **Electrical Circuit Analysis Using Laplace Transforms:** Review of Laplace Transform, Analysis of electrical circuits using Laplace Transform for standard inputs, convolution integral, inverse Laplace transform, transformed network with initial conditions. Transfer function representation. Poles and Zeros. Frequency response (magnitude and phase plots), series and parallel resonances. [8]
4. **Two Port Network:** Two Port Networks, terminal pairs, relationship of two port variables, impedance parameters, admittance parameters, transmission parameters and hybrid parameters, interconnections of two port networks. [6]
5. **Synthesis of Passive Network:** Hurwitz polynomials, positive real functions, elementary synthesis procedures, properties of LC immittance function, synthesis of LC driving point immittance, properties of RC driving point impedances, synthesis of RC impedances or RL admittances, properties of RL impedances and RC admittances, synthesis of RLC functions. [8]

Outcome: At the end of this course, students will demonstrate the ability to

- Apply network theorems for the analysis of electrical circuits.
- Obtain the transient and steady-state response of electrical circuits.
- Analyse circuits in the sinusoidal steady-state (single-phase and three-phase).
- Analyse two port circuit behaviors.

Text Books:

1. M. E. Van Valkenburg, “Network Analysis”, Prentice Hall, 2006.
2. D. Roy Choudhury, “Networks and Systems”, New Age International Publications, 1998.

Reference Books:

1. W. H. Hayt and J. E. Kemmerly, “Engineering Circuit Analysis”, McGraw Hill Education, 2013.
2. C. K. Alexander and M. N. O. Sadiku, “Electric Circuits”, McGraw Hill Education, 2004.
3. K. V. V. Murthy and M. S. Kamath, “Basic Circuit Analysis”, Jaico Publishers, 1999.

EC 19.201	Electronic Devices and Circuits	Total Lectures: 40 3-0-0-3

Objective To acquire fundamental knowledge of operation, design and application of various Electronic devices and circuits.

Pre-requisite Basic Electronics and Physics of electron.

1. **Junction Diode:** Junction breakdown**,** Current components in a p-n diode, Quantitative analysis of p-n diode characteristics and equivalent circuit, diode resistance, interconnections of diodes, transition and diffusion capacitance. [6]

2. **Transistors**: Operation of transistor, transistor current components, transistor circuit configurations, transistor biasing schemes and operating point stabilization, hybrid-pi model of BJT, low and high frequency models of JFET, MOS Devices - NMOS, PMOS and CMOS [11]

3. **Small Signal Amplifiers at Low Frequency:** Coupling schemes for multistage amplifiers, frequency response of coupled amplifier, RC coupled transistor amplifier, transformer coupled transistor amplifier, cascode circuits, Differential amplifier, Darlington amplifier. [7]

4. **Power Amplifiers:** Power amplifier circuits, class-A, class-B, class-AB, class-C, push pull amplifiers- class-A, class-B, Class- AB, complementary symmetry push-pull and quasi-complementary symmetry, push-pull amplifiers. [8]

5. **Oscillators:** Classification criterion for oscillation, tuned collector, Hartley, Colpitts, RC phase shift, Wien bridge and crystal oscillators, astable, monostable and bistable multivibrators, Schmitt trigger [8]

Outcome: After completion of this course, students would be able to understand the working phenomena and applications of various electronic devices and circuits. Knowledge gained from this course would also be utilized to design different electronic circuits and devices.

Text Books:
1. Robert L. Boylestad & Louis Nashelsky, “Electronic Devices and Circuit Theory”, Pearson Education.
2. Thomas L. Floyd, “Electronic Devices”, Pearson Education.

Reference Books:
1. Bell, David A., “Operational Amplifiers & Linear ICS” Prentice Hall of India.
2. Millman J. & Halkias C.C., “Electronic Devices and Circuits” McGraw Hill

MA 19.201 **Mathematics III** **Total Lectures: 40**
3-1-0-4

Objective: To acquire fundamental knowledge of linear programming, numerical methods, complex analysis and integral transform and apply in engineering disciplines.

Pre-requisite: Mathematics I and Mathematics II

1. **Linear Programming:** Introduction with formulation; Graphical method; Simplex method, Artificial variable technique (Two phase method, Big –M method); Assignment problem (Hungarian method); Transportation problem(Vogel's approximation method). [12]
2. **Numerical Methods:** Solution of system of equations (Gauss elimination and Gauss - Seidel methods);Solution of algebraic and transcendental equations (Bisection, Ramanujan's and Regula Falsi methods); Solution of ordinary differential equation (Euler's modified, Milne's predictor & corrector, Runge-Kutta method of order four). [08]
3. **Complex Analysis:** Function of complex variable, analytic function, Cauchy- Riemann equations(without proof); Integration of complex functions, line integrals in the complex plane, Cauchy integral theorem(without proof), Cauchy integral formula(without proof), zeros and singularities of complex functions, residues. [08]
4. **Integral Transform I**: Basics of Laplace transform and inverse Laplace transform;First and Second Shifting theorems; Convolution theorem (without proof);Laplace transform of Unit Step function, Dirac Delta function and periodic function. [06]
5. **Integral Transform II**: Solution of ordinary differential equations with initial conditions by Laplace transforms; Fourier series of periodic functions, even and odd functions, Fourier half-range series; Basics of Fourier transforms with properties. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of linear programming, numerical methods, complex analysis and integral transforms in engineering and solve curriculum problems.

Text Books:
1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.

Reference Books:

3. Jain R.K. and S.R.K. Iyenger Advanced Engineering Mathematics, Narosa Publishing House, 2003.

EE 19.221 **Electrical Machines-I Laboratory** **Total Hours: 26**
0-0-2-1

Objective: The objective of the Electrical Machine Lab is to provide an exposure of operation of D.C. machines and transformers and give them experimental skill. It also aims to understand the generation of D.C. voltages by using shunt generator and study their performance. It also enables the students to understand the working principles of D.C. motors and their load characteristics and methods of speed control. It also enables students to test and performance of d.c. machines and transformers.

Prerequisite: Electrical Lab

Perform any ten of the list.

1. To conduct the open circuit and short circuit tests on the given single phase transformer and to pre-determine (i) equivalent circuit parameters (ii) voltage regulation and (iii) efficiency.
2. To connect the given three, single phase transformers as three phase bank in (i) star-star (ii) star-delta (iii) delta-delta and (iv) delta-star configurations.
3. To perform the no-load test on the given D.C. shunt motor to study its speed variation by (i) field control method and (ii) armature voltage control method.
4. To obtain the open circuit characteristics of a separately excited D.C. generator at rated speed and to determine (i) critical field resistance at rated speed (ii) critical speed (iii) voltage built up by the generator at rated speed and (iv) to plot the O.C.C. at different speeds.
5. To conduct the load test on the given D.C. shunt generator and its internal and external characteristics.
6. To determine the no load losses and hence to predetermine the efficiency, at any desired load, of the d.c. machine running. (i) as a motor and (ii) as a generator
7. To conduct the polarity test on the given transformer and to operate two single phase transformers in parallel to share a common load.
8. To determine the efficiency of two identical d.c. shunt machines by Hopkinson's regenerative test.
9. To conduct the back-to-back test on the given two, identical single phase transformers and to pre-determine (i) equivalent circuit parameters (ii) voltage regulation and (iii) efficiency.
10. To connect the given two, single phase transformers in Scott connection so as to
    (i) Show that the secondary voltages are at right angles to each other
    (ii) Supply two phase load from three-phase supply.
11. To conduct:
    (i) Field's test on two similar mechanically coupled series machines.
    (ii) Compute efficiency at different outputs.

    Plot the following curves for the motor efficiency, torque and speed v/s output.
12. To determine the no load stray losses of a given d.c. shunt machine and to separate the mechanical losses from iron losses.

Outcome: Students will be convergent with transformer and d.c. machines and their testing and performance aspects.

EE 19.223 **Network Analysis and Synthesis Laboratory** **Total Hours: 26**

0-0-2-1

Objective: This Lab course helps us to gain basic knowledge of principle, operation, application and design/verification of various Electrical components /devices/ circuits/theorems by conducting the experiments.

Prerequisite: Basics of Electronics Engineering, Elements of Electrical Engineering

Perform any ten of the list.

1. To study the series and parallel connected resistive circuits
2. To study the equivalent star of a delta connected resistive circuit and also the equivalent delta of a star connected resistive circuit.
3. To verify the Kirchhoff's current Law and Kirchhoff's Voltage law.
4. To verify the superposition theorem using resistive circuit.
5. To verify the Reciprocity Theorem using resistive circuit.
6. To verify the Thevenin's Theorem using resistive circuit.
7. To verify of Norton's Theorem using resistive circuit.
8. To verify of Maximum Power Transfer Theorem using resistive circuit.
9. To determine Z-parameter, Y-parameter and ABCD parameter of a given Two-port network.
10. To design a zero PCB for a given circuit to verify the Thevenin's Theorem.
11. To find out the time- constant of RL-series circuit when connected to step function.
12. To find out the time constant of RC-series circuit when connected to step function.

Outcome: After completion of this lab course, students would be able to demonstrate the working phenomena and applications of various electrical components and circuits. Knowledge gained from this course would also be utilized in designing different electrical circuits/theorems and devices.

EC 19.221 **Electronic Devices and Circuit Laboratory** **Total Hours: 26**
0-0-2-1

Objective: To acquire fundamental knowledge of operation, design and application of various Electronic devices and circuits by doing the experiments.

Pre-requisite: Electronics Lab

1. To plot the diode characteristics and its dynamic resistance and cut-in Voltage.
2. Plot the characteristics of a Zener diode and find its dynamic resistance under reverse biased condition. Plot the Line-Regulation and Load-Regulation curve using Zener diode.
3. (a) To implement a diode clipper circuit which clips the positive peak of the input voltage (i) By 1V and (ii) By 3V? (For given sinusoidal input $V_{pp} = 4V, 1kH$).
   (b) To implement a diode clipper circuit which clips the negative peak of the input voltage (i) By 1.5V and (ii)By 2.5V.(For given sinusoidal input $V_{pp} = 4V, 1kH$).
4. (a) To implement a diode clamper circuit which clamps the positive peak of the input voltage to(i)zero reference voltage and (ii)a given voltage $1V$. (For given square wave input $V_{pp} = 10V, 1kH$).
   (b) To implement a diode clamper circuit which clamps the negative peak of the input voltage to(i)zero reference voltage and (ii)a given voltage 1.5V.(For given square wave input $V_{pp} = 10V, 1kH$.
5. To plot the frequency response of a emitter follower.(For given sinusoidal input $V_{pp} = 3V, 1kH$.
6. Design a Half Wave Rectifier circuit with and without capacitor filter, measure the rms and Dc values of output voltage and calculate the ripple factor for given sinusoidal input $V_{pp} = 10V, 1kH$.
7. To plot the input and output characteristics of a transistor in CE Configuration.
8. Design a two stage RC coupled transistor amplifier and calculate the gain. (for given sinusoidal input $V_{pp} = 200mV, 1kHz$).
9. To plot the characteristics of a UJT and find its peak voltage, peak current and valley voltage. Design a relaxation oscillator determine the frequency of oscillation and compare the practical frequency obtained with the theoretical frequency.
10. To plot the Transfer characteristics (for$V_{DS} = 5V$) and Drain (for $V_{GS} = -1V$) characteristics of a JFET in CS Configuration.

Outcome: After completion of this lab course, students would be able to demonstrate the working phenomena and applications of various electronic devices and circuits. Knowledge gained from this course would also be utilized to design different electronic circuits and devices.

UC 19.202 **Business Environment** **Total Lectures: 26**
2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]
2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]
3. **Political and legal Environment***:* Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]
4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]
5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:
1. Business Environment, Francis Cherunilam, 1st Edition, 2018.
2. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:
1. Business Environment, BN Ghosh, OUP, 2015
2. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
3. Business Environment, AC Fernando, Pearson, 2016

EE 19.202 **Electrical Machines-II** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to the working principles, construction and performance of A.C machines and synchronous machines.

Pre-requisite: Electrical Machine-I

1. **Fundamentals of AC Machine Windings:** Physical arrangement of windings in stator and cylindrical rotor; slots for windings; single turn coil - active portion and overhang; full-pitch coils, concentrated winding, distributed winding, winding axis, 3D visualization of the above winding types, Air-gap MMF distribution with fixed current through winding - concentrated and distributed, Sinusoidally distributed winding, winding distribution factor. [8]
2. **Pulsating and Revolving Magnetic Fields:** Constant magnetic field, pulsating magnetic field - alternating current in windings with spatial displacement, Magnetic field produced by a single winding - fixed current and alternating current Pulsating fields produced by spatially displaced windings, Windings spatially shifted by 90 degrees, Addition of pulsating magnetic fields, Three windings spatially shifted by 120 degrees (carrying three-phase balanced currents), revolving magnetic field. [6]
3. **Induction Machines:** Construction, Types (squirrel cage and slip-ring), Torque Slip Characteristics, Starting and Maximum Torque. Equivalent circuit. Phasor Diagram, Losses and Efficiency. Effect of parameter variation on torque speed characteristics (variation of rotor and stator resistances, stator voltage, frequency). Methods of starting, braking and speed control for induction motors. Generator operation. Self-excitation. Doubly-Fed Induction Machines. [12]
4. **Single Phase Induction Motors:** Constructional features double revolving field theory, equivalent circuit, determination of parameters. Split-phase starting methods and applications. [5]
5. **Synchronous Machines:** Constructional features, cylindrical rotor synchronous machine - generated EMF, equivalent circuit and phasor diagram, armature reaction, synchronous impedance, voltage regulation. Operating characteristics of synchronous machines, V-curves. Salient pole machine – two reaction theory, analysis of phasor diagram, power angle characteristics. Parallel operation of alternators - synchronization and load division. [9]

Outcome: At the end of this course, students will demonstrate the ability to

- Understand the concepts of rotating magnetic fields.
- Understand the operation of ac machines.
- Analyse performance characteristics of ac machines.

Text Books:

1. A. E. Fitzgerald and C. Kingsley, "Electric Machinery", McGraw Hill Education, 2013.
2. I. J. Nagrath and D. P. Kothari, "Electric Machines", McGraw Hill Education, 2010.

Reference Books:

1. M. G. Say, "Performance and design of AC machines", CBS Publishers, 2002.
2. P. S. Bimbhra, "Electrical Machinery", Khanna Publishers, 2011.
3. A. S. Langsdorf, "Alternating current machines", McGraw Hill Education, 1984.
4. P. C. Sen, "Principles of Electric Machines and Power Electronics", John Wiley & Sons, 2007.

EE 19.204 Electrical Measurement and Instrumentation Total Lectures: 40
3-0-0-3

Objective: To make students conversant with concepts of measurement and various electrical and electronics instruments, transducers and bridges.

Pre-requisite: Basic Electrical engineering, Basic Electronics Engineering

1. **Concepts of Measurements:** Introduction, accuracy and precision, repeatability, errors in measurement, sources of errors, types of errors, statistical analysis of measurement data, graphical representation of measurement, data as distributions, Gaussian graph and precision indices. [8]
2. **Analog Instruments:** Types of operating torques in an analog instrument, Moving coil, moving iron, electrodynamic and induction instruments-construction, operation, torque equation and errors. Shunts and multipliers. Applications of instruments for measurement of single-phase power and single-phase energy. Errors in wattmeter and energy meter and their compensation and adjustment. [10]
3. **Bridge:** DC bridges for measurement of resistance Wheatstone bridges, Kelvin's double bridges and AC bridges for measurement of L, R, C & M, Maxwell's bridges, Anderson's bridges, De-Sauty Bridge, Wein bridge. [7]
4. **Transducers:** Introduction , Classification, Selection Criteria, Characteristics, Construction, Working Principles and applications of following Transducers- RTD, Thermocouples, Thermistors, LVDT, Strain Gauges. [7]
5. **Potentiometers and Instrument Transformers:** Crompton's DC and AC polar and coordinate types. Applications, Electronic Multi-meter, Q meter, Vector Impedance meter. Oscilloscope in frequency, phase and amplitude measurements. Instrument transformers. Ratio and Phase angle errors and their reduction. [8]

Outcome: Students will be able to understand electrical and electronic measuring devices and instrumentation like bridges, transducers, CRO etc.

Text Books:

1. J. B. Gupta , "Electrical Measurements and Measuring Instruments", S. K. Kataria & Sons, Reprint Edition, 2012.
2. A.K.Sawhney, "A Course in Electrical and Electronic Measurements & Instrumentation", Dhanpat Rai and Co., 2005.

Reference Books:

3. F.W. Golding and Widdis, Electrical Measurements and Measuring Instruments, 5th Edition, 2010.

CS 19.202 **Objected Oriented Programming** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): (Programming Language)

Objective(s): The objective of this course is to:

- cover issues related to the definition, creation and usage of classes, objects and methods.
- discuss the principles of inheritance and polymorphism.
- provide the foundation of good programming skills by discussing key issues of the design of object- oriented software, including programming design and documentation.
- cover the basics of API and to explore the java abstract programming interface.

1. **Overview:** Introduction to OOP, OOP concepts, interactive Development Environments: Eclipse/Net Beans, basics of OOP, importance of Java Primitive data types, type casting, arrays, Array List, operators and control structures, identifiers, constants and literals. [9]
2. **Classes and Inheritance:** Class fundamentals, objects, constructors, this keyword, garbage collection, the finalize() method, overloading methods, understanding static & final, exploring the string class. Inheritance basics, using super, multilevel hierarchy, constructor in hierarchy, method overriding, dynamic method dispatch, the object class, using abstract classes, interface. [10]
3. **Package, and Exception Handling:** Packages, access protection, importing packages, interfaces, exception-handling fundamentals, exception types, using try and catch, multiple catch clauses, nested try statements, throw, throws, finally, Java's built-in exceptions, user defined exception, assertions [10]
4. **Multithreaded Programming:** The Java thread model, the main thread, creating multiple threads, threads priorities, managing threads, thread class built-in functions. [4]
5. **I/O and String Handling:** I/O basics, reading console input, writing console output, the print writer class, reading and writing files, string constructors, operations on string, string tokenizing, string buffer. [7]

Outcome(s): Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Develop programs using the in-built Java API and the Java standard class library.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).
- Use of development environment like Eclipse for collaborative programming

Text Books:

1. Herbert Schildt, Java The Complete Reference, Herbert Schildt, 8th Edition, 2011.
2. Bert Bates and Kathy Sierra, Head First Java, O'Reilly,2005

Reference Books:

1. Allen B. Downey, Think Java: How to Think Like a Computer Scientist, 2011.
2. Paul Deitel, Harvey Deitel , Java How To Program (Early Objects), 10th Edition, 2014.
3. E. Balaguruswamy, Programing with Java A Primer, Tata Mc. Graw Hill, 2007

EC 19.202 **Digital Electronics** **Total Lectures: 40**

3-0-0-3

Objective: The aim of this course is to present the principles and techniques of combinational and sequential digital logic design and optimization at a gate level. The use of transistors for building gates is also introduced.

Pre-requisite: Basics of Electronics Engineering

1. **Number Systems and Boolean Algebra:** Introduction to number systems, weighted and non-weighted codes, 1's complement, 2's complement, complement arithmetic, Postulates and theorems of Boolean algebra, Boolean functions, canonical and standard form, simplification of Boolean function using Boolean laws and theorems. [5]
2. **Logic Gates and Simplification of Boolean Functions:** Basic Logic gates, Universal gates, K-map representation, incompletely specified functions, simplification realization with gates, Quine-Mc Cluskey method. [5]
3. **Combinational Logic:** Analysis and design of combinational circuits, half adder and full adder, half subtractor and full subtractor, binary serial and parallel adder, BCD adder, binary multipliers, magnitude comparator, decoders, encoders, multiplexers, de-multiplexers. [10]
4. **Sequential Circuits and Programmable Logic :** Latches, flip-flops, triggering of the flip-flops, master-slave flip-flop, excitation tables, conversion of the flip-flops, analysis and design of clocked sequential circuits, shift registers, counters, PAL, PLA. [10]
5. **Introduction to Verilog HDL:** Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Functional Verification, System Tasks, Programming Language Interface (PLI), Module, Simulation and Synthesis Tools. Gate Level Modeling: Introduction, AND Gate Primitive, Module Structure, Other Gate Primitives, Illustrative Examples, Tri-State Gates, Array of Instances of Primitives, Design of Flip-flops with Gate Primitives, Delays, Strengths and Construction Resolution, Net Types, Design of Basic Circuits. [10]

Outcomes: Upon successful completion of this course, students should be able to:

1. Gain fundamental knowledge of the basic logic gates such as AND, OR, NAND NOR, EX-OR and their implementation in Logic Circuits.
2. Design multipliers, Combinational Circuits and registers.

Text Books:

1. Mano, M. M. and Ciletti, M.D., "Digital Design", Pearson Education, Patparganj, Delhi, 4thEdition, 2009.
2. Floyd, T. L. and Jain, R.P., "Digital Fundamental", Pearson Education, Patparganj, Delhi, 8thEdition, 2009.

Reference Books:

1. Puri, V. K., "Digital Electronics: Circuits and Systems", Tata McGraw-Hill, Patel Nagar, New Delhi, 4thEdition, 2001.
2. Jain, R. P., "Modern Digital Electronics", Tata McGraw-Hill, Patel Nagar, New Delhi, 4th Ed.

MA 19.204 **Optimization Techniques** **Total Lectures: 40**
3-1-0-4

Objective: To acquire fundamental knowledge of optimization techniques with statistics and probability and apply in engineering disciplines.

Pre-requisite: Mathematics I, Mathematics II, and Mathematics III

1 **Introductory Ideas:** Recapitulation of basics of permutation, combination and probability theory; Law of addition and law of multiplication; Conditional probability; Total probability; Bayes' theorem (with proof)and it's applications; Discrete and continuous random variables; Types of distributions with basic properties; Probability mass and density functions; Cumulative distribution function; Mean, variance and standard deviation of distributions. [06]

2 **Linear Programming**: Introduction to Operation Research, Problem Formulation, Simplex Methods, Primal and Dual Problem, Dual Simplex, Sensitivity Analysis, Dynamic Programming, Integer Programming, Multi Criteria Decision Making. [10]

3 **Transportation and Assignment Models:** Introduction, Mathematical Formulation, Definitions, Physical Significance, Optimal Solution of Transportation (North West Corner Rule, Matrix Minima Method, Vogel's Approximation Method with MODI and Steeping Stone Methods); The Hungarian Method for Solution of the Assignment Problems, Variations in Transportation and Assignment Problems, The Travelling Salesman Problem.. [08]

4. **Decision and Queuing Theory:** Decision under various conditions, Game Theory, Minimax and Maximin Strategies, Birth and Death Process, Pure Birth and Pure Death Process, Classification of queuing models: $[(M/M/1):(FCFS/\infty/\infty)]$, $[(M/M/1):(SIRO/\infty/\infty)]$, $[(M/M/1):(FCFS/N/\infty)]$, $[(M/M/C):(FCFS/\infty/\infty)]$; Applications of Queuing Models. [10]

5. **CPM and PERT:** Project Management Techniques, Introduction to CPM and PERT Techniques, Rules of Network Construction, Network Analysis, Time Analysis, Time-Cost Optimization Algorithm. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of optimization techniques with statistics and probability in inter-disciplinary engineering and solve curriculum problems.

Text Books:

1. Taha H. A, "Operations Research – An Introduction", Prentice Hall India, Latest Edition.
2. S.Palaniammal, Probability and Random Processes, PHI, 2013.

Reference Books:

1. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.
2. Hillier F.S. and Lieberman G.J. Introduction to Operations Research, McGraw Hill, 2016.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

EE 19.222 **Electrical Machines-II Laboratory** **Total Hours: 26**

0-0-2-1

Objective: The objective of the Electrical Machines-II Lab is to provide an exposure of operation of different types of A.C. motor and ac generator and give them experimental skill. It also aims to understand the generation of A.C. voltages by synchronous generator and induction generator and study their performance. It also enables the students to understand their testing, load characteristics and methods of speed control.

Pre-requisite: Elements of Electrical Engineering (EE 19.101)

Perform any ten of the list.

1. To perform load test on three-phase Squirrel cage Induction Motor.
2. To conduct no-load test and blocked rotor test on three-phase Squirrel cage Induction motor and to draw the circle diagram.
3. To obtain the equivalent circuit of a single-phase induction motor by no-load test and blocked rotor test.
4. To determine the regulation of a three-phase alternator at full load condition by ZPF method.
5. To determine the regulation of a three-phase alternator at full load condition by ASA method.
6. To conduct load test on single phase induction motor and to draw the performance characteristics.
7. To determine the regulation of a three-phase alternator by EMF and MMF method.
8. To conduct the parallel operation/synchronization of an alternator with bus bar by Synchroscope.
9. To perform the starting of Induction motor automatically by Start-delta starter.
10. To plot V and inverted V-curves of three phase synchronous motor.
11. To conduct the experiment for separation of no-load losses of three-phase induction motor.

Outcome: Students will be convergent with transformer and d.c. machines and their testing and performance aspects.

EE 19.224 Electrical Measurement and Instrumentation Laboratory Total Hours: 26

0-0-2-1

Objective: The aim of this Measurements and Instrumentation Laboratory is to reinforce the students with an adequate work experience in the measurement of different quantities and also the expertise in handling the instruments involved. It also helps to train the students in the measurement of displacement, resistance, inductance, frequency and angle etc., and to give exposure to AC, DC bridges and transient measurement.

Pre-requisite: Basic Electrical and Electronics

Perform any ten of the list.

1. To measure unknown resistance using Wheat stone bridge.
2. To measure unknown inductance, capacitance and resistance using Maxwell bridge.
3. To Measure unknown frequency and capacitance using Wein's bridge.
4. To study the working of Q meter and measure Q of coils.
5. Study of Input-Output characteristics of LVDT.
6. Measurement of phase difference between LVDT secondary.
7. Study of Strain measurement using strain gauges and cantilever assembly.
8. To determine the Sensitivity of Strain gauge Trainer.
9. To study the Characteristics of IC temperature sensor (LM 335).
10. To study the Characteristics of Platinum RTD (Temperature sensor).
11. To study the Characteristics of NTC Thermistor.
12. Determining Linear Range of operation (Strain Gauge).
13. To measure unknown inductance, capacitance and resistance using Anderson bridge.
14. To study the loading effect of a PMMC type voltmeter and hence to observe the change in percentage error in its full scale reading when it is used to find out the voltage across different load resistances.
15. To measure very low unknown resistance using Kelvin's Double bridge.

Outcome: The student will be able to:(Knowledge based):

- identify electronics/ electrical instruments, their use, peculiar errors associated with the instruments and how to minimize such errors
- understand the basic design techniques of electronic equipment (Skills) The students will
- uses various laboratory instruments like cathode ray oscilloscope, function generators, various types of transducers, dismantle and recouple serviceable parts of some other selected instruments without damaging them.

CS 19.252 **Object Oriented Programming Lab** **Total Hours: 26**

0-0-2-1

Objective: The objective of this course is to:

- Become comfortable with object-oriented programming and learn to think in terms of objects.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, documentation.

Pre-requisite: Programming Lab (CS 19.151)

Contents:

1. Code different pattern to understand control structures.
2. Code program like factorial, fibinocci etc. to understand functions and recursions.
3. To understand OOP implement a small application with getter and setter method.
4. Implement various operators, this keyword and constructors.
5. Code different usage of static keyword.
6. Implement different types of polymorphism.
7. Show different usage of String class using its inbuilt functions.
8. Demonstrate abstraction using abstract class and interface.
9. Demonstrate exception handling using all its keywords.
10. Demonstrate console I/O and File I/O.
11. Implement multithreading using Runnable interface and Thread class.

Outcome: Students will be convergent with transformer and d.c. machines and their testing and performance aspects.

EE 19.301 **Power System-I** **Total Lectures: 40**
3-0-0-3

Objective:
1. To learn the fundamentals designing of power system that meets specific need.
2. To understand the factors affecting Insulators and also in Under Ground cables.
3. To calculate the various parameters in Distribution System.

Pre-requisite: Network Analysis & Synthesis (EE 19.203)

1. **Introduction:** Evolution of Power Systems and Present-Day Scenario. Structure of a power system: Bulk Power Grids and Micro-grids. Effect of Transmission voltage, Load factor, diversity factor, plant capacity factor, plant utilization factor, different types of tariffs, per unit quantities and its advantages. Impedance and Reactance Diagram. Analysis of simple three-phase circuits. Power Transfer in AC circuits and Reactive Power. [5]
2. **Parameter and Performance of Transmission Line:** Parameter: Configuration, Type of conductors, Resistance of line, Skin & Proximity Effects, Calculation of Inductance and capacitance of single phase, three phase, Single circuit and double circuit transmission lines. Performance: Representation of short, medium and long transmission lines, Ferranti effect, SIL, Tuned Power Line, Power flow through transmission lines. [12]
3. **Insulator, Corona and Underground Cables:** Overhead lines insulators type of insulators and their applications Potential distribution over a string of insulators, Methods of Equalizing the potential, Phenomenon of Corona, Corona Loss, Factors affecting Corona, Methods of reducing corona. Types of Insulation for Cable, Sheath, Armour and Covering, Classification of cables, Effective Conductor Resistance, Inductive Reactance, Capacitance of single phase and three phase cables, Grading of Cables, Problems with Underground cables. [12]
4. **Mechanical Design of Transmission Lines:** Catenary curve, Calculation of sag and Tension, Effects of wind and ice Loadings, Sag Templates, Vibration dampers. [5]
5. **Distribution:** Comparison of various distribution systems, type of primary and secondary distribution systems, choice of transmission voltage, Kelvin's law, limitation of Kelvin's law. Necessity of neutral grounding, various methods of neutral grounding. [6]

Outcome: At the end of this course, students will demonstrate the ability to
- Understand the concepts of power systems components, generation of over-voltages and insulation coordination.
- Understand the concepts of Mechanical, electrical design of overhead lines and performance of transmission lines.
- Evaluate fault currents for different types of faults.

Text Books:
1. Wadhwa C. L. "Electrical Power Systems Electronics", New Age International Publishers, 4th Edition, 2011.
2. Gupta, B. R., "Power System Analysis and Design" S. Chand and Co., Ltd, 2nd Edition, 2005.

Reference Books:
1. Grainger J. J. and William D. Stevenson Jr., "Power System Analysis", McGraw Hill, 3rd Edition, 2005.
2. Abhijit Chakrabarti and SunitaHalder, "Power System Analysis: Operation and Control", Prentice Hall of India, 2nd Edition, 2008.

EE 19.303 **Control System Engineering** **Total Lectures: 40**

3-0-0-3

Objective: The student gains the knowledge of the fundamental principles of analog and digital control system engineering, time response and frequency response analysis with its practical implementation. This course helps in understanding the design of Compensator and PID controller for the Automatic control of Industry.

Pre-requisite: Mathematics, Network Analysis & Synthesis

1. **Introduction:** Industrial control examples. Mathematical models of physical systems. Control hardware and their models. Transfer function models of linear time-invariant systems. Feedback Control: Open-Loop and Closed-loop systems. Benefits of feedback. [8]
2. **Reduction Techniques:** Block diagram reduction and signal flow graph representation of systems. [4]
3. **Time Domain Analysis:** Standard test signals, time response of 1st and 2nd order systems for standard test inputs, time domain design specifications i.e. rise time, peak time, delay time, peak overshoot, settling time and steady state error etc., different types of feedback systems, Steady state errors for unit step, unit ramp and unit parabolic inputs. Concept of stability: conditions for stable system, relative and marginal stability, Routh-Hurwitz criterion. Root-Locus technique. Construction of Root-loci. [12]
4. **Frequency Domain Analysis:** Relationship between time and frequency response. Polar plots. Bode plots. Nyquist stability criterion. Relative stability using Nyquist criterion – gain and phase margin. Introduction to Controller Design: Frequency-domain methods of design. Application of conventional Controllers, Lead and Lag compensation in designs. Analog and Digital implementation of controllers. [12]
5. **State Variables:** Analysis of systems, state vector, state space, advantages of state space techniques, state space representation, State variable analysis and design. [4]

Outcome: At the end of this course, students will demonstrate the ability to

- Understand the concept of stability and its assessment for linear-time invariant systems.
- Design simple feedback controllers.
- Knowledge of stability analysis and improvement of stability for control system.
- Benefit the graduates who wish to work in core sector industry as most of the core sector is state-of-art control.

EE 19.305 **Electromagnetic Fields** **Total Lectures: 40**
3-0-0-3

Objective: To develop the understanding of basics concepts of electromagnetic field theory and its applications.

Pre-requisite: Basic understanding of laws of Physics and Mathematics

1. **Introduction**: Transformation of a point and a vector in different coordinate systems, Differential length, area, volume. Physical meaning of gradient, divergence and curl, Laplacian of a scalar, Conversion of a vector from one coordinate system to another. Divergence theorem, Stoke's theorem, reviews of electro-static and magneto-static fields. [6]
2. **Static Electric Field:** Coulomb's law, Electric field intensity, Electrical field due to point charges. Line, Surface and Volume charge distributions. Gauss law and its applications. Conductors, Dielectrics and Capacitance: Current and current density, Ohm's Law in Point form, Continuity of current, Boundary conditions of perfect dielectric materials. Permittivity of dielectric materials, Capacitance, Capacitance of a two wire line, Solution and Application of Laplace and Poisson's equations. [9]
3. **Static Magnetic Fields:** Biot-Savart Law, Ampere Law, Magnetic flux and magnetic flux density, Scalar and Vector Magnetic potentials. Steady magnetic fields produced by current carrying conductors. Magnetic Forces, Materials and Inductance: Force on a moving charge, Force between differential current elements, Nature of magnetic materials, Magnetization and permeability, Magnetic boundary conditions, Magnetic circuits. [9]
4. **Time Varying Fields and Maxwell's Equations:** Faraday's law of electromagnetic induction, Displacement current, Point form of Maxwell's equation, Maxwell's equations in integral and differential form, potential functions, electromagnetic boundary conditions. [8]
5. **Electromagnetic Waves:** Derivation of wave equations and their solutions for free space, uniform plane waves, Maxwell's equation in phasor form, wave equation in phasor form, plane waves in free space and in a homogenous material, wave equation for a conducting medium, plane waves in lossy dielectrics, propagation in good conductors, Skin effect. Poynting theorem. [8]

Outcome: At the end of the course, students will demonstrate the ability

- To understand the basic laws of electromagnetism.
- To obtain the electric and magnetic fields for simple configurations under static conditions.
- To analyze time varying electric and magnetic fields.
- To understand Maxwell's equation in different forms and different media.

Text Books:

1. Matthew N. O. Sadiku, "Principles of Electromagnetics", Oxford University Press, 4th Edition, 2009.
2. William H. Hayt, "Engineering Electromagnetic", McGraw Hill, 8th Edition, 2001

EE 19.307 **Power Plant Engineering** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates the students to understand the basic functioning of generation and design/economics consideration of various power plants.

Pre-requisite: Elements of Electrical Engineering, Power System-I

1. **Introduction:** Energy sources and their availability, Principle types of power plants, Their special features and applications, Present status and future trends. Economic aspects in power Generation: Terms commonly used in system operation, various factors affecting cost of generation: Load curves, load duration curves, Connected load, maximum load, Peak load, base load and peak load power plants, load factor, Plant capacity factor, Plant use factor, Demand factor, diversity factor, Cost of power plant. [10]
2. **Thermal Power Plant:** General developing trends, Essentials, Plant layout, Coal storage, Preparation, Handling, Feeding and burning, Ash handling, Dust collection, High pressure boilers and steam turbines, Their main components like super heaters, Economizers, Pre-heaters etc., Fuel efficiency/heat balance. [8]
3. **Hydro Electric Power Plants:** Classifications, Plant layout, various components, Types of turbines, Pumped storage, hydro-electric plants, advantages and disadvantages. Environmental aspects for selecting the sites and locations of hydro power stations. [8]
4. **Gas Turbine Power Plants:** Schematic arrangement, advantages and disadvantages of Gas turbine power plant. Open cycle and Closed cycle gas turbine power plant, Combined cycle power plant, Comparison of various power plants. [6]
5. **Nuclear Power Plant:** Nuclear fuels, Nuclear energy, Main components of nuclear power plant, Nuclear reactors types and applications, Radiation shielding, Radioactive and waste disposal safety aspect. [8]

Outcome: The students shall develop an insightful knowledge to apply the basic laws and operating principles in various power plants.

Text Books:
1. Deshpande, M.V., "Power Plant Engineering", McGraw Hill, 4th Edition 2004.
2. Gupta B. R., "Generation of Electrical Energy", S. Chand Publications, 14th Edition, 2011.

3. Arora S.C &Domkundawar S, "A course in Power Plant Engineering", Dhanpat Rai, 2nd Edition, 2002.

EC 19.301 **Microprocessor and Microcontroller** **Total Lectures: 40**
3-0-0-3

Objective: To develop an in-depth understanding of the operation of microprocessors and microcontrollers, machine language programming & interfacing techniques.

Pre-requisite: Digital electronics

1. The 8086 Microprocessor Architecture : Architecture, details of sub-blocks such as EU, BIU; memory segmentation and physical address computations, pin diagram and description of various signals, minimum and maximum mode of operations, supporting chips viz. 8284, 8288 and memory mapping [8]

2. Programming of 8086: Addressing modes of 8086, instruction set of 8086, assembly language programming, counters and time delays, stack structure of 8086 and subroutine. [7]

3. Interfacing of 8085 / 8086 with Programmable Chips: Interfacing of 8255 Programmable peripheral interface, 8251 USART, 8253/8254 Programmable Interval Timer and Direct Memory Access Controller 8237/8257 DMA, 8259 Programmable Interrupt Controller. [8]

4. Introduction to Microcontrollers, Architecture and Memory Interfacing: Overview of the 8051 family, 8051 Microcontroller's Architecture, Pin configuration, Common memory types and Tradeoffs, External Memory interfacing. [7]

5. Programming and Interfacing of 8051: Addressing modes of 8051, instruction set of 8051, assembly language programming of 8051, stack structure of 8085, delays, and subroutines, Applications of interrupts, timer/counter and serial port, Components of Integrated Development Environment for software development, Interfacing of 8051 with sensors, Keyboard, ADC, DAC, LCD, Stepper Motor and D.C motor [10]

Outcome: Upon completion of this course, the student will be able to:

- The student will learn the internal organization of some popular microprocessors and microcontrollers.
- The student will learn hardware and software interaction and integration and memory.

Text Books:

1. Ramesh S. Gaonkar, Microprocessor Architecture, Programming and Application with the 8085; Penram International Publishing (India).
2. M. A. Mazidi, The 8051 Microcontroller & Embedded Systems; Pearson Education.

Reference Books:

1. I. Scott McKenzie and Raphael C.W. Phan; The 8051 Microcontroller; Pearson Education
2. D. V. Hall, Microprocessors and Interfacings; TMH, second Edition.

EE 19.321 **Power System-I Laboratory** **Total Hours: 26**
0-0-2-1

Objective:
- To make the students aware about the use and applications of MATLAB and ETAP software in electrical engineering.
- To impart hands on experience in verification of circuit laws and theorems, measurement of circuit parameters, study of circuit characteristics using MATLAB & ETAP. It also gives practical exposure to the usage of different power circuits with different condition.

Pre-requisite: Basic electrical engineering and basic power system fundamentals.

1. Basic MATLAB desktop, help Browser, types of files, basic commands.
2. Introduction to SIMULINK, creating and simulating a SIMULINK model.
3. Plotting of single phase and three phase voltage waveforms using MATLAB through programming techniques.
4. Simulink model to generate sine and cosine waveforms.
5. Response of RL, RC and PLC circuits and its transient study using MATLAB.
6. Plot of daily load curve for the given data using MATLAB.
7. Calculation of Transmission Line Parameters and verify using MATLAB.
8. Introduction to basics of Electrical Transients Analyzer Program (ETAP).
9. Study and operation of various ETAP modules Viz. load flow, short circuit and harmonics.
10. Construction of single line diagram of a power system using ETAP Software.
11. Modeling of power distribution network using ETAP Software.

Outcome: Upon completion of this course, the student will be able to:
- Develop computer programs for electrical circuits and power system.
- Develop computer models for power system components.
- Design, simulate and analyze circuits using simulation packages.

EE 19.323 **Control System Laboratory** **Total Hours: 26**
0-0-2-1

Objective: This laboratory course facilitates the students to get a comprehensive exposure to various techniques/principles and applications of control systems for real life implementation like temperature control of oven, position control of DC/AC servomotor, synchro devices as a control transformer, robotic control systems etc.

Pre-requisite: Nil

Perform any ten of the list.

1. To study the performance of various types of controllers (P, PI, PID) in order to control the temperature of an oven.
2. To study the performance analysis of PC based analogue and digital motor control system (DCMC) with second order feedback system behavior.
3. To study the characteristics of a Synchro Transmitter Receiver pair and use these as torque-synchro and angular error detector.
4. To study the performance characteristics of angular position error detector (AC&DC excitation) using two Potentiometers.
5. Using Nyquist Stability technique, find the stability of negative feedback control system whose open loop transfer function is given by $G(s)\,H(s) = 10/[\,(s+1)\,(s+2)\,(s+3)\,]$ Also verifies the MATLAB results/stability with theoretical method after plotting on graph sheets.
6. To study the performance characteristics of an AC servo motor angular position control system and analysis of transient characteristics with gain Variation.
7. To study the performance characteristics of a DC servo motor angular position control system and analysis of transient characteristics with gain Variation and additional tachometer feedback.
8. To study the Characteristics of an A.C. Servo Motor and determine its transfer function.
9. Plot the Root locus diagram for investigating the stability for the system whose open loop transfer function given by $G(s)\,H(s) = K/[s\,(s+4)\,(S+5)]$. Using MATLAB Code, verify the results with Conventional method.
10. To study and design the pc based universal robotic system as snake.
11. Draw the bode plot for the transfer function $G(s) = 50/[s\,(1+0.25s)\,(1+0.1s)]$.
    From the graph, determine:
    1. Gain and Phase Crossover Frequency
    2. Gain Margin and Phase Margin
    3. Stability of the system

    Also, verify the MATLAB results with theoretical value.
12. Obtain the state space, pole-zero and residue pole form of the control system whose transfer function is given by.

Outcome: The students shall develop an insightful knowledge on various techniques and concepts of analysis & design of control system for different applications like temperature control of oven, position control of DC/AC servomotor, synchro devices, Robotic control systems etc.

EC 19.325 **Microprocessor and Microcontroller Laboratory** **Total Hours: 26**
0-0-2-1

Objective: To introduce to students the basics of 8086 microprocessor, assembling language programming and interfacing with various modules.

Pre-requisite: Assembly language programming

1 **[a]** Write a program for 8085 microprocessor to move a eight bit number in register A, B, C and D. Verify the content of all the registers after execution of program.
Also find out the followings:
(i) Total number of bytes required for the program
(ii) Hex code of each instruction used in the program

[b] Load a eight bit number stored in memory location 4000H into register A. Now load the content of A in B and in memory location 5000H. Verify the contents of A, B and memory location 5000H.

2 **[a]** Write a program to perform multiplication of two 8 bit numbers using 8085 microprocessor.

[b] Let two numbers are stored at memory locations 2000H and 2001H. Write a program for 8085 microprocessor to perform following actions:
If 1st number > 2nd number then store 00H at 3000
If 1st number < 2nd number then store FFH at 3000
If 1st number = 2nd number then store 99H at 3000

3 **[a]** Write an assembly language program for 8086 microprocessor to find out the smallest number from a series of five eight bit numbers and store it at memory location 2000H: 2000H.

[b] Write an assembly language program for 8086 microprocessor to find out the largest number from a series of five eight bit numbers and store it at memory location 2000H: 2000H.

4 **[a]** Write a program to arrange the series of four eight bit numbers in ascending order.

[b] Write a program to arrange the series of four eight bit numbers in descending order.

5 Interface three LEDs with 8086 Kit to form traffic light control logic.

6 Interface a buzzer with 8086 microprocessor with the help of relay and write a program to control the ON-OFF sound from the buzzer.

7 Interface a DC motor with 8086 microprocessor and write a program to control its operation.

8 a) Introduction to Keil µVision Integrated Design Environment software.
b) Write an ALP for 8051 to move a block of five bytes stored from locations 30H to 40H of internal RAM.

9 a) Write an ALP for 8051 to move a block of five bytes stored from address 3000H of external data memory to address 40H of internal RAM.
b) Write an ALP for 8051 to move a block of five bytes stored from address 40H of internal RAM to address 3000H of external data memory.

10 a) Three 8 bit numbers are stored at internal RAM locations 30H, 31H and 32H. Find out the largest number and store it at internal RAM location 40H.
b) Three 8 bit numbers are stored at internal RAM locations 30H, 31H and 32H. Find out the smallest number and store it at internal RAM location 40H.

Outcome: After the basic knowledge of microprocessor and microcontroller interfacing and their applications, the student will be able to:
1. Analyze and apply working of 8086.
2. Compare the various interface techniques. Analyze and apply the working of 8255, 8279, 8259, 8251, 8257 ICs and design and develop the programs.
3. Learning the Communication Standards

EE 19.302 **Power System-II** **Total Lectures: 40**
3-0-0-3

Objective:
- To know the necessity of load flow in a regulated system.
- To examine the need of various analysis like fault analysis, short circuit analysis stability analysis, steady state and transient analysis.

Pre-requisite: Power System-I (EE 19.301)

1. **Load Flow Studies:** Bus admittance(Y bus) and Impedance (Z bus) matrices and their formation. Power flow in a transmission system, bus classification, Load flow equations and solution techniques-Gauss iterative method, Gauss-Seidel method, Newton-Raphson method, comparison of load flow solution techniques. [9]
2. **Fault Calculation and Network:** Symmetrical fault, Significance of Positive, Negative and Zero Sequence Components, Fault calculation, Sequence Networks, Unsymmetrical fault analysis – Single Line to Ground faults, Line to Line fault, Double line to Ground fault. [9]
3. **Power System Stability:** Steady state stability and transient stability- stability problem, rotor dynamics and swing equation, power angle equation and diagram, equal area criterion and its application, critical clearing angle, fault clearing time, factors influencing transient stability, methods of improving stability. [8]
4. **Economic Load Dispatch:** Station performance and operating characteristics, Incremental rate theory, optimal Load distribution within generating station and between various generating stations in a region, Transmission loss equation, Calculation of losses and Generation scheduling and dispatch. [8]
5. **Power System Control:** Load Frequency Control:Load Frequency Problems, Speed Governing System, Reasons for Limits on Frequency. Excitation systems, Automatic Voltage Regulators, SCADA and Computer control. [6]

Outcome: After the completion of the course, the students will be able to:
- Apply the load flow application to various power system problems like minimization of transmission line losses and minimization of the total fuel cost.
- Analyze the economic dispatch problem in thermal power plant.
- Design a power system solution based on the problem requirements and realistic constraint.

Text Books:
1. Grainger, J. J. and William D. Stevenson Jr., "Power System Analysis", McGraw Hill, 4th Edition, 2005.
2. Wadhwa. C. L. "Electrical Power Systems Electronics", New Age International Publishers, 3rd Edition, 2011.

Reference Books:
1. Ashfaq Husain, "Electrical Power Systems", CBS Publishers and Distributors, 4th Edition, 1996.
2. Abhijit Chakrabarti, Sunita Halder "Power System Analysis: Operation and Control", Prentice Hall of India, 2nd Edition, 2008.

EE 14.304 **Power Electronics** **Total Lectures: 40**
3-0-0-3

Objective:
- To introduce to students the theory and applications of power electronics systems for high efficiency, renewable and energy saving conversion systems
- To prepare students to know the characteristics of different power electronics switches, drivers and selection of components for different applications
- To develop students with an understanding of the switching behavior and design of power electronics circuits such as DC/DC, AC/DC, DC/AC and AC/AC converters

Prerequisite: Network Analysis and Synthesis, Basics of Electronics Engineering

1. **Introduction to Power Devices:** Review of power semiconductor devices, SCR, Static and dynamic characteristics, Turn-on and Turn-off methods and circuits, Ratings and protection of SCRs, Series and parallel operation of thyristor, Other members of thyristor family. [8]
2. **Controlled AC to DC Converter:** Principle of phase control, Single phase half wave circuit with different types of loads, Single phase and three phase semi converter and full converter bridge circuits, Single phase dual converters and their operation with circulating and non-circulating currents. [10]
3. **Controlled AC to AC Converter:** AC Voltage Controllers - Types of single-phase voltage controllers, Single phase voltage controller with R and RL type of loads, gate pulse requirements to trigger the SCRs of ac voltage controllers. Cycloconverters - Principles of operation, Single phase to single phase step up and step down cycloconverters. Three phase to single phase cycloconverter. [10]
4. **Controlled DC to DC Converter:** Introduction to dc chopper, Principle of chopper operation, Control strategies, Types of choppers and its operation. [5]
5. **Controlled DC to AC Converter:** Introduction to inverter, Single phase VSI: half bridge and full bridge inverters. Three phase bridge inverters with 180 degree and 120 degree modes of operation, Series and parallel inverters, Introduction to current source inverters. [7]

Outcome:
- The student will be able to understand the principle of operation of commonly employed power electronic converters.
- The student will be capable of analyzing non-linear circuits with several power electronic switches.
- The student will be equipped to take up advanced courses in Power Electronics and its application areas.

Text Books:
1. Rashid, M., "Power Electronics", Prentice Hall of India Private Limited, 4th Edition,2006.
2. P.S. Bimbhra, "Power Electronics," Khanna publishers, 5th edition, 2012.

Reference Books:
1. Mohan,N., Undel, T.M. and Robbins, W. P., "Power Electronics: Converter Applications and Design," John Wiley and Sons, 3rd Edition, 2007.
2. Jain,A., "Power Electronics and its Applications," Penram International Publishing (India) Pvt. Ltd., 4th Edition, 2008.
3. Dubey, G.K., Doradla, S.R., Joshi, A. and Sinha, R.N.K., "Thyristoried Power Controllers," New Age International (P) Limited, Publishers, 2nd Edition, 2004.

EE 19.306 **Power System Protection** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to the working principles of various power system protection equipment andits simulation-Modeling schemes.

Pre-requisite: Power System-I

1. **Introduction and Components of a Protection System:** [4]
   Principles of Power System Protection, Relays, Instrument transformers, Circuit Breakers.
2. **Faults and Over-Current Protection:** [8]
   Review of Fault Analysis, Sequence Networks. Introduction to Overcurrent Protection and overcurrent relay co-ordination.
3. **Equipment Protection Schemes:** [8]
   Directional, Distance, Differential protection. Transformer and Generator protection. Bus bar Protection, Bus Bar arrangement schemes.
4. **Digital Protection:** [8]
   Computer-aided protection, Fourier analysis and estimation of Phasors from DFT. Sampling, aliasing issues.
5. **Modeling and Simulation of Protection Schemes and system protection:** [12]
   CT/PT modeling and standards, Simulation of transients using Electro-Magnetic Transients (EMT) programs. Relay Testing. Effect of Power Swings on Distance Relaying. System Protection Schemes. Under-frequency, under-voltage and df/dt relays, Out-of-step protection, Synchro-phasors, Phasor Measurement Units and Wide-Area Measurement Systems (WAMS). Application of WAMS for improving protection systems.

Outcome: At the end of this course, students will demonstrate the ability toUnderstand the different components of a protection system.

- Evaluate fault current due to different types of fault in a network.
- Understand the protection schemes for different power system components.
- Understand the basic principles of digital protection.
- Understand system protection schemes, and the use of wide-area measurements.

Text Books:

1. J. L. Blackburn, "Protective Relaying: Principles and Applications", Marcel Dekker, New York, 1987.
2. Y. G.Paithankar and S. R. Bhide, "Fundamentals of power system protection", Prentice Hall, India, 2010.

Reference Books:

1. A. G. Phadke and J. S. Thorp, "Computer Relaying for Power Systems", John Wiley & Sons, 1988.
2. A. G. Phadke and J. S. Thorp, "Synchronized Phasor Measurements and their Applications", Springer, 2008.
3. D. Reimert, "Protective Relaying for Power Generation Systems", Taylor and Francis, 2006.

EE 19.308 **Renewable Energy Technology** **Total Lectures: 40**
3-0-0-3

Objective:
- To provide knowledge, understanding and application oriented skills on solar, wind, ocean, biomass, wave, tidal, ocean, geothermal and other energy sources and relevant technologies towards their effective utilization for meeting energy demand.
- To develop clear understanding of these technologies to be able to select an appropriate type of plant for given energy requirements.

Prerequisite: Nil

6. **Solar and Wind Energy:** Solar radiation, Measurements of solar radiation and sunshine, Solar thermal collectors, Flat plate and concentrating collectors, Fundamentals of photo voltaic conversion, applications. Wind data and energy estimation, Wind energy Conversion Systems, Wind energy generators and performance, applications. [10]

7. **Biomass Energy:** Biomass resources and their classification, Biomass production for Energy farming, Direct combustion for heat, Pyrolysis, Thermo chemical process, Anaerobic digestion, Digester sizing, waste and residues, vegetable oils and biodiesels, Applications of Biogas-Social and environmental aspects. [7]

8. **Wave and Tidal Energy:** Concept of energy and power from waves, Wave characteristics, period and wave velocities, Different wave energy conversion devices (Tapchan, oscillating water column type); Principles of tidal power generation, components of power plant, Single and two basin systems, Estimation of energy, Maximum and minimum power ranges. [8]

9. **Ocean and Geothermal Energy:** OTEC Principle, Lambert's law of absorption, Open cycle and closed cycle, Heat exchanger calculations (elementary treatment), Major problems and operational experience, Classification of geothermal resource, Fundamentals of geophysics, Availability and estimation of thermal power, Extraction techniques. [7]

10. **Hydrogen and Fuel Cell:** The Hydrogen economy, Advantages of hydrogen as an energy carrier, Components of the hydrogen economy, Generation of hydrogen, Transport and storage of hydrogen: physical and chemical, Fuel Cells, classification of fuel cells, power generation and economics. [8]

Outcome: Upon successful completion of this course, students should be able to:
- Gaining appropriate knowledge on principles of operation, construction and workingand technological advances in solar photovoltaics, solar thermal, wind, ocean, tidal, geothermal and other systems.
- Ability to design and describe the challenges and problems with different types renewable energy technologies.
- Discuss remedies/potential solution to the supply

Text Books:
1. Twidell, J.W. and Weir, A., "Renewable Energy Sources", EFN Spon Ltd, 2nd Edition, 2006.
2. G.N.TiwariandM.K.Ghosal, "Renewable Energy Resources Basic Principles and Applications", Narosa Publishing House, New Delhi, 1st Edition, 2005.

Reference Books:
1. Sukhatme, "S.P., "Solar Energy", McGraw Hill, 3rd Edition, 2008.
2. LivinOniciu, "Fuel cell", Abacus press, 5th Edition, 1976.

EE 19.310 **Engineering Material Science** **Total Lectures: 40**
3-0-0-3

Objective:
- Use the fundamental science and engineering principles relevant to materials that include the relationships between nano/microstructure, characterization, properties, processing, performance and design of materials.
- Use their knowledge of the significance of research, the value of continued learning and environmental/social issues surrounding materials.
- Use lifelong learning skills to develop knowledge and skills, to pursue new areas of expertise, careers and to take advantage of professional development opportunities.

Pre-requisite: Nil

1. **Introduction**: Engineering properties of material. Structure, properties and performance, types of materials. Classical theory of electrical and thermal conduction in solids, temperature dependence of resistivity, skin effect, Hall effect. [6]
2. **Dielectric Properties of Insulators in Static and Alternating Fields:** Types of Polarizations**,** static dielectric constant of gases and solids, properties of ferroelectrics materials. Spontaneous polarization, Piezoelectricity, Frequency dependence of Electronic and Ionic Polarizability, complex dielectric constant of non-dipolar solids, dielectric relaxation, dielectric losses. [10]
3. **Magnetic Properties and Superconductivity:** Magnetization of matter, Classification of Magnetic Materials, Ferromagnetic Origin, Curie-Weiss Law, Soft and Hard Magnetic Materials, Superconductivity and its origin, Zero resistance and Meissner Effect, critical current density. [10]
4. **Conductivity of Metals**: ohm's law and the relaxation time of electrons, relaxation time, collision time and mean free path, electron scattering and resistivity of metals, thermal conductivity of metals. [9]
5. **Semiconductor Materials:** Classification of semiconductors, semiconductor conductivity, temperature dependence, Carrier density and energy gap, Trends in materials used in Electrical Equipment. [6]

Outcome: After the completion of the course, the students will be able to:
- Learn the basics of materials used in electrical engineering.
- Realize the dielectric properties of insulators in static and alternating fields.
- Importance of magnetic properties and superconductivity.
- Behavior of conductivity of metals and classifications of semiconductor materials.

Text Books:
1. AdrianusJ. Dekker, "Electrical Engineering Materials" Prentice Hall India Learning Publishers, 1970.
2. Solymar, "Electrical Properties of Materials" 8th Edition, Oxford University Press-New Delhi, 2012.

Reference Books:
1. T. K. Basak, "Electrical Engineering Materials" New Age International Private Limited Publisher, 2010.
2. C. S. Indulkar, S. Thiruvengadan, "An Introduction to Electrical Engineering Materials", Revised Edition, S. Chand & Company Pvt. Ltd, 2008.

RM 19.101 **Research Methodology** **Total Lectures: 40**
3-0-0-3

Objective(s):
- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

Prerequisite(s): Communication Skills

1.	**Introduction:** Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches,ResearchProcess,ValidityandReliabilityin Research.	[6]
2.	**Problem Formulation:** Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps.	[10]
3.	**Research Design:** Research Framework, Meaning & Significance of Research Designs, Features of a good Research Design, Types of Research Design.	[10]
4.	**Data Analysis and Simulation Tool:**TypesofData,Sources of Data, Methods of CollectingData,DataPresentation Techniques.Methodsof DataAnalysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim.	[12]
5.	**Report Writing:** Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy.	[2]

Outcome(s): On successful completion of this course, the students will be able to
- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:
1. R. Pannershelvam, "Research Methodology" Prentice Hall India, New Delhi, 2nd Edition, 2013.
2. C. R. Kothari, "Research Methodology: Methods and Techniques", New Age International (p) Limited, Publishers New Delhi, 4nd edition, 2018.

Reference Books:
1. William G. Zikmund, “Business Research Methods”, Cengage Learning New Delhi, 8th edition, 2016.
2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

EE 19.322 **Power System-II Laboratory** **Total Hours: 26**
0-0-2-1

Objective: To enhance the model building, advanced analyzing and problem solving skills of the students in the area of power system, power electronics and control through computer programming and simulation.

Pre-requisite: Power System-I

1. To study and testing the operation Gas actuated Buchholz Relay.
2. To study and testing of IDMT type Over current Relay with different and time setting & draw characteristics.
3. To study and testing of under voltage relay with different voltage setting multiplier & plot IDMT characteristics.
4. To study and testing of under frequency relay with IDMT characteristics.
5. To study and testing of microcontroller based Earth Fault relay with IDMT and DMT mode.
6. To study and testing the operating characteristics of percentage-biased differential relays and plot the characteristics of percentage biased differential relay for 30%, 40%, & 20%.
7. Simulation of load Flow analysis and related problems using Newton-Raphson and Fast-Decoupled methods using MATLAB.
8. Simulation and study of various power quality events like voltage sag, harmonics and transients etc.
9. Developing a simple simulation models for harmonic filter in power system distribution lines.
10. Simulation of various faults and short circuit analysis for a given power system.
11. Draw I-V and P-V characteristics of PV panel by variable resistive load and find out maximum power point by FF (fill factor) calculation.
12. Simulation of transient and small signal stability analysis: single-machine Infinite Bus System using SIMULINK.
13. Transient Stability Analysis of Multi-machine Power Systems using MATLAB.

Outcome: Upon completion of the course students will be able to

- Develop computer programs for advanced power system studies.
- Develop computer models for power system components.
- Simulate and visualize the real time phenomenon.

EE 19.324 **Power Electronics Laboratory** **Total Hours: 26**
0-0-2-1

Objective: To enable the students to develop hands on experience in analyzing, designing and carrying out experiments on various electrical networks by using power electronic components. It aims to familiarize the switching devices, power converters and its applications in various systems for power control.

Pre-requisite: Network Analysis and Synthesis, Basics of Electronics Engineering

Perform any ten of the list.

1. To obtain the V-I characteristic of an SCR and to find out it's latching and holding currents.
2. To obtain the Drain and Transfer Characteristic of a MOSFET.
3. To obtain the V-I characteristic of TRIAC.
4. Study of SCR (i) Resistor Triggering circuit (ii) Resistor Capacitor Triggering circuit for Half wave rectifier.
5. Study of SCR (i) Resistor Triggering circuit (ii) Resistor Capacitor Triggering circuit for Full wave rectifier.
6. Study of Step-Up Chopper with (i) resistive load (ii) resistive, inductive load.
7. Study of Step Down Chopper with (i) resistive load and (ii) resistive – inductive load.
8. To study the forced commutation process of an SCR.
9. Study of Single Phase Bridge Inverter with
   i. Resistive-Capacitive load
   ii. Inductive-Capacitive load
   iii. Resistive Capacitive and Inductive load.
10. To write and execute a program (i.e. STL and Ladder Logic) for SIEMEN make P.L.C to flash a light at regular intervals of time.
11. To simulate a program for a PLC controller to control the traffic lights using 'BRYTONIC' software.
12. To design and develop a simulation schematic for the performance analysis of Half wave rectifier with different loads, using MATLAB SIMULINK toolbox.
13. To design and develop a simulation schematic for the performance analysis of Full wave rectifier with different loads, using MATLAB SIMULINK toolbox.

Outcome: Upon completion of this course, the student will be able to:

- Understand the characteristics of various switching devices and appreciate its applications in various electrical networks/systems.
- Analyze and design the operation of power switching converters.
- Develop practical control circuits for various real time applications.
- Analyze and prepare the technical report on the experiments carried out.

EE 19.401 **Electrical Drives and Control** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to the working principles, characteristics details, control and performance of Electrical Drives.

Pre-requisite: Electrical Machines, Control System Engineering, Power Electronics

1. **DC Motor Characteristics and Chopper fed DC Drive:** Review of emf and torque equations of DC machine, review of torque-speed characteristics of separately excited DC motor, change in torque-speed curve with armature voltage, example load torque-speed characteristics, operating point, armature voltage control for varying motor speed, flux weakening for high speed operation. Review of DC chopper and duty ratio control, chopper fed DC motor for speed control, steady state operation of a chopper fed drive, armature current waveform and ripple, calculation of losses in DC motor and chopper, efficiency of DC drive, smooth starting. [10]
2. **Multi-quadrant DC Drive:** Review of motoring and generating modes operation of a separately excited DC machine, four quadrant operation of DC machine; single-quadrant, two-quadrant and four-quadrant choppers; steady-state operation of multi-quadrant chopper fed DC drive, regenerative braking. [6]
3. **Closed-loop Control of DC Drive:** Control structure of DC drive, inner current loop and outer speed loop, dynamic model of DC motor – dynamic equations and transfer functions, modeling of chopper as gain with switching delay, plant transfer function for controller design, current controller specification and design, speed controller specification and design. [6]
4. **Induction Motor Characteristics:** Review of induction motor equivalent circuit and torque-speed characteristic, variation of torque-speed curve with applied voltage, applied frequency and applied voltage and frequency. Typical torque-speed curves of fan and pump loads, operating point, constant flux operation, flux weakening operation. [6]
5. **Scalar Control or Constant V/f Control of Induction Motor and Control of Slip Ring Induction Motor:** Review of three-phase voltage source inverter, generation of three-phase PWM signals, sinusoidal modulation, space vector theory, conventional space vector modulation; constant V/f control of induction motor, steady-state performance analysis based on equivalent circuit, speed drop with loading, slip regulation. Impact of rotor resistance of the induction motor torque-speed curve, operation of slip-ring induction motor with external rotor resistance, starting torque, power electronic based rotor side control of slip ring motor, slip power recovery. [12]

Outcome: At the end of this course, students will demonstrate the ability to

- Understand the characteristics of DC motors and induction motors.
- Understand the principles of speed-control of DC motors and induction motors.
- Understand the power electronic converters used for DC motor and induction motor speed control.

Text Books:

1. G. K. Dubey, "Power Semiconductor Controlled Drives", Prentice Hall, 1989.
2. R. Krishnan, "Electric Motor Drives: Modeling, Analysis and Control", Prentice Hall, 2001.

Reference Books:

1. G. K. Dubey, "Fundamentals of Electrical Drives", CRC Press, 2002.
2. W. Leonhard, "Control of Electric Drives", Springer Science & Business Media, 2001.
3. Leonhard, Werner. Control of electrical drives. Springer Science & Business Media, 2001.

EE 19.402 **Smart Grid** **Total Lectures: 40**
3-0-0-3

Objective:
- This course aims to equip the students to understand the change in electricity power business from conventional sectors to smart grid sectors.
- To understand and analyze the basic architecture of smart grid and functions of its various components like renewables generation, measurement and communication system etc.

Pre-requisite: Electrical Engineering

1. **The Traditional Power Generation and Transmission System**: Introduction, Power System reliability and quality, Voltage profile of power system, Power transfer Through radial feeder, Power system stability and control, Protection system, SCADA System. [8]
2. **Smart Grid:** Introduction, Characteristics of Smart Grid, Traditional Grid Versus Smart Grid, Evolution of Smart Grid, Components of Smart Grid, The Environmental Impacts of Smart Grid, Technologies Required for Smart Grid. [8]
3. **Renewable Energy Integration:** Introduction, Solar Energy, Wind Energy, Distributed Energy Resources Integration Challenges, Forecasting and Scheduling, Impacts of Renewable Energy into the Grid. [8]
4. **Smart Grid Communications and Measurement Technology:** Communication, Measurement and Monitoring Technologies, Wide Area Monitoring Systems (WAMS), Phasor Measurement Units (PMU) ,Smart Appliances, Advanced Metering Infrastructure (AMI),Communication Protocols. [8]
5. **Smart Meter:** Details Description of Smart Meter, Benefits of Smart Meter, Technical Configurations of Smart Meter, Components of Smart Meter Network in Distribution System, and Characteristics of smart meters. [8]

Outcome: At the end of this course, students will demonstrate the ability to
- Understand the difference between conventional grid and smart grid.
- Understand the integration necessity and challenges of renewable in conventional grid system.
- Understand the operation of communication and measurement technology in modern grid context.

Text Books:
1. Momoh James., "Smart Grid Fundamentals of Design and Analysis" ,John Wiley &Sons, Inc., Hoboken, New Jersey, 4th Edition, 2012.
2. Bollen, Math and Hassan F, "Integration of Distributed Generation in The Power System", IEEE press, 2011.

Reference Books:
1. Shawkat Ali A. B. M., "Smart Grids Opportunities, Developments and Trends", Springer Verlag, London, 4th Edition, 2013.
2. Chowdhury S., Crossley P. "Microgrids and Active Distribution Networks" The Institution of Engineering and Technology, UK, 3rd Edition, 2009.
3. James Momoh, Smart Grid: Fundamentals of Design and Analysis, IEEE Computer Society Press (2012).

EE 19.403 **High Voltage Engineering** **Total Lectures: 40**
3-0-0-3

Objective: To provide an in-depth understanding the principle of High Voltage (HV) generation, various measurement methods, testing aspects of HV electrical apparatus and HV laboratories facilities.

Pre-requisite: Power System-I, Power System-II

1. **Breakdown in Gases, liquid and solid Insulating materials:** Ionization processes and de-ionization processes, Types of Discharge, Gases as insulating materials, Breakdown in Uniform gap, non-uniform gaps, Townsend's theory, Streamer mechanism, Corona discharge. Breakdown in pure and commercial liquids, Solid dielectrics and composite dielectrics, intrinsic breakdown, electromechanical breakdown and thermal breakdown, Partial discharge, applications of insulating materials. [12]
2. **Generation of High Voltages:** Generation of high voltages, generation of high D. C. and A.C. voltages, generation of impulse voltages, generation of impulse currents, tripping and control of impulse generators. [7]
3. **Measurements of High Voltages and Currents:** Peak voltage, impulse voltage and high direct current measurement method, cathode ray oscillographs for impulse voltage and current measurement, measurement of dielectric constant and loss factor, partial discharge measurements. [7]
4. **Lightning and Switching Over-voltages:** Charge formation in clouds, Stepped leader, Dart leader, Lightning Surges. Switching over-voltages, Protection against over-voltages, Surge diverters, Surge modifiers. [7]
5. **High Voltage Testing of Electrical Apparatus and High Voltage Laboratories:** Various standards for HV Testing of electrical apparatus, IS, IEC standards, Testing of insulators and bushings, testing of isolators and circuit breakers, testing of cables, power transformers and some high voltage equipment, High voltage laboratory layout, indoor and outdoor laboratories, testing facility requirements, safety precautions in H. V. Labs. [7]

Outcome: At the end of the course, the student will demonstrate

- Understand the basic physics related to various breakdown processes in solid, liquid and gaseous insulating materials.
- Knowledge of generation and measurement of D. C., A.C., & Impulse voltages. Knowledge of tests on H. V. equipment and on insulating materials, as per the standards.
- Knowledge of how over-voltages arise in a power system, and protection against these over-voltages.

Text Books:

1. M. S. Naidu and V. Kamaraju, "High Voltage Engineering", McGraw Hill Education, 2013.
2. C. L. Wadhwa, "High Voltage Engineering", New Age International Publishers, 2007.

Reference Books:

1. D. V. Razevig (Translated by Dr. M. P. Chourasia), "High Voltage Engineering Fundamentals", Khanna Publishers, 1993.
2. E. Kuffel, W. S. Zaengl and J. Kuffel, "High Voltage Engineering Fundamentals", Newnes Publication, 2000.

EE 19.404 **Advanced Electric Drives** **Total Lectures: 40**
3-0-0-3

Objective: This course aims to equip the students to understanding the advance electric drive system and their controls.

Pre-requisite: Electrical Drives and Control (EE 19.401)

1. **Power Converters for AC Drives :** [10]
   PWM control of inverter, selected harmonic elimination, space vector modulation, current control of VSI, three level inverter, different topologies, SVM for three level inverter, diode rectifier with boost chopper, PWM converter as line side rectifier, current fed inverters with self-commutated devices, control of CSI, H-bridge as a 4-Q drive.
2. **Induction Motor and Synchronous Motor Drives:** [12]
   Different transformations and reference frame theory, modeling of induction machines, voltage fed inverter control, v/f control, vector control, direct torque and flux control (DTC), modeling of synchronous machines, open loop v/f control, vector control, direct torque control, CSI fed synchronous motor drives.
3. **Permanent magnet motor drives:** [6]
   Introduction to various PM motors, BLDC and PMSM drive configuration, comparison, block diagrams, speed and torque control in BLDC and PMSM.
4. **Switched reluctance motor drives:** [6]
   Evolution of switched reluctance motors, various topologies for SRM drives, comparison, closed loop speed and torque control of SRM.
5. **DSP based motion control:** [6]
   Use of DSPs in motion control, various DSPs available, realization of some basic blocks in DSP for implementation of DSP based motion control.

Outcome: At the end of this course, students will demonstrate the ability to

- Understand the operation of power electronic converters and their control strategies.
- Understand the vector control strategies for AC motor drives
- Understand the implementation of the control strategies using digital signal processors.

Text Books:

1. B. K. Bose, "Modern Power Electronics and AC Drives", Pearson Education, Asia, 2003.
2. P. C. Krause, O. Wasynczuk and S. D. Sudhoff, "Analysis of Electric Machinery and Drive Systems", John Wiley & Sons, 2013.

Reference Books:

1. H. A. Taliyat and S. G. Campbell, "DSP based Electromechanical Motion Control", CRC press, 2003.
2. R. Krishnan, "Permanent Magnet Synchronous and Brushless DC motor Drives", CRC Press, 2009.
3. Boldea, Ion, and Syed A. Nasar. Electric drives. CRC press, 2016.

EE 19.405 **Nonlinear Control System** **Total Lectures: 40**
3-0-0-3

Objective: This graduate course will cover fundamentals of nonlinear systems analysis and control.

Pre-requisite: Linear dynamical systems, differential equations, and linear algebra

1. **Introduction:** Examples – violin strings, heart rhythms, double pendulum, van der Pol oscillator. Existence and uniqueness of solutions [6]
2. **Analysis:** Linearization through Taylors series, Hartman-Grobmann Theorem, local stability. Multiple equilibria, limit cycles, bifurcations. [9]
3. **Second-order systems and Input-output analysis and stability:** Phase plane techniques, Poincare-Bendixson Theorem. Small gain theorem, passivity, describing functions [9]
4. **Mathematical background and Lyapunov stability theory:** Contraction mapping theorem, homeomorphisms, norms. Basic stability and instability theorems. Uniform stability, asymptotic stability, exponential stability. LaSalles Theorem, indirect method. [8]
5. **Feedback linearization, Sliding mode control and Gain scheduling:** Input-output linearization, full-state linearization, stabilization, tracking. Zero dynamics, MIMO systems, non-minimum phase systems, singularities. Sliding surfaces, differential inclusions, solutions in the sense of Filippov. Controller and scheduling design [8]

Outcome: At the end of this course, students will demonstrate the ability to

- Understand the concepts of stability for linear and non-linear systems.
- Approach and understand non-linear control literature.
- Analyze simple non-linear systems to determine system stability.
- Synthesize control methods to achieve the desired performance of practical non-linear systems.

Text Books:

1. S. Sastry, Nonlinear Systems: Analysis, Stability, and Control, Springer 1999.
2. H. Khalil, Nonlinear Systems, Prentice Hall, 2002.

Reference Books:

1. Slotine, J.-J. E and Li, W. Applied Nonlinear Control. Englewood Cliffs, NJ: Prentice Hall, 1991.
2. H. J. Marquez, Nonlinear Control Systems: Analysis and Design, John Wiley Interscience, 2003.
3. J. E. Gibson Nonlinear Automatic Control, McGraw-Hill,1963

EE 19.406 **Robotic Drives System** **Total Lectures: 40**
3-0-0-3

Objective: To impart knowledge about various drive systems and its selection for particular applications.

Pre-requisite: NIL

1. **Robot drive mechanism:** [8]
Objectives, motivation, open loop control, closed loop control with velocity and position feedback, Types of drive systems. Functions of drive system. Lead Screws, Ball Screws, Chain & linkage drives, Belt drives, Gear drives, Precision gear boxes, Harmonic drives, Cyclo speed reducers.

2. **Hydraulic Drives:** [8]
Introduction, Requirements, Hydraulic piston and transfer valve, hydraulic circuit incorporating control amplifier, hydraulic fluid considerations, hydraulic actuators Rotary and linear actuators. Hydraulic components in robots.

3. **Pneumatic drives:** [8]
Introduction, Advantages, pistons-Linear Pistons, Rotary pistons Motors, Flapper motor, Geared motor, Components used in pneumatic control. Pneumatic proportional controller, pneumatically controlled prismatic joint.

4. **Electric drives:** [8]
Introduction, Types, DC electric motor, AC electric motor, stepper motors, half step mode operation, micro step mode. Types of stepper motors, Direct drive actuator.

5. **Servo systems for robot control:** [8]
General aspects of robot control. Basic control techniques, mathematical modeling of robot servos, error responses and steady state errors in robot servos, feed back and feed forward compensations, hydraulic position servo, computer controlled servo system for robot applications, selection of robot drive systems.

Outcome: At the end of this course, students will demonstrate the ability to

- Various types and selection of drive system for a particular application.
- Accurate positioning of the robot end effectors with error compensation by servo control.

Text Books:

1. Francis N-Nagy AndrasSiegler, Engineering foundation of Robotics, Prentice Hall Inc., 1987.
2. Richard D. Klafter, Thomas .A, ChriElewski, Michael Negin, Robotics Engineering an Integrated Approach, Phi Learning., 2009.

Reference Books:

1. P.A. Janaki Raman, Robotics and Image Processing an Introduction, Tata Mc Graw Hill Publishing company Ltd., 1995.
2. Mikell P Groover& Nicholas G Odrey, Mitchel Weiss, Roger N Nagel, Ashish Dutta, Industrial Robotics, Technology programming and Applications, Tata McGraw-Hill Education, 2012.
3. Bernard Hodges, Industrial Robotics, Second Edition, Jaico Publishing house, 1993.

EE 19.407 **Robotic Engineering** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates to enlighten the students about the fundamentals of robotic systems.

Pre-requisite: NIL

1. **Introduction:** Robot anatomy-Definition, law of robotics, History and Terminology of Robotics-Accuracy and repeatability of Robotics-Simple problems Specifications of Robot-Speed of Robot-Robot joints and links-Robot classifications-Architecture of robotic systems-Robot Drive systems, Hydraulic, Pneumatic and Electric system. [8]
2. **End effectors and robot controls:** Mechanical grippers-Slider crank mechanism, Screw type, Rotary actuators, cam type-Magnetic grippers-Vacuum grippers-Air operated grippers-Gripper force analysis-Gripper design-Simple problems-Robot controls-Point to point control, Continuous path control, Intelligent robot-Control system for robot joint-Control actions-Feedback devices-Encoder, Resolver, LVDT-Motion Interpolations-Adaptive control. [8]
3. **Robot transformations and sensors:** Robot kinematics-Types- 2D, 3D Transformation-Scaling, Rotation, Translation- Homogeneous coordinates, multiple transformation-Simple problems. Sensors in robot – Touch sensors-Tactile sensor – Proximity and range sensors – Robotic vision sensor-Force sensor-Light sensors, Pressure sensors. [8]
4. **Robot cell design and applications:** Robot work cell design and control-Sequence control, Operator interface, Safety monitoring devices in Robot-Mobile robot working principle, actuation using MATLAB, NXT Software Introductions-Robot applications. Material handling, Machine loading and unloading, assembly, Inspection, Welding, Spray painting and undersea robot. [8]
5. **Micro/Nano robotics system:** Micro/Nano robotics system overview-Scaling effect-Top down and bottom up approach- Actuators of Micro/Nano robotics system-Nano robot communication techniques-Fabrication of micro/nano grippers-Wall climbing micro robot working principles-Biomimetic robot-Swarm robot-Nano robot in targeted drug delivery system. [8]

Outcome: At the end of this course, students will able to understand

- The basics of robot, end effectors and robot controls.
- Robot Transformations, Sensors, robot cell design and its applications.
- Micro/Nano robotic systems

Text Books:

1. S.R. Deb, Robotics Technology and flexible automation, Tata McGraw-Hill Education., 2009
2. Robert J. Schilling, Fundamentals of Robotics Analysis and Control, PHI Learning., 2009.

Reference Books:

2. P.A. Janaki Raman, Robotics and Image Processing An Introduction, Tata Mc Graw Hill Publishing company Ltd., 1995.

EE 19.408 **PLC and Automation** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to the Industries Automation techniques and the importance of PLC, SCADA and robots in automation.

Pre-requisite: Elements of Electrical Engineering, Digital Electronics, Electrical Measurement and Instrumentation.

1. **Introduction:** Automation overview, Requirement of automation systems, Architecture of Industrial Automation system, Introduction of PLC and supervisory control and data acquisition (SCADA). Industrial bus systems: modbus & profibus. [9]
2. **Automation components:** Sensors for temperature, pressure, force, displacement, speed, flow, level, humidity and pH measurement. Actuators, process control valves, power electronics devices DIAC, TRIAC, power MOSFET and IGBT. Introduction of DC and AC servo drives for motion control. [7]
3. **Computer aided measurement and control systems:** Role of computers in measurement and control, Elements of computer aided measurement and control, man-machine interface, computer aided process control hardware, process related interfaces, Communication and networking, Industrial communication systems, Data transfer techniques, Computer aided process control software, Computer based data acquisition system, Internet of things (IoT) for plant automation. [9]
4. **Programmable logic controllers:** Programmable controllers, Programmable logic controllers, Analog digital input and output modules, PLC programming, Ladder diagram, Sequential flow chart, PLC Communication and networking, PLC selection, PLC Installation, Advantage of using PLC for Industrial automation, Application of PLC to process control industries. [7]
5. **Distributed Control System:** Overview of DCS, DCS software configuration, DCS communication, DCS Supervisory Computer Tasks, DCS integration with PLC and Computers, Features of DCS, Advantages of DCS. [8]

Outcome: At the end of this course, students will demonstrate the ability to

- Understand various automation components and systems
- Explain architecture of industrial automation system and fundamentals of process control
- Measure industrial parameters like temperature, pressure, force, displacement, speed, flow, level, humidity and pH.
- Use programmable logic controllers and IOTs for industrial automation
- Draw block diagram of SCADA and integrate SCADA with PLC systems

Text Books:

3. Hydraulic Control Systems, Herbert E. Merritt, Wiley, 1991

EE 19.409 Power Electronics in Renewable Energy Technology Total Lectures: 40

3-0-0-3

Objective: This course facilitates the students to develop the competency of maintaining renewable energy equipment using power electronic devices and circuits. The purpose of power electronic interface is to regulate the voltage, frequency, and power to make energy useable as per requirement.

Pre-requisite: Power Electronics, Renewable Energy Technology.

1. **Introduction:** Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) – Qualitative study of different renewable energy resources ocean, Biomass, Hydrogen energy systems: operating principles and characteristics of: Solar PV, Fuel cells, wind electrical systems-control strategy, operating area. [8]
2. **Electrical machines for renewable energy conversion:** Review of reference theory fundamentals-principle of operation and analysis: IG, PMSG, SCIG and DFIG. [8]
3. **Power converters:** Solar: Block diagram of solar photo voltaic system: line commutated converters (inversion- mode) – Boost and buck-boost converters- selection Of inverter, battery sizing, array sizing. Wind: 3-Φ AC voltage controllers- AC-DC-AC converters: uncontrolled rectifiers, PWM Inverters, Grid Interactive Inverters-matrix converters. [8]
4. **Analysis of wind and PV systems:** Stand alone operation of fixed and variable speed wind energy conversion systems and solar system-Grid connection Issues -Grid integrated PMSG and SCIG Based WECS-Grid Integrated solar system. [8]
5. **Hybrid renewable energy systems:** Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV- Maximum Power Point Tracking (MPPT). [8]

Outcome: At the end of this course, students will demonstrate the ability to

- Identify renewable energy sources for generation of power.
- Maintain PE devices in PV power system.
- Maintain PE devices in Wind power system.
- Maintain PE devices in power system of power generation from solid waste.
- Maintain PE devices in hybrid power system of renewable energy.

Text Books:

1. S.N.Bhadra, D. Kastha, & S. Banerjee "Wind Electrical Systems", Oxford University Press, 2009
2. Ned Mohan, Tore M. Undel and William P. Robbins, "Power Electronics: Converters, Applications and Design", Third Edition, John Wiley & Sons, 2007

Reference Books:

1. L. Umanand, "Power Electronics: Essentials and Applications", Wiley India, 2009.
2. Non-conventional Energy sources B.H.Khan Tata McGraw-hill Publishing Company, New Delhi.

EE 19.410 **Energy Storage Systems** **Total Lectures: 40**
3-0-0-3

Objective:
- To enable the student to understand the need for energy storage, devices and technologies available and their applications

Pre-requisite: Electrical Engineering

1. **Electrical Energy Storage Technologies:** Characteristics of electricity, Electricity and the roles of EES, High generation cost during peak-demand periods, Need for continuous andflexible supply, Long distance between generation and consumption, Congestion in power grids, Transmission by cable. [8]
2. **Needs for Electrical EnergyStorage:** Emerging needs for EES, More renewableenergy, less fossilfuel, Smart Grid uses, The roles of electrical energy storage technologies, The roles from the viewpoint of a utility, The roles fromthe viewpoint of consumers, The roles from the viewpoint of generators of renewable energy. [8]
3. **Features of Energy Storage System:** Classificationof EES systems,Mechanical storage systems, Pumped hydro storage (PHS), Compressed air energy storage (CAES), Flywheel energy storage (FES),Electrochemical storage systems, Secondary batteries, Flow batteries, Chemical energy storage, Hydrogen (H_2),Synthetic natural gas (SNG). [8]
4. **Types of Electrical Energy Storage Systems:** Electrical storage systems, Double-layer capacitors (DLC), Superconducting magnetic energy storage (SMES), Thermal storage systems,Standards for EES, Technical comparison of EES technologies. [8]
5. **Applications:** Presentstatus of applications,Utility use (conventional power generation, grid operation & service), Consumer use (uninterruptable power supply for large consumers), New trendsin applications,Renewable energy generation, Smart Grid, Smart Micro grid, Smart House, Electricvehicles,Management and control hierarchy of storage systems, Internal configuration of battery storage systems, External connection of EES systems . [8]

Outcome: After completion of this course, the student will be able to
- analyze the characteristics of energy from various sources and need for storage
- classify various types of energy storage and various devices used for the purpose
- Identify various real time applications.

Text Books:
1. James M. Eyer, Joseph J. Iannucci and Garth P. Core, "Energy Storage Benefits and Market Analysis", Sandia National Laboratories, 2004.
2. The Electrical Energy Storage by IEC Market Strategy Board.

Reference Books:
1. Jim Eyer, Garth Core, "Energy Storagefor the Electricity Grid: Benefits and Market Potential Assessment Guide, Report", Sandia National Laboratories, Feb 2010.
2. Rahn C. D. and Wang C., "Battery Systems Engineering" First Edition, Wiley, 2013.
3. Moseley P. T., and Garche J., "Electrochemical Energy Storage for Renewable Sources and Grid Balancing", Elsevier Science, 2014.

EE 19.411 **Industrial Automation and Control** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to the working principles of actuators, sensors, different type of controllers and industrial communication in the field of industrial automation system.

Pre-requisite: Elements of Electrical Engineering (EE 19.101)

1. **Overview:** Structure & components Industrial Automation systems. Architectural levels of Industrial controls. [8]
2. **Actuators & sensors:** Servomotors, Stepper motors, Process I/O systems. Local & remote I/O systems. [8]
3. **Controllers:** Different types of controllers, Single loop and Multiloop controllers and their tunning, Direct controllers and their tunning, Direct Digital Controllers, Software implementation of Multiloop Controllers. Distributed Control Systems. [8]
4. **Supervisory Controllers:** Functionally of Supervisory Control Level, Process Optimization, Recipe Management Material. Tracking. Man-machine interfaces. [8]
5. **Industrial Communication Systems:** Characteristic features of industrial networks. Low level networks and their features, Field bus architecture. Performance aspects of Industrial Automation Systems. [8]

Outcome: The students shall develop an insightful knowledge on actuators, sensors, different controllers and tuning of different controllers used in industries.

Text Books:
1. Terry Bartlet, Industrial Control Electronics Devices, Systems & Applications, Thomson Delmar Learning, 3rd Edition, 2006.
2. John W. Webb, Ronald A. Reis, Programmable Logic Controllers: Principles and Applications, PHI New Delhi, 5th Edition, 2009.

Reference Books:
1. John G. Webster, The Measurement Instrumentation and Sensors Handbook, Springer Science & Business Media, 1999.
2. Richard Zurawski, Industrial Communication Technology Handbook, CRC Press, 2nd Edition, 2017.

EE 19.413 **Solar PV Technology** **Total Lectures: 40**
3-0-0-3

Objective: This course facilitates the students to attain a broad comprehension of solar photovoltaic systems used for various applications.

Pre-requisite: Basic Electrical Engineering

1. **Photovoltaic basics:** [7]
Structure and working of Solar Cells - Types, Electrical properties and Behaviour of Solar Cells - Cell properties and design - PV Cell Interconnection and Module Fabrication - PV Modules and arrays - Basics of Load Estimation.
2. **Stand alonepv systems:** [8]
Schematics, Components, Batteries, Charge Conditioners - Balance of system components for DC and/or AC Applications - Typical applications for lighting, water pumping etc.
3. **Grid connected pv systems:** [8]
Schematics, Components , Charge Conditioners, Interface Components - Balance of system Components - PV System in Buildings
4. **Hybrid systems:** [8]
Solar, Biomass, Wind, Diesel Hybrid systems - Comparison and selection criteria for a given application.
5. **Design of pv systems:** [9]
Radiation and load data - Design of System Components for different PV Applications - Sizing and Reliability - Simple Case Studies.

Outcome: At the end of this course, students will demonstrate the ability to
- To explain basics of solar photovoltaic systems.
- To know in depth of its types and design of various PV-interconnected systems.

Text Books:
1. Gilbert M. Masters, Renewable and Efficient Electric Power Systems, Wiley-Interscience, ISBN 0-471-28060-7.
2. CS Solanki: Solar Photovotaics – Fundamentals, Technologies and Applications, PHI Learning Pvt. Ltd., 2011.

Reference Books:
1. Martin A. Green, Solar Cells Operating Principles, Technology, and System Applications Prentice- Hall, 2008.
2. Nelson, J The Physics of Solar Cells. Imperial College Press, 2003. Thomas Markvart, Solar Electricit, John Wiley and Sons, 2001.
3. Stuart R. Wenham, Martin A. Green, Muriel E. Watt, Richard Corkish (Editors), Applied Photovoltaics, Earthscan, 2008.

EE 19.415 **Wind Energy System** **Total Lectures: 40**
3-0-0-3

Objective: This course provides an overview of the wind turbine as a system, including the influence of the wind resource and external factors that impact the wind energy enterprise.

Pre-requisite: Electrical Engineering

1. **History*:*** early wind power, technical development, influence of society and science. [7]
   Winds*:* physical background, energy content, variation in time and in space, geographical resource distribution, influence of terrain, measurement methods, statistical analysis.
2. **Turbines*:*** free flow, principles of drag and lift, aerodynamics, design of turbine blades, horizontal and vertical axis wind turbines, Betz' and Glauert's turbine theories, the BEM method. [9]
   Mechanics*:* static and dynamic loads (oscillations), rotor dynamics, solid mechanics, mechanical modelling, aeroelasticity.
3. **Electric generation*:*** synchronous/ asynchronous generators, winding/ permanent magnetised generators, constant/ variable speed, transformers, power electronics, power converters. [8]
4. **Design*:*** horizontal and vertical axis wind turbines, blades, control mechanisms, drive train, tower, nacelle, foundation, choice of materials, manufacture, adaptation to different climates [8]
   Control*:* control targets, system modelling, control strategies (pitch and stall regulation), hardware.
   Systems*:* wind power parks, transports, erection, grid connection, operation, maintenance.
5. **Economy*:*** financing, investment, costs during the life time of a wind turbine, value of wind energy, business and market overview. [8]
   Society*:* environmental issues, law, forms of government support, technical aspects of environment. Small scale wind power: technology, economy, paths of development.

Outcome: At the end of this course, students will demonstrate the ability to

- calculate and analyze wind resource and energy production for a wind turbine from wind speed distribution, wind shear and power curve
- Analyze wind turbine components and compare various design configurations.
- compute performance characteristics of the main components of the wind turbine.

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY

The Bhagavad-Gita

Pre-requisite(s): Basic interest in Indian culture. Sanskrit verses in *Devanagari* script as well as in transliteration forms are provided for further references only; knowledge of Sanskrit is not required as the medium of instruction is English, however it may be an added advantage. Familiarity with the *Devanagari* script may be useful at times.

Course Objectives: The primary aim of the Bhagavad-Gita Course is to make the glorious 'Gita way of life' accessible to anyone who yearns for it, or is just curious to know more in a convenient yet effective manner. It provides a holistic, insightful coverage of the entire text in a lucid and simple style without compromising on the salient features of this priceless knowledge. Providing inputs in the modern context for continuous improvement it becomes a practical manual to live a transformed life of goodness and greatness. The course seeks to help students negotiate the text independently without referring to the traditional commentaries so as to enable them to experience the richness of the text and its philosophy.

Evaluation Process: The evaluation pattern would have following two components:

1. Internal component of 20 marks, which can be assessed in one of the following ways at the discretion of course coordinator
    a. Assignment
    b. Written test
    c. Presentation
    d. Viva
    e. Model preparation
    f. Practical assignment
2. An end term examination of 80 marks.

Course Description:

BG 111	**The Bhagavad-Gita**	**3-0-0-3**
Introduction: Background of the Mahabharata War, Author (Vedavyasa), Background of the Bhagavad-Gita: knowledge given in the battlefield of life, The role of Gita in our life, Overview of the chapters, The Distress of Arjuna		[03]
Cognitive and Emotive Apparatus: Hierarchy of senses, *manas, buddhi* and *ātman*- III.42, XV.7 Role of the ātman-XV.7, XV.9 Mind as a product of prakṛti VII.4 Properties of three modes and their impact on the mind-XIII. 5-6; XIV.5-8, 11-13; XIV.17		[08]
Controlling the Mind: Confusion and conflict: Nature of conflict I.1; IV.16; I.45; II.6		[09]

Causal factors-Ignorance-II.41; *Indriya*-II.60, Mind-II.67; *Rajoguṇa*-III.36-39; XVI.21; Weakness of mind- II.3; IV.5 Means of controlling the mind: Meditation–difficulties –VI.34-35; procedure VI.11-14 Balanced life- III.8; VI.16-17 Diet control- XVII. 8-10 Physical and mental discipline – XVII. 14-19, VI. 36.	
Means of Conflict Resolution: Importance of knowledge – II. 52 ; IV.38-39; IV.42 Clarity of *buddhi* – XVIII.30-32 Process of decision making – XVIII.63 Control over senses – II.59, 64 Surrender of doer-ship –XVIII .13-16; V.8-9 Desirelessness- II.48; II.55 Putting others before self – III.25	[10]
Self Management through Devotion: Surrender of ego – II.7 ; IX.27; VIII.7; XI.55 ; II.47 Abandoning frivolous debates – VII.21, IV.11; IX.26 Acquisition of moral qualities - XII.11; XII.13-19 **Conclusion:** Arjuna's realization, Lasting property, Total victory- XVIII.73,78	[09]

Text Book:

Srimad Bhagavadgita(with English Translation and Transliteration, Code 1411), Gita Press, Gorakhpur

Reference Books:

2. Shrimadbhagavadgita-Tattvavivechani (English Commentary by Jayadayal Goyandaka), Gita Press, Gorakhpur
3. Shrimadbhagavadgita:A Guide to Daily Living (English Translation and notes by Pushpa Anand), Arpana Publications
4. Shrimadbhagavadgita:The Blessed Lord's Song Paramananda, The Vedanta Centre
5. The Art of Man Making (114 short talks on the Bhagavadgita), Chinmayananda, Central Chinmay Mission Trust, Mumbai
6. Essays on the Gita, Shri Aurobindo, Shri Aurobindo Ashram, Pondicherry
7. Managing One-Self (Shrimadbhagavadgita: Theory & Practice), Panchamukhi V.R., Panchamukhi Indological Research Centre, New Delhi & Amar Granth Publications, Delhi
8. Science of Bhagavadgita (A Study of Ancient Wisdom through Modern Science),Virajeshwar, Himalayan Books, Connaught Place, New Delhi
9. Shrimadbhagavadgita through the Eyes of a Scientist, Manhas M.S., B.R. Publishing Corporation, Delhi

Mody University

Open Elective in English for all Undergraduate Programmes

Paper Code: EL 100 **Credits: 3-0-0-3**
Paper Name: Essential English

Contents:

Reading Comprehension [11]
To develop skills such as vocabulary building, efficient reading and note-taking.
Poetry

1. Milton: On His Blindness
2. Shakespeare: Let Me Not to the Marriage of true minds
3. Wordsworth: The Solitary Reaper
4. William Butler Yeats: A Prayer to my daughter
5. Browning: My Last Duchess
6. Nissim Ezekiel: Night of the Scorpion

Prose

(1) Francis Bacon: Of Studies
(2) R.K. Narayan: Engine trouble
(3) O. Henry : The Gift of the Magi
(4) Oscar Wilde : The Nightingale and the Rose

Grammar and Usage [16]
Tenses and their different forms (present, past and future), their uses and sequences of tenses. Articles, auxiliaries and modals, Preposition, Rules of conversion form direct to indirect speech, expressions of time and place, questions in indirect speech, commands, requests and advice in indirect speech. Spotting the errors in spelling, tenses, prepositions, articles and how to avoid them.
Business Letter Writing [6]
Layout of formal letters, difference between British and American pattern of letter writing and different types of letters (Job application letter, invitation letter, letter of request)
Idioms and Phrasal Verbs: Understanding idioms, collocations, introduction to phrasal verbs, verb and preposition/ adverb combination, usage of idioms and phrasal verbs.
Vocabulary Building: One word for many, Synonyms and Antonyms, words commonly mis-spelt and mis-pronounced. [6]

Text Books:

1. Jain, Jasbir (ed): Strings of Gold, Delhi, Macmillan Ltd. (1994/ Latest Edition).
2. Lockitt, C. H (ed): The Art of the Essayist, Delhi, Longman Group Ltd. (Latest Edition).
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, 4th printing 2007.

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **3-0-0-3**
ET-18.101 **E-Government Processes and Technologies**

Total Lectures: 39

Objectives:

- Support the government departments, in terms of leading or being part of team responsible for, e-Governance project Conceptualization and design .
- Support the government departments in effectively planning and managing various phases of e-Governance project development and implementation
- Leverage the strengths of private sector in e-Governance initiatives through effective procurement approach and manage service delivery throughout project Lifecycle
- Application of learning and good practices in e-Governance projects implementation to minimise the learning curve and to maximise the benefits for the department

1. **Roadmap to e-Government:** Vision and mission of e-government, government to e-government transformation, selection, planning and management of projects, parameters for success and measure of projects, relationship and citizen participation in e-government. [5]
2. **e-Gov 2.0:** Introduction, e-Gov 1.0 v/s e-Gov 2.0, e-Gov 2.0 financial and technology models. [5]
3. **Multiple Standards in ICT and Change Management:** Purpose and rationale for multiple standards, areas having multiple standards, rationale for single standard, introduction to change management, model of change management. [6]
4. **Government Data Centres and Utility Computing :** Elements and complexity of GDCs, virtualization and consolidation of GDCs, architecture of a GDC, utility computing concepts and areas, technical and regulatory issues in utility computing. [7]
5. **Secured Government Information System Architecture:** Introduction, architectural types, processes, security requirements and policies, steps in designing security architecture. [8]

6. **Case Studies of few e-Government Projects:** National Citizen Identity System, land records, urban development management system, e-agriculture, e-procurement, RTO, e-mitra etc. [8]

(The contents in this unit are subject to change as per the evolution and progression of novel e-governance projects).

Outcomes: Will have the understanding and knowledge of the following:

- Better access to information and quality services for citizens
- Simplicity, efficiency and accountability in the government
- Expanded reach of governance
- Enabling Environment for Promoting Economic development
- Enhancing Transparency and Accountability:
- Improving Service Delivery:
- Improving Public Administration

Text Books:

1. Jaijit Bhattacharya, "e-Gov 2.0", 1st edition, Tata McGraw Hill.

2. C.S.R. Prabhu, "e-Governance: Concepts and Case Studies", 2nd edition, PHI.

Reference Books:

1 J. Satyanarayana," e-Government: The Science of the Possible", PHI.

2 Bidisha Chaudhuri, "E-Governance in India: Interlocking Politics, Technology and Culture", 1st edition, Routledge.

MODY UNIVERSITY

Course Code: **3-0-0-3**

ET-18.102 **Web Designing and Mobile App Development** **Total Lectures:40**

OPEN ELECTIVE CBCS COURSE

Objectives: On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. Students will gain the skills and project-based experience needed for entry into web application and development careers.

1. Concept of Internet A brief Introduction to the Internet: Computer Networks, Internet, URL (Uniform Resource Locator), Internet Service Provider, Intranet, Extranet, Virtual Private Network. Application of Internet: World Wide Web, Search Engines, News groups, Electronic Mail, Web Portal, Chat, Video Conferencing, FTP, Remote Login, E-Commerce, E-Learning, EGovernance, E-Banking. [9]

2. Static Web Page Development Basics of HTML: What is Internet Language?, Understanding HTML, Create a Web page, Linking to other Web Pages, Publishing HTML Pages, Text Alignment and Lists, Text Formatting Fonts Control, Email Links and link within a Page, Creating a Table, Creating HTML Forms, Creating Web Page Graphics, Putting Graphics on a Web Page, Custom Backgrounds and Colors, Creating Animated Graphics. [9]

3. Dynamic Web page Development Cascading Style Sheet: CSS, Defining Style with HTML Tags, Features of Style Sheet, Style Properties, Style Classes, External Style Sheet [8]

4. JavaScript Introduction to JavaScript: Writing First Java Script, External JavaScript, Variables: Rules for variable names, Declaring the variable, Assign a value to a variable, Scope of variable, Using Operators, Control Statements, JavaScript loops, JavaScript Functions: Defining a Function, Returning value from function, User define function. [9]

5. Android: Introduction to android OS, Versions of Android, Introduction to Android Studio, Different GUI Elements of Android Programming, WebView, Convert any Website to android apk. [5]

Outcomes:

- Students are able to develop a dynamic webpage by the use of java script and DHTML.
- Students will be able to write a well formed / valid XML document.
- Students will be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.
- Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.

- Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.

Text Books:

1. Teach Yourself HTML 4 in 24 Hours By Dick Oliver (Tech media) 4th edition
2. The Complete Reference JavaScript By Thomas Powell & Fritz Schneider 2nd Edition.
3. Jerome (J.F) DiMarzio "Android A programmer's Guide" Tata McGraw-Hill 2010 Edition.

Reference Books :

1. HTML, DHTML, JavaScript, Perl CGI By Ivan Bayross(BPB) 3rd Edition
2. CSS By Kynn Bartlett(Pearson Education)2nd Edition
3. Introduction to Internet & HTML Scripting By Bhaumik Shroff Books India Publication 3rd Edition.

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **ET 18.103** | **Application of Electronics in Everyday Life** | **3-0-0-3** **Total Lectures: 40**

Objective: To develop the understanding of Electronics used in daily life as well as understand the principle and working of various instruments used in health care, IoT and communication sector.

1. **ELECTRONICS COMPONENTS:** Resistor and its color code, Capacitor, Inductor, PN diode, Photo Diode, LDR, LED, Zener diode, Varactor diode. **[4]**
2. **ELECTRONICS IN COMMUNICATION:** Telegraph, Telex, Mobile Phone, Optical Fiber, Transmission Line, Waveguides, Satellite Communication, RADAR, 4G system, Internet, Video conferencing, Fax. **[10]**
3. **ELECTRONICS IN HOME CARE:** Basic of electricity and electrical cables, Multi meter and basic electronic component, Power supply, UPS/Inverter, SMPS, Washing machine, Microwave oven, Steam iron, Electric rice cooker, Electric kettle, Induction plate. **[8]**
4. **ELECTRONICS IN IOT:** Introduction, IoT applications for industry: Future Factory Concepts, Smart Objects, Smart Applications, Smart Homes, Structural Monitoring, Buildings, Smart Cities , Transportation Healthcare Warfare, Physical Intrusion Detection, Surveillance. **[10]**
5. **ELECTRONICS IN HEALTHCARE:** ECG, EEG, Defibrillator, Computed Tomography, Magnetic Resonance Imaging, Glucometer, Sphygmomanometer, Digital and Infrared Thermometer. **[8]**

Outcomes:

At the end of this course, the student should be able to

1. Know about fundamentals of Electronic Components.
2. Understand the concept of Communication.
3. Understand the concepts of electronics behind various home appliances.
4. Learn about basics of health care equipment.

Text Books:

1. Ben G. Streetman, Sanjay Kumar Banerjee: Solid state Electronic Device Electronics, Sixth Edition, Prentice Hall.
2. Adel S. Sedra, Kenneth C. Smith: Microelectronic circuit, Sixth Edition, Oxford.
3. Richard. C. Jaeger, “Microelectronic Circuit Design”, Tata McGraw-Hill Companies Inc., International Edition.

Reference Books:

1. B. P. Lathi, "Modern Digital and Analog communication Systems", Oxford University Press, 2010.
2. William C. Y. Lee, Mobile cellular telecommunication – Analog and Digital systems, McGraw Hill, 2nd Ed, 2006

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **Energy Sources & Sustainable development** **3-0-0-3**
ET 18.104 **Total Lectures: 39**

Objective(s): *The course is designed to give knowledge of various energy sources and basics of power production techniques. It lays emphasis on basic understanding of green energy technology and its importance for environment and sustainable development.*

1. **World Energy Status:** Present Situation and future Energy Scenario, Evolution of Energy Security; India's Energy Scenario; Introduction to nexus between Energy, Environment, and Sustainable development and Climate Change and societal issues [14]
   Conventional Energy Sources: Fossil Fuel, Coal, Oil, Gas, Thermal Power Stations, Hydro power generation, Comparison of various conventional energy systems, their prospects and limitations
   Scenario of Green Energy Sources: Difference between conventional and renewable energy systems, Needs and advantages of green energy sources, social implications.
2. **Solar Energy:** Principles of photovoltaic generation of electricity; Silicon cell; Photon absorption; Cell efficiency; Solar cell construction; Types and usage of photovoltaic systems. solar cell modules and arrays, solar cell types, material, applications, advantages and disadvantages, solar energy conversion into heat, types of solar collectors, cylindrical parabolic collector, solar energy thermal storage. [14]
   Nuclear Energy: Present Status of Nuclear Power; Nuclear Fission & Fusion, National Nuclear Power Program,, Natural Radioactivity, Radioactive Decay, Radiation Doses, various types of nuclear power plants, Nuclear Reactor Safety, Fusion reactor
3. **Wind Energy:** Energy available from wind, basics of wind energy conversion system, classification, factors influencing wind, wind shear, turbulence, wind speed monitoring, Betz limit, WECS: classification, characteristics, and applications. [6]
   Bio Energy: Types of biogas plants, biogas generation, factors affecting biogas generation, advantages and disadvantages, biomass energy, energy plantation, gasification
4. **Ocean Energy:** Ocean energy resources-ocean energy routes - Principles of ocean thermal energy conversion systems- ocean thermal power plants- Principles of ocean wave energy conversion and tidal energy conversion. [5]
   Geothermal energy: Introduction, vapor and liquid dominated systems, binary cycle, hot dry rock resources, magma resources, advantages and limitations

Outcome(s): *After learning the subject, student will be able to understand the basic principle of power production from different energy sources. Advantage of renewable and green energy sources for sustainable development and environmental issues related to energy sources and societal implications*

Text Books:

1. S.P. Sukhatme, Solar Energy: principles of Thermal Collection and Storage, Tata McGraw-Hill
2. C. S. Solanki, "Solar Photovoltaics: Fundamental Applications and Technologies, PHI, 2009
3. S. Glasstone & A. Sesonkse, Nuclear Reactor Engineering, CBS, 2004
4. D. A. Spera, Wind Turbine Technology: Fundamental concepts of Wind Turbine Engineering, ASME Press.

Reference Books:

1. Non-conventional energy resources, Shobh Nath Singh, Pearson India
2. Principles of Solar Energy, Frank Krieth& John F Kreider, John Wiley, New York
3. David Bodansky, Nuclear Energy: Principles, Practices and Prospects, Springer 2004.

MODY UNIVERSITY OF SCIENCE & TECHNOLOGY
College of Fashion Design & Merchandising
Bachelors of Design (Fashion Design) BFD
Autumn (2015-16)
First Year
FOUNDATION PROGRAMME

Total L & P: 45

Title of Course: Fashion in Everyday Life **3-0-0-3**
Semester: Autumn
Course Code: FD 115
Pre-requisite(s): Basic interest in fashion and trends

Course Objectives: This course will give the students overview of fashion and its use in everyday life considering trends, forecast; body anatomy, colour preferences and styling techniques. The course will also elaborate on fashion market segments while giving an idea on leading fashion brands, designers and trendsetting celebrities

Course Description:

- Basic Introduction to Fashion: Brief Introduction to fashion and regularly used fashion terminologies, Overview of types of clothing such as Formal Wear, Casual Wear, Evening Wear, Ethnic Wear, Traditional Wear etc., Fun facts related to fashion **(3)**
- Body Analysis: Triangular figure study, Eight headed figure, Hour glass structure, Vital statistics, Clothing suggestions as per body types **(3)**
- Practical Colour Study in Fashion: Colour selection in clothing as per skin – tones for day wear and evening wear **(6)**
- Styling tips with ensembles – An introduction to fashion styling, Exploring various mix and match combinations like print plain combination, combining ethnic and western fashion elements, etc. - **GO, get the desired look!!** **(5)**
- Fashion Market Segments – A brief insight to different consumer market segments in fashion such as Haute Couture, Pret a Porter (Ready to Wear), Semi Couture, Premium Fashion, High Street fashion, Street fashion, Bridge Fashion, Fast fashion, etc. in context of products, features and service **(3)**
- Fashion Brands – To Study and compare national and international women's wear fashion brands such as Prada, Dior, Chanel, LVMH, Zara, Aldo, Biba, W, Elle, Aakruti, FabIndia, AND, etc. across market segments and their incorporation by consumers in everyday life **(5)**
- Fashion Designers – A brief look into the profile and work of renowned Indian and International fashion designers like Manish Malhotra, Sabyasachi Mukherjee, Manish Arora, Ritu Beri, Ritu Kumar, Coco Chanel, Yves Saint Laurent, Giorgio Armani, Christian Dior, Prada, etc. who changed the fashion industry. **(10)**

- Trailblazers of Fashion: To study the role of celebrities (David Beckham, Lady Gaga, Sonam Kapoor, Hrithik Roshan, etc.) red carpets (Oscars, Golden Globes, Filmfare Awards, IIFA, etc.) movies (Piku, Tanu Weds Manu, Dil Dhakadne Do, Devil Wears Prada, etc.) television series (Sex and the City, Gossip Girls, Two Broke Girls, Roadies, Splitsvilla, etc.) on the fashion trends at Indian and Global level **(10)**

Learning Outcomes:

- Demonstrate a basic knowledge of fashion and common fashion terms
- Understand clothing selection with respect to body type and colour tones while applying basic styling tips to get desired looks
- Explore and evaluate different fashion brands, fashion designers and other popular influencers of fashion

Reference Books:

1. Malcom Barnard, UK March 2014. *Fashion Theory: An Introduction.* Routledge Publishers
2. Harriet Worsley, UK. August 2011. *100 Ideas that Changed Fashion.* Laurence King Publishing
3. Helen Warner. UK April 2014/US June 2014. *Fashion on Television- Identity & Celebrity Culture*. Bloomsbury Academic
4. Pamela Church Gibson. UK December 2011/US December 2011. *Fashion & Celebrity Culture.* Berg Publishers
5. Shanon Burns. UK April 2013/US February 2013. *Style Wise- A Practical Guide to Becoming A Fashion Stylist*. Fairchild Books
6. Patrizia Caietato. Translated by Lisa Adams. UK April 2014/US June 2014. *Luxury- Fashion, Lifestyle & Excess.* Bloomsbury Academic
7. Laura Eceiza, UK. 2008. *Atlas of Fashion Designers.* Rockport Publishers
8. Mark Tungate, UK. 2008. *Fashion Brands.* Kogan Page Limited

Evaluation Process:

Course Work: 50% weightage. It includes Quiz
Exam: 50% weightage. It includes running jury of fashion display

Other Study Material:

1) Websites: www.highheelconfidential.com, www.theblondesalad.com, www.stylebubble.co.uk , www.weworewhat.com, www.wendyslookbook.com
2) Handouts: As indicated by the course instructor
3) Magazine & Other Reading Material: Vogue, GQ, Elle, Harper Bazaar, Jaipur Times

Mody University
College of Architecture and Design (CAD)
Open Elective in Free hand sketching for all Undergraduate Programmes

Paper Code: FH 141 **3-0-0-3**
Paper Name: FREEHAND SKETCHING

Learning Objectives:
1. To ensure that students begin to understand pencils, grades, holding to sketch.
2. To provide students an exposure to express with sketching and understand proportions.
3. To gain skill of sketching indoors.
4. To enhance ability to sketch outdoors.
5. To develop rudimentary ability to use pencil as a media in sketching.

CONTENTS

Unit - I. Introduction to Graphic Skills: **[04]**
Understanding the meaning of graphic skill; basic techniques, types of pencil shades and grades.

Unit - II. Geometry of Objects **[10]**
Understanding geometry of an Object, Free hand sketching of an object, object in different eye level, Optical illusions, effect of light on object.

Unit–III. Fundamentals of Perspective **[05]**
Diminution, Foreshortening, convergence, overlapping shades and shadow

Unit - IV. Outdoor Sketching & Indoor Sketching
Outdoor: **[10]**
Sketching buildings, road activity, Landscape, Environmental scenes, principles of perspective drawing, natural forms, built form, their texture.
Indoor: **[10]**
Sketching of an arranged objects, indoor activity, still life, furniture, equipment, understanding depth, light, shade, shadow; memory drawing.

Expected Outcome:
Students learn and able to draw freehand sketch scenes with addition detailing of foreground and background from pencil effectively on paper.

Suggested Readings

- Buildings;Ian Sidaway, : New Holland Publishers.
- Perspective;Milind Mulick,: Jyotsana Prakashan.
- The fundamentals of Water colour Paintings;D.Carter: Arcturus Pubishing Ltd
- Drawing for designers; Koptievsky: Sterling Publishing
- Rendering with pen & Ink; .R.W Gill: Thomas & Hudson
- Drawing and designing with confidence: A step by step guide; M.W Lin: John Wiley & Sons
- Perspective drawing Handbook; Joseph D'Amelio: Dover Publication
- Urban Sketching a complete guide; Thorspecken: Search Press

Evaluation Scheme: 20%=Internal, 80%=End term

Mody University of Science and Technology

Open Elective in Law for all Undergraduate Programmes
Choice Based Credit System (CBCS)

Paper Code: LF 100 **Credits: 3-0-0-3**
Paper Name: Gender Justice and the Law

Position of Women in Vedic, Post Vedic & Medieval period	[03]
Constitutional Provisions and Gender Justice — Relevant provisions relating to women in Fundamental Rights, Directive Principles of State Policy and Fundamental Duties etc. under the Indian Constitution	[06]
Laws Relating to Marriage, Divorce, Maintenance, Adoption and Succession under the relevant personal laws with special emphasis on Women and Maintenance under Code of Criminal Procedure, 1973	[12]
Provisions under the Indian Penal Code, 1860 (Sec. 292, 293, 294, 304B, 326A, 326B, 354, 354A, 354B, 354C, 354D, 370, 370A, 375, 376, 376A to 376E,359 to 374, 494,495 497, 498A, 507 & 509)	[10]
Provisions under the Code of Criminal Procedure,1973- relating arrest, search & seizure	
Socio-Legal position of women and the law — Dowry Prohibition Act, 1961 – Protection of Woman against Domestic Violence Act, 2005, The Prohibition of Child Marriage Act, 2006	[06]
Free Legal Aid for Women	[02]

MODY UNIVERSITY OF SCIENCE AND TECHONOLOGY

Open Elective CBCS course

Course Title: Vedic Knowledge **3-0-0-3**

Course Code: VK 111

Course Description:

Unit-1 History of Vedic Literature (13)

1. Importance of Vedas in Indian Tradition (भारतीय परम्परा में वेदों का महत्व)
2. The emergence of the Vedas (वेदों का आविर्भाव)
3. Introduction of Vedic Svara (वैदिक स्वर परिचय)
4. Definition of Sukta (सूक्त की परिभाषा)
5. Introduction of Rig-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(ऋग्वेद का परिचय -संहिता,ब्राह्मण,आरण्यक एवं उपनिषद -)
6. Introduction of Yajur-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(यजुर्वेद का परिचय - संहिता,ब्राह्मण,आरण्यक एवं उपनिषद)

Unit -2 Suktas related to Rigveda Samhita (Shakalashakha) (11)

1. Lord of fire :	Agnisuktam	(अग्निसूक्तम्-ऋग्वेद 1/1/1-4)
2. Lord 0f creation :	Vishnusuktam	(विष्णुसूक्तम्-ऋग्वेद 7/100/1-3)
3. Lord of omniscient :	Brahmanaspatisuktam	(ब्रह्मणस्पतिसूक्तम् -ऋग्वेद 1/40/1-4)
4. Lord of pre-creation :	Hiranyasuktam	(हिरण्यगर्भसूक्तम्- ऋग्वेद 10/121/1-3)
5. Goddess of Glory :	Shreesuktam	(श्रीसूक्तम्-ऋग्वेद-परिशिष्ट 1-4)

Unit-3 Suktas related to ShuklaYajurved Samhita(Madhyandinashakha) (15)

1. God of wisdom :	Ganapatistavanam	(गणपति-स्तवनम् -यजुर्वेद – 23/19)
2. Identification of nation :	Rashtrageetam	(राष्ट्रगीतम् -यजुर्वेद - 22/22)
3. Good faith :	Svastivachanam	(स्वस्तिवाचनम् -यजुर्वेद-14/19,21-22)
4. Perception power :	Medhasuktam	(मेधासूक्तम् -यजुर्वेद -32/13 -16)
5. Concept of mind :	Shivasuktam	(शिवसंकल्पसूक्तम् -यजुर्वेद -34/1-6)
6. Origin of creation :	Purushasuktam	(पुरुषसूक्तम् (यजुर्वेद-31/1-4,7,16)
7. Goddess of learning :	Sarasvati-stavanam	(सरस्वती-स्तवनम् (यजुर्वेद -20/84-86)
8 Serenity Prayer of Yajurveda :	Shaantipaathah	(शान्तिपाठः - यजुर्वेद -36/17)

Text books :-

1.Vedic Sukta Sangrha: (Code No.1885) 7th Edn. Pub. Gita Press Gorakhpur

(वैदिकसूक्त-संग्रह – प्रकाशक - गीताप्रेस, गोरखपुर)

2. Vedic Sukta Sangrha: Acharya Bheshraja Sharma First Edn. Pub. Hansa prakashan Jaipura (वैदिकसूक्तसंग्रह - आचार्य भेषराज शर्मा, हंसा प्रकाशन, जयपुर)

3. Vedic Sangraha: Dr. Krishna Lal First Edn. Pub.Istarna book Linkarsa Delhi. (वैदिक संग्रह डा कृष्ण लाल ,ईस्टर्न बुक लिंकर्स , दिल्ली)

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**
2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

Pre-requisite:

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**
2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**
3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**
4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**
5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

MA 19.101 **Mathematics I** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: (10+2) Higher Secondary Mathematics

1. **Differential Calculus I:** Review of basic concepts, partial differentiation, Euler's theorem on homogeneous functions, Maclaurin's and Taylor's series (one and two variables) and Jacobians. [06]
2. **Differential Calculus II:** Maxima and minima of functions of two variables, asymptotes, Tracing of simple cartesian curves and standard polar curves. [06]
3. **Integral Calculus:** Basics of Beta and Gamma functions, Length of plane curves(cartesian and polar), area bounded by the curves(cartesian and polar), multiple integrals (double and triple integrals, change of order of integration), volumes, conversion from cartesian to polar form, physical interpretations and applications. [12]
4. **Matrix Theory**: Rank of matrix, linear dependence and independence of vectors, solution of system of simultaneous linear equations, Eigen values, Eigen vectors of a matrix, statement of Cayley-Hamilton theorem (without proof) , reduction of a matrix to diagonal form, quadratic forms, linear transformation of a quadratic form, and applications. [08]
5. **Three-dimensional Geometry:** Direction cosines and direction ratios of a straight line, equation of a plane, plane passing through intersections of two planes, equations of straight line, shortest distance between two skew lines, equation of a sphere, intersection of plane and sphere. [08]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Shanti Narayan and Mittal, Analytical Solid Geometry, S. Chand, 2018.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CY 19.101 **Engineering Chemistry** **Total Lectures: 39**

3-0-0-3

Prerequisite(s): NIL

Objective(s):
- To purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers their preparation, properties and uses.
- To develop the basics of protecting engineering materials from the natural forces.
- To understand the present day up-to-date knowledge of the contemporary energy sources.
- To build up the basis of the future Engineering materials like superconductors, conducting organic polymers, Nano materials etc.

1. **Water treatment:** Hardness, types of hardness, degree of hardness and its estimation (EDTA methods). Numerical problems on degree of hardness. Boiler troubles: sludge and scale formation, Prevention of sludge and scale formation in boilers. Softening of hard water (Lime-Soda, Permutit, Ion Exchange and calgon methods). Numerical problems based on water treatment (Lime-Soda process). [8]

2. **Polymers:** Classification, Functionality, Types of polymerization, Mechanism of Addition polymerization. Plastics: thermoplastic and thermosetting resins. Preparation, Properties and Uses of Polyamides, Bakelite, Polyesters, Rubber, Vulcanization of Rubber, Synthetic Rubber viz. Buna-S, Buna-N, Butyl and Neoprene rubbers. Silicones-polysiloxanes and sulphur based polymers. [8]

3. **Electrochemistry and Corrosion:** Electrochemical Changes, Electrochemical cell and its classifications (Galvanic cell, electrolytic cell). Types of electrodes. Origin of electrode potential, Electrochemical Series. Electromotive force, Nernst equation of electrode potential. [8]
Corrosion: Definition and its significance, Theories of corrosion, Mechanism of corrosion, types of corrosion, Corrosion control (Corrosion inhibitors, Cathodic protection - sacrificial anodic and impressed current cathodic protection).

4. **Fuels and Lubricants:** Introduction - Importance of fuels in Industries. Classifications of fuels, Comparison of solid, liquid & solid fuels, Calorific value of a fuel. Determination of calorific value by Bomb calorimeter. Refining and cracking of petroleum, knocking. Octane Number and Cetane Number. L.P.G., Coal gas and Producer gas. [9]
Lubricants: Introduction and Classification of Lubricants. Properties of Lubricants, Lubricant Oil, Grease, Emulsions.

5. **New Engineering Materials:** Introduction: Superconductors, high and low temperature superconductors, organic electronic materials, Fullerenes and Nano materials, Industrial applications of fullerenes and Nano materials. [6]

Outcome(s): The student will be able to understand the basis of the future Engineering materials like of lubricants, superconductors, conducting polymers, Nano materials etc and purification of the most valuable natural resource of the future-water.

Text Books:
1. Jain and Jain, "Engineering Chemistry," 16th Edition, Dhanpat Rai Publishing Company, 2015.
2. S.S. Dara, "A Text Book of Engineering Chemistry," 12th Edition, S. Chand & Company Limited, 2014.

Reference Books:
1. Peter Atkins, Julio de Paula, and James Keeler, "Atkins' Physical Chemistry" Eleventh Edition, Oxford University Press, 2017.
2. William D. Callister, "Materials Science and Engineering: An Introduction, Eighth Edition, John Wiley & Sons, Inc., 2010.

ME 19.101 **Applied Mechanics** **Total Lectures: 40**
3-1-0-4

Prerequisite Basic Mathematics and Physics

Objectives:
1. This course will help the student to acquire knowledge of basic engineering mechanics concepts and enhance their ability to solve open ended engineering problems.
2. To provide the student with a clear and thorough understanding of the theory and applications of engineering mechanics, covering both statics and dynamics.
3. To provide the student with a thorough understanding of the concept, drawing, and the use of free-body diagrams.
4. To be able to determine the Centre of Gravity and Moments of Inertia of simple geometric shapes and understand the physical applications of these properties.
5. To understand the use and be able to perform calculations related to friction forces in engineering applications.

1. **Introduction:** Idealization of Mechanics, concept of Rigid Body, External Forces (Body forces & surface forces), Laws of Mechanics. **[10]**
   Force Systems and Equilibrium: Introduction to vector, Statically Equivalent Force systems, Free Body Diagram, Equations of equilibrium and their applications to various system of forces.
2. **Distributed Forces and Moment Of Inertia:** Centroid of Composite figures, Area Moment of Inertia, Mass Moment of Inertia, Principle axes and Principle Moment of Inertia. **[6]**
3. **Friction:** Introduction of friction, Laws of friction, wedge, screw, belt, rolling friction. **[6]**
4. **Tension, Compression and Shear:** Normal stress and strain, Linear elasticity, Hooke's Law and Poisson's Ratio, Shear stress and shear strain, Relationship between modulus. **[9]**
   Beams: Different support & load conditions, SFD, BMD
5. **Kinematics of Particles:** Introduction, Rectilinear motion, Plane curvilinear motion, Rectangular coordinates, Tangential and normal coordinates, polar coordinates, Relative motion (Translating Axes), constrained motion of connected particles. **[9]**
   Kinetics of Particles: Introduction, Force, Mass and acceleration, Newton's second law of motion, Equation of motion and solution of problems, Work and Energy, Impulse and Momentum.

Outcome: The students shall develop the ability to identify, formulate, and solve engineering problems related to forces and motion.

Text Books:
1. Hibbeler, Gupta R. C., "Engineering Mechanics," 11th ed., Pearson India, 2010.
2. Merian, J.L, Kraige, L.G., "Engineering Mechanics Vol I & II," 5th edition, Wiley India 2010.

Reference Books:
1. Timoshenko, S, Young, D.H, Rao, J.V, "Engineering Mechanics," 4th edition TMH, 2010.
2. Irving. H. Shames, "Engineering Mechanics," Prentice Hall Book Company, 1966.

EC 19.101 **Basics of Electronics Engineering** **Total Lectures: 40**

3-1-0-4

Prerequisite Basic Knowledge of Engineering and Applied Physics

Objective: To learn the fundamental principle and applications of electronics and communication engineering and devices.

1. **Introduction:** Brief history of major inventions in ECE, Electronic test and measurement equipments, Specifications for electronic components. **[3]**

2. **Semiconductors**: Material and its properties, Formation of energy band diagram, Currents in semiconductors, Fermi-Dirac energy distribution, Types of semiconductors – Intrinsic and Extrinsic, Mass action law, Hall effect. **[5]**

3. **Diodes**: Introduction, Characteristic of ideal and real diode, Current components in diode, load characteristics, Breakdown in diode, Zener diode, Varactor diode, Tunnel diode, Clippers and Clampers, Rectifiers – Half and Full-wave rectifiers. **[8]**

4. **Transistors:** Introduction to pnp and npn transistors, current components, active, cutoff and saturation regions, CC, CB and CE configuration, Operating point, Biasing circuits, Bias Stability, Thermal runway and thermal stability. **[8]**

5. **Signals**: Definition, Classification of signals – Analog and Digital, Deterministic and Random signals, Power and Energy of signals, Bandwidth, Bit and Baud rate. **[4]**

6. **Basics and Applications of Communication**: Definition, Block representation of communication system, Modulation – Definition, Need of modulation, Frequency translation, Types of modulation - Analog and Digital, Multiplexing – TDM and FDM. Introduction to - Optical Fiber, Transmission line, Waveguides, Satellite communication and RADAR. **[12]**

Outcome: Students will be able to understand the basic concepts of Electronic and Communication Engineering and devices .They are able to implement mini projects based on concepts of ECE.

Text Books:

1. George Kennedy, Bernard Davis, “Electronics Communication Systems”, Tata McGraw-Hill, 3rd Edition, 2007.
2. Behrouz Forouzan, “Data Communication and Networking”, McGraw-Hill, 4th Edition, 2006.

Reference Books:

1. David A. Bell, “Electronics Devices and Circuits”, PHI, 4th edition, 2008.
2. Wayne, Tomasi, “Advanced Electronic Communication Systems”, PHI, 6th edition, 2013.
3. Robert L. Boylestad, Louis Nashelsky, “Electronics Devices and Circuits Theory”, Prentice Hall, 10th Edition, 2009.

ME 19.111 **Computer Aided Engineering Drawing** **Total Hours: 26**
0-0-4-2

Objective:
1. To improve the visualization skills.
2. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient.
3. To impart the knowledge on understanding and drawing of simple engineering products.

1. **Introduction to Computer Aided Sketching:** Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practice. Board Drawing vs. Computer- Aided Drawing. Introduction to Solid works Environments. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP &LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, dimensioning, line conventions, material conventions and lettering. [8]
2. **Orthographic Projections** : Horizontal planes, Vertical planes, Front view, Top view, Side view, Projections, First and Third angle of projection, Projections of points, Principles of orthographic projections, Sketching of different views of given objects. Introduction to sketching in Solid works : 2-Dimenional Sketching, Sketching in Solid works, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity. [12]
3. **Projections of Lines, Planes and Solids:** Lines inclined to both the principal planes, projection of Lamina inclined to both principal planes, Projections of solids: Axis inclined to both the reference planes and Intersection of solids. Introduction to part module in Solid works: Extrude, Revolve, Sweep, Hole, Filleting, and Chamfering features. [12]
4. **Sections of solids and sectional orthographic views:** Sectional orthographic projections - Full, Half, Partial, revolved and removed surfaces. Introduction to drawing module in Solid works: Standard 3 views, Auxiliary view, Section View, Projected view. [12]
5. **Isometric Projection:** Terminology, Isometric scale, Box method, Coordinate or offset method, Four-center method, isometric projection of arcs. Solid models practice using Solidworks part module. [8]

Outcomes:
1. Students will be able to improve their visualization skills so that they can apply these skills in developing new products.
2. Students will be able to know and understand the conventions and the methods of engineering drawing using Solid works.
3. Students will be able to prepare simple drawings of engineering products.

Text Books:
1. N.D. Bhatt, "Engineering Drawing", Charotar Publishing House, 2013.
2. Prof. Sham Tickoo, Sandeep Prem Dass “Solid works 2013 for Engineers and Designers” Wiley Publication, 2013.

1. Randy H. Shih, “Solid works 2013 and Engineering Graphics: An Integrated Approach”, SDC Publications. 2013

CY 19.111 **Chemistry Laboratory** **Total Hours:26**
0-0-2 - 1

Prerequisite(s): NIL

Objective(s):
- To introduce students to water chemistry and purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers, lubricants, fuel and their properties and uses.

LIST OF EXPERIMENTS

Choice of 10-12 experiments from the following

1. To determine the temporary and permanent hardness in the given water sample by complexometric titration using EDTA as standard solution.
2. To determine the percentage of Available Chlorine in the given sample of Bleaching powder. Iodometrically.
3. To determine the alkalinity of water sample.
4. To prepare urea formaldehyde resin.
5. To determine the strength of given HCl solution by titrating it against NaOH solution using pH meter.
6. To determine the strength of given acid solution by titration it against sodium hydroxide solution using conductometer.
7. To determine molecular weight of a polymer using Ostwald viscometer.
8. Determination of viscosity of given lubricating oil by Redwood viscometer.
9. Determination of cloud and pour point of given lubricating oil.
10. Determination of the flash and fire point of given lubricating oil.
11. Determination of acid value of given lubricating oil.
12. To determine the calorific value (HCV) of a sample of fuel.
13. Proximate Analysis of Coal.
14. Determination of the percentage of Fe in the given steel sample.

Outcomes The students will learn to:
- Estimate the Hardness of water, alkalinity of water.
- Familiar with the important practical applications of electrochemistry, lubricants, solids, their properties and applications, and the polymer materials.

EC 19.111 **Electronics Laboratory** **Total Hours: 26**

0-0-2-1

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the theory of Electronics Engineering.
2. To apply the analytical techniques and graphical analysis to the experimental data.
3. To enable the students to simulate and test the Electronics circuits using Multisim software.

Prerequisite: Nil

Practical to be performed on Hardware:

1. To plot V-I characteristics of junction diode and Zener diode.
2. To design a half wave rectifier with and without filter circuit and find the ripple factor.
3. To design a full wave rectifier with and without filter circuit and find the ripple factor.
4. Study of clipper and clamper circuits and their implementation on breadboard.
5. To plot the characteristics of Transistor under Common Emitter configuration
6. To plot the characteristics of Transistor under Common Base Configuration
7. To plot the characteristics of Transistor under Common Collector configuration
8. To perform soldering and de-soldering to make banana probe, BNC probe and connection on PCB.

Practical to be performed using Multi-Sim Software:

9. An Introduction to Electronic Circuit Simulation using Multi-Sim Software.
10. To verify Ohm's law and Kirchhoff's law.
11. To Simulate half wave and full wave bridge rectifier.
12. To plot V-I characteristics of junction diode.

Outcome: Student will be able to understand the operation of electronic test equipment and hardware/software tools to characterize the behavior of devices and circuits.

UC 19.102 **Communication Skills** **Total Lectures: 26**
2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

Pre-requisite:

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures. **Technology-based Communication:** Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software. [5]
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

1. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
2. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

CY 19.102 **Environmental Studies** **Total Lectures: 52**

3-1-0-4

Prerequisite(s): NIL

Objective(s):
- To teach the principal resources, renewable energy systems and biosphere.
- To explore the environmental impact of various energy sources and also the effects of different types of pollutants.

1. **Multidisciplinary nature of environmental studies:** Definition, scope and importance, Need for public awareness. [2]

2. **Natural Resources:** Renewable and non-renewable resources: Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. [8]
   Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
   Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
   Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
   Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources.
   Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

3. **Ecosystems & Biodiversity:** [14]
   Ecosystems: Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow and nutrient cycling in the ecosystem. Food chains, food webs and ecological pyramids. Ecological succession Structure and function of the following ecosystem - Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).
   Biodiversity and its conservation: Introduction – Definition, genetic, species and ecosystem diversity. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values. Biodiversity at global, national and local levels. Hot-sports of biodiversity. India as a mega-diversity nation, Threats to biodiversity: habitat loss, illicit poaching, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

4. **Environmental Pollution:** Definition, cause, effects and control measures of : Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes. [8]
   Role of an individual in prevention of pollution. Pollution case studies. Disaster management: floods, earthquake, cyclone and landslides.

5. **Social Issues, Human Population and the Environment:** From Unsustainable to [13]

Sustainable development: Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people: its problems and concerns. Global Climate Change, global warming, acid rain, ozone layer depletion. Wasteland reclamation. Population growth, variation among nations. Population explosion – Family Welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS.
Women and Child Welfare. Role of Information Technology in Environment and human health. Case Studies.
Environment Protection Act 1986. Air (Prevention and Control of Pollution) Act 1981., Water (Prevention and control of Pollution) Act 1974, Wildlife Protection Act 1972., Forest Conservation Act 1980.

Field work [7]

- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

Outcome(s): Upon successful completion of the course, students should be able to:

- Measure environmental variables and interpret results
- Evaluate local, regional and global environmental topics related to resource use and management
- Propose solutions to environmental problems related to resource use and management
- Interpret the results of scientific studies of environmental problems
- Describe threats to global biodiversity, their implications and potential solutions.

Text Books:

2. G. Boyle, Renewable energy: Power for a sustainable future’. Oxford University press. 2004.

Reference Books:

1. C. William, P. Saigo, B Woodworth, “Environmental Science: A Global Concern”, Sixth Edition McGraw-Hill Higher Education, 2001.
2. R.T. Wright, D.F. Boorse, “Environmental Science” 11th Edn, PHI, 2010.

MA 19.102 **Mathematics II** **Total Lectures: 40**
3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: Mathematics I

1. **Computational Methods:** Introduction and importance of numerical analysis, calculus of finite differences, interpolation schemes for equal and unequal intervals (Newton's forward and backward interpolation formulae), divided difference, interpolation for unequal intervals (Newton's divided difference and Lagrange interpolation formulae), Solution of algebraic and transcendental equations by Newton-Raphson method. Applications to Engineering. [12]
2. **Ordinary Differential Equations I:** First order and first degree differential equations (variable separable, homogeneous and non-homogeneous, linear, Bernoulli's equation, and exact equations). [06]
3. **Ordinary Differential Equations II:** Linear differential equations of second order with constant and variable coefficients (complementary functions and particular integrals), and applications. [06]
4. **Partial Differential Equations:** Formation of partial differential equations, Lagrange's multipliers method for solution of first order differential equations, separation of variables for nonlinear differential equations and applications. [06]
5. **Vector Calculus:** Vector and scalar point functions, conservative fields, gradient of scalar point functions, divergence and curl of vector point functions (Solenoidal and irrotational vectors), directional derivative of scalar point functions, work done along a curve, Integration of vectors, line integral (work done), surface integral, volume integral, physical interpretations and applications. [10]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:
1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Grewal, B.S. and Grewal, J.S., Higher Engineering Mathematics, Khanna Publishers, Daryaganj, New Delhi, 40th Edition, 2007.

Reference Books:
1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

PY19.101 **Engineering Physics** **Total Lectures: 40**

3-0-0-3

Pre-requisite: Fundamental knowledge of Basic Physics

Objective:

1. To provide students with a basic understanding of the Physics that may be required by engineers in the course of their careers
2. To enhance knowledge related to lasers and its different components to make it suitable for various purposes
3. To introduce most important concepts of superconductivity, crystallography and fiber optics to the students
4. To introduce the learners to the basics of modern physics and Quantum Mechanics

1. **Modern Physics**: Introduction to Black body radiation spectrum, Photo-electric effect, Compton effect. Wave particle Dualism. de Broglie hypothesis – de Broglie wavelength, extension to electron particle. Davisson and Germer Experiment. Matter waves and their Characteristic properties, Phase velocity, group velocity and Particle velocity, Relation between phase velocity and group velocity, Relation between group velocity and particle velocity. Expression for deBroglie wavelength using group velocity. **[8]**

2. **Quantum Mechanics:** Heisenberg's uncertainity principle and its physical significance. Application of uncertainty principle (Non-existence of electron in the nucleus, explanation for decay and kinetic energy of electron in an atom). Wave function, Properties and physical significance of wave function, Probability density and Normalization of wave function. Setting up of one dimensional time independent Schrodinger wave equation. Eigen values and Eigen functions. Application of Schrodinger wave equation – Energy Eigen values for a free particle. Energy Eigen values and Eigen functions for a particle in a potential well of infinite depth. **[7]**

3. **Electrical Conductivity in Metals**: Free–electron concept. Classical free-electron theory – Assumptions. Drift velocity, Mean collision time and mean free path. Relaxation time. Expression for drift velocity. Expression for electrical conductivity in metals. Effect of impurity and temperature on electrical resistivity of metals.
Quantum free-electron theory – Assumptions. Fermi – Dirac Statistics. Fermi-energy, Fermi factor. Density of states (No Derivation). Expression for electrical resistivity / conductivity. Temperature dependence of resistivity of metals. electron in a periodic potential, origin of the energy gap, band theory of solids, distinction of solids into metals, semi-conductors and insulators. **[8]**

4. **Dielectric & Magnetic Properties of Materials**: Dielectric constant and polarization of dielectric materials. Types of polarization. Equation for internal field in liquids and solids (one dimensional). Ferro and Piezo electricity. Frequency dependence of dielectric constant. Important applications of dielectric materials. Classification of dia, para and ferro-magnetic materials. Hysterisis in ferromagnetic materials. Soft and Hard magnetic materials. Applications. **[7]**

5. **Lasers and Optical Fibers**: Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, Construction and working of CO2 laser and semiconductor Laser. Applications of Laser – Laser welding, cutting and drilling. **[10]**
Measurement of atmospheric pollutants. Holography–Principle of Recording and reconstruction of images, applications of holography.
Propagation mechanism in optical fibers. Angle of acceptance. Numerical aperture. Types of optical fibers and modes of propagation. Attenuation. Applications–Block diagram discussion of point to point communication.

Outcome: The student will be able to understand many modern devices and technologies based on lasers and optical fibers. Student can also appreciate various material properties which are used in engineering applications and devices.

Text Books:
1. S. O. Pillai, "Solid State Physics", New Age International, Sixth Edition, 2009
2. V. Rajendran, "Engineering Physics," TMH, Fifth Edition , 2013

Reference Book:
1. G. K. Shivkumar, "Engineering Physics," Prism Book Pvt. Ltd.
2. Stephen T. Thornton, "Modern Physics for Scientists and Engineers",Cengage Learning, 4th ed.,2013

EE 19.101 **Elements of Electrical Engineering** **Total Lectures: 40**
3-1-0-4

Objective: This course facilitates the students to get a comprehensive exposure to various concepts and devices of electrical engineering.

Pre-requisite: Nil

1. **DC Circuits:** Electrical circuit elements (R, L and C), voltage and current sources, Ohm's law, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation using mesh and nodal method. Network Theorems - Superposition, Thevenin, Norton and Maximum power transfer Theorems. Time-domain analysis of first-order RL and RC circuits. [8]
2. **AC Circuits:** Basic terminologies, representation of sinusoidal waveforms, average, rms and peak values of a.c. quantities, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel). [8]
3. **Three Phase A.C. Circuits:** Three phase supply, phase sequence, star connection, delta connection, relationship between phase and line quantities in 3-phase circuits, measurements of three phase power under balanced condition. [6]
4. **Transformers:** Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, Transformer testing: open circuit and short circuit test, losses in transformers, regulation and efficiency. Basics of auto-transformer and three-phase transformer connections. [10]
5. **Electrical Machines:** DC Machines – construction, functions of each part, working principle, EMF and torque equations, types of dc machines. AC machines – classification of a.c. machines, construction, operating principles of ac machines. [8]

Outcome: At the end of this course, students will demonstrate the ability to

- To understand and analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines.

Text Books:

1. Kothari, D. P., and I. J. Nagrath, "Theory and Problems of Basic Electrical Engineering," PHI Learning Pvt. Ltd., 1998.
2. Fitzgerald, Arthur Eugene, David E. Higginbotham, and Arvin Grabel, "Basic electrical engineering," McGraw-Hill Series in Electrical Engineering, Auckland: McGraw-Hill, 1981, 5th ed.(1981).

Reference Books:

1. H.Cotton, "Advanced Electrical Technology," CBS Publication. 1967.
2. Vincent Del Toro, "Electrical Engineering Fundamentals," 2nd Edition PHI Publication. 1972.
3. Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.101 **Programming Language** **Total Lectures: 40**

3-1-0-4

Prerequisite(s): NIL

Objective(s):
1. To learn principles of programming by the structured native language 'C'.
2. To comprehend the rudiments, constructs, syntax, and statements with essentials of efficient compiling, running and debugging processes.

1. **Introduction:** The role of programming languages, programming paradigms, language description and syntax structure, basics of structured and object-oriented programming, functional programming, logic programming, concurrent programming. [10]
2. **Fundamentals of 'C' language**: Character set, variables data types constants, arithmetic, relational and logical operators, type conversion,increment,decrement, bitwise and assignment operators, conditional expressions, statements and blocks, *if-else*, *switch*, loops-*do-while*, *while*, *for*; *break*, *continue* and *goto* statements, labels. [10]
3. **Functions, pointers and Arrays**: Basics of functions, automatic, external, static and register variables, scope rules, and header files, recursion and C preprocessor, arrays, pointers and addresses, pointers and arrays address arithmetic, character pointers and functions, pointer arrays, pointers to functions, pointers and multidimensional arrays, command line arguments. [10]
4. **Structures and unions:** Basics of structures and functions, arrays of structures, pointers to structures, self-referential structures, unions. [5]
5. I/O and File Processing: Concept of files, standard input and output, formatted output, file access in different modes, reading from and writing to a file. [5]

Outcome(s): Students would be able to apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

Text Books:
1. Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013,
2. Ravi Sethi & K.V.Viswanatha, Programming Languages-Concepts, and Constructs, Second edition, Pearson Education,2013,

Reference Books:
1. Herbert Schildt, C: The Complete Reference, Fourth Edition, McGraw-Hill Education, 2017
2. E Balagurusamy, Programming in ANSI C, Tata McGraw - Hill Education,6th edition, 2012

CS 19.151 **Programming Language Laboratory** **Total Hours: 26**

0-0-2-1

Objective:
- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

Prerequisite: Nil

List of Practicals

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement programs to cover all possible String operations.
11. Implement programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement programs for Reading and writing from/to a file.

Outcome: On completion of this course student will be able to:
- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner

PY 19.111 **Physics Laboratory** **Total Hours: 26**
0-0-2-1

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
2. To apply the analytical techniques and graphical analysis to the experimental data.

List of Experiments:

1. To study of material constant, temperature coefficient of current and planck's constant.
2. To determine the specific resistance of a given wire by using the Carey Foster's bridge.
3. To determine the ballistic constant, K of a moving coil ballistic galvanometer with a standard capacitor of known capacity.
4. To determine the high resistance by the method of leakage of a condenser with the help of ballistic galvanometer.
5. To study the variations of resistivity with temperature and hence determines the energy band gap of the given semiconductor with help of four probe method.
6. To convert a galvanometer into a voltmeter of a given range.
7. To convert a galvanometer into an ammeter of a given ranges.
8. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current and to estimate from it the radius of the coil.

Outcome: Students will be convergent with operation of equipments and verify the principle of Physics by doing the experiments. Students will be able to apply the analytical techniques and graphical analysis for finding out the experimental results.

EE 19.111 **Electrical Laboratory** **Total Hours: 26**

0-0-2-1

Objective: The objective is to provide a basic exposure of installation and operation of electrical equipment.

Prerequisite: Nil

Perform any ten of the list.

1. To Study of the various apparatus used in Electrical Engineering.
2. To perform residential house wiring using fuse, indicator, switch, Socket, plug and lamp.
3. To design a Stair case wiring for illuminating a lamp.
4. To design Tunnel wiring for illuminating three lamps.
5. To construct a fluorescent tube and to measure voltage across tube rod, voltage across choke and current.
6. To conduct the polarity test on the given transformer.
7. To conduct the open circuit & short circuit tests on the given single phase transformer and to determine equivalent circuit parameters.
8. To control the speed of DC machine by field current control method.
9. To control the speed of DC machine by Armature Voltage control method.
10. To measure three phase power by using two wattmeter methods.
11. To verify Superposition Theorem using resistive circuit.
12. To verify Thevenin's Theorem using resistive circuit.

Outcome: Students will be convergent with installation and operation of electrical equipment.

ME 19.112	Mechanical Workshop	Total Hours:26 0-0-2-1

Objectives:

1. Practice on manufacturing of components using workshop trades including fitting, carpentry, sheet metal and welding.
2. Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping.
3. Study and practice on machine tools and their operations.

List of Jobs:

1. **Fitting Shop:** Prepare job that contain various fitting operation like filing, marking, measuring, cutting, drilling etc.
2. **Carpentry Shop:** Making of carpentry joint (T, L joint etc).
3. **Sheet Metal Shop:** Making job from sheet (funnel, tray etc).
4. **Machine Shop:** Perform various operations like, turning, step turning, facing, chamfering, knurling etc on Lathe.

Outcomes:

At the end of the course, the student will be able to:

1. To acquire skills in basic engineering practice.
2. To identify the hand tools and instruments.
3. To acquire measuring skills.
4. To provides the knowledge of job materials in various shops.
5. Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.

Text Books:

1. Hajara Chaudhary, Workshop Technology Vol I & II, Media Promoters and Publishers PVT. LTD, Mumbai.
2. B.S. Raghuvanshi, Workshop Technology, Dhanpat Rai & Sons. New Delhi.

Reference Books:

1. H S Bawa, Workshop Technology, TMH. New Delhi.

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**
2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession-Management as social System Concepts of management-Administration-Organization **[4]**
2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**
3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**
4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**
5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher,16th Edition, 2014

Reference Books:

3. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
1. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
2. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
3. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

MA 19.201 **Mathematics III** **Total Lectures: 40**
3-1-0-4

Objective: To acquire fundamental knowledge of linear programming, numerical methods, complex analysis and integral transform and apply in engineering disciplines.

Pre-requisite: Mathematics I and Mathematics II

1. **Linear Programming:** Introduction with formulation; Graphical method; Simplex method, Artificial variable technique (Two phase method, Big –M method); Assignment problem (Hungarian method); Transportation problem(Vogel's approximation method). [12]
2. **Numerical Methods:** Solution of system of equations (Gauss elimination and Gauss - Seidel methods);Solution of algebraic and transcendental equations (Bisection, Ramanujan's and Regula Falsi methods); Solution of ordinary differential equation (Euler's modified, Milne's predictor & corrector, Runge-Kutta method of order four). [08]
3. **Complex Analysis:** Function of complex variable, analytic function, Cauchy- Riemann equations(without proof); Integration of complex functions, line integrals in the complex plane, Cauchy integral theorem(without proof), Cauchy integral formula(without proof), zeros and singularities of complex functions, residues. [08]
4. **Integral Transform I**: Basics of Laplace transform and inverse Laplace transform;First and Second Shifting theorems; Convolution theorem (without proof);Laplace transform of Unit Step function, Dirac Delta function and periodic function. [06]
5. **Integral Transform II**: Solution of ordinary differential equations with initial conditions by Laplace transforms; Fourier series of periodic functions, even and odd functions, Fourier half-range series; Basics of Fourier transforms with properties. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of linear programming, numerical methods, complex analysis and integral transforms in engineering and solve curriculum problems.

ME 19.201 **Mechanics of Solids** **Total Lectures: 40**
Credit 3-0-0-3

Prerequisite(s): ME 19.101, MA 19.101

Objective(s):

- *To acquaint with the basic concepts of stress and deformation in solids.*
- *To practice the methodologies to analyse stresses and strains in simple structural members, and to apply the results in simple design problems.*
- *Learn the fundamental concepts of the method of superposition, flexibility method, and stiffness method as applied to problems involving statically determinate and indeterminate axial and torsional members, and beams.*

1. **Compound Stress and Strains:** Introduction, objective of the course, stresses on inclined sections, strain energy, impact loads and stresses, state of plane stress, principal stress and strain, maximum shear stress, Mohr's stress circle, three dimensional state of stress & strain, generalized Hook's law. **[6]**

2. **Beams:** Axial force, shear force and bending moment diagrams for statically determinate (uniform and variable loading) beams including beams with internal hinges for different types of loading. Pure Bending**,** normal stresses in beams, shear stresses in beams due to transverse and axial loads, composite beams. Equation of elastic curve, cantilever and simply supported beams, Macaulay's method, area moment method, fixed and continuous beams, combined bending & torsion of solid & hollow shafts. **[12]**

3. **Columns, Struts and Trusses:** Buckling and stability, slenderness ratio, combined bending and direct stress, struts with different end conditions, Euler's theory for pin ended columns, effect of end conditions on column buckling, Rankine Gordon formulae, examples of columns in mechanical equipments and machines. Truss- Introduction, simple truss and solution of simple truss, method of joints and method of sections. **[10]**

4. **Thin and Thick cylinders:** Introduction, difference between thin walled and thick walled pressure vessels, Thin walled cylinders, hoop and axial stresses and strain, volumetric strain. **[6]**

5. **Curved Beams:** Bending of beams with large initial curvature, position of neutral axis for rectangular and circular cross sections, stress in crane hooks, stress in circular rings subjected to tension or compression. **[6]**

Outcome(s):

- *Understand the fundamental concepts of stress and strain and the relationship between both through the strain-stress equations in order to solve problems for simple tri-dimensional elastic solids.*
- *Solve problems relating to pure and non-uniform bending of beams and other simple structures.*
- *Solve problems relating to torsional deformation of bars and other simple tri-dimensional structures.*
- *Understand the concept of buckling and be able to solve the problems related to isolated bars.*

Text Books:

ME 19.203 **Engineering Thermodynamics** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): MA 19.101

Objective(s):

- *Identify and use units and notations in thermodynamics*
- *State and illustrate the first and second laws of thermodynamics*
- *Identify and explain the concept of entropy, enthalpy, specific energy, reversibility and irreversibility*
- *Apply the first and second laws of thermodynamics to formulate and solve engineering problems for (i) closed systems, (ii) open systems, and (iii) power cycles*
- *Ability to understand and effectively communicate the fundamentals of thermodynamic analyses and to articulate the basic environmental, economic, and sustainability considerations to the non-thermodynamicist*
- *Use thermodynamic (steam) tables, charts, and equation of state (e.g. the ideal gas law) to obtain appropriate property data to solve thermodynamics problems*

1. **Basic Concepts and Definitions:** Introduction and definition of thermodynamics, dimensions and units, systems, surroundings, property, energy, thermodynamic path, process and cycle, thermodynamic equilibrium, quasi static process, energy and its forms, work and heat, gas laws. **[8]**
   Zeroth and First Law of Thermodynamics: Zeroth law of thermodynamics, temperature scale, First law of thermodynamics, calculation of work in various processes and sign convention, first law of thermodynamics applied to open systems, steady flow systems and their analysis, steady flow energy equations for boilers, condensers, turbine, compressors, pumps and throttling process, etc., PMM-I.

2. **Second Law of Thermodynamics:** Limitations of first law of thermodynamics, thermal reservoir, heat engine, heat pump and refrigerator, statement and equivalence of the Kelvin Plank and Clausius statements, reversible and irreversible processes, Carnot cycle, Carnot engine, Carnot theorem and its corollaries, thermodynamic temperature scale, PMM-II. **[10]**
   Entropy: Clausius inequality, concept of entropy, calculation of entropy change, principle of entropy increase, temperature-entropy diagram, Second law analysis of a control volume, statement of third law of thermodynamics, available and unavailable energy, availability and irreversibility, second law efficiency.

3. **Properties of Steam**: Pure substance, property of steam, triple point, critical point, sub-cooled liquid, saturation states, superheated states, phase transformation process of water, graphical representation of P-V-T data, Properties of steam. Steam tables and Mollier chart. **[8]**
   Ideal Gas and Real Gas: Ideal gas, Real gas, Internal energy, enthalpy and specific heats of an ideal gas, equations of state, Dalton's law of partial pressures, Gibbs Dalton law, Thermodynamic properties of gas mixtures.

4. **Thermodynamic Relations:** Thermodynamic variables, Independent and dependent variables, Maxwell's thermodynamic relations, Thermodynamic relations involving entropy, Thermodynamic relations involving enthalpy and internal energy, Joule-Thomson coefficient, Clapeyron equation**.** **[8]**
   Power Cycles: Otto cycle, Diesel cycle, Dual cycle, Brayton cycle and Ericsson cycle.

5. **Vapour Power Cycle:** Rankine cycle, comparison of Carnot and Rankine cycle, modified Rankine cycle, effect of operating conditions on its efficiency, properties of ideal working fluid in vapour power cycle, Reheat cycle, regenerative cycle, bleeding extraction cycle, feed water heating co-generation cycle. **[6]**

Outcome(s):

- *Understand the thermodynamics implication and thermodynamics explanation for the states of matter.*
- *Understand and apply basic energy conservation equations for kinetic, potential and flow energies.*
- *Understand the concepts of enthalpy, entropy and the basic laws of thermodynamics.*
- *Understand and solve thermodynamic cycle problems, including the Carnot ideal cycle, the Otto cycle, the Diesel Cycle, Rankine and Brayton*
- *Understand thermodynamic tables, charts, and equation of state (e.g. the ideal gas law) to obtain appropriate property data to solve thermodynamics problems*

Text Books:

1. Nag, P.K, "Engineering Thermodynamics", Tata McGraw-Hill, 5th Edition. 2013
2. Cengel Y.A and Boles M.A, "Thermodynamics: An Engineering Approach", Tata McGraw Hill, 7th Edition 2011.

2. Moran, M. J and Shapiro H. N, "Fundamentals of Engineering Thermodynamics", John Wiley & Sons, 6th Edition. 2010.

ME 19.205 **Material Science** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): PY 19.101

Objective(s):

- *To acquaint students with the basic concepts of Material Science.*
- *To impart the knowledge on mechanical behaviour of materials.*
- *To acquire knowledge in various class of materials (like Ferrous, Non-Ferrous Alloys and Advanced Materials) and their applications.*
- *To impart knowledge on Heat Treatment, Microstructure and Phase diagrams.*
- *To acquire knowledge in destructive and non-destructive testing of materials.*

1. **Introduction to Engineering Materials & Material Structure:** Introduction to engineering materials, development in materials science, classification of material, crystal structures (BCC, FCC and HCP systems), imperfections in crystals, point defects, line defects, surface and bulk defects, slip, twinning. **[8]**

2. **Phase Diagrams:** Solid solutions, binary alloy system, lever rule, Iron-carbon equilibrium diagram, TTT diagrams**.** **[8]**

3. **Heat Treatment:** Annealing, normalizing, tempering, hardening (case hardening and surface hardening). **[8]**

4. **Engineering Materials:** Ferrous metals, alloy steels, tool steels, stainless steels, cast irons, effect of alloying elements on mechanical properties of steel. Copper and its alloys, aluminium and their alloys, bearing materials. Polymers, polymer types, polymer synthesis and processing; ceramics, their crystal structures and properties, composites, particle reinforced composites, fibre reinforced composites, structural composites, nanoparticle composites. **[8]**

5. **Mechanical Properties and Their Testing:** Destructive Testing**,** tensile test, engineering stress-strain curve, true stress-strain curve, types of stress-strain curves, compression test, formability, hardness testing, different hardness tests, Vickers, Rockwell, Brinell, impact test, ductile and brittle fracture, creep, generalized creep behaviour. Non-destructive testing (NDT), visual Inspection, magnetic particle inspection, dye penetrant inspection, ultrasonic inspection, Selection of NDT. **[8]**

Outcome(s):

- *The students will be able to understand the knowledge of materials & their applications.*
- *Students will be able to design the alloy system of ferrous and non-ferrous metals based on their knowledge of phase diagrams and metal characteristics.*
- *The students will also be able to understand the heat treatment processes and destructive and non-destructive testing of materials.*

Text Books:

1. V. Raghavan, "Material Science & Engineering", Prentice Hall India Ltd., 6th Edition.
2. A. K. Bhargava, C.P. Sharma. "Mechanical Behaviour & Testing of Materials", PHI Learning Private Ltd., 2014

Reference Books:

1. Avner S. H, "Introduction to Physical Metallurgy", Tata-McGraw Hill Publishing Co., New Delhi, 26th Edition 2009.
2. Dieter G. E, "Mechanical Metallurgy", McGraw Hill Publishing Co., New York, Latest Edition.

ME 19.215 **Mechanics of Solids Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME 19.101, MA 19.101

Objective(s):

- *To acquaint with the basic concepts of stress and deformation in solids.*
- *To practise the methodologies to analyse stresses and strains in simple structural members, and to apply the results in simple design problems.*
- *Learn the fundamental concepts of the method of superposition, flexibility method, and stiffness method as applied to problems involving statically determinate and indeterminate axial and torsional members, and beams.*

List of Experiments

1. To determine the Impact toughness (strain energy) through Izod test. [**2]**
2. To determine the tensile strength of specimen using Universal Testing Machine. **[4]**
3. To find the modulus of rigidity using torsion testing equipment. **[4]**
4. To find the values of bending stresses and Young's modulus of the material of a beam (say a wooden or steel) simply supported at the ends and carrying a concentrated load at the centre using Universal Testing Machine **[4]**
5. To find the shear strength of given specimen using Universal Testing Machine. **[4]**
6. To find the compressive strength of given specimen using Universal Testing Machine. **[4]**
7. To determine the stiffness of the spring and modulus of rigidity of spring wire using spring testing machine. **[4]**

Outcome(s):

- *Understand the fundamental concepts of stress and strain and the relationship between both through the strain-stress equations in order to solve problems for simple tri-dimensional elastic solids.*
- *Solve problems relating to pure and non-uniform bending of beams and other simple structures.*
- *Solve problems relating to torsional deformation of bars and other simple tri-dimensional structures.*
- *Understand the concept of buckling and be able to solve the problems related to isolated bars.*

ME 19.217 **Thermodynamics Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): MA 19.101

Objective(s):

- *Apply the first and second laws of thermodynamics to formulate and solve engineering problems for (i) closed systems, (ii) open systems, and (iii) power cycles*
- *Application of the first and second laws of thermodynamics*

List of Experiments:

1. To measure temperature using different types of measurement devices and compare measurement methods for accuracy and ease of use. **[10]**
   a. J and K type thermometer
   b. NTC thermistor
   c. PT 100 platinum resistance thermometer (four wire)
   d. 2 x liquid in glass thermometers
   e. Bimetal and gas (vapour) pressure thermometer
2. To measure the humidity using different type of humidity measurement devices and compare the measurement methods for accuracy and ease of use. **[8]**
   a. Hair hygrometer
   b. Wet and dry bulb hygrometer
   c. Whirling hygrometer
3. To study and determine the various properties of steam with steam generator **[8]**

Outcome(s):

- *Understand the thermodynamics implication and thermodynamics explanation for the states of matter.*
- *Understand the concepts of enthalpy, entropy and the basic laws of thermodynamics.*

ME 19.219 **Computer Aided Machine Drawing Practice** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME 19.111

Objective(s):

- *Understanding limits, Fits and Tolerances, various joints.*
- *Understanding CAD software*
- *Explaining and Sketching Valves, Cocks and Plugs.*
- *Various parts of Machinery*

List of Experiments:

1. **Drawing Standards:** Code of practice for engineering drawing, BIS specifications–welding symbols, riveted joints, keys, fasteners. Reference to hand book for the selection of standard components like bolts, nuts, screws, keys etc. **[4]**

2. **2-D Drawings:** Limits, Fits -Tolerancing of individual dimensions, specification of fits, manual preparation of production drawings and reading of part and assembly drawings. **[8]**

3. **CAD Practice:** Drawing, Editing, dimensioning, plotting commands, layering concepts, hatching, detailing, assembly, basic principles of GD&T (geometric dimensioning & tolerancing) **[6]**

4. **Assembly Drawing (using CAD software):** Manual parts drawing and preparation of assembled views given part details for components followed by practicing the same using CAD packages. **[8]**

   Suggested Assemblies: Shaft couplings, Plummer block, screw jack, lathe tailstock, universal joint, machine vice, stuffing box, safety valves, non-return valves, connecting rod, piston and crank shaft, multi plate clutch. Preparation of bill of materials.

Outcome(s):

- *Understand the machine parts drawing conventions*
- *Gain sufficient knowledge on Limits, Fits and Tolerances and their representation in the drawing*
- *Have sufficient knowledge in CAD softwares and their use.*
- *Draw and read the Machine drawing used in the Industry***.**

UC 19.202 **Business Environment** **Total Lectures: 26**
2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]
2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]
3. **Political and legal Environment*:*** Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]
4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]
5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:
1. Business Environment, Francis Cherunilam, 1st Edition, 2018.
2. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:
1. Business Environment, BN Ghosh, OUP, 2015
2. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
3. Business Environment, AC Fernando, Pearson, 2016

MA 19.204 **Optimization Techniques** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of optimization techniques with statistics and probability and apply in engineering disciplines.

Pre-requisite: Mathematics I, Mathematics II, and Mathematics III

1 **Introductory Ideas:** Recapitulation of basics of permutation, combination and probability theory; Law of addition and law of multiplication; Conditional probability; Total probability; Bayes' theorem (with proof)and it's applications; Discrete and continuous random variables; Types of distributions with basic properties; Probability mass and density functions; Cumulative distribution function; Mean, variance and standard deviation of distributions. [06]

2 **Linear Programming**: Introduction to Operation Research, Problem Formulation, Simplex Methods, Primal and Dual Problem, Dual Simplex, Sensitivity Analysis, Dynamic Programming, Integer Programming, Multi Criteria Decision Making. [10]

3 **Transportation and Assignment Models:** Introduction, Mathematical Formulation, Definitions, Physical Significance, Optimal Solution of Transportation (North West Corner Rule, Matrix Minima Method, Vogel's Approximation Method with MODI and Steeping Stone Methods); The Hungarian Method for Solution of the Assignment Problems, Variations in Transportation and Assignment Problems, The Travelling Salesman Problem.. [08]

4. **Decision and Queuing Theory:** Decision under various conditions, Game Theory, Minimax and Maximin Strategies, Birth and Death Process, Pure Birth and Pure Death Process, Classification of queuing models: $[(M/M/1):(FCFS/\infty/\infty)]$, $[(M/M/1):(SIRO/\infty/\infty)]$, $[(M/M/1):(FCFS/N/\infty)]$, $[(M/M/C):(FCFS/\infty/\infty)]$; Applications of Queuing Models. [10]

5. **CPM and PERT:** Project Management Techniques, Introduction to CPM and PERT Techniques, Rules of Network Construction, Network Analysis, Time Analysis, Time-Cost Optimization Algorithm. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of optimization techniques with statistics and probability in inter-disciplinary engineering and solve curriculum problems.

Text Books:

1. Taha H. A, "Operations Research – An Introduction", Prentice Hall India, Latest Edition.
2. S.Palaniammal, Probability and Random Processes, PHI, 2013.

Reference Books:

1. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.
2. Hillier F.S. and Lieberman G.J. Introduction to Operations Research, McGraw Hill, 2016.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

ME 19.202 **Kinematics of Machines** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): ME 19.101

Objective(s):

- *To provide basic concept of kinematics and kinetics of machine elements.*
- *Know different machine elements and mechanisms.*
- *Select Suitable Drives and Mechanisms for a particular application.*
- *Develop ability to come up with innovative ideas.*

1. **Basics Of Mechanisms:** Terminology and definitions - degree of freedom mobility, Kutzbach criterion, Grashoff's law, kinematic inversions of 4-bar chain and slider crank chains, mechanical advantage, transmission angle, description of common mechanisms- single, double and offset slider mechanisms, quick return mechanisms, straight line mechanism. **[8]**

2. **Kinematics:** Displacement, velocity and acceleration analysis in simple mechanisms- Graphical Method of velocity and acceleration analysis for different mechanisms- instantaneous centre of velocity - angular velocity ratio theorem. coriolis acceleration. **[8]**

3. **Kinematics of Cam:** Classifications, displacement diagrams, parabolic simple harmonic and cycloidal motions, layout of plate cam profiles, derivatives of follower motion, high speed cams, circular arc and tangent cams, standard cam motion, pressure angle and undercutting. **[8]**

4. **Friction drives:** Introduction, belt and rope drives, open and crossed belt drives, velocity ratio, slip, power transmission, effect of mass of belt on power transmission, maximum power transmission, initial tension and maximum tension, pivots and collars, uniform pressure and uniform wear. **[8]**

5. **Gears:** Spur gear terminology and definitions, fundamental law of toothed gearing and involutes gearing, inter changeable gears, gear tooth action, terminology, interference and undercutting , non-standard gear teeth , helical, bevel, worm, rack and pinion gears (basics only), gear trains , parallel axis gear trains, epicyclic gear trains, differentials , automotive transmission gear trains. **[8]**

Outcome(s):

- *Identify mechanisms and predict their motion*
- *Calculate the degrees of freedom of mechanisms.*
- *Draw velocity and acceleration diagrams of various mechanisms.*
- *Construct CAM profile for the specific follower motion.*
- *Select appropriate power transmission mechanism.*

Text Books:

1. Rattan S. S, "Theory of Machines", Tata McGraw Hill Publishing Company Ltd., New Delhi, 4th Edition 2014.
2. Shigley J. E and Uicker J.J, "Theory of Machines and Mechanisms", Oxford University Press, 5th Edition 2017.

Reference Books:

1. Thomas B, "Theory of Machines", Pearson Education India, 3rd Edition 2010.
2. Norton R. L, "Kinematics and dynamics of machinery", Tata McGraw Hill Publishing Company Ltd., New Delhi, 1st Edition 2009.

ME 19.204 **Fluid Mechanics** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): ME 19.101

Objective(s):

- *To know properties of fluid.*
- *To calculate hydrostatic forces on submerged surfaces.*
- *To apply Bernoulli equations.*
- *To calculate friction losses in pipes.*
- *To apply conservation of mass, momentum & energy principle.*
- *To apply boundary condition for different conditions.*

1. **Introduction:** Physical properties of fluids, concept of shear stress, Newtonian and Non-Newtonian fluids **[8]**
   Fluid Statics: Pressure-density-height relationships, manometers, force on plane and curved surfaces, center of pressure, buoyancy, stability of immersed and floating bodies, fluid masses subjected to uniform acceleration and uniform rotation about the axis.
2. **Kinematics of Fluid Flow:** Types of fluid flow, stream lines, streak lines, path lines, stream tubes, stream function and velocity potential, flow nets. **[10]**
   Dynamics of Fluid Flow: Euler's equation of motion along a streamline and its integration, Bernoulli's equation and momentum equation. Boundary Layer Analysis, Boundary Layer Thickness, Boundary Layer over a flat plate.
3. **Dimensional Analysis And Hydraulic Similitude:** Dimensional analysis, Buckingham's pi theorem, important dimensionless numbers and their significance, geometric, kinematic and dynamic studies. **[8]**
   Flow Past Immersed Bodies: Lift and drag, expressions for lift and drag.
4. **Flow Through Pipes:** Laminar and turbulent flow in pipes, general equation for head loss-Darcy-Weisbach and Fanning's equations, Moody's diagram, energy losses through pipe fitting, flow through network of pipes, power transmission through pipelines. **[7]**
5. **Fluid Flow Measurements:** Introduction, venturimeter, orifice meter, Pitot tube, notches and weirs. **[7]**
   Introduction To Compressible Flow: Velocity of sound in a fluid, Mach number, propagation of pressure waves in a compressible fluid

Outcome(s):

- *An understanding of fluid mechanics fundamentals, including concepts of mass and momentum conservation.*
- *An ability to apply the Bernoulli equation to solve problems in fluid mechanics.*
- *An ability to apply control volume analysis to problems.*
- *An ability to use potential flow theory to solve problems.*
- *An ability to perform dimensional analysis for problems.*
- *Knowledge of laminar and turbulent boundary layer fundamentals.*

ME 19.206 **Design of Machine Elements - I** **Total Lecture 40**
Credit: 3-0-0-3

Prerequisite(s): ME 19.101, ME 19.201

Objective(s):

- *Develop an ability to apply knowledge of mathematics, science, and engineering*
- *To develop an ability to design a system, component, or process to meet desired needs within realistic constraints.*
- *To develop an ability to identify, formulate, and solve engineering problems.*
- *To develop an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice*.

1. **Introduction:** Engineering design - an applied decision theory with respect to functional requirements, aesthetic consideration and ergonomic consideration-traditional design methods-synthesis in design, standardization, preferred numbers, derived series of preferred numbers, types of Fits, tolerance with respect to Indian standard, calculation examples, interchangeability, surface Roughness and its designation on drawing. **[4]**

2. **Design against Static and Fluctuating Load:** Factor of safety, design of simple machine parts, design of Cotter Joint, knuckle Joint and Hooke's Joint, theories of Failures, maximum principal stress theory, maximum shear stress theory, distortion-energy theory of failures. Methods to reduce stress concentration. Fluctuating stresses, fatigue failure, endurance limit, low cycle and high cycle fatigue, notch sensitivity, reversed stress-design for finite and infinite life, cumulative damage in fatigue, Soderberg and Goodman lines, modified Goodman's diagram, Gerber equation, fatigue design under combined stresses. **[11]**

3. **Shaft, Keys and Couplings:** Transmission shafts, shaft design on strength basis, shaft design on torsional rigidity bases, ASME code for shaft design, design of hollow shaft, design of keys, design of couplings- muff coupling, rigid flange coupling, flexible coupling, design of shaft for lateral rigidity, Castigliano's theorem, area moment method. **[6]**

4. **Welded, Riveted and Threaded Joints:** Design of riveted joints and simple welded connections under concentric loads only, eccentric load in plane of weld, welded joints subjected to bending moment, Welded joints subjected to torsional moment, welded joints subjected to fluctuating forces. Basic type of screw fastening, terminology of screw thread, ISO metric screw thread, materials and manufacture, simple analysis of bolted joints, eccentrically loaded bolted joints in shear, eccentric load perpendicular to the axis of the bolt, eccentric load circular base, elastic analysis of bolted joints, bolted joints under fluctuating load. **[9]**

5. **Power Screw and Springs:** Forms of threads, multiple threaded screws, terminology of power screw, torque requirement for lifting of load and for lowering of load, self-locking screw, design of screw jack, differential and compound screws. Types of springs, style of end, stress and deflection equation, series and parallel connections, spring material, design of helical springs, concentric springs, multi-leaf spring, design of load spring. **[10]**

Outcome(s):

- *Be able to analyze the stress and strain on mechanical components; and understand, identify and quantify failure modes for mechanical parts.*
- *Demonstrate knowledge on basic machine elements used in machine design; design machine elements to withstand the loads and deformations for a given application, while considering additional specifications.*
- *Be able to approach a design problem successfully, taking decisions when there*

is not a unique answer.

ME 19.208 **Production Technology-I** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): ME 19.112

Objective(s):
- *To analyze and understand the metal cutting phenomenon.*
- *To study the conventional machining processes such as lathe, drilling, milling, shaping.*
- *To select process parameters and tools for obtaining desired machining characteristic.*

1. **Metal Cutting Theory:** Introduction to manufacturing, classification of manufacturing processes. Tool materials, tool geometry, mechanics of metal cutting, tool failures, tool wear in metal cutting, tool life, cutting forces and power, machinability, cutting fluids. **[10]**
2. **Turning Operations:** Introduction, constructional features of a center lathe, cutting tools, operations performed on a center lathe, taper turning methods, thread cutting methods, special attachments, limitations of a center lathe, capstan and turret lathes, turret indexing mechanism, tool layout of turret and capstan machines, automatic lathes, tool layout for automatic lathes, machining time estimation. **[8]**
3. **Hole Making and Milling Process:** Introduction, constructional features of a drilling, types of drilling machines, drill geometry, reaming, boring, tapping, other hole making operations, machining time estimation, boring machine. Introduction, types of milling machines, constructional features of a milling, cutters, milling operations, dividing head, milling mechanics, machining time estimation, machining center. **[8]**
4. **Other Machining processes:** Introduction to shaper, planner, slotter and broaching. Gears types and gear making, machining of gears, gear finishing. Introduction to jig and fixtures. **[8]**
5. **Abrasive Machining:** Grinding machines, various grinding operations; Grinding wheels, preparation for wheel operation. Lapping, honing, super finishing **[6]**

Outcome(s): *At the end of the course, the student will be able to understand working of lathe, shaper, planer, drilling, and milling and machines. Comprehend speed and feed mechanisms of machine tools. Estimate machining times for machining operations on machine tools. Be able to select proper metal removing processes for the typical application.*

Text Books:
1. Rao P. N, "Manufacturing Technology", Tata McGraw-Hill, Fourth Edition.
2. Lindberg Roy A, "Processes and Materials of Manufacture", PHI, Fourth edition.

Reference Books:
1. Mikell. P. Grover, Fundamentals of Modern Manufacturing, Fourth Edition, John Wiley & Sons.
2. Kalpakjian, S. and Steven R. Schmid, Manufacturing, Engineering & Technology, 7th Edition, Pearson.

ME 19.216 **Fluids Mechanics Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME 19.101

Objective(s):
- *To provide practice in estimating friction losses.*
- *To impart training to use various flow measuring devices for making engineering judgments.*

List of Experiments:

1. To Study Bourdon tube pressure gauge. [**2**]
2. To calibrate pressure gage. **[2]**
3. Study of Venturimeter. **[6]**
   a. To measure complete static head distribution along a horizontal Venturitube.
   b. To compare experimental results with theoretical results.
   c. To measure the meter coefficient of discharge at various flow rates.
4. To study discharge over a notch. **[8]**
   a. To investigate head against discharge over a notch.
5. To study friction loss in pipe . **[8]**
   a. To investigate laminar and turbulent flow in pipe. .
   b. To verify Poiseulle's Equation and the coefficient of viscosity for water in the laminar flow region.
   c. To demonstrate and measure the change in friction factor from laminar to turbulent.

Outcome(s):
- *Estimate the friction and measure the frictional losses in fluid flow.*
- *Experiment with flow measurement devices like venturimeter and orifice meter.*
- *Predict the coefficient of discharge for flow through pipes.*

ME 19.218 **Design of Machine Elements Practice -I** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME 19.101, ME 19.201

Objective(s):

- *Develop an ability to apply knowledge of mathematics, science, and engineering*
- *To develop an ability to design a system, component, or process to meet desired needs within realistic constraints.*
- *To develop an ability to identify, formulate, and solve engineering problems.*
- *To develop an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.*

List of Experiments

1.	Design and drawing of a cotter joint, knuckle joint, hooke's joint	**[4]**
2.	Application of theories of failure to design machine members subjected to combined loadings	**[4]**
3.	Design of machine elements against fluctuating loads.	**[4]**
4.	Design and drawing of rigid and flexible couplings.	**[4]**
5.	Design and drawing of a riveted joint & welded joint	**[4]**
6.	Design and drawing of threaded joints.	**[2]**
7.	Design and drawing of power screws.	**[2]**
8.	Design and drawing of springs.	**[2]**

Outcome(s):

- *Be able to analyze the stress and strain on mechanical components; and understand, identify and quantify failure modes for mechanical parts.*
- *Demonstrate knowledge on basic machine elements used in machine design; design machine elements to withstand the loads and deformations for a given application, while considering additional specifications.*
- *Be able to approach a design problem successfully, taking decisions when there is not a unique answer.*

ME19. 220 **Production Laboratory–I** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME 19.112

Objective(s): *To study and practice the various operations that can be performed in lathe, shaper, milling machines and drilling and to provide with the practical knowledge requisite in the core industries.*

List of Experiments

1. Study of center lathe machine.
2. Job – I: Facing, Plain turning, Step turning, External taper turning, External threading, Knurling, Parting off.
3. Job – II: Facing, Plain turning, Drilling, Boring, Internal threading. Mating with Job I
4. Study of Shaper
5. Job – III: To cut multi slots on shaper.
6. Study of milling machine and calculation of indexing mechanism on Universal Dividing Head.
7. Job IV: Slotting on milling machine.
8. Job V: To cut gear teeth on milling machine using dividing head.
9. Study of radial drilling machine and making of one job with different drilling and reaming operations

Outcome(s): *Upon completion of this course, the students can able to demonstrate and manufacture different types of components using the basic machine tools.*

ME 19.301 **Dynamics of Machines** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): ME 19.101, ME 19.202

Objective(s):

- *Understand Kinematics and Dynamics of different machines and mechanisms.*
- *To facilitate students to understand the function of flywheels, the concept of balancing of rotating and reciprocating masses.*
- *To understand the principles in mechanisms used for governing of machines*
- *To give awareness to students on the phenomenon of vibration and its effects.*

1. **Static and Dynamic force analysis:** Constraint and applied forces, static Equilibrium of two and three forces members, principle of virtual work, and friction in mechanisms. Dynamic analysis of 4-bar linkage and slider-crank mechanism, velocity and acceleration of a piston, angular velocity and angular acceleration of connecting rod, Engine force analysis, Dynamically equivalent system, inertia of connecting rod, Inertia force in reciprocating engine, crank shaft torque.
   Engine dynamics and flywheel: Turning moment diagram of an I. C engine, Fluctuation of crankshaft-speed, flywheel and its effect on cyclic fluctuation of speed of an engine. **[10]**

2. **Balancing:** Static balancing & dynamic balancing, Balancing of several masses, rotating in different planes, Balancing of reciprocating mass, Balancing of in-line engine, Balancing of V-engines, Balancing of radial engines. **[8]**

3. **Governors:** Types of governors, analysis of Watt, Porter , Prowell, Hartnell, Hartung governor, Sensitiveness of a governor, hunting, isochronisms and stability of a governor, effect and power of a governor, effect of friction on dynamics of governor. **[8]**

4. **Gyroscope:** Angular velocity, angular acceleration and gyroscopic torque, gyroscopic effect on aeroplanes, naval ships, two wheelers and four wheelers. **[6]**

5. **Mechanical Vibrations:** Types of vibrations, Single degree free & damped vibrations, Logarithmic decrement, Forced vibration of single degree system under harmonic excitation, vibration isolation. **[8]**

Outcome(s):

- *Students will have an understanding of static force relationships and inertia forces and their effect that exist in machines.*
- *Students will demonstrate the dynamics of flywheel and their motion.*
- *Analyse balancing of rotating masses in a single and several planes.*
- *Understand concepts of vibrations in various machineries, their harmful effects and remedies*

Text Books:

3. Rattan S. S, "Theory of Machines", Tata McGraw Hill Publishing Company Ltd., New Delhi, 4th Edition 2014.
4. Shigley J. E and Uicker J.J, "Theory of Machines and Mechanisms", Oxford University Press, 5th Edition 2017.

Reference Books:

3. Thomas B, "Theory of Machines", Pearson Education India, 3rd Edition 2010.
4. Norton R. L, "Kinematics and dynamics of machinery", Tata McGraw Hill Publishing Company Ltd., New Delhi, 1st Edition 2009.

5. Bhave S., " Mechanical Vibrations: Theory and Practice ", Pearson India Ltd., 1st Edition 2010

ME 19.303 **Fluid Machinery** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): ME 19.204

Objective(s):

- *To impart the knowledge on pumps and turbines.*
- *To understand the basic principles of pneumatics and hydraulics.*
- *To identify pneumatic and hydraulic components and their functions*
- *To understand different types of turbine and its applications.*
- *To compute the efficiency of different types of turbine and pumps.*

1. **Introduction:** Introduction, Application of momentum and momentum equation to flow through hydraulic machinery, Euler's fundamental equation. **[6]**
   Impact of Jet: Introduction to hydrodynamic thrust of jet on a fixed and moving surface (flat & curve), effect of inclination of jet with the surface.

2. **Hydraulic Turbines:** Classification of turbines. **[15]**
   Impulse Turbines: Pelton turbine, constructional details, velocity triangles, power and efficiency calculations, governing of Pelton wheel.
   Reaction Turbines: Fransis and Kaplan turbines, constructional details, velocity triangles, power and efficiency calculations, degree of reaction, draft tube, cavitation in turbines, principles of similarity, unit and specific speed, performance characteristics, selection of water turbines.

3. **Centrifugal Pumps:** Classifications of centrifugal pumps, vector diagram, work done by impellor, efficiencies of centrifugal pumps, specific speed, model testing, cavitation and separation, performance characteristics. **[6]**

4. **Positive Displacement Pumps:** Reciprocating pump theory, slip and coefficient of discharges, indicator diagram, effect and acceleration, work saved by fitting air vessels, comparison of centrifugal and reciprocating pumps, positive rotary pumps, Gear and Vane pumps, performance characteristics. **[8]**

5. **Other Machines:** Hydraulic accumulator, Intensifier, Hydraulic press, Lift and Cranes, theory of hydraulic coupling and torque converters, performance characteristics, Hydraulic ram, Jet pumps, Airlift pumps. **[5]**

Outcome(s):

- *Able to identify hydraulic problem.*
- *Able to learn any possible improvements on fluid machinery.*
- *Able to compute efficiency of various fluid machineries.*

Text Books:

1. Bansal R. K., "Fluid Mechanics and Hydraulic Machines" Laxmi Publication Pvt. Ltd., 2005.
2. Modi, P. N., and S. M. Seth. Hydraulics and Fluid Mechanics: Including Hydraulic Machines (in SI Units). Standard Book House, 14th ed., 2002.

Reference Books:

2. Sawhney G. S. "Thermal And Hydraulic Machines", PHI Learning Pvt. Ltd., 2nd ed., 2011.

ME 19.305 **Heat and Mass Transfer** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): MA 19.201, ME 19.203, ME 19.204

Objective(s):

- *Identify and understand the various mechanisms of heat and mass transfer that characterize a given physical system.*
- *Formulate models for heat conduction processes. Apply analytical and numerical methods to solve one- and two-dimensional conduction problems.*
- *Analyze and design complex heat transfer applications, such as heat exchangers.*
- *Combine thermodynamics and fluid mechanics principles to analyze heat convection processes.*
- *Integrate radiation aspects into real-world global heat transfer problems.*

1. **Basics Concepts:** Heat transfer in engineering, Mechanisms of heat transfer, temperature field and temperature gradient, conduction, convection and radiation heat transfer, concept of driving potential, combined mechanism of heat transfer. **[10]**
   Fundamental equations of conduction: General different equation of heat conduction in Cartesian, cylindrical and spherical coordinate system, one dimensional steady state heat conduction, systems without internal heat generation, systems with variable thermal conductivity, composite systems, critical radius of insulation, Special one dimensional steady state situations – heat generation, pin fins

2. **Multidimensional steady state conduction:** Introduction, Mathematical analysis of 2-D systems, graphical analysis of 2-D systems, electrical analogy for 2-D systems, Numerical method of solution for 2-D systems, three dimensional systems. **[8]**
   Transient heat conduction: Introduction, systems with negligible internal resistance – lumped parameter method, systems with negligible surface resistance, heat flow in an infinitely thick plate, systems with finite surface and internal resistance.

3. **Fundamental of convective heat transfer:** Introduction, convective heat transfer coefficient, basic equation, boundary layer concept, laminar heat transfer over flat plate, fully developed heat transfer through smooth pipes, the case of contact heat flux and constant wall temperature boundary condition, dimensional analysis, Correlation of heat transfer in turbulent flow, use of hydraulic diameter, free convection heat transfer phenomena. **[12]**
   Heat Exchangers: Types of heat exchangers; Fouling factors; Overall heat transfer coefficient; Logarithmic mean temperature difference (LMTD) method; Effectiveness-NTU method.
4. **Thermal Radiation:** Basic concept, Theory of thermal radiation, electromagnetic spectrum, Wien's displacement law, Stefan-Boltzmann equation, Concept of black, gray bodies without participating media, radiation shields, View factors, Equivalent emissivity of grooved surfaces electrical network analogies. **[8]**

5. **Mass Transfer**: Analogy between heat and mass transfer, mass diffusion, Fick's law of diffusion, boundary conditions, steady mass diffusion through a wall, transient mass diffusion, mass convection, limitations of heat and mass transfer analogy. **[2]**

Outcome(s):

- *Analyze problems involving steady state heat conduction in simple geometries.*
- *Develop solutions for transient heat conduction in simple geometries.*

- *Understand the fundamentals of convective heat transfer process.*
- *Analyze heat exchanger performance by using the method of heat exchanger effectiveness.*
- *Calculate radiation heat transfer between black body surfaces.*

Text Books:

1. Holman J. P, "Heat Transfer", McGraw Hill Higher Education., 10th Edition 2010
2. Nag P. K, "Heat & mass transfer", Tata McGraw Hill Publishing Company Ltd., 3rd Edition 2005.

Reference Books:

1. Yunus Cengel, "Heat and Mass Transfer: Fundamentals and Application", Tata McGraw Hill Publishing Company Ltd., 4th Edition 2011
2. Bergman TL, Incropera FP, DeWitt DP, Lavine AS. "Fundamentals of heat and mass transfer". John Wiley & Sons; 7th Edition 2011

ME 19.307 **Production Technology-II** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): ME 19.205, ME 19.208, ME 19.112

Objective(s):

- *To understand the basic principles of metal forming, welding and casting processes*
- *To know the various types of melting practices*
- *To broaden the understanding of casting design principles*

1. **Metal Forming:** Nature of plastic deformation, deformation mechanism, hot and cold working, rolling principal, rolling stand arrangement, roll passes, sheet metal working processes bending, bend force, press work tool and types of dies. **[10]**
   Forging, Extrusion and other Processes: Forging operations, forging design, drop forging die design; Extrusion-principle, forward and backward extrusion, impact extrusion, hydrostatic extrusion, extruding tubes; Wire drawing- rod and tube drawing, tube making, swaging.
2. **Metal Fabrication Process:** Introduction to fabrication process, gas welding and cutting. Electric arc welding-principle of arc, arc welding equipment, electrodes, carbon arc welding, TIG GMAW, SAW, arc cutting Resistance welding, Other welding process: Thermit welding, electro slag welding, EBW, laser beam welding, forge welding, friction welding, diffusion welding, explosion welding, Welding design: heat input, heat flow, distortion, metallurgy of welding, defects in welding, brazing, braze welding and soldering **[8]**
3. **Metal Casting Process:** Introduction, Casting terms Patterns: Pattern allowance-pattern materials-types of patterns- colour codes Moulding materials: Moulding sand composition-testing sand properties-sand preparation-moulding sand properties-types of sand moulds-moulding machines Cores: Core sand, types of cores, core prints, chaplets, forces acting on the moulding flasksGating system: Elements of gating system, gates, pouring time, sprue, gating ratio, slagtrap system, risering design-caine's method, modulus method, chills-feeding aids. **[9]**
4. **Powder Metallurgy & Rapid Prototyping:** Introduction, basic process, powder manufacturing, powder mixing and blending, composting, sintering. Introduction to rapid prototyping, role of rapid prototyping & rapid tooling, features and classifications. **[5]**
5. **Non Traditional Machining:** AJM, WJM, EDM, ECM, USM: working principle, components of set up, field of application, Parameters affecting machining characteristics, Material removal mechanism. **[8]**

Outcome(s):

- *Student will be able to*
- *Choose forming techniques for various applications*
- *Develop welding techniques for various alloys*
- *Develop welding application concepts*
- *Develop suitable casting techniques for specific applications*
- *Design of gates and risers in castings*

Text Books:

1. Rao P. N, "Manufacturing Technology", Tata McGraw-Hill, Fourth Edition.
2. Lindberg Roy A, "Processes and Materials of Manufacture", Fourth edition PHI Latest Edition.

Reference Books:

1. Mikell. P. Grover, Fundamentals of Modern Manufacturing, Fourth Edition, John Wiley & Sons.
2. Kalpakjian, S. and Steven R. Schmid, Manufacturing, Engineering & Technology, 7th Edition, Pearson.

ME 19.309 **Thermal Engineering System** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): ME 19.203

Objective(s):

- *Thermodynamics is an essential part of engineering curricula, and has a broad application area such as transportation vehicles, power generation and cooling systems.*
- *The course will cover the basic principles of thermodynamics and will give students knowledge about how thermodynamics is applied in engineering practice.*

1. **Steam Generator and Draft:** Introduction; classification of boilers; comparison of fire tube and water tube boiler; their advantages; description of boiler; Lancashire; locomotive; Babcock; Wilcox and etc, boiler mountings and accessories; natural draught chimney design; artificial draught; stream jet draught; mechanical draught; calculation of boiler efficiency and equivalent evaporation. Introduction to high pressure boiler **[8]**
2. **Steam & Gas Nozzles:** Flow through nozzle, Variation of velocity, Area and specific volume, Choked flow, Throat area, Nozzle efficiency, off design operation of nozzle, Effect of friction on nozzle, critical pressure ratio for maximum discharge; physical explanation of critical pressure; super saturated flow of steam; design of steam nozzle. **[8]**
3. **Steam Turbines:** Introduction; classification of steam turbine; impulse turbine; working principal; compounding of impulse turbine; velocity diagram; calculation of power output and efficiency; maximum efficiency of a single stage impulse turbine; design of impulse turbine blade section; impulse reaction turbine; working principle; degree of reaction; parsons turbine; velocity diagram; calculation of power output; internal losses in steam turbine; governing of steam turbine. **[10]**
4. **Compressors:** **[6]**
   Classification, single and multistage reciprocating compressors, isothermal and volumetric efficiencies, centrifugal and axial flow compressors, surging, choking and stalling.
5. **Steam Condensers:** Component of steam condensing plant; types of condensers; air leakage in condensers; Dalton's law of partial pressure; Condenser vacuum, sources of air leakage & its disadvantages, vacuum efficiency; calculation of cooling water requirement; air expansion pump. **[8]**

Outcome(s):

- *Apply basic fluid mechanic, thermodynamic, and heat transfer principles and techniques,*
  including the use of empirical data and property tables
- *Tto the analysis of representative fluid and thermal energy components and systems.*
- *Apply basic fluid mechanic, thermodynamic, and heat transfer principles and techniques,*
  including the use of empirical data and property tables
- *To the design analysis of auxiliary fluid and thermal energy components and systems representative of the systems encountered in the practice of electrical, industrial, and related disciplines of engineering.*

2. Chattopadhyay P, "Boiler Operation Engineering", Tata McGraw Hill, 11th Edition, 2008.

ME 19.311 **CAD/CAM** **Total Lecture 40**
Credit: 3-0-0-3

Prerequisite(s) ME 19.101, ME 19.206, CS 19.101

Objective(s)

- *Understand the applications and benefits of CAD*
- *Understand geometric transformation.*
- *Understand various representations of curves and surfaces.*
- *Understand the various concepts and characteristics in geometric modelling.*
- *Understand the basic concepts of CAM. Analyze the components and systems of NC and CNC machine tools. Understand and apply various programming methods for specific jobs.*
- *Classify various CAPP systems.*
- *Understand FMS and CIMS with reference to components, advantages and applications.*

1. **Fundamentals of CAD**: Introduction: Design Process: Application of computers in design: Creating manufacturing database: benefits of CAD. Computer Hardware; Graphic input devices; display devices; Graphics output devices; Central processing unit (CPU). CAD software and Database: Software configuration of a graphics system: functions of a graphics package: geometric modeling: Database structure and control; Graphics standard: GKS and IGES. **[4]**

2. **Geometric Transformations, Curves and Surfaces**: Mathematics preliminaries, matrix representation of 2 and 3 dimensional transformation: Concatenation of transformation matrices. Application of geometric transformations. Polygon, meshed and ruled surfaces: Bezier curves; B-spline curves. **[10]**

3. **Geometric Modeling**: Wireframe model: solid modeling: representation, volumetric properties, surface modeling, concepts of hidden-line removal and shading: Kinematics analysis and simulation. Application of CAD techniques to finite Element Mesh Generation. Computer Aided Manufacturing (CAM) **[8]**

4. **Introduction of CAM**: Basic concepts of manufacturing system and CAD/CAM. NC/CMNC Machine Tools; NC machine tools- basic components, coordinate systems; features of NC machine tools. Computerized Numerical Control (CNC): Tooling for NC machines - tool presetting equipment, flexible tooling, tool length compensation, tool path graphics; NC motion control system; Manual part programming, fixed/floating zero. Block format and codes: Computer assisted part programming. DNC and Adaptive Control: Direct numerical control: Adaptive control in machining system; Combined DNC/CNC system. **[12]**

5. **Computer Aided Process Planning and Automation**: Introduction and benefits of CAPP. Types of CAPP systems, machinability data selection systems in CAPP. Introduction to Automation **[6]**

Outcome(s)

- *Understand the capabilities of general Computer Aided Designing Systems and CAD Systems for designing mechanical parts and elements in 2D and 3D dimensions.*
- *Use effectively CAD / CAM systems in order to produce the final NC code for the manufacturing of various mechanical parts and carry out exchange*

of data between CAD and CAM systems.

- *Describe the principles of* various manufacturing processes, manufacturing technology.

Text Books:

3. Groover, Mikell P. "Automation, production systems, and computer-integrated manufacturing". Prentice Hall Press, 2007.

ME 19.315 **Production Laboratory II** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME 19.112, ME 19.208

Objective(s): *To study and practice the various operations that can be performed in capstan lathe, turret lathe, grinding machines and study of tool dynamometer to provide with the practical knowledge requisite in the core industries.*

List of Experiments

1. Study of capstan and turret lathe.
2. Job – I: One component on capstan lathe consisting of various operations.
3. Job – II: One component on turret lathe consisting of various operations
4. Study of surface grinder and centre less grinding machine.
5. Job – III: Surface Grinding.
6. Job – IV: Centre less grinding.
7. Study of Radial Drilling Machine.
8. Job V: To perform different drilling, reaming and boring operations on Radial Drilling Machine.
9. By using lathe tool dynamometer measure the cutting forces in all directions and calculate the following: a) Shear plane angle b) Coefficient of friction c) Power consumption.
10. By using the drill dynamometer, measure the torque and thrust in Drilling operation.
11. Cutting forces measurement during milling using milling dynamometer.

Outcome(s): *Upon completion of this course, the students can able to demonstrate and manufacture different types of components using the basic machine tools and also able to measures forces.*

ME 19.317 **Fluid Machinery Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME 19.204

Objective(s):

- *To impart the knowledge on pumps and turbines.*
- *To understand the basic principles of pneumatics and hydraulics.*
- *To identify pneumatic and hydraulic components and their functions*
- *To understand different types of turbine and its applications.*

List of Experiments:

1. To study and determine the performance characteristic of a Pelton wheel. **[6]**
   a. To plot a graph between inlet pressure, flow rate, torque and power against speed for a set of nozzle opening.
   b. To analyze the plotted graph between inlet pressure, flow rate, torque and power against speed for a set of nozzle opening.
   c. To determine the overall conversion efficiency of fluid to mechanical energy, over a range of condition.
   d. To compare experimental results with theoretical results
2. To study and determine the performance characteristics of Francis Turbine **[6]**
   a. At different flow rates
   b. At different guide vane setting
   c. To determine the overall conversion efficiency of fluid to mechanical energy
   d. To compare experimental results with theoretical results
3. To study and determine the performance characteristics of Centrifugal Pump. **[6]**
   a. To plot a graph between head v/s flow.
   b. To plot a graph between efficiency v/s flow
   c. To study non dimensional characteristics
   d. To demonstrate Cavitations
4. To study and determine the performance characteristics of positive displacement pumps **[8]**
   a. Piston pump
   b. Gear pump
   c. Vane pump
   d. Swash plate pump

Outcome(s):

- *Able to identify hydraulic problem.*
- *Able to learn any possible improvements on fluid machinery.*
- *Able to compute efficiency of various fluid machineries.*

ME 19.319 **Project I** **Credit: 2**

Prerequisite (s): -

Objective (s):

- *To provide students with the opportunity to apply the knowledge and skills acquired in their courses to a specific problem or issue.*
- *To allow students to extend their academic experience into areas of personal interest, working with new ideas, issues, organizations, and individuals.*
- *To encourage students to think critically and creatively about academic, professional, or social issues and to further develop their analytical and ethical leadership skills necessary to address and help solve these issues.*
- *To provide students with the opportunity to refine research skills and demonstrate their proficiency in written and/or oral communication* skills.

Each student / group has to work on research topics with hardware design and fabrication or advanced design and analysis projects. The projects must be in different specialization topics (Heat Power/Fluid Mechanics/Machine Design/ Applied Mechanics/ Production) from a list of topics offered by the department.

Students have to submit a project report to the respective supervisors and give a presentation of the work done in front of a specialization specific evaluation board. For each project, distribution of marks will be: 50 marks to be evaluated by the supervisor and 50 marks to be evaluated by the specialization specific evaluation board.

The project provides students with the opportunity to explore a problem or issue of particular personal or professional interest and to address that problem or issue through focused study and applied research under the direction of a faculty member. The project should demonstrate the student's ability to synthesize and apply the knowledge and skills acquired in his/her academic program to real-world issues and problems. This final project should affirm students' ability to think critically and creatively, to solve practical problems, to make reasoned and ethical decisions, and to communicate effectively.

Outcome(s):

- *Knowledge of discipline or content area*
- *Ability to think critically*
- *Ability to communicate effectively*
- *Ability to use contemporary technology*
- *Commitment to ethical and social responsibilities*
- *Commitment to learning as life-long endeavour*

ME 19.302 **I. C. Engines** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): ME 19.203, ME 19.204

Objective(s):

- *To teach students the fundamentals, operations, and performance of internal combustion engines and their different types.*
- *To provide students with the theoretical and experimental ability to operate, analyse, and design internal combustion engines.*
- *To study the thermodynamics, combustion, heat transfer, friction and other factors affecting engine power, efficiency and emissions*

1. **Introduction to I C Engine:** Two and four stroke engines, SI and CI engines, Valve timing diagram, Rotary engines, Stratified charge engine, Scavenging in 2 Stroke engines. **[9]**
   Spark Ignition Engines: Spark ignition engine mixture requirements, Carburetion, Theory of carburettor, SP and MPFI, Combustion in SI engine, Flame speed, Ignition delay, Abnormal combustion and it's control, combustion chamber design for SI engines.
2. **Compression Ignition Engines:** Combustion in CI engine, Ignition delay, Knock and its control, Combustion chamber design of CI engine, Turbocharging, Supercharging. **[6]**
3. **Engine Systems and Components:** Ignition systems- Battery, Magneto and Electronic, Lubrication systems, Engine starting system, Engine cooling system, Intake and exhaust system, Drive train- Cam shaft and Valves. **[7]**
4. **Pollutant Formation Control:** Pollutant, Sources and types, Nox formation, Hydrocarbon emission mechanism, Carbon monoxide formation, Particulate emissions, Effect of pollutant, Emission standards, Catalytic converters and particulate traps, Method of measurement **[12]**
   Alternate Fuels: Methanol, Ethanol, Hydrogen, Natural gas, Biogas, Bio diesel, Liquefied petroleum gas, Properties, suitability, Engine Modifications, Merits and Demerits.
5. **Performance Characteristic and Testing of I C Engine:** Standards for testing of I.C. Engine, Mean effective pressure, Mean effective pressure, indicated power, brake power, friction power, Methods to determine power and efficiencies, Variables affecting performance of engine, characteristic curves, heat balance sheet, Methods of improving engine performance. **[6]**

Outcome(s):

- *Demonstrate a basic understanding of different types of internal combustion engines and their operations.*
- *To analyze the ideal models of engine cycles.*
- *To understand the effect of supercharging and turbocharging on engine performance.*
- *To understand fuel-metering systems: carburetors and fuel injectors, in SI and CI engines.*

Text Books:

5. Ganesan V, "Internal combustion Engines", Tata McGraw Hill, 3rd Edition, 2007.
6. Mathur M. L. and Sharma R. P, "Internal Combustion Engines", Dhanpat Rai & Sons, 2005.

Reference Books:

1. Heywood John B, "Internal combustion Engines Fundamentals", McGraw Hill, 2nd Edition, 2018.
Pulkrabek W. W, "Engineering Fundamentals of the Internal Combustion Engine, Pearson Education Limited, 2nd Edition, 2013.

ME 19.304 **Refrigeration and Air Conditioning** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): ME 19.203, ME 19.305

Objective(s):

- *To understand the principles of refrigeration and air conditioning.*
- *To calculate the cooling load for human comfort & different applications.*
- *To select the right equipment for a particular application.*
- *To understand the effect of temperature and pressure on moist air.*

1. **Introduction:** Definition of refrigeration & air conditioning; Necessity; Methods of refrigeration; Unit of refrigeration; Coefficient of performance (COP). **[6]**
   Air Refrigeration System: Carnot refrigeration cycle; Temperature Limitations; Brayton refrigeration or the Bell Coleman air refrigeration cycle; Necessity of cooling the aero plane; Air craft refrigeration systems, Simple cooling and Simple evaporative types, Boot strap and Boot strap evaporative types, Regenerative type and Reduced Ambient type system, Comparison of different systems.
2. **Vapor Compression Refrigeration Systems:** Simple Vapor Compression Refrigeration systems-Limitations of Reversed Carnot cycle with vapor as the refrigerant; Analysis of VC cycle considering degrees of sub cooling and superheating; VC cycle on p-v, t-s and p-h diagrams; Effects of operating conditions on COP. **[11]**
   Multistage Vapor Compression Refrigeration Systems: Necessity of multistage compression, Compound VC cycle, Inter cooling with liquid sub –cooling and / or water inter cooler: Multistage compression with flash inter cooling and / or water inter-cooling; systems with individual or multiple expansion valves; Individual compression system with individual or multiple expansion valves.
3. **Vapor Absorption Refrigeration Systems:** Basic Systems, Actual COP of the System, Performance, Relative merits and demerits; Properties of aqua ammonia; Electrolux Refrigeration; **[6]**
   Refrigerants: Definition, Classification, Nomenclature, Desirable properties, Comparative study, secondary refrigerants, Introduction to eco-friendly Refrigerants.
4. **Psychrometry:** Properties of moist Air-Gibbs Dalton law, Specific humidity, Dew point temperature, Degree of saturation, Relative humidity, Enthalpy, Humid specific heat, Wet bulb temp., Thermodynamics wet bulb temp., Psychrometric chart; Psychrometry of air-conditioning processes, Mixing Process, Basic processes in conditioning of air; Psychrometric processes in air washer. **[7]**
5. **Air Conditioning:** Classification; factors affecting air conditioning systems; comfort air-conditioning system; winter air conditioning system; summer air-conditioning system; year round air conditioning; unitary air-conditioning system; central air conditioning system; room sensible heat factor; Grand sensible heat factor; effective room sensible heat factor; Inside design conditions; comfort conditions; components of cooling loads; internal heat gains; system heat gain: external heat gain; Transport air conditioning. **[10]**

Outcome(s):

- *Able to understand basic principles of refrigeration*
- *Able to understand simple and multiple vapour-compression cycle, gas refrigeration cycles and absorption cycles.*
- *Ability to understand the principles of thermal comfort & ventilation*
- *An ability to use refrigerant property tables and psychrometric chart.*

Text Books:

2. Arora C. P., "Refrigeration & Air conditioning", Tata McGraw-Hill, New Delhi, 7th Edition, 2006.

Reference Books:

1. Prasad M, "Refrigeration & Air conditioning", New Age International (P) Limited, New Delhi, 3rd Edition, 2006.
2. Rajput, R. K. Refrigeration And Air-Conditioning. SK Kataria & Sons, 1st Edition, 2009.

ME 19.306 **Metrology and Quality Control** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): PY 19.101

Objective(s):
- *Describe various instruments and their characteristics.*
- *Solve the problems on angle measurements.*
- *Explain the types of control chart to use, depending on given data.*
- *Solve problems based on quality control and acceptance sampling.*

1. **Introduction to Metrology:** Principles of Engineering metrology, Measurement standards, Types and sources of errors, Accuracy and Precision, introduction to uncertainty in measurement, linear and angular measuring instruments and their applications. **[8]**

2. **Form Measurement:** Principles and Methods of straightness – Flatness measurement – Thread measurement, Gear measurement, Interferometry, Types of Interferometer, Flatness, Roundness measurement - Applications. Control Gauges and Comparators. Surface texture measurement with stylus type instruments, Tomlinson surface meter, Talysurf and profilograph. **[8]**

3. **Advancements in Metrology**: Introduction & applications of: Co-ordinate Measuring Machine, Universal Measuring Machine, Laser in Metrology, Automatic inspection system, Machine vision for online-offline inspection. **[4]**

4. **Quality Management:** Concept of Quality and quality control, elements of quality & its growth, purpose, setup, policy & objective, factors controlling & quality of design and conformance, balance between cost and quality and value of quality. Specification of quality, planning through trial lots and for essential information. QMS (ISO 9000, TS16949, ISO14000), Quality Audit, FMECA, Zero defects, TPM. Six Sigma. **[10]**

5. **Statistical Quality Control:** Importance of statistical method in quality control, measuring of statistical control variables and attributes. Measurement/inspection, different types of control charts (X Bars, R, P. charts) and their constructions and their application. **[10]**
   Acceptance Sampling: Sampling inspection & percentage inspection, basic concept of sampling inspection, operating characteristic curves, conflicting interests of consumer and producer, producer and consumers risks, AWQL, LTPD, ADGL, single and double sampling plans.

Outcome(s): *After successful completion of this course the student will be able to:*
- *Make various comparative measurements.*
- *Understand fundamentals of gears, thread measurements and measurements of surface finish.*
- *Control chart techniques in quality control.*
- *Purpose and use of sampling and its benefit.*

Text Books:
1. Anand Bewoor & Vinay Kulkarni, “Metrology and Measurement”, McGraw –Hill, 2009.
2. Mahajan M., “Statistical quality Control”,Dhanpat Rai & Sons, Latest Edition.

Reference Books:

1. Jain R. K, “Engineering Metrology”, Khanna Publishers, Latest Edition.
2. Gupta I. C, “Engineering Metrology”, Dhanpatrai Publications, Latest Edition

RM 19.101 **Research Methodology** **Total Lectures: 40**
3-0-0-3

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

Prerequisite(s): Communication Skills

1.	**Introduction:** Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches,ResearchProcess,ValidityandReliabilityin Research.	[6]
2.	**Problem Formulation:** Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps.	[10]
3.	**Research Design:** Research Framework, Meaning & Significance of Research Designs, Features of a good Research Design, Types of Research Design.	[10]
4.	**Data Analysis and Simulation Tool:** Types of Data, Sources of Data, Methods of Collecting Data, Data Presentation Techniques. Methods of Data Analysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, Multi Sim.	[12]
5.	**Report Writing:** Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy.	[2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:

1. R. Pannershelvam, "Research Methodology" Prentice Hall India, New Delhi, 2nd Edition, 2013.
2. C. R. Kothari, "Research Methodology: Methods and Techniques", New Age International (p) Limited, Publishers New Delhi, 4nd edition, 2018.

2. Mark Saunders, "Research Methods for Business Students" Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, "Business Research Methods" Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

ME19.308 **Design of Machine Elements -II** **Total Lecture 40**
Credit: 3-0-0-3

Prerequisite(s) ME19.101, ME 19.201, ME 19.206

Objective(s)

- *Develop an ability to apply knowledge of mathematics, science, and engineering*
- *To develop an ability to design a system, component, or process to meet desired needs within realistic constraints.*
- *To develop an ability to identify, formulate, and solve engineering problems.*
- *To develop an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.*

1. **Design of Gears:** Different types of gears – spur, helical, bevel and worm gears, Beam strength, wear strength, dynamics loads on gears, estimation of module based on beam strength and wear strength, Thermal consideration design of worm gears. **[14]**
2. **Friction Clutches and Brakes:** Different types of clutches, torque transmitting capacity for multidisc clutches, cone clutches, centrifugal clutches, Friction materials for clutches lining, energy equation and thermal considerations. Different types of brakes, Energy equations, Design of block brake, Design of band brake, Design of disc brake, Thermal consideration. **[9]**
3. **Rolling Contact Bearings:** Types of rolling contact bearings, Selection of bearing type, Static load carrying capacity, Equivalent bearing load, Load life relationship, selection of bearing life, Selection of bearing from manufacture's catalogue, Selection of taper roller bearings, Design of cyclic loads and speeds lubrication of bearing contact bearings, Mounting of bearings. **[6]**
4. **Sliding Contact Bearing:** Basic mode of lubrication, Petroff's equation, Mckee's Investigation, Reynold's equation, Raimondi Boyd method, Bearing design- selection of parameters, Bearing materials and construction, selection of lubricant. **[6]**
5. **Miscellaneous Machine Elements:** Engine crank shaft, connecting rod, cylinder head, pressure vessels. **[5]**

Outcome(s)

- *Be able to analyze the stress and strain on mechanical components; and understand, identify and quantify failure modes for mechanical parts.*
- *Demonstrate knowledge on machine elements used in machine design; design machine elements to withstand the loads and deformations for a given application, while considering additional specifications.*
- *Be able to approach a design problem successfully, taking decisions when there is not a unique answer.*

Text Books:

8. Shigley, Joseph E., and Charles R. Mischke. "Machine Engineering Design.", McGraw-Hill Book Company, 1989

9. Spotts, Merhyle Franklin. "Design of machine elements". Vol. 730. Englewood Cliffs: Prentice-Hall, 1985.

ME 19.310 **Renewable Energy Technology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): ME 19.203, ME 19.305

Objective(s):

- *To familiarize students with the various renewable energy sources.*
- *Awareness of the potential of renewable energy technologies, for sustainability in particular.*
- *Suitable applications of solar, wind, biomass, hydro, geothermal and ocean energy.*
- *Awareness and development of suitable social and economic models with implications.*

1. **Importance and applicability of renewable energy sources**: Energy Resources and Their Utilization, Environmental Aspects of Electric Energy Generation. **[8]**
   Technology and economics of solar thermal systems: Solar Radiation and Its Measurement, Solar Thermal Energy Collectors, Solar Thermal Energy Conversion Systems. Solar Photovoltaic System
2. **Technology and economics of wind power:** Types of turbines and their aerodynamics. Theories of wind turbines. WECS components and state of art Feasibility of large wind turbines. Wind Farms. **[10]**
   Technology and economics of small hydro: Types and theories of small, mini, and micro hydro turbines. Hydroelectric systems and advantages at small hydro levels. Conversion apparatus and feasibility.
3. **Technology and economics of geothermal, wave and tidal energy systems:** Geothermal Energy, Wave and tidal turbines. Harnessing wave energy, applicability and feasibility, Electric Power Generation by Ocean Energy. **[8]**
4. **Technology and economics of biogas and biopower:** Biofuel production and gasification. Biopower generation methods with technical details: steam, combined cycle, cogeneration. **[6]**
5. **Fuel Cells, Hydrogen and Hybrid systems:** Fuel Cells, Hydrogen Energy System, Hybrid Systems. **[8]**
   Environmental Impact: Environmental impacts of renewable energy sources and remedial measures. Global Climate Change.

Outcome(s): *Upon successful completion of this course, the student will be able to:*

- *Identify appropriate renewable technology for application.*
- *Implement concepts of clean development mechanism (CDM) and carbon credits.*
- *Utilize energy management and renewable energy systems in everyday life.*
- *Select eco-friendly, cost effective, energy efficient alternatives to unsustainable practices.*

Text Books:

1. Rai, G. D., "Non-Conventional Energy Sources", Khanna Publication, First Edition, 2010.
2. Tiwari, G. N. and Ghosal, M. K., Renewable energy resources: basic principles and applications. Alpha Science International, First Edition, 2005.

Reference Books:

1. Khan, B.H., "Non-Conventional Energy Resources", Tata McGraw-Hill, First Edition, 2006.
2. Kothari DP, Singal KC, Ranjan R. Renewable energy sources and emerging technologies. PHI Learning Pvt. Ltd.;2nd Edition 2011.

ME 19.316 **I.C. Engines Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME 19.203, ME 19.204

Objective(s):

- *To provide knowledge on testing of properties of fuels and lubricating oils*
- *To demonstrate and conduct experiments, interpret and analyse data and report results of IC Engine testing*
- *To make the student understand about the various components of petrol engine and diesel engine by dismantling and assembling the parts like carburettor, alternator, water pump etc.*

List of Experiments:

1. To Study the performance characteristics of single cylinder four stroke petrol engine. **[6]**
   a. To investigate torque speed and power relationship
   b. To study mean effective pressure
   c. To plot different engine performance curve
   d. To determine volumetric and thermal efficiency
2. To Study the performance characteristics of single cylinder four stroke diesel engine. **[8]**
   a. To investigate torque speed and power relationship
   b. To study mean effective pressure
   c. To plot different engine performance curve
   d. To determine volumetric and thermal efficiency
   e. To plot a Willans line
3. To Study the performance characteristics of Reciprocating Compressor **[6]**
   a. To investigate compressor performance with variation in pressure and speed
   b. To determine mechanical, volumetric and isothermal efficiency of compressor
   c. To investigate energy balance and thermodynamics of compressor
4. To Study the performance characteristics of Centrifugal Compressor **[6]**
   a. To investigate compressor performance with variation in speed.
   b. To investigate non dimensional characteristics.
   c. To compare the performance of centrifugal compressor with ideal system

Outcome(s):

- *Compute the property of fuels and lubricating oils using suitable tests.*
- *Demonstrate the performance of internal combustion engines and air compressors.*
- *Interpret the emission characteristics of internal combustion engines.*

ME 19.318 **Design of Machine Element Practice II** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): ME19.101, ME 19.201, ME 19.206

Objective(s):

- *Develop an ability to apply knowledge of mathematics, science, and engineering*
- *To develop an ability to design a system, component, or process to meet desired needs within realistic constraints.*
- *To develop an ability to identify, formulate, and solve engineering problems.*
- *To develop an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.*

List of Experiments:

1. To design and draw according to data given Spur Gears. **[2]**
2. To design and draw according to data given Helical Gears **[2]**
3. To design and draw according to data given Bevel Gears. **[2]**
4. To design and draw according to data given Worm Gears. **[4]**
5. To design and draw according to data given Friction Clutch **[4]**
6. To design and draw according to data given different types of brakes. **[4]**
7. Selection and drawing of Rolling Contact Bearings **[4]**
8. Design and drawing of Crankshaft and Conne **[4]**

Outcome(s):

- *Be able to analyze the stress and strain on mechanical components; and understand, identify and quantify failure modes for mechanical parts.*
- *Demonstrate knowledge on machine elements used in machine design; design machine elements to withstand the loads and deformations for a given application, while considering additional specifications.*
- *Be able to approach a design problem successfully, taking decisions when there is not a unique answer.*

ME 19.320 Metrology and Quality Control Laboratory Total Hours: 26
Credit: 0-0-2-1

Prerequisite(s): PY 19.111

Objective(s) *To demonstrate the theoretical concepts taught in Metrology and Quality Control. To understand and use various measuring tools and calibration of various measuring devices*

List of Experiments

1 To measure gaps with help of slip gauges.

2 Measurement of angle/taper using a sine bar.

3 Measurement of chordal thickness of Gear tooth by Gear tooth vernier calliper.

4 Use of three-wire method to determine the effective diameter of external threads.

5 Measurement of flatness and roundness of a given machine/ground/lapped flat and round surface respectively using dial gauge.

6 Measurement of screw thread elements by tool Makers microscope and Inspection of various elements of screw thread by optical projector.

7 To measure surface roughness of a given test piece with the help of surface profilometer or surface roughness tester.

8 Study & Use of Control charts

9 Study of sampling plans.

Outcome(s): *Upon completion of this course, the students can able to use measuring tools such as Sine Bar, Sine Center, Bevel Protractor, Tool Maker Microscope, Gear Tooth Micrometer, Optical Flats etc.*

ME 19.322 **Project II** **Credit: 2**

Prerequisite (s): -

Objective (s):

- *To provide students with the opportunity to apply the knowledge and skills acquired in their courses to a specific problem or issue.*
- *To allow students to extend their academic experience into areas of personal interest, working with new ideas, issues, organizations, and individuals.*
- *To encourage students to think critically and creatively about academic, professional, or social issues and to further develop their analytical and ethical leadership skills necessary to address and help solve these issues.*
- *To provide students with the opportunity to refine research skills and demonstrate their proficiency in written and/or oral communication* skills.

Each student / group has to work on research topics with hardware design and fabrication or advanced design and analysis projects. The projects must be in different specialization topics (Heat Power/Fluid Mechanics/Machine Design/ Applied Mechanics/ Production) from a list of topics offered by the department.

Students have to submit a project report to the respective supervisors and give a presentation of the work done in front of a specialization specific evaluation board. For each project, distribution of marks will be: 50 marks to be evaluated by the supervisor and 50 marks to be evaluated by the specialization specific evaluation board.

The project provides students with the opportunity to explore a problem or issue of particular personal or professional interest and to address that problem or issue through focused study and applied research under the direction of a faculty member. The project should demonstrate the student's ability to synthesize and apply the knowledge and skills acquired in his/her academic program to real-world issues and problems. This final project should affirm students' ability to think critically and creatively, to solve practical problems, to make reasoned and ethical decisions, and to communicate effectively.

Outcome(s):

- *Knowledge of discipline or content area*
- *Ability to think critically*
- *Ability to communicate effectively*
- *Ability to use contemporary technology*
- *Commitment to ethical and social responsibilities*
- *Commitment to learning as life-long endeavour*

ME 19.401 **Automobile Engineering** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): ME 19.302

Objective(s):
- *To identify various automotive systems & subsystems*
- *To explain working & construction of various automotive systems & subsystems.*

To introduce students to engine auxiliary systems like heating, ventilation and air-conditioning.

1. **Introduction** - Introduction of automobile, classification of automobile, parts of an automobile, performance of automobile, tractive efforts. Chassis - Introduction, classification of chassis, frame types & nomenclature of car body. **[4]**
2. **Fuel Supply, Lubrication and Cooling System -** Fuel feed system in spark ignition engine, types, gravity & pump feed system, layout of spark ignition engine fuel pump system, function of each component. Fuel supply system in compression ignition engine, layout, components, function, types, working & line diagram of common rail, individual pump system, fuel injectors, single orifice, multiple orifices. Engine friction, lubrication system, areas of heat flow in engines, temperature distribution and temperature profiles, cooling air and water requirements, cooling systems. **[10]**
3. **Suspension, Wheels and Tyres** - Introduction, Macpherson struts, Ball joint and torsion bars, Electronic ride control and air suspension systems, Sonar shock absorber and active suspension system. Introduction, Requirement & types of wheels , wheel balancing, wheel alignment
   Introduction, requirements & types of tyre, tyre construction, tyre materials, tyre shape, tread patterns, tyre inflation pressure, causes of wear. **[10]**
4. **Steering, Gears and Controls -** Purpose, function, general arrangements of steering systems, steering gears, steering ratio, drag link, power steering. Clutch- Types, necessity, construction & working, torque-converters. Gear Box- Types of gear box, construction & working of constant mesh gear box, synchromesh gear box, propeller shaft & differential, Axle- Type of rear axles, front axles & their applications, stub axles **[10]**
5. **Automotive Electrical & Auxiliary Systems -** Electrical circuit component, symbol and wiring diagrams, battery, starting motor, dynamo, alternators, lighting. Auxiliary systems like heating, ventilation and air-conditioning. **[6]**

Outcome(s):
- *Develop non-working models of automobile sub- systems*
- *Formulate steering, braking and suspension systems*
- *Select a suitable conventional and automatic transmission system*
- *Identify the usage of automotive systems & hybrid vehicles.*

Text Books:
1. William. H. Crouse, "Automotive Mechanics", McGraw-Hill, 10th Edition 2006.
2. Singh Kirpal, "Automobile Engineering", Vol.1&2, Standard Publications, 2008.

Reference Books:
1. Sethi H.M., "Automotive Technology", Tata McGraw-Hill, 1st Edition 2001.
2. Duffy James E., Modern Automotive Technology, Goodheart-Willcox Company, 9th Edition 2016.

ME 19.403 **Composite Materials** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite ME 19.205

Objectives:

- *To provide a basic understanding of the mechanical and physical properties of polymeric, metallic, and ceramic composites.*
- *To understand the fundamentals of composite material strength and its mechanical behavior.*
- *Understanding the analysis of fiber reinforced Laminate design for different combinations of plies with different orientations of the fiber.*
- *To obtain knowledge and skills needed for the optimum design and manufacture of advanced composite components.*

1 **Introduction to Composite Materials:** Introduction, Definition of composite material, Classification based on matrix and topology, Constituents of composites, Interfaces and Interphases, Distribution of constituents, Nano-composites. **[8]**
Reinforcements: Fibres-Glass, Silica, Kevlar, carbon, boron, silicon carbide and boron carbide. Fibres, Particulate composites, Polymer composites, Thermoplastics,
Thermosets, Metal-matrix and ceramic composites

2. **Fabrication of Composites :** Fabrication of Metal Matrix Composites: Commonly used matrices, Basic Requirements in Selection of constituents, solidification processing of composites - XD process, Spray processes - Osprey Process, Rapid solidification processing, Dispersion Processes - Stir-casting & Compocasting, Screw extrusion, Liquid-metal impregnation technique – Squeeze casting, Pressure infiltration, Lanxide process), Synthesis of In situ Composites; Fabrication of Polymer Matrix Composites - Commonly used Matrices Basic Requirements in selection of Constituents, Moulding method, Low pressure closed moulding, pultrusion, Filament winding, Fabrication of ceramic matrix composites - Various techniques of vapour deposition, Liquid phase method and Hot pressing **[8]**

3. **Secondary Processing and Joining of Composite :** Forging and extrusion of composites – critical issues, dynamic recovery and dynamic recrystallization, mechanical properties; Induction Heating, Fusion Bonding, Ultrasonic welding, Gas tungsten arc welding, Gas metal arc welding, Resistance spot & seam welding, Resistance brazing, Resistance spot joining, Resistant spot brazing, Resistance welding of thermoplastic-graphite composite, Weld bonding, Brazing of MMC **[8]**

4. **Performance of Structural Composites:** Prediction of composite properties, tensile strength of fibre reinforced composites, modulus of elasticity, poission's ratio, density, tribological and thermal properties. Influence of environmental effects such as elevated temperature, moisture etc. on composite properties Laminated plate model, Eshelby's models and Other models. **[8]**
Performance of Composite in Non-structural Applications: Composites in Electrical, Superconducting and Magnetic Applications, Nano-composite devices.

5. **Characterization of Composites:** Control of particle/fibre and porosity content, particle/fibre distribution, Interfacial Reaction of matrix-reinforcing component, Coating of reinforcing component, Strength analysis. **[8]**
Industrial Application of Composite Materials : Civil constructions of structures/panels, Aerospace industries, Automobile and other surface transport industries, Packaging industries, House hold and sports components etc.

outcome:

- *Discuss the benefits and disadvantages of using composites in various structures.*
- *Select the most appropriate manufacturing process for fabricating composite components*
- *Demonstrate understanding of the different materials (fibres, resins, cores) used in composites*
- *Calculate the elastic and strength properties of unidirectional laminates using micromechanics theory*
- *Describe the fracture, fatigue and impact performance of composites*

Text Books:

1. Krishan K. Chawla, "Composite Materials Science and Engineering" , Springer, 2009
2. Mukhopadhyay.M, "Mechanics of Composite Materials and Structures", University Press, India, 2004

References Book :

1. Mallick, P.K., "Fiber – Reinforced Composites: Materials, Manufacturing and Design", Maneel Dekker Inc, 1993
2. Agarwal, B.D., and Broutman L.J., "Analysis and Performance of Fiber Composites", John Wiley and Sons, New York, 1990
3. R. M. Jones, "Mechanics of Composite Materials", Mc Graw Hill Company, New York, 1975

ME 19.405 **Robotics Engineering** **Total Lecture 40**
Credit: 3-0-0-3

Prerequisite(s) EC 19.101

Objective(s)

- *To provide fundamental knowledge of the various sub-disciplines such as kinematics, dynamics, controls, sensors, actuators, etc.*
- *To provide adequate background in both analysis and design of robots.*
- *To provide basic understanding of application of robotics in various applications.*
- *To understand economics behind application of robotics*

1. **Introduction**: Classification of robots, basic robot components, manipulator end effectors, controller, power unit, sensing devices, specification of robot systems, accuracy precision and repeatability. **[8]**
Robot Motion Analysis: Manipulator Kinematics, Inverse Manipulator Kinematics, Manipulator Dynamics-Newton-Euler and Lagrange formulation, Trajectory generation.

2. **Robotic sensing devices**: Position, velocity and acceleration sensors, proximity and range sensors, touch and slip sensors, tactile sensors, force and torque sensors. **[8]**

3. **Robotic vision system**: Imaging components, picture coding, object recognition, training and vision systems, and review of existing vision systems. **[8]**

4. **Robotics programming:** Methods of robot programming, types of programming, robotics programming languages, artificial intelligence. **[8]**

5. **Robot applications**: Material transfer and machine loading /unloading, processing applications, welding and painting assembly and inspection, future robotic applications and related technologies developments. **[8]**
Economics analysis of robotics: Robotics project analysis, life cycle costs, data required for economic analysis, methods of economic analysis.

Outcome(s)

- *Be able analyze and design robot for automation purpose.*
- *Be able to understand concept of sensors and actuators. Identify sensors and actuators required for specific applications.*
- *Understand programming principles for robot control.*
- *Implement hardware and software to build a robot that can perform a task.*

Text Books:

1. M.P. Groover, M.Weiss, P.N.Nagal, and N.G Odrey, Industrial Robotics, McGraw Hill. 2nd Edition 2012
2. K.S. Fu, R.S. Gonzalez, C.S.G. Lee, Robotics Control, Sensing Vision and Intelligence, Tata McGraw Hill Publishing Company Ltd. 2nd Edition 2008.

Reference Books:

1. Harry H. Poole, "Fundamentals of Robotics Engineering", Springer Science & Business Media, 2nd Edition 2012
2. Zhang D, Wei B, editors. "Mechatronics and Robotics Engineering for Advanced and Intelligent Manufacturing". Springer International Publishing; 2017.

ME 19.407 **Vibration Engineering** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): ME 19.301, MA 19.201

Objective(s):

- *Formulate mathematical models of problems in vibrations using Newton's second law or energy principles.*
- *Perform detailed analysis of the response of one and two degree of freedom systems in both free and forced vibration regimes.*
- *Explain the interaction of mechanical vibrations with humans.*
- *Perform vibration design of simple mechanical systems that can be approximated by one, two, or infinite degree of freedom systems.*

1. **Introduction:** Basic Concept, Classification of vibrations and vibrating systems, Oscillating motion like harmonic motion, periodic motion and vibration terminology. **[10]**
   Free vibration of single degree-of-freedom system: Vibration model, Equation of motion, natural frequency, viscously damped free vibration, Logarithmic decrement, Coulomb damping.
   Harmonically forced vibration of single degree-of-freedom system: Forced harmonic vibration, vibration isolation, rotating unbalance, whirling of rotating shaft, support motion, Structural damping.
2. **Two Degree Freedom systems:** Introduction, Principal modes, Double pendulum, Torsional system with damping, coupled system, undamped dynamic vibration absorbers **[6]**
3. **Multi-degree-of-freedom system:** Free vibration of undamped systems, Torsional systems, Co-ordinate coupling and principal Co-ordinates, forced vibration of damp free and damped systems **[8]**
4. **Numerical technique to find Natural frequencies:** Rayleigh's method, Horzer's method, Matrix Iteration method, energy method. **[8]**
5. **Vibration analysis of continuous system:** Transverse vibration of strings, longitudinal vibration of rods, Torsional vibration of shafts, transverse vibration of beams. **[8]**

Outcome(s):

- *Ability to analyze the mathematical model of a linear vibratory system to determine its response.*
- *Ability to solve for the motion and the natural frequency for free and forced vibration of a single degree of freedom damped or undamped system.*
- *Ability to obtain linear mathematical models of real life engineering systems*
- *Ability to solve vibration problems that contain multiple degrees of freedom.*

Text Books:

1. Bhave S., "Mechanical Vibrations: Theory and Practice", Pearson India Ltd., 1st Edition 2010.
2. S. S. Rao, "Mechanical Vibrations", Pearson-Prentice Hall, 5th Edition 2011.

Reference Books:

1. Gowda, "Mechanical Vibrations", Tata McGraw-Hill Education, 1st Edition 2012
2. G. K. Groover, "Mechanical Vibrations", Nem Chand, 2nd Edition 1972

ME 19.409 **Maintenance Engineering** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisites: ME 19. 307

Objective(s): *To make the students to explain the different maintenance categories like Preventive maintenance, condition monitoring and repair of machine elements.*

1. **Maintenance Planning:** Basic Principles of maintenance planning - Objectives and principles of planned maintenance activity Importance and benefits of sound Maintenance systems - Reliability and machine availability MTBF, MTTR and MWT - Factors of availability - Maintenance organization - Maintenance economics. **[8]**

2. **Preventive Maintenance:** Maintenance categories - Comparative merits of each category - Preventive maintenance, maintenance schedules, repair cycle - Principles and methods of lubrication - TPM. **[8]**

3. **Condition Monitoring:** Condition Monitoring - Cost comparison with and without CM - On-load testing and off-load testing Methods and instruments for CM - Temperature sensitive tapes - Pistol thermometers - wear-debris analysis. **[8]**

4. **Repair Methods for Machine Elements:** Repair methods for beds, slideways, spindles, gears, lead screws and bearings - Failure analysis Failures and their development - Logical fault location methods - Sequential fault location. **[8]**

5. **Repair Methods for Material Handling Equipment:** Repair methods for Material handling equipment - Equipment records -Job order systems-Use of computers in maintenance. **[8]**

Outcome: *Student will be able to Understand the principles, functions and practices adapted in industry for the successful management of maintenance activities.*

Text Books:

1. Srivastava S.K., Industrial Maintenance Management, S. Chand and Co. Latest Edition,

ME 19.411 **Turbomachinery** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): ME 19.303

Objective(s):

- *Teach students how to apply various understandings from other courses;*
- *Provide students with opportunities to apply basic flow equations;*
- *How to compare and chose machines for various operations*.

Introduction: Basic law and equations, dimensional parameters and their physical significance and specific speed. **[12]**

Energy Transfer in Turbomachine: General analysis of a turbomachine, energy transfer between fluid and rotor, degree of reaction.

Centrifugal Fans and Blowers: Types, stage and design parameters, flow analysis in impeller blades, volute and diffusers, losses, characteristic curves and selection, fan drives and fan noise. **[8]**

Centrifugal Compressor: Construction details, impeller flow losses, slip factor, diffuser analysis, and losses, performance curves. **[6]**

Axial Flow Compressor: Stage velocity diagrams, enthalpy-entropy diagrams, stage losses and efficiency, work done, simple stage design problems and performance characteristics. **[8]**

Axial and radial flow turbines: Stage velocity diagrams, reaction stages, losses and coefficients, blade design principles, testing and performance characteristics. **[6]**

Outcome(s): *Upon successful completion of this course, the student will be able to:*

- *Classify and explain the function of dimensionless number;*
- *Design Prototype from Model;*
- *Select Fluid Machines for Appropriate Operations;*
- *Applications of Thermodynamics Laws.*

Text Books:

3. Yahya S.H., Turbines, "Compressor and Fans", Tata McGraw-Hill, 4th Edition, 2011.

4. Venkanna B. K., "Fundamentals of Turbomachines", PHI Learning Pvt. Ltd., 1st Edition 2009

Reference Books:

3. Dixon S.I., "Fluid Mechanics and Thermodynamics of Turbomachinery", Butterworth-Heinemann , 6th Edition., 2010.

4. Shepherd, D.G, "Principles of Turbomachinery", Macmillan, 1995.

ME 19.413 **Work System Design** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisites: MA 19.204, ME 19.306

Objective: *The course should enable the students :*

- *To understand Concept of Industrial Engineering*
- *To learn various Industrial Engineering techniques*
- *To impart knowledge on Forecasting, Project management, Inventory, Scheduling & capacity planning with appropriate tools and techniques needed for understanding the operational situation.*

1. **Introduction to Industrial Engineering and Plant Location:** Relevance & importance of industrial engineering in industry. Productivity Management*:* Productivity measurement and improvement. Factors affecting plant location, Selection of plant site, Quantitative techniques of plant location decision **[4]**

2. **Plant Layout & Material Handling***:* Plant layout, Types of layout Principles of layout design, Methods for evaluation of a layout, Quantitative techniques of developing layouts, Manual assembly lines, line balancing problems way to improve line balancing. Group Technology, parts family, parts classification and coding, production flow analysis. Introduction to material handling. **[9]**

3. **Work study & Ergonomics:** Method study, micro - motion study and principles of motion economy. Work measurement: time study, work sampling, standard data, PMTS. Introduction to ergonomics and its scope in relation to work. **[10]**

4. **Forecasting & Capacity Planning:** Use and types of forecasting, Methods of forecasting, Definition of capacity, capacity planning, capacity requirement planning, Capacity available and required. **[8]**

5. **Materials Planning & Scheduling:** Inventories-types and classification; ABC analysis, economic lot size, EOQ model, leads time and reorder point, inventory control systems. Aggregate planning: definition, aggregate planning methods, Introduction to MRP and MRP-II. Loading, scheduling and sequencing, single processor scheduling, flow shop scheduling, job shop scheduling, scheduling criteria; Gantt chart. **[9]**

Outcome: *The students should be able to:*

- *Understand Concept of Industrial engineering and its role in industry.*
- *Be good team member and project leaders to carry out projects in companies.*

Text Books:
1. Khanna O P, "Industrial Engineering and Management", Dhanpat Rai Publications, Latest Edition.
2. Monks J. G, "Production/Operations Management", McGraw Hill, Latest Edition.

Reference Books:
1. Work Study, ILO, Geneva, Latest Edition.
2. Adam & Ebert, "Productions & Operations Management", PHI, Latest Edition.

ME 19.415 **Mechatronics** **Total Lecture 40**

Credit: 3-0-0-3

Prerequisite(s) EC 19.101

Objective(s)

- *To study the definition and elements of mechatronics system.*
- *To learn how to apply the principles of mechatronics for the development of productive and efficient manufacturing systems.*
- *To study the hydraulic and pneumatic systems employed in manufacturing industry.*

1. **Introduction**: Definition of Mechatronics, Mechatronics in manufacturing, Products, and design. Comparison between Traditional and Mechatronics approach. Review of fundamentals of electronics. Data conversion devices, sensors, micro sensors, transducers, signal processing devices, relays, contactors and timers. Microprocessors controllers and PLCs. **[12]**
2. **Drives:** stepper motors, servo drives. Ball screws, linear motion bearings, cams, systems controlled by camshafts, electronic cams, indexing mechanisms, tool magazines, transfer **[8]**
3. **Hydraulic systems**: flow, pressure and direction control valves, actuators, and supporting elements, hydraulic power packs, pumps. Design of hydraulic circuits. **[8]**
4. **Pneumatics:** production, distribution and conditioning of compressed air, system components and graphic representations, design of systems. Description **[6]**
5. Description of PID controllers. CNC machines and part programming. Industrial Robotics. **[6]**

Outcome(s)

- *Be able to analyze and design mechatronics system used for automation.*
- *Demonstrate knowledge on basic electronics used in manufacturing systems.*
- *Be able to design hydraulic systems for automating manufacturing systems.*
- *Be able to design pneumatic systems for automating manufacturing systems.*

Text Books:

1. HMT ltd. “Mechatronics”, Tata Mcgraw-Hill, New Delhi, 1988.
2. J. Musa, “Fundamentals of Mechatronics”, 1st Edition, Cengage Learning, 2012.

Reference Books:

2. T.O. Boucher, “Computer automation in manufacturing - an Introduction”, Chappman and Hall, 1996
3. R. Iserman, “Mechatronic Systems: Fundamentals”, Springer, 1st Edition, 2005

ME 19.417 **Gas Turbine and Jet Propulsion** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): ME 19.303

Objective(s):

- *Provide awareness and emphasis on the importance of f low physics that mechanical engineers are likely to encounter in the range of science and industry careers they follow.*
- *Understand compressible fluid flow.*
- *Learn the computational models of fluid flow*
- *Create an awareness of turbulent flow and its significance in industry*

1. **Compressible Flow Fundamentals:** Energy and momentum equations for compressible fluid flows, various regions of flows, reference velocities, stagnation state, velocity of sound, critical states, Mach number, critical Mach number, types of waves, Mach cone, Mach angle, effect of Mach number on compressibility. **[8]**
2. **Flow Through Variable Area Ducts:** Isentropic flow through variable area ducts, T-s and h-s diagrams for nozzle and diffuser flows, area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles. **[8]**
3. **Low Through Constant Area Ducts**: Flow in constant area ducts with friction (Fanno flow) - Fanno curves and Fanno flow equation, variation of flow properties, variation of Mach number with duct length. Isothermal flow with friction in constant area ducts.
   Flow in constant area ducts with heat transfer (Rayleigh flow), Rayleigh line and Rayleigh flow equation, variation of flow properties, maximum heat transfer. **[8]**
4. **Normal Shock:** Governing equations, variation of flow parameters like static pressure, static temperature, density, stagnation pressure and entropy across the normal shock, Prandtl - Meyer equation, impossibility of shock in subsonic flows, flow in convergent and divergent nozzle with shock, normal shock in Fanno and Rayleigh flows, flow with oblique shock (elementary treatment only). **[8]**
5. **Jet Propulsion:** Aircraft propulsion, types of jet engines, energy flow through jet engines, study of turbojet engine components-diffuser, compressor, combustion chamber, turbine and exhaust systems, performance of turbojet engines, thrust, thrust power, propulsive and overall efficiencies, thrust augmentation in turbojet engine, ram jet and pulse jet engines, Rocket propulsion, rocket engines thrust equation, effective jet velocity specific impulse, rocket engine performance, solid and liquid propellants, comparison of different propulsive systems. **[8]**

Outcome(s):

- *Solve simple one dimensional flow problems by making appropriate assumptions and by applying sensible boundary conditions.*
- *Solve simple problems in one dimensional isentropic and non-isentropic flow.*
- *Qualitatively appreciate the complexity of turbulence and the need for computational models for turbulent flow*
- *Assess flow contexts, be aware of the types of behavior that may occur, and know where to seek further information to predict behavior.*

Text Books:

1. Rathakrishnan.E, “Gas Dynamics”, Prentice Hall of India, New Delhi, 2009
2. Zucker RD, Biblarz O. Fundamentals of gas dynamics. John Wiley & Sons; 2002.

Reference Books:

1. Y.A.Cengel & J.M.Cimbala, Fluid Mechanics: Fundamentals & Applications, 1st Ed (2006) McGraw-Hill.
2. Patrich.H. Oosthvizen, William E.Carscallen, Compressible fluid flow, McGraw-Hill,1997

ME 19.421 **Capstone Project I** **Credit: 2**

Prerequisite (s): -

Objective (s):

- *To provide students with the opportunity to apply the knowledge and skills acquired in their courses to a specific problem or issue.*
- *To allow students to extend their academic experience into areas of personal interest, working with new ideas, issues, organizations, and individuals.*
- *To encourage students to think critically and creatively about academic, professional, or social issues and to further develop their analytical and ethical leadership skills necessary to address and help solve these issues.*
- *To provide students with the opportunity to refine research skills and demonstrate their proficiency in written and/or oral communication* skills.

Each student / group has to work on research topics with hardware design and fabrication or advanced design and analysis projects. The projects must be in different specialization topics (Heat Power/Fluid Mechanics/Machine Design/ Applied Mechanics/ Production) from a list of topics offered by the department.

Students have to submit a project report to the respective supervisors and give a presentation of the work done in front of a specialization specific evaluation board. For each project, distribution of marks will be: 50 marks to be evaluated by the supervisor and 50 marks to be evaluated by the specialization specific evaluation board.

The project provides students with the opportunity to explore a problem or issue of particular personal or professional interest and to address that problem or issue through focused study and applied research under the direction of a faculty member. The project should demonstrate the student's ability to synthesize and apply the knowledge and skills acquired in his/her academic program to real-world issues and problems. This final project should affirm students' ability to think critically and creatively, to solve practical problems, to make reasoned and ethical decisions, and to communicate effectively.

Outcome(s):

- *Knowledge of discipline or content area*
- *Ability to think critically*
- *Ability to communicate effectively*
- *Ability to use contemporary technology*
- *Commitment to ethical and social responsibilities*
- *Commitment to learning as life-long endeavour*

ME 19.402 **Manufacturing Management** **Total Lecture 40**
Credit: 3-0-0-3

Prerequisite(s) ME 19.306, ME 19.413

Objective(s) *To introduce the concepts of flexible manufacturing system, CIM, lean manufacturing, supply chain management, six sigma and sustainable manufacturing.*

1. **Flexible Manufacturing System & CIM:** Introduction, components of FMS machines, part movement system, work stations, system controller, planning and control hierarchy, system design, system set up, and flexible assembly system. Introduction to computer integrated manufacturing. **[8]**

2. **Lean and JIT:** Evolution of Mass production, Traditional vs. Mass production, Evolution of Toyota (Lean) Production System, JIT, pull and push systems of production; Kanban system. Introduction to ERP. **[10]**

3. **Supply Chain Management (SCM)**: Introduction, concept of logistics management, concept of supply management and SCM core competency, value chain elements of supply chain efficiency, flow in supply chains, key issues in supply chain management, decision phases in supply chain, supply chain integration process, supply chain competitive strategy and supply chain strategies, uncertainties in supply chain supply chain drivers. **[10]**

4. **Six Sigma Methodology:** Need for Six Sigma, Six Sigma Team, DMAIC Methodology: Define, Measure, Analyze, Improve and Control, Lean Six Sigma **[6]**

5. **Sustainability through Green Manufacturing Systems:** Concept of sustainability, Green manufacturing technique, Synchronous Manufacturing. **[6]**

Outcome(s) *The students will be able to design manufacturing systems which will be environmental friendly.*

Text Books:
1. Mikell P. Groover, "Automation, Production Systems, and Computer – Integrated Manufacturing", 3rd Ed., PHI Learning Pvt. Ltd., New Delhi, 2009.
2. Design and Analysis of Lean Production Systems, Ronald G. Askin & Jeffrey B. Goldberg, John Wiley & Sons, 2003

Reference Books:
1. Sunil Chopra & Peter Meindl, "Supply Chain Management, Strategy, Planning, and Operation ", 2nd Edition, PHI, 2004
2. John Nicholas. Competitive Manufacturing Management - Continuos Improvement, Lean Production, and Customer-Focused Qualities, McGraw-Hill International Editions.

ME 19.404 **Finite Elements Method** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): MA 19.201, ME 19.201, ME 19.204, ME 19.305

Objective(s):

- *To equip the students with the Finite Element Analysis fundamentals.*
- *To introduce basic aspects of finite element technology, including domain discretization, polynomial interpolation, application of boundary conditions, assembly of global arrays, and solution of the resulting algebraic systems.*
- *Develop finite elements formulations of engineering problems from the variety of application areas including stress, heat transfer and vibration analysis.*

1. **Introduction:** Introduction to finite difference method and finite elements method, Advantages and limitations, Mathematical formulation of FEM, Different approaches in Finite Element Method - Direct Stiffness approach, simple examples, Variational approach, Elements of variational calculus - Principle of minimum potential energy, Rayleigh Ritz method, Weighted Residual methods, Point Collocation method, Galarkin method - Steps involved in FEM. **[10]**
2. **Types of Elements Used:** Interpolation Polynomials, Linear elements Shape function, Analysis of axial rod problem and simply supported beam. Quadratic element, nodal approximation, development of shape functions, element matrices and vectors, example problems, extension to plane truss, development of element equations, assembly, element connectivity, global equations, solution methods, beam element, nodal approximation, shape functions, element matrices and vectors, assembly, solution, example problems. **[6]**
3. **FEM Formulation of Solid Mechanics:** 2-D problem of shaft; Truss element analysis of pinned truss, Plane stress/strain problems, Axi-symmetric problems, thin plate problems; Vibration of shafts & beams. **[8]**
4. **FEM Formulation of Heat Transfer:** Introduction, Steady state heat condition, longitudinal deformation of a rod, unsteady state problem in one and two dimension. **[8]**
5. **FEM Formulation of Fluid Mechanics:** Basic equation of fluid mechanics, inviscid and incompressible fluids, viscous and non-Newtonian flows **[8]**

Outcome(s):

- *Identify mathematical model for solution of common engineering problems.*
- *Derive element matrix equation by different methods by applying basic laws in mechanics and integration by parts.*
- *Solve structural, thermal, fluid flow problems*
- *Use professional-level finite element software to solve engineering problems in Solid mechanics, fluid mechanics and heat transfer.*

Text Books:

3. S.S Rao, The Finite Element Method in Engineering, 2nd Ed., Pergamon Press, Oxford, Latest Edition.
4. O. C. Zienkiewicz and R. L. Taylor, The Finite Element Method, Volume 1-3 Butterworth-Heinemann, Latest Edition.

Reference Books:

6. T.R. Chandrupatla, A.D. Belegundu, Introduction to Finite Elements in Engineering, Prentice Hall of India, Latest Edition.
7. K. J. Bathe, Finite Element Procedures, Prentice-Hall, Latest Edition.

ME 19.406 **Machine Tool Design** **Total Lecture 40**
Credit: 3-0-0-3

Prerequisite(s) ME 19.308

Objective(s)

- *To develop competency in understanding of machine tools and its working principles.*
- *To make the student conversant with design of machine tool structures and special features of machine tool design.*
- *To develop the understanding of mechanical vibration, Static and dynamic testing of machine tools, Modal analysis, Vibration isolation.*

1. **Machine Tool Drive:** working and auxiliary motion in machine, Machine tool drives, Hydraulic transmission, Mechanical transmission, General requirements of machine tool design, Layout of machine tools. **[8]**
2. **Regulation of Speed and Feed Rates**: Aim of speed feed regulation, stepped regulation of speed, design of speed box, Design of feed box, Special cases of gear box design, Set stopped regulation of speed and feed rates. **[8]**
3. **Design of Machine Tool Structure:** Fundamentals of machine tool structures and their requirements, Design criteria of machine tool structure, Static and dynamic stiffness, Design of beds and columns,\ Design of housing models, Techniques in design of machine tool structure. **[8]**
4. **Design of Guide-ways and power Screws:** Function and type of guide-ways, design of slide-ways, protecting devices for slide-ways, Design of power screws. **[8]**
5. **Design of Spindles and Spindle Supports**: Materials for spindles, Design of spindles, Antifriction bearings, sliding bearings. **[8]**

Outcome(s)

- *Design various single and multipoint cutting tools*
- *Illustrate the properties of various cutting tool materials and hence select an appropriate tool material for particular machining application*
- *Demonstrate the inter-relationship between cutting parameters and machining performance measures like power requirement, cutting time, tool life and surface finish*
- *Analyze economics of machining operations*

Text Books:

3. Mehta N. K. "Machine Tool Design & Numerical Control". Tata McGraw Hill Education Pte. Limited; 2012.
4. D. K Pal and S. K. Basu, "Design of Machine Tool", Oxford & IBH Publishing Pvt. Ltd.4th Edition

ME 14.408 **Product Design and Development** **Total Lecture 40**
Credit:3-0-0-3

Prerequisite(s) ME 19.413

Objective(s) *This course aims at introducing the students to the basic concepts of engineering design and product development with focus on the front end processes.*

1. **Introduction:** Concept of Product, definition and scope, Introduction to product development, Product design and development process, Challenges of product development, Need based developments; Technology based developments, Physical reliability & economic feasibility of design concepts. **[8]**

2. **Needs Identification & Conceptual Design**: Interpret raw data in terms of customers need, organize needs in hierarchy and establish the relative importance of needs, Generation, selection & embodiment of concept, Product architecture. Industrial design: process, need. Robust Design: Taguchi Designs & DOE. Design Optimization **[8]**

3. **Design for Mfg & Assembly:** Methods of designing for Mfg & Assembly. Designs for Maintainability. Designs for Environment. Product costing. Legal factors and social issues. Engineering ethics and issues of society related to design of products **[8]**

4. **Value Engineering/Value Analysis:** Definition. , importance of value, value analysis job plan, creativity,. Case studies. Economic analysis: Qualitative & Quantitative. Material and process selection in value engineering. Concept of Product Life Cycle Management **[8]**

5. **Concurrent Engineering:** Rapid prototyping, Tools for product design–Drafting / Modeling software. CAM Interface. Patents & IP Acts. Overview, Disclosure preparation. **[8]**

Outcome(s) *The student is expected to demonstrate an understanding of the overview of all the product development processes and knowledge of concept generation and selection tools.*

Text Books:

1. Karl T Ulrich, Steven D Eppinger, Product Design & Development. 6th Edition, Tata McGrawhill New Delhi 3.
2. David G Ullman, The Mechanical Design Process. 4th Edition McGrawhill Inc

Reference Books:

1. Kevin Otto & Kristin Wood Product Design, Techniques In Reverse Engineering and new Product Development. 1/e 2004, Pearson Education New Delhi.

ME 19.410 **Advanced Metal Casting & Welding** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisites: ME 19.307

Objective(s):
- *To make the students understand the concepts of advance casting technique.*
- *To make the students understand the concepts of advance welding technique.*
- *To make the students understand the principles and operations of special and modern welding processes*

1. **Advanced Casting :** Processes, parameters and applications of Investment Casting, Continuous Casting, Centrifugal casting, Carbon dioxide molding, Shell Moulding, Gravity die/ permanent mold casting, pressure die casting, Resin bonded casting , plaster mold casting, Vaccum Casting, Full Mould Casting, Slush Casting, Non metal Molding /Ceramic Molding. **[10]**

2. **Inspection and Testing of Casting:** Defects in Casting, its causes and remedies, Inspection and Destructive and nondestructive Testing of Casting including. **[4]**

3. **Advanced Welding Technique-I:** Electron Beam Welding- Background of the Process, Weld Environment, Welding in Different Degrees of Vacuum, Equipment and Safety, Joint Design, Applications, Laser Beam Welding, Process Parameters, Applications and Limitations. Plasma arc welding: Theory and Principles, Transferred arc and Non-Transferred arc Techniques, Equipment and Tooling, Joint Design Advantages, Disadvantages. **[10]**

4. **Advanced Welding Technique-II**: Ultrasonic Welding; Propagation of ultrasonic waves in matter, mode of joint formation, joint types and design of product for ultrasonic welding, details of equipment. Friction Welding- Basic Principles, Process Variants, Different Stages of Friction Welding, Mechanism of Bonding, Influence of Process Parameters, Weld Quality and Process Control, Joining of Dissimilar Materials, Advantages, Limitations and Applications. Diffusion Welding- theory and Principle of Process, Key Variables, Intermediate Materials, Deformation Welding, Equipment and Tooling. **[10]**

5. **Thermal and Metallurgical Consideration.** Thermal considerations for welding, temperature distribution, Analytical analysis, heating & cooling curves. Metallurgical consideration of weld, micro & macro structure. Solidification of weld and properties. **[6]**

Outcome(s): *Student will be able to*
- *Develop advanced casting techniques for various alloys*
- *Develop advanced welding techniques*
- *Develop welding application concepts*

Text Books:
1. Khanna O.P., "Foundry Technology", Latest Edition, Dhanpat Rai *Publication*
2. Khanna O.P., "Welding Technology", Latest Edition, Dhanpat Rai *Publication*

Reference Books:

1. Mikell. P. Grover, Fundamentals of Modern Manufacturing, Fourth Edition, John Wiley & Sons.
2. Kalpakjian, S. and Steven R. Schmid, Manufacturing, Engineering &

Technology, 7th Edition, Pearson.

ME 19.412 **Tribology in Design** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisites(s): ME 19.204, ME 19.206, ME 19.308

Objective(s):
- *Differentiate between the types of lubricants and its respective application area.*
- *Understand and explain different laws of friction and topology of surfaces.*
- *Appreciate the various modes of wear and the wear-mechanism maps.*

1. Tribology, Historical background, practical importance and subsequent use in the field **[8]**
Lubricants: Types and specific field of applications. Requisite properties of lubricants Viscosity, its measurement, effect of temperature and pressure on viscosity, standard grades of lubricants, and selection of lubricants. Lubricant Rheology, Lubrication Types, Basic equation of lubrication

2. **Friction:** Origin, Friction Theories, measurement methods, friction of metals and non-metals. **[8]**
Wear: Classification and Mechanisms of Wear, Delamination theory, Debris analysis, testing methods and standards, wear mechanism maps and approach to wear reduction. Related Case Studies

3. **Surface Roughness:** Standardization, measurement with contacting and non-contacting instruments, Statistical analysis of surface, characteristics of the surface, tribological behaviour of asperities contact. Behaviour of Tribological components: Plain & Antifriction Bearings: selection, effect of frictional torque, factors affecting performance, failure modes, bearing lubrication. **Gears:** friction & stresses, wear, lubrication & failure. Failure Case Studies **[8]**

4. **Hydrodynamic Bearings:** Mechanism of pressure development, classification, Idealized Journal Bearing, oil film thickness, pressure distribution, loads carrying capacity. Failure Case Studies. **[8]**
Elastohydrodynamic Lubrication: Theoretical considerations, line and point contacts, film thickness equations, different regimes in EHL contact.

5. **Antifriction Bearings:** Ball and roller bearings, geometry of ball bearings, radial load distribution, stresses and deformations, lubrication of ball bearings. Failure Case Studies. **[8]**
Monitoring of Equipment's Condition: Condition monitoring techniques, lubricant, corrosion, temperature & surface roughness monitoring. Failure Case Studies. Nano/Micro Tribology, Green Tribology.

Outcome(s):
- *Understand behaviour of bearing in different lubrication regimes and able to develop mathematical model.*
- *Select the type of bearing for any given required engineering use and determine the load carrying capacity and other related parameters.*
- *Decide on the condition monitoring techniques based on performance of tribological component*s

ME 19.422 **Capstone Project II** **Credit: 6**

Prerequisite (s): -

Objective (s):

- *To provide students with the opportunity to apply the knowledge and skills acquired in their courses to a specific problem or issue.*
- *To allow students to extend their academic experience into areas of personal interest, working with new ideas, issues, organizations, and individuals.*
- *To encourage students to think critically and creatively about academic, professional, or social issues and to further develop their analytical and ethical leadership skills necessary to address and help solve these issues.*
- *To provide students with the opportunity to refine research skills and demonstrate their proficiency in written and/or oral communication* skills.

Each student / group has to work on research topics with hardware design and fabrication or advanced design and analysis projects. The projects must be in different specialization topics (Heat Power/Fluid Mechanics/Machine Design/ Applied Mechanics/ Production) from a list of topics offered by the department.

Students have to submit a project report to the respective supervisors and give a presentation of the work done in front of a specialization specific evaluation board. For each project, distribution of marks will be: 50 marks to be evaluated by the supervisor and 50 marks to be evaluated by the specialization specific evaluation board.

The project provides students with the opportunity to explore a problem or issue of particular personal or professional interest and to address that problem or issue through focused study and applied research under the direction of a faculty member. The project should demonstrate the student's ability to synthesize and apply the knowledge and skills acquired in his/her academic program to real-world issues and problems. This final project should affirm students' ability to think critically and creatively, to solve practical problems, to make reasoned and ethical decisions, and to communicate effectively.

Outcome(s):

- *Knowledge of discipline or content area*
- *Ability to think critically*
- *Ability to communicate effectively*
- *Ability to use contemporary technology*
- *Commitment to ethical and social responsibilities*
- *Commitment to learning as life-long endeavour*

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY

The Bhagavad-Gita

Pre-requisite(s): Basic interest in Indian culture. Sanskrit verses in *Devanagari* script as well as in transliteration forms are provided for further references only; knowledge of Sanskrit is not required as the medium of instruction is English, however it may be an added advantage. Familiarity with the *Devanagari* script may be useful at times.

Course Objectives: The primary aim of the Bhagavad-Gita Course is to make the glorious 'Gita way of life' accessible to anyone who yearns for it, or is just curious to know more in a convenient yet effective manner. It provides a holistic, insightful coverage of the entire text in a lucid and simple style without compromising on the salient features of this priceless knowledge. Providing inputs in the modern context for continuous improvement it becomes a practical manual to live a transformed life of goodness and greatness. The course seeks to help students negotiate the text independently without referring to the traditional commentaries so as to enable them to experience the richness of the text and its philosophy.

Evaluation Process: The evaluation pattern would have following two components:

1. Internal component of 20 marks, which can be assessed in one of the following ways at the discretion of course coordinator
    a. Assignment
    b. Written test
    c. Presentation
    d. Viva
    e. Model preparation
    f. Practical assignment
2. An end term examination of 80 marks.

Course Description:

BG 111 The Bhagavad-Gita **3-0-0-3**

Introduction:
Background of the Mahabharata War, Author (Vedavyasa), Background of the Bhagavad-Gita: knowledge given in the battlefield of life, The role of Gita in our life, Overview of the chapters, The Distress of Arjuna [03]

Cognitive and Emotive Apparatus:
Hierarchy of senses, *manas*, *buddhi* and *ātman*- III.42, XV.7
Role of the ātman-XV.7, XV.9
Mind as a product of prakṛti VII.4
Properties of three modes and their impact on the mind-XIII. 5-6; XIV.5-8, 11-13; XIV.17 [08]

Controlling the Mind:
Confusion and conflict: Nature of conflict I.1; IV.16; I.45; II.6 [09]

Causal factors-Ignorance-II.41; *Indriya*-II.60, Mind-II.67; *Rajoguṇa*-III.36-39; XVI.21;
Weakness of mind- II.3; IV.5
Means of controlling the mind: Meditation–difficulties –VI.34-35; procedure VI.11-14
Balanced life- III.8; VI.16-17
Diet control- XVII. 8-10
Physical and mental discipline – XVII. 14-19, VI. 36.

Means of Conflict Resolution: [10]
Importance of knowledge – II. 52 ; IV.38-39; IV.42
Clarity of *buddhi* – XVIII.30-32
Process of decision making – XVIII.63
Control over senses – II.59, 64
Surrender of doer-ship –XVIII .13-16; V.8-9
Desirelessness- II.48; II.55
Putting others before self – III.25

Self Management through Devotion: [09]
Surrender of ego – II.7 ; IX.27; VIII.7; XI.55 ; II.47
Abandoning frivolous debates – VII.21, IV.11; IX.26
Acquisition of moral qualities - XII.11; XII.13-19
Conclusion: Arjuna's realization, Lasting property, Total victory- XVIII.73,78

Text Book:
Srimad Bhagavadgita(with English Translation and Transliteration, Code 1411), Gita Press, Gorakhpur

Reference Books:

Open Elective in English for all Undergraduate Programmes

Paper Code: EL 100 **Credits: 3-0-0-3**
Paper Name: Essential English

Contents:

Reading Comprehension [11]
To develop skills such as vocabulary building, efficient reading and note-taking.
Poetry

1. Milton: On His Blindness
2. Shakespeare: Let Me Not to the Marriage of true minds
3. Wordsworth: The Solitary Reaper
4. William Butler Yeats: A Prayer to my daughter
5. Browning: My Last Duchess
6. Nissim Ezekiel: Night of the Scorpion

Prose

(1) Francis Bacon: Of Studies
(2) R.K. Narayan: Engine trouble
(3) O. Henry : The Gift of the Magi
(4) Oscar Wilde : The Nightingale and the Rose

Grammar and Usage [16]
Tenses and their different forms (present, past and future), their uses and sequences of tenses. Articles, auxiliaries and modals, Preposition, Rules of conversion form direct to indirect speech, expressions of time and place, questions in indirect speech, commands, requests and advice in indirect speech. Spotting the errors in spelling, tenses, prepositions, articles and how to avoid them.
Business Letter Writing [6]
Layout of formal letters, difference between British and American pattern of letter writing and different types of letters (Job application letter, invitation letter, letter of request)
Idioms and Phrasal Verbs: Understanding idioms, collocations, introduction to phrasal verbs, verb and preposition/ adverb combination, usage of idioms and phrasal verbs.
Vocabulary Building: One word for many, Synonyms and Antonyms, words commonly mis-spelt and mis-pronounced. [6]

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **3-0-0-3**
ET-18.101 **E-Government Processes and Technologies**

Total Lectures: 39

Objectives:

- Support the government departments, in terms of leading or being part of team responsible for, e-Governance project Conceptualization and design .
- Support the government departments in effectively planning and managing various phases of e-Governance project development and implementation
- Leverage the strengths of private sector in e-Governance initiatives through effective procurement approach and manage service delivery throughout project Lifecycle
- Application of learning and good practices in e-Governance projects implementation to minimise the learning curve and to maximise the benefits for the department

1. **Roadmap to e-Government:** Vision and mission of e-government, government to e-government transformation, selection, planning and management of projects, parameters for success and measure of projects, relationship and citizen participation in e-government. [5]
2. **e-Gov 2.0:** Introduction, e-Gov 1.0 v/s e-Gov 2.0, e-Gov 2.0 financial and technology models. [5]
3. **Multiple Standards in ICT and Change Management:** Purpose and rationale for multiple standards, areas having multiple standards, rationale for single standard, introduction to change management, model of change management. [6]
4. **Government Data Centres and Utility Computing :** Elements and complexity of GDCs, virtualization and consolidation of GDCs, architecture of a GDC, utility computing concepts and areas, technical and regulatory issues in utility computing. [7]
5. **Secured Government Information System Architecture:** Introduction, architectural types, processes, security requirements and policies, steps in designing security architecture. [8]
6. **Case Studies of few e-Government Projects:** National Citizen Identity

System, land records, urban development management system, e-agriculture, e-procurement, RTO, e-mitra etc. [8]

(The contents in this unit are subject to change as per the evolution and progression of novel e-governance projects).

Outcomes: Will have the understanding and knowledge of the following:

- Better access to information and quality services for citizens
- Simplicity, efficiency and accountability in the government
- Expanded reach of governance
- Enabling Environment for Promoting Economic development
- Enhancing Transparency and Accountability:
- Improving Service Delivery:
- Improving Public Administration

Text Books:

1. Jaijit Bhattacharya, "e-Gov 2.0", 1st edition, Tata McGraw Hill.

2. C.S.R. Prabhu, "e-Governance: Concepts and Case Studies", 2nd edition, PHI.

Reference Books:

1 J. Satyanarayana," e-Government: The Science of the Possible", PHI.

2 Bidisha Chaudhuri, "E-Governance in India: Interlocking Politics, Technology and Culture", 1st edition, Routledge.

MODY UNIVERSITY

Course Code: **3-0-0-3**
ET-18.102 **Web Designing and Mobile App Development** **Total Lectures:40**

OPEN ELECTIVE CBCS COURSE

Objectives: On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. Students will gain the skills and project-based experience needed for entry into web application and development careers.

1. Concept of Internet A brief Introduction to the Internet: Computer Networks, Internet, URL (Uniform Resource Locator), Internet Service Provider, Intranet, Extranet, Virtual Private Network. Application of Internet: World Wide Web, Search Engines, News groups, Electronic Mail, Web Portal, Chat, Video Conferencing, FTP, Remote Login, E-Commerce, E-Learning, EGovernance, E-Banking. [9]

2. Static Web Page Development Basics of HTML: What is Internet Language?, Understanding HTML, Create a Web page, Linking to other Web Pages, Publishing HTML Pages, Text Alignment and Lists, Text Formatting Fonts Control, Email Links and link within a Page, Creating a Table, Creating HTML Forms, Creating Web Page Graphics, Putting Graphics on a Web Page, Custom Backgrounds and Colors, Creating Animated Graphics. [9]

3. Dynamic Web page Development Cascading Style Sheet: CSS, Defining Style with HTML Tags, Features of Style Sheet, Style Properties, Style Classes, External Style Sheet [8]

4. JavaScript Introduction to JavaScript: Writing First Java Script, External JavaScript, Variables: Rules for variable names, Declaring the variable, Assign a value to a variable, Scope of variable, Using Operators, Control Statements, JavaScript loops, JavaScript Functions: Defining a Function, Returning value from function, User define function. [9]

5. Android: Introduction to android OS, Versions of Android, Introduction to Android Studio, Different GUI Elements of Android Programming, WebView, Convert any Website to android apk. [5]

Outcomes:

- Students are able to develop a dynamic webpage by the use of java script and DHTML.
- Students will be able to write a well formed / valid XML document.
- Students will be able to connect a java program to a DBMS and perform insert, update

and delete operations on DBMS table.

- Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.
- Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.

Text Books:

1. Teach Yourself HTML 4 in 24 Hours By Dick Oliver (Tech media) 4th edition
2. The Complete Reference JavaScript By Thomas Powell & Fritz Schneider 2nd Edition.
3. Jerome (J.F) DiMarzio "Android A programmer's Guide" Tata McGraw-Hill 2010 Edition.

Reference Books :

1. HTML, DHTML, JavaScript, Perl CGI By Ivan Bayross(BPB) 3rd Edition
2. CSS By Kynn Bartlett(Pearson Education)2nd Edition
3. Introduction to Internet & HTML Scripting By Bhaumik Shroff Books India Publication 3rd Edition.

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: ET 18.103 | **Application of Electronics in Everyday Life** | **3-0-0-3** | **Total Lectures: 40**

Objective: To develop the understanding of Electronics used in daily life as well as understand the principle and working of various instruments used in health care, IoT and communication sector.

1. **ELECTRONICS COMPONENTS:** Resistor and its color code, Capacitor, Inductor, PN diode, Photo Diode, LDR, LED, Zener diode, Varactor diode. **[4]**
2. **ELECTRONICS IN COMMUNICATION:** Telegraph, Telex, Mobile Phone, Optical Fiber, Transmission Line, Waveguides, Satellite Communication, RADAR, 4G system, Internet, Video conferencing, Fax. **[10]**
3. **ELECTRONICS IN HOME CARE:** Basic of electricity and electrical cables, Multi meter and basic electronic component, Power supply, UPS/Inverter, SMPS, Washing machine, Microwave oven, Steam iron, Electric rice cooker, Electric kettle, Induction plate. **[8]**
4. **ELECTRONICS IN IOT:** Introduction, IoT applications for industry: Future Factory Concepts, Smart Objects, Smart Applications, Smart Homes, Structural Monitoring, Buildings, Smart Cities , Transportation Healthcare Warfare, Physical Intrusion Detection, Surveillance. **[10]**
5. **ELECTRONICS IN HEALTHCARE:** ECG, EEG, Defibrillator, Computed Tomography, Magnetic Resonance Imaging, Glucometer, Sphygmomanometer, Digital and Infrared Thermometer. **[8]**

Outcomes:

At the end of this course, the student should be able to

1. Know about fundamentals of Electronic Components.
2. Understand the concept of Communication.
3. Understand the concepts of electronics behind various home appliances.
4. Learn about basics of health care equipment.

Text Books:

1. Ben G. Streetman, Sanjay Kumar Banerjee: Solid state Electronic Device Electronics, Sixth Edition, Prentice Hall.
2. Adel S. Sedra, Kenneth C. Smith: Microelectronic circuit, Sixth Edition, Oxford.
3. Richard. C. Jaeger, "Microelectronic Circuit Design", Tata McGraw-Hill Companies Inc., International Edition.

Reference Books:

1. B. P. Lathi, "Modern Digital and Analog communication Systems", Oxford University Press, 2010.
2. William C. Y. Lee, Mobile cellular telecommunication – Analog and Digital systems, McGraw Hill, 2nd Ed, 2006

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **Energy Sources & Sustainable development** **3-0-0-3**
ET 18.104 **Total Lectures: 39**

Objective(s): *The course is designed to give knowledge of various energy sources and basics of power production techniques. It lays emphasis on basic understanding of green energy technology and its importance for environment and sustainable development.*

6. **World Energy Status:** Present Situation and future Energy Scenario, Evolution of Energy Security; India's Energy Scenario; Introduction to nexus between Energy, Environment, and Sustainable development and Climate Change and societal issues [14]
Conventional Energy Sources: Fossil Fuel, Coal, Oil, Gas, Thermal Power Stations,
Hydro power generation, Comparison of various conventional energy systems, their prospects and limitations
Scenario of Green Energy Sources: Difference between conventional and renewable energy systems, Needs and advantages of green energy sources, social implications.
7. **Solar Energy:** Principles of photovoltaic generation of electricity; Silicon cell; Photon absorption; Cell efficiency; Solar cell construction; Types and usage of photovoltaic systems. solar cell modules and arrays, solar cell types, material, applications, advantages and disadvantages, solar energy conversion into heat, types of solar collectors, cylindrical parabolic collector, solar energy thermal storage. [14]
Nuclear Energy: Present Status of Nuclear Power; Nuclear Fission & Fusion, National Nuclear Power Program,, Natural Radioactivity, Radioactive Decay, Radiation Doses, various types of nuclear power plants, Nuclear Reactor Safety, Fusion reactor
8. **Wind Energy:** Energy available from wind, basics of wind energy conversion system, classification, factors influencing wind, wind shear, turbulence, wind speed monitoring, Betz limit, WECS: classification, characteristics, and applications. [6]
Bio Energy: Types of biogas plants, biogas generation, factors affecting biogas generation, advantages and disadvantages, biomass energy, energy plantation, gasification
9. **Ocean Energy:** Ocean energy resources-ocean energy routes - Principles of ocean thermal energy conversion systems- ocean thermal power plants- Principles of ocean wave energy conversion and tidal energy conversion. [5]
Geothermal energy: Introduction, vapor and liquid dominated systems, binary cycle, hot dry rock resources, magma resources, advantages and limitations

Outcome(s): *After learning the subject, student will be able to understand the basic principle of power production from different energy sources. Advantage of renewable and green energy*

sources for sustainable development and environmental issues related to energy sources and societal
implications

Text Books:

1. S.P. Sukhatme, Solar Energy: principles of Thermal Collection and Storage, Tata McGraw-Hill
2. C. S. Solanki, "Solar Photovoltaics: Fundamental Applications and Technologies, PHI, 2009
3. S. Glasstone & A. Sesonkse, Nuclear Reactor Engineering, CBS, 2004
4. D. A. Spera, Wind Turbine Technology: Fundamental concepts of Wind Turbine Engineering, ASME Press.

Reference Books:

1. Non-conventional energy resources, Shobh Nath Singh, Pearson India
2. Principles of Solar Energy, Frank Krieth& John F Kreider, John Wiley, New York
3. David Bodansky, Nuclear Energy: Principles, Practices and Prospects, Springer 2004.

MODY UNIVERSITY OF SCIENCE & TECHNOLOGY
College of Fashion Design & Merchandising
Bachelors of Design (Fashion Design) BFD
Autumn (2015-16)
First Year
FOUNDATION PROGRAMME

Total L & P: 45

Title of Course: Fashion in Everyday Life **3-0-0-3**
Semester: Autumn
Course Code: FD 115
Pre-requisite(s): Basic interest in fashion and trends

Course Objectives: This course will give the students overview of fashion and its use in everyday life considering trends, forecast; body anatomy, colour preferences and styling techniques. The course will also elaborate on fashion market segments while giving an idea on leading fashion brands, designers and trendsetting celebrities

Course Description:

- Basic Introduction to Fashion: Brief Introduction to fashion and regularly used fashion terminologies, Overview of types of clothing such as Formal Wear, Casual Wear, Evening Wear, Ethnic Wear, Traditional Wear etc., Fun facts related to fashion **(3)**
- Body Analysis: Triangular figure study, Eight headed figure, Hour glass structure, Vital statistics, Clothing suggestions as per body types **(3)**
- Practical Colour Study in Fashion: Colour selection in clothing as per skin – tones for day wear and evening wear **(6)**
- Styling tips with ensembles – An introduction to fashion styling, Exploring various mix and match combinations like print plain combination, combining ethnic and western fashion elements, etc. - **GO, get the desired look!!** **(5)**
- Fashion Market Segments – A brief insight to different consumer market segments in fashion such as Haute Couture, Pret a Porter (Ready to Wear), Semi Couture, Premium Fashion, High Street fashion, Street fashion, Bridge Fashion, Fast fashion, etc. in context of products, features and service **(3)**
- Fashion Brands – To Study and compare national and international women's wear fashion brands such as Prada, Dior, Chanel, LVMH, Zara, Aldo, Biba, W, Elle, Aakruti, FabIndia, AND, etc. across market segments and their incorporation by consumers in everyday life **(5)**
- Fashion Designers – A brief look into the profile and work of renowned Indian and International fashion designers like Manish Malhotra, Sabyasachi Mukherjee, Manish Arora, Ritu Beri, Ritu Kumar, Coco Chanel, Yves Saint Laurent, Giorgio Armani, Christian Dior, Prada, etc. who changed the fashion industry. (10)

- Trailblazers of Fashion: To study the role of celebrities (David Beckham, Lady Gaga, Sonam Kapoor, Hrithik Roshan, etc.) red carpets (Oscars, Golden Globes, Filmfare Awards, IIFA, etc.) movies (Piku, Tanu Weds Manu, Dil Dhakadne Do, Devil Wears Prada, etc.) television series (Sex and the City, Gossip Girls, Two Broke Girls, Roadies, Splitsvilla, etc.) on the fashion trends at Indian and Global level **(10)**

Learning Outcomes:

- Demonstrate a basic knowledge of fashion and common fashion terms
- Understand clothing selection with respect to body type and colour tones while applying basic styling tips to get desired looks
- Explore and evaluate different fashion brands, fashion designers and other popular influencers of fashion

7. Laura Eceiza, UK. 2008. *Atlas of Fashion Designers.* Rockport Publishers
8. Mark Tungate, UK. 2008. *Fashion Brands.* Kogan Page Limited

Evaluation Process:

Course Work: 50% weightage. It includes Quiz
Exam: 50% weightage. It includes running jury of fashion display

Other Study Material:

1) Websites: www.highheelconfidential.com, www.theblondesalad.com, www.stylebubble.co.uk , www.weworewhat.com, www.wendyslookbook.com
2) Handouts: As indicated by the course instructor
3) Magazine & Other Reading Material: Vogue, GQ, Elle, Harper Bazaar, Jaipur Times

Mody University
College of Architecture and Design (CAD)
Open Elective in Free hand sketching for all Undergraduate Programmes

Paper Code: FH 141 **3-0-0-3**
Paper Name: FREEHAND SKETCHING

Learning Objectives:
1. To ensure that students begin to understand pencils, grades, holding to sketch.
2. To provide students an exposure to express with sketching and understand proportions.
3. To gain skill of sketching indoors.
4. To enhance ability to sketch outdoors.
5. To develop rudimentary ability to use pencil as a media in sketching.

CONTENTS

Unit-I. Introduction to Graphic Skills: **[04]**
Understanding the meaning of graphic skill; basic techniques, types of pencil shades and grades.

Unit-II. Geometry of Objects **[10]**
Understanding geometry of an Object, Free hand sketching of an object, object in different eye level, Optical illusions, effect of light on object.

Unit–III. Fundamentals of Perspective **[05]**
Diminution, Foreshortening, convergence, overlapping shades and shadow

Unit-IV. Outdoor Sketching & Indoor Sketching
Outdoor: **[10]**
Sketching buildings, road activity, Landscape, Environmental scenes, principles of perspective drawing, natural forms, built form, their texture.
Indoor: **[10]**
Sketching of an arranged objects, indoor activity, still life, furniture, equipment, understanding depth, light, shade, shadow; memory drawing.

Expected Outcome:
Students learn and able to draw freehand sketch scenes with addition detailing of foreground and background from pencil effectively on paper.

Suggested Readings

- Buildings;Ian Sidaway, : New Holland Publishers.
- Perspective;Milind Mulick,: Jyotsana Prakashan.
- The fundamentals of Water colour Paintings;D.Carter: Arcturus Pubishing Ltd
- Drawing for designers; Koptievsky: Sterling Publishing
- Rendering with pen & Ink; .R.W Gill: Thomas & Hudson
- Drawing and designing with confidence: A step by step guide; M.W Lin: John Wiley & Sons
- Perspective drawing Handbook; Joseph D'Amelio: Dover Publication
- Urban Sketching a complete guide; Thorspecken: Search Press

Evaluation Scheme: 20%=Internal, 80%=End term

Mody University of Science and Technology

Open Elective in Law for all Undergraduate Programmes
Choice Based Credit System (CBCS)

Paper Code: LF 100 **Credits: 3-0-0-3**

Paper Name: Gender Justice and the Law

Position of Women in Vedic, Post Vedic & Medieval period	[03]
Constitutional Provisions and Gender Justice — Relevant provisions relating to women in Fundamental Rights, Directive Principles of State Policy and Fundamental Duties etc. under the Indian Constitution	[06]
Laws Relating to Marriage, Divorce, Maintenance, Adoption and Succession under the relevant personal laws with special emphasis on Women and Maintenance under Code of Criminal Procedure, 1973	[12]
Provisions under the Indian Penal Code, 1860 (Sec. 292, 293, 294, 304B, 326A, 326B, 354, 354A, 354B, 354C, 354D, 370, 370A, 375, 376, 376A to 376E,359 to 374, 494,495 497, 498A, 507 & 509)	[10]
Provisions under the Code of Criminal Procedure,1973- relating arrest, search & seizure	
Socio-Legal position of women and the law — Dowry Prohibition Act, 1961 – Protection of Woman against Domestic Violence Act, 2005, The Prohibition of Child Marriage Act, 2006	[06]
Free Legal Aid for Women	[02]

MODY UNIVERSITY OF SCIENCE AND TECHONOLOGY

Open Elective CBCS course

Course Title: Vedic Knowledge **3-0-0-3**

Course Code: VK 111

Course Description:

Unit-1 History of Vedic Literature (13)

1. Importance of Vedas in Indian Tradition (भारतीय परम्परा में वेदों का महत्व)
2. The emergence of the Vedas (वेदों का आविर्भाव)
3. Introduction of Vedic Svara (वैदिक स्वर परिचय)
4. Definition of Sukta (सूक्त की परिभाषा)
5. Introduction of Rig-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(ऋग्वेद का परिचय -संहिता,ब्राह्मण,आरण्यक एवं उपनिषद -)
6. Introduction of Yajur-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(यजुर्वेद का परिचय - संहिता,ब्राह्मण,आरण्यक एवं उपनिषद)

Unit -2 Suktas related to Rigveda Samhita (Shakalashakha) (11)

1. Lord of fire :	Agnisuktam	(अग्निसूक्तम्-ऋग्वेद 1/1/1-4)
2. Lord 0f creation :	Vishnusuktam	(विष्णुसूक्तम्-ऋग्वेद 7/100/1-3)
3. Lord of omniscient :	Brahmanaspatisuktam	(ब्रह्मणस्पतिसूक्तम् -ऋग्वेद 1/40/1-4)
4. Lord of pre-creation :	Hiranyasuktam	(हिरण्यगर्भसूक्तम्- ऋग्वेद 10/121/1-3)
5. Goddess of Glory :	Shreesuktam	(श्रीसूक्तम्-ऋग्वेद-परिशिष्ट 1-4)

Unit-3 Suktas related to ShuklaYajurved Samhita(Madhyandinashakha) (15)

1. God of wisdom :	Ganapatistavanam	(गणपति-स्तवनम् -यजुर्वेद – 23/19)
2. Identification of nation :	Rashtrageetam	(राष्ट्रगीतम् -यजुर्वेद - 22/22)
3. Good faith :	Svastivachanam	(स्वस्तिवाचनम् -यजुर्वेद-14/19,21-22)
4. Perception power :	Medhasuktam	(मेधासूक्तम् -यजुर्वेद -32/13 -16)
5. Concept of mind :	Shivasuktam	(शिवसंकल्पसूक्तम् -यजुर्वेद -34/1-6)
6. Origin of creation :	Purushasuktam	(पुरुषसूक्तम् (यजुर्वेद-31/1-4,7,16)
7. Goddess of learning :	Sarasvati-stavanam	(सरस्वती-स्तवनम् (यजुर्वेद -20/84-86)
8 Serenity Prayer of Yajurveda :	Shaantipaathah	(शान्तिपाठः - यजुर्वेद -36/17)

Evaluation of proficiency will be based on the participation in co- curricular / extra curricular activities.

MTE **:** *Mid Term Examination*

ETE **:** *End Term Examination*

**Major Project: Spring Semester of third year will be exclusively for project training in an organization in which student shall be required to work on a project assigned by such organizations in consultation with the concerned Internal Supervisor allotted to her from the faculty members of the department. However, In exceptional conditions HOD may allow any student to undergo the project training in the campus under the supervision of faculty member assigned to her. At the end of the semester the student shall be required to submit a Project Report based on the project given to her. A committee of the Internal Supervisor & External Examiner will evaluate the report & conduct viva- voce.*

Program Elective-1		
S. No.	**Course Code**	
1.	CA 19.231	Management Information System
2.	CA 19.232	Enterprise Resource Planning
3.	CA 19.237	Software Project Management
Program Elective-2		
S. No.	**Course Code**	**Course Title**
1.	CA 19.263	System Software
2.	CA 19.265	Internet Technologies
3.	CA 19.267	Network Security
4.	CA 19.208	Electronic Commerce
5.	ET 19.471	Cloud Computing (Infosys)
Program Elective 3		
1.	CA 19.373	Software and Case Study
2.	CA 19.375	Bioinformatics
3.	CA 19.377	Geographical Information System
4.	CA 19.369	E-Business
5.	ET 19.465	Agile Software Development (Infosys)
Program Elective 4		
1.	CA 19.362	Knowledge Management
2.	CA 19.364	Artificial Intelligence
3.	CA 19.366	Information Security
4.	CA 19.368	Cyber Laws
5.	ET 19.362	Mobile Apps Development (Infosys)

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**
2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

Pre-requisite:

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**

2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**

3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**

4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**

5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

CA 19. 101 **Computer Fundamentals** **Total Lectures: 40**
Credits : 3-0-0-3

Prerequisite(s): NIL
Objective(s): To understand the fundamentals of computers like basic working and structure of computer, data representation, and office automation and networking.

1	**Introduction to Computers**: Definition, Block Diagram, characteristics, Applications in Modern Society, History, Classification of computers and Generation of computers.	[6]
2	**Functional Units of Computer Processing System**: Hardware, CPU, Memory and secondary storage devices, Input devices, Output Devices, Information Concept and Processing: Data, Information, Knowledge and Wisdom.	[8]
3	**Data representation**: Representation of Data, Bits and Bytes, Number System: Decimal, Binary, Octal, Hexadecimal, Conversions b/w number system, Arithmetic Operations in Binary Number, ASCII, EBCDIC and BCD Codes.	[8]
4	**Software Concepts**: Types of Software, Generation of Programming Language: Machine Language, Assembly Language, High Level Language, Translator: Assembler, Interpreter, Compiler, Operating System: Functions, types of operating system: Batch Processing, Multiprogramming, Multiprocessing, Multitasking, Time Sharing and Real Time System, MS-DOS, MS-Windows.	[9]
5	**Data Communication and Computer Networks**: The Basic Communication System, Data Transmission Modes, Network types, Network Topologies, Internet and its Applications: E-mail, World Wide Web, Intranet, Extranet, Computer Threats: Virus, Worm, Trojan horse, Malware.	[9]

Outcome(s): After completion of the course, students would be able to:

- Understand the concept of input/output devices of Computers and how it works.
- Learn the working of computer network and web communication.

Text Books:

[1]. P.K.Sinha ,P.Sinha, Computer Fundamentals, 6th ed., BPB Publications, 2015.
[2]. R. Thareja, Fundamentals of Computers, 2nd ed., Oxford University Press India, 2016.

Reference Books:

[2]. V. Rajaraman, Fundamentals of Computers, 6th ed., PHI, 2015

CA 19.103

C- Programming **Total Lectures: 40**

Credits :3-0-0-3

Prerequisite(s): NIL

Objective(s):

- To learn the basics of programming skills through C-Programming language.
- To understand the fundamentals concepts like syntax, and statements with essentials of efficient compiling, running and debugging processes.

1	**Introductory Concepts:** Introduction to computers, Computer characteristics, Types of programming languages, Introduction to C, identifiers and keywords,Data types: declaration and definition, Type conversion.	[8]
2	**Operators:** Arithmetic, relational, logical, bitwise, unary, assignment, Increment and Decrement operators, conditional operators and their hierarchy, associativity,Data input/output.	[6]
3	**Control Structure and Array:** Introduction, Conditional Statements; Simple If-Else; Nested Statements, switch, Loops- For, While, Do-While; Break, Continue, Go-To Statements, Labels, printf, scanf function. Defining an array, processing an array, passing arrays to functions, Multidimensional arrays, Arrays and strings.	[13]
4	**Function and Pointer:** A brief overview, Defining a function, accessing a function, function prototypes, passing arguments to a function, recursion, Pointers: Declaration, operations on pointers, array of pointers, pointers to arrays.	[7]
5	**Advance C Concepts:** Structure, Union, storage classes in C, Concept of files, file access in different modes, reading from and writing into a file, Library Functions.	[6]

Outcome(s): At the end of the course student will be able to:

- Describe the process of problem solving through C.
- Write a justifiable C program for a given algorithm.
- Trace the certain C program manually.

Text Books:

[1]. Y. Kanetkar, Let us C, 16th ed. BPB Publication, 2018.
[2]. B. W. Kernighan and D. M. Ritchie, The C Programming Language, 2nd ed., Pearson Education, 2013.

Reference Books:

[1]. H. Schildt, C: The Complete Reference, Fourth edition, McGraw- Hill Education, 2000.
[2]. E. Balagurusamy, Programming in ANSI C, 4th ed., TMH Education, 2008.

CA 19. 107 **Foundation course in Mathematics** **Total Lectures: 40**
Credits :3-1-0-4

Prerequisite(s): Nil

Objective(s):
- To acquire fundamental knowledge of (10+02) higher Mathematics and apply in science and engineering disciplines.

1	**Matrix:** Addition, Subtraction and Multiplication of matrices, column matrix, row matrix, unit matrix, diagonal matrix, zero matrixes.	[6]
2	**Determinants:** Definition, Properties of Determinants, multiplication of Determinants, Value of Determinants up to third order, Minors and Co-factors.	[8]
3	**Algebra:** Factorial Functions, Permutations and Combinations.	[7]
4	**Calculus:** Differentiation, Integration of Standard functions, Definite Integrals.	[11]
5	**Statistics:** Frequency Distribution, Mean, Median, Mode, and Standard Deviation and Variance.	[8]

Outcome(s): After completion of the course, students would be able to apply fundamentals of (10+02) higher mathematical knowledge in science and engineering and also solve curriculum problems.

Text Books:
[1]. R.D. Sharma, 11th and 12th Mathematics, Dhanpatrai Publication, 2018.
[2]. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

Reference Books:
[1]. Majumder, Engineering Mathematics , Volume I, Central,1995.
[2]. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.

CA 19. 133 Office Automation Laboratory

Total Hours: 26

0-0-4-2

Prerequisite(s): NIL

Objective(s): To familiarize the students in preparation of documents and presentations with office automation tools like, MS Word, MS Excel, MS PowerPoint and MS Access.

MS Word Exercise:

1. Working with Documents., Formatting Documents.
2. Setting Page style.
3. Creating Tables.
4. Drawing.
5. Mail Merging and Printing Documents.

MS Excel Exercise:

6. Spread Sheet & its Applications, Opening Spreadsheet, Menus.
7. Entering & Deleting Data.
8. Setting Formula.
9. Formatting Spreadsheets.
10. Working with sheets.
11. Creating Charts.
12. Using Tools.

MS Access Exercise:

13. Starting Access, Access Screen, Creating a New Database.
14. Creating Tables and Working with Forms.
15. Creating queries.
16. Finding Information in Databases.
17. Creating Reports.
18. Types of Reports.
19. Printing & Print Preview – Importing data from other databases viz. MS Excel etc.

MS Power Point Exercise:

20. Creating a presentation.
21. Formatting a Presentation.
22. Adding Effects to the Presentation.
23. Printing Handouts.

Outcome(s): By learning the course, the students will be able

- to perform documentation
- to perform accounting operations
- to perform presentation skills

CA 19.135 **C Programming Laboratory** **Total Hours: 26**

0-0-4-2

Prerequisite(s): NIL

Objective(s):

- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement the 10 programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement the 8 programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement the 5 programs to cover all possible String operations.
11. Implement the 4 programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement the 5 programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement 4 programs for Reading and writing from/to a file.

Outcome(s): On competition of this course student will be able to:

- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

UC 19.102 Communication Skills **Total Lectures: 26**

2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

Pre-requisite:

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures. [5]
   Technology-based Communication: Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software.
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

3. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
4. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

CA 19. 102 **Operating System** **Total Lectures: 40**
Credits: 3-0-0-3

Prerequisite(s): NIL

Objective(s):

- Understand the fundamental operating system abstractions like processes, threads, files, semaphores, IPC and deadlocks.
- Understand operating system from user's perspective as well as from system's perspective.
- Understand the principles of concurrency and synchronization.
- Understand basic resource management techniques.
- Understand different theoretical principles in depth through hands on high level programming.

1 **Introduction:** Definition and types of operating systems, Batch Systems, multi programming, time sharing, distributed and real-time systems, Operating system structure, Operating System Components and Services, System calls, System Programs, Virtual Machines. **[6]**

2 **Process Management:** Process and Thread Concept, Process States, Process Control Block, Operations with examples from UNIX (fork, exec) and/or Windows, Inter-process communication (shared memory and message passing), Scheduling Algorithms, Performance Evaluation. **[9]**

3 **Process synchronization and Deadlocks:** critical section problems, semaphores, classical Inter process communication problems. **[9]**
Deadlocks-System model, Characterization, Deadlock prevention, Avoidance and Detection, Recovery from deadlock, Combined approach to deadlock handling.

4 **Memory Management:** Logical and Physical Address Space, Swapping, Contiguous Allocation, paging and segmentation, demand paging, virtual memory page replacement algorithms. **[8]**

5 **File and I/O Management:** Directory systems, File System Implementation issue, access methods, Allocation Methods, Free Space Management, Disk Structure, Disk Scheduling, Disk Management, Control of Various Devices, Device Drivers, Interrupt Driven and Poll Driven Data Transfer. **[8]**

Outcome(s): By learning the course, the students will be able to,

- describe, contrast and compare differing structures for operating systems
- understand and analyse theory and implementation of: processes, resource control (concurrency etc.), physical and virtual memory, scheduling, I/O and files

Text Books:

[1]. P. B. Galvin, A. Silberschatz, G. Gagne, Operating System Concepts, 9th ed., Wiley India, 2015.
[2]. Andrew S. Tanenbaum, Modern Operating Systems, 4th ed.,Prentice-Hall Inc., 2015.

Reference Books:

[1]. Deitel, Operating Systems,3rd ed., Pearson Education,2012
[2]. Stallings, Operating Systems: Internals and Design Principles, 7th ed., Pearson education, 2013.

CA 19. 104 **Data Structures** **Total Lectures:40**
Credits 3-0-0-3

Prerequisite(s): CS-19.103 (C- Programming)

Objective(s):
- To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems,
- To promote an analytical and empirical appreciation of the behavior of algorithms using data structures

1. **Introduction:** Overview of data structure, types of data structures and operations. Applications of data structures. [4]
2. **Pointer and dynamic memory allocation:** Pointer declaration and initialization, accessing a variable through its pointer, meaning and advantages of dynamic memory allocation, Memory allocation functions. [9]
3. **Array, Sorting and Searching Techniques:** Representation of single and multidimensional array. Insertion Sort, Selection Sort, Merge Sort, quick sort, Linear Search, Binary Search. [9]
4. **Stack & Queue:** Definition and representation of stack, operations on stack, Infix, Postfix, Prefix Expressions, Conversion from Infix to Postfix (Algorithms only). Types of queues, Primitive Operations on Queues. [9]
5. **Linked List & Tree:** Introduction to Linked List, implementation of Linked List, operations on linked list: creation, deletion, search and display, Tree introduction, Traversal of Binary Trees. [9]

Outcome(s): On the successful completion of the course, the student will be able to:
- be knowledgeable of certain abstract data types (ADT)
- be able to make a critical assessment of different implementations of an ADT
- be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems

Text Books:
[1]. Lipschutz, Data Structures, Schaum's Outline Series, TMH, Revised ed. Feb. 2014.
[2]. Horowitz and Sahani, Fundamentals of Data Structures, 2nd ed., University Press, 2008.

Reference Books:
[1]. Langsam , Augenstein and Tannenbaum, Data Structure Using C and C++, 3rd ed., PHI, 1996.
[2]. M. A. Weiss, Data Structures and Algorithm analysis in C++, 3rd ed., Addison Wesley,

CA 19. 106 System Analysis and Design

Total Lectures:40
Credits : 3-0-0-3

Prerequisite(s): NIL

Objective(s):

- To introduce the concept of system analysis for managing the projects
- To analyze and document systems, design new systems and implement their plans.

1	**Introduction to system:** Definition, characteristics and elements of system, types of system, System development life cycle, Role of system analyst.	**[6]**
2	**System Planning and Initial Investigation:** Introduction, bases for planning in system analysis, initial investigation, fact finding, information gathering, information gathering tools, fact analysis, determination of feasibility.	**[7]**
3	**Structured Analysis and Feasibility Study:** Tools of structured analysis: DFD, data dictionary, flow charts, Gantt charts, decision tree, decision table, structured English, pros and cons of each tool. Feasibility Study Objective, types, Steps in feasibility analysis, feasibility report, oral presentation, cost and benefit analysis, classification of costs and benefits.	**[10]**
4	**Designing:** System Design Objective, logical and physical design, design methodologies, structured design, form-driven methodology (IPO charts), and structured walkthrough. Input/ Output and Form Design: Objectives of input and output design, form design, classifications of forms, requirements of form design.	**[9]**
5	**System Testing and Implementation:** Objectives of testing test plan, testing techniques/types of system tests, quality assurance goals in system life cycle, System implementation.	**[8]**

Outcome(s): By learning the course, the students will be able to,

- Describe different approaches to systems analysis and design.
- Describe the five phases of the systems development life cycle (SDLC).
- Describe in detail the systems planning, systems analysis, systems design, systems implementation, and systems operation and support phases of the SDLC.

Text Books:

[1]. A wad Elias M, System Analysis and Design,,2nd ed., Galgotia Pub.(P) Ltd., 2008

Reference Books:

[1]. H. Igor, Introduction To System Analysis and Design, 5th ed., PHI, 2001
[2]. M. Lejk and D. David , An Introduction to System Analysis Techniques, 1st ed., PHI, 1998

CA 19.108 **Python Programming** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): C Programming (CA 19.103)

Objective(s): Python is a general-purpose, versatile and popular programming language. It's great as a first language because it is concise and easy to read, and it is also a good language to have in any programmer's stack as it can be used for everything from web development to software development and scientific applications.

1. **Basics of Python Programming**: History of python, installation of python , execution of python program, python character set, token, data type, inbuilt functions in python, operators and expressions, translating mathematical formulae into equivalent python expressions. [7]
2. **Python Program Flow Control** : Conditional blocks using if, else and elif, simple for loops in python For loop using ranges, use of while loops in python Loop, nested loops, break and continue [8]
3. **Functions:** syntax and basics of a function, parameters and arguments in a function, local and global scope of a variable, return statement, recursive function and lambda function [8]
4. **Strings and Lists:** Basic inbuilt python functions for string, immutable strings, strings operators and operations, creating and accessing the elements of the list, python inbuilt functions for lists. [9]
5. **Tuples, sets and dictionary:** creating tuples, inbuilt functions for tuples, operations on tuples, creating sets and set operations, creating dictionary, simple program on dictionary [8]

Outcome(s): Upon completion of this course students will be

- Familiar with Python syntax.
- Able to use python to implement a given logic.

Text Books:

1. John V Guttag, Introduction to Computation and Programming using Python, Prentice Hall of India, 2nd Edition, 2013.
2. Swaroop C H. , A Byte of Python, URL: https://python.swaroopch.com

Reference Books:

1. Zed A. Shaw ,Learn Python the hard way: a very simple introduction to the terrifyingly beautiful world of computers and code, Third edition, 2014.
2. Richard L. Halterman,Learning to Program with python, 2011.
3. Allen Downey ,Think Python How to Think Like a Computer Scientist, Version 2.0.17, Green Tea Press Needham, Massachusetts,2012.

CA 19.134 **Data Structure Laboratory** **Total Hours: 26**

0-0-4-2

Prerequisite(s): CS-19.135 (C Programming Laboratory)

Objective(s):

- To develop skills to design and analyze simple linear and nonlinear data structures
- To Strengthen the ability to identify and apply the suitable data structure for the given real
- world problem
- To Gain knowledge in practical applications of data structures

1. Implement the logic of One Dimensional Array.
2. Implement the logic of Two Dimensional Array.
3. Implement the logic of Linked List and its various operations.
4. Implementation of stack using array and Link List.
5. Implement various stack operations.
6. Implementation the logic of Queue using array.
7. Implement various operations on queue.
8. Implement all the types searching algorithms (minimum 4 programs are desired)
9. Implement all types of sorting algorithms (minimum 5 programs are desired)

Outcome(s): At the end of this course, the student will

- Be able to design and analyze the time and space efficiency of the data structure.
- Be capable to identity the appropriate data structure for given problem.
- Have practical knowledge on the application of data structures.

CA-19.136 **Python Programming Laboratory** **Total Hours:26**

Credit:0-0-4-2

.

Prerequisite: (CS 19.135) C Programming Laboratory

Objectives: The objective of this course is to:

- Become comfortable with Python programming, starting from basics of data types to deep learning.
- Provide the foundation of to explore any expansions of Python whether it is machine learning, deep learning, web development or gaming. It will also put focus to learn various skills to design object-oriented software.

Contents:

- Code different data types and operations on list, dictionaries, sets, String etc
- Code basic programs like factorial, Fibonacci etc. to understand functions and recursions.
- Implement different built-in functions in Python like eval, exec, map, lambda etc.
- Implement the concept of class, objects, inheritance and polymorphism
- Implement constructor and self
- Code programs to implement exceptions and assertions
- Implement regular expressions

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**

2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization **[4]**

2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**

3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**

4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**

5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher,16th Edition, 2014

Reference Books:

1. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
2. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
3. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
4. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

CA 19. 201 **Computer Organization** **Total Lectures:40**
Credits 3-1-0-4

Prerequisite(s): NIL

Objective(s):
- To understand the basics of combinational as well as sequential logic.
- To get familiar for analyzing the performance of digital circuits

1 **Boolean Algebra:** Laws and theorems of Boolean algebra. De-Morgan's theorem, XOR and XNOR gates, Half and Full Adder and Subtractor circuits. **[5]**

2 **Fundamental Concepts:** Products, Sum of products and Product of sums, Form of Boolean expressions, Truth Tables and Karnaugh maps and Karnaugh simplification. Multiplexers, decoders, characteristics of digital integrated digitals. **[8]**

3 **Design of Simple Computer:** Micro Operation, Macro Operation, Bus and Memory Transfers, Arithmetic and Logic Micro Operations, Shift Micro Operation, Instruction and Instruction Types **[8]**

4 **Instruction Cycle:** Timing and Control Instruction Cycle, Memory Reference Instructions, Input Output and Interrupts, Machine Language Instructions **[8]**

5 **I/O and Memory Organization:** Peripheral Devices, Input-Output Interface, Asynchronous Data Transfer, Modes of Transfer, Programmed I/O, Interrupt I/O Direct Memory Access. Memory Hierarchy, Main Memory, Auxiliary Memory, Associative, Cache Memory, Virtual Memory and Memory Management Hardware **[10]**

Outcome(s): After successful completion of the course, student will be able to
- Develop a digital logic and apply it to solve real life problems.
- Analyze, design and implement combinational logic circuits.
- Classify different semiconductor memories.
- Analyze, design and implement sequential logic circuits.

Text Books:
[1].M. Mano, Digital Design, 4th ed., Prentice Hall of India, 2008
[2].R. P. Jain, Modern Digital Electronics, 3rd ed., TMH, 2003.
[3].W. Stallings, Computer Organization and Architecture, 9th ed., Pearson,2013

Reference Books:
[1].J. F.Wakerly, Digital Design, 4th ed, Pearson, 2008.
[2].C.H.Roth. Fundamentals of Logic Design, 6th ed., Thomson Learning, 2013.

CA 19.203 **Database Management System** **3-0-0-3**

Total Lectures:40

Prerequisite(s): Nill

Objective(s): The objective of this Course is to:

- Understand the fundamental concepts of database management.
- Design and Normalize databases.
- Understand transaction processing control.
- Understand basic of object concepts and object relations.
- Understand the role of the DBMS & RDBMS in the organization.

1. **Introduction**: An Overview of Database Management System, Comparison of Database System and File System, Characteristics of Database Approach, DBMS Architecture, Data Models, Schema and Instances, Data Independence. Data Modeling Using Entity Relationship Model: Entity, Entity Types, Entity Set, Notation for ER Diagram, Attributes and Keys, Concepts of Composite, Derived and Multivalued Attributes, Super Key, Candidate Key, Primary Key, Relationships, Relation Types, Weak Entities, Inheritance, Specialization and Generalization. **[10]**
2. **Relational Data Model:** Relational Model Terminology: Domains, Attributes, Tuples, Relations, Characteristics of Relations, Relational Constraints: Domain Constraints, Key Constraints, Relational Database Schema, Relational Database Design By ER To Relational Mapping. Introduction to SQL. **[11]**
3. **Normalization:** Functional Dependencies, Armstrong's Inference Rule, Normal Form up to Boyce Codd Normal Form. **[4]**
4. **Relational Algebra:** Selection, Projection, Set Theoretic Operations Union, Intersection, Set Difference And Division, Inner, Outer, Left Outer, Right Outer and Full Outer Join. **[8]**
5. **Transaction Processing And Concurrency Control:** Definition of Transaction, Desirable ACID Properties, Serializable And Non Serializable Transactions, Concurrency, Lost Update, Dirty Read, Concurrency Control Techniques: Locking, 2PL **[7]**

Outcome(s): After completion of the course, students will be able to:

- Analyze database models & entity relationship models. Understand architecture for database development.
- Design E-R diagram
- Use Structured Query Language (SQL) with complex queries.
- Design and normalize the relations for any organization.

Text Books:
[1] R. Elmasri & S. B. Navathe, Fundamentals of Database Management Systems, 7th ed., Pearson Education, 2016.
[2] R. Ramakrishnan, Database Management Systems, 3rd ed., Tata McGraw Hill, 2008.

Reference Books:
[1] Korth and Schilberschatz, Database System Concepts, 6th ed., Tata McGraw Hill, 2011.
[2] C.J. Date, Database Systems, Tata McGraw Hill, 2nd Edition, 2003.

CA 19. 207 **C++ Programming** **Total Lectures: 40**
Credits: 3-0-0-3

Prerequisite(s): CS-19.103 (C Programming)

Objective(s):
- To get a basic knowledge of object-oriented concepts.
- To master in programming related to classes inheritance using C++.

1	**Introduction to Object Oriented Programming and C++:** Basic concepts of object–oriented programming, Structured versus object- oriented programming, merits and demerits of object oriented methodology. C++ Preprocessor directives, Variables, data types, constants, operators, scope resolution operator, memory management operators, decision and loop control structures, arrays, strings, functions.	**[8]**
2	**Classes and Objects:** Class definition, Structure versus class, accessing member functions within a class, data hiding, arrays within a class, static data and member functions, objects, friend functions and friend classes, constant member functions, pointers to members, constructors and destructor.	**[9]**
3	**Overloading and Exception Handling:** Definition, unary operator overloading, binary operators overloading, overloading of new and delete operators, manipulation of string using operators, type conversion, overloading with friend functions, function overloading, error and exception handling.	**[9]**
4	**Inheritance and Overriding:** Derived and base classes, type of inheritance, derived class constructors and destructor, overriding member functions, public and private inheritance, virtual base classes, abstract classes, this pointer, virtual functions and pure virtual functions, static and dynamic bindings.	**[8]**
5	**Introduction of I/O Streams and the Standard Library:** Header files, I/O stream library, stream I/O for objects, file I/O.	**[6]**

Outcome(s): On the successful completion of the course, the student will be able to:
- To gain the basic knowledge on object oriented concepts.
- To understand the role of inheritance, polymorphism, dynamic binding and generic structures in building reusable code.

Text Books:
[1]. R. Lafore, Object-Oriented Programming in C++, 4th ed.,Pearson Education, 1997.
[2]. Balagurusamy E., Object Oriented Programming With C++, 6th ed., Tata McGraw Hill Publishing Co. Ltd., 2013.

Reference Books:
[1]. Stroustrup Bjarne,Programming -Principles and Practice Using C++, 4th ed.Addison-Wesley, 2013
[2]. Schildt Herbert, "C++: The Complete Reference", 4th ed., Tata McGraw Hill Publishing Co. Ltd., New Delhi, 2003.

CA 19. 209 **Discrete Mathematics** **Total Lectures: 40**
3-1-0-4

Prerequisite(s): Nill

Objective(s):
- To Introduce fundamental concepts and applications of discrete structure in the field of computer science

1	**Set Theory:** Definition of Sets, Subsets, Cardinality of Sets, types of sets: Equal Sets, Universal Sets, Finite and Infinite Sets, proper set, power sets, Operations on Sets: Union, Intersection, Complement of Sets, set difference, Cartesian Product, Venn Diagrams, and Algebra of sets, duality, counting principle.	**[10]**
2	**Relations and Functions:** Definition, types of relation, Ordered Pairs, properties of relation, equivalence relations, partial ordering relation. Function: Domain and Range, Onto, Into, and One to One Function, Composite and Inverse Functions.	**[8]**
3	**Algebraic Structures:** Definition of a group, properties of group, different types of group, subgroup, finite, infinitely, countable and Cyclic Groups.	**[8]**
4	**Prepositional Calculus:** Propositions, Logical Connectives: conjunction, disjunction and negation, Truth Tables, Tautologies and Contradictions, Conditional and Bi-conditional statements.	**[8]**
5	**Counting:** Basic principles, permutations, combinations, summations, principle of inclusion and exclusion, pigeon-hole principle.	**[6]**

Outcome(s): On the successful completion of the course, the student will be able to:
- Understand the theory and techniques of logic, graphs and trees, and algebraic systems.
- Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems.

Text Book:
[1]. B. Kolman, C. Robert , S. Busb, C. Ross, Discrete Mathematical Structures, 6th ed., PHI, 2009.
[2]. H. R. Kenneth, Discrete Mathematics and Its Applications, 7th ed., TMH, 2011.

Reference Book:
[1]. Swapan Kumar Chakraborty, BikashKanti Sarkar, Discrete Mathematics, Oxford Higher Education, 2011

CA-19.233 **Data Base Management Systems Laboratory** **Total Hours: 26**

Credit: 0-0-4-2

Pre-requisites: CS14.111 (Programming Language Laboratory)

Objective: By the end of the practical sessions of this section, students will be able to:

- To learn Databases using a user interface and SQL command.
- To learn Integrity and constraints on databases.
- To understand the working of SQL queries.

Contents: Lab manual based upon the theory course CS 19.203 and to achieve the listed course objectives and outcomes

Outcomes: After undergoing this laboratory module, the students should be able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies.
- Design and implement a database schema for a given problem-domain.
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art
- RDBMS.

CA 19. 235 **C++ Programming Laboratory** **Total Hours: 26**

0-0-4-2

Prerequisite(s): CS-19.135 (C Programming Laboratory)

Objective(s):

- To make students familiar with syntax and structure of C++-programming.
- To learn problem solving techniques using object oriented programming through C++ programs implementation.

1. Implement the logic of Data Types & Operators in C++.
2. Implement the logic of Control Statements in C++.
3. Implement the programs on arrays using C++.
4. Implement the basic logic of class with a function, displaying "Hello World" as output.
5. Implement the use of all types of constructors in object creation. Also covers the concept of destructor to reclaim the resources from object (minimum 3 programs).
6. Implementation of data constant and static keyword in all possible manners.
7. Implementation of all types of inheritance using C++ (min. 3 programs).
8. Implement the logic of Function and operator overloading (min. 2 programs).
9. Implement the logic of Function overriding.
10. Implement the use of access specifiers in C++ for creating class, function and data members (min. 2 programs).
11. Implement the logic of virtual function and virtual class.
12. Implement the use of this pointer to differentiate local data member to object data member.
13. Implement the 3 programs in order to cover all aspects of exception handling in C++.
14. Implementation of abstract class functionality.
15. Implementation of file handling concepts (min. 4 programs).

Outcome(s): On the successful completion of this lab course, the student will be able to:

- To implement features of object oriented programming to solve real world problems.

UC 19.202 **Business Environment** **Total Lectures: 26**
2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]

2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]

3. **Political and legal Environment*:*** Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]

4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]

5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:

3. Business Environment, Francis Cherunilam, 1st Edition, 2018.
4. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:

5. Business Environment, BN Ghosh, OUP, 2015
6. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
7. Business Environment, AC Fernando, Pearson, 2016

CA 19. 204 **Computer Networks** **Total Lectures: 40**
Credits: 3-1-0-4

Prerequisite(s): Nill

Objective(s):
- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To understand fundamentals of computer networks and major routing protocols.

1	**Basic concepts of networks and Layered Architecture:** Computer networks introduction, network topologies, protocols and standards, Client-Server transactions, Network devices: repeaters, bridges, gateway, Routers; categories of networks- LAN, WAN and MAN. Layers and their function, OSI reference model, TCP/IP model, Comparison of models.	**[9]**
2	**Physical layer:** Transmission Media, guided and unguided; Attenuation, Distortion, Noise, Switching.	**[7]**
3	**Data Link Layer:** Functionality, Framing, Encoding Techniques, Design Issue, Error Detection & Correction Codes, MAC.	**[7]**
4	**Network & Transport Layer:** Routing Algorithms (Distance Vector & Link State), IPv4 and IPv6, Connection Oriented and Connection Less services, Sliding Window Protocols.	**[8]**
5	**Application Layer :** Network Security & Privacy, Data Compression & Cryptography, Electronic Mail (SMTP, POP3, IMAP), DNS, FTP, HTTP, telnet etc.	**[9]**

Outcome(s): On successful completion of this course, students will be able to
- Analyze computer network component and devices.
- Synthesize how communication works in a network and internet.
- Formulate the concept of topologies and their applications.
- Analyze protocol at different layers and how they play important role in network implementation.
- Enumerate the layers of OSI and TCP/IP models.

Text Book: [1]. B. A. Forouzan, Data Communications and Networking, 5th ed., Tata McGraw Hill, 2013.

Reference Book: [1]. A. S. Tanenbaum, Computer Networks, 4^{tn} ed., Prentice-Hall of India, 2002.

CA 19. 206 **Computer Graphics** **Total Lectures: 40**
3-1-0-4

Prerequisite(s): CS-19.103 (C Programming)

Objective(s):

- To introduce the students with the graphics mode, with the help of basic algorithms and methodologies.
- The objective of the course is to equip students with fundamental knowledge and basic technical competence in the field of computer graphics.
- Provide an understanding of how a computer draws the fundamental graphics primitives.
- To learn Computer Graphics methodologies/Algorithms and techniques.

1	**Basic Concepts:** Application Areas of Computer Graphics, Graphical User Interface, RGB Color model, CMY color models, Advantages of Computer Graphics.	**[8]**
2	**Graphics Hardware:** Random Scan Displays, Raster Scan Display (with Introduction to Flickering, Interlacing, American Standard Video), Color CRT Monitors, Flat Panel Display (Plasma Panel, Liquid Crystal Display, Electroluminescent Display).	**[7]**
3	**Raster Graphics Algorithms:** Line Drawing Algorithms-DDA, Bresenham's Algorithm, Circle and Ellipse Drawing Algorithms, Filling (Scan-Converting Polygon Filling, Inside Outside Tests Boundary Fill and Area Fill Algorithm). Cohen- Sutherland Algorithm of clipping.	**[12]**
4	**Transformations:** 2-D Transformations (Rotation, Reflection,Shearing, Scaling), Homogeneous Coordinate Representation, and Translation.	**[8]**
5	**Animation Introduction:** Conventional and Computer-Assisted Animation, Animation languages, methods of controlling Animation, basic rules of Animation.	**[5]**

Outcome(s): On successful completion of this course, students will be able to

- Understand basic concepts of computer graphics.
- Acquire knowledge about drawing basic shapes such as lines, circle ellipse, polygon.
- Perform processing of basic shapes by various processing algorithms /techniques.
- Implement two dimensional transformations.

Text Books:

[1]. D. D. Hearn and M. P. Baker, Computer Graphics, 3rd ed., Prentice Hall India, 2011.
[2]. A. Kalbag, Computer graphics & animation, 1st ed., Usborne, 1999.

Reference Books:

[1]. J. D. Foley, A. V. Dam, S. K. Feiner, J. F. Hughes, Computer Graphics Principles and Practice, 2nd ed., Addison Wesley, 1995.
[2]. D. F. Rogers, Procedural Elements for Computer Graphics, 2nd ed., Tata McGraw Hill Publications, 2001.

CA 19. 210 **Java Programming** **Total Lectures: 40**
3-1-0-4

Prerequisite(s): Nill

Objective(s): The objective of this course is to:

- Cover issues related to the definition, creation and usage of classes, objects and methods.
- Discuss the principles of inheritance and polymorphism.
- Provide the foundation of good programming skills by discussing key issues of the design of object- oriented software, including programming design and documentation.

1	**Basics of Java Programming:** Importance of Java, Java Byte code, Java and HTML, the Java buzzwords, using blocks of code, lexical issues, Java Class Libraries. Constants, Variables, Data Types, Operators, Type Conversion in Expression, Mathematical Functions, Decision Control Structure, Loop Control Structure, Arrays.	**[10]**
2	**Class and Inheritance:** Class fundamentals, declaring objects, assigning object reference variables, introducing methods, constructors, the this keyword, garbage collection, the finalize () method, overloading methods, using objects as parameters, returning objects, recursion, introducing access control, understanding static, introducing final, arrays revisited, introducing nested and inner classes, Wrapper Classes. Inheritance: Multilevel hierarchy, method overriding, Abstract classes, Final classes, String Class.	**[10]**
3	**I/O and String Handling:** I/O basics, reading console input, writing console output, the PrintWriter class, reading and writing files, String and StringBuffer class, Various Types of string operations related to both the classes.	**[6]**
4	**Package, Interfaces and Exception Handling:** Packages, importing packages, interfaces, exception-handling fundamentals, exception types, uncaught exceptions, using try and catch, multiple catch clauses, nested try statements, throw, throws, finally, Java's built-in exceptions, creating your own exception subclasses, using exceptions.	**[7]**
5	**Applet Programming:** Applet life cycle, creating executable application, Designing a web page, Applet Tag, Parameter passing in applets, Graphic Class, lines, rectangles, circle and ellipse, polygons.	**[7]**

Outcome(s): Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Develop programs using the in-built Java API and the Java standard class library.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).

Text Book:
[1]. H. Schildt, Java The Complete Reference, 8th ed., Herbert Schildt, 2011.
[2]. J. Jukowski, Mastering Java J2SE 1.4, SYBEX, 2002.

Reference Book:
[1]. A. B. Downey, Think Java: How to Think Like a Computer Scientist, 2011.
[2]. P. Deitel, H. Deitel , Java How To Program, 10th ed., Deitel publication, 2014.

CA 19.234 Internet Laboratory **Total Hours: 26**

0-0-4-2

Prerequisite(s): NIL

Objective(s):

- Understanding of working of internet enabled applications
- Understand the practical aspects of various application layer protocols of TCP/IP Model

1. Describe and demonstrate the use of Web-based e-mail services
2. Configure and use Outlook Express to send, receive, and print e-mail messages
3. Create and maintain an address book in Outlook Express
4. How to formulate an effective Web search strategy to answer research questions
5. Uses of Web search engines, Web directories, and Web meta search engines effectively
6. Use Boolean logic and filtering techniques to improve your Web searches
7. Use advanced search options in Web search engines
8. Demonstrate how to use an FTP client program and Web browser to transfer files
9. Demonstrate navigation of an FTP site using a Web browser
10. Demonstrate how to compress and decompress files and how to check them for viruses
11. Download an FTP client program using a Web browser
12. Install and use a compression program
13. Trace the connection between your computer and a remote computer
14. Demonstrate the working of e-commerce related online operations

Outcome(s): After completion of the course students will be

- Well versed in internet or online related browsing and other functionalities
- To configure FTP and WEB agents properly.
- To understand the working of Mail agent like outlook express.

CS-19.236 **Java Programming Laboratory** **Total Hours:26**

0-0-4-2

.

Prerequisite: CS-19.135 (C Programming Laboratory)

Objectives: The objective of this course is to:

- Become comfortable with object-oriented programming and learn to think in terms of objects.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, documentation.

Contents: Lab manual based upon the theory course CS 19.210 and to achieve the listed course objectives and outcomes.

Outcomes: Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of
- Inheritance, polymorphism, encapsulation and method overloading.
- Create Java application programs
- Use of development environment like Eclipse for collaborative

CA 19.301 **Web Technology** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): Nil

Objective(s):

- Build Web applications. Semantics and syntax of the HTML,Java Scripts and VB Scripts, including discussion on the practical problems that HTML solves. Write server-side scripts to implement dynamic Web pages that interact with databases and files.

1. **Introduction:** Clients, Servers, and Communication, The Internet Basic Internet Protocols, The World Wide Web, HTTP request message, response message, Web Clients Web Servers. [5]

2. **HTML:** HTML Document, Markup Tags (HTML, HEAD, TITLE, BODY, PRE, LIST, HR, BR), Formatting Tags (MARQUEE, BOLD, ITALICS, SUBSCRIPT), Linking, URL, Relative Path Vs Absolute Path names, Images, Tables, Frames, Form Elements (Text, Buttons, List, Reset, Submit, Radio buttons, Checkbox); DHTML: Cascading Style sheets, Dragging, Dropping, Layers, Div tag. [8]

3. **JavaScript:** Declaration and Expressions, Control Structure and Functions, Variable scope Global Vs Local, Object in Java Script: Properties and Methods, Array Object, Date Object, Math Object, String Object, Events in java Script: Onblur, Onclick, on change, on focus, Design of Interactive forms. [9]

4. **VBScript:** Fundamentals, Variables, String, Constant, Date and Time, Arrays, control Structure, Design making, looping, Sub procedure, Object Methods and events, data validation. [7]

5. **XML:** Overview, Comparison of XML and html, components of XML, XML document, XML declaration, Root element, An empty element, attributes, Markup Delimiters, Element Mark Up, Attribute Mark Up, Naming Rules, Character References, Predefined Entities, Entity References, Cdata Sections, Processing Instructions, Document Type Declaration, Welformed and Valid Document, DTD and Validation, Internal DTD Subset, External DTD, Developing DTD, Elements and Attributes Of DTDs:- Empty Element, Only Element, Mixed Elements, Any Element, Creating a valid document from a DTD [11]

Outcome(s): After Successful completion of this course student will be able to:

- Write Java and VB scripts to handle HTML forms
- Write regular expressions including modifiers, operators, and meta-characters.
- Create HTML web pages that use various Scripting functions, and that manipulate files and directories

Text Books:

1. Young M .L, “Internet Millenum Edition” TMH, New Delhi, 2007.
2. Jackson Jeffrey C., "Web Technologies -A Computer Science Perspective", Pearson Education, 2006.

Reference Books:

(1) Noel Jerkr, “ Techunedia VB Scraper VB Script Interleave course”, New Delhi 1998(2) Web Searching Technology and Search Engine Optimization[ISBN: 978 - 93 - 81786 - 92 - 5] by Bharat & Company
(2) Marlin Webb, “Java Scraper, Instant JavaScript”, Tata McGraw-Hill, New Delhi.(4) SEO Warrior: Essential Techniques for Increasing Web Visibility By John I Jerkovic, O'Reilly Media, November, 2009
(3) Eathier Kay and Houser Alan , “XML programming in 2 ½ days,” IDG Books India (P) Ltd.

CA 19. 303 **Software Engineering** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): CA 19.103 (C Programming)

Objective(s):

- To know about software requirements specification, requirement elicitation, structured system analysis and introduction of object-oriented analysis and design, design techniques.
- To acquire knowledge on implementation issues such as modularity and coding standards

1. **Introduction:** Software Characteristics, Components and Applications, Software Engineering a layered Technology, Software life cycle models, Waterfall, Prototype, Evolutionary and Spiral Models. [8]
2. **Software Project Management**: Basic Concepts, Project Management: Core functions, support functions, Project Integration Management. [8]
3. **Software Project Planning:** Objectives, decomposition techniques: software sizing, problem based estimation, lines of code based estimation, and function point based estimation, process based estimation, Cost Estimation Models:-COCOMO, Risk Management. [8]
4. **Software Design:** Design Principles, Design Concepts:- abstraction, refinement, modularity, software architecture, structured partitioning, information hiding, effective Modular Design:- functional independence, cohesion and coupling, Object Oriented analysis and Design. [8]
5. **Software Testing:** Testing Fundamentals, Design of Test Cases, White box testing, Basis Path testing, Control structure Testing, Black box testing. [8]

Outcome(s):

- Demonstrate knowledge of the distinction between critical and non-critical systems and ability to manage a project including planning, scheduling and risk assessment/management.
- Author a software requirements document and understanding of the proper contents of a software requirements document.

Text Books:

1. Pressman R.S., "Software Engineering", Tata McGraw Hill Publishing Company Ltd.,8th edition, 2014

Reference Books:

1. Jalote Pankaj,"An Integrated Approach to Software Engineering", NAROSA.3rdedition, 2005.
2. Rajib Mall, Fundamentals of Software Engineering, Prentice-Hall, 2ndedition, 2004.

Develop Web Pages by use of following tags

- Markup Tags
- Formatting Tags
- Frames
- Form Elements

Programs:

- Design web pages based on above Tags.
- Design and formatting a form based on form elements

Develop Web Pages by use of following tags/Concepts

- Cascading Style sheets
- Dragging
- Dropping
- Div tag.

Programs:

- Based on above CSS formatting on HTML scripts.

Develop Web Pages by use of following tags/Concepts

- java Script Declaration and Expressions
- Control Structure and Functions
- Java Script: Properties and Methods
- Array Object
- Date Object
- Math Object
- String Object
- Events in java Script: Onblur, Onclick, on change, on focus.

Develop Web Pages by use of following tags/Concepts

- Form validation through JavaScript
- Program for Event handling
- Working with Date and Time Functions
- Program for calculator

Testing:

- XML components
- DTD
- Creating a Valid Document From a DTD

Programs:

- Basic XML Document
- Access XML document elements through programs

Program Electives

Program Elective-1

CA 19. 231 **Management Information System** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental

Objective(s): To understand how to leverage information systems to effectively operate and grow an enterprise. The course provides a foundation in the theory and practical application of information systems within an organization. Managing, analyzing, designing, and implementing an MIS will be the focus of the course

1	**Introduction:** Elements, characteristics, objectives and importance, relationshipbetween MIS and Computer, role of MIS in the functions of management.	**[6]**
2	**Information:** Classification of information, levels of information,techniques of data collection, quality aspect of information, value of Information	**[8]**
3	**Decision Making:** Decision making concepts, rationality in decision making,decision support system, MIS as a technique for programmed decisions, structured v/s Un-structured decisions, formal vs. informal systems, model of decision making, methods, MIS and role of decision making.	**[8]**
4	**Manager and Computers:** Database concept, database models, database design,RDBMS, MIS and RDBMS, network topology, LAN, MAN, WAN and data communication.	**[9]**
5	**Development and Application of MIS:** Strategic and project planning for MIS, conceptual system design, detailed design, implementation, evaluation and maintenance of the MIS, pitfalls of MIS. MIS for marketing, financial, production management,human resource management.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- understand and articulate fundamental concepts of information technology management.
- assess and apply IT to solve common business problems.
- suggest and defend effective solutions to business problems, and design a database application to solve a business problem.
- discuss the ethical aspects of information technology use in the organization and its governance issues.

Text Books:

[1]. Jawadekar,W. S. “Management Information System”, Tata McGraw- Hill Publishing Co. Ltd., New Delhi, 2004

Reference Books:

[1]. Murdick, R, G, Ross J E and Clagget, J,R, “Information Systems for Modern Management”, PHI, New Delhi.,2003
[2]. Sadagopan, “Management Information System”, PHI, New Delhi.2010.
[3]. Parker, Case Thomas, “Management Information System: Strategies and Action”, Tata McGraw- Hill Publishing Co. Ltd., New Delhi

CA 19.232 **Enterprise Resource Planning** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental and Networking

Objective(s): This course will enable student understanding of issues and decisions that must be made when embarking upon a ERP selection and implementation journey. It will also lead to an understanding the challenges associated with managing extant ERP systems.

1	**Overview:** Definition, ERP & Business, Evolution of ERP, Need of ERP, Features of ERP, Motivation behind ERP, Technologies & Infrastructure required for ERP, Demerits of ERP, benefits & application, BPR & ERP,ERP Market.	**[6]**
2	**Data Mining & Data Warehousing:** Foundation of Data Mining, scope of Data Mining, Mechanism, Data Mining methods & Algorithms, Relevance of Data Mining to BPR, Database marketing by Data mining. Data warehouse Management System, Business Intelligent system architecture, features, Application, Necessity of Data warehousing, critical factors for the failure of Data warehouse.	**[8]**
3	**Implementation Issues:** Implementation Methodologies, Post Implementation Issue, Hidden Costs of ERP (Training, Testing, Dirty Data), Role of consultant	**[8]**
4	**ERP Module :** BAAN, SAP, ORACLE, People soft, Comparison of major ERP packages	**[9]**
5	**ERP & E-commerce:** Electronic Data Interchange, Advantage of EDI with respect to business, ERP fitness with E-commerce, Post ERP work with E-commerce, ERP & Internet.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Understand and gain insight into process views of organizations and tools and techniquesused to model both as-is and to-be models.
- Apply the process modeling techniques in one or more modeling environments.
- Know and be able to apply key technical terminology in enterprise information systems asthey apply in different ERP products and development methods
- Understand key differences between the major ERP applications (such as SAP R/3, andOracle/PeopleSoft/Sibel) and issues specific to these applications their configuration andmanagement.
- Analyze a current architecture and perform an effective gap analysis before an ERP implementation
- Be able to map enterprise architectural resources to a contemporary Enterprise Architecturemapping tool.

CA 19.237 **Software Project Management** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): (System Analysis and Design)

Objective(s):

- To introduce the concepts of Software Project Management to the students.
- To make the students understand the requirement for project evaluation.
- To make the students understand the requirement for Software quality assurance and project management along with its tools.

1	**Introduction to Software Project Management (SPM) : S**oftware Engineering problem and software product, software product attributes, definition of a Software Project (SP), SP vs. other types of projects activities covered by SPM, categorizing SPs, Project Management cycle, SPM framework, types of project plan	**[10]**
2	**Project Evaluation:** Strategic assessment, technical assessment, cost benefit analysis, cash flow forecasting, cost benefit evaluation techniques, risk evaluation	**[8]**
3	**Activity Planning:** Objectives, project schedule, sequencing and scheduling activities, network planning models, forward pass, backward pass, activity float, shortening project duration, activity on arrow networks.	**[8]**
4	**Managing people and Organizing teams:** Introduction, understanding behaviour, organizational behavior, working in groups, becoming a team, decision making leadership, organizational structures.	[**7**]
5	**Software Quality Assurance and Testing:** Testing principles and objectives, test plan, types and levels of testing, test strategies, program verification and validation, software quality, SEI-CMM,SQA activities, QA organization structure, SQA plan	**[7]**

Outcome(s): After completion of the course, students would be able to:

- Identifying the essential skills required to be an excellent project manager
- Analyzing the main factors influencing project management outcome

Text Books:

[1]. Bob Hughes, Mikecotterell, “Software Project Management”, Fourth Edition, Tata McGraw Hill, 2009.

[2]. AshfaqueAhmed,"Software Project Management: A Process-Driven Approach",CRC Press, 2016.

CA 19. 263 **System Software** **Total Lectures: 40**

3-0-0-3

Prerequisite(s): Basic concepts of Unix-like systems. Shells and scripting. System-level programming in the C language. Software development tools and techniques.

Objective(s): This course provides an introduction to computer systems and explores the design and implementation issues of System programs that play an important role in program development.

1	**Overview:** Language processors, data structures for language processors, assemblers,macrosandmacroprocessors,compilers,interpreters, linkers and loaders.	**[6]**
2	**Operating System:** Functions of Operating System, Kernel, Shell, Process, Process state diagram, System Calls	**[8]**
3	**Assemblers:** Design of an assembler ,one pass and two pass Assembler, Databases of Assemblers,tableprocessing	**[8]**
4	**MacroProcessors:**Importance of Macro, MacroDefinition,Macro call,Macro Expansion,ConditionalMacroexpansion,Nesting ofMacros,FunctionsofMacro Processor .	**[9]**
5	**Loaders, Linkers and Compilers:**FunctionofLoaders, loaderschemes-compileandgo, general,absolute,subroutinelinkages,relocating loaders,directlinkingloaders, binders, linkingloaders,overlays, dynamicbinders,TypesofCompilers,Phases of compilerdesign,recursion,calland return statements.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Apply knowledge of mathematics, science, and engineering
- Design a system, component, or process to meet desired needs within realistic constraints.
- Identify, formulate, and solve engineering problems Understand the concept of input/output devices of Computers and how it works.

Text Books:

CA 19. 265 **Internet Technologies** **Total Lectures: 40**
Credits 3-0-0-3

Prerequisite(s): Computer Fundamental

Objective(s): Internet Technologies presents the student with an introduction to the Internet and its services, applications and tools

1	**Introduction:** Layering, TCP/IP Layering, Internet Addresses, The Domain Name System,Client ServerModel, PortNumbers,Implementations andApplication, Programminginterfaces.	**[6]**
2	**IP**:TheLinkLayerEthernetandIEEE802EncapsulationTrailerEncapsulation,**SLIP:**SerialLi neIP, Compressed SLIP,**PPP**: Point-to-Point Protocol. TheInternetProtocolIPHeader,IPRouting,SubnetAddressing,SubnetMask, Special CaseIPAddresses.	**[8]**
3	**Introduction toARP**: Address Resolution Protocol and RARP: Reverse Address Resolution Protocol, ARP Packet Format, ProxyARP, RARPPacketFormat.	**[8]**
4	**ICMP**:InternetControlMessageProtocolIntroduction,ICMP,MessageTypes,ICMP Address, Mask Request and Reply , IP Routing RoutingPrinciples, Introduction to Dynamic Routing; . UDP: User Datagram Protocol UDP Header, UDP Checksum; DNS: The Domain Name System DNS Basics, DNS Message Format, security	**[9]**
5	**TCP**: Transmission Control Protocol TCP Services, TCP Header TCP Connection, Establishment and Termination, TCP Timeout and Retransmission, Repacketization; Telnet and Rlogin Remote Login Rlogin Protocol, SMTP Protocol; FTP: File Transfer Protocol and SMTP: Simple Mail Transfer Protocol.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Understand different types of networks, various topologies and application of networks.
- Understand types of addresses, data communication.
- Understand the concept of networking models, protocols, functionality of each layer.
- Learn basic networking hardware and tools.

Text Books:

[1]. Tannenbaum A. S., "Computer Networks", Prentice-Hall India., New Delhi
[2]. ForouzanBehrouz A, "Data Communication and Networking", TMH, New Delhi

Reference Books:

[1]. Sybex ,"Networking Complete", BPB Publication, New Delhi
[2]. Stallings Willam, "Data and Computer Communication", Pearson Education, New Delhi

CA 19.267 **Network Security** **Total Lectures: 40**
Credits 3-0-0-3

Prerequisite(s): Computer Fundamental and Networking,
Basic Mathematics.

Objective(s): Students will learn the basic concepts in computer security including software vulnerability analysis and defense, networking and wireless security, applied cryptography, as well as ethical, legal, social and economic facets of security.

1	**Introduction:** Attacks, Services and Mechanisms, Security Attacks, Security Services, Integrity check, digital Signature, authentication, has algorithms	**[6]**
2	**Secret Key Cryptography:** Block Encryption, DES rounds, S-Boxes IDEA: Overview comparison with DES, Key expansion, IDEA rounds, Uses of Secret key Cryptography; ECB CBC, OFB, CFB, Multiple encryptions DES, Hash Functions and Message Digests: Length of hash, uses, algorithms (MD2, MD4, MD5, SHS) MD2: Algorithm (Padding, checksum, passes.) MD4 and 5: algorithm (padding, stages,digest computation.) SHS: Overview, padding, stages	**[8]**
3	**Public key Cryptography:** Algorithms, examples, Modular arithmetic (addition,multiplication, inverse, and exponentiation) RSA: generating keys, encryption and decryption.Other Algorithms: PKCS, Diffie-Hellman, El-Gamal signatures, DSS, Zero-knowledge signatures	**[8]**
4	**Authentication:** Password Based, Address Based, Cryptographic Authentication. Passwords in distributed systems, on-line vs offline guessing, storing. Cryptographic Authentication:passwords as keys, protocols, KDC's Certification Revocation, Interdomain, groups, delegation. Authentication of People: Verification techniques, passwords, length of passwords, password distribution, smart cards, biometrics, Kerberos: purpose, authentication, serer and ticket granting server, keys and tickets, use of AS and TGS, replicated servers. Kerberos V4: names, inter-realm authentication,Key version numbers. Kerberos V5: names, realms, delegation, forwarding and proxies, ticket lifetimes, revoking tickets, multiple Realms	**[9]**
5	**Network Security:** Electronic mail security, IP security, Network management security.Security for electronic commerce: SSL, SET. System Security: Intruders and Viruses, Firewalls, Intrusion Detection	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Identify the security goals of an information system, point out contradictory goals and suggest compromises.
- Understand of the principles underlying cryptography and cryptanalysis and have a technical understanding of the main cryptographic concepts and technologies.
- Understand the purpose of security protocols and be witness to the difficulties of their verification.

Text Books:

CA 19. 208 **Electronic Commerce** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental

Objective(s): A comprehensive overview of how firms compete in today's environment with a focus on strategic choices and the infrastructures affecting e-commerce including technology, capital, media, and public policy.

1	**Electronic Commerce**: Overview and Scope, Traditional Commerce vs. Electronic Commerce, Impact of E-Commerce, Electronic Markets, Internet Commerce, e-commerce in perspective, Application of E Commerce in Direct Marketing and Selling, advantages and disadvantages, and future of E-commerce	**[6]**
2	**Business strategy in an Electronic Age:** Value Chains, Supply chain, Porter's value chain Model, Inter Organizational value chains, Strategic Business unit chains and industryvalue chains.	**[8]**
3	**Business to Business E-Commerce**: Inter-organizational Transitions, Credit Transaction Trade Cycle, a variety of transactions. Electronic Data Interchange (EDI): Introduction, Benefits of EDI, EDI Technology, EDI standards, EDI Communication, EDI Implementation, EDIagreement, EDIsecurity.	**[8]**
4	**Electronic Payment System:** Introduction, Online Payment System, Prepaid Electronic Payment System, Post Paid Electronic System, E-Cheques, Credit Cards, Smart Cards, E-Purses, DebitCards,LegalRisk of E-Payment System.	**[9]**
5	**Securing NetworkTransaction:** Security Policy, Procedures and Practices, Transaction Security, Cryptography Algorithm, Public Key Algorithm, Authentication Protocol, Digital Signature, E-Mail Security. Different case studies of E commerce	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Illustrate management's role in the networked economy.
- Identify strategies involved in running an e-commerce company.
- Identify factors of successful implementation of an online strategy.
- Compare metrics used to evaluate progress of an e-commerce strategy.
- Summarize the effect of laws and regulations on e-commerce and Internet business.

Text Books:

ET 19.471 **Cloud Computing (Infosys)** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental and Networking
Object Oriented Design and Programming

Objective(s): This course covers a series of current cloud computing technologies, including technologies for Infrastructure as a Service, Platform as a Service, Software as a Service, and Physical Systems as a Service.

1 **Overview of Cloud Computing:** Brief history and evolution - History of Cloud Computing, Evolution of Cloud Computing, Traditional vs. Cloud Computing. Why Cloud Computing, Cloud service models (IaaS, PaaS&SaaS). Cloud deployment models (Public, Private, Hybrid and Community Cloud), Benefits and Challenges of Cloud Computing. Introduction to AWS Public Cloud Vendor. Cost optimization in AWS. **[6]**

2 **Virtualization**: Basics of virtualization, Virtualization technologies, Server virtualization, VM migration techniques, Role of virtualization in Cloud Computing. Introduction to EC2 service of AWS. **[8]**

3 **WWoWorking with Private Cloud**: Private Cloud Definition, Characteristics of rivate Cloud, Private Cloud deployment models, Private Cloud Vendors - CloudStack, OpenStack, Eucalyptus Microsoft, Private Cloud – Benefits and Challenges. Private Cloud implementation in Amazon EC2 service. **[8]**

4 **Working with Public Clouds:** What is Public Cloud, Why Public Cloud, When to opt for Public Cloud, Public Cloud Service Models, and Public Cloud Players. Infrastructure as a Service Offerings, IaaS Vendors, PaaS offerings, PaaS vendors, Software as a Service. Demonstrating public cloud with AWS – Storage and Database services. Private vs. Public Cloud – When to choose. **[9]**

5 **Overview of Cloud Security:** Explain the security concerns in Traditional IT, Introduce challenges in Cloud Computing in terms of Application Security, Server Security, and Network Security. Security reference model, Abuse and Nefarious Use of Cloud Computing, Insecure Interfaces and APIs, Malicious Insiders, Shared Technology Issues, Data Loss or Leakage, Account or Service Hijacking, Unknown Risk Profile, Shared security model between vendor and customer in IAAS/PAAS/SAAS, Implementing security in AWS. Migration paths for cloud, Selection criteria for cloud deployment, Issues/risks in cloud computing, Future technology trends in Cloud Computing. **[9]**

Outcome(s): After completion of the course, students would be able to:

- Understand the concepts of cloud computing
- Understand the advantages and limitations of different cloud architectures.
- Understand the enabling technologies for building cloud systems.
- Understand the concept of security in cloud computing.

Text Books:

[1]. Cloud Computing: Principles and paradigms By Raj Kumar Buyya, James Broberg, AndrezeiM. Goscinski, 2011
[2]. Cloud Computing, By Michael Miller, 2008.
[3]. Cloud Computing for dummies, By Judith Hurwitz, Robin Bllor, Marcia Kaufman, Fern Halper, 2009.

Reference Books:

[1]. Rittinghouse, John, W. Cloud computing: Implementation, management and security
[2]. Rhoton, John, Cloud Computing Architected: Solution Design Handbook.
[3]. Krutz, Ronald L.; Vines, Russell DeanKalakota ,R. and Whinston, A. B.,"Cloud Security: A comprehensive Guide to Secure Cloud Computing", Addison Wesley.

CA 19. 373 **Software and CASE Tools** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental, Computer programming

Objective(s):

- To introduce the concept of software crisis, managing complexity, requirements specification, architectural and detailed design, testing and analysis, software process, and tools and environments.
- Explores concepts and techniques for design and construction of reliable and maintainable software systems in modern high-level languages; program structure and design; program-correctness approaches, including testing; and event-driven programming

1	**Software Engineering Fundamentals :** Definition of software product and process, Software Characteristics, Components, Applications, Layered Technologies, Processes and Product, Methods and Tools, Generic View of Software Engineering, Software Crisis and Software development paradigms	**[6]**
2	**Software Requirements Analysis & Specification:** System specification, Software requirements specification (SRS) standards, Analysis Modeling: Difference between Data and Information, ER Diagram, Dataflow Model, Control Flow Model, Control and Process Specification, Data Dictionary	**[8]**
3	**Software Design:** Software architecture, Modular design - cohesion and coupling, Process-oriented design, Data-oriented design, User-interface design, Real-time software design, introduction to Object Oriented Design	**[8]**
4	**CASE Tools, Coding and Testing:** Computer-aided software engineering, Introduction to CASE, Building Blocks of CASE, Integrated Case Environment, Characteristics of good Programming languages, Introduction to Testing Process, Testing Activities like Unit, Integration & System Testing.	**[9]**
5	**Reengineering, Quality and Metrics:** Business Process Reengineering, Reverse Engineering, Software re-engineerin. SQA-Software Quality Assurance, Software Reliability, Software quality metrics, SQA plan, ISO 9000 and 9001 Quality Standards.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Make independent and critical assessments,
- Identify, formulate and solve problems autonomously, and
- Deal with changes in working life.
- Stay abreast of the development of knowledge, and
- Communicate their knowledge to others, including those who lack specialist knowledge in the field.

Text Books:

[1]. Pressman R.S. , "Software Engineering", TMH 7th Ed 2014.
[2]. PankajJalote,"An Integrated Approach to Software Engineering", NAROSA, 2005.

Reference Books:

[1]. Designing Flexible Object Oriented systems with UML - Charles Ritcher
[2]. Fairely, R.E., "Software Engineering Concepts", McGraw-Hill
[3]. Object-Oriented Analysis and Design: using UML Mike O'Docherty Wiley Publication

CA 19. 375 **Bioinformatics** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Networking
Some knowledge of genetics or molecular biology would be advantageous.

Objective(s): To deliver descriptions of this rapidly evolving field, and facilitate user access to and manipulation of the biological data. This will include descriptions of genetic and biological databases and relevant tools available to retrieve and analyse the information within these.

1	**Biological InformationResources:**Introductionto biological dataand database management,Biologicaldatabases– Protein databanks (Primaryand Secondary databank; Sequence andstructuredatabank), Genomicdatabanks (Sequence and specialized databanks).	**[6]**
2	**SequenceAlignment:**Introduction to biological sequence alignment, Database searching, Algorithm for sequence alignment, Pairwise alignment(Needleman and Wunsch algorithm, Smith-Waterman algorithm),Multiple SequenceAlignment, Concept of Gaps, Gap penalties and scoringmatrices, FASTA,BLAST, Variations ofBLAST, Alignment scores andstatistical significanceof databasesearches	**[8]**
3	**Genomics:** Genome, Gene structure of prokaryotes and eukaryotes, Concept of ORFs, GC-content, Codon Usage, cDNAsand ESTs, Serial analysis of gene expression (Microarrays).	**[8]**
4	**Proteomics:**Introduction to proteome and proteome analysis(2D electrophoresis, Mass spectrophotometry, Proteinmicro array and X-ray crystallography), Algorithm for modeling protein folding.	**[9]**
5	**Phylogenetics:** Introduction to phylogenetics, Parsimony, Molecular phylogenetics, Methods of phylogenetic tree construction	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Explain the basic principles that underpin Bioinformatics analyses, and apply these principles when analysing biological data.
- criticallyanalyse and solve problems in biotechnology.
- Interpret correctly the outputs from tools used to analyse biological data and make meaningful predictions from these outputs.

Text Books:

[1]. Peruski and Peruski: The Internet and the new Biology: tools for Genomic and MolecularResearch, ASM Publishing House, India.

Reference Books:

[1]. Higgins and Taylor, Bioinformatics, Oxford University Press, US.

CA 19. 377 **Geographical Information System** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental
Data Representation
Computer Graphics

Objective(s): This is designed to provide the students with an understanding of the methods and theories of GIS Analysis that will allow students to apply GIS knowledge and skills to everyday life.

1	**Genesis and Progression:** Basic Concepts, Benefits of Computerization of Information, Users of GIS, Introduction to Real World and Data Model, GeometricRepresentationofobjects, LevelsofMeasurement,Applicationsof GIS.	**[6]**
2	**Vector DataModels:** Introduction, Spaghetti Model, Topology Model, Data Compression, StoringVector Data, Compression, StoringVector Data.	**[8]**
3	**RasterDataModels:**NecessityandCharacteristics, Coding and StorageofRaster Data, Compression of Raster Data, Run Length Encoding, Chain Codes, Block Codes, Quad Tree Model, Conversion and Contrast between Vector and Raster Models	**[8]**
4	**Hardware and SoftwareRequirements for GIS:**Basic Hardware Devices viz Computer, VDU, Quantizers, Printers, Plotters, etc. DBMS, Structure of Databases, Multimedia, WWW.	**[9]**
5	**BasicsofDataCollection:**DigitizingMaps,Scanning,ManualDigitizing,Arial Photographs, Photo Interpretation, Remote Sensing, Correction, Surveying	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Summarize GPS elevations and the operating environment for GPS;
- Create spatial data with real time GPS data;
- Recognize discrepancies in data presentations;
- Import GPS data into GIS;
- Evaluate data before transformation for scale and accuracy;

Text Books:

[1]. Bernhardsen Tor, "Geographic Information System: An Introduction", 3rd edition, Wiley Publication

Reference Books:

[1]. Longley Paul, "Geographic Information Systems and Science", 2nd Edition, Wiley Publication

CA 19. 369 **E-Business** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental

Objective(s):

- To introduce the fundamental concepts in the use and application of telecommunications, systems and technology in the e-business environment.
- To introduce new opportunities and expectations created through the use of eBusiness processes enabled by integrating information systems, telecommunications and internet-based technologies.
- To provide hands-on training for designing e-business applications and web sites using the market software packages, web authoring and development tools.

1	**Internet asaBusinessDriver:**Internet,WWW,BenefitsofInternetand WWW,Difference betweene-Commerceande-Business,MobileInternet, Internet Consumers.	**[6]**
2	**Introductiontoe-BusinessTrends:**TrendsDrivinge-Business,Customer Oriented Trends, e-Service Trends, Organizational Trends, Enterprise TechnologyTrendsandGeneral TechnologyTrends	**[8]**
3	**E-BusinessModels:**DisruptiveTechnology,e-BusinessModels,Internet Pricing, e-Cash, Online Retailing, Constructing e-Business ICT Framework.	**[8]**
4	**LeveragingtheWebforMarketing:**BusinessEnhancement,Framework forWebMarketing,WebUsability,ContentManagement,andImpactof Internet on Marketing	**[9]**
5	**Online Resources and Deployment:** Meta Search Engines, Boolean, SearchingonInternet,Best PracticeWeb Searching, TheInvisible Web	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Apply the functions of the various types of hardware, software, telecommunications, security and their uses to enable and support integrated, e-Business processes in any organisation;
- Understand the strategies and approaches for the e-business processes engineering;
- Understand the basic methods and procedures involved in planning and controlling the development and modification of an e-Business system in an organisation; Understand the concept of input/output devices of Computers and how it works.

Text Books:

[1]. Ravi Kalakota, Marcia Robinsion, "E-Business 2.0: Roadmap For Success", 2nd Edition, Pearson.

[2]. Paul Phillips, "E-Business Strategy", 1st edition, TMH.

Reference Books:

[1]. Colin Combe, "Introduction to e-Business", 1st Edition, Routledge

[2]. AzharKozami, "Business Policy and Strategic Management", 2nd Edition, Tata McGrawHill.

ET 19.465 **Agile Software Development** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): Software Engineering

Objective(s):
- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1 **Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools. **[7]**

2 **Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management. **[9]**

3 **Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software. **[10]**

4 **Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control. **[10]**

5 **Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies. **[4]**

Outcome(s): On successful completion of this course, students will be able to
- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Agile.
- Write user stories for project requirements.

Text Books:
[1]. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
[2]. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall
[3]. Lisa Crispin, Janet Gregory, Agile Testing: A Practical Guide for Testers and Agile Teams, Addison Wesley.

Reference Books:

[2]. Mike Cohn, User Stories Applied for Agile Software, Addison Wesley, 2004

CA 19. 362 **Knowledge Management** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Management Information System
Software Engineering
Data Mining and warehousing

Objective(s): To enable students to learn about this practice in the context of managing the design, development and operation of information technologies that can facilitate KM.

1	**Introduction:** Definition, Evolution, Types, Implication for Knowledge Management	**[6]**
2	**LifeCycle:**Challenges,Difference,KnowledgemanagementsystemLifeCycle, Comparative Studies Between SDLC and Knowledge Management System Development, Role ofKnowledgeDeveloper.	**[8]**
3	**Knowledge Creationand Architecture:** Knowledge Codification, Need ofCodification, and KnowledgeTools forCodification, Developer Skills Set.	**[8]**
4	**KnowledgeTransferandInternet:**InternetandKnowledge,E-Business,EthicalandLegalIssues in KnowledgeManagement.	**[9]**
5	**ExecutiveInformationandsupportSystems**:BusinessExpertSystemandAI, OLTO&OLAP;DataWarehousing;DataMarts,DataWarehousearchitecture; Tools fordata warehousing.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Analyze the role of knowledge management in attainment of financial objectives, quality and process improvement, and innovation.
- Apply knowledge management models and technologies to business situations.
- Use a knowledge management system for an organization.
- Create a knowledge management plan to leverage opportunities to create, capture, represent and share knowledge within an organization. Understand the concept of input/output devices of Computers and how it works.

CA 19. 364 **Artificial Intelligence** **Total Lectures: 40**

3-0-0-3

Prerequisite(s):
- fundamental concepts in calculus, linear algebra and probability theory, for example, vector, matrix, Bayes' rule, differential
- Programming language

Objective(s): Presentation of artificial intelligence as a coherent body of ideas and methods to acquaint the student with the basic programs in the field and their underlying theory. Students will explore this through problem-solving paradigms, logic and theorem proving, language and image understanding, search and control methods and learning.

1	**OverviewofA.I.:**IntroductiontoAI,ImportanceofAI,AIanditsrelatedfield,AI techniques.	**[6]**
2	**Problemspaceandsearch**:Definingtheproblemasastatespacesearch,Production system and its characteristics,Issues in thedesignof thesearch problem.	**[8]**
3	**Heuristic search techniques** : Generate and test, hill climbing, best first search technique, problem reduction, constraintsatisfaction	**[8]**
4	**GamePlaying**: Minimax, alpha-beta pruning, Predicate logic,representation of simple facts in logic, well formed formula, resolution.	**[9]**
5	**Knowledge representation and Learning** : Definition and importance of knowledge, Knowledge representation, Various approaches used in knowledge representation, Issues in knowledge representation, Introduction learning,Types of learning,Introduction to neuralnetworks.	**[9]**

Outcome(s): After completion of the course, students would be able to:
- Know various AI search algorithms (uninformed, informed, heuristic, constraint satisfaction, genetic algorithms)
- Demonstrate working knowledge in Lisp in order to write simple Lisp programs and explore more sophisticated Lisp code on their own.
- Ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems.

CA 19. 366 **Information Security** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental and Networking,
Basic Mathematics.

Objective(s): Students will learn the basic concepts in computer security including software vulnerability analysis and defense, networking and wireless security, applied cryptography, as well as ethical, legal, social and economic facets of security. Students will also learn the fundamental methodology for how to design and analyze security critical systems.

1	**Introduction:**Information,CharacteristicsofInformation,SecurityAttacks, NSTISSC securitymodel, ConceptsofPolicies; procedures;Guidelines andStandards	**[6]**
2	**Cryptography:** ConventionalEncryption Principles, Conventionalencryption algorithms, cipherblockmodesofoperation,locationofencryptiondevices,Publickey cryptography principles, publickeycryptographyalgorithms, digital signatures, digital Certificates.	**[8]**
3	**IPSecurity:**IPSecurity Overview,Architecture,AuthenticationHeader,Encapsulation Security Payload,CombiningSecurity Association,Key Management,Pretty GoodPrivacy, S/Mimeand Types.	**[8]**
4	**WebSecurityandE-Commerce:**WebSecurity Requirement,SSLandTransportLayer Security, Secure Electronic Transactions,Introduction to E-Commerce, Transactionson E- Commerce, Requirement of Securityon E-Commerce.	**[9]**
5	**SystemSecurity**:RecognizedSecurity Threats,Virus,Trojanhorse,Worm,Spyware, Adware,Key Logger,DenialofServices,FirewallDesignPrinciples,TrustedSystems, Common criteria forinformation technologysecurityand evaluation.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Identify the security goals of an information system, point out contradictory goals and suggest compromises.
- Understand of the principles underlying cryptography and cryptanalysis and have a technical understanding of the main cryptographic concepts and technologies available today, including symmetric and asymmetric encryption, hashing, and digital signatures.

Text Books:

CA 19. 368 **CyberLaw** **Total Lectures: 40**
3-0-0-3

Prerequisite(s): Computer Fundamental
Information Security Concept

Objective(s): To give the Students a general knowledge of cyber technology and cyber security. Students will clarify issues of jurisdiction and sovereignty of the internet and be introduced to the basic principles of digital intellectual property, online privacy, and the basic elements of software copyright.

1	**Fundamentals of Cyber Law**: Jurisprudence of Cyber Law- Overview of Computer and WebTechnology-IntroductiontoIndian CyberLaw- Overview of GeneralLaws andProcedures inIndia; Freedomof Expression on theInternet.	**[6]**
2	**E-commerce-LegalIssues:**ElectronicCommerce–DigitalSignature-Meaning; CreationofDigitalSignature;Understanding howdigitalsignatureswork,Rolein InformationTechnology;technicalissues;legalissues;Crimesrelating todigital signature certificates	**[8]**
3	**CyberCrimes:**MeaningofCyberCrimes– CybercrimesunderIPC,Cr.P.CandIndianEvidenceLaw- CybercrimesundertheInformationTechnologyAct,2000	**[8]**
4	**CybercrimesunderInternationalLaw** -HackingChildPornography,Cyber Stalking,Denialofservice Attack,VirusDissemination, Software Piracy,Internet Relay Chat(IRC)Crime,CreditCardFraud,NetExtortion,Phishingetc-Cyber Terrorism - Violation of Privacy on Internet - Data Protection and Privacy	**[9]**
5	**Intellectual Property Issues and Cyberspace : The Indian Perspective;** Overview of Intellectual Property related Legislation-Copyright law &Cyberspace; Trademark law &Cyberspace; Law relating to Semiconductor Layout&Design.	**[9]**

Outcome(s): After completion of the course, students would be able to:

- Identify cyber laws and regulatory tools
- Understand the role of government and jurisdiction in technology
- Reflect on cyber laws regarding the internet and IP
- Judge case studies and court outcomes regarding online privacy and cyber security
- Classify cyber privacy, copyright, and software IP

ET 19.362 **Mobile Apps Development** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): CA 19.210 (Java Programming)

Objective(s):
- To learn how mobile apps are different from others traditional apps by learning those aspects of mobile programming that make it unique from other platforms
- Program mobile applications for the Android operating system that use basic and advanced phone features
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout,UI elements, Draw-able,Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and smsapis native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access(via Internet/Intranet)	[15]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobileapps, distributing apps on mobile market place.	[3]

Outcome(s): On successful completion of this course, students will be able to
- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**

2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**

2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**

3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**

4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**

5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

MA 19.101 **Mathematics I** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: (10+2) Higher Secondary Mathematics

1. **Differential Calculus I:** Review of basic concepts, partial differentiation, Euler's theorem on homogeneous functions, Maclaurin's and Taylor's series (one and two variables) and Jacobians. [06]
2. **Differential Calculus II:** Maxima and minima of functions of two variables, asymptotes, Tracing of simple cartesian curves and standard polar curves. [06]
3. **Integral Calculus:** Basics of Beta and Gamma functions, Length of plane curves(cartesian and polar), area bounded by the curves(cartesian and polar), multiple integrals (double and triple integrals, change of order of integration), volumes, conversion from cartesian to polar form, physical interpretations and applications. [12]
4. **Matrix Theory**: Rank of matrix, linear dependence and independence of vectors, solution of system of simultaneous linear equations, Eigen values, Eigen vectors of a matrix, statement of Cayley-Hamilton theorem (without proof) , reduction of a matrix to diagonal form, quadratic forms, linear transformation of a quadratic form, and applications. [08]
5. **Three-dimensional Geometry:** Direction cosines and direction ratios of a straight line, equation of a plane, plane passing through intersections of two planes, equations of straight line, shortest distance between two skew lines, equation of a sphere, intersection of plane and sphere. [08]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Shanti Narayan and Mittal, Analytical Solid Geometry, S. Chand, 2018.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

PY19.101 **Engineering Physics** **Total Lectures: 40**

Pre-requisite: Fundamental knowledge of Basic Physics **3-0-0-3**

Objective:

1. To provide students with a basic understanding of the Physics that may be required by engineers in the course of their careers
2. To enhance knowledge related to lasers and its different components to make it suitable for various purposes
3. To introduce most important concepts of superconductivity, crystallography and fiber optics to the students
4. To introduce the learners to the basics of modern physics and Quantum Mechanics

1. **Modern Physics**: Introduction to Black body radiation spectrum, Photo-electric effect, Compton effect. Wave particle Dualism. de Broglie hypothesis – de Broglie wavelength, extension to electron particle. Davisson and Germer Experiment. Matter waves and their Characteristic properties, Phase velocity, group velocity and Particle velocity, Relation between phase velocity and group velocity, Relation between group velocity and particle velocity. Expression for deBroglie wavelength using group velocity. **[8]**

2. **Quantum Mechanics:** Heisenberg's uncertainity principle and its physical significance. Application of uncertainty principle (Non-existence of electron in the nucleus, explanation for decay and kinetic energy of electron in an atom). Wave function, Properties and physical significance of wave function, Probability density and Normalization of wave function. Setting up of one dimensional time independent Schrodinger wave equation. Eigen values and Eigen functions. Application of Schrodinger wave equation – Energy Eigen values for a free particle. Energy Eigen values and Eigen functions for a particle in a potential well of infinite depth. **[7]**

3. **Electrical Conductivity in Metals**: Free–electron concept. Classical free-electron theory – Assumptions. Drift velocity, Mean collision time and mean free path. Relaxation time. Expression for drift velocity. Expression for electrical conductivity in metals. Effect of impurity and temperature on electrical resistivity of metals. Quantum free-electron theory – Assumptions. Fermi – Dirac Statistics. Fermi-energy, Fermi factor. Density of states (No Derivation). Expression for electrical resistivity / conductivity. Temperature dependence of resistivity of metals. electron in a periodic potential, origin of the energy gap, band theory of solids, distinction of solids into metals, semi-conductors and insulators. **[8]**

4. **Dielectric & Magnetic Properties of Materials**: Dielectric constant and polarization of dielectric materials. Types of polarization. Equation for internal field in liquids and solids (one dimensional). Ferro and Piezo electricity. Frequency dependence of dielectric constant. Important applications of dielectric materials. Classification of dia, para and ferro-magnetic materials. Hysterisis in ferromagnetic materials. Soft and Hard magnetic materials. Applications. **[7]**

5. **Lasers and Optical Fibers**: Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, Construction and working of CO2 laser and semiconductor Laser. Applications of Laser – Laser welding, cutting and drilling. Measurement of atmospheric pollutants. Holography–Principle of Recording and reconstruction of images, applications of holography.
Propagation mechanism in optical fibers. Angle of acceptance. Numerical aperture. Types of optical fibers and modes of propagation. Attenuation. Applications–Block diagram discussion of point to point communication. **[10]**

Outcome: The student will be able to understand many modern devices and technologies based on lasers and optical fibers. Student can also appreciate various material properties which are used in engineering applications and devices.

CY 19.102 **Environmental Studies** **Total Lectures: 52**

Prerequisite(s): NIL **Credit: 3-1-0-4**

Objective(s):
- To teach the principal resources, renewable energy systems and biosphere.
- To explore the environmental impact of various energy sources and also the effects of different types of pollutants.

1. **Multidisciplinary nature of environmental studies:** Definition, scope and importance, Need for public awareness. [2]

2. **Natural Resources:** Renewable and non-renewable resources: Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. [8]
Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources.
Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

3. **Ecosystems & Biodiversity:** [14]
Ecosystems: Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow and nutrient cycling in the ecosystem. Food chains, food webs and ecological pyramids. Ecological succession
Structure and function of the following ecosystem - Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).
Biodiversity and its conservation: Introduction – Definition, genetic, species and ecosystem diversity. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values. Biodiversity at global, national and local levels. Hot-sports of biodiversity. India as a mega-diversity nation, Threats to biodiversity: habitat loss, illicit poaching, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

4. **Environmental Pollution:** Definition, cause, effects and control measures of : Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes. [8]
Role of an individual in prevention of pollution. Pollution case studies. Disaster management: floods, earthquake, cyclone and landslides.

5. **Social Issues, Human Population and the Environment:** From Unsustainable to Sustainable development: Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people: its problems and concerns. Global Climate Change, global warming, acid rain, ozone layer depletion. Wasteland reclamation. Population growth, variation among nations. Population explosion – Family Welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in Environment and human health. Case Studies.Environment Protection Act 1986. Air (Prevention and Control of Pollution) Act 1981., Water (Prevention and control of Pollution) Act 1974, Wildlife Protection Act 1972., Forest Conservation Act 1980. [13]

Field work [7]
- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

Outcome(s): Upon successful completion of the course, students should be able to:
- Measure environmental variables and interpret results
- Evaluate local, regional and global environmental topics related to resource use and management
- Propose solutions to environmental problems related to resource use and management
- Interpret the results of scientific studies of environmental problems
- Describe threats to global biodiversity, their implications and potential solutions.

EE 19.101 **Elements of Electrical Engineering** **Total Lectures: 40**

3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to various concepts and devices of electrical engineering.

Pre-requisite: Nil

1. **DC Circuits:** Electrical circuit elements (R, L and C), voltage and current sources, Ohm's law, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation using mesh and nodal method. Network Theorems - Superposition, Thevenin, Norton and Maximum power transfer Theorems. Time-domain analysis of first-order RL and RC circuits. **[8]**

2. **AC Circuits:** Basic terminologies, representation of sinusoidal waveforms, average, rms and peak values of a.c. quantities, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel). **[8]**

3. **Three Phase A.C. Circuits:** Three phase supply, phase sequence, star connection, delta connection, relationship between phase and line quantities in 3-phase circuits, measurements of three phase power under balanced condition. **[6]**

4. **Transformers:** Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, Transformer testing: open circuit and short circuit test, losses in transformers, regulation and efficiency. Basics of auto-transformer and three-phase transformer connections. **[10]**

5. **Electrical Machines:** DC Machines – construction, functions of each part, working principle, EMF and torque equations, types of dc machines. AC machines – classification of a.c. machines, construction, operating principles of ac machines. **[8]**

Outcome: At the end of this course, students will demonstrate the ability to

- To understand and analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines.

Text Books:

1. Kothari, D. P., and I. J. Nagrath, "Theory and Problems of Basic Electrical Engineering," PHI Learning Pvt. Ltd., 1998.
2. Fitzgerald, Arthur Eugene, David E. Higginbotham, and Arvin Grabel, "Basic electrical engineering," McGraw-Hill Series in Electrical Engineering, Auckland: McGraw-Hill, 1981, 5th ed.(1981).

Reference Books:

1. H.Cotton, "Advanced Electrical Technology," CBS Publication. 1967.
2. Vincent Del Toro, "Electrical Engineering Fundamentals," 2nd Edition PHI Publication. 1972.
Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.101 **Programming Language** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite(s): NIL

Objective(s):
1. To learn principles of programming by the structured native language 'C'.
2. To comprehend the rudiments, constructs, syntax, and statements with essentials of efficient compiling, running and debugging processes.

1. **Introduction:** The role of programming languages, programming paradigms, language description and syntax structure, basics of structured and object-oriented programming, functional programming, logic programming, concurrent programming. [10]
2. **Fundamentals of 'C' language**: Character set, variables data types constants, arithmetic, relational and logical operators, type conversion,increment,decrement, bitwise and assignment operators, conditional expressions, statements and blocks, *if-else*, *switch*, loops-*do-while*, *while*, *for*; *break, continue* and *goto* statements, labels. [10]
3. **Functions, pointers and Arrays**: Basics of functions, automatic, external, static and register variables, scope rules, and header files, recursion and C preprocessor, arrays, pointers and addresses, pointers and arrays address arithmetic, character pointers and functions, pointer arrays, pointers to functions, pointers and multidimensional arrays, command line arguments. [10]
4. **Structures and unions:** Basics of structures and functions, arrays of structures, pointers to structures, self-referential structures, unions. [5]
5. I/O and File Processing: Concept of files, standard input and output, formatted output, file access in different modes, reading from and writing to a file. [5]

Outcome(s): Students would be able to apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

Text Books:
1.Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013,
2.Ravi Sethi & K.V.Viswanatha, Programming Languages-Concepts, and Constructs, Second edition, Pearson Education,2013,

2.E Balagurusamy, Programming in ANSI C, Tata McGraw - Hill Education,6th edition,2012

PY 19.111 **Physics Laboratory** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
2. To apply the analytical techniques and graphical analysis to the experimental data.

List of Experiments:

1. To study of material constant, temperature coefficient of current and planck's constant.
2. To determine the specific resistance of a given wire by using the Carey Foster's bridge.
3. To determine the ballistic constant, K of a moving coil ballistic galvanometer with a standard capacitor of known capacity.
4. To determine the high resistance by the method of leakage of a condenser with the help of ballistic galvanometer.
5. To study the variations of resistivity with temperature and hence determines the energy band gap of the given semiconductor with help of four probe method.
6. To convert a galvanometer into a voltmeter of a given range.
7. To convert a galvanometer into an ammeter of a given ranges.
8. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current and to estimate from it the radius of the coil.

Outcome: Students will be convergent with operation of equipments and verify the principle of Physics by doing the experiments. Students will be able to apply the analytical techniques and graphical analysis for finding out the experimental results.

EE 19.111 **Electrical Laboratory** **0-0-2-1**

Objective: The objective is to provide a basic exposure of installation and operation of electrical equipment.

Prerequisite: Nil

Perform any ten of the list.

1. To Study of the various apparatus used in Electrical Engineering.
2. To perform residential house wiring using fuse, indicator, switch, Socket, plug and lamp.
3. To design a Stair case wiring for illuminating a lamp.
4. To design Tunnel wiring for illuminating three lamps.
5. To construct a fluorescent tube and to measure voltage across tube rod, voltage across choke and current.
6. To conduct the polarity test on the given transformer.
7. To conduct the open circuit & short circuit tests on the given single phase transformer and to determine equivalent circuit parameters.
8. To control the speed of DC machine by field current control method.
9. To control the speed of DC machine by Armature Voltage control method.
10. To measure three phase power by using two wattmeter methods.
11. To verify Superposition Theorem using resistive circuit.
12. To verify Thevenin's Theorem using resistive circuit.

Outcome: Students will be convergent with installation and operation of electrical equipment.

Text Books:

1. J.B. Gupta, Theory and Performance of Electrical Machines, S.K. Kataria and Sons, 3rd Edition, 2002.
2. Kothari, D. P., and I. J. Nagrath. Theory and Problems of Basic Electrical Engineering. PHI Learning Pvt. Ltd., 1998.

Reference Books:

1. P.S. Bimbhra, "Electrical Machinery", Khanna Publishers, 5th Edition, 2013.
2. Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.151 **Programming Language Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): NIL

Objective(s):

- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

List of Practicals

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement programs to cover all possible String operations.
11. Implement programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement programs for Reading and writing from/to a file.

Outcomes On completion of this course student will be able to:

- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner

UC 19.102 **Communication Skills** **Total Lectures: 26**

2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures.**Technology-based Communication:** Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software. [5]
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

1. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
2. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

MA 19.102 **Mathematics II** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: Mathematics I

1. **Computational Methods:** Introduction and importance of numerical analysis, calculus of finite differences, interpolation schemes for equal and unequal intervals (Newton's forward and backward interpolation formulae), divided difference, interpolation for unequal intervals (Newton's divided difference and Lagrange interpolation formulae), Solution of algebraic and transcendental equations by Newton-Raphson method. Applications to Engineering. [12]
2. **Ordinary Differential Equations I:** First order and first degree differential equations (variable separable, homogeneous and non-homogeneous, linear, Bernoulli's equation, and exact equations). [06]
3. **Ordinary Differential Equations II:** Linear differential equations of second order with constant and variable coefficients (complementary functions and particular integrals), and applications. [06]
4. **Partial Differential Equations:** Formation of partial differential equations, Lagrange's multipliers method for solution of first order differential equations, separation of variables for nonlinear differential equations and applications. [06]
5. **Vector Calculus:** Vector and scalar point functions, conservative fields, gradient of scalar point functions, divergence and curl of vector point functions (Solenoidal and irrotational vectors), directional derivative of scalar point functions, work done along a curve, Integration of vectors, line integral (work done), surface integral, volume integral, physical interpretations and applications. [10]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Grewal, B.S. and Grewal, J.S., Higher Engineering Mathematics, Khanna Publishers, Daryaganj, New Delhi, 40th Edition, 2007.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CY 19.101 **Engineering Chemistry** **Total Lectures: 39**

Prerequisite(s): NIL **Credit: 3-0-0-3**

Objective(s):
- To purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers their preparation, properties and uses.
- To develop the basics of protecting engineering materials from the natural forces.
- To understand the present day up-to-date knowledge of the contemporary energy sources.
- To build up the basis of the future Engineering materials like superconductors, conducting organic polymers, Nano materials etc.

1. **Water treatment:** Hardness, types of hardness, degree of hardness and its estimation (EDTA methods). Numerical problems on degree of hardness. Boiler troubles: sludge and scale formation, Prevention of sludge and scale formation in boilers. Softening of hard water (Lime-Soda, Permutit, Ion Exchange and calgon methods). Numerical problems based on water treatment (Lime-Soda process). [8]

2. **Polymers:** Classification, Functionality, Types of polymerization, Mechanism of Addition polymerization. Plastics: thermoplastic and thermosetting resins. Preparation, Properties and Uses of Polyamides, Bakelite, Polyesters, Rubber, Vulcanization of Rubber, Synthetic Rubber viz. Buna-S, Buna-N, Butyl and Neoprene rubbers. Silicones-polysiloxanes and sulphur based polymers. [8]

3. **Electrochemistry and Corrosion:** Electrochemical Changes, Electrochemical cell and its classifications (Galvanic cell, electrolytic cell). Types of electrodes. Origin of electrode potential, Electrochemical Series. Electromotive force, Nernst equation of electrode potential. [8]
Corrosion: Definition and its significance, Theories of corrosion, Mechanism of corrosion, types of corrosion, Corrosion control (Corrosion inhibitors, Cathodic protection - sacrificial anodic and impressed current cathodic protection).

4. **Fuels and Lubricants:** Introduction - Importance of fuels in Industries. Classifications of fuels, Comparison of solid, liquid & solid fuels, Calorific value of a fuel. Determination of calorific value by Bomb calorimeter. Refining and cracking of petroleum, knocking. Octane Number and Cetane Number. L.P.G., Coal gas and Producer gas.**Lubricants:** Introduction and Classification of Lubricants. Properties of Lubricants, Lubricant Oil, Grease, Emulsions. [9]

5. **New Engineering Materials:** Introduction: Superconductors, high and low temperature superconductors, organic electronic materials, Fullerenes and Nano materials, Industrial applications of fullerenes and Nano materials. [6]

Outcome(s): The student will be able to understand the basis of the future Engineering materials like of lubricants, superconductors, conducting polymers, Nano materials etc and purification of the most valuable natural resource of the future-water.

Text Books:
1. Jain and Jain, "Engineering Chemistry," 16th Edition, Dhanpat Rai Publishing Company, 2015.
2. S.S. Dara, "A Text Book of Engineering Chemistry," 12th Edition, S. Chand & Company Limited, 2014.

Reference Books:
1. Peter Atkins, Julio de Paula, and James Keeler, "Atkins' Physical Chemistry" Eleventh Edition, Oxford University Press, 2017.
2. William D. Callister, "Materials Science and Engineering: An Introduction, Eighth Edition, John Wiley & Sons, Inc., 2010.

ME-19.101 **Applied Mechanics** **Total Lectures: 40**
3-1-0-4

Prerequisite Basic Mathematics and Physics

Objectives:
1. This course will help the student to acquire knowledge of basic engineering mechanics concepts and enhance their ability to solve open ended engineering problems.
2. To provide the student with a clear and thorough understanding of the theory and applications of engineering mechanics, covering both statics and dynamics.
3. To provide the student with a thorough understanding of the concept, drawing, and the use of free-body diagrams.
4. To be able to determine the Centre of Gravity and Moments of Inertia of simple geometric shapes and understand the physical applications of these properties.
5. To understand the use and be able to perform calculations related to friction forces in engineering applications.

1. **Introduction:** Idealization of Mechanics, concept of Rigid Body, External Forces (Body forces & surface forces), Laws of Mechanics. **[10]**
Force Systems and Equilibrium: Introduction to vector, Statically Equivalent Force systems, Free Body Diagram, Equations of equilibrium and their applications to various system of forces.

2. **Distributed Forces and Moment Of Inertia:** Centroid of Composite figures, Area Moment of Inertia, Mass Moment of Inertia, Principle axes and Principle Moment of Inertia. **[6]**

3. **Friction:** Introduction of friction, Laws of friction, wedge, screw, belt, rolling friction. **[6]**

4. **Tension, Compression and Shear:** Normal stress and strain, Linear elasticity, Hooke's Law and Poisson's Ratio, Shear stress and shear strain, Relationship between modulus. **[9]**
Beams: Different support & load conditions, SFD, BMD

5. **Kinematics of Particles:** Introduction, Rectilinear motion, Plane curvilinear motion, Rectangular coordinates, Tangential and normal coordinates, polar coordinates, Relative motion (Translating Axes), constrained motion of connected particles. **[9]**
Kinetics of Particles: Introduction, Force, Mass and acceleration, Newton's second law of motion, Equation of motion and solution of problems, Work and Energy, Impulse and Momentum.

Outcome: The students shall develop the ability to identify, formulate, and solve engineering problems related to forces and motion.

Text Books:
1. Hibbeler, Gupta R. C., "Engineering Mechanics," 11th ed., Pearson India, 2010.
2. Merian, J.L, Kraige, L.G., "Engineering Mechanics Vol I & II," 5th edition, Wiley India 2010.

Reference Books:
1. Timoshenko, S, Young, D.H, Rao, J.V, "Engineering Mechanics," 4th edition TMH, 2010.
2. Irving. H. Shames, "Engineering Mechanics," Prentice Hall Book Company, 1966.

EC 19.101 **Basics of Electronics Engineering** **Total Lectures: 40**

3-1-0-4

Prerequisite Basic Knowledge of Engineering and Applied Physics

Objective: To learn the fundamental principle and applications of electronics and communication engineering and devices.

1. **Introduction:** Brief history of major inventions in ECE, Electronic test and measurement equipments, Specifications for electronic components. **[3]**
2. **Semiconductors**: Material and its properties, Formation of energy band diagram, Currents in semiconductors, Fermi-Dirac energy distribution, Types of semiconductors – Intrinsic and Extrinsic, Mass action law, Hall effect. **[5]**
3. **Diodes**: Introduction, Characteristic of ideal and real diode, Current components in diode, load characteristics, Breakdown in diode, Zener diode, Varactor diode, Tunnel diode, Clippers and Clampers, Rectifiers – Half and Full-wave rectifiers. **[8]**
4. **Transistors:** Introduction to pnp and npn transistors, current components, active, cutoff and saturation regions, CC, CB and CE configuration, Operating point, Biasing circuits, Bias Stability, Thermal runway and thermal stability. **[8]**
5. **Signals**: Definition, Classification of signals – Analog and Digital, Deterministic and Random signals, Power and Energy of signals, Bandwidth, Bit and Baud rate. **[4]**
6. **Basics and Applications of Communication**: Definition, Block representation of communication system, Modulation – Definition, Need of modulation, Frequency translation, Types of modulation - Analog and Digital, Multiplexing – TDM and FDM. Introduction to - Optical Fiber, Transmission line, Waveguides, Satellite communication and RADAR. **[12]**

Outcome: Students will be able to understand the basic concepts of Electronic and Communication Engineering and devices .They are able to implement mini projects based on concepts of ECE.

Text Books:

1. George Kennedy, Bernard Davis, “Electronics Communication Systems”, Tata McGraw-Hill, 3rd Edition, 2007.
2. Behrouz Forouzan, “Data Communication and Networking”, McGraw-Hill, 4th Edition, 2006.

Reference Books:

1. David A. Bell, “Electronics Devices and Circuits”, PHI, 4th edition, 2008.
2. Wayne, Tomasi, “Advanced Electronic Communication Systems”, PHI, 6th edition, 2013.
3. Robert L. Boylestad, Louis Nashelsky, “Electronics Devices and Circuits Theory”, Prentice Hall, 10th Edition, 2009.

ME-19.111 **Computer Aided Engineering Drawing** **0-0-4-2**

Objective:

1. To improve the visualization skills.
2. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient.
3. To impart the knowledge on understanding and drawing of simple engineering products.

1. **Introduction to Computer Aided Sketching:** Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practice. Board Drawing vs. Computer- Aided Drawing. Introduction to Solid works Environments. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP &LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, dimensioning, line conventions, material conventions and lettering. [8]

2. **Orthographic Projections** : Horizontal planes, Vertical planes, Front view, Top view, Side view, Projections, First and Third angle of projection, Projections of points, Principles of orthographic projections, Sketching of different views of given objects. Introduction to sketching in Solid works : 2-Dimenional Sketching, Sketching in Solid works, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity. [12]

3. **Projections of Lines, Planes and Solids:** Lines inclined to both the principal planes, projection of Lamina inclined to both principal planes, Projections of solids: Axis inclined to both the reference planes and Intersection of solids. Introduction to part module in Solid works: Extrude, Revolve, Sweep, Hole, Filleting, and Chamfering features. [12]

4. **Sections of solids and sectional orthographic views:** Sectional orthographic projections - Full, Half, Partial, revolved and removed surfaces. Introduction to drawing module in Solid works: Standard 3 views, Auxiliary view, Section View, Projected view. [12]

5. **Isometric Projection:** Terminology, Isometric scale, Box method, Coordinate or offset method, Four-center method, isometric projection of arcs. Solid models practice using Solidworks part module. [8]

Outcomes:

1. Students will be able to improve their visualization skills so that they can apply these skills in developing new products.
2. Students will be able to know and understand the conventions and the methods of engineering drawing using Solid works.
3. Students will be able to prepare simple drawings of engineering products.

Text Books:

1. N.D. Bhatt, "Engineering Drawing", Charotar Publishing House, 2013.
2. Prof. Sham Tickoo, Sandeep Prem Dass “Solid works 2013 for Engineers and Designers” Wiley Publication, 2013.

Reference Books:

1. Randy H. Shih, “Solid works 2013 and Engineering Graphics: An Integrated Approach”, SDC Publications. 2013

CY 19.111 **Engineering Chemistry Laboratory** **Total Hours:26**
Credit: 0-0-2 - 1

Prerequisite(s): NIL

Objective(s):

- To introduce students to water chemistry and purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers, lubricants, fuel and their properties and uses.

LIST OF EXPERIMENTS

Choice of 10-12 experiments from the following

1. To determine the temporary and permanent hardness in the given water sample by complexometric titration using EDTA as standard solution.
2. To determine the percentage of Available Chlorine in the given sample of Bleaching powder. Iodometrically.
3. To determine the alkalinity of water sample.
4. To prepare urea formaldehyde resin.
5. To determine the strength of given HCl solution by titrating it against NaOH solution using pH meter.
6. To determine the strength of given acid solution by titration it against sodium hydroxide solution using conductometer.
7. To determine molecular weight of a polymer using Ostwald viscometer.
8. Determination of viscosity of given lubricating oil by Redwood viscometer.
9. Determination of cloud and pour point of given lubricating oil.
10. Determination of the flash and fire point of given lubricating oil.
11. Determination of acid value of given lubricating oil.
12. To determine the calorific value (HCV) of a sample of fuel.
13. Proximate Analysis of Coal.
14. Determination of the percentage of Fe in the given steel sample.

Outcomes The students will learn to:

- Estimate the Hardness of water, alkalinity of water.
- Familiar with the important practical applications of electrochemistry, lubricants, solids, their properties and applications, and the polymer materials.

ME-19.112 **Mechanical Workshop** **0-0-2-1**

Objectives:

1. Practice on manufacturing of components using workshop trades including fitting, carpentry, sheet metal and welding.
2. Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping.
3. Study and practice on machine tools and their operations.

List of Jobs:

1. **Fitting Shop:** Prepare job that contain various fitting operation like filing, marking, measuring, cutting, drilling etc.
2. **Carpentry Shop:** Making of carpentry joint (T, L joint etc).
3. **Sheet Metal Shop:** Making job from sheet (funnel, tray etc).
4. **Machine Shop:** Perform various operations like, turning, step turning, facing, chamfering, knurling etc on Lathe.

Outcomes:

At the end of the course, the student will be able to:

1. To acquire skills in basic engineering practice.
2. To identify the hand tools and instruments.
3. To acquire measuring skills.
4. To provides the knowledge of job materials in various shops.
5. Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.

Text Books:

1. Hajara Chaudhary, Workshop Technology Vol I & II, Media Promoters and Publishers PVT. LTD, Mumbai.
2. B.S. Raghuvanshi, Workshop Technology, Dhanpat Rai & Sons. New Delhi.

Reference Books:

1. H S Bawa, Workshop Technology, TMH. New Delhi.

EC 19.111 **Electronics Lab** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the theory of Electronics Engineering.
2. To apply the analytical techniques and graphical analysis to the experimental data.
3. To enable the students to simulate and test the Electronics circuits using Multisim software.

Practical to be performed on Hardware:

1. To plot V-I characteristics of junction diode and Zener diode.
2. To design a half wave rectifier with and without filter circuit and find the ripple factor.
3. To design a full wave rectifier with and without filter circuit and find the ripple factor.
4. Study of clipper and clamper circuits and their implementation on breadboard.
5. To plot the characteristics of Transistor under Common Emitter configuration
6. To plot the characteristics of Transistor under Common Base Configuration
7. To plot the characteristics of Transistor under Common Collector configuration
8. To perform soldering and de-soldering to make banana probe, BNC probe and connection on PCB.

Practical to be performed using Multi-Sim Software:

9. An Introduction to Electronic Circuit Simulation using Multi-Sim Software.
10. To verify Ohm's law and Kirchhoff's law.
11. To Simulate half wave and full wave bridge rectifier.
12. To plot V-I characteristics of junction diode.

Outcome: Student will be able to understand the operation of electronic test equipment and hardware/software tools to characterize the behavior of devices and circuits.

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**
2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization **[4]**
2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**
3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**
4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**
5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher, 16th Edition, 2014

Reference Books:

1. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
2. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
3. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
4. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

MA 19.201 **Mathematics III** **Total Lectures: 40**
3-1-0-4

Pre-requisite: Mathematics I and Mathematics II

Objective: To acquire fundamental knowledge of linear programming, numerical methods, complex analysis and integral transform and apply in engineering disciplines.

1. **Linear Programming:** Introduction with formulation; Graphical method; Simplex method, Artificial variable technique (Two phase method, Big –M method); Assignment problem (Hungarian method); Transportation problem (Vogel's approximation method). [12]

2. **Numerical Methods:** Solution of system of equations (Gauss elimination and Gauss - Seidel methods); Solution of algebraic and transcendental equations (Bisection, Ramanujan's and Regula Falsi methods); Solution of ordinary differential equation (Euler's modified, Milne's predictor & corrector, Runge-Kutta method of order four). [08]

3. **Complex Analysis:** Function of complex variable, analytic function, Cauchy- Riemann equations(without proof); Integration of complex functions, line integrals in the complex plane, Cauchy integral theorem(without proof), Cauchy integral formula(without proof), zeros and singularities of complex functions, residues. [08]

4. **Integral Transform I**: Basics of Laplace transform and inverse Laplace transform; First and Second Shifting theorems; Convolution theorem (without proof); Laplace transform of Unit Step function, Dirac Delta function and periodic function. [06]

5. **Integral Transform II**: Solution of ordinary differential equations with initial conditions by Laplace transforms; Fourier series of periodic functions, even and odd functions, Fourier half-range series; Basics of Fourier transforms with properties. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of linear programming, numerical methods, complex analysis and integral transforms in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Sastry S.S., Introductory Methods of Numerical Analysis, 5th Edition, Pearson.
3. Jain R.K. and S.R.K. Iyenger Advanced Engineering Mathematics, Narosa Publishing House, 2003.

EC 19.202 **Digital Electronics** **Total Lectures: 40**

Pre-requisite: Basics of Electronics Engineering **3-0-0-3**

Objective: The aim of this course is to present the principles and techniques of combinational and sequential digital logic design and optimization at a gate level. The use of transistors for building gates is also introduced.

1. **Number Systems and Boolean Algebra:** Introduction to number systems, weighted and non-weighted codes, 1's complement, 2's complement, complement arithmetic, Postulates and theorems of Boolean algebra, Boolean functions, canonical and standard form, simplification of Boolean function using Boolean laws and theorems. [5]
2. **Logic Gates and Simplification of Boolean Functions:** Basic Logic gates, Universal gates, K-map representation, incompletely specified functions, simplification realization with gates, Quine-Mc Cluskey method. [5]
3. **Combinational Logic:** Analysis and design of combinational circuits, half adder and full adder, half subtractor and full subtractor, binary serial and parallel adder, BCD adder, binary multipliers, magnitude comparator, decoders, encoders, multiplexers, de-multiplexers. [10]
4. **Sequential Circuits and Programmable Logic :** Latches, flip-flops, triggering of the flip-flops, master-slave flip-flop, excitation tables, conversion of the flip-flops, analysis and design of clocked sequential circuits, shift registers, counters, PAL, PLA. [10]
5. **Introduction to Verilog HDL:** Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Functional Verification, System Tasks, Programming Language Interface (PLI), Module, Simulation and Synthesis Tools. Gate Level Modeling: Introduction, AND Gate Primitive, Module Structure, Other Gate Primitives, Illustrative Examples, Tri-State Gates, Array of Instances of Primitives, Design of Flip-flops with Gate Primitives, Delays, Strengths and Construction Resolution, Net Types, Design of Basic Circuits. [10]

Outcomes: Upon successful completion of this course, students should be able to:

1. Gain fundamental knowledge of the basic logic gates such as AND, OR, NAND NOR, EX-OR and their implementation in Logic Circuits.
2. Design multipliers, Combinational Circuits and registers.

Text Books:

1. Mano, M. M. and Ciletti, M.D., "Digital Design", Pearson Education, Patparganj, Delhi, 4thEdition, 2009.

2. Floyd, T. L. and Jain, R.P., "Digital Fundamental", Pearson Education, Patparganj, Delhi, 8thEdition, 2009.

References

1. Puri, V. K., "Digital Electronics: Circuits and Systems", Tata McGraw-Hill, Patel Nagar, New Delhi, 4thEdition, 2001.

2. Jain, R. P., "Modern Digital Electronics", Tata McGraw-Hill, Patel Nagar, New Delhi, 4th Ed.

CS 19.201 **Discrete Mathematics** **Total Lectures: 40**
Credit:3-1-0-4

Prerequisite(s): None

Objective(s):
- To Introduce fundamental concepts and applications of discrete structure in the field of computer science

1. **Sets, Relations and Functions**: Set theory, combination of sets, multi-sets, ordered pairs, set identities, relations, operations on relations, properties of relations, composite relations, equality of relations, order of relations, functions, classification of functions, operations on functions, recursively defined functions. [8]
2. **Partially Ordered Sets:** Definition, combination of partial order sets, Hasse diagram, lattices: definition, properties of lattices: bounded, complemented, modular and complete lattice, morphisms of lattices. [6]
3. **Algebraic Structures & Counting:** Groups, subgroups and order, cyclic groups, cosets, Lagrange's theorem, normal subgroups, permutation and symmetric groups, group homomorphisms, rings, fields, basics of linear algebra, integers modulo n. Counting principles, permutations, combinations, summations, principle of inclusion and exclusion, pigeon-hole principle, generating functions and recurrence relations. [10]
4. **Propositional Logic:** Proposition, well formed formula, truth tables, tautology, satisfiability, contradiction, algebra of proposition, theory of inference, natural deduction, predicate logic: first order predicate, well formed formula of predicate, quantifiers, and inference theory of predicate logic. [8]
5. **Graph Theory:** Graphs, types of graphs, subgraphs, Eulerian chains and cycles, Hamiltonian chains and cycles, graph traversal algorithms, chromatic number, plannar graph. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- Understand the theory and techniques of logic, graphs and trees, and algebraic systems.
- Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems.

Text Books:
1. Bernard Kolman, Robert C., Busb Sharon, Cutler Ross, Discrete Mathematical Structures, PHI, 6th Edition, 2009.
2. Kenneth H. Rosen, Discrete Mathematics and Its Applications, Tata McGraw- Hill, 7th Edition, 2011.

Reference Books:

2. C. L. Liu, D. P. Mohapatra, Elements of Discrete Mathematics A Computer Oriented Approach, Tata Mcgraw-Hill, 3rd Edition, 2008.
3. Seymour Lipshutz, Marc Lipson, Discrete Mathematics, 3rd edition, 2010

CS -19.203 **Data Structures** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s):
- To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems, and to promote an analytical and empirical appreciation of the behavior of algorithms using data structures

1. **Introduction:** Basic terminology, elementary data organization, algorithm, efficiency of an algorithm, time and space complexity, asymptotic notations, time-space trade- off, abstract data types. [4]
2. **Array & Linked list:** Definition, single and multidimensional arrays, representation of arrays: row major order, and column major order, application of arrays, sparse matrices and their representations. Singly linked lists, doubly linked list, circular linked list, insertion, deletion, traversal, polynomial representation and addition, generalized linked list. [10]
3. **Searching & Sorting:** Sequential search, binary search, comparison and analysis, hash function, collision resolution strategies, insertion sort, selection sort, bubble sort, quick sort, merge sort, heap sort, radix sort. [10]
4. **Stack & Queue:** Primitive stack operations: push and pop array and linked list implementation of stack, application of stack: prefix and postfix expressions, evaluation of postfix expression, recursion, and tower of Hanoi problem. Queue operations, circular queues, array and linked list implementation of queues, dequeue and priority queue [8]
5. **Tree:** Binary trees, binary tree representation, tree traversal algorithms: inorder, preorder and postorder, threaded binary trees, Huffman algorithm, binary search trees AVL trees. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- be knowledgeable of certain abstract data types (ADT)
- be able to make a critical assessment of different implementations of an ADT
- be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems

Text Books:
1.Lipschutz, "Data Structures" Schaum's Outline Series, TMH, Revised Edition Feb. 2014
2. Horowitz and Sahani, Fundamentals of Data Structures, University Press, 2nd Edition, 2008.

Reference Books:

2. D. Samanta, Classic Data Structures, PHI, 2nd Edition, 2009
3. Jean Paul Trembley and Paul G. Sorenson, An Introduction to Data Structures with applications, McGraw Hill, 2nd Edition, 2003.

CS 19.205 **General Purpose Programming** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s): Python is a general-purpose, versatile and popular programming language. It's great as a first language because it is concise and easy to read, and it is also a good language to have in any programmer's stack as it can be used for everything from software development and scientific applications.

1. **Introduction**: The basic elements of python, python syntax, python operators, basic input, branching programs, control structures, strings, tuples, lists, sets, dictionaries and input iteration, Mutability with deferent types, Ranges and iterators [7]
2. **Functions and Module**: Functions and scoping flow of execution, specifications, recursion, global variables, eval &exec , variable arguments, default arguments, system functions and parameters, input and output, modules , making your own module, importing modules. [7]
3. **Classes and Object-Oriented Programming**: Abstract data types and classes, class attribute, instances, constructor, self, inheritance, encapsulation and information hiding, polymorphism, getter & setter [8]
4. **Testing and Debugging**: Exceptions and assertions, types of testing – black-box and glass-box, debugging, handling exceptions, assertions. [6]
5. **Advance Python:** Regular expressions – REs and Python, plotting using matplotlib and Multithreaded Programming, GUI & event handling programming using Tkinter & pygame. Introduction to machine learning and deep learning [12]

Outcome(s): Upon completion of this course students will be

- Familiar with Python syntax.
- Able to use python to implement a given logic.

Text Books:

1. John V Guttag, Introduction to Computation and Programming using Python, Prentice Hall of India, 2nd Edition, 2013.
2. Martin C. Brown, Python: The Complete Reference,Mc Graw Hill, 2018

Reference Books:

1. Zed A. Shaw ,Learn Python the hard way: a very simple introduction to the terrifyingly beautiful world of computers and code, 3rd edition, 2014.
2. Richard L. Halterman,Learning to Program with python, 2011.
3. Allen Downey ,Think Python How to Think Like a Computer Scientist, Version 2.0.17, Green Tea Press Needham, Massachusetts,2012.

CS-19.253 **Data Structures Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): Programming Language Laboratory
Objective(s):

- To develop skills to design and analyze simple linear and nonlinear data structures
- To Strengthen the ability to identify and apply the suitable data structure for the given real world problem
- To Gain knowledge in practical applications of data structures

Contents:

- Implement various operations on arrays
- Implement different operations on different types of link list
- Implement various searching algorithms
- Implement different sorting algorithm and realize their complexities
- Implement Queue and stacks with all the operations
- Implement Binary Tree
- Implement graphs

Outcome(s): At the end of this course, the student will

- Be able to design and analyze the time and space efficiency of the data structure.
- Be capable to identity the appropriate data structure for given problem.
- Have practical knowledge on the application of data structures.

CS-19.255 **General Purpose Programming Lab** **Total Hours:26**

Credit: 0-0-2-1

.

Prerequisite: Programming Lab

Objectives: The objective of this course is to:

- Become comfortable with Python programming, starting from basics of data types to deep learning.
- Provide the foundation of to explore any expansions of Python whether it is machine learning, deep learning, web development or gaming. It will also put focus to learn various skills to design object-oriented software.

- **Contents:**
  - Code different data types and operations on list, dictionaries, sets, String etc
  - Code basic programs like factorial, Fibinocci etc. to understand functions and recursions.
  - Implement different built-in functions in Python like eval, exec, map, lambda etc.
  - Implement the concept of class, objects, inheritance and polymorphism
  - Implement constructor and self
  - Code programs to implement exceptions and assertions
  - Implement regular expressions
  - Implement a small gaming application using Pygame
  - Implement user interface and event handling using TKinter
  - Code programs to implement the logic for machine and deep learning
  - Implement multithreading

Outcomes: Upon completion of this course, students will be:

- Able to develop application in Python
- Able to develop scientific applications for machine learning
- Able to use python to implement a given logic.
- Able to use various Python IDE like Anaconda, Pycharm etc.

UC 19.202 **Business Environment** **Total Lectures: 26**

2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]

2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]

3. **Political and legal Environment*:*** Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]

4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]

5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:

1. Business Environment, Francis Cherunilam, 1st Edition, 2018.
2. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:

1. Business Environment, BN Ghosh, OUP, 2015
2. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
3. Business Environment, AC Fernando, Pearson, 2016

MA 19.202	Statistics and Probability Theory	Total Lectures: 40
		3-1-0-4

Pre-requisite: Mathematics I, Mathematics II, and Mathematics III

Objective: To acquire fundamental knowledge of Statistics and Probability and apply in engineering disciplines.

1.	**Introductory Ideas:** Recapitulation of basics of permutation, combination and probability theory; Law of addition and law of multiplication; Conditional probability; Total probability; Bayes' theorem (with proof)and it's applications.	[08]
2.	**Random Variables and Distribution:** Discrete and continuous random variables; Types of distributions with basic properties; Probability mass and density functions; Cumulative distribution function; Mean, variance and standard deviation of distributions; Discrete types (Binomial and Poisson) and Continuous types (Normal, Uniform and Exponential); Applications of basic ideas of these distributions.	[10]
3.	**Sampling and Testing of Hypothesis:** Sampling distribution of mean and variance; Central limit theorem; Simple and Composite hypothesis; Type I and Type II errors with graphical interpretations; Level of significance and tests of significance for large and small samples with applications.	[08]
4.	**Correlation and Regression:** Simple, partial and multiple correlations; Linear regression with applications.	[06]
5.	**Queuing Theory and Queuing Models:** Birth and death process; Pure birth and pure death process; Classification of queuing models: $[(M/M/1):(FCFS/\infty/\infty)]$, $[(M/M/1):(SIRO/\infty/\infty)]$, $[(M/M/1):(FCFS/N/\infty)]$, $[(M/M/C):(FCFS/\infty/\infty)]$; Applications of queuing models.	[08]

Outcome:	After completion of the course, students would be able to apply the knowledge of Statistics and Probability theory in engineering and solve curriculum problems.
Text Books:	1. S.Palaniammal, Probability and Random Processes, PHI, 2013. 2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.
Reference Books:	1. Papoulis, Probability, Random Variables and Stochastic Processes, TMH, 2018. 2. Gupta & Kapoor, Fundamental of Mathematical Statistics, SCS Publisher, 2002. 3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CS-19.202 **Objected Oriented Programming** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.101(Programming Language)

Objective(s): The objective of this course is to:

- Cover issues related to the definition, creation and usage of classes, objects and methods.
- Discuss the principles of inheritance and polymorphism.
- Provide the foundation of good programming skills by discussing key issues of the design of object- oriented software, including programming design and documentation.
- Cover the basics of API and to explore the java abstract programming interface.

1. **Overview:** Introduction to OOP, OOP concepts, interactive Development Environments: Eclipse/Net Beans, basics of OOP, importance of Java Primitive data types, type casting, arrays, ArrayList, operators and control structures, identifiers, constants and literals. [9]
2. **Classes and Inheritance:** Class fundamentals, objects, constructors, this keyword, garbage collection, the finalize() method, overloading methods, understanding static & final, exploring the string class. Inheritance basics, using super, multilevel hierarchy, constructor in hierarchy, method overriding, dynamic method dispatch, the object class, using abstract classes, interface. [10]
3. **Package, and Exception Handling:** Packages, access protection, importing packages, interfaces, exception-handling fundamentals, exception types, using try and catch, multiple catch clauses, nested try statements, throw, throws, finally, Java's built-in exceptions, user defined exception, assertions [10]
4. **Multithreaded Programming:** The Java thread model, the main thread, creating multiple threads, threads priorities, managing threads, thread class built-in functions. [4]
5. **I/O and String Handling:** I/O basics, reading console input, writing console output, the print writer class, reading and writing files, string constructors, operations on string, string tokenizing, string buffer. [7]

Outcome(s): Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Develop programs using the in-built Java API and the Java standard class library.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).
- Use of development environment like Eclipse for collaborative programming

Text Books:

1. Herbert Schildt, Java The Complete Reference, Herbert Schildt, 8th Edition, 2011.
2. Bert Bates and Kathy Sierra, Head First Java, O'Reilly,2005

Reference Books:

1.Allen B. Downey, Think Java: How to Think Like a Computer Scientist, 2011.
2. Paul Deitel, Harvey Deitel , Java How To Program (Early Objects), 10th Edition, 2014.
3.E. Balaguruswamy, Programing with Java A Primer, Tata Mc. Graw Hill, 2007

CS-19.204 **Database Management Systems** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures).

Objective(s): The objective of this Course is to:

- Understand the fundamental concepts of database management.
- Design and Normalize databases.
- Understand transaction processing control.
- Understand basic of object concepts and object relations.
- Understand the role of the DBMS & RDBMS in the organization.

1. **Introduction & Relational Data Model:** database system concepts and architecture, data modeling using the entity-relationship (ER) model, relational model constraints, relational database schemas, update operations, dealing with constraint violations, relational algebra operations, relational calculus, mapping ER model to relational model. [10]
2. **Structured Query Language (SQL)**: SQL data definition and data types, specifying constraints, schema change statements, basic queries, complex queries, update statements, views. [6]
3. **Database Design:** Functional dependencies and normalization of relational databases, first normal form (1NF), 2NF, 3NF, boyce-codd normal form (BCNF), multi valued dependency, 4NF, join dependency, 5NF. [8]
4. **Transaction Processing:** Introduction, properties, recoverability, serializability, concurrency control techniques: two phase locking protocol, concurrency control based on time-stamp ordering, database recovery techniques: recovery concepts, recovery techniques based on deferred and immediate update, the ARIES recovery algorithm. [8]
5. **Database Security:** Vulnerabilities in database, authentication, SQL injections, Encryptions & public Key infrastructures, privacy issues and preservation process [8]

Outcome(s): After completion of the course, students will be able to:

- Analyze database models & entity relationship models. Understand architecture for database development.
- Design E-R diagram
- Use Structured Query Language (SQL) with complex queries.
- Design and normalize the relations for any organization.
- Understand transaction processing control.

Text Books:

1. Ramez Elmasri & Shamkant B. Navathe, Fundamentals of Database Management Systems, Edition, Pearson Education, 2013.
2. Raghu Ramakrishnan, Database Management Systems, 3rd Edition, Tata McGraw Hill, 2008.

Reference Books:

1. G.W. Hansen, and J.V. Hansen, Database Management and Design, 2nd Edition, Prentice Hall India, 2000.
2. Korth and Schilberschatz, Database System Concepts, 5th Edition, Tata McGraw Hill, 2006.
3. C.J. Date, Database Systems, Tata McGraw Hill, 2nd Edition, 2003.

CS 19.206 **Theory of Computation** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 14.201(Discrete Structures)

Objective(s): The goal of this course is to

- Provide students with an understanding of basic concepts in the theory of computation.
- To understand variety of issues in the mathematical development of computer science theory, particularly finite representations for languages and machines, as well as gain a more formal understanding of algorithms and procedures.

1. **Finite Automata and Regular Expression:** Finite state systems, basic definitions, regular languages and regular expression, finite automata ,Equivalence of DFA and NDFA , Kleen's theorem, pumping lemma for regular sets, regular expression with algebraic method Using Arden's Theorem, closure properties of regular sets, minimization of finite automata, Mealy and Moore machine - conversion of Mealy machine into Moore machine and vice versa. [11]
2. **Context-Free Grammars:** Context-free grammars, union, concatenation of CFG, derivation trees, simplification of context-free grammars, Chomsky normal form, Greibach Normal form, ambiguous context-free grammar. [9]
3. **Context-Free Languages and Pushdown Automata:** Pushdown automata and context-free languages, pumping lemma for CFL, closure properties of CFL, decision, algorithms for CFL. [8]
4. **Turing Machine:** Turing machine model, techniques for Turing machine construction, Turing machines as language acceptor, combining Turing machines, properties of recursive and recursively enumerable languages, universal Turing machine. [8]
5. **Chomsky Hierarchy of Languages:** Regular grammars, unrestricted grammars and Turing machines, context-sensitive grammars and linear bounded automata. [4]

Outcome(s):

- Be able to prove the equivalence of languages described by finite state machines and regular expressions.
- Be able to construct pushdown automata and the equivalent context free grammars.
- Be able to prove the equivalence of languages described by pushdown automata and context free grammars.
- Be able to construct Turing machines and Post machines.
- Be able to prove the equivalence of languages described by Turing machines and Post Machines.

Text Books:

1. Peter Linz, An Introduction to Formal Languages and Automata, Third Edition, Jones and Bartlett, 2016.
2. Hopcroft, Motwani, Ullmann, Introduction to Automata Theory, Languages and Computation, Pearson Education, 2nd Edition, 2005.

Reference Books:

1. Daniel I. A. Cohen, Introduction to Computer Theory, Prentice-Hall, 2nd Edition,1997.
2. Martin, Introduction to Languages and the theory of Computation, Tata McgrawHill, 3rd Edition, 2006
3. Michael Sipser, Introduction to the Theory of Computation, 3rd Edition, Cengage Learning,2013

CS 19.208 **Computer Organization and Architecture** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): EC 19.202 (Digital Electronics) (Optional)

Objective(s):

- To have a thorough understanding of the basic structure and operation of a digital computer.
- To discuss in detail the operation of the arithmetic unit including the algorithms &
- implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- To study the different ways of communicating with I/O devices and standard I/O interfaces. To study the hierarchical memory system including cache memories and virtual memory.

1. **Introduction:** Von-Neuman architecture, register transfer and micro operations: register transfer language, arithmetic micro-operations, logic micro-operations, shift micro-operations, bus and memory transfers, computer organization and design: instruction cycle, computer registers, common bus system, computer instructions, addressing modes, design of a basic computer. General register organization, stack organization, instruction formats, data transfer and manipulation, program control, RISC, CISC [10]
2. **Computer Arithmetic:** Hardware implementation of addition and subtraction, multiplication algorithms, Booths multiplier, array multiplier, division algorithms, floating point arithmetic: floating point representation, add, subtract, multiplication, division. [8]
3. **Memory & I/O Organization:** Memory hierarchy, RAM, ROM chips, memory address map, memory connection, associative memory, cache memory and virtual memory: paging and segmentation, auxiliary memory: magnetic disks, magnetic tapes, Input-output interface, Asynchronous data transfer, modes of transfer, priority interrupt, DMA, IOP. [8]
4. **Hardwired and Microprogrammed Control:** Hardwired control, microprogrammed control: microinstruction, microprogram sequencing, wide-branch addressing, microinstruction with next-address field, prefetching microinstruction. [7]
5. **Pipelining & Parallel Processing:** Pipeline and vector processing: pipeline structure, speedup, efficiency, throughput and bottlenecks, arithmetic pipeline and instruction pipeline. Flynn's Classification performance matrices for parallel system [7]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand basic structure of a digital computer.
- Perform arithmetic operations of binary number system.
- Know the organization of the control unit, arithmetic and logical unit and I/O memory unit

Text Books:

1. M. Morris Mano, Computer System Architecture, Pearson Education, 3rd edition, 2008.
2. Carl Hamacher, ZvonkoVranesic and SafwatZaky, Computer Organization, Tata McGraw Hill, 5th edition, 2002.

3. Kai Hwang, Advance Computer Architecture,Tata Mc Graw Hill,18th edition,2008

CS-19.252 Object Oriented Programming Lab **Total Hours: 40**

Credit: 0-0-2-1

.

Prerequisite: Programming Lab

Objectives: The objective of this course is to:

- Become comfortable with object-oriented programming and learn to think in terms of objects.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, documentation.

- **Contents:**
  - Code different pattern to understand control structures
  - Code program like factorial, fibinocci etc. to understand functions and recursions.
  - To understand OOP implement an small application with getter and setter method
  - Implement various operators, this keyword and constructors
  - Code different usage of static keyword
  - Implement different types of polymorphism
  - Show different usage of String class using its inbuilt functions
  - Demonstrate abstraction using abstract class and interface.
  - Demonstrate exception handling using all its keywords
  - Demonstrate console I/O and File I/O
  - Implement multithreading using Runnable interface and Thread class

Outcomes: Upon completion of this course, students are able to:

- Understand the concepts of OOP as well as the purpose and usage principles of Inheritance, polymorphism, encapsulation and method overloading.
- Create Java application programs
- Use of development environment like Eclipse for collaborative programming/editing.

CS-19.254 **Data Base Management Systems Laboratory** **Total Hours: 40**
Credit: 0-0-2-1

Pre-requisites: CS14.111 (Programming Language Laboratory)

Objective: By the end of the practical sessions of this section, students will be able to:

- Create Databases using a user interface and SQL command.
- Create Integrity and constraints on databases.
- Write SQL queries.
- Provide a practical overview of advanced concepts like triggers, assertion, views, etc.

Contents:

- Creation of Databases
- Implement various Integrity Constraints
- SQL queries to implement DDL
- Implement various queries to implement DML
- Implement logics for PLSQL
- Implement Triggers

Outcomes: After undergoing this laboratory module, the students should be able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies.
- Design and implement a database schema for a given problem-domain.
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS.
- Programming PL/SQL including stored procedures, stored functions, cursors, packages.

RM 19.101 **Research Methodology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. **Introduction:** Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches, Research Process, Validity and Reliability in Research. [6]
2. **Problem Formulation:** Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps. [10]
3. **Research Design:** Research Framework, Meaning & Significance of Research Designs, Features of a good Research Design, Types of Research Design. [10]
4. **Data Analysis and Simulation Tool:** Types of Data, Sources of Data, Methods of Collecting Data, Data Presentation Techniques. Methods of Data Analysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. **Report Writing:** Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:

1. R. Pannershelvam, "Research Methodology" Prentice Hall India, New Delhi, 2nd Edition, 2013.
2. C. R. Kothari, "Research Methodology: Methods and Techniques", New Age International (p) Limited, Publishers New Delhi, 4nd edition, 2018.

Reference Books:

1 William G.Zikmund, “Business Research Methods”, Cengage Learning New Delhi, 8th edition, 2016.
2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

CS 19.301 **Design and Analysis of Algorithms** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): CS-19.201(Discrete Structures), CS-19.203(Data Structures)

Objective(s):

- To learn the algorithm analysis techniques.
- To become familiar with the different algorithm design techniques.
- To understand the limitations of the algorithms power.

1. **Introduction:** Fundamentals of algorithms and problem solving, asymptotic notations, time complexity and analysis of algorithms, solutions of recurrence relations, master theorem and summations techniques. [8]
2. **Analysis of Sorting and Searching Algorithms:** Linear, binary and interpolation search, insertion, selection, merge, quick and heap sort, stability and other issues, hashing. [8]
3. **Algorithm Design Approaches:** Greedy method (knapsack problem, job sequencing problem), dynamic programming (assembly line scheduling, matrix chain multiplication), backtracking (8 queens problem, sum of subsets), branch and bound (0/1 knapsack problem), divide and conquer algorithms (Strassen matrix multiplication), problems based on these design paradigms. [8]
4. **Tree and Graph algorithms:** Spanning trees, Prim and Kruskal's algorithm, Huffman coding, BFS and DFS, disjoint set operations, connected components, shortest path algorithms in a graph such as Dijkstra, Bellman Ford, Warshall's etc. [8]
5. **Complexity Classes:** P,NP,NP hard and NP complete problems, reducibility, decision and optimization problems, examples of NP complete problems such as 3 CNF, clique, vertex cover and traveling salesman problem, basic introduction of approximation algorithms. [8]

Outcome(s): On the successful completion of the course, the student will be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.
- Modify existing algorithms to improve efficiency.

Text Books:

1. Thomas H.Cormen, Charles E.Leiserson, Ronald L. Rivest and Clifford Stein, Introduction to Algorithms, PHI Learning Private Limited, 3rd edition, 2016.
2. Ellis Horowitz, Sarta jSahni, Sanguthevar Rajasekaran, Computer Algorithms, Silicon Press, 2nd edition, 2008.

Reference Books:

1. Anany Levitin, Introduction to the Design and Analysis of Algorithms, Pearson Education, 3rd edition, 2012.
2. Alfred V. Aho, John E. Hopcroft and Jeffrey D. Ullman, Data Structures and Algorithms, Pearson Education, 1st edition, 2006.
3. Donald E. Knuth, The Art of Computer Programming, Volumes 1& 3, Pearson Education, 2009.

CS-19.303 **Operating System** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.208 (Computer Organization & Architecture)

Objective(s):

- Understand the fundamental operating system abstractions like processes, threads, files, semaphores, IPC and deadlocks.
- Understand operating system from user's perspective as well as from system's perspective.
- Understand the principles of concurrency and synchronization.
- Understand basic resource management techniques.

1. **Overview:** Definition, types of operating systems: mainframe, server, multiprocessor, personal computer, real-time, embedded and smart card, system calls and utilities, batch, multiprogramming and multitasking operating system. [3]

2. **File Systems:** File concept, user and system programmer view of file systems, different modules of a file system, disk structure, disk-space allocation methods: contiguous, linked, indexed directory structures, file protection, disk scheduling algorithms. [6]

3. **Process Management:** Process concepts, threads, scheduling concepts, types of schedulers, scheduling algorithms, process state diagram, comparison of various CPU scheduling algorithms, multi-level queue scheduling. [6]

4. **Memory Management:** Logical and physical address spaces, base, limit and relocation registers, address binding, dynamic loading and linking, partitioning, swapping, contiguous memory allocation, non-contiguous memory allocation: segmentation, paging and segmentation. [8]

5. **Process Synchronization and deadlock:** Independent and concurrent processes, shared memory approach and message passing approach, mutual exclusion, synchronization, inter process communication, critical section problem and its solution to semaphores: binary and counting semaphores, wait/signal operations and their implementation, classical problems of synchronization, deadlock. [11]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the primary functionalities of operating system.
- Manage system resources efficiently as an operating system designer.
- Develop new operating systems as well as work on existing ones to develop them further.

Text Books:

1. Galvin, Silberschatz, Gagne, Operating System Concepts, Wiley India, 9th edition, 2015.
2. Stallings, Operating Systems: Internals and Design Principles, Pearson education, 7th edition 2013.

Reference Books:

1. Andrew S. Tanenbaum, Modern Operating Systems - Prentice-Hall, Inc., 4th edition, 2015.
2. Deitel, Operating Systems, Pearson Education , 3rd edition, (2012 reprint).

CS-19.305 **Logic in Computer Science** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS-19.201(Discrete Structures)

Objective(s):

- To introduce the main notions of mathematical logic: logical notations (syntax) and how to assign meaning to them (semantics).
- To study formal frameworks (in the sense of being rigorous as well as in the sense of manipulating "form") for constructing logical arguments (proof theory).
- To study some deductive systems for propositional and first-order logic.
- To introduce the concept of fuzzy logic.

1. **Introduction:** Role of logic in computer science, problem representation, review of the principle of mathematical induction, the principle of structural induction, review of Boolean algebra, language, models, interpretations, validity, proof, decision problems in logic, decidability. [6]
2. **Propositional Logic:** Syntax, semantics, propositional logic as a formal language, natural deduction, normal forms, propositional satisfiability, propositional resolution and tableaux method. [10]
3. **Predicate Logic:** Predicate logic as a formal language, semantics of predicate logic, validity and satisfiability, forward and backward chaining, Skolmization, normal forms, unification, Horn formulas and programs, resolution. [12]
4. **Binary Decision Diagrams:** Representing Boolean functions, algorithms for reduced binary decision diagram (OBDD), reduce, apply, restrict, exists, symbolic model checking. [8]
5. **Fuzzy Logic:** Crisp sets and fuzzy sets, fuzzy membership, operations on fuzzy sets, fuzzy arithmetic, Cartesian product, fuzzy relations, fuzzy propositions, fuzzification and defuzzyfication, engineering applications of fuzzy logic. [4]

Outcome(s): On successful completion of this course, the students will be able to

- Use propositional and first-order logic.
- Apply of logic in specifying properties.
- Develop proof by induction.
- Design binary decision diagrams.
- Identify the scope for fuzzy logic.

Text Books:

1. Huth M and Ryan M, Logic in Computer Science: Modelling and Reasoning about Systems, Cambridge University Press, 2nd edition, 2004.
2. George J Klir and Bo Yuan, Fuzzy Sets and Fuzzy Logic – theory and applications, Prentice Hall, 2000.

Reference Books:

1. Arindama Singh, Logics for Computer Science, Prentice Hall of India, 1st edition, 2004.
2. M. Ben-Ari, Mathematical Logic for Computer Science, Springer, 2nd edition, 2003.
3. Rich E., and Knight K., Artificial Intelligence, Tata McGraw-Hill, 3rd edition, 2009.

CS-19.307 **Computer Graphics and Multimedia** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): MA 19.101 Mathematics-I

Objective(s):

- To understand the basics of various inputs and output computer graphics hardware devices
- To understand an in-depth exploration of fundamental concepts in 2D and 3D computer graphics.
- To study 2D raster graphics techniques, 3D modeling, geometric transformations, 3D viewing and rendering.

1. **Introduction:** Types of computer graphics, Graphic Displays Random scan displays, Raster scan displays, Frame buffer and video controller, Points and lines, Line drawing algorithms, Circle generating algorithms. [8]
2. **Transformations:** Basic transformation, Matrix representations and homogenous coordinates, Composite transformations, Reflections and shearing. [8]
   Windowing and Clipping: Viewing pipeline, Viewing transformations, 2-D Clipping algorithms- Line clipping algorithms such as Cohen Sutherland line clipping algorithm, Liang Barsky algorithm, Line clipping against non-rectangular clip windows; Polygon clipping – Sutherland Hodgeman polygon clipping, Weiler and Atherton polygon clipping, Curve clipping, Text clipping
3. **Three Dimensional:** 3-D geometric primitives, 3-D Object representation, 3-D Transformation, 3-D viewing, projections, 3-D Clipping [8]
4. **Curves and Surfaces:** Quadric surfaces, Spheres, Ellipsoid, Blobby objects, Introductory concepts of Spline, Bspline and Bezier curves and surfaces. Back Face Detection algorithm, Depth buffer method, A- buffer method, Scan line method, basic illumination models– Ambient light, 08 Diffuse reflection, Specular reflection and Phong model. [8]
5. **Multimedia :** Overview, applications, multimedia hardware, multimedia authoring tools, audio format, digital video format, compression techniques JPG, MPEG, basic animation concepts. [8]

Outcome(s): On successful completion of this course, the students will be able to

- To understand the various computer graphics hardware and display technologies.
- 2D and 3D viewing technologies
- Various 2D and 3D objects transformation techniques

Text Books:

1. D.Hearn And P.Baker, Computer Graphics, - Pearson Education -
2. Vaughan T. , Multimedia making it work, TMH 3rd Edition 2002.

Reference Books:

1. Rogers D, Procedural elements for computer graphics, TMH, 2nd Edition 1997.
2. Rogers D, Mathematical elements for computer graphics, TMH, 2nd Edition 2002
3. Mukherjee, Fundamentals of Computer graphics & Multimedia, PHI 3rd Edition 2010.

CS-19.351 **DAA Laboratory** **Total Hrs: 26**

Credit: 0-0-2-1

Prerequisite(s): CS 19.253 (Data Structure Laboratory)

Objective(s):

- To analyze the asymptotic performance/Time complexity of algorithms.
- To demonstrate familiarity with major algorithms and data structures.
- To apply important algorithmic design paradigms, techniques and methods for the solution of real life problems.
- To synthesize efficient algorithms in common engineering design situations.

Contents: Lab manual based upon the theory course CS 14.301 and to achieve the listed course objectives and outcomes.

- To implement and analyze sorting algorithms Insertion, Quick and Merge Sort
- To implement optimal binary search tree
- To implement greedy algorithms Knapsack problem
- To implement Dikshtra and Warshall's Algorithm
- To implement Bellman Ford Algorithm
- To implement DFS and BFS

Outcome(s): On successful completion of this course, the students will be able to

- Understand and analyze the time complexities of sorting algorithms
- Understand and analyze Graph algorithms
- Understand and analyze the DFS and BFS algorithms

CS-19.357 **Computer Graphics and Multimedia Lab** **Total Hours:26**

Credit: 0-0-2-1

Prerequisite(s): CS 14.253(Data Structure Laboratory)

Objective(s):

- To introduce the use of the components of a graphics system and become familiar with building approach of graphics system components and algorithms related with them.
- To learn the basic principles of 3- dimensional computer graphics.
- Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition.

Contents: Lab manual based upon the theory course CS 14.301 and to achieve the listed course objectives and outcomes.

- To implement DDA Brenham's algorithms for line, circle and ellipse drawing
- To implement Mid-Point Circle algorithm.
- To implement Mid-Point Ellipse algorithm
- To perform 2D Transformations such as translation, rotation, scaling, reflection and sharing.
- To implement Cohen–Sutherland 2D clipping and window–viewport mapping.
- To implement Liang Barksy Line Clipping Algorithm.
- To perform 3D Transformations such as translation, rotation and scaling.
- To create motion tween of object and shapes, using a guide layer in Macromedia Flash

Outcome(s): On successful completion of this course, the students will be able to

- To implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
- To describe the importance of viewing and projections.
- To define the fundamentals of animation, virtual reality and its related technologies.

CS-19.302 **Software Engineering** **Total Lectures:40**

Prerequisite(s): CS-19.101 (Programming Language) **Credit:3-0-0-3**

Objective(s):
- To understand the basic software engineering approaches, software development process models, project planning, software size estimation, software effort and cost estimation and risk management.
- To know about software requirements specification, requirement elicitation, structured system analysis and introduction of object-oriented analysis and design, design techniques.
- To acquire knowledge on implementation issues such as modularity and coding standards.

1. **Introduction:** Programs versus software products, software crisis, need for software engineering, attributes of effective software, software myths, software characteristics, and role of management in software development, overview of quality standards like ISO 9001, SEI-CMM. [6]
2. **Software Processes and Requirement Analysis:** Software engineering: a layered technology, the software process, software process models, component based development, problem analysis, requirement engineering, requirement elicitation, requirement analysis, software requirement and specifications, data flow diagrams, data dictionaries, entity-relationship diagrams. [8]
3. **Software Project Planning:** Responsibilities & skills of a project manager, project planning, and project size estimation: LOC, function point & feature point metric, project estimation techniques, COCOMO model, staffing level estimation, scheduling, risk management, software configuration management. [9]
4. **Software Design:** The design process, design principles, design concepts, effective modular design: cohesion & coupling, classification of cohesiveness & coupling, design notations, design techniques, structure charts, introduction to object-oriented design. [8]
5. **Coding and Testing:** Software testing fundamentals, test case design, white box testing:-basis path testing, control structure testing, black box testing: boundary value analysis, equivalence class testing, decision table testing, cause effect graphing, level of testing, debugging, testing tools &standards, testing for client/server architecture, real time systems and GUIs testing. Brief of software re-use, reverse engineering, software re-engineering, agile software engineering. [9]

Outcome(s):

On successful completion of this course, students will be able to
- Demonstrate knowledge of the distinction between critical and non-critical systems and ability to manage a project including planning, scheduling and risk assessment/management.
- Author a software requirements document and understanding of the proper contents of a software requirements document.

Text Books:
1. R. S. Pressman, Software Engineering – A practitioner's approach,Tata-McGraw- Hill Int. Ed., 8th edition, 2014.
2. K. K. Aggarwal, Yogesh Singh, Software Engineering, New Age International, 1st edition, 2008.

Reference Books:
1. Pankaj Jalote, An Integrated Approach to Software Engineering, Narosa Publisher, 3rdedition, 2005.
2. Rajib Mall, Fundamentals of Software Engineering, Prentice-Hall, 2ndedition, 2004.
3. Robert C. Martin, Agile Software Development, Principles, Patterns and Practices, 1st edition, 2002.

CS-19.304 **Compiler Design** **Total Lectures:40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.206 (Theory of Computation)

Objective(s):

- To introduce the major conceptual areas of language translation and compiler design.
- To enrich the knowledge in various phases of compiler, code optimization techniques
- To extend the knowledge of different parsers.
- To provide practical programming skills necessary for construction of a compiler.

1. **Introduction:** Introduction of compiler, compiler structure: analysis-synthesis model of compilation, various phases of a compiler, Symbol table: Role and data structure used for symbols tables . Lexical Analysis: Input buffering, specification & recognition of tokens, error detection & recovery . [8]
2. **Syntax Analysis & Syntax Directed Translation:** Syntax analysis: CFGs, top down parsing, Brute force approach, recursive descent parsing, transformation on the grammars, predictive parsing, bottom up parsing, operator precedence parsing, LR parsers (SLR, LALR, LR), parser generation error detection & recovery. [9]
3. **Syntax Directed Definition**: Construction of syntax trees, bottom up evaluation, S-attribute definition, L-attribute definition, top down translation, bottom up evaluation of inherited attributes, recursive evaluation, analysis of syntax directed definition. [8]
4. **Intermediate Code Generation:** Intermediate code, postfix notation, parse trees & syntax trees, three address code, quadruple & triples, translation of assignment statements, Boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser, more about translation: array references in arithmetic expressions, procedures call, declarations, case statements. [8]
5. **Code Optimization & Code Generation:** Loop optimization, the DAG representation of basic blocks, flow graphs, global data-flow analysis, peephole optimization, generating code from DAG, register allocation and assignment. [7]

Outcome(s): On successful completion of this course, the students will be able to

- Use lexical analyzer and parser generator tools.
- Generate intermediate code.
- Be familiar with register allocation.
- Expose compiler code optimization.

Text Books:

1. A. V. Aho, R. Sethi, and J. D. Ullman. Compilers: Principles, Techniques and Tools, Pearson Education, 2nd edition, 2014.
2. Louden, Compiler Construction: Principles and Practice, Cengage Learning, 1st edition, 1997.

Reference Books:

1. Allen I. Holub, Compiler Design in C, Prentice-Hall Inc., 1st edition, 1994.
2. AW Appel, M Ginsburg, Modern Compiler Implementation in C, Cambridge University Press, 1st edition, 2004.
3. J. R. Levine, T. Mason, D. Brown, Lex and Yacc, O'Reilly, 2nd edition, 2000.

CS-19.306 **Computer Networks** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures)

Objective(s):

- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To construct large-scale computer networks
- To understand fundamentals of computer networks and major protocols.
- To analysis and evaluate major Internet protocols.
- To program simple network applications using socket API
- To learn and adopt newly introduced computer network technologies by themselves.

1. **Introduction:** History and development of computer networks, networks topologies, MANET, categories of networks, layering and protocols. [5]
2. **Physical and MAC Layer:** Different types of transmission media, transmission impairments, encoding schemes (NRZ, NRZI, Manchester, 4B/5B, Manchester etc.), packet and circuit switching. Aloha, CSMA/CA, CSMA/CD protocols, performance evaluation and characteristics. [8]
3. **Data Link Layer:** Framing concept, error detection (parity, CRC), sliding window, stop and wait protocols, stop performance and efficiency. IEEE 802.3, 802.4, 802.5, 802.11, performance evaluation. [10]
4. **Network Layer:** IPv4, IP address classes, classless addressing, IPv6, ARP, RARP, DHCP, ICMP, routing algorithms: distance vector, metrics, RIP, OSPF, BGP, congestion control algorithms, leaky bucket, token bucket. [8]
5. **Transport & Application Layer:** Duties of the transport layer, connection, TCP, TCP services, TCP header, UDP, evaluating protocol such as TCP/UDP using simulator like NS2. DNS, FTP, HTTP, SMTP, POP, basics of network security, cryptography, digital signature and firewall. [9]

Outcome(s): On successful completion of this course, students will be able to

- Analyze computer network component and devices.
- Synthesize how communication works in a network and internet.
- Formulate the concept of topologies and their applications.
- Analyze protocol at different layers and how they play important role in network implementation.

Text Books:

1. Tanenbaum A. S., Computer Networks, Prentice-Hall of India, 5th edition, 2010.
2. Forouzan B. A., Data Communications and Networking, Tata McGraw-Hill, 5th edition, 2013.

Reference Books:

1. Stallings W., Data and Computer Communications, Prentice-Hall of India, 10th edition, 2013.
2. Hayes J. F., Modeling and Analysis of Computer Communication Networks, Plenum Press, 1st edition, 1987.
3. Kurose and Ross, Computer Network: a top-down approach, Pearson 6th edition 2015.

CS-19.308 **Digital Image Processing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS-19.101 (Programming Language)

Objective(s):

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To study the image segmentation and representation techniques
- To study the image representation in form of features and descriptors

1. **Digital Image Fundamentals:** Elements of digital image processing systems, elements of visual perception, brightness, contrast, hue, saturation, mach band effect, color image fundamentals - RGB, HSI models, image sampling, quantization, dither, two-dimensional mathematical preliminaries, 2D transforms - DFT, DCT, KLT, SVD. [7]
2. **Image Enhancement and Restoration:** Histogram equalization and specification techniques, noise distributions, spatial averaging, directional smoothing, median, geometric mean, harmonic mean, contra harmonic mean filters, image restoration - degradation model, unconstrained restoration, inverse filtering, removal of blur caused by uniform linear motion. [7]
3. **Morphological Image Processing:** Basics, structuring element, erosion, dilation, opening, closing, hit-or-miss transform, boundary detection, hole filling, connected components, convex hull, thinning, thickening, skeletons, pruning, and reconstruction by dilation and erosion. [7]
4. **Image Segmentation:** Edge detection, edge linking via Hough transform, thresholding, region based segmentation, region growing, region splitting and merging, and segmentation by morphological watersheds, basic concepts, dam construction, and watershed segmentation algorithm. [7]
5. **Image Representation:** Boundary representation, chain code, polygonal approximation, signature, boundary segments, boundary description, shape number, Fourier descriptor, regional descriptors, and topological features. [6]
6. **Image Compression:**Need for data compression, Huffman, run length encoding, shift codes, arithmetic coding, vector quantization, transform coding, JPEG standard, MPEG. [6]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the basic algorithms used for image processing &image compression with morphological image processing.
- Apply image enhancement and restoration techniques.
- Use image compression and segmentation Techniques.
- Represent features of images.

Text Books:

2. Anil Jain K. “Fundamentals of Digital Image Processing”, PHI Learning Pvt. Ltd., 2011.

Reference Books:

1. Rafael C. Gonzalez, Richard E. Woods, Steven L. Eddins, “Digital Image Processing Using MATLAB”, Third Edition Tata Mc Graw Hill Pvt. Ltd., 2011.
2. William K Pratt, “Introduction to Digital Image Processing”, CRC Press, 13-Sep-2013.
3. Bernd Jähne, Digital Image Processing, Springer Science & Business Media, 29-Jun-2013.

CS 19.310 **Artificial Intelligence and Machine Learning** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.305 (Logic in Computer Science)

Objective(s):

- To understand the basic problem solving in Artificial Intelligence.
- To learn different blind as well as heuristic search strategies.
- To understand the various ways of knowledge representation in Artificial Intelligence.
- To know the concepts of machine learning.

1. **Overview of Artificial Intelligence:** Introduction to artificial intelligence and intelligent agents, brief history of artificial intelligence, related research fields, AI techniques, AI problems, applications and future of AI. [6]

2. **Problem Solving and Search Techniques:** Basics of problem solving, Problem representation paradigms, defining problem as a state space representation, uninformed search, depth first search, breadth first search, heuristic search, heuristic functions, generate and test, hill climbing, best first search, A* algorithm, problem reduction, AND/OR graph, AO* algorithm. [8]

3. **Knowledge Representation and Logic:** Representation and mappings, procedural versus declarative knowledge, approaches and issues in knowledge representation, first order logic, higher order logic, unification and resolution for performing logical inference, probabilistic logic. [8]

4. **Game Theory:** Minimax search, alpha-beta cutoffs, iterative deepening, references on specific games. [8]

5. **Machine Learning:** Components of learning, supervised learning, unsupervised learning, reinforcement learning, perceptron learning, support vector machines, KNN, learning decision trees, association rule mining, applications in game playing and robot control. [10]

Outcome(s): On successful completion of this course, students will be able to

- Solve the basic problems and apply searching techniques used in Artificial Intelligence.
- To select knowledge representations to solve AI problems.
- Apply various machine learning techniques.

Text Books:

1. Rich E., and Knight K., Artificial Intelligence, Tata McGraw-Hill, 3rd edition, 2009.
2. P. Flach, Machine Learning: The art and science of algorithms that make sense of data, Cambridge University Press, 2012.

CS-19.354 **Compiler Design Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): CS 19.151(Programming Language Lab.) CS 19.253(Data Structures Lab.)

Objective(s):

- To design and implement a lexical analyzer
- To design and implement a parser
- To design and implement symbol tables
- To understand and design code generation schemes
- To learn the working of some compiler writing tools

Contents:

- To study the Flex environment
- Implementation of Simple Programs using FLEX
- To illustrate the concept of Special Directives in FLEX
- Illustrate the special functions like yymore(), yyless(), unput(), input(), yyterminate(), yyflush buffer
- To implement the Lexical Analyser using FLEX
- To implement syntax analysis programs such as string check, identifier, integer, converting and evaluation of postfix, infix expressions in YACC
- To demonstrate symbol table implementation in YACC and FLEX
- Implementation of intermediate code generation.

Outcome(s): On successful completion of this course, the students will be able to

- Understand the peculiarities of a language translator
- Get the practical approach of how a compiler works
- Work in the development phase of new computer languages in industry
- Understand the working of compiler construction tools
- Visualize and design a new compiler of her own language

CS-19.356 **Computer Network Laboratory** **Credit: 0-0-2-1**

Prerequisite(s): CS 19.101 (Programming Language Lab.), CS 14.253(Data Structures Lab.)

Objective(s):

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming

Contents:

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming
- To demonstrate sending a UDP packet and TCP

Outcome(s): On successful completion of this course, students will be able

- To know how communication works at different layers of TCP/IP model
- To understand practically the purpose of various key protocol.
- To learn how a network can be efficiently deployed.
- To identify and analyze the latest technology with existing one.
- To configure network with client/server programming
- To understand computer network component and devices.

CS-19.358 **Digital Image Processing Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): CS 19.151 (Programming Language Lab.),

Objective(s): The aim of this course is to familiarize students with the implementation in Matlab of the basic techniques for handling images and developing algorithms for image processing (quality enhancement, restoration, coding, compression).

Contents:

- Introduction to MATLAB
- Implementation of Image Transformation Fourier, DCT etc.
- Implantation of Fourier Transformation properties
- Implementation of Image Enhancement operations.
- Implementation of image degradation and restoration methods
- Implementation of image segmentation and morphological operations.

Outcome(s): On successful completion of this course, students will be able

- Learn basic image processing techniques for solving real problems.
- Student will also have sufficient expertise in both the theory of two-dimensional signal processing and its wide range of applications, for example, image restoration, image compression, and image analysis.

CS 19.411 **Data Mining and Warehousing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.204 (Database Management System), CS 19.301 (Design and Analysis of Algorithms), MA 19.202 (Statistics and Probability Theory)

Objective(s):

- Understand the functionality of the various data mining and data warehousing components.
- Appreciate the strengths and limitations of various data mining and data warehousing models.
- Compare the various approaches to data warehousing and data mining implementations
- Describe and utilize a range of techniques for designing data warehousing and data mining systems for real-world applications.

1	**Overview:** Evolution of the database system technology, concept of data mining and warehousing, data warehouse roles and structures, cost of warehousing data, approaches to data exploration and data mining, foundations of data mining, web warehousing, introduction to knowledge management and knowledge bases.	[6]
2	**Data Mining and Data Visualization:** Data mining general approach, classification and clustering, introduction to DM tool (Weka, RapidMiner), techniques used to mine the data, current limitations and challenges to DM, data visualization, visualization tools.	[10]
3	**Data Preprocessing:** Overview, data cleaning, data integration, data reduction strategies, principal component analysis, sampling, histograms, clustering, data cube aggregation, data transformation and discretization.	[8]
4	**Text Mining:** Information retrieval and search, text classification, text clustering, unsupervised learning, mining frequent patterns and correlations, classification concepts, backpropagation, decision tree induction, rule-based classification, clustering basic concepts and methods, K-means centroid-based technique.	[8]
5	**Data Warehouse:** Overview of data warehousing, data marts, data warehouse architecture, multidimensional data model, online analytical processing (OLAP), OLAP operations, data about data - metadata.	[8]

Outcome(s): On successful completion of this course, students will be able to

- Identify, formulate, and solve data science related problems by applying principles of the course.
- Understand both analysis and synthesis in the design process with the help of data mining and data warehousing tools.
- Develop and conduct appropriate experiments, analyze and interpret data, and use data visualization to draw conclusions.
- Function effectively on teams that establish goals, plan tasks, meet deadlines, and analyze risk and uncertainty.

CS 19.412 **Big Data and Unstructured Databases** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.204 (Database Management System)

Objective(s): To understand fundamental concept of Big Data and its application in various fields

1	**Data and its Classifications**: Data, information, knowledge and wisdom, digital and analog data, unstructured data, semi-structured data, structured data, sources of data, dealing with unstructured data, data science and responsibilities of data scientists.	[6]
2	**Introduction to Big Data**: Big data, characteristics of big data (volume, velocity, variety), challenges with big data, applications of big data in healthcare, agriculture, education, scientific experiments, advertising, stock market etc., integrity and privacy of big data, big data and cloud computing, big data and IoT.	[8]
3	**Classification of Analytics:** Descriptive, diagnostic, discovery, prescriptive and predictive analytics, big data analytics, semantic analytics, in-memory analytics, analytics and decision making, shared nothing architecture, CAP theorem, parallel and distributed system, massively parallel processing.	[10]
4	**Hadoop and its Architecture**: RDBMS and Hadoop, master slave architecture, HDFS, name node, secondary name node, data node, HDFS client, replica placement strategy, MapReduce, job tracker, task tracker, map phase, reduce phase, shuffle phase, Hadoop 1.0 and Hadoop 2.0, YARN, Installation of Hadoop in pseudo distributed mode and full distributed mode.	[10]
5	**NoSQL Databases**: NoSQL, database scaling, CAP theorem, ACID versus BASE, key-value stores, column-oriented databases, document databases, graph databases, NoSQL challenges.	[6]

Outcome(s): On successful completion of this course, students will be able to

- Apply knowledge of Big Data to solve real life problems in various areas of social importance

Text Books:

1. Seema Acharya, Subhashini Chellapan, “Big Data and Analytics”, Wiley, ISBN:978-81-265-5478-2, 2015

CS 19.413 **Distributed Databases** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.204 (Database Management System)

Objective(s):

- To build on the previous background of database systems by deepening the understanding of the theoretical and practical aspects of the database technologies, showing the need for distributed database technology.
- To introduce the concept and techniques of distributed database including principles, architectures, design, implementation and major domain of application.

1	**Overview:** Features of distributed versus centralized databases, levels of distributed transparency, types of data fragmentation, distributed database access primitives, integrity constraints in distributed databases.	[6]
2	**Distributed Database Design:** A framework for distributed database design, the design of database fragmentation, allocation of fragments, translation of global queries to fragment queries, parametric queries, a framework for query optimization.	[10]
3	**Management of Distributed Transactions:** A framework for transaction management, supporting atomicity of distributed transactions, concurrency control for distributed transactions, architectural aspects of distributed transactions.	[8]
4	**Concurrency Control:** Foundations of distributed concurrency control, distributed deadlocks, concurrency control based on timestamps, basic concepts of reliability, reliability and concurrency control, determining a constant view of the network, checkpoints and cold restart.	[8]
5	**Distributed Database Administration:** Catalog management in distributed databases, authorization and protection, SDD-1 a system for distributed databases, the R* project	[8]

Outcome(s): On successful completion of this course, students will be able to

- Identify the introductory distributed database concepts and its structures.
- Describe terms related to distributed object database design and management.
- Produce the transaction management and query processing techniques in DDBMS.
- Relate the importance and application of emerging database technology.

Text Books:

1. Stefano Ceri and Giuseppe Pelagatti, “Distributed Databases Principles and Systems”, McGraw-Hill, 2013

Reference Books:

1. M Tamar Ozsu and Patrick Valduriez, “Principles of Distributed Database Systems”, Pearson Education, 2011

CS 19.414 **Advanced RDBMS** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.204 (Database Management System)

Objective(s):

- To develop an understanding of the manner in which relational systems are implemented and the implications of the techniques of implementation for database performance.
- To assess the impact of emerging database standards on the facilities which future database management systems will provide

1	**Object and Object-Relational Databases:** Overview of object database concepts, object-relational features, ODMG and ODL, the object query language.	[4]
2	**Extensible Markup Language (XML):** Structured, semi-structured and unstructured data, XML hierarchical data model, XML documents, DTD, XML schema, sorting and extracting XML documents from databases, XML languages, extracting XML documents from relational databases.	[6]
3	**Query Processing and Optimization:** Translating SQL queries into relational algebra, algorithms for external sorting, SELECT, JOIN, PROJECT and set operations, combining operations using pipelining, using heuristics in query optimization, physical database design in relational databases, an overview of database tuning in relational systems.	[10]
4	**Concurrency Control Techniques:** Two-phase locking techniques for concurrency control, concurrency control based on timestamp ordering, multi-version concurrency control techniques, validation concurrency control techniques, granularity of data items and multiple granularity locking, using locks for concurrency control in indexes.	[8]
5	**Database Recovery and Security:** Recovery concepts, NO-UNDO/REDO recovery based on deferred update, recovery techniques based on immediate update, shadow paging, ARIES, recovery in multi database systems, database security issues, access control based on granting and revoking privileges, mandatory access control and role-based access control, SQL injection, encryption and public key infrastructures, privacy issues and preservation, challenges of database security.	[12]

Outcome(s): On successful completion of this course, students will be able to

- Critically assess new developments in database technology
- Interpret and explain the impact of emerging database standards
- Evaluate the contribution of database theory to practical implementations of database management systems.

Text Books:

1. Ramez Elmasri and S B Navathe, "Fundamentals of Database Systems", 6th ed, Addison-Wesley, 2010

2. Ivan Bayross, "SQL, PL/SQL: The Programming Language of ORACLE", 2nd ed, BPB, 1998

CS 19.415 **Machine Learning with Big Data** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.411 (Data Mining and Warehousing)

Objective(s): To learn the fundamental concept of machine learning and apply the concept of recommendations, clustering and classifications on large scale data sets using mahout.

1	**Introduction**: learning problems, designing learning system, perspectives and issues, concept learning, version spaces and candidate elimination algorithm, inductive bias, decision tree learning, representation, heuristic space search	[8]
2	**Data Mining, Machine Learning:** Data mining, machine learning, statistical modeling, feature extraction, computational approaches to modeling, statistical limits on data mining, statistical limits on data mining, Bonferroni's principle, recommendation engines, clustering and classifications, mahout: Mahout, installation and setting up of Mahout, tackling large scale data with mahout and Hadoop	[8]
3	**Recommendations:** Defining recommendation, running a recommender engine, evaluating a recommender, evaluating precision and recall, evaluating the GroupLens data set, representing preference data, in-memory data models, coping without preference values, user-based recommendation, item-based recommendation, similarity metrics, slope-one recommender, distributing recommendation computations	[8]
4	**Clustering**: Clustering basics, measuring the similarity of items, running a simple clustering example, distance measures, representing data, visualizing vectors, representing text documents as vectors, generating vectors from documents, clustering algorithms in Mahout, k-means clustering, different kinds of clustering problems, fuzzy k-means clustering, model-based clustering, evaluating and improving clustering quality, real-world applications of clustering	[8]
5	**Classifications**: Introduction to classification, Mahout for classification, differences between classification, recommendation, and clustering, applications of classification, working of classification, training a classifier, extracting features to build a Mahout classifier, preprocessing raw data into classifiable data, converting classifiable data into vectors, evaluating and tuning a classifier, deploying a classifier	[8]

Outcome(s): Students would be able to apply learning and knowledge of machine learning techniques in the area of Big Data Analytics using Mahout to solve real life problems.

CS 19.421 **Microprocessor and Assembly Language** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): (Basics of Electronics Engineering), (Digital Electronics)

Objective(s):

- To study architecture and memory management of 8-bit and 16-bit microprocessor (8085 & 8086)
- To study assembly language programming and use it to solve various problems.

1	**Introduction:** Evolution of Microprocessor and its types, 8085 microprocessor architecture, buses, registers, flags, 8085 pin configuration & function.	[6]
2	**8085 Instruction Set:** Addressing modes of 8085, 8085 instruction set, data transfer arithmetic, logical and branch instructions, 8085 interrupt structure, limitations of 8085 microprocessor.	[8]
3	**Interfacing:** Memory mapped I/O, I/O mapped I/O, address decoding, interfacing of memory with 8085, interfacing of I/O with 8085.	[8]
4	**Advance Microprocessors:** 8086 microprocessor architecture, 8086 pin configuration & function, addressing modes of 8086, instruction set of 8086, 8086 interrupts, study of advance processors of the family (8088, 80286, 80386, 80486 and Pentium).	[10]
5	**Assembly Language Programming:** Introduction, assembler directives, looping, condition and jump, subroutines, procedures, macros, parameter passing.	[8]

Outcome(s): On successful completion of this course, students will be able to:

- Draw block diagram of 8085/86 processor and know the pin function
- Know the instruction set and addressing modes
- Write the assembly language program for different problems and know the use of procedures and macros.
- Design interface of memory chips.

2. Ray A K and Bhurchandi K M, "Advanced Microprocessor and Peripherals Architecture, Programming and Interfacing", Tata Mc-Graw Hill, 2006
3. Chhabra, "The Intel 8086/8088 microprocessor architecture programming design & interfacing", Dhanpat Rai Publication

CS 19.422 **Microcontroller and Interfacing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): (Digital Electronics), CS 19.208 (Computer Organization and Architecture)

Objective(s): To learn design and interfacing of microcontroller-based systems.

Covers fundamentals and architecture of the 8051 microcontroller and various interfacings.

1	**Microcontroller:** Types of microcontrollers, examples of popular microcontrollers, selection of a microcontroller, architecture of a microcontroller, family members, microcontroller resources.	[6]
2	**Intel 8051/8031 Family:** 8051 microcontroller, internal and external memories, counters and timers, synchronous serial-cum-asynchronous serial communication, USART interface in Intel 8051, interrupts.	[6]
3	**8051 Family Microcontroller Instruction Set:** Basic assembly language programming, data transfer instructions, data and bit manipulation instructions, arithmetic instructions, instructions for logical operations, program flow control instructions, interrupt control flow instructions.	[10]
4	**Peripherals and Interfacing:** Serial IO USART communication interface 8251, parallel IO port interface 8255, programmable DMA controller 8257, programmable interrupt controller 8259, ADC circuit interfacing, DAC circuit interfacing.	[10]
5	**Digital and Analog Interfacing:** Switch, keypad and keyboard interfacings, LED and LED array, keyboard-cum-display controller 8279, printer interfaces, programmable instruments interface using IEEE 488 GPIB bus, interfacing with flash memory. Analog input interfacing, analog output interfacing.	[8]

Outcome(s): On successful completion of this course, students will be able to:

- Program, build and test a microcontroller system.
- Interface a microcontroller system to user controls and other electronic system.

Text Books:

1. Raj Kamal, "Microcontrollers: Architecture, Programming, Interfacing and System Design", Pearson Education, 2009

Reference Books:

EC 19.416 **Communication Engineering** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): (Digital Electronics), MA 19.202 (Statistics and Probability Theory)

Objective(s):
- To develop a fundamental understanding on communication systems with emphasis on analog modulation techniques
- To appreciate the mathematical concepts that form the foundations of analog and digital communication

1	**Linear Modulation Techniques:** Basic blocks of communication systems, review of signals and systems, linear modulation, time domain and frequency domain description of AM (DSB-FC), DSB-SC, SSB and VSB signals, generation and detection of linear modulation techniques, super-heterodyne receivers and design.	[12]
2	**Angular Modulation Techniques:** Basic concepts, frequency modulation spectrum analysis of FM wave, generation and detection of narrow band and wide band frequency modulation, phase modulation, FM detection techniques-phase locked loops, commercial broadcasting systems.	[8]
3	**Sources of Noise and their Characterization:** Random variables, random process and their characterization, noise in analog communication system, SNR calculations for synchronous detection of DSB and SSB and envelope detection of AM, SNR calculations for angle modulation system, pre-emphasis and de-emphasis, threshold effect in angle modulation.	[8]
4	**Sampling and Pulse Modulation:** Sampling theorem – ideal and natural sampling and reconstruction, pulse-amplitude modulation, pulse-time modulation.	[5]
5	**Digital Communication Techniques:** Sampling theorem and techniques, uniform and non-uniform quantization techniques, PCM, DPCM, DM, and ADM, compression standards.	[7]

Outcome(s): On successful completion of this course, students will be able to:

- Apply the basic knowledge of signals and systems and understand the basics of communication system and analog modulation techniques.
- Evaluate the communication system performance in the presence of noise and summarize the merits and demerits of all the conventional analog modulation system.

Text Books:
1. B P Lathi and Zhi Ding, "Modern Digital and Analog Communication Systems", Oxford university press, 4th Edition
2. S. Haykins, "Communication Systems" (4/e), Wiley

Reference Books:
1. Kennedy, Davis, "Electronic Communication Systems" (4/e), McGraw Hill.
2. P K Ghosh, "Principles of Analog and Digital Communication", Orient Black Swan Publishers Pvt. Ltd., 1st Edition

CS 19.424 **Embedded Systems** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.421 (Microprocessor and Assembly Language), CS 19.422 (Microcontroller and Interfacing)

Objective(s): To develop knowledge about the basic functions of embedded systems.

To develop the ability to write programs in embedded C.

1	**Introduction to Embedded Systems:** Embedded systems, processor embedded into a system, embedded hardware units and devices in a system, embedded software in a system, examples of embedded systems, embedded System-on-Chip (SoC) and use of VLSI circuit design technology, classification of embedded systems.	[8]
2	**Devices and Communication Buses:** IO types and examples, serial communication devices, parallel device ports, wireless devices, timer and counting devices, watchdog timer, real time clock, networked embedded systems, serial bus communication protocols, parallel bus device protocols, Internet enabled systems, wireless and mobile system protocols.	[8]
3	**Device Drivers and Interrupts Service Mechanism:** ISR concept, interrupt sources, interrupt service mechanism, multiple interrupts, context and the periods for context switching, interrupt latency and deadline, classification of processor interrupt service mechanism, direct memory access, device driver programming.	[8]
4	**Embedded Programming:** Software programming in assembly language and in high-level language C, programming basics in embedded C, embedded programming in C++, embedded programming in Java, UML modeling.	[8]
5	**Real Time Systems:** OS services, process management, timer functions, event functions, memory management, real time operating systems (RTOS), interrupt routines in RTOS, RTOS task scheduling, RTOS security issues, case study of RTOS: Windows CE, OSEK and RTLinux.	[8]

Outcome(s): On successful completion of this course, students will be able to:

- Understand and design embedded systems and real-time systems.
- Identify the unique characteristics of real-time system.
- Define the design problems and challenges of real-time system.

Text Books:

1. Raj Kamal, "Embedded Systems: Architecture, Programming and Design", 2nd ed, Tata McGraw Hill, 2008
2. Michael J Pont, "Embedded C", Pearson Education, 2007

Reference Books:

1. David E Simon, "An Embedded Software Primer", Pearson Education
2. M A Mazidi, "The 8051 Microcontroller & Embedded Systems", Pearson Education

EC 19.421 **System Design using HDL** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), Digital Electronics

Objective(s):

- To acquire fundamental knowledge of designing of digital systems using VHDL.
- Students will acquire practical working knowledge of creating digital circuits using commercial Computer-Aided-Design (CAD) tools.

1	**Programmable Logic Design:** ASIC, ROM, PLA, PAL, CPLD and FPGA.	[3]
2	**VHDL Based Design and fundamentals:** An overview of VHDL, role of VHDL in system design, introduction to CAD tools for system design, introduction to Xilinx IDE software, entity and architecture declaration, introduction to behavioural, dataflow and structural models, package, package declarations and package body.	[9]
3	**Basic Elements of VHDL:** Data objects – constant, variable and signal, data types – scalar and composite, predefined operators – logical, relational, shift, adding and multiplying, overloading – literal and operator.	[4]
4	**VHDL Statements:** Process, variable assignment, signal assignment, sequential statements, conditional statements, loop, if, case, next statements, assertion and report statements, signal drivers and signal assignment statements, conditional signal assignments, select and generic, subprograms: application of functions and procedures, overloading and signal assignments, component declaration, component instantiation.	[10]
5	**Combinational and Sequential Circuit Design:** VHDL models of combinational circuits such as adder, multiplexer, de-multiplexer, encoder, decoder, code converters, comparators, parity generators, multipliers and implementation of Boolean functions, VHDL models of sequential such as edge triggered D flip flop, T flip flop and J K flip flop, serial in serial out register, serial in parallel out register, parallel in parallel out register, counter, memory, ALU.	[14]

Outcome(s): On successful completion of this course, students will be able to:

- Identify, formulate, and solve engineering problems
- To use the technique, skills, and modern engineering tools necessary for engineering practice.

Text Books:

1. J. Bhaskar, VHDL Primer, Pearson Education Asia, 3rd Ed
2. Douglas L. Perry, VHDL Programming by Examples, Tata McGraw Hill, 4th Ed.

Reference Books:

1. Digital Design: Principles and Practices by John F. Wakerly
2. Beginner's guide to VHDL by Peter J. Ashenden

CS 19.431 **Advanced Java** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s): This course extends the study of Web Programming Fundamentals. Advanced concepts of program design, implementation and testing will be introduced with J2EE framework. Student will learn various concept of advance Java for implementation of small to medium sized application programs that illustrate professionally acceptable coding and performance standards.

1	**Introduction:** OOPS principle, class and objects, basics of HTML, web development introduction, web framework, J2EE building blocks, web application structure	[4]
2	**Servlets:** Servlet needs, servlet request-response model, servlet life cycle (init, service, doGet, doPost), servlet configuration, scopes (session, request, page), servlet parameters, servlet context, forms processing (get, post), HTTP header processing, HTTP responses.	[10]
3	**Java Server Pages**: JSP life cycle, JSP a servlet, creating dynamic content with use of JSP elements: expressions, scriptlets & declarations, JSP composition, redirecting, forwarding, accessing default objects (request, response, session, application, config, pageContext), error processing with use of JSP, Servlets vs. JSP pages	[10]
4	**Session management**: Http session, the Http session interface session tracking: cookies, hidden fields, cookies and JSP, sending and receiving cookies.	[6]
5	**Using Beans and tag libraries**: Separating presentation and business logic, JSP actions, JavaBeans, working with properties, <jsp:useBean>, <jsp:getProperty> and <jsp:setProperty>,using form parameters with Beans, custom tags, types of tags.	[10]

Outcome(s): Upon successful completion of this course you should be able to:

- Demonstrate knowledge of the advance Java along with object oriented development process and apply this understanding to the analysis and design of solutions for small to medium scale problems.
- Implement web application using all the feature of J2EE covered in the course.

Text Books:

1. Phillip Hanna, Osborne, "JSP 2.0: The Complete Reference", 2nd ed, McGraw-Hill,2003.
2. Martin Bond, Debbie Law, Andy Longshaw, Dan Haywood, Peter Roxburgh, "SAMS Teach Yourself J2EE in 21 Days", 2nd ed, SAMS, 2004.

Reference Books:

1. Bryan Basham, Kathy Sierra & Bert Bets, Head First Servlets and JSP, 2nd Edition, , Oreilly publication, 2008.

CS 19.432 **Web Development with PHP** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.205 (General Purpose Programming), CS 19.202 (Object Oriented Programming)

Objective(s): Build dynamic Web applications. Semantics and syntax of the PHP language, including discussion on the practical problems that PHP solves. Write server-side cross-platform HTML-embedded scripts to implement dynamic Web pages that interact with databases and files.

1	**Introduction:** Introduction to PHP, storing and retrieving data, using arrays, string manipulation and regular expressions, reusing code and writing functions,	[8]
2	**MySQL:** Designing and creating web database, accessing MySQL database from web with PHP, advanced MySQL.	[6]
3	**E-Commerce and Security:** Running an E-Commerce site, E-Commerce security issues, implementing authentication with PHP and MySQL.	[10]
4	**Advanced PHP Techniques:** Interacting with file system and server, using network and protocol functions, managing date and time, generating images, using session control in PHP	[6]
5	**Building Practical PHP and MySQL projects:** Applying software engineering for web development, debugging, building user authentication and personalization, building a shopping cart, building web forms, generating personalized documents in PDF.	[8]

Outcome(s): After Successful completion of this course student will be able to:

- Write PHP scripts to handle HTML forms
- Write regular expressions including modifiers, operators, and meta-characters.
- Create PHP programs that use various PHP library functions, and that manipulate files and directories
- Analyze and solve various database tasks using the PHP language
- Analyze and solve common Web application tasks by writing PHP programs

Text Books:

1. Luke Welling and Laura Thomson, PHP and MySQL Web Development, Addison Wesley, 5th edition, 2017.

Reference Books:

1. Adrian W. West, Practical PHP and MySQL Website Databases, Apress, 4th edition, 2017.

CS 19.441 **Shell Programming** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s):

- To familiarize students with the Unix/Linux environment
- To learn the fundamentals of shell scripting/programming
- To familiarize students with basic Unix/Linux administration

1	**UNIX-Basic Concepts:** Introduction, file systems, visual editors, Unix philosophy and features, understanding the Unix commands and general-purpose utilities and navigating the file system, the shell and kernel.	[8]
2	**UNIX-Advanced Features:** File and directory structures, file systems and peripheral devices, handling ordinary files, file attributes. UNIX system administration, data blocks and i-nodes.	[8]
3	**Unix Editors and Filters:** Vi Editor, simple filters, regular expression and grep family, advanced filters: sed and awk, awk pattern scanning and processing, awk arithmetic, operators and variables.	[8]
4	**Shell Fundamentals:** Command syntax, Shell variables, pattern matching, escaping, command substitution, input /output redirection, pipes, tees,	[6]
5	**Shell Scripting:** Bourne shell, C shell; scripts, meta characters and environment, shell programming and scripts, logical operators, control and looping statements and programs. Shell reliability, maintainability, efficiency, portability and usability.	[10]

Outcome(s): After completion of the course students will be able to

- Work confidently in Unix/Linux environment
- Write shell scripts to automate various tasks
- Master the basics of Unix/Linux administration
- Understand the basic difference between high level programming and shell programming

Text Books:

1. Sumitabha Das, "UNIX", Tata McGraw-Hill, 4th ed, 2011.
2. Cameron Newham, "Learning the bash Shell: Unix Shell Programming", 3rd ed, O'Reilly Media, 2009.

Reference Books:

1. Bill Rosenblatt, "Learning the Korn Shell", O'Reilly Media, 2002.
2. Mark G. Sobell, "A practical guide to Linux commands, editors, and shell programming", 2nd ed, Prentice Hall, 2013.

CS 19.442 **System Programming** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures), CS 19.208 (Computer Organization and Architecture), CS 19.303 (Operating System)

Objective(s): To develop the student the habit of thorough testing and become comfortable in using debugging tools.

To develop software systems that demonstrate the importance of networking technologies.

1	**Overview of System Software:** Introduction, software hierarchy, machine structure, interfaces, address space, computer languages and tools, life cycle of a source program, different views on the meaning of a program, system software development, recent trends in software development, levels of system software, programming languages and language processors, language processing activities, program execution, fundamental of language processing, symbol tables data structures for language processing: search data structures, allocation data structures.	[10]
2	**Assemblers:** Elements of assembly language programming, design of the assembler, assembler design criteria, types of assemblers, two-pass assemblers, one-pass assemblers, single pass assembler for Intel x86 algorithm of single pass assembler, multi-pass assemblers, advanced assembly process, variants of assembler design of two pass assembler.	[8]
3	**Macro and Macro Processors:** Introduction, macro definition and call, macro expansion, nested macro calls, advanced macro facilities, design of a macro pre-processor, design of a macro assembler, functions of a macro processor, basic tasks of a macro processor, design issues of macro processors, features, macro processor design options, two-pass macro processors, one-pass macro processors.	[8]
4	**Linkers and Loaders:** Introduction, relocation of linking concept, design of a linker, self-relocating programs, linking in MS-DOS, linking of overlay structured programs, dynamic linking, loaders, different loading schemes, sequential and direct loaders, compile-and-go loaders, general loader schemes, absolute loaders, relocating loaders, practical relocating loaders, linking loaders, relocating linking loaders, linkers v/s loaders.	[8]
5	**Interpreters & Debuggers:** Benefits of interpretation, overview of interpretation, the java language environment, java virtual machine, types of errors, debugging procedures, classification of debuggers, dynamic/interactive debugger.	[6]

Outcome(s): After completion of the course students will be able to

- understand the execution process of HLL programs.
- understand the working of scanners and parsers
- understand the basic design of various system software.
- implement various system software.

Text Books:

1. D M Dhamdhere, “System Programming”, McGraw Hill, 2011

Reference Books:

1. Leland L Beck, “System Software – An Introduction to System Programming”, 3rd ed, Pearson Education, 2000
2. Santanu Chattopadhyay, “System Software”, Prentice Hall India, 2007

CS 19.443 **Distributed Systems** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.303 (Operating System), CS 19.306 (Computer Networks)

Objective(s): To make students aware of:

- What a distributed system is, its example, use and utilities.
- Hardware and software requirements/constraints for implementation of distributed systems.
- Abstractions like, RMI, distributed objects, RPC, distributed shared memory etc.
- Notion of time in a distributed system.
- Databases in a distributed system.

1	**Introduction:** Characterization of distributed systems, examples of distributed systems, trends of distributed systems, challenges, physical models, architectural models, fundamental models, network principles, internet protocols, case studies.	[6]
2	**Interprocess Communication and Remote Invocation:** The API for the Internet protocols, external data representation and marshalling, multicast communication, network virtualization, introduction to remote invocation, request-reply protocols, remote procedure call, remote method invocation.	[10]
3	**Distributed Objects and Components:** Distributed objects, case study: CORBA, from objects to components, introduction to web services.	[6]
4	**Time and Global States:** Clocks, events and process states, synchronizing physical clocks, logical time and logical clocks, global states, distributed mutual exclusion, coordination and agreement in group communication.	[8]
5	**Transactions and Concurrency Control:** Transactions, nested transactions, locks, optimistic concurrency control, timestamp ordering, flat and nested distributed transactions, atomic commit protocols, distributed deadlocks, transaction recovery.	[10]

Outcome(s): On successful completion of the course the student will be able to:

- Understand the concept of distributed systems.
- Explain the principles underlying the functioning of distributed systems as well as how these principles are applied in distributed systems.
- Comprehend the problems and challenges of distributed systems.
- Understand and estimate the impact of different design choices, system features on distributed systems.

Text Books:

1. George Coulouris, Jean Dollimore, Tim Kindberg, Gordon Blair, "Distributed Systems Concept and Design", Addison Wesley, 5th ed, 2011

Reference Books:

1. Pradeep K Sinha, "Distributed Operating Systems", PHI, 2012
2. Mukesh Singhal, Niranjan Shivrathri, "Advanced Concepts in Operating Systems", TMH, 2010

CS 19.444 **Advanced Computer Architecture** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.208 (Computer Organization and Architecture)

Objective(s):

- To discuss the organization of computer-based systems and how a range of choices are influenced by application.
- To understand the organization and operation of current generation computer systems including multiprocessor and multicore systems.
- To understand the principles of I/O in computer systems including viable mechanism for I/O and secondary storage organization.

1	**Introduction**: Overview of parallel processing and pipelining, study and comparison of uniprocessors and parallel processors, architectural classification, applications of parallel processors, instruction level parallelism, performance matrices and measures, speedup.	[6]
2	**Pipelining:** Principles and implementation of pipelining, classification of pipelining processors, pipeline architecture, general pipelining reservation table, design aspect of arithmetic and instructional pipeline, pipelining hazards and resolving techniques, advanced pipelining techniques, software pipelining, implementation issues.	[8]
3	**Vector and Array Processors**: Vector and array processors, basic vector architecture, issues in vector processing, SIMD computer architecture, masking and data network mechanism, interconnection networks of SIMD, static vs dynamic networks, parallel algorithm for array processors, matrix multiplication, sorting, implementation issues.	[10]
4	**Multiprocessor Architecture**: Multiprocessor architecture, loosely and tightly coupled multiprocessors, characteristics of multiprocessor, inter-processor communication network, memory contention and arbitration techniques, cache coherence, bus snooping, massively parallel processors, inter process communication and synchronization.	[10]
5	**Parallel Algorithms:** Multithreading, synchronous and asynchronous message passing, shared memory, study of parallel programming concepts, parallel algorithm for multiprocessors, operating system for multiprocessors, message passing interfaces, parallel programming languages, Fortran 90, Occam, C-Linda, CCC.	[6]

Outcome(s): On successful completion of this course, students will be able to

- Describe the operation of performance enhancements such as pipelines, dynamic scheduling, branch prediction, cache, and vector processors.
- Describe modern architectures such as RISC, super scalar, multiprocessor and multicore systems.
- Develop applications for high performance computing systems.

Text Books:

1. Kai Hwang, Naresh Jotwani, “Advanced Computer Architecture”, McGraw-Hill Education, 2011.
2. John L Hennessey, David A Patterson, “Computer Architecture – A Quantitative Approach”, Morgan Kaufmann, Elsevier Publishers, 5thedition, 2012.

Reference Books:

1. Kai Hwang, Zhi Wei Xu, “Scalable Parallel Computing”, McGraw Hill,1998.
2. Kai Hwang, Faye A Briggs, “Computer Architecture and Parallel Processing”, McGraw Hill, 1984.

CS 19.445 **Soft Computing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.305 (Logic in Computer Science), CS 19.310 (Artificial Intelligence)

Objective(s):

- To familiarize with soft computing concepts
- To introduce the idea of neural networks, fuzzy logic and use of heuristics based on human experience
- To introduce the concept of genetic algorithm and its applications to soft computing using some applications

1	**Introduction**: Introduction of soft computing, types of soft computing, applications of soft computing, introduction of artificial intelligence, production system, various search techniques, hill climbing, best first search, knowledge representation, monotonic and non-monotonic reasoning.	[8]
2	**Neural Networks:** Structure and function of a single neuron, definition of ANN, characteristics of ANN, applications of ANN, single layer networks, perceptron training algorithm, linear separability, various learning rules, delta rule, ADALINE, MEDALINE, multi-layer networks, activation functions, error back propagation algorithms, characteristics of EBPA.	[8]
3	**Neural Network Architectures**: Counter propagation networks, architecture, functioning, characteristics, Hopfield network, configuration, associative memory, limitations and applications, Hopfield vs Boltzman machine, adaptive resonance theory, architecture, classification, implementation and training	[8]
4	**Fuzzy Logic: Fuzzy** logic, fuzzy set theory, fuzzy set vs crisp set, crisp relation and fuzzy relation, introduction and features of membership functions, fuzzy rule-based system, fuzzy propositions, formation, decomposition and aggregation of fuzzy rules, fuzzy reasoning, fuzzy interference system, fuzzy decision making, applications of fuzzy logic.	[8]
5	**Genetic Algorithms:** Genetic algorithm, fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, genetic modelling, inheritance operator, cross over, inversion and deletion, mutation operator, bitwise operator, generational cycle, convergence of GA, applications and advances in GA, difference and similarities between GA and other traditional methods.	[8]

Outcome(s): On successful completion the students will be able to:

- Identify and describe soft computing techniques and their roles in building intelligent machines
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems
- Apply genetic algorithms to combinatorial optimization problems
- Apply neural networks to pattern classification and regression problems
- Evaluate and compare solutions by various soft computing approaches for a given problem

Text Books:

1. S N Sivanandan and S N Deepa, “Principles of Soft Computing”, Wiley India, 2007
2. J S R Jang, C T Sun and E Mizutani, “Neuro-Fuzzy and Soft Computing”, PHI, 2004

Reference Books:

2. Timothy J Ross, “Fuzzy Logic with Engineering Applications”, McGraw-Hill, 3rd Edition, 2009
3. Pravir K Chawdhry, Rajkumar Roy, Raj K. Pant, “Soft Computing in Engineering Design and Manufacturing”, Springer, 2012

CS 19.491 **Information Security** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s):

- To provide an understanding of principle concepts, major issues, technologies and basic approaches in information security.
- To develop a basic understanding of cryptography, how it has evolved and some key encryption technologies used today.
- To develop an understanding of security policies (authentication, integrity and confidentiality) as well as protocols to implement such policies in the form of message exchanges.
-

1	**Introduction:** The history of information security, components of information security, the need for security, threats, attacks, legal, ethical and professional issues in information security.	[6]
2	**Risk Management and Planning for Security:** An overview of risk management, risk identification, risk assessment, risk control strategies, information security policy, standards and practices, security education, training and awareness programs.	[8]
3	**Security Technology:** Access control, firewalls, protecting remote connections, intrusion detection and prevention systems, honeypots, honeynets and padded cell system, scanning and analysis tools, biometric access controls.	[10]
4	**Cryptography:** Foundations of cryptography, cipher methods, cryptographic algorithms, cryptographic tools, protocols for secure communications, attacks on cryptosystems.	[10]
5	**Implementing Information Security:** Information security project management, technical aspects of implementation, nontechnical aspects of implementation, information systems security certification and accreditation, positioning and staffing the security function, employment policies and practices, security considerations for nonemployees.	[6]

Outcome(s): On successful completion the students will be able to:

- Identify computer and network security threats, classify the threats and develop a security model to prevent, detect and recover from the attacks.
- Encrypt and decrypt messages using ciphers.
- Develop SSL or Firewall based solutions against security threats, employ access control techniques to the existing computer platforms such as Unix and Windows NT.

Text Books:

1. Michael E Whitman and Herbert J Mattord, "Principles and Practices of Information Security", India edition, Cengage Learning, 2009
2. William Stallings, "Cryptography and Network Security", 4th edition, Prentice Hall, 2005

1. Mark Stamp, "Information Security: Principles and Practices", 2nd edition, John Wiley & Sons, 2011
2. Mark S Merkow and Jim Breithaupt, "Information Security: Principles and Practices", 2nd edition, Pearson Education, 2014

CS 19.492 **Wireless and Sensor Networks** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s):

- To provide an overview about wireless and sensor networks and emerging technologies
- To study about the network architecture of sensor nodes and its execution environment
- To understand the concepts of communication, MAC and routing protocols in WSN
- To learn about topology control and clustering for localization services with sensor tasking and control
- To study about sensor node hardware and software platforms and understand the simulation and programming techniques

1	**Introduction:** Background of sensor network technology, applications of sensor networks, challenges and hurdles, range of applications, examples of category-2 WSN applications, examples of category-1 WSN applications.	[8]
2	**Basic Wireless Sensor Technology:** Sensor node technology, sensor taxonomy, operating environment, radio technology primer, available wireless technologies, modulation basics.	[8]
3	**Medium Access Control Protocols for WSN:** Introduction, fundamentals of MAC protocols, MAC protocols for WSNs, sensor-MAC case study, IEEE 802.15.4 LR-WPAN standard	[8]
4	**Routing Protocols for WSN:** Data dissemination and gathering, routing challenges and design issues in WSN, routing strategies in WSN, traditional transport control protocols, transport protocol design issues, performance of transport control protocols, traditional network management models, network management design issues.	[10]
5	**Operating Systems for WSN:** Operating system design issues, examples of operating systems: TinyOS, Mate, MagnetOS, MANTIS, OSPM, EYESOS, SenOS, PicOS, performance modeling of WSNs.	[6]

Outcome(s): On successful completion the students will be able to:

- Compare and pick out the right type of software testing process for any given real-world problem
- Carry out the software testing process in efficient way
- Automate the testing process by using several testing tools
- Establish a quality environment as specified in standards for developing quality software
- Analyze and improve the quality procedures based on the past experience

Text Books:

Reference Books:

1. Zhao, Guibas, “Wireless Sensor Networks” , Elsevier, 2004.
2. A.Boukereche, “Handbook of Algorithms for Wireless Networking and Mobile Computing”, Chapman and Hall/CRC Computer and Information Science Series, 2007.

CS 19.493 **Foundations and Applications of IoT** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language), CS 19.303 (Operating System), CS 19.306 (Computer Networks)

Objective(s):

- To introduce the vision and impact of IoT.
- To understand IoT Market perspective.
- To understand the challenges that must be overcome by IoT technology.

1	**Introduction:** The vision-introduction, from M2M to IoT, M2M towards IoT-the global context, a use case example, differing characteristics.	[6]
2	**M2M to IoT – A Market Perspective:** Introduction, some definitions, M2M value chains, IoT value chains, an emerging industrial structure for IoT, the international driven global value chain and global information monopolies, M2M toIoT-an architectural overview, building an architecture, main design principles and needed capabilities, an IoT architecture outline, standards considerations.	[10]
3	**M2M and IoT Technology Fundamentals:** Devices and gateways, local and wide area networking, data management, business processes in IoT, everything as a service (XaaS), M2M and IoT analytics, knowledge management.	[8]
4	**IoT Architecture:** Introduction, state of the art, architecture reference model-introduction, reference model and architecture, IoT reference model.	[6]
5	**IoT Reference Architecture:** IoT reference architecture- introduction, functional view, information view, deployment and operational view, other relevant architectural views, real-world design constraints- introduction, technical design constraints-hardware is popular again, data representation and visualization, interaction and remote control, implementation automation.	[10]

Outcome(s): On successful completion of this course, students will be able to

- Understand the vision of IoT from a global context.
- Determine the Market perspective of IoT.
- Understand the use of Devices, Gateways and Data Management in IoT.
- Build architecture in IoT
- Analyze, design and develop parts of IoT solution

Text Books:

2. Peter Waher, "Learning Internet of Things", Packt Publishing Ltd, 2015.
3. Francis daCosta, “Rethinking the Internet of Things: A Scalable Approach to Connecting Everything”, 1st Edition, Apress Publications, 2013

CS 19.494 **Software Defined Networking** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.302 (Software Engineering), CS 19.306 (Computer Networks)

Objective(s):

- To explore the basics of SDN
- To discuss various types plane
- To list out various controllers
- To program a simple SDN

1	**Control and Data Planes**: Introduction, evolution vs revolution, the control plane, data plane, moving information between planes, distributed control planes, convergence time, load balancing, creating the MPLS overlay, centralized control planes, logical vs literal, ATM.LANE, route servers.	[8]
2	**SDN Controllers:** Wire protocol, replication, FAWG, hybrid approaches, SDN controllers, VMware, Nicira, OpenFlow, Mininet, NOX/POX, Trema, Ryu, L3VPN, RSPV-TE problem statement, bin-packing, deadlock, Plexxi, Cisco OnePK.	[8]
3	**Network Programmability:** The management interface, the application-network divide, NETCONF and NETMOD, SNMP, modern programmatic interface, XMPP, JSON, I2RS, OpenStack, CloudStack, Puppet, virtual multitenant data center, SDN solution for data center networks.	[8]
4	**Network Function Virtualization**: Virtualization and data plane I/O, services engineered path, service locations and chaining, NFV at ETSI, non-ETSI NFV work, network topology, LLDP, BGP-TE/LS, ALTO, I2RS topology.	[8]
5	**Building an SDN framework:** Build code first, ask questions later, the Juniper SDN framework, IETF SDN framework, open daylight controller/framework, use cases for bandwidth scheduling, manipulation, data center overlays, big data, NFV, and traffic monitoring.	[8]

Outcome(s): On successful completion the students will be able to:

- Describe the key benefits of SDN
- Describe the data plane
- Configure an SDN friendly network emulator
- Program a simple SDN for a given task using a low-level approach and high-level approach
- Evaluate a sample SDNs performance and reliability

Text Books:

1. Ken Gray, Thomas D Nadeau, "SDN: Software Defined Networks", O'Reilly, 2013.

Reference Books:

2. Vishal Shukla, "Introduction to Software Defined Networking – OpenFlow & VxLAN", Createspace, 2013
3. Patricia A Morreale, James M. Anderson, "Software Defined Networking: Design and Deployment", CRC Press, 2014

CS 19.495 **Principles and Practices of Secure Computing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks), CS 19.491 (Information Security)

Objective(s):

- To understand the technical realization and security of data and computers.
- To understand the industry security standards, regulatory mandates, audit policies and compliance requirements for cloud-based infrastructures.

1	**Authentication, Access Control and Cryptography:** Identification vs. authentication, authentication based on phrases, biometrics and tokens, multifactor authentication, access control, access policies, role-based access control, problems addressed by encryption, trust and certification, digital signatures.	[8]
2	**Programs and Programming:** Unintentional programming oversights, malicious code – malware, countermeasures, browser attacks, web attacks targeting users, obtaining user or website data, email attacks.	[8]
3	**Operating Systems and Network Security:** Security in operating systems, security in design of operating system, rootkit, threats to network communications, wireless network security, denial of service, distributed denial of service, cryptography in network security, network management.	[10]
4	**Database Security:** Introduction to databases, security requirements of databases, reliability and integrity, database disclosure, data mining and big data.	[6]
5	**Cloud Security:** Cloud computing concepts, risk analysis in cloud computing, cloud security tools and techniques, cloud identity management, securing IaaS, privacy principles and policies.	[8]

Outcome(s): On successful completion the students will be able to:

- Define terms related to computer, data and network security.
- Analyze the offered system and point to the potential safety problems.
- Choose and appropriate engineering approach to solving the security problems in various domains.

Text Books:

1. Charles P Pfleeger, Shari Lawrence Pfleeger and Jonathan Margulies, "Security in Computing", 5th edition, Prentice Hall, 2015.
2. Tim Mather, Subra Kumaraswamy and Shahed Latif, "Cloud Security and Privacy" An Enterprise Perspective on Risk and Compliance", O'Reilly, 2009

2. Chuck Easttom, "Computer Security Fundamentals", 2nd edition, Pearson Education, 2012

CS 19.461 **Cloud Computing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s): To learn how to use cloud services.
To implement virtualization and task scheduling

1	**Overview of Cloud Computing:** Brief history and evolution - history of cloud computing, evolution of cloud computing, traditional vs. cloud computing, cloud service models (IaaS, PaaS & SaaS), cloud deployment models (public, private, hybrid and community cloud), benefits and challenges of cloud computing, introduction to AWS public cloud vendor, cost optimization in AWS, basics of virtualization, virtualization technologies, server virtualization, VM migration techniques, role of virtualization in cloud computing, introduction to EC2 service of AWS.	[10]
2	**Working with Private Cloud:** Private cloud definition, characteristics of private cloud, private cloud deployment models, private cloud vendors - CloudStack, OpenStack, Eucalyptus Microsoft, private cloud – benefits and challenges, private cloud implementation in Amazon EC2 service.	[8]
3	**Working with Public Clouds:** What is public cloud, why public cloud, when to opt for public cloud, public cloud service models, public cloud players, infrastructure as a service offering, IaaS vendors, PaaS offerings, PaaS vendors, software as a service, demonstrating public cloud with AWS – storage and database services, private vs. public cloud – when to choose.	[10]
4	**Overview of Cloud Security:** Explain the security concerns in traditional IT, introduce challenges in cloud computing in terms of application security, server security, network security, security reference model, abuse and nefarious use of cloud computing, insecure interfaces and APIs, malicious insiders, shared technology issues, data loss or leakage, account or service hijacking, unknown risk profile, shared security model between vendor and customer in IaaS/PaaS/SaaS, implementing security in AWS.	[8]
5	**Future directions in Cloud Computing:** When and not to migrate to cloud, migration paths for cloud, selection criteria for cloud deployment, issues/risks in cloud computing, future technology trends in cloud computing.	[4]

Outcome(s): On successful completion the students will be able to:

- Analyze the cloud computing setup with its vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds.

Text Books:

1. Raj Kumar Buyya, James Broberg and Andrezi M Goscinski, “Cloud Computing: Principles and Paradigms”, John Wiley & Sons, 2010
2. Nick Antonopoulos and Lee Gillam, “Cloud computing: Principles, Systems and Applications”, Springer, 2010.

Reference Books:

2. Borko Furht and Armando Escalante (Editors), “Handbook of Cloud Computing”, Springer, 2010
3. Judith Hurwitz, Robin Bllor, Marcia Kaufman and Fern Halper, “Cloud Computing for Dummies”, John Wiley & Sons, 2010.

CS 19.462 **Mobile App Development** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s):

- To learn how mobile apps are different from other traditional apps by learning those aspects of mobile programming that make it unique from other platforms.
- Program mobile applications for the Android operating system that use basic and advanced phone features.
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout, UI elements, Drawable, Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and SMS APIs native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access (via Internet/Intranet)	[14]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobile apps, distributing apps on mobile market place.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

Text Books:

1. Barry Burd, Android Application Development All in One for Dummies, Johen Wiley & Sons Inc., 2011.
2. Anubhav Pradhan, Anil V Deshpandy, Mobile App Development, Edition I

Reference Books:

1. Lauren Darcey, Shane Conder, “Teach Yourself Android Application Development in 24 Hours”, SAMS Publishing, 2012, 2ndEdition , 2012.

CS 19.463 **Agile Software Development** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.302 (Software Engineering)

Objective(s):
- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To learn the essentials of collaboration as they apply to agile methods.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1	**Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools.	[7]
2	**Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management.	[9]
3	**Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk-based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software.	[10]
4	**Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control.	[10]
5	**Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies.	[4]

Outcome(s): On successful completion of this course, students will be able to
- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Scrum.
- Write user stories for project requirements.
- Write test cases for developing features.

Text Books:
1. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
2. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: ET-18.101 **E-Government Processes and Technologies** **3-0-0-3**

Total Lectures: 39

Objectives:

- Support the government departments, in terms of leading or being part of team responsible for, e-Governance project Conceptualization and design .
- Support the government departments in effectively planning and managing various phases of e-Governance project development and implementation
- Leverage the strengths of private sector in e-Governance initiatives through effective procurement approach and manage service delivery throughout project Lifecycle
- Application of learning and good practices in e-Governance projects implementation to minimise the learning curve and to maximise the benefits for the department

1. **Roadmap to e-Government:** Vision and mission of e-government, government to e-government transformation, selection, planning and management of projects, parameters for success and measure of projects, relationship and citizen participation in e-government. [5]
2. **e-Gov 2.0:** Introduction, e-Gov 1.0 v/s e-Gov 2.0, e-Gov 2.0 financial and technology models. [5]
3. **Multiple Standards in ICT and Change Management:** Purpose and rationale for multiple standards, areas having multiple standards, rationale for single standard, introduction to change management, model of change management. [6]
4. **Government Data Centres and Utility Computing :** Elements and complexity of GDCs, virtualization and consolidation of GDCs, architecture of a GDC, utility computing concepts and areas, technical and regulatory issues in utility computing. [7]
5. **Secured Government Information System Architecture:** Introduction, architectural types, processes, security requirements and policies, steps in designing security architecture. [8]
6. **Case Studies of few e-Government Projects:** National Citizen Identity System, land records, urban development management system, e-agriculture, e-procurement, RTO, e-mitra etc. [8]

(The contents in this unit are subject to change as per the evolution and progression of novel e-governance projects).

Outcomes: Will have the understanding and knowledge of the following:

- Better access to information and quality services for citizens
- Simplicity, efficiency and accountability in the government
- Expanded reach of governance
- Enabling Environment for Promoting Economic development
- Enhancing Transparency and Accountability:
- Improving Service Delivery:
- Improving Public Administration

Text Books:

1. Jaijit Bhattacharya, "e-Gov 2.0", 1st edition, Tata McGraw Hill.

2. C.S.R. Prabhu, "e-Governance: Concepts and Case Studies", 2nd edition, PHI.

Reference Books:

1 J. Satyanarayana," e-Government: The Science of the Possible", PHI.

2 Bidisha Chaudhuri, "E-Governance in India: Interlocking Politics, Technology and Culture", 1st edition, Routledge.

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code:
ET- 18.103

Application of Electronics in Everyday Life

3-0-0-3
Total Lectures: 40

Objective: To develop the understanding of Electronics used in daily life as well as understand the principle and working of various instruments used in health care, IoT and communication sector.

1. **ELECTRONICS COMPONENTS:** Resistor and its color code, Capacitor, Inductor, PN diode, Photo Diode, LDR, LED, Zener diode, Varactor diode. **[4]**
2. **ELECTRONICS IN COMMUNICATION:** Telegraph, Telex, Mobile Phone, Optical Fiber, Transmission Line, Waveguides, Satellite Communication, RADAR, 4G system, Internet, Video conferencing, Fax. **[10]**
3. **ELECTRONICS IN HOME CARE:** Basic of electricity and electrical cables, Multi meter and basic electronic component, Power supply, UPS/Inverter, SMPS, Washing machine, Microwave oven, Steam iron, Electric rice cooker, Electric kettle, Induction plate. **[8]**
4. **ELECTRONICS IN IOT:** Introduction, IoT applications for industry: Future Factory Concepts, Smart Objects, Smart Applications, Smart Homes, Structural Monitoring, Buildings, Smart Cities , Transportation Healthcare Warfare, Physical Intrusion Detection, Surveillance. **[10]**
5. **ELECTRONICS IN HEALTHCARE:** ECG, EEG, Defibrillator, Computed Tomography, Magnetic Resonance Imaging, Glucometer, Sphygmomanometer, Digital and Infrared Thermometer. **[8]**

Outcomes:

At the end of this course, the student should be able to

1. Know about fundamentals of Electronic Components.
2. Understand the concept of Communication.
3. Understand the concepts of electronics behind various home appliances.
4. Learn about basics of health care equipment.

Text Books:

1. Ben G. Streetman, Sanjay Kumar Banerjee: Solid state Electronic Device Electronics, Sixth Edition, Prentice Hall.
2. Adel S. Sedra, Kenneth C. Smith: Microelectronic circuit, Sixth Edition, Oxford.
3. Richard. C. Jaeger, "Microelectronic Circuit Design", Tata McGraw-Hill Companies Inc., International Edition.

Reference Books:

1. B. P. Lathi, "Modern Digital and Analog communication Systems", Oxford University Press, 2010.
2. William C. Y. Lee, Mobile cellular telecommunication – Analog and Digital systems, McGraw Hill, 2nd Ed, 2006

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **Energy Sources & Sustainable development** **3-0-0-3**
ET-18.104 **Total Lectures: 39**

Objective(s): *The course is designed to give knowledge of various energy sources and basics of power production techniques. It lays emphasis on basic understanding of green energy technology and its importance for environment and sustainable development.*

1. **World Energy Status:** Present Situation and future Energy Scenario, Evolution of Energy Security; India's Energy Scenario; Introduction to nexus between Energy, Environment, and Sustainable development and Climate Change and societal issues [14]
Conventional Energy Sources: Fossil Fuel, Coal, Oil, Gas, Thermal Power Stations, Hydro power generation, Comparison of various conventional energy systems, their prospects and limitations
Scenario of Green Energy Sources: Difference between conventional and renewable energy systems, Needs and advantages of green energy sources, social implications.

2. **Solar Energy:** Principles of photovoltaic generation of electricity; Silicon cell; Photon absorption; Cell efficiency; Solar cell construction; Types and usage of photovoltaic systems. solar cell modules and arrays, solar cell types, material, applications, advantages and disadvantages, solar energy conversion into heat, types of solar collectors, cylindrical parabolic collector, solar energy thermal storage. [14]
Nuclear Energy: Present Status of Nuclear Power; Nuclear Fission & Fusion, National Nuclear Power Program,, Natural Radioactivity, Radioactive Decay, Radiation Doses, various types of nuclear power plants, Nuclear Reactor Safety, Fusion reactor

3. **Wind Energy:** Energy available from wind, basics of wind energy conversion system, classification, factors influencing wind, wind shear, turbulence, wind speed monitoring, Betz limit, WECS: classification, characteristics, and applications. [6]

Bio Energy: Types of biogas plants, biogas generation, factors affecting biogas generation, advantages and disadvantages, biomass energy, energy plantation, gasification

4. **Ocean Energy:** Ocean energy resources-ocean energy routes - Principles of ocean thermal energy conversion systems- ocean thermal power plants- Principles of ocean wave energy conversion and tidal energy conversion. [5]
Geothermal energy: Introduction, vapor and liquid dominated systems, binary cycle, hot dry rock resources, magma resources, advantages and limitations

Outcome(s): *After learning the subject, student will be able to understand the basic principle of power production from different energy sources. Advantage of renewable and green energy sources for sustainable development and environmental issues related to energy sources and societal implications*

Text Books:

1. S.P. Sukhatme, Solar Energy: principles of Thermal Collection and Storage, Tata McGraw-Hill
2. C. S. Solanki, "Solar Photovoltaics: Fundamental Applications and Technologies, PHI, 2009
3. S. Glasstone & A. Sesonkse, Nuclear Reactor Engineering, CBS, 2004
4. D. A. Spera, Wind Turbine Technology: Fundamental concepts of Wind Turbine Engineering, ASME Press.

Reference Books:

1. Non-conventional energy resources, Shobh Nath Singh, Pearson India
2. Principles of Solar Energy, Frank Krieth& John F Kreider, John Wiley, New York
3. David Bodansky, Nuclear Energy: Principles, Practices and Prospects, Springer 2004.

Mody University

College of Architecture and Design (CAD)

Open Elective in Free hand sketching for all Undergraduate Programmes

3-0-0-3

Paper Code: FH 141
Paper Name: FREEHAND SKETCHING

Learning Objectives:

1. To ensure that students begin to understand pencils, grades, holding to sketch.
2. To provide students an exposure to express with sketching and understand proportions.
3. To gain skill of sketching indoors.
4. To enhance ability to sketch outdoors.
5. To develop rudimentary ability to use pencil as a media in sketching.

CONTENTS

Unit - I. Introduction to Graphic Skills: [04]

Understanding the meaning of graphic skill; basic techniques, types of pencil shades and grades.

Unit - II. Geometry of Objects [10]

Understanding geometry of an Object, Free hand sketching of an object, object in different eye level, Optical illusions, effect of light on object.

Unit –III. Fundamentals of Perspective [05]

Diminution, Foreshortening, convergence, overlapping shades and shadow

Unit - IV. Outdoor Sketching & Indoor Sketching: [10]

Outdoor:

Sketching buildings, road activity, Landscape, Environmental scenes, principles of perspective drawing, natural forms, built form, their texture.

Indoor: [10]

Sketching of an arranged objects, indoor activity, still life, furniture, equipment, understanding depth, light, shade, shadow; memory drawing.

Expected Outcome:

Students learn and able to draw freehand sketch scenes with addition detailing of foreground and background from pencil effectively on paper.

Suggested Readings

- Buildings;Ian Sidaway, : New Holland Publishers.
- Perspective;Milind Mulick,: Jyotsana Prakashan.
- The fundamentals of Water colour Paintings;D.Carter: Arcturus Pubishing Ltd
- Drawing for designers; Koptievsky: Sterling Publishing
- Rendering with pen & Ink; .R.W Gill: Thomas & Hudson
- Drawing and designing with confidence: A step by step guide; M.W Lin: John Wiley & Sons
- Perspective drawing Handbook; Joseph D'Amelio: Dover Publication
- Urban Sketching a complete guide; Thorspecken: Search Press

Evaluation Scheme: 20%=Internal, 80%=End term

MODY UNIVERSITY OF SCIENCE AND TECHONOLOGY

Open Elective CBCS course

Course Title: Vedic Knowledge **3-0-0-3**

Course Code: VK 111

Course Description:

Unit-1 History of Vedic Literature (13)

1. Importance of Vedas in Indian Tradition (भारतीय परम्परा में वेदों का महत्त्व)
2. The emergence of the Vedas (वेदों का आविर्भाव)
3. Introduction of Vedic Svara (वैदिक स्वर परिचय)
4. Definition of Sukta (सूक्त की परिभाषा)
5. Introduction of Rig-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(ऋग्वेद का परिचय -संहिता,ब्राह्मण,आरण्यक एवं उपनिषद -)
6. Introduction of Yajur-veda: Samhita, Brahmana, Aranyaka and Upanishad.
(यजुर्वेद का परिचय - संहिता,ब्राह्मण,आरण्यक एवं उपनिषद)

Unit -2 Suktas related to Rigveda Samhita (Shakalashakha) (11)

1. Lord of fire :	Agnisuktam	(अग्निसूक्तम्-ऋग्वेद 1/1/1-4)
2. Lord 0f creation :	Vishnusuktam	(विष्णुसूक्तम्-ऋग्वेद 7/100/1-3)
3. Lord of omniscient :	Brahmanaspatisuktam	(ब्रह्मणस्पतिसूक्तम् -ऋग्वेद 1/40/1-4)
4. Lord of pre-creation :	Hiranyasuktam	(हिरण्यगर्भसूक्तम्- ऋग्वेद 10/121/1-3)
5. Goddess of Glory :	Shreesuktam	(श्रीसूक्तम्-ऋग्वेद-परिशिष्ट 1-4)

Unit-3 Suktas related to ShuklaYajurved Samhita(Madhyandinashakha) (15)

1. God of wisdom :	Ganapatistavanam	(गणपति-स्तवनम् -यजुर्वेद – 23/19)
2. Identification of nation :	Rashtrageetam	(राष्ट्रगीतम् -यजुर्वेद - 22/22)
3. Good faith :	Svastivachanam	(स्वस्तिवाचनम् -यजुर्वेद-14/19,21-22)
4. Perception power :	Medhasuktam	(मेधासूक्तम् -यजुर्वेद -32/13 -16)
5. Concept of mind :	Shivasuktam	(शिवसंकल्पसूक्तम् -यजुर्वेद -34/1-6)
6. Origin of creation :	Purushasuktam	(पुरुषसूक्तम् (यजुर्वेद-31/1-4,7,16)
7. Goddess of learning :	Sarasvati-stavanam	(सरस्वती-स्तवनम् (यजुर्वेद -20/84-86)
8. Serenity Prayer of Yajurveda :	Shaantipaathah	(शान्तिपाठः - यजुर्वेद -36/17)

Text books :-

1.Vedic Sukta Sangrha: (Code No.1885) 7th Edn. Pub. Gita Press Gorakhpur

(वैदिकसूक्त-संग्रह – प्रकाशक - गीताप्रेस, गोरखपुर)

2. Vedic Sukta Sangrha: Acharya Bheshraja Sharma First Edn. Pub. Hansa prakashan Jaipura (वैदिकसूक्तसंग्रह - आचार्य भेषराज शर्मा, हंसा प्रकाशन, जयपुर)

3. Vedic Sangraha: Dr. Krishna Lal First Edn. Pub.Istarna book Linkarsa Delhi. (वैदिक संग्रह डा कृष्ण लाल ,ईस्टर्न बुक लिंकर्स , दिल्ली)

Reference books:-

1. RigvedaSamhita: Acharya Shri Ram Sharma Publishers-Yuganirmana Yojana, Mathura U.P. (ऋग्वेदसंहिता - आचार्य श्रीराम शर्मा प्रकाशक युग निर्माण योजना मथुरा उ.प्र)

3. Vedas: The source of Ultimate science: Dr. Shri Ram Varma, Nag Publishers Delhi.

4. Vedic Sahitya ka Itihasa aur sanskriti: Shri Baldeva upadhyaay Publishers Sharadasansthan Varanasi .U.P.

5. Vedic dicsnory: Bhagavad Datta and Hansaraja Publishers- VishvBharti Anusandhan prishada Gyanpura U.P. (वैदिककोश - भगवद दत्त एवं हंसराज प्रकाशक –विश्वभारती अनुसंधान परिषद् ज्ञानपुर उ.प्र.)

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code:
ET-18.102

Web Designing and Mobile App Development **3-0-0-3**

Total Lectures:40

Objectives: On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. Students will gain the skills and project-based experience needed for entry into web application and development careers.

1. Concept of Internet A brief Introduction to the Internet: Computer Networks, Internet, URL (Uniform Resource Locator), Internet Service Provider, Intranet, Extranet, Virtual Private Network. Application of Internet: World Wide Web, Search Engines, News groups, Electronic Mail, Web Portal, Chat, Video Conferencing, FTP, Remote Login, E-Commerce, E-Learning, EGovernance, E-Banking. [9]

2. Static Web Page Development Basics of HTML: What is Internet Language?, Understanding HTML, Create a Web page, Linking to other Web Pages, Publishing HTML Pages, Text Alignment and Lists, Text Formatting Fonts Control, Email Links and link within a Page, Creating a Table, Creating HTML Forms, Creating Web Page Graphics, Putting Graphics on a Web Page, Custom Backgrounds and Colors, Creating Animated Graphics. [9]

3. Dynamic Web page Development Cascading Style Sheet: CSS, Defining Style with HTML Tags, Features of Style Sheet, Style Properties, Style Classes, External Style Sheet [8]

4. JavaScript Introduction to JavaScript: Writing First Java Script, External JavaScript, Variables: Rules for variable names, Declaring the variable, Assign a value to a variable, Scope of variable, Using Operators, Control Statements, JavaScript loops, JavaScript Functions: Defining a Function, Returning value from function, User define function. [9]

5. Android: Introduction to android OS, Versions of Android, Introduction to Android Studio, Different GUI Elements of Android Programming, WebView, Convert any Website to android apk. [5]

Outcomes:

- Students are able to develop a dynamic webpage by the use of java script and DHTML.
- Students will be able to write a well formed / valid XML document.
- Students will be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.
- Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.

- Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.

Text Books:

1. Teach Yourself HTML 4 in 24 Hours By Dick Oliver (Tech media) 4th edition
2. The Complete Reference JavaScript By Thomas Powell & Fritz Schneider 2nd Edition.
3. Jerome (J.F) DiMarzio "Android A programmer's Guide" Tata McGraw-Hill 2010 Edition.

Reference Books :

1. HTML, DHTML, JavaScript, Perl CGI By Ivan Bayross(BPB) 3rd Edition
2. CSS By Kynn Bartlett(Pearson Education)2nd Edition
3. Introduction to Internet & HTML Scripting By Bhaumik Shroff Books India Publication 3rd Edition.

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY

The Bhagavad-Gita

Pre-requisite(s): Basic interest in Indian culture. Sanskrit verses in *Devanagari* script as well as in transliteration forms are provided for further references only; knowledge of Sanskrit is not required as the medium of instruction is English, however it may be an added advantage. Familiarity with the *Devanagari* script may be useful at times.

Course Objectives: The primary aim of the Bhagavad-Gita Course is to make the glorious 'Gita way of life' accessible to anyone who yearns for it, or is just curious to know more in a convenient yet effective manner. It provides a holistic, insightful coverage of the entire text in a lucid and simple style without compromising on the salient features of this priceless knowledge. Providing inputs in the modern context for continuous improvement it becomes a practical manual to live a transformed life of goodness and greatness. The course seeks to help students negotiate the text independently without referring to the traditional commentaries so as to enable them to experience the richness of the text and its philosophy.

Evaluation Process: The evaluation pattern would have following two components:

1. Internal component of 20 marks, which can be assessed in one of the following ways at the discretion of course coordinator
    a. Assignment
    b. Written test
    c. Presentation
    d. Viva
    e. Model preparation
    f. Practical assignment
2. An end term examination of 80 marks.

Course Description:

BG 111	**The Bhagavad-Gita**	**3-0-0-3**
Introduction: Background of the Mahabharata War, Author (Vedavyasa), Background of the Bhagavad-Gita: knowledge given in the battlefield of life, The role of Gita in our life, Overview of the chapters, The Distress of Arjuna		[03]
Cognitive and Emotive Apparatus: Hierarchy of senses, *manas, buddhi* and *ātman*- III.42, XV.7 Role of the ātman-XV.7, XV.9 Mind as a product of prakṛti VII.4 Properties of three modes and their impact on the mind-XIII. 5-6; XIV.5-8, 11-13; XIV.17		[08]
Controlling the Mind: Confusion and conflict: Nature of conflict I.1; IV.16; I.45; II.6 Causal factors-Ignorance-II.41; *Indriya*-II.60, Mind-II.67; *Rajoguṇa*-III.36-39; XVI.21; Weakness of mind- II.3; IV.5		[09]

Means of controlling the mind: Meditation–difficulties –VI.34-35; procedure VI.11-14 Balanced life- III.8; VI.16-17 Diet control- XVII. 8-10 Physical and mental discipline – XVII. 14-19, VI. 36.	
Means of Conflict Resolution: Importance of knowledge – II. 52 ; IV.38-39; IV.42 Clarity of *buddhi* – XVIII.30-32 Process of decision making – XVIII.63 Control over senses – II.59, 64 Surrender of doer-ship –XVIII .13-16; V.8-9 Desirelessness- II.48; II.55 Putting others before self – III.25	[10]
Self Management through Devotion: Surrender of ego – II.7 ; IX.27; VIII.7; XI.55 ; II.47 Abandoning frivolous debates – VII.21, IV.11; IX.26 Acquisition of moral qualities - XII.11; XII.13-19 **Conclusion:** Arjuna's realization, Lasting property, Total victory- XVIII.73,78	[09]

Text Book:

Srimad Bhagavadgita(with English Translation and Transliteration, Code 1411), Gita Press, Gorakhpur

Reference Books:

1. Shrimadbhagavadgitarahasya or Karmayogashastra: The Hindu Philosophy of Life, Ethics, and Religion (Original Sanskrit Stanzas with English Translation), Balgangadhar Tilak & Balchandra Sitaram Sukthankar, J.S. Tilak & S.S. Tilak
2. Shrimadbhagavadgita-Tattvavivechani (English Commentary by Jayadayal Goyandaka), Gita Press, Gorakhpur
3. Shrimadbhagavadgita:A Guide to Daily Living (English Translation and notes by Pushpa Anand), Arpana Publications
4. Shrimadbhagavadgita:The Blessed Lord's Song Paramananda, The Vedanta Centre
5. The Art of Man Making (114 short talks on the Bhagavadgita), Chinmayananda, Central Chinmay Mission Trust, Mumbai
6. Essays on the Gita, Shri Aurobindo, Shri Aurobindo Ashram, Pondicherry
7. Managing One-Self (Shrimadbhagavadgita: Theory & Practice), Panchamukhi V.R., Panchamukhi Indological Research Centre, New Delhi & Amar Granth Publications, Delhi
8. Science of Bhagavadgita (A Study of Ancient Wisdom through Modern Science),Virajeshwar, Himalayan Books, Connaught Place, New Delhi
9. Shrimadbhagavadgita through the Eyes of a Scientist, Manhas M.S., B.R. Publishing Corporation, Delhi

Annexure-I

Mody University

Open Elective in English for all Undergraduate Programmes

Paper Code: EL 100 **Credits: 3-0-0-3**
Paper Name: Essential English

Contents:

Reading Comprehension **[11]**
To develop skills such as vocabulary building, efficient reading and note-taking.
Poetry

1. Milton: On His Blindness
2. Shakespeare: Let Me Not to the Marriage of true minds
3. Wordsworth: The Solitary Reaper
4. William Butler Yeats: A Prayer to my daughter
5. Browning: My Last Duchess
6. Nissim Ezekiel: Night of the Scorpion

Prose

(1) Francis Bacon: Of Studies
(2) R.K. Narayan: Engine trouble
(3) O. Henry : The Gift of the Magi
(4) Oscar Wilde : The Nightingale and the Rose

Grammar and Usage **[16]**
Tenses and their different forms (present, past and future), their uses and sequences of tenses. Articles, auxiliaries and modals, Preposition, Rules of conversion form direct to indirect speech, expressions of time and place, questions in indirect speech, commands, requests and advice in indirect speech. Spotting the errors in spelling, tenses, prepositions, articles and how to avoid them.
Business Letter Writing **[6]**
Layout of formal letters, difference between British and American pattern of letter writing and different types of letters (Job application letter, invitation letter, letter of request)
Idioms and Phrasal Verbs: Understanding idioms, collocations, introduction to phrasal verbs, verb and preposition/ adverb combination, usage of idioms and phrasal verbs.
Vocabulary Building: One word for many, Synonyms and Antonyms, words commonly mis-spelt and mis-pronounced. [6]

Text Books:
1. Jain, Jasbir (ed): Strings of Gold, Delhi, Macmillan Ltd. (1994/ Latest Edition).
2. Lockitt, C. H (ed): The Art of the Essayist, Delhi, Longman Group Ltd. (Latest Edition).
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, 4th printing 2007.

MODY UNIVERSITY OF SCIENCE & TECHNOLOGY
College of Fashion Design & Merchandising
Bachelors of Design (Fashion Design) BFD
Autumn (2015-16)
First Year
FOUNDATION PROGRAMME

Total L & P: 45

Title of Course: Fashion in Everyday Life **3-0-0-3**
Semester: Autumn
Course Code: FD 115
Pre-requisite(s): Basic interest in fashion and trends

Course Objectives: This course will give the students overview of fashion and its use in everyday life considering trends, forecast; body anatomy, colour preferences and styling techniques. The course will also elaborate on fashion market segments while giving an idea on leading fashion brands, designers and trendsetting celebrities

Course Description:

- Basic Introduction to Fashion: Brief Introduction to fashion and regularly used fashion terminologies, Overview of types of clothing such as Formal Wear, Casual Wear, Evening Wear, Ethnic Wear, Traditional Wear etc., Fun facts related to fashion **(3)**
- Body Analysis: Triangular figure study, Eight headed figure, Hour glass structure, Vital statistics, Clothing suggestions as per body types **(3)**
- Practical Colour Study in Fashion: Colour selection in clothing as per skin – tones for day wear and evening wear **(6)**
- Styling tips with ensembles – An introduction to fashion styling, Exploring various mix and match combinations like print plain combination, combining ethnic and western fashion elements, etc. - **GO, get the desired look!!** **(5)**
- Fashion Market Segments – A brief insight to different consumer market segments in fashion such as Haute Couture, Pret a Porter (Ready to Wear), Semi Couture, Premium Fashion, High Street fashion, Street fashion, Bridge Fashion, Fast fashion, etc. in context of products, features and service **(3)**
- Fashion Brands – To Study and compare national and international women's wear fashion brands such as Prada, Dior, Chanel, LVMH, Zara, Aldo, Biba, W, Elle, Aakruti, FabIndia, AND, etc. across market segments and their incorporation by consumers in everyday life **(5)**
- Fashion Designers – A brief look into the profile and work of renowned Indian and International fashion designers like Manish Malhotra, Sabyasachi Mukherjee, Manish Arora, Ritu Beri, Ritu Kumar, Coco Chanel, Yves Saint Laurent, Giorgio Armani, Christian Dior, Prada, etc. who changed the fashion industry **(10)**

- Trailblazers of Fashion: To study the role of celebrities (David Beckham, Lady Gaga, Sonam Kapoor, Hrithik Roshan, etc.) red carpets (Oscars, Golden Globes, Filmfare Awards, IIFA, etc.) movies (Piku, Tanu Weds Manu, Dil Dhakadne Do, Devil Wears Prada, etc.) television series (Sex and the City, Gossip Girls, Two Broke Girls, Roadies, Splitsvilla, etc.) on the fashion trends at Indian and Global level **(10)**

Learning Outcomes:

- Demonstrate a basic knowledge of fashion and common fashion terms
- Understand clothing selection with respect to body type and colour tones while applying basic styling tips to get desired looks
- Explore and evaluate different fashion brands, fashion designers and other popular influencers of fashion

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**

2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**

2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**

3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**

4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**

5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

MA 19.101 **Mathematics I** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: (10+2) Higher Secondary Mathematics

1. **Differential Calculus I:** Review of basic concepts, partial differentiation, Euler's theorem on homogeneous functions, Maclaurin's and Taylor's series (one and two variables) and Jacobians. [06]
2. **Differential Calculus II:** Maxima and minima of functions of two variables, asymptotes, Tracing of simple cartesian curves and standard polar curves. [06]
3. **Integral Calculus:** Basics of Beta and Gamma functions, Length of plane curves(cartesian and polar), area bounded by the curves(cartesian and polar), multiple integrals (double and triple integrals, change of order of integration), volumes, conversion from cartesian to polar form, physical interpretations and applications. [12]
4. **Matrix Theory**: Rank of matrix, linear dependence and independence of vectors, solution of system of simultaneous linear equations, Eigen values, Eigen vectors of a matrix, statement of Cayley-Hamilton theorem (without proof) , reduction of a matrix to diagonal form, quadratic forms, linear transformation of a quadratic form, and applications. [08]
5. **Three-dimensional Geometry:** Direction cosines and direction ratios of a straight line, equation of a plane, plane passing through intersections of two planes, equations of straight line, shortest distance between two skew lines, equation of a sphere, intersection of plane and sphere. [08]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Shanti Narayan and Mittal, Analytical Solid Geometry, S. Chand, 2018.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

PY19.101 **Engineering Physics** **Total Lectures: 40**

Pre-requisite: Fundamental knowledge of Basic Physics **3-0-0-3**

Objective:

1. To provide students with a basic understanding of the Physics that may be required by engineers in the course of their careers
2. To enhance knowledge related to lasers and its different components to make it suitable for various purposes
3. To introduce most important concepts of superconductivity, crystallography and fiber optics to the students
4. To introduce the learners to the basics of modern physics and Quantum Mechanics

1. **Modern Physics**: Introduction to Black body radiation spectrum, Photo-electric effect, Compton effect. Wave particle Dualism. de Broglie hypothesis – de Broglie wavelength, extension to electron particle. Davisson and Germer Experiment. Matter waves and their Characteristic properties, Phase velocity, group velocity and Particle velocity, Relation between phase velocity and group velocity, Relation between group velocity and particle velocity. Expression for deBroglie wavelength using group velocity. **[8]**

2. **Quantum Mechanics:** Heisenberg's uncertainity principle and its physical significance. Application of uncertainty principle (Non-existence of electron in the nucleus, explanation for decay and kinetic energy of electron in an atom). Wave function, Properties and physical significance of wave function, Probability density and Normalization of wave function. Setting up of one dimensional time independent Schrodinger wave equation. Eigen values and Eigen functions. Application of Schrodinger wave equation – Energy Eigen values for a free particle. Energy Eigen values and Eigen functions for a particle in a potential well of infinite depth. **[7]**

3. **Electrical Conductivity in Metals**: Free–electron concept. Classical free-electron theory – Assumptions. Drift velocity, Mean collision time and mean free path. Relaxation time. Expression for drift velocity. Expression for electrical conductivity in metals. Effect of impurity and temperature on electrical resistivity of metals. Quantum free-electron theory – Assumptions. Fermi – Dirac Statistics. Fermi-energy, Fermi factor. Density of states (No Derivation). Expression for electrical resistivity / conductivity. Temperature dependence of resistivity of metals. electron in a periodic potential, origin of the energy gap, band theory of solids, distinction of solids into metals, semi-conductors and insulators. **[8]**

4. **Dielectric & Magnetic Properties of Materials**: Dielectric constant and polarization of dielectric materials. Types of polarization. Equation for internal field in liquids and solids (one dimensional). Ferro and Piezo electricity. Frequency dependence of dielectric constant. Important applications of dielectric materials. Classification of dia, para and ferro-magnetic materials. Hysterisis in ferromagnetic materials. Soft and Hard magnetic materials. Applications. **[7]**

5. **Lasers and Optical Fibers**: Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, Construction and working of CO2 laser and semiconductor Laser. Applications of Laser – Laser welding, cutting and drilling. Measurement of atmospheric pollutants. Holography–Principle of Recording and reconstruction of images, applications of holography.
Propagation mechanism in optical fibers. Angle of acceptance. Numerical aperture. Types of optical fibers and modes of propagation. Attenuation. Applications–Block diagram discussion of point to point communication. **[10]**

Outcome: The student will be able to understand many modern devices and technologies based on lasers and optical fibers. Student can also appreciate various material properties which are used in engineering applications and devices.

Text Books:

1. S. O. Pillai, "Solid State Physics", New Age International, Sixth Edition, 2009
2. V. Rajendran, "Engineering Physics," TMH, Fifth Edition , 2013

Reference Book:

1. G. K. Shivkumar, "Engineering Physics," Prism Book Pvt. Ltd.
2. Stephen T. Thornton, "Modern Physics for Scientists and Engineers",Cengage Learning, 4th ed.,2013

CY 19.102 **Environmental Studies** **Total Lectures: 52**

Prerequisite(s): NIL **Credit: 3-1-0-4**

Objective(s):
- To teach the principal resources, renewable energy systems and biosphere.
- To explore the environmental impact of various energy sources and also the effects of different types of pollutants.

1. **Multidisciplinary nature of environmental studies:** Definition, scope and importance, Need for public awareness. [2]

2. **Natural Resources:** Renewable and non-renewable resources: Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. [8]
Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources.
Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

3. **Ecosystems & Biodiversity:** [14]
Ecosystems: Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow and nutrient cycling in the ecosystem. Food chains, food webs and ecological pyramids. Ecological succession
Structure and function of the following ecosystem - Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).
Biodiversity and its conservation: Introduction – Definition, genetic, species and ecosystem diversity. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values. Biodiversity at global, national and local levels. Hot-sports of biodiversity. India as a mega-diversity nation, Threats to biodiversity: habitat loss, illicit poaching, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

4. **Environmental Pollution:** Definition, cause, effects and control measures of : Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes. [8]
Role of an individual in prevention of pollution. Pollution case studies. Disaster management: floods, earthquake, cyclone and landslides.

5. **Social Issues, Human Population and the Environment:** From Unsustainable to Sustainable development: Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people: its problems and concerns. Global Climate Change, global warming, acid rain, ozone layer depletion. Wasteland reclamation. Population growth, variation among nations. Population explosion – Family Welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in Environment and human health. Case Studies.Environment Protection Act 1986. Air (Prevention and Control of Pollution) Act 1981., Water (Prevention and control of Pollution) Act 1974, Wildlife Protection Act 1972., Forest Conservation Act 1980. [13]

Field work [7]
- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

Outcome(s): Upon successful completion of the course, students should be able to:
- Measure environmental variables and interpret results
- Evaluate local, regional and global environmental topics related to resource use and management
- Propose solutions to environmental problems related to resource use and management
- Interpret the results of scientific studies of environmental problems
- Describe threats to global biodiversity, their implications and potential solutions.

Text Books:

1. Erach Bharucha "Environmental Studies", University Grants Commission, 2004.
2. G. Boyle, Renewable energy: Power for a sustainable future'. Oxford University press. 2004.

Reference Books:

1. C. William, P. Saigo, B Woodworth, "Environmental Science: A Global Concern", Sixth Edition McGraw-Hill Higher Education, 2001.
2. R.T. Wright, D.F. Boorse, "Environmental Science" 11th Edn, PHI, 2010.

EE 19.101 **Elements of Electrical Engineering** **Total Lectures: 40**

3-0-0-3

Objective: This course facilitates the students to get a comprehensive exposure to various concepts and devices of electrical engineering.

Pre-requisite: Nil

1. **DC Circuits:** Electrical circuit elements (R, L and C), voltage and current sources, Ohm's law, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation using mesh and nodal method. Network Theorems - Superposition, Thevenin, Norton and Maximum power transfer Theorems. Time-domain analysis of first-order RL and RC circuits. **[8]**

2. **AC Circuits:** Basic terminologies, representation of sinusoidal waveforms, average, rms and peak values of a.c. quantities, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel). **[8]**

3. **Three Phase A.C. Circuits:** Three phase supply, phase sequence, star connection, delta connection, relationship between phase and line quantities in 3-phase circuits, measurements of three phase power under balanced condition. **[6]**

4. **Transformers:** Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, Transformer testing: open circuit and short circuit test, losses in transformers, regulation and efficiency. Basics of auto-transformer and three-phase transformer connections. **[10]**

5. **Electrical Machines:** DC Machines – construction, functions of each part, working principle, EMF and torque equations, types of dc machines. AC machines – classification of a.c. machines, construction, operating principles of ac machines. **[8]**

Outcome: At the end of this course, students will demonstrate the ability to

- To understand and analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines.

Text Books:

1. Kothari, D. P., and I. J. Nagrath, "Theory and Problems of Basic Electrical Engineering," PHI Learning Pvt. Ltd., 1998.
2. Fitzgerald, Arthur Eugene, David E. Higginbotham, and Arvin Grabel, "Basic electrical engineering," McGraw-Hill Series in Electrical Engineering, Auckland: McGraw-Hill, 1981, 5th ed.(1981).

Reference Books:

1. H.Cotton, "Advanced Electrical Technology," CBS Publication. 1967.
2. Vincent Del Toro, "Electrical Engineering Fundamentals," 2nd Edition PHI Publication. 1972.
Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.101 **Programming Language** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite(s): NIL

Objective(s):
1. To learn principles of programming by the structured native language 'C'.
2. To comprehend the rudiments, constructs, syntax, and statements with essentials of efficient compiling, running and debugging processes.

1. **Introduction:** The role of programming languages, programming paradigms, language description and syntax structure, basics of structured and object-oriented programming, functional programming, logic programming, concurrent programming. [10]
2. **Fundamentals of 'C' language**: Character set, variables data types constants, arithmetic, relational and logical operators, type conversion,increment,decrement, bitwise and assignment operators, conditional expressions, statements and blocks, *if-else*, *switch*, loops-*do-while*, *while*, *for*; *break, continue* and *goto* statements, labels. [10]
3. **Functions, pointers and Arrays**: Basics of functions, automatic, external, static and register variables, scope rules, and header files, recursion and C preprocessor, arrays, pointers and addresses, pointers and arrays address arithmetic, character pointers and functions, pointer arrays, pointers to functions, pointers and multidimensional arrays, command line arguments. [10]
4. **Structures and unions:** Basics of structures and functions, arrays of structures, pointers to structures, self-referential structures, unions. [5]
5. I/O and File Processing: Concept of files, standard input and output, formatted output, file access in different modes, reading from and writing to a file. [5]

Outcome(s): Students would be able to apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner.

Text Books:
1.Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013,
2.Ravi Sethi & K.V.Viswanatha, Programming Languages-Concepts, and Constructs, Second edition, Pearson Education,2013,

Reference Books:
1.Herbert Schildt, C: The Complete Reference, Fourth Edition, McGraw-Hill Education, 2017
2.E Balagurusamy, Programming in ANSI C, Tata McGraw - Hill Education,6th edition,2012

CS 19.103 **Software Foundation and Programming I with C** **Total Lectures: 40**

Prerequisite(s): C Programming , Fundamental of Computers **Credit: 3-0-0-3**

Objective(s): To understand the advanced concept of c programming to solve the real world programming problems.

1. **Pointers in C** : Pointers, declaring pointer variables, dereferencing and address of operators, pointer expression and pointer arithmetic, null pointers, generic pointers, passing arguments to function using pointers, pointers and array, handling multidimensional array using pointers, passing an array to a function, pointers and strings, array of pointers, pointer-to-pointer, function pointers, dynamic memory allocation functions- malloc( ), calloc ( ) , realloc ( ), free( ), drawbacks of pointers-memory leak, dangling pointer, memory corruption [9]
2. **File Handling in C :** Streams-stdin, stdout and stderr, types of files-text file and binary file, file pointer, file modes-r,w,a,rb,wb and ab, file handling functions-fopen( ), fclose(), fscanf( ), fread( ), fgetc( ), fgets( ), fprintf( ), fputc( ), fputs( ), fwrite( ), ferror( ), feof( ), fseek( ), ftell( ), rewind ( ), fgetpos( ), fsetpos( ) , remove( ) , rename ( ) [5]
3. **Searching and Sorting-** Searching techniques- linear search, binary search, hashing, sorting techniques-bubble sort, insertion sort, selection sort, quick sort, merge sort, heap sort, shell sort, radix sort, bucket sort [6]
4. **Stack, Queue and Linked List :** Introduction to data structures, linear and non-linear data structures, stack, push and pop operations on stack, application of stacks, queue, circular queue, priority queue, deque, insertion and deletion operations in queue, linked list, single linked list, circular linked list, double linked list, insertion, deletion and searching in linked list, application of linked lists [12]
5. **Trees and Graphs :**Binary tree, Binary search tree, AVL tree, Red-Black tree, Splay tree, B+ tree, insertion , deletion and searching operations on trees, graph terminologies, operations of graphs [8]

Outcome(s): Upon successful completion of the course ,students will be able to

-solve complex programming problems using the concepts of pointers
- handle various file operations in c for real world applications
- implement various data structures using c language

Text Books:

1. Brain W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second edition, Pearson Education, 2013
2. D. Samantha, Classic Data Structures, Second edition, PHI learning, 2013

Reference Books:

1. Aaron M. Tenebaum, Yedidyah Langsam and Moshe J. Augenstein, Data Structures Using C and C++, PHI, 2nd Edition, 2012
2. D. Samanta, Classic Data Structures, PHI, 2nd Edition, 2009
3. Jean Paul Trembley and Paul G. Sorenson, An Introduction to Data Structures with applications, McGraw Hill, 2nd Edition, 2003

PY 19.111 **Physics Laboratory** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the Physics theory.
2. To apply the analytical techniques and graphical analysis to the experimental data.

List of Experiments:

1. To study of material constant, temperature coefficient of current and planck's constant.
2. To determine the specific resistance of a given wire by using the Carey Foster's bridge.
3. To determine the ballistic constant, K of a moving coil ballistic galvanometer with a standard capacitor of known capacity.
4. To determine the high resistance by the method of leakage of a condenser with the help of ballistic galvanometer.
5. To study the variations of resistivity with temperature and hence determines the energy band gap of the given semiconductor with help of four probe method.
6. To convert a galvanometer into a voltmeter of a given range.
7. To convert a galvanometer into an ammeter of a given ranges.
8. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current and to estimate from it the radius of the coil.

Outcome: Students will be convergent with operation of equipments and verify the principle of Physics by doing the experiments. Students will be able to apply the analytical techniques and graphical analysis for finding out the experimental results.

EE 19.111 **Electrical Laboratory** **0-0-2-1**

Objective: The objective is to provide a basic exposure of installation and operation of electrical equipment.

Prerequisite: Nil

Perform any ten of the list.

1. To Study of the various apparatus used in Electrical Engineering.
2. To perform residential house wiring using fuse, indicator, switch, Socket, plug and lamp.
3. To design a Stair case wiring for illuminating a lamp.
4. To design Tunnel wiring for illuminating three lamps.
5. To construct a fluorescent tube and to measure voltage across tube rod, voltage across choke and current.
6. To conduct the polarity test on the given transformer.
7. To conduct the open circuit & short circuit tests on the given single phase transformer and to determine equivalent circuit parameters.
8. To control the speed of DC machine by field current control method.
9. To control the speed of DC machine by Armature Voltage control method.
10. To measure three phase power by using two wattmeter methods.
11. To verify Superposition Theorem using resistive circuit.
12. To verify Thevenin's Theorem using resistive circuit.

Outcome: Students will be convergent with installation and operation of electrical equipment.

Text Books:

1. J.B. Gupta, Theory and Performance of Electrical Machines, S.K. Kataria and Sons, 3rd Edition, 2002.
2. Kothari, D. P., and I. J. Nagrath. Theory and Problems of Basic Electrical Engineering. PHI Learning Pvt. Ltd., 1998.

Reference Books:

1. P.S. Bimbhra, "Electrical Machinery", Khanna Publishers, 5th Edition, 2013.
2. Smarajit Ghosh, "Fundamentals of Electrical and Electronics Engineering", PHI Publication, 1st Edition, 2007.

CS 19.151 **Programming Language Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): NIL

Objective(s):

- To make students familiar with syntax and structure of C-programming.
- To learn problem solving techniques using C programs implementation.

List of Practicals

1. Implement the logic of Data Types & Operators.
2. Implement the logic of Type Conversions.
3. Implement the logic of Arithmetic, Relational, and logical operators.
4. Implementation of Bitwise, unary, assignment operators.
5. Implementation of Increment and Decrement operators.
6. Implementation of Conditional operators.
7. Implement the logic of Increment and Decrement operators.
8. Implement programs in order to cover Control Structure, If-Else statements, Nested If-Else statements, Switch-case statement, Loops- For, While, Do-While, Break Continue, Go-To Statements, and Labels.
9. Implement programs in order to cover processing an array, passing arrays to functions, Multidimensional arrays.
10. Implement programs to cover all possible String operations.
11. Implement programs in order to cover Function prototypes and passing arguments to a function, Recursion.
12. Implement programs in order to cover Pointers declaration, operations on pointers, Array of pointers, pointers to arrays.
13. Implementation of structure and union programs.
14. Implement the use of Storage classes in C programming.
15. Implement programs for Reading and writing from/to a file.

Outcomes On completion of this course student will be able to:

- Apply learning and knowledge of C language analytically, critically and logically to solve mathematical, scientific and real-life problems in an efficient manner

UC 19.102 **Communication Skills** **Total Lectures: 26**

2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

1. **Introduction to Communication:** Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures.**Technology-based Communication:** Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software. [5]
2. **Listening and Reading Skills :** Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. **Reading Skills**: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. **Writing Skills**: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. **Letter Writing:** Formal, informal and demi-official letters; **Job Application:** Cover letter, Differences between bio-data, CV and Resume. **Report Writing**: Basics of Report Writing; Structure of a report; Types of reports. [6]
4. **Non-verbal Communication and Body Language:** Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]
5. **Interview Skills:** Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. **Group Discussion:** Differences between group discussion and debate; Ensuring success in group discussions. **Presentation Skills:** Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

1. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
2. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

MA 19.102 **Mathematics II** **Total Lectures: 40**

3-1-0-4

Objective: To acquire fundamental knowledge of Mathematics and apply in engineering disciplines.

Pre-requisite: Mathematics I

1. **Computational Methods:** Introduction and importance of numerical analysis, calculus of finite differences, interpolation schemes for equal and unequal intervals (Newton's forward and backward interpolation formulae), divided difference, interpolation for unequal intervals (Newton's divided difference and Lagrange interpolation formulae), Solution of algebraic and transcendental equations by Newton-Raphson method. Applications to Engineering. [12]
2. **Ordinary Differential Equations I:** First order and first degree differential equations (variable separable, homogeneous and non-homogeneous, linear, Bernoulli's equation, and exact equations). [06]
3. **Ordinary Differential Equations II:** Linear differential equations of second order with constant and variable coefficients (complementary functions and particular integrals), and applications. [06]
4. **Partial Differential Equations:** Formation of partial differential equations, Lagrange's multipliers method for solution of first order differential equations, separation of variables for nonlinear differential equations and applications. [06]
5. **Vector Calculus:** Vector and scalar point functions, conservative fields, gradient of scalar point functions, divergence and curl of vector point functions (Solenoidal and irrotational vectors), directional derivative of scalar point functions, work done along a curve, Integration of vectors, line integral (work done), surface integral, volume integral, physical interpretations and applications. [10]

Outcome: After completion of the course, students would be able to apply mathematical knowledge in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. Grewal, B.S. and Grewal, J.S., Higher Engineering Mathematics, Khanna Publishers, Daryaganj, New Delhi, 40th Edition, 2007.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Pal and Bhunia, Engineering Mathematics, Oxford University Press, 2015.
3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

CY 19.101 **Engineering Chemistry** **Total Lectures: 39**

Prerequisite(s): NIL **Credit: 3-0-0-3**

Objective(s):
- To purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers their preparation, properties and uses.
- To develop the basics of protecting engineering materials from the natural forces.
- To understand the present day up-to-date knowledge of the contemporary energy sources.
- To build up the basis of the future Engineering materials like superconductors, conducting organic polymers, Nano materials etc.

1. **Water treatment:** Hardness, types of hardness, degree of hardness and its estimation (EDTA methods). Numerical problems on degree of hardness. Boiler troubles: sludge and scale formation, Prevention of sludge and scale formation in boilers. Softening of hard water (Lime-Soda, Permutit, Ion Exchange and calgon methods). Numerical problems based on water treatment (Lime-Soda process). [8]

2. **Polymers:** Classification, Functionality, Types of polymerization, Mechanism of Addition polymerization. Plastics: thermoplastic and thermosetting resins. Preparation, Properties and Uses of Polyamides, Bakelite, Polyesters, Rubber, Vulcanization of Rubber, Synthetic Rubber viz. Buna-S, Buna-N, Butyl and Neoprene rubbers. Silicones-polysiloxanes and sulphur based polymers. [8]

3. **Electrochemistry and Corrosion:** Electrochemical Changes, Electrochemical cell and its classifications (Galvanic cell, electrolytic cell). Types of electrodes. Origin of electrode potential, Electrochemical Series. Electromotive force, Nernst equation of electrode potential. **Corrosion:** Definition and its significance, Theories of corrosion, Mechanism of corrosion, types of corrosion, Corrosion control (Corrosion inhibitors, Cathodic protection - sacrificial anodic and impressed current cathodic protection). [8]

4. **Fuels and Lubricants:** Introduction - Importance of fuels in Industries. Classifications of fuels, Comparison of solid, liquid & solid fuels, Calorific value of a fuel. Determination of calorific value by Bomb calorimeter. Refining and cracking of petroleum, knocking. Octane Number and Cetane Number. L.P.G., Coal gas and Producer gas.**Lubricants:** Introduction and Classification of Lubricants. Properties of Lubricants, Lubricant Oil, Grease, Emulsions. [9]

5. **New Engineering Materials:** Introduction: Superconductors, high and low temperature superconductors, organic electronic materials, Fullerenes and Nano materials, Industrial applications of fullerenes and Nano materials. [6]

Outcome(s): The student will be able to understand the basis of the future Engineering materials like of lubricants, superconductors, conducting polymers, Nano materials etc and purification of the most valuable natural resource of the future-water.

Text Books:
1. Jain and Jain, "Engineering Chemistry," 16th Edition, Dhanpat Rai Publishing Company, 2015.
2. S.S. Dara, "A Text Book of Engineering Chemistry," 12th Edition, S. Chand & Company Limited, 2014.

Reference Books:
1. Peter Atkins, Julio de Paula, and James Keeler, "Atkins' Physical Chemistry" Eleventh Edition, Oxford University Press, 2017.
2. William D. Callister, "Materials Science and Engineering: An Introduction, Eighth Edition, John Wiley & Sons, Inc., 2010.

ME-19.101 **Applied Mechanics** **Total Lectures: 40**
3-1-0-4

Prerequisite Basic Mathematics and Physics

Objectives:
1. This course will help the student to acquire knowledge of basic engineering mechanics concepts and enhance their ability to solve open ended engineering problems.
2. To provide the student with a clear and thorough understanding of the theory and applications of engineering mechanics, covering both statics and dynamics.
3. To provide the student with a thorough understanding of the concept, drawing, and the use of free-body diagrams.
4. To be able to determine the Centre of Gravity and Moments of Inertia of simple geometric shapes and understand the physical applications of these properties.
5. To understand the use and be able to perform calculations related to friction forces in engineering applications.

1. **Introduction:** Idealization of Mechanics, concept of Rigid Body, External Forces (Body forces & surface forces), Laws of Mechanics. **[10]**
Force Systems and Equilibrium: Introduction to vector, Statically Equivalent Force systems, Free Body Diagram, Equations of equilibrium and their applications to various system of forces.

2. **Distributed Forces and Moment Of Inertia:** Centroid of Composite figures, Area Moment of Inertia, Mass Moment of Inertia, Principle axes and Principle Moment of Inertia. **[6]**

3. **Friction:** Introduction of friction, Laws of friction, wedge, screw, belt, rolling friction. **[6]**

4. **Tension, Compression and Shear:** Normal stress and strain, Linear elasticity, Hooke's Law and Poisson's Ratio, Shear stress and shear strain, Relationship between modulus. **[9]**
Beams: Different support & load conditions, SFD, BMD

5. **Kinematics of Particles:** Introduction, Rectilinear motion, Plane curvilinear motion, Rectangular coordinates, Tangential and normal coordinates, polar coordinates, Relative motion (Translating Axes), constrained motion of connected particles. **[9]**
Kinetics of Particles: Introduction, Force, Mass and acceleration, Newton's second law of motion, Equation of motion and solution of problems, Work and Energy, Impulse and Momentum.

Outcome: The students shall develop the ability to identify, formulate, and solve engineering problems related to forces and motion.

Text Books:
1. Hibbeler, Gupta R. C., "Engineering Mechanics," 11th ed., Pearson India, 2010.
2. Merian, J.L, Kraige, L.G., "Engineering Mechanics Vol I & II," 5th edition, Wiley India 2010.

Reference Books:
1. Timoshenko, S, Young, D.H, Rao, J.V, "Engineering Mechanics," 4th edition TMH, 2010.
2. Irving. H. Shames, "Engineering Mechanics," Prentice Hall Book Company, 1966.

EC 19.101 **Basics of Electronics Engineering** **Total Lectures: 40**

3-1-0-4

Prerequisite Basic Knowledge of Engineering and Applied Physics

Objective: To learn the fundamental principle and applications of electronics and communication engineering and devices.

1. **Introduction:** Brief history of major inventions in ECE, Electronic test and measurement equipments, Specifications for electronic components. **[3]**
2. **Semiconductors**: Material and its properties, Formation of energy band diagram, Currents in semiconductors, Fermi-Dirac energy distribution, Types of semiconductors – Intrinsic and Extrinsic, Mass action law, Hall effect. **[5]**
3. **Diodes**: Introduction, Characteristic of ideal and real diode, Current components in diode, load characteristics, Breakdown in diode, Zener diode, Varactor diode, Tunnel diode, Clippers and Clampers, Rectifiers – Half and Full-wave rectifiers. **[8]**
4. **Transistors:** Introduction to pnp and npn transistors, current components, active, cutoff and saturation regions, CC, CB and CE configuration, Operating point, Biasing circuits, Bias Stability, Thermal runway and thermal stability. **[8]**
5. **Signals**: Definition, Classification of signals – Analog and Digital, Deterministic and Random signals, Power and Energy of signals, Bandwidth, Bit and Baud rate. **[4]**
6. **Basics and Applications of Communication**: Definition, Block representation of communication system, Modulation – Definition, Need of modulation, Frequency translation, Types of modulation - Analog and Digital, Multiplexing – TDM and FDM. Introduction to - Optical Fiber, Transmission line, Waveguides, Satellite communication and RADAR. **[12]**

Outcome: Students will be able to understand the basic concepts of Electronic and Communication Engineering and devices .They are able to implement mini projects based on concepts of ECE.

Text Books:

1. George Kennedy, Bernard Davis, “Electronics Communication Systems”, Tata McGraw-Hill, 3rd Edition, 2007.
2. Behrouz Forouzan, “Data Communication and Networking”, McGraw-Hill, 4th Edition, 2006.

Reference Books:

1. David A. Bell, “Electronics Devices and Circuits”, PHI, 4th edition, 2008.
2. Wayne, Tomasi, “Advanced Electronic Communication Systems”, PHI, 6th edition, 2013.
3. Robert L. Boylestad, Louis Nashelsky, “Electronics Devices and Circuits Theory”, Prentice Hall, 10th Edition, 2009.

CS 19.102 **Advance Object Oriented Programming** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): NIL

Objective(s):

- Provide the foundation of good programming skills by discussing key issues of the design of object-oriented software, including programming design and documentation.
- Cover the basics of API and to explore the java abstract programming interface.

1. **Basic OOPS and Core Java:** Core object concepts (Encapsulation, Abstraction, Polymorphism, Classes, Messages Association, Interfaces), Concept of inheritance. Derived class and based class. Managing memory with garbage collector, abstraction, access specifiers, Collection framework, keywords (static, final, abstract etc.), Swing API. [12]
2. **Java Database Connectivity (JDBC):** accessing data from tables: Joining, manipulating Databases with JDBC, Prepared Statements, Transaction Processing. [4]
3. **Modeling & Practice:** UML diagrams (structural & behavioral), ER diagrams, Data Flow Diagrams (DFD), logical complexity, effective modularization. Case study: automation tools, agile testing strategy, agile sprints. [6]
4. **Servlets and Java Server Pages (JSP):** Servlet Overview and Architecture, Interface Servlet and the Servlet Life Cycle, Handling HTTP get Requests, Handling HTTP post Requests, Redirecting Requests to Other Resources, using cookies. Introduction, Java Server Pages Overview, A First Java Server Page Example, Implicit Objects, Scripting, Standard Actions, Directives, Custom Tag Libraries. [13]
5. **Introduction to Application Development:** Introduction to android platform, Creating application template, adding activity, intent, services to application, using Google map API. [5]

Outcome(s):

- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Develop programs using the in-built Java API and the Java standard class library.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).

Text Books:

1. Herbert Schildt, Java The Complete Reference, Herbert Schildt, 8th Edition, 2011.
2. Bert Bates and Kathy Sierra, Head First Java, O'Reilly,2005

Reference Books:

1. Advanced Java 2 Platform HOW TO PROGRAM by H. M.Deitel, P. J. Deitel, S. E. Santry – PrenticeHall
2. Beginning Java™ EE 6 Platform with GlassFish 3 From Novice to Professional by Antonio Goncalves– Apress publication

ME-19.111 **Computer Aided Engineering Drawing** **0-0-4-2**

Objective:

1. To improve the visualization skills.
2. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient.
3. To impart the knowledge on understanding and drawing of simple engineering products.

1. **Introduction to Computer Aided Sketching:** Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practice. Board Drawing vs. Computer- Aided Drawing. Introduction to Solid works Environments. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP &LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, dimensioning, line conventions, material conventions and lettering. [8]

2. **Orthographic Projections** : Horizontal planes, Vertical planes, Front view, Top view, Side view, Projections, First and Third angle of projection, Projections of points, Principles of orthographic projections, Sketching of different views of given objects. Introduction to sketching in Solid works : 2-Dimenional Sketching, Sketching in Solid works, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity. [12]

3. **Projections of Lines, Planes and Solids:** Lines inclined to both the principal planes, projection of Lamina inclined to both principal planes, Projections of solids: Axis inclined to both the reference planes and Intersection of solids. Introduction to part module in Solid works: Extrude, Revolve, Sweep, Hole, Filleting, and Chamfering features. [12]

4. **Sections of solids and sectional orthographic views:** Sectional orthographic projections - Full, Half, Partial, revolved and removed surfaces. Introduction to drawing module in Solid works: Standard 3 views, Auxiliary view, Section View, Projected view. [12]

5. **Isometric Projection:** Terminology, Isometric scale, Box method, Coordinate or offset method, Four-center method, isometric projection of arcs. Solid models practice using Solidworks part module. [8]

Outcomes:

1. Students will be able to improve their visualization skills so that they can apply these skills in developing new products.
2. Students will be able to know and understand the conventions and the methods of engineering drawing using Solid works.
3. Students will be able to prepare simple drawings of engineering products.

Text Books:

1. N.D. Bhatt, "Engineering Drawing", Charotar Publishing House, 2013.
2. Prof. Sham Tickoo, Sandeep Prem Dass “Solid works 2013 for Engineers and Designers” Wiley Publication, 2013.

Reference Books:

1. Randy H. Shih, “Solid works 2013 and Engineering Graphics: An Integrated Approach”, SDC Publications. 2013

CY 19.111 **Engineering Chemistry Laboratory** **Total Hours:26**
Credit: 0-0-2 - 1

Prerequisite(s): NIL

Objective(s):

- To introduce students to water chemistry and purify the most valuable natural resource of the future-water.
- To understand one of the most versatile Engineering Materials: Polymers, lubricants, fuel and their properties and uses.

LIST OF EXPERIMENTS

Choice of 10-12 experiments from the following

1. To determine the temporary and permanent hardness in the given water sample by complexometric titration using EDTA as standard solution.
2. To determine the percentage of Available Chlorine in the given sample of Bleaching powder. Iodometrically.
3. To determine the alkalinity of water sample.
4. To prepare urea formaldehyde resin.
5. To determine the strength of given HCl solution by titrating it against NaOH solution using pH meter.
6. To determine the strength of given acid solution by titration it against sodium hydroxide solution using conductometer.
7. To determine molecular weight of a polymer using Ostwald viscometer.
8. Determination of viscosity of given lubricating oil by Redwood viscometer.
9. Determination of cloud and pour point of given lubricating oil.
10. Determination of the flash and fire point of given lubricating oil.
11. Determination of acid value of given lubricating oil.
12. To determine the calorific value (HCV) of a sample of fuel.
13. Proximate Analysis of Coal.
14. Determination of the percentage of Fe in the given steel sample.

Outcomes The students will learn to:

- Estimate the Hardness of water, alkalinity of water.
- Familiar with the important practical applications of electrochemistry, lubricants, solids, their properties and applications, and the polymer materials.

ME-19.112 **Mechanical Workshop** **0-0-2-1**

Objectives:

1. Practice on manufacturing of components using workshop trades including fitting, carpentry, sheet metal and welding.
2. Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping.
3. Study and practice on machine tools and their operations.

List of Jobs:

1. **Fitting Shop:** Prepare job that contain various fitting operation like filing, marking, measuring, cutting, drilling etc.
2. **Carpentry Shop:** Making of carpentry joint (T, L joint etc).
3. **Sheet Metal Shop:** Making job from sheet (funnel, tray etc).
4. **Machine Shop:** Perform various operations like, turning, step turning, facing, chamfering, knurling etc on Lathe.

Outcomes:

At the end of the course, the student will be able to:

1. To acquire skills in basic engineering practice.
2. To identify the hand tools and instruments.
3. To acquire measuring skills.
4. To provides the knowledge of job materials in various shops.
5. Students will be able to analyze the material on the basis of their properties and thus assigning different weight age to their use for technical purposes.

Text Books:

1. Hajara Chaudhary, Workshop Technology Vol I & II, Media Promoters and Publishers PVT. LTD, Mumbai.
2. B.S. Raghuvanshi, Workshop Technology, Dhanpat Rai & Sons. New Delhi.

Reference Books:

1. H S Bawa, Workshop Technology, TMH. New Delhi.

EC 19.111 **Electronics Lab** **0-0-2-1**

Pre-requisite: Nil

Objective:
1. To gain practical knowledge by applying the experimental methods to correlate with the theory of Electronics Engineering.
2. To apply the analytical techniques and graphical analysis to the experimental data.
3. To enable the students to simulate and test the Electronics circuits using Multisim software.

Practical to be performed on Hardware:

1. To plot V-I characteristics of junction diode and Zener diode.
2. To design a half wave rectifier with and without filter circuit and find the ripple factor.
3. To design a full wave rectifier with and without filter circuit and find the ripple factor.
4. Study of clipper and clamper circuits and their implementation on breadboard.
5. To plot the characteristics of Transistor under Common Emitter configuration
6. To plot the characteristics of Transistor under Common Base Configuration
7. To plot the characteristics of Transistor under Common Collector configuration
8. To perform soldering and de-soldering to make banana probe, BNC probe and connection on PCB.

Practical to be performed using Multi-Sim Software:

9. An Introduction to Electronic Circuit Simulation using Multi-Sim Software.
10. To verify Ohm's law and Kirchhoff's law.
11. To Simulate half wave and full wave bridge rectifier.
12. To plot V-I characteristics of junction diode.

Outcome: Student will be able to understand the operation of electronic test equipment and hardware/software tools to characterize the behavior of devices and circuits.

UC 19.201 **Introduction to Management and Leadership** **Total Lectures: 26**
2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:

1. **Introduction to Management :** Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization **[4]**
2. **Evolution of Management Thought:** Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. **[5]**
3. **Functions of Management:** Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. **[6]**
4. **Introduction to Leadership**: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. **[6]**
5. **Emerging Challenges to Leadership**: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. **[5]**

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books:

1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher, 16th Edition, 2014

Reference Books:

1. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
2. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014

MA 19.201 **Mathematics III** **Total Lectures: 40**

3-1-0-4

Pre-requisite: Mathematics I and Mathematics II

Objective: To acquire fundamental knowledge of linear programming, numerical methods, complex analysis and integral transform and apply in engineering disciplines.

1. **Linear Programming:** Introduction with formulation; Graphical method; Simplex method, Artificial variable technique (Two phase method, Big –M method); Assignment problem (Hungarian method); Transportation problem (Vogel's approximation method). [12]

2. **Numerical Methods:** Solution of system of equations (Gauss elimination and Gauss - Seidel methods); Solution of algebraic and transcendental equations (Bisection, Ramanujan's and Regula Falsi methods); Solution of ordinary differential equation (Euler's modified, Milne's predictor & corrector, Runge-Kutta method of order four). [08]

3. **Complex Analysis:** Function of complex variable, analytic function, Cauchy- Riemann equations(without proof); Integration of complex functions, line integrals in the complex plane, Cauchy integral theorem(without proof), Cauchy integral formula(without proof), zeros and singularities of complex functions, residues. [08]

4. **Integral Transform I**: Basics of Laplace transform and inverse Laplace transform; First and Second Shifting theorems; Convolution theorem (without proof); Laplace transform of Unit Step function, Dirac Delta function and periodic function. [06]

5. **Integral Transform II**: Solution of ordinary differential equations with initial conditions by Laplace transforms; Fourier series of periodic functions, even and odd functions, Fourier half-range series; Basics of Fourier transforms with properties. [06]

Outcome: After completion of the course, students would be able to apply the knowledge of linear programming, numerical methods, complex analysis and integral transforms in engineering and solve curriculum problems.

Text Books:

1. Ramana B.V., Higher Engineering Mathematics, TMH, 2006.
2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.

Reference Books:

1. Erwin Kreyszig Advanced Engineering Mathematics, 9th Edition, Reprint 2011.
2. Sastry S.S., Introductory Methods of Numerical Analysis, 5th Edition, Pearson.
3. Jain R.K. and S.R.K. Iyenger Advanced Engineering Mathematics, Narosa Publishing House, 2003.

CS 19.201 **Discrete Mathematics** **Total Lectures: 40**
Credit:3-1-0-4

Prerequisite(s): None

Objective(s):
- To Introduce fundamental concepts and applications of discrete structure in the field of computer science

1. **Sets, Relations and Functions**: Set theory, combination of sets, multi-sets, ordered pairs, set identities, relations, operations on relations, properties of relations, composite relations, equality of relations, order of relations, functions, classification of functions, operations on functions, recursively defined functions. [8]
2. **Partially Ordered Sets:** Definition, combination of partial order sets, Hasse diagram, lattices: definition, properties of lattices: bounded, complemented, modular and complete lattice, morphisms of lattices. [6]
3. **Algebraic Structures & Counting:** Groups, subgroups and order, cyclic groups, cosets, Lagrange's theorem, normal subgroups, permutation and symmetric groups, group homomorphisms, rings, fields, basics of linear algebra, integers modulo n. Counting principles, permutations, combinations, summations, principle of inclusion and exclusion, pigeon-hole principle, generating functions and recurrence relations. [10]
4. **Propositional Logic:** Proposition, well formed formula, truth tables, tautology, satisfiability, contradiction, algebra of proposition, theory of inference, natural deduction, predicate logic: first order predicate, well formed formula of predicate, quantifiers, and inference theory of predicate logic. [8]
5. **Graph Theory:** Graphs, types of graphs, subgraphs, Eulerian chains and cycles, Hamiltonian chains and cycles, graph traversal algorithms, chromatic number, plannar graph. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- Understand the theory and techniques of logic, graphs and trees, and algebraic systems.
- Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems.

Text Books:
1. Bernard Kolman, Robert C., Busb Sharon, Cutler Ross, Discrete Mathematical Structures, PHI, 6th Edition, 2009.
2. Kenneth H. Rosen, Discrete Mathematics and Its Applications, Tata McGraw- Hill, 7th Edition, 2011.

Reference Books:

2. C. L. Liu, D. P. Mohapatra, Elements of Discrete Mathematics A Computer Oriented Approach, Tata Mcgraw-Hill, 3rd Edition, 2008.
3. Seymour Lipshutz, Marc Lipson, Discrete Mathematics, 3rd edition, 2010

CS -19.203 **Data Structures** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s):
- To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems, and to promote an analytical and empirical appreciation of the behavior of algorithms using data structures

1. **Introduction:** Basic terminology, elementary data organization, algorithm, efficiency of an algorithm, time and space complexity, asymptotic notations, time-space trade- off, abstract data types. [4]
2. **Array & Linked list:** Definition, single and multidimensional arrays, representation of arrays: row major order, and column major order, application of arrays, sparse matrices and their representations. Singly linked lists, doubly linked list, circular linked list, insertion, deletion, traversal, polynomial representation and addition, generalized linked list. [10]
3. **Searching & Sorting:** Sequential search, binary search, comparison and analysis, hash function, collision resolution strategies, insertion sort, selection sort, bubble sort, quick sort, merge sort, heap sort, radix sort. [10]
4. **Stack & Queue:** Primitive stack operations: push and pop array and linked list implementation of stack, application of stack: prefix and postfix expressions, evaluation of postfix expression, recursion, and tower of Hanoi problem. Queue operations, circular queues, array and linked list implementation of queues, dequeue and priority queue [8]
5. **Tree:** Binary trees, binary tree representation, tree traversal algorithms: inorder, preorder and postorder, threaded binary trees, Huffman algorithm, binary search trees AVL trees. [8]

Outcome(s): On the successful completion of the course, the student will be able to:
- be knowledgeable of certain abstract data types (ADT)
- be able to make a critical assessment of different implementations of an ADT
- be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems

Text Books:
1.Lipschutz, "Data Structures" Schaum's Outline Series, TMH, Revised Edition Feb. 2014
2. Horowitz and Sahani, Fundamentals of Data Structures, University Press, 2nd Edition, 2008.

1.Aaron M. Tenenbaum, YedidyahLangsam and Moshe J. Augenstein, Data Structures Using C and C++, PHI, 2nd Edition, 2012.
2. D. Samanta, Classic Data Structures, PHI, 2nd Edition, 2009
3. Jean Paul Trembley and Paul G. Sorenson, An Introduction to Data Structures with applications, McGraw Hill, 2nd Edition, 2003.

CS-19.204 **Database Management Systems** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures).

Objective(s): The objective of this Course is to:

- Understand the fundamental concepts of database management.
- Design and Normalize databases.
- Understand transaction processing control.
- Understand basic of object concepts and object relations.
- Understand the role of the DBMS & RDBMS in the organization.

1. **Introduction & Relational Data Model:** database system concepts and architecture, data modeling using the entity-relationship (ER) model, relational model constraints, relational database schemas, update operations, dealing with constraint violations, relational algebra operations, relational calculus, mapping ER model to relational model. [10]
2. **Structured Query Language (SQL)**: SQL data definition and data types, specifying constraints, schema change statements, basic queries, complex queries, update statements, views. [6]
3. **Database Design:** Functional dependencies and normalization of relational databases, first normal form (1NF), 2NF, 3NF, boyce-codd normal form (BCNF), multi valued dependency, 4NF, join dependency, 5NF. [8]
4. **Transaction Processing:** Introduction, properties, recoverability, serializability, concurrency control techniques: two phase locking protocol, concurrency control based on time-stamp ordering, database recovery techniques: recovery concepts, recovery techniques based on deferred and immediate update, the ARIES recovery algorithm. [8]
5. **Database Security:** Vulnerabilities in database, authentication, SQL injections, Encryptions & public Key infrastructures, privacy issues and preservation process [8]

Outcome(s): After completion of the course, students will be able to:

- Analyze database models & entity relationship models. Understand architecture for database development.
- Design E-R diagram
- Use Structured Query Language (SQL) with complex queries.
- Design and normalize the relations for any organization.
- Understand transaction processing control.

Text Books:

1. Ramez Elmasri & Shamkant B. Navathe, Fundamentals of Database Management Systems, Edition, Pearson Education, 2013.
2. Raghu Ramakrishnan, Database Management Systems, 3rd Edition, Tata McGraw Hill, 2008.

2. Korth and Schilberschatz, Database System Concepts, 5th Edition, Tata McGraw Hill, 2006.
3. C.J. Date, Database Systems, Tata McGraw Hill, 2nd Edition, 2003.

CS 19.205 **General Purpose Programming** **Total Lectures: 40**
Credit: 3-1-0-4

Prerequisite(s): CS 19.101 (Programming Language)

Objective(s): Python is a general-purpose, versatile and popular programming language. It's great as a first language because it is concise and easy to read, and it is also a good language to have in any programmer's stack as it can be used for everything from software development and scientific applications.

1. **Introduction**: The basic elements of python, python syntax, python operators, basic input, branching programs, control structures, strings, tuples, lists, sets, dictionaries and input iteration, Mutability with deferent types, Ranges and iterators [7]
2. **Functions and Module**: Functions and scoping flow of execution, specifications, recursion, global variables, eval &exec , variable arguments, default arguments, system functions and parameters, input and output, modules , making your own module, importing modules. [7]
3. **Classes and Object-Oriented Programming**: Abstract data types and classes, class attribute, instances, constructor, self, inheritance, encapsulation and information hiding, polymorphism, getter & setter [8]
4. **Testing and Debugging**: Exceptions and assertions, types of testing – black-box and glass-box, debugging, handling exceptions, assertions. [6]
5. **Advance Python:** Regular expressions – REs and Python, plotting using matplotlib and Multithreaded Programming, GUI & event handling programming using Tkinter & pygame. Introduction to machine learning and deep learning [12]

Outcome(s): Upon completion of this course students will be

- Familiar with Python syntax.
- Able to use python to implement a given logic.

Text Books:

1. John V Guttag, Introduction to Computation and Programming using Python, Prentice Hall of India, 2nd Edition, 2013.
2. Martin C. Brown, Python: The Complete Reference,Mc Graw Hill, 2018

Reference Books:

1. Zed A. Shaw ,Learn Python the hard way: a very simple introduction to the terrifyingly beautiful world of computers and code, 3rd edition, 2014.
2. Richard L. Halterman,Learning to Program with python, 2011.

CS-19.207 **Application Development for Cloud** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): Basic knowledge of JavaScript. • Basic knowledge of Eclipse-based development tools • Basic understanding of HTML • Basic understanding of the IBM Skills Academy learning environment • Basic understanding of the IBM Skills Academy Cloud hands-on labs platform

Objective(s):
To Define cloud computing
• To Describe the choices that are available to developers when creating cloud applications
• To Describe infrastructure as a service, platform as a service, and software as a service
• To Describe IBM Cloud
• To Describe the architecture of IBM Cloud

1.	**Cloud Application Foundations**: Introduction to HTML5 and JavaScript Programming, JavaScript programming for web applications, HTML5 features,Exersices: Working with JavaScript in HTML documents, Working with HTML5 features	[8]
2.	**Cloud Application Developer**: Essentials of Cloud Application Development, Introduction to cloud computing and IBM Cloud, Getting started with IBM Cloud, Developing IBM Cloud applications on a local workstation, Adopt a DevOps approach by using IBM Cloud Continuous Delivery, REST architecture and Watson APIs, Introduction to data services in IBM Cloud, IBM Cloud mobile backend as a service, Exercise: IBM Cloud command line interface (CLI),	[12]
3	**Cloud Application Development:** Develop IBM Cloud applications with Eclipse, Developing IBM Cloud applications with IBM Cloud Continuous Delivery, IBM Cloud with Cloudant,Build a mobile application by using Kinetise	[8]
4.	**Developing Cloud Applications with SDK for Node.js**: Introduction to server-side JavaScript, Asynchronous I/O with callback programming, Express web application framework, Exercise :Developing a Hello World Node.js app on IBM Cloud, Understanding asynchronous callback,	[7]
5.	**Application Development:** Creating your first express application, Understanding asynchronous callback Building a rich UI application by using AngularJS with Node.js	[5]

Outcome(s): On the successful completion of the course, the student will be able to:
- Understand asynchronous callbacks and be able to write the code in a Node.js application
- Understand Express routing
- Understand IBM Watson Natural Language Understanding service
- Use the Fetch API to interact with back-end web services

Text Books: David E. Sarnya, Implementing and Developing Cloud Computing Applications, CRC Press, 2nd Edition, 2011.

CS-19.253 **Data Structures Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Prerequisite(s): Programming Language Laboratory
Objective(s):

- To develop skills to design and analyze simple linear and nonlinear data structures
- To Strengthen the ability to identify and apply the suitable data structure for the given real world problem
- To Gain knowledge in practical applications of data structures

Contents:

- Implement various operations on arrays
- Implement different operations on different types of link list
- Implement various searching algorithms
- Implement different sorting algorithm and realize their complexities
- Implement Queue and stacks with all the operations
- Implement Binary Tree
- Implement graphs

Outcome(s): At the end of this course, the student will

- Be able to design and analyze the time and space efficiency of the data structure.
- Be capable to identity the appropriate data structure for given problem.
- Have practical knowledge on the application of data structures.

CS-19.254 **Data Base Management Systems Laboratory** **Total Hours: 40**
Credit: 0-0-2-1

Pre-requisites: CS14.111 (Programming Language Laboratory)

Objective: By the end of the practical sessions of this section, students will be able to:

- Create Databases using a user interface and SQL command.
- Create Integrity and constraints on databases.
- Write SQL queries.
- Provide a practical overview of advanced concepts like triggers, assertion, views, etc.

Contents:

- Creation of Databases
- Implement various Integrity Constraints
- SQL queries to implement DDL
- Implement various queries to implement DML
- Implement logics for PLSQL
- Implement Triggers

Outcomes: After undergoing this laboratory module, the students should be able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies.
- Design and implement a database schema for a given problem-domain.
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS.
- Programming PL/SQL including stored procedures, stored functions, cursors, packages.

CS-19.255 **General Purpose Programming Lab** **Total Hours:26**

Credit: 0-0-2-1

.

Prerequisite: Programming Lab

Objectives: The objective of this course is to:

- Become comfortable with Python programming, starting from basics of data types to deep learning.
- Provide the foundation of to explore any expansions of Python whether it is machine learning, deep learning, web development or gaming. It will also put focus to learn various skills to design object-oriented software.

- **Contents:**
  - Code different data types and operations on list, dictionaries, sets, String etc
  - Code basic programs like factorial, Fibinocci etc. to understand functions and recursions.
  - Implement different built-in functions in Python like eval, exec, map, lambda etc.
  - Implement the concept of class, objects, inheritance and polymorphism
  - Implement constructor and self
  - Code programs to implement exceptions and assertions
  - Implement regular expressions
  - Implement a small gaming application using Pygame
  - Implement user interface and event handling using TKinter
  - Code programs to implement the logic for machine and deep learning
  - Implement multithreading

Outcomes: Upon completion of this course, students will be:

- Able to develop application in Python
- Able to develop scientific applications for machine learning
- Able to use python to implement a given logic.
- Able to use various Python IDE like Anaconda, Pycharm etc.

UC 19.202 **Business Environment** **Total Lectures: 26**

2-0-0-2

Objective: To familiarize the students about the background of the spectrum of business and its environment (internal and external).

Pre-requisite: Good General knowledge.

1. **Dimensions of Business Environment**: Nature and characteristics of contemporary business; Types of business environment - general and task environment, Internal (Value system, Organization structure, Human Resource, Company image and brand value, Physical assets) and external Environment (micro and macro), Environmental analysis and strategic Management. [5]

2. **Social Environment**: Concept and salient features of Indian culture and values, Impact of culture on business, Cultural resources, Ethics and social responsibility of business, Consumerism. [5]

3. **Political and legal Environment*:*** Impact of competing political ideologies and role of government, Political Stability and Instability on Business Activities, Legal framework for establishing a business unit in India, Competitive Conditions, Foreign Direct Investment in India. [5]

4. **Economic Environment**: Economic systems – Market, Planned and Mixed economy; Indian economy – overview; Economic reforms in India; Economic policies – Determinants of National Income, Privatization, Fiscal policy and Monetary policy. [6]

5. **Technological Environment:** Features of technology; Impact of technology; Management of technology; status of technology in India; Policy for research and development in India. [5]

Outcome: Understanding real life situations vis-à-vis economic, social, legal, political and technological systems in the country and analyzing the impact of changes on different industries and trends in different sectors of the economy and society.

Text Books:

1. Business Environment, Francis Cherunilam, 1st Edition, 2018.
2. Essentials of Business Environment, K Aswathappa, HPH, 12th Edition, 2014.

Reference Books:

1. Business Environment, BN Ghosh, OUP, 2015
2. Business Environment: Text & Cases (3rd Edition), Justin Paul, McGraw Hill, 2016.
3. Business Environment, AC Fernando, Pearson, 2016

MA 19.202	Statistics and Probability Theory	Total Lectures: 40
		3-1-0-4

Pre-requisite: Mathematics I, Mathematics II, and Mathematics III

Objective: To acquire fundamental knowledge of Statistics and Probability and apply in engineering disciplines.

1.	**Introductory Ideas:** Recapitulation of basics of permutation, combination and probability theory; Law of addition and law of multiplication; Conditional probability; Total probability; Bayes' theorem (with proof)and it's applications.	[08]
2.	**Random Variables and Distribution:** Discrete and continuous random variables; Types of distributions with basic properties; Probability mass and density functions; Cumulative distribution function; Mean, variance and standard deviation of distributions; Discrete types (Binomial and Poisson) and Continuous types (Normal, Uniform and Exponential); Applications of basic ideas of these distributions.	[10]
3.	**Sampling and Testing of Hypothesis:** Sampling distribution of mean and variance; Central limit theorem; Simple and Composite hypothesis; Type I and Type II errors with graphical interpretations; Level of significance and tests of significance for large and small samples with applications.	[08]
4.	**Correlation and Regression:** Simple, partial and multiple correlations; Linear regression with applications.	[06]
5.	**Queuing Theory and Queuing Models:** Birth and death process; Pure birth and pure death process; Classification of queuing models: $[(M/M/1):(FCFS/\infty/\infty)]$, $[(M/M/1):(SIRO/\infty/\infty)]$, $[(M/M/1):(FCFS/N/\infty)]$, $[(M/M/C):(FCFS/\infty/\infty)]$; Applications of queuing models.	[08]

Outcome:	After completion of the course, students would be able to apply the knowledge of Statistics and Probability theory in engineering and solve curriculum problems.
Text Books:	1. S.Palaniammal, Probability and Random Processes, PHI, 2013. 2. P.K. Gupta and D.S. Hira, Operations Research, S. Chand, 2019.
Reference Books:	1. Papoulis, Probability, Random Variables and Stochastic Processes, TMH, 2018. 2. Gupta & Kapoor, Fundamental of Mathematical Statistics, SCS Publisher, 2002. 3. Dass and Verma, Higher Engineering Mathematics, S.Chand, 2019.

EC 19.202 **Digital Electronics** **Total Lectures: 40**

Pre-requisite: Basics of Electronics Engineering **3-0-0-3**

Objective: The aim of this course is to present the principles and techniques of combinational and sequential digital logic design and optimization at a gate level. The use of transistors for building gates is also introduced.

1. **Number Systems and Boolean Algebra:** Introduction to number systems, weighted and non-weighted codes, 1's complement, 2's complement, complement arithmetic, Postulates and theorems of Boolean algebra, Boolean functions, canonical and standard form, simplification of Boolean function using Boolean laws and theorems. [5]
2. **Logic Gates and Simplification of Boolean Functions:** Basic Logic gates, Universal gates, K-map representation, incompletely specified functions, simplification realization with gates, Quine-Mc Cluskey method. [5]
3. **Combinational Logic:** Analysis and design of combinational circuits, half adder and full adder, half subtractor and full subtractor, binary serial and parallel adder, BCD adder, binary multipliers, magnitude comparator, decoders, encoders, multiplexers, de-multiplexers. [10]
4. **Sequential Circuits and Programmable Logic :** Latches, flip-flops, triggering of the flip-flops, master-slave flip-flop, excitation tables, conversion of the flip-flops, analysis and design of clocked sequential circuits, shift registers, counters, PAL, PLA. [10]
5. **Introduction to Verilog HDL:** Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Functional Verification, System Tasks, Programming Language Interface (PLI), Module, Simulation and Synthesis Tools. Gate Level Modeling: Introduction, AND Gate Primitive, Module Structure, Other Gate Primitives, Illustrative Examples, Tri-State Gates, Array of Instances of Primitives, Design of Flip-flops with Gate Primitives, Delays, Strengths and Construction Resolution, Net Types, Design of Basic Circuits. [10]

Outcomes: Upon successful completion of this course, students should be able to:

1. Gain fundamental knowledge of the basic logic gates such as AND, OR, NAND NOR, EX-OR and their implementation in Logic Circuits.
2. Design multipliers, Combinational Circuits and registers.

Text Books:

1. Mano, M. M. and Ciletti, M.D., "Digital Design", Pearson Education, Patparganj, Delhi, 4thEdition, 2009.

2. Floyd, T. L. and Jain, R.P., "Digital Fundamental", Pearson Education, Patparganj, Delhi, 8thEdition, 2009.

References

1. Puri, V. K., "Digital Electronics: Circuits and Systems", Tata McGraw-Hill, Patel Nagar, New Delhi, 4thEdition, 2001.

CS 19.206 **Theory of Computation** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): CS 14.201(Discrete Structures)

Objective(s): The goal of this course is to

- Provide students with an understanding of basic concepts in the theory of computation.
- To understand variety of issues in the mathematical development of computer science theory, particularly finite representations for languages and machines, as well as gain a more formal understanding of algorithms and procedures.

1. **Finite Automata and Regular Expression:** Finite state systems, basic definitions, regular languages and regular expression, finite automata ,Equivalence of DFA and NDFA , Kleen's theorem, pumping lemma for regular sets, regular expression with algebraic method Using Arden's Theorem, closure properties of regular sets, minimization of finite automata, Mealy and Moore machine - conversion of Mealy machine into Moore machine and vice versa. [11]
2. **Context-Free Grammars:** Context-free grammars, union, concatenation of CFG, derivation trees, simplification of context-free grammars, Chomsky normal form, Greibach Normal form, ambiguous context-free grammar. [9]
3. **Context-Free Languages and Pushdown Automata:** Pushdown automata and context-free languages, pumping lemma for CFL, closure properties of CFL, decision, algorithms for CFL. [8]
4. **Turing Machine:** Turing machine model, techniques for Turing machine construction, Turing machines as language acceptor, combining Turing machines, properties of recursive and recursively enumerable languages, universal Turing machine. [8]
5. **Chomsky Hierarchy of Languages:** Regular grammars, unrestricted grammars and Turing machines, context-sensitive grammars and linear bounded automata. [4]

Outcome(s):

- Be able to prove the equivalence of languages described by finite state machines and regular expressions.
- Be able to construct pushdown automata and the equivalent context free grammars.
- Be able to prove the equivalence of languages described by pushdown automata and context free grammars.
- Be able to construct Turing machines and Post machines.
- Be able to prove the equivalence of languages described by Turing machines and Post Machines.

Text Books:

1. Peter Linz, An Introduction to Formal Languages and Automata, Third Edition, Jones and Bartlett, 2016.
2. Hopcroft, Motwani, Ullmann, Introduction to Automata Theory, Languages and Computation, Pearson Education, 2nd Edition, 2005.

Reference Books:

1. Daniel I. A. Cohen, Introduction to Computer Theory, Prentice-Hall, 2nd Edition,1997.
2. Martin, Introduction to Languages and the theory of Computation, Tata McgrawHill, 3rd Edition, 2006
3. Michael Sipser, Introduction to the Theory of Computation, 3rd Edition, Cengage Learning,2013

CS 19.208 **Computer Organization and Architecture** **Total Lectures: 40**
Credit:3-0-0-3

Prerequisite(s): EC 19.202 (Digital Electronics) (Optional)

Objective(s):

- To have a thorough understanding of the basic structure and operation of a digital computer.
- To discuss in detail the operation of the arithmetic unit including the algorithms &
- implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- To study the different ways of communicating with I/O devices and standard I/O interfaces. To study the hierarchical memory system including cache memories and virtual memory.

1. **Introduction:** Von-Neuman architecture, register transfer and micro operations: register transfer language, arithmetic micro-operations, logic micro-operations, shift micro-operations, bus and memory transfers, computer organization and design: instruction cycle, computer registers, common bus system, computer instructions, addressing modes, design of a basic computer. General register organization, stack organization, instruction formats, data transfer and manipulation, program control, RISC, CISC [10]
2. **Computer Arithmetic:** Hardware implementation of addition and subtraction, multiplication algorithms, Booths multiplier, array multiplier, division algorithms, floating point arithmetic: floating point representation, add, subtract, multiplication, division. [8]
3. **Memory & I/O Organization:** Memory hierarchy, RAM, ROM chips, memory address map, memory connection, associative memory, cache memory and virtual memory: paging and segmentation, auxiliary memory: magnetic disks, magnetic tapes, Input-output interface, Asynchronous data transfer, modes of transfer, priority interrupt, DMA, IOP. [8]
4. **Hardwired and Microprogrammed Control:** Hardwired control, microprogrammed control: microinstruction, microprogram sequencing, wide-branch addressing, microinstruction with next-address field, prefetching microinstruction. [7]
5. **Pipelining & Parallel Processing:** Pipeline and vector processing: pipeline structure, speedup, efficiency, throughput and bottlenecks, arithmetic pipeline and instruction pipeline. Flynn's Classification performance matrices for parallel system [7]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand basic structure of a digital computer.
- Perform arithmetic operations of binary number system.
- Know the organization of the control unit, arithmetic and logical unit and I/O memory unit

Text Books:

1. M. Morris Mano, Computer System Architecture, Pearson Education, 3rd edition, 2008.
2. Carl Hamacher, ZvonkoVranesic and SafwatZaky, Computer Organization, Tata McGraw Hill, 5th edition, 2002.

3. Kai Hwang, Advance Computer Architecture,Tata Mc Graw Hill,18th edition,2008

CS 19.210 **Essentials of Software Engineering (OOAD & SW Lifecycle)** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite(s): Object Oriented Technologies

Objective(s):

- To acquire fundamental knowledge of Software designing using UML.

1. **Software Engineering Overview:** Best Practices of Software Engineering Concepts of Object Orientation Essentials of Visual Modeling Requirements Overview [12]
2. **Requirement analysis**: Analysis and Design Overview Architectural Analysis Use-Case Analysis Identify Design Elements [8]
3. **Design analysis**: Identify Design Mechanisms Describe the Run-time Architecture Describe Distribution Use-Case Design Object store Mechanism Security Mechanism. [8]
4. **Testing:** software testing fundamentals, test case design, white box testing, basis path testing, control structure testing, black box testing, [6]
5. **UML and mapping**: UML to C++ Mapping, UML to Java Mapping, UML to Visual Basic Map, UML to Visual Basic Map [6]

Outcome(s):

- After completion of this course student get the understandings of object-oriented analysis and design concepts, as well as hands-on practical experience applying the techniques within a use-case-driven, architecture-centric, and iterative development process.

Text Books:

1. Pressman R.S., “Software Engineering”, Tata McGraw Hill Publishing Company Ltd., New Delhi.
2. Sommerville, Ian “Software Engineering”, Pearson Education

Reference Books:

1. Jalote Pankaj, “An Integrated Approach to Software Engineering”, NAROSA.
2. Fairely, R.E., “Software Engineering Concepts”, McGraw-Hill

EC-19.224 **Digital Electronics Laboratory** **Total Hours:26**
Credit: 0-0-2-1

Pre-requisite: Basics of Electronics Engineering

Objective: This lab course develops skills for implementing and analyzing digital electronic circuits, with applications to electronics design. It is also designed to enhance problem solving ability through steadily increasing problem complexity.

1 To study the use of General Purpose Digital Trainer and familiarization with the digital IC Data-Books.

2 To study AND, OR. NOT, NAND, NOR, EX-OR gates and their specified experiments.

3 To set up a 4-bit Binary Counter (74LS93) to demonstrate its sequence of Counting.

4 To study the characteristics curve of TTL and CMOS logic gates.

5 To design and test 4-bit Adder and Subtractor circuits.

6 To compare the magnitude of two 4-bit Binary Numbers A and B.

7 Design a combinational circuit with 4 inputs and 4-outputs that converts a 4-bit Gray Code to an equivalent 4-bit Binary number.

8 Design and implement a BCD to Seven Segment Decoder / Driver.

9 To design and implement a 2 to 1 multiplexer.

10 To design and implement a 1:2 & 1:4 de multiplexer.

11 To investigate the operation of various flip flops SR, JK, T and D using gates and FF ICs.

12 To design and implement Adders and Subtractors using Verilog HDL

13 To design and implement Multiplexers/De-Multiplexers using Verilog HDL

14 To design and implement Filp-Flops using Verilog HDL

Outcomes:

1. The background provided in this laboratory may effectively be utilized for the understanding of advanced courses such as VLSI Design and for the designing of complex circuitry.
2. Gain a hands-on experience in carrying out key operations needed to assemble circuits on breadboard.
3. This subject is directly applicable to industrial IC design and provides a strong background for more advanced courses.
4. This lab will be useful in the designing of hardware projects using Verilog HDL

RM 19.101 **Research Methodology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. **Introduction:** Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches, Research Process, Validity and Reliability in Research. [6]
2. **Problem Formulation:** Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps. [10]
3. **Research Design:** Research Framework, Meaning & Significance of Research Designs, Features of a good Research Design, Types of Research Design. [10]
4. **Data Analysis and Simulation Tool:** Types of Data, Sources of Data, Methods of Collecting Data, Data Presentation Techniques. Methods of Data Analysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. **Report Writing:** Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:

1. R. Pannershelvam, "Research Methodology" Prentice Hall India, New Delhi, 2nd Edition, 2013.
2. C. R. Kothari, "Research Methodology: Methods and Techniques", New Age International (p) Limited, Publishers New Delhi, 4nd edition, 2018.

Reference Books:

1 William G.Zikmund, “Business Research Methods”, Cengage Learning New Delhi, 8th edition, 2016.
2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

CS 19.301 **Design and Analysis of Algorithms** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): CS-19.201(Discrete Structures), CS-19.203(Data Structures)

Objective(s):

- To learn the algorithm analysis techniques.
- To become familiar with the different algorithm design techniques.
- To understand the limitations of the algorithms power.

1. **Introduction:** Fundamentals of algorithms and problem solving, asymptotic notations, time complexity and analysis of algorithms, solutions of recurrence relations, master theorem and summations techniques. [8]
2. **Analysis of Sorting and Searching Algorithms:** Linear, binary and interpolation search, insertion, selection, merge, quick and heap sort, stability and other issues, hashing. [8]
3. **Algorithm Design Approaches:** Greedy method (knapsack problem, job sequencing problem), dynamic programming (assembly line scheduling, matrix chain multiplication), backtracking (8 queens problem, sum of subsets), branch and bound (0/1 knapsack problem), divide and conquer algorithms (Strassen matrix multiplication), problems based on these design paradigms. [8]
4. **Tree and Graph algorithms:** Spanning trees, Prim and Kruskal's algorithm, Huffman coding, BFS and DFS, disjoint set operations, connected components, shortest path algorithms in a graph such as Dijkstra, Bellman Ford, Warshall's etc. [8]
5. **Complexity Classes:** P,NP,NP hard and NP complete problems, reducibility, decision and optimization problems, examples of NP complete problems such as 3 CNF, clique, vertex cover and traveling salesman problem, basic introduction of approximation algorithms. [8]

Outcome(s): On the successful completion of the course, the student will be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.
- Modify existing algorithms to improve efficiency.

Text Books:

1. Thomas H.Cormen, Charles E.Leiserson, Ronald L. Rivest and Clifford Stein, Introduction to Algorithms, PHI Learning Private Limited, 3rd edition, 2016.
2. Ellis Horowitz, Sarta jSahni, Sanguthevar Rajasekaran, Computer Algorithms, Silicon Press, 2nd edition, 2008.

Reference Books:

1. Anany Levitin, Introduction to the Design and Analysis of Algorithms, Pearson Education, 3rd edition, 2012.
2. Alfred V. Aho, John E. Hopcroft and Jeffrey D. Ullman, Data Structures and Algorithms, Pearson Education, 1st edition, 2006.
3. Donald E. Knuth, The Art of Computer Programming, Volumes 1& 3, Pearson Education, 2009.

CS-19.303 **Operating System** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.208 (Computer Organization & Architecture)

Objective(s):

- Understand the fundamental operating system abstractions like processes, threads, files, semaphores, IPC and deadlocks.
- Understand operating system from user's perspective as well as from system's perspective.
- Understand the principles of concurrency and synchronization.
- Understand basic resource management techniques.

1. **Overview:** Definition, types of operating systems: mainframe, server, multiprocessor, personal computer, real-time, embedded and smart card, system calls and utilities, batch, multiprogramming and multitasking operating system. [3]

2. **File Systems:** File concept, user and system programmer view of file systems, different modules of a file system, disk structure, disk-space allocation methods: contiguous, linked, indexed directory structures, file protection, disk scheduling algorithms. [6]

3. **Process Management:** Process concepts, threads, scheduling concepts, types of schedulers, scheduling algorithms, process state diagram, comparison of various CPU scheduling algorithms, multi-level queue scheduling. [6]

4. **Memory Management:** Logical and physical address spaces, base, limit and relocation registers, address binding, dynamic loading and linking, partitioning, swapping, contiguous memory allocation, non-contiguous memory allocation: segmentation, paging and segmentation. [8]

5. **Process Synchronization and deadlock:** Independent and concurrent processes, shared memory approach and message passing approach, mutual exclusion, synchronization, inter process communication, critical section problem and its solution to semaphores: binary and counting semaphores, wait/signal operations and their implementation, classical problems of synchronization, deadlock. [11]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the primary functionalities of operating system.
- Manage system resources efficiently as an operating system designer.
- Develop new operating systems as well as work on existing ones to develop them further.

Text Books:

1. Galvin, Silberschatz, Gagne, Operating System Concepts, Wiley India, 9th edition, 2015.
2. Stallings, Operating Systems: Internals and Design Principles, Pearson education, 7th edition 2013.

Reference Books:

1. Andrew S. Tanenbaum, Modern Operating Systems - Prentice-Hall, Inc., 4th edition, 2015.
2. Deitel, Operating Systems, Pearson Education , 3rd edition, (2012 reprint).

CS-19.305 **Logic in Computer Science** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS-19.201(Discrete Structures)

Objective(s):

- To introduce the main notions of mathematical logic: logical notations (syntax) and how to assign meaning to them (semantics).
- To study formal frameworks (in the sense of being rigorous as well as in the sense of manipulating "form") for constructing logical arguments (proof theory).
- To study some deductive systems for propositional and first-order logic.
- To introduce the concept of fuzzy logic.

1. **Introduction:** Role of logic in computer science, problem representation, review of the principle of mathematical induction, the principle of structural induction, review of Boolean algebra, language, models, interpretations, validity, proof, decision problems in logic, decidability. [6]
2. **Propositional Logic:** Syntax, semantics, propositional logic as a formal language, natural deduction, normal forms, propositional satisfiability, propositional resolution and tableaux method. [10]
3. **Predicate Logic:** Predicate logic as a formal language, semantics of predicate logic, validity and satisfiability, forward and backward chaining, Skolmization, normal forms, unification, Horn formulas and programs, resolution. [12]
4. **Binary Decision Diagrams:** Representing Boolean functions, algorithms for reduced binary decision diagram (OBDD), reduce, apply, restrict, exists, symbolic model checking. [8]
5. **Fuzzy Logic:** Crisp sets and fuzzy sets, fuzzy membership, operations on fuzzy sets, fuzzy arithmetic, Cartesian product, fuzzy relations, fuzzy propositions, fuzzification and defuzzyfication, engineering applications of fuzzy logic. [4]

Outcome(s): On successful completion of this course, the students will be able to

- Use propositional and first-order logic.
- Apply of logic in specifying properties.
- Develop proof by induction.
- Design binary decision diagrams.
- Identify the scope for fuzzy logic.

Text Books:

1. Huth M and Ryan M, Logic in Computer Science: Modelling and Reasoning about Systems, Cambridge University Press, 2nd edition, 2004.
2. George J Klir and Bo Yuan, Fuzzy Sets and Fuzzy Logic – theory and applications, Prentice Hall, 2000.

Reference Books:

1. Arindama Singh, Logics for Computer Science, Prentice Hall of India, 1st edition, 2004.
2. M. Ben-Ari, Mathematical Logic for Computer Science, Springer, 2nd edition, 2003.
3. Rich E., and Knight K., Artificial Intelligence, Tata McGraw-Hill, 3rd edition, 2009.

CS-19.351 **DAA Laboratory** **Total Hrs: 26**

Credit: 0-0-2-1

Prerequisite(s): CS 19.253 (Data Structure Laboratory)

Objective(s):

- To analyze the asymptotic performance/Time complexity of algorithms.
- To demonstrate familiarity with major algorithms and data structures.
- To apply important algorithmic design paradigms, techniques and methods for the solution of real life problems.
- To synthesize efficient algorithms in common engineering design situations.

Contents: Lab manual based upon the theory course CS 14.301 and to achieve the listed course objectives and outcomes.

- To implement and analyze sorting algorithms Insertion, Quick and Merge Sort
- To implement optimal binary search tree
- To implement greedy algorithms Knapsack problem
- To implement Dikshtra and Warshall's Algorithm
- To implement Bellman Ford Algorithm
- To implement DFS and BFS

Outcome(s): On successful completion of this course, the students will be able to

- Understand and analyze the time complexities of sorting algorithms
- Understand and analyze Graph algorithms
- Understand and analyze the DFS and BFS algorithms

CS-19.353 **Operating System Laboratory** **Total Hours: 26**

Credit: 0-0-2-1

Prerequisite(s): CS 19.151 (Programming Language Lab.) CS 19.253(Data Structures Lab)

Objective(s):

- Learn basic operating system abstractions like process, file, page etc. through hands on programming.
- Comprehend problems of resource sharing in operating system and develop software solutions for the same.
- Work in groups to come out with solutions that require collective application of skills learnt.

Lab manual based upon the theory subject and to achieve the listed course objectives and outcomes.

- To simulate multi-level queue scheduling algorithm
- To simulate the Sequential and Indexed allocation
- To simulate the MVT and MFT memory management techniques
- To simulate the following contiguous memory allocation techniques
  a) Worst-fit b) Best-fit c) First-fit.
- To simulate paging technique of memory management
- To simulate Bankers algorithm for the purpose of deadlock avoidance
- To simulate disk scheduling algorithms a) FCFS b) SCAN c) C-SCAN

Outcome(s): On successful completion of this course, the students will be able to

- Simulate different operating system scenarios like, process scheduling, memory management, disk scheduling, page replacement and deadlocks.
- Comprehend real life issues in operating system design and would design software level solutions for the same.
- Work in a group to come out with piecemeal solutions individually for a large problem in operating system and would be able enough to make handshaking between different modules to develop a single solution for the same.

CS 19.312 **Soft Computing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.305(Logic in Computer Science)

Objective(s):

- To familiarize with soft computing concepts
- To introduce the idea of neural networks, fuzzy logic and use of heuristics based on human experience
- To introduce the concept of genetic algorithm and its applications to soft computing using some applications

1. **Introduction**: Introduction of soft computing, types of soft computing, applications of soft computing, introduction of artificial intelligence, production system, various search techniques, hill climbing, best first search, knowledge representation, monotonic and non-monotonic reasoning. [8]
2. **Neural Networks:**Structure and function of a single neuron, definition of ANN, characteristics of ANN, applications of ANN, single layer networks, perceptron training algorithm, linear separability, various learning rules, delta rule, ADALINE, MEDALINE, multi-layer networks, activation functions, error back propagation algorithms, characteristics of EBPA. [8]
3. **Neral Network Architectures**: Counter propagation networks, architecture, functioning, characteristics, Hopfield network, configuration, associative memory, limitations and applications, Hopfield vs Boltzman machine, adaptive resonance theory, architecture, classification, implementation and training [8]
4. **Fuzzy Logic :**Fuzzy logic, fuzzy set theory, fuzzy set vs crisp set, crisp relation and fuzzy relation, introduction and features of membership functions, fuzzy rule based system, fuzzy propositions, formation, decomposition and aggregation of fuzzy rules, fuzzy reasoning, fuzzy interference system, fuzzy decision making, applications of fuzzy logic. [8]
5. **Genetic Algorithms :**Genetic algorithm, fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, genetic modelling, inheritance operator, cross over, inversion and deletion, mutation operator, bitwise operator, generational cycle, convergence of GA, applications and advances in GA, difference and similarities between GA and other traditional methods. [8]

Outcome(s): On successful completion the students will be able to:

- Identify and describe soft computing techniques and their roles in building intelligent machines
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems
- Apply genetic algorithms to combinatorial optimization problems
- Apply neural networks to pattern classification and regression problems
- Evaluate and compare solutions by various soft computing approaches for a given problem

Text Books:

1. S. N. Sivanandan and S.N. Deepa, “Principles of Soft Computing”, Wiley India, 2007
2. J.S.R.Jang, C.T.Sun and E. Mizutani, “Neuro-Fuzzy and Soft Computing”, PHI, 2004
3. Pravir K. Chawdhry, Rajkumar Roy, Raj K. Pant “Soft Computing in Engineering Design and Manufacturing”Springer, 2012.

Reference Books:

1. S. Rajasekaran and G.A.V. Pai, “Neural Networks, Fuzzy Logic and Genetic Algorithms”, PHI, 2003
2. Timothy J.Ross, “Fuzzy Logic with Engineering Applications”, McGraw-Hill, 3rdEdition, 2009.
3. Davis E. Goldberg, “Genetic Algorithms: Search, Optimization and Machine Learning”, Pearson Education , 2006

CS-19.304 **Compiler Design** **Total Lectures:40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.206 (Theory of Computation)

Objective(s):

- To introduce the major conceptual areas of language translation and compiler design.
- To enrich the knowledge in various phases of compiler, code optimization techniques
- To extend the knowledge of different parsers.
- To provide practical programming skills necessary for construction of a compiler.

1. **Introduction:** Introduction of compiler, compiler structure: analysis-synthesis model of compilation, various phases of a compiler, Symbol table: Role and data structure used for symbols tables . Lexical Analysis: Input buffering, specification & recognition of tokens, error detection & recovery . [8]
2. **Syntax Analysis & Syntax Directed Translation:** Syntax analysis: CFGs, top down parsing, Brute force approach, recursive descent parsing, transformation on the grammars, predictive parsing, bottom up parsing, operator precedence parsing, LR parsers (SLR, LALR, LR), parser generation error detection & recovery. [9]
3. **Syntax Directed Definition**: Construction of syntax trees, bottom up evaluation, S-attribute definition, L-attribute definition, top down translation, bottom up evaluation of inherited attributes, recursive evaluation, analysis of syntax directed definition. [8]
4. **Intermediate Code Generation:** Intermediate code, postfix notation, parse trees & syntax trees, three address code, quadruple & triples, translation of assignment statements, Boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser, more about translation: array references in arithmetic expressions, procedures call, declarations, case statements. [8]
5. **Code Optimization & Code Generation:** Loop optimization, the DAG representation of basic blocks, flow graphs, global data-flow analysis, peephole optimization, generating code from DAG, register allocation and assignment. [7]

Outcome(s): On successful completion of this course, the students will be able to

- Use lexical analyzer and parser generator tools.
- Generate intermediate code.
- Be familiar with register allocation.
- Expose compiler code optimization.

Text Books:

1. A. V. Aho, R. Sethi, and J. D. Ullman. Compilers: Principles, Techniques and Tools, Pearson Education, 2nd edition, 2014.
2. Louden, Compiler Construction: Principles and Practice, Cengage Learning, 1st edition, 1997.

Reference Books:

1. Allen I. Holub, Compiler Design in C, Prentice-Hall Inc., 1st edition, 1994.
2. AW Appel, M Ginsburg, Modern Compiler Implementation in C, Cambridge University Press, 1st edition, 2004.
3. J. R. Levine, T. Mason, D. Brown, Lex and Yacc, O'Reilly, 2nd edition, 2000.

CS-19.306 **Computer Networks** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.203 (Data Structures)

Objective(s):

- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To construct large-scale computer networks
- To understand fundamentals of computer networks and major protocols.
- To analysis and evaluate major Internet protocols.
- To program simple network applications using socket API
- To learn and adopt newly introduced computer network technologies by themselves.

1. **Introduction:** History and development of computer networks, networks topologies, MANET, categories of networks, layering and protocols. [5]
2. **Physical and MAC Layer:** Different types of transmission media, transmission impairments, encoding schemes (NRZ, NRZI, Manchester, 4B/5B, Manchester etc.), packet and circuit switching. Aloha, CSMA/CA, CSMA/CD protocols, performance evaluation and characteristics. [8]
3. **Data Link Layer:** Framing concept, error detection (parity, CRC), sliding window, stop and wait protocols, stop performance and efficiency. IEEE 802.3, 802.4, 802.5, 802.11, performance evaluation. [10]
4. **Network Layer:** IPv4, IP address classes, classless addressing, IPv6, ARP, RARP, DHCP, ICMP, routing algorithms: distance vector, metrics, RIP, OSPF, BGP, congestion control algorithms, leaky bucket, token bucket. [8]
5. **Transport & Application Layer:** Duties of the transport layer, connection, TCP, TCP services, TCP header, UDP, evaluating protocol such as TCP/UDP using simulator like NS2. DNS, FTP, HTTP, SMTP, POP, basics of network security, cryptography, digital signature and firewall. [9]

Outcome(s): On successful completion of this course, students will be able to

- Analyze computer network component and devices.
- Synthesize how communication works in a network and internet.
- Formulate the concept of topologies and their applications.
- Analyze protocol at different layers and how they play important role in network implementation.

Text Books:

1. Tanenbaum A. S., Computer Networks, Prentice-Hall of India, 5th edition, 2010.
2. Forouzan B. A., Data Communications and Networking, Tata McGraw-Hill, 5th edition, 2013.

Reference Books:

1. Stallings W., Data and Computer Communications, Prentice-Hall of India, 10th edition, 2013.
2. Hayes J. F., Modeling and Analysis of Computer Communication Networks, Plenum Press, 1st edition, 1987.
3. Kurose and Ross, Computer Network: a top-down approach, Pearson 6th edition 2015.

CS-19.308 **Digital Image Processing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS-19.101 (Programming Language)

Objective(s):

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To study the image segmentation and representation techniques
- To study the image representation in form of features and descriptors

1. **Digital Image Fundamentals:** Elements of digital image processing systems, elements of visual perception, brightness, contrast, hue, saturation, mach band effect, color image fundamentals - RGB, HSI models, image sampling, quantization, dither, two-dimensional mathematical preliminaries, 2D transforms - DFT, DCT, KLT, SVD. [7]
2. **Image Enhancement and Restoration:** Histogram equalization and specification techniques, noise distributions, spatial averaging, directional smoothing, median, geometric mean, harmonic mean, contra harmonic mean filters, image restoration - degradation model, unconstrained restoration, inverse filtering, removal of blur caused by uniform linear motion. [7]
3. **Morphological Image Processing:** Basics, structuring element, erosion, dilation, opening, closing, hit-or-miss transform, boundary detection, hole filling, connected components, convex hull, thinning, thickening, skeletons, pruning, and reconstruction by dilation and erosion. [7]
4. **Image Segmentation:** Edge detection, edge linking via Hough transform, thresholding, region based segmentation, region growing, region splitting and merging, and segmentation by morphological watersheds, basic concepts, dam construction, and watershed segmentation algorithm. [7]
5. **Image Representation:** Boundary representation, chain code, polygonal approximation, signature, boundary segments, boundary description, shape number, Fourier descriptor, regional descriptors, and topological features. [6]
6. **Image Compression:**Need for data compression, Huffman, run length encoding, shift codes, arithmetic coding, vector quantization, transform coding, JPEG standard, MPEG. [6]

Outcome(s): On successful completion of this course, students will be able to

- Analyze the basic algorithms used for image processing &image compression with morphological image processing.
- Apply image enhancement and restoration techniques.
- Use image compression and segmentation Techniques.
- Represent features of images.

Text Books:

1. Rafael C. Gonzales, Richard E. Woods, “Digital Image Processing”, Third Edition, Pearson Education, 2010.
2. Anil Jain K. “Fundamentals of Digital Image Processing”, PHI Learning Pvt. Ltd., 2011.

Reference Books:

1. Rafael C. Gonzalez, Richard E. Woods, Steven L. Eddins, “Digital Image Processing Using MATLAB”, Third Edition Tata Mc Graw Hill Pvt. Ltd., 2011.
2. William K Pratt, “Introduction to Digital Image Processing”, CRC Press, 13-Sep-2013.
3. Bernd Jähne, Digital Image Processing, Springer Science & Business Media, 29-Jun-2013.

CS-19.354 **Compiler Design Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): CS 19.151(Programming Language Lab.) CS 19.253(Data Structures Lab.)

Objective(s):

- To design and implement a lexical analyzer
- To design and implement a parser
- To design and implement symbol tables
- To understand and design code generation schemes
- To learn the working of some compiler writing tools

Contents:

- To study the Flex environment
- Implementation of Simple Programs using FLEX
- To illustrate the concept of Special Directives in FLEX
- Illustrate the special functions like yymore(), yyless(), unput(), input(), yyterminate(), yyflush buffer
- To implement the Lexical Analyser using FLEX
- To implement syntax analysis programs such as string check, identifier, integer, converting and evaluation of postfix, infix expressions in YACC
- To demonstrate symbol table implementation in YACC and FLEX
- Implementation of intermediate code generation.

Outcome(s): On successful completion of this course, the students will be able to

- Understand the peculiarities of a language translator
- Get the practical approach of how a compiler works
- Work in the development phase of new computer languages in industry
- Understand the working of compiler construction tools
- Visualize and design a new compiler of her own language

CS-19.356 **Computer Network Laboratory** **Credit: 0-0-2-1**

Prerequisite(s): CS 19.101 (Programming Language Lab.), CS 14.253(Data Structures Lab.)

Objective(s):

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming

Contents:

- To implement classification of IPV4, IPV6.
- Network protocol Analyzer using Wireshark
- To evaluate IP Header Checksum
- To calculate the parity check and convert it into even or odd parity
- To evaluate Longitudinal Redundancy Check
- Introduction to socket programming
- To demonstrate sending a UDP packet and TCP

Outcome(s): On successful completion of this course, students will be able

- To know how communication works at different layers of TCP/IP model
- To understand practically the purpose of various key protocol.
- To learn how a network can be efficiently deployed.
- To identify and analyze the latest technology with existing one.
- To configure network with client/server programming
- To understand computer network component and devices.

CS-19.358 **Digital Image Processing Laboratory** **Total Hours: 26**
Credit: 0-0-2-1

Prerequisite(s): CS 19.151 (Programming Language Lab.),

Objective(s): The aim of this course is to familiarize students with the implementation in Matlab of the basic techniques for handling images and developing algorithms for image processing (quality enhancement, restoration, coding, compression).

Contents:

- Introduction to MATLAB
- Implementation of Image Transformation Fourier, DCT etc.
- Implantation of Fourier Transformation properties
- Implementation of Image Enhancement operations.
- Implementation of image degradation and restoration methods
- Implementation of image segmentation and morphological operations.

Outcome(s): On successful completion of this course, students will be able

- Learn basic image processing techniques for solving real problems.
- Student will also have sufficient expertise in both the theory of two-dimensional signal processing and its wide range of applications, for example, image restoration, image compression, and image analysis.

CS 19.212 **Business Intelligence** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.207 Application Development for cloud

Objective(s):

- To Understand how analytics provided a solution to industries using real case studies
- To Explain what is analytics, the various types of analytics, and how to apply it
- To Understand how a business analysis software works, and its architecture
- To Describe a reporting application, its interface, and the different report types
- To Create different types of advanced reports
- To Understand Active Reports and how to create them

1. **Business Analytics Overview**: Analytics overview, Analytics trends: past, present & future, Towards a predictive enterprise, Analytics: Industry domains, Case studies and solutions. [5]
2. **Business Intelligence and Analytics 101 and Business analytics foundations**: Business Intelligence and Analytics 101, IBM Cognos Analytics for Consumers, Business analysis solution for consumers. [7]
3. **Business intelligence analyst:** IBM Cognos Analytics: Author Reports Fundamentals, Introduction to IBM Cognos Analytics, Create list reports, Focus reports using filters, Create crosstab reports, Present data graphically, Focus reports using prompts, Extend reports using calculations, Use additional report building techniques, Customize reports with conditional formatting, Drill-through definitions, Enhance report layout, Overview of IBM Cognos Analytics [12]
4. **IBM Cognos Analytics: Author Reports Advanced & Active Reports:** Create query models, Create reports based on query relationships, Create advanced dynamic reports, Design effective prompts, Create additional advanced reports, Examine the report specification, Distribute reports through bursting, Enhance user interaction with HTML. [11]
5. **IBM Cognos Analytics: Author:** Introduction to IBM Cognos Active Reports, Use Active Report connections, Active Report charts, visualizations, and decks. [5]

Outcome(s):

- Describe a reporting application, its interface, and the different report types
- Create different types of advanced reports
- Understand Active Reports and how to create them

Text Books: IBM Study Material.

Reference Books:

1. Liautaud, Bernard, and Mark Hammond. e-Business intelligence: turning information into knowledge into profit. McGraw-Hill, Inc., 2000.
2. Anandarajan, Murugan, Asokan Anandarajan, and Cadambi A. Srinivasan, eds. Business intelligence techniques: a perspective from accounting and finance. Springer Science & Business Media, 2012.
3. Michalewicz, Zbigniew, et al. Adaptive business intelligence. Springer Berlin Heidelberg, 2006.

CS-19.311 **Big Data Programming** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): Basic knowledge of Linux , SQL, Hadoop technologies, data science,

Objective(s):

- To Understand what Big Data is
- To understand how the growth of interconnected devices helps big data.
- To Learning the tools that will enable to continue big data education after the course

1. **Big Data Overview**: Introduction to Big Data, Introduction to the Big Data Ecosystem, Introduction to Hortonworks Data Platform (HDP), Apache Ambari, Hadoop and HDFS, MapReduce and YARN, Apache Spark, Storing and quering data, ZooKeeper, Slider, and Knox, Loading data with Sqoop, Security and Governance, Stream Computing, Exercise: Exploration of the lab environment. [10]
2. **Exploration of the lab environment:** Managing Hadoop clusters with Apache Ambar, File access and basic commands with HDFS, Running MapReduce and YARN jobs, Creating and coding a simple MapReduce job, Working with a Spark RDD with Scala, Using Hive to access Hadoop/HBase data, Explore Zookeeper, Moving data into HDFS with Sqoop, [10]
3. **Introduction to Data Science**: Data Science and Data Science Notebooks, Data Science with Open Source Tools, Exercise: Moving data into HDFS with Sqoop [5]
4. **Big SQL**: Using Big SQL to access data residing in the HDFS, Creating Big SQL schemas and tables, File formats and querying Big SQL tables, Managing the Big SQL Server, Configuring Big SQL security, Data federation with Big SQL, Exercise: Connecting to the IBM Big SQL Server, Creating and managing Big SQL schemas and tables, Querying Big SQL tables, Managing the Big SQL Server, Configuring Big SQL security, Configuring impersonation in Big SQL, Using Fluid Query with Big SQL. [9]
5. **IBM Watson Studio:** Introduction to IBM Watson Studio, Analyzing data with Watson Studio,Exersice: Getting started with Watson Studio, Analyzing data with Watson Studio. [6]

Outcome(s): On the successful completion of the course, the student will be able to:

- Hadoop and the Hadoop Distributed File System
- Analyze the time and space complexity of algorithms.
- Apache Spark.
- ZooKeeper, Slider, and Knox

Text Books:

1. Fan, Jianqing, Fang Han, and Han Liu. "Challenges of big data analysis." National science review 1.2 (2014): 293-314.

Reference Books:

CS 19.316 **Artificial Intelligence** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.311 Big Data Programming

Objective(s):

- To Describe the field of AI and its subfields machine learning, NLP and computer vision
- To Describe the types of AI
- To Describe the types of machine learning: Supervise learning, unsupervised learning, and deep learning
- To Describe the purpose of training the various Watson services to adapt them to a closed-domain
- To Use Watson API Explorer to interact with the Watson services REST API, to rest your calls to the

1. **Artificial intelligence overview**: Introduction to Artificial Intelligence, Machine Learning, Natural Language Processing, Computer vision, Cognitive Computing. [5]
2. **Artificial intelligence foundations**: Introduction to IBM Watson, Evolution from DeepQA to Watson services on IBM Cloud, Build with Watson, Exploring Watson services with Watson API Explorer. [10]
3. **Artificial intelligence analyst:** Introduction to Natural Language Processing, Pipeline and concepts, NLP and IBM Watson, Exercises on Ingest, Convert, Enrich, and Query with Watson Discovery Service. [10]
4. **Chatbots:** Introduction to Chatbots, Chatbot fundamentals, IBM Watson conversation service. [8]
5. **Computer Vision:** Introduction to Computer Vision, Computer Vision fundamentals, IBM Watson Visual Recognition service, Exercise on Classifying images with Watson Visual Recognition. [7]

Outcome(s):

- Understand the relationship between AI and NLP
- Know the history and advancement of Computer Vision
- Understand Computer Vision components
- Learn about the Vision services that are available from IBM Watson.

Text Books:

1. Russell, Stuart J., and Peter Norvig. Artificial intelligence: a modern approach. Malaysia; Pearson Education Limited,, 2016.

Reference Books:

1. Michalski, Ryszard S., Jaime G. Carbonell, and Tom M. Mitchell, eds. Machine learning: An artificial intelligence approach. Springer Science & Business Media, 2013.
2. Nilsson, Nils J. Principles of artificial intelligence. Morgan Kaufmann, 2014.

CS-19.416 **Predictive Modeling Analytics** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): Cs 19.316 Artificial Intelligence

Objective(s):

- To understand how analytics provided a solution to industries using real case studies
- To Explain what is analytics, the various types of analytics, and how to apply it
- To Improve efficiency, sample records, and work with sequence data
- To Integrate and collect data
- To Understand the principles of data mining

1. **Business Analytics Overview**: Analytics overview, Analytics trends, Towards a predictive enterprise, Analytics: Industry domains , Case studies and solutions. Business Intelligence and Analytics. [5]
2. **Introduction to A Predictive Analytics Platform & Data Mining**: Introduction to data mining, Working with modeler, A Data-mining tour ,Collecting initial data , Understanding your data ,Setting the unit of analysis ,Integrating data ,Deriving and reclassifying fields, Looking for relationships ,Introduction to modeling , Exercise: On the basis of all above topics. [10]
3. **Advanced data preparation**: Using functions, Data transformations, Working with sequence data, Sampling records, Improving efficiency. Exercise on the basis of all above topics. [10]
4. **Automated Data Mining**: Introduction to data mining ,The basics of using a modeler ,Reading data files , Data exploration , Automated data preparation ,Data partitioning, Predictor selection for modeling ,Automated models for categorical targets , Model evaluation , Automated models for continuous targets. [5]
5. **Deploying models Exercise :**Adding nodes and creating streams in the modeler ,Reading a data file and typing the data in the source node , Review missing values in modeler and use the data audit node on the charity data , Practice using the ADP node to prepare data for modeling ,Use a partition node to split the charity data for modeling ,Use the feature selection node to select fields and predict a response ,Using the auto classifier node to construct a model in order to predict a response, Evaluate the model created to predict the field response ,Develop a model to predict the total spending , Use a scoring stream to make predictions [10]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand the principles of data mining
- Use the user interface of modeler to create basic program streams
- User a partition node to create training and testing data subsets
- Use a model to score new data

Text Books:

Reference Books:

1. Kuhn, Max, and Kjell Johnson. Applied predictive modeling. Vol. 26. New York: Springer, 2013.
2. Siegel, Eric. Predictive analytics: The power to predict who will click, buy, lie, or die. Hoboken: Wiley, 2013.

CS 19.292 **Application Security** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s):

Objective(s):

- To Describe the emerging threats and leaks as the world is becoming digitalized
- To Understand the security dynamics of securing the enterprise
- To Understand relational database concepts and how to work with database objects
- To Describe how to work with select statements, DML statements, and multiple tables
- support etc.)
- To Understand glass box scanning, content based scanning, and troubleshooting

1. **Cyber Security Overview**: Emerging threats and leaks as the world is becoming digitalized, The changing dynamics of securing the enterprise, A new approach to security, The foundation of approach to security the enterprise, IT Security Frameworks, Security Intelligence as a foundation of all security programs, IBM Security. [5]
2. **Application Security Foundations**: SQL Fundamentals, Relational database concepts, Working with database objects, Reading data, Inserting, updating, and deleting data, Working with multiple tables, exercises on Relational database exercise, Creating, modifying and deleting database objects ,Inserting, updating, and deleting data. [9]
3. **Introduction to HTML5 and JavaScript Programming:** HTML5 overview, JavaScript programming for web applications, HTML5 features, Working with JavaScript in HTML documents, Working with HTML5 features. [9]
4. **Web Application Security Fundamentals:** The web application security problem, Web application basics, Injection flaws, Broken authentication and session management, Cross-Site scripting, Insecure direct object reference, Security misconfiguration, Sensitive data exposure, Missing function level access control, Cross-site request forgery (CSRF), Using components with known vulnerabilities, Unvalidate redirects and forwards, Integrating security in the software development lifecycle [9]
5. **Web Application Security Solution Fundamentals:** Web application security overview, Installation and setup, Preparing for scan, Configuring first scan, Reviewing the results, Reporting, Logging in and managing sessions, Configuring explore options, Optimizing your scan, Glass box scanning, Content-based scanning, Reviewing scan coverage, Scanning web services, Extending the security web application solution, Troubleshooting, [8]

Outcome(s):

- Understand relational database concepts and how to work with database objects
- Describe how to work with select statements, DML statements, and multiple tables
- Understand how to use JOINs in SQL
- Understand the basics of HTML5 (objectives, document types that are supported, browser support etc.)

Text Books:

CS-19.311 **Big Data Programming** **Total Lectures: 40**

Credit:3-0-0-3

Prerequisite(s): Basic knowledge of Linux , SQL, Hadoop technologies, data science,

Objective(s):

- To Understand what Big Data is
- To understand how the growth of interconnected devices helps big data.
- To Learning the tools that will enable to continue big data education after the course

1. **Big Data Overview**: Introduction to Big Data, Introduction to the Big Data Ecosystem, Introduction to Hortonworks Data Platform (HDP), Apache Ambari, Hadoop and HDFS, MapReduce and YARN, Apache Spark, Storing and quering data, ZooKeeper, Slider, and Knox, Loading data with Sqoop, Security and Governance, Stream Computing, Exercise: Exploration of the lab environment. [10]
2. **Exploration of the lab environment:** Managing Hadoop clusters with Apache Ambar, File access and basic commands with HDFS, Running MapReduce and YARN jobs, Creating and coding a simple MapReduce job, Working with a Spark RDD with Scala, Using Hive to access Hadoop/HBase data, Explore Zookeeper, Moving data into HDFS with Sqoop, [10]
3. **Introduction to Data Science**: Data Science and Data Science Notebooks, Data Science with Open Source Tools, Exercise: Moving data into HDFS with Sqoop [5]
4. **Big SQL**: Using Big SQL to access data residing in the HDFS, Creating Big SQL schemas and tables, File formats and querying Big SQL tables, Managing the Big SQL Server, Configuring Big SQL security, Data federation with Big SQL, Exercise: Connecting to the IBM Big SQL Server, Creating and managing Big SQL schemas and tables, Querying Big SQL tables, Managing the Big SQL Server, Configuring Big SQL security, Configuring impersonation in Big SQL, Using Fluid Query with Big SQL. [9]
5. **IBM Watson Studio:** Introduction to IBM Watson Studio, Analyzing data with Watson Studio,Exersice: Getting started with Watson Studio, Analyzing data with Watson Studio. [6]

Outcome(s): On the successful completion of the course, the student will be able to:

- Hadoop and the Hadoop Distributed File System
- Analyze the time and space complexity of algorithms.
- Apache Spark.
- ZooKeeper, Slider, and Knox

CS 19.496 **Block Chain** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.292 Application Security

Objective(s):

- To Explain block chain and how it is applied across industries
- To Understand the benefits of a blockchain platform
- To Explain what is Hyper ledger Composer, how it fits into blockchain, and its applications
- To Explain the elements of a business network, the role of channels, and how the world state is maintained
- To Understand block chain deployment, security and integration capabilities

1. **Blockchain overview**: What is Blockchain? The business backdrop, The problem area, Relation to Bitcoin, Difference between Bitcoin and Blockchain, Requirements for a blockchain in a business environment, Requirements deep dive, Apply blockchain to business, Why blockchain is relevant for business, Consensus: Shared Reference Data Example, Provenance: Supply Chain Example, Immutability: Audit and Compliance Example, Finality: Letter of Credit Example, Industry Use Cases, Hyperledger Composer, Hyperledger Fabric, Blockchain for Financial Services [10]
2. **Blockchain Foundations**: HTML5 overview, JavaScript programming for web applications, HTML5 features, Working with HTML 5 features, Node.js, Server-Side JavaScript, Creating a Node.js Web Application, Asynchronous I/O with callback programming, Refactor weather project, , Working with JavaScript in HTML documents. [8]
3. **Docker Essentials** : Introduction to Docker, Add value CI/CD with Docker Images, Introduction to Orchestration, Get started with Kubernetes, Virtual machines, containers, and Kubernetes, Relationship between Kubernetes and containers, Deploy an application with IBM Watson services. [8]
4. **Blockchain Developer:** Blockchain Overview, Introducing Hyperledger Composer, Understanding Blockchain Solution Architecture, Blockchain in-depth, Hyperledger Fabric Application Development, Understanding Blockchain Deployment Options, Understanding Blockchain Security, Blockchain Integrated, Applying blockchain concepts to the vehicle manufacture lifecycle use case, [8]
5. **User Application:** Developing a blockchain user application with Hyperledger Composer SDK, Developing a client application for Hyperledger Fabric, Integrating blockchain with other systems, [6]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand blockchain and how it is applied across industries
- Understand the role of a shared ledger
- Understand the benefits of a blockchain platform
- Understand what is Hyperledger Composer, how it fits into blockchain, and its applications
- Understand the blockchain solution architecture

Text Books:

1. Wattenhofer R. The science of the blockchain. CreateSpace Independent Publishing Platform; 2016 Jan 27.

Reference Books:

1. Swan, Melanie. Blockchain: Blueprint for a new economy. " O'Reilly Media, Inc.", 2015.
2. Mougayar, William. The business blockchain: promise, practice, and application of the next Internet technology. John Wiley & Sons, 2016.

CS 19.461 **Cloud Computing** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s): To learn how to use cloud services.
To implement virtualization and task scheduling

1	**Overview of Cloud Computing:** Brief history and evolution - history of cloud computing, evolution of cloud computing, traditional vs. cloud computing, cloud service models (IaaS, PaaS & SaaS), cloud deployment models (public, private, hybrid and community cloud), benefits and challenges of cloud computing, introduction to AWS public cloud vendor, cost optimization in AWS, basics of virtualization, virtualization technologies, server virtualization, VM migration techniques, role of virtualization in cloud computing, introduction to EC2 service of AWS.	[10]
2	**Working with Private Cloud:** Private cloud definition, characteristics of private cloud, private cloud deployment models, private cloud vendors - CloudStack, OpenStack, Eucalyptus Microsoft, private cloud – benefits and challenges, private cloud implementation in Amazon EC2 service.	[8]
3	**Working with Public Clouds:** What is public cloud, why public cloud, when to opt for public cloud, public cloud service models, public cloud players, infrastructure as a service offering, IaaS vendors, PaaS offerings, PaaS vendors, software as a service, demonstrating public cloud with AWS – storage and database services, private vs. public cloud – when to choose.	[10]
4	**Overview of Cloud Security:** Explain the security concerns in traditional IT, introduce challenges in cloud computing in terms of application security, server security, network security, security reference model, abuse and nefarious use of cloud computing, insecure interfaces and APIs, malicious insiders, shared technology issues, data loss or leakage, account or service hijacking, unknown risk profile, shared security model between vendor and customer in IaaS/PaaS/SaaS, implementing security in AWS.	[8]
5	**Future directions in Cloud Computing:** When and not to migrate to cloud, migration paths for cloud, selection criteria for cloud deployment, issues/risks in cloud computing, future technology trends in cloud computing.	[4]

Outcome(s): On successful completion the students will be able to:

- Analyze the cloud computing setup with its vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds.

Text Books:

1. Raj Kumar Buyya, James Broberg and Andrezi M Goscinski, “Cloud Computing: Principles and Paradigms”, John Wiley & Sons, 2010
2. Nick Antonopoulos and Lee Gillam, “Cloud computing: Principles, Systems and Applications”, Springer, 2010.

Reference Books:

1. Anthony T Velte, Toby J Velte and Robert Elsenpeter, “Cloud Computing: A Practical Approach”, McGraw Hill, 2010
2. Borko Furht and Armando Escalante (Editors), “Handbook of Cloud Computing”, Springer, 2010
3. Judith Hurwitz, Robin Bllor, Marcia Kaufman and Fern Halper, “Cloud Computing for Dummies”, John Wiley & Sons, 2010.

CS 19.462 **Mobile App Development** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s):

- To learn how mobile apps are different from other traditional apps by learning those aspects of mobile programming that make it unique from other platforms.
- Program mobile applications for the Android operating system that use basic and advanced phone features.
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout, UI elements, Drawable, Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and SMS APIs native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access (via Internet/Intranet)	[14]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobile apps, distributing apps on mobile market place.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

Text Books:

1. Barry Burd, Android Application Development All in One for Dummies, Johen Wiley & Sons Inc., 2011.
2. Anubhav Pradhan, Anil V Deshpandy, Mobile App Development, Edition I

Reference Books:

1. Lauren Darcey, Shane Conder, “Teach Yourself Android Application Development in 24 Hours”, SAMS Publishing, 2012, 2ndEdition , 2012.

CS 19.463 **Agile Software Development** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.302 (Software Engineering)

Objective(s):

- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To learn the essentials of collaboration as they apply to agile methods.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1	**Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools.	[7]
2	**Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management.	[9]
3	**Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk-based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software.	[10]
4	**Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control.	[10]
5	**Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Scrum.
- Write user stories for project requirements.
- Write test cases for developing features.

Text Books:

1. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
2. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: ET-18.101 **E-Government Processes and Technologies** **3-0-0-3**

Total Lectures: 39

Objectives:

- Support the government departments, in terms of leading or being part of team responsible for, e-Governance project Conceptualization and design .
- Support the government departments in effectively planning and managing various phases of e-Governance project development and implementation
- Leverage the strengths of private sector in e-Governance initiatives through effective procurement approach and manage service delivery throughout project Lifecycle
- Application of learning and good practices in e-Governance projects implementation to minimise the learning curve and to maximise the benefits for the department

1. **Roadmap to e-Government:** Vision and mission of e-government, government to e-government transformation, selection, planning and management of projects, parameters for success and measure of projects, relationship and citizen participation in e-government. [5]
2. **e-Gov 2.0:** Introduction, e-Gov 1.0 v/s e-Gov 2.0, e-Gov 2.0 financial and technology models. [5]
3. **Multiple Standards in ICT and Change Management:** Purpose and rationale for multiple standards, areas having multiple standards, rationale for single standard, introduction to change management, model of change management. [6]
4. **Government Data Centres and Utility Computing :** Elements and complexity of GDCs, virtualization and consolidation of GDCs, architecture of a GDC, utility computing concepts and areas, technical and regulatory issues in utility computing. [7]
5. **Secured Government Information System Architecture:** Introduction, architectural types, processes, security requirements and policies, steps in designing security architecture. [8]
6. **Case Studies of few e-Government Projects:** National Citizen Identity System, land records, urban development management system, e-agriculture, e-procurement, RTO, e-mitra etc. [8]

(The contents in this unit are subject to change as per the evolution and progression of novel e-governance projects).

Outcomes: Will have the understanding and knowledge of the following:

- Better access to information and quality services for citizens
- Simplicity, efficiency and accountability in the government
- Expanded reach of governance
- Enabling Environment for Promoting Economic development
- Enhancing Transparency and Accountability:
- Improving Service Delivery:
- Improving Public Administration

Text Books:

1. Jaijit Bhattacharya, "e-Gov 2.0", 1st edition, Tata McGraw Hill.

2. C.S.R. Prabhu, "e-Governance: Concepts and Case Studies", 2nd edition, PHI.

Reference Books:

1 J. Satyanarayana," e-Government: The Science of the Possible", PHI.

2 Bidisha Chaudhuri, "E-Governance in India: Interlocking Politics, Technology and Culture", 1st edition, Routledge.

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code:
ET- 18.103

Application of Electronics in Everyday Life

3-0-0-3
Total Lectures: 40

Objective: To develop the understanding of Electronics used in daily life as well as understand the principle and working of various instruments used in health care, IoT and communication sector.

1. **ELECTRONICS COMPONENTS:** Resistor and its color code, Capacitor, Inductor, PN diode, Photo Diode, LDR, LED, Zener diode, Varactor diode. **[4]**
2. **ELECTRONICS IN COMMUNICATION:** Telegraph, Telex, Mobile Phone, Optical Fiber, Transmission Line, Waveguides, Satellite Communication, RADAR, 4G system, Internet, Video conferencing, Fax. **[10]**
3. **ELECTRONICS IN HOME CARE:** Basic of electricity and electrical cables, Multi meter and basic electronic component, Power supply, UPS/Inverter, SMPS, Washing machine, Microwave oven, Steam iron, Electric rice cooker, Electric kettle, Induction plate. **[8]**
4. **ELECTRONICS IN IOT:** Introduction, IoT applications for industry: Future Factory Concepts, Smart Objects, Smart Applications, Smart Homes, Structural Monitoring, Buildings, Smart Cities , Transportation Healthcare Warfare, Physical Intrusion Detection, Surveillance. **[10]**
5. **ELECTRONICS IN HEALTHCARE:** ECG, EEG, Defibrillator, Computed Tomography, Magnetic Resonance Imaging, Glucometer, Sphygmomanometer, Digital and Infrared Thermometer. **[8]**

Outcomes:

At the end of this course, the student should be able to

1. Know about fundamentals of Electronic Components.
2. Understand the concept of Communication.
3. Understand the concepts of electronics behind various home appliances.
4. Learn about basics of health care equipment.

Text Books:

1. Ben G. Streetman, Sanjay Kumar Banerjee: Solid state Electronic Device Electronics, Sixth Edition, Prentice Hall.
2. Adel S. Sedra, Kenneth C. Smith: Microelectronic circuit, Sixth Edition, Oxford.
3. Richard. C. Jaeger, "Microelectronic Circuit Design", Tata McGraw-Hill Companies Inc., International Edition.

Reference Books:

1. B. P. Lathi, "Modern Digital and Analog communication Systems", Oxford University Press, 2010.
2. William C. Y. Lee, Mobile cellular telecommunication – Analog and Digital systems, McGraw Hill, 2nd Ed, 2006

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code: **Energy Sources & Sustainable development** **3-0-0-3**
ET-18.104 **Total Lectures: 39**

Objective(s): *The course is designed to give knowledge of various energy sources and basics of power production techniques. It lays emphasis on basic understanding of green energy technology and its importance for environment and sustainable development.*

1. **World Energy Status:** Present Situation and future Energy Scenario, Evolution of Energy Security; India's Energy Scenario; Introduction to nexus between Energy, Environment, and Sustainable development and Climate Change and societal issues [14]
Conventional Energy Sources: Fossil Fuel, Coal, Oil, Gas, Thermal Power Stations, Hydro power generation, Comparison of various conventional energy systems, their prospects and limitations
Scenario of Green Energy Sources: Difference between conventional and renewable energy systems, Needs and advantages of green energy sources, social implications.

2. **Solar Energy:** Principles of photovoltaic generation of electricity; Silicon cell; Photon absorption; Cell efficiency; Solar cell construction; Types and usage of photovoltaic systems. solar cell modules and arrays, solar cell types, material, applications, advantages and disadvantages, solar energy conversion into heat, types of solar collectors, cylindrical parabolic collector, solar energy thermal storage. [14]
Nuclear Energy: Present Status of Nuclear Power; Nuclear Fission & Fusion, National Nuclear Power Program,, Natural Radioactivity, Radioactive Decay, Radiation Doses, various types of nuclear power plants, Nuclear Reactor Safety, Fusion reactor

3. **Wind Energy:** Energy available from wind, basics of wind energy conversion system, classification, factors influencing wind, wind shear, turbulence, wind speed monitoring, Betz limit, WECS: classification, characteristics, and applications. [6]

Bio Energy: Types of biogas plants, biogas generation, factors affecting biogas generation, advantages and disadvantages, biomass energy, energy plantation, gasification

4. **Ocean Energy:** Ocean energy resources-ocean energy routes - Principles of ocean thermal energy conversion systems- ocean thermal power plants- Principles of ocean wave energy conversion and tidal energy conversion. [5]
Geothermal energy: Introduction, vapor and liquid dominated systems, binary cycle, hot dry rock resources, magma resources, advantages and limitations

Outcome(s): *After learning the subject, student will be able to understand the basic principle of power production from different energy sources. Advantage of renewable and green energy sources for sustainable development and environmental issues related to energy sources and societal implications*

Text Books:

1. S.P. Sukhatme, Solar Energy: principles of Thermal Collection and Storage, Tata McGraw-Hill
2. C. S. Solanki, "Solar Photovoltaics: Fundamental Applications and Technologies, PHI, 2009
3. S. Glasstone & A. Sesonkse, Nuclear Reactor Engineering, CBS, 2004
4. D. A. Spera, Wind Turbine Technology: Fundamental concepts of Wind Turbine Engineering, ASME Press.

Reference Books:

1. Non-conventional energy resources, Shobh Nath Singh, Pearson India
2. Principles of Solar Energy, Frank Krieth& John F Kreider, John Wiley, New York
3. David Bodansky, Nuclear Energy: Principles, Practices and Prospects, Springer 2004.

Mody University

College of Architecture and Design (CAD)

Open Elective in Free hand sketching for all Undergraduate Programmes

3-0-0-3

Paper Code: FH 141
Paper Name: FREEHAND SKETCHING

Learning Objectives:

1. To ensure that students begin to understand pencils, grades, holding to sketch.
2. To provide students an exposure to express with sketching and understand proportions.
3. To gain skill of sketching indoors.
4. To enhance ability to sketch outdoors.
5. To develop rudimentary ability to use pencil as a media in sketching.

CONTENTS

Unit - I. Introduction to Graphic Skills: [04]

Understanding the meaning of graphic skill; basic techniques, types of pencil shades and grades.

Unit - II. Geometry of Objects [10]

Understanding geometry of an Object, Free hand sketching of an object, object in different eye level, Optical illusions, effect of light on object.

Unit –III. Fundamentals of Perspective [05]

Diminution, Foreshortening, convergence, overlapping shades and shadow

Unit - IV. Outdoor Sketching & Indoor Sketching: [10]

Outdoor:

Sketching buildings, road activity, Landscape, Environmental scenes, principles of perspective drawing, natural forms, built form, their texture.

Indoor: [10]

Sketching of an arranged objects, indoor activity, still life, furniture, equipment, understanding depth, light, shade, shadow; memory drawing.

Expected Outcome:

Students learn and able to draw freehand sketch scenes with addition detailing of foreground and background from pencil effectively on paper.

Suggested Readings

- Buildings;Ian Sidaway, : New Holland Publishers.
- Perspective;Milind Mulick,: Jyotsana Prakashan.

5. Vedic dicsnory: Bhagavad Datta and Hansaraja Publishers- VishvBharti Anusandhan prishada Gyanpura U.P. (वैदिककोश - भगवद दत्त एवं हंसराज प्रकाशक –विश्वभारती अनुसंधान परिषद् ज्ञानपुर उ.प्र.)

MODY UNIVERSITY

OPEN ELECTIVE CBCS COURSE

Course Code:
ET-18.102

Web Designing and Mobile App Development **3-0-0-3**

Total Lectures:40

Objectives: On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. Students will gain the skills and project-based experience needed for entry into web application and development careers.

1. Concept of Internet A brief Introduction to the Internet: Computer Networks, Internet, URL (Uniform Resource Locator), Internet Service Provider, Intranet, Extranet, Virtual Private Network. Application of Internet: World Wide Web, Search Engines, News groups, Electronic Mail, Web Portal, Chat, Video Conferencing, FTP, Remote Login, E-Commerce, E-Learning, EGovernance, E-Banking. [9]

2. Static Web Page Development Basics of HTML: What is Internet Language?, Understanding HTML, Create a Web page, Linking to other Web Pages, Publishing HTML Pages, Text Alignment and Lists, Text Formatting Fonts Control, Email Links and link within a Page, Creating a Table, Creating HTML Forms, Creating Web Page Graphics, Putting Graphics on a Web Page, Custom Backgrounds and Colors, Creating Animated Graphics. [9]

3. Dynamic Web page Development Cascading Style Sheet: CSS, Defining Style with HTML Tags, Features of Style Sheet, Style Properties, Style Classes, External Style Sheet [8]

4. JavaScript Introduction to JavaScript: Writing First Java Script, External JavaScript, Variables: Rules for variable names, Declaring the variable, Assign a value to a variable, Scope of variable, Using Operators, Control Statements, JavaScript loops, JavaScript Functions: Defining a Function, Returning value from function, User define function. [9]

5. Android: Introduction to android OS, Versions of Android, Introduction to Android Studio, Different GUI Elements of Android Programming, WebView, Convert any Website to android apk. [5]

Outcomes:

- Students are able to develop a dynamic webpage by the use of java script and DHTML.
- Students will be able to write a well formed / valid XML document.
- Students will be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.
- Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.

- Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.

Text Books:

1. Teach Yourself HTML 4 in 24 Hours By Dick Oliver (Tech media) 4th edition
2. The Complete Reference JavaScript By Thomas Powell & Fritz Schneider 2nd Edition.
3. Jerome (J.F) DiMarzio "Android A programmer's Guide" Tata McGraw-Hill 2010 Edition.

Reference Books :

1. HTML, DHTML, JavaScript, Perl CGI By Ivan Bayross(BPB) 3rd Edition
2. CSS By Kynn Bartlett(Pearson Education)2nd Edition
3. Introduction to Internet & HTML Scripting By Bhaumik Shroff Books India Publication 3rd Edition.

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY

The Bhagavad-Gita

Pre-requisite(s): Basic interest in Indian culture. Sanskrit verses in *Devanagari* script as well as in transliteration forms are provided for further references only; knowledge of Sanskrit is not required as the medium of instruction is English, however it may be an added advantage. Familiarity with the *Devanagari* script may be useful at times.

Course Objectives: The primary aim of the Bhagavad-Gita Course is to make the glorious 'Gita way of life' accessible to anyone who yearns for it, or is just curious to know more in a convenient yet effective manner. It provides a holistic, insightful coverage of the entire text in a lucid and simple style without compromising on the salient features of this priceless knowledge. Providing inputs in the modern context for continuous improvement it becomes a practical manual to live a transformed life of goodness and greatness. The course seeks to help students negotiate the text independently without referring to the traditional commentaries so as to enable them to experience the richness of the text and its philosophy.

Evaluation Process: The evaluation pattern would have following two components:

1. Internal component of 20 marks, which can be assessed in one of the following ways at the discretion of course coordinator
    a. Assignment
    b. Written test
    c. Presentation
    d. Viva
    e. Model preparation
    f. Practical assignment
2. An end term examination of 80 marks.

Course Description:

BG 111	**The Bhagavad-Gita**	**3-0-0-3**
Introduction: Background of the Mahabharata War, Author (Vedavyasa), Background of the Bhagavad-Gita: knowledge given in the battlefield of life, The role of Gita in our life, Overview of the chapters, The Distress of Arjuna		[03]

2. Jerri L. Ledford, “SEO: Search Engine Optimization Bible”, 2nd Edition, Wiley India, 2009
3. John I Jerkovic, “SEO Warrior: Essential Techniques for Increasing Web Visibility”, O'Reilly, 2009

CS 19.461 **Cloud Computing** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.306 (Computer Networks)

Objective(s): To learn how to use cloud services.
To implement virtualization and task scheduling

1	**Overview of Cloud Computing:** Brief history and evolution - history of cloud computing, evolution of cloud computing, traditional vs. cloud computing, cloud service models (IaaS, PaaS & SaaS), cloud deployment models (public, private, hybrid and community cloud), benefits and challenges of cloud computing, introduction to AWS public cloud vendor, cost optimization in AWS, basics of virtualization, virtualization technologies, server virtualization, VM migration techniques, role of virtualization in cloud computing, introduction to EC2 service of AWS.	[10]
2	**Working with Private Cloud:** Private cloud definition, characteristics of private cloud, private cloud deployment models, private cloud vendors - CloudStack, OpenStack, Eucalyptus Microsoft, private cloud – benefits and challenges, private cloud implementation in Amazon EC2 service.	[8]
3	**Working with Public Clouds:** What is public cloud, why public cloud, when to opt for public cloud, public cloud service models, public cloud players, infrastructure as a service offering, IaaS vendors, PaaS offerings, PaaS vendors, software as a service, demonstrating public cloud with AWS – storage and database services, private vs. public cloud – when to choose.	[10]
4	**Overview of Cloud Security:** Explain the security concerns in traditional IT, introduce challenges in cloud computing in terms of application security, server security, network security, security reference model, abuse and nefarious use of cloud computing, insecure interfaces and APIs, malicious insiders, shared technology issues, data loss or leakage, account or service hijacking, unknown risk profile, shared security model between vendor and customer in IaaS/PaaS/SaaS, implementing security in AWS.	[8]
5	**Future directions in Cloud Computing:** When and not to migrate to cloud, migration paths for cloud, selection criteria for cloud deployment, issues/risks in cloud computing, future technology trends in cloud computing.	[4]

Outcome(s): On successful completion the students will be able to:

- Analyze the cloud computing setup with its vulnerabilities and applications using different architectures.
- Design different workflows according to requirements and apply map reduce programming model.
- Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds.

Text Books:

1. Raj Kumar Buyya, James Broberg and Andrezi M Goscinski, “Cloud Computing: Principles and Paradigms”, John Wiley & Sons, 2010
2. Nick Antonopoulos and Lee Gillam, “Cloud computing: Principles, Systems and Applications”, Springer, 2010.

Reference Books:

1. Anthony T Velte, Toby J Velte and Robert Elsenpeter, “Cloud Computing: A Practical Approach”, McGraw Hill, 2010
2. Borko Furht and Armando Escalante (Editors), “Handbook of Cloud Computing”, Springer, 2010
3. Judith Hurwitz, Robin Bllor, Marcia Kaufman and Fern Halper, “Cloud Computing for Dummies”, John Wiley & Sons, 2010.

CS 19.462 **Mobile App Development** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite(s): CS 19.202 (Object Oriented Programming)

Objective(s):

- To learn how mobile apps are different from other traditional apps by learning those aspects of mobile programming that make it unique from other platforms.
- Program mobile applications for the Android operating system that use basic and advanced phone features.
- Deploy applications to the Android marketplace for distribution.

1	**Getting started with Mobility:** Mobility landscape, mobile platform, mobile apps development, overview of android platform, setting up the mobile app development environment along with an emulator, a case study on mobile app development.	[8]
2	**Building blocks of mobile apps: Apps user:** Interface designing-mobile UI resources (Layout, UI elements, Drawable, Menu), activity-states and life-cycle, interaction amongst activities. app-functionality beyond user interface- threads, async task, service –state and life cycle, notification, broad cast receivers, telephony and SMS APIs native data handling-on device file I/O, shared preferences, mobile database such as SQLite, and enterprise data access (via Internet/Intranet)	[14]
3	**Sprucing up mobile apps:** Graphics and animation- custom views, canvas, animation APIs, multimedia-audio/video playback and record, location awareness, and native hardware access (sensor such as accelerometer and gyroscope).	[8]
4	**Testing mobile apps:** Debugging mobile apps, white box testing, black box testing, and test automation of mobile app, JUnit for Android, Robotium, Monkey Talk.	[6]
5	**Taking apps to market:** Versioning signing and packaging mobile apps, distributing apps on mobile market place.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand the android operating system in details
- Create mobile application for various screens
- Deploy on play store market
- Use various sensors available in mobile

Text Books:

1. Barry Burd, Android Application Development All in One for Dummies, Johen Wiley & Sons Inc., 2011.
2. Anubhav Pradhan, Anil V Deshpandy, Mobile App Development, Edition I

Reference Books:

1. Lauren Darcey, Shane Conder, “Teach Yourself Android Application Development in 24 Hours”, SAMS Publishing, 2012, 2ndEdition , 2012.

CS 19.463 **Agile Software Development** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): CS 19.302 (Software Engineering)

Objective(s):

- To learn the fundamental principles and practices associated with each of the agile development methods.
- To learn how agile methods scale to large and distributed projects.
- To learn the essentials of collaboration as they apply to agile methods.
- To perform in-depth explorations into aspects of agile development that are particularly relevant to each student through detailed discussion sessions.

1	**Fundamentals of Agile:** The genesis of Agile, introduction and background, Agile manifesto and principles, overview of Scrum, extreme programming, feature driven development, lean software development, Agile project management, design and development practices in Agile projects, test driven development, continuous integration, refactoring, pair programming, simple design, user stories, Agile testing, Agile tools.	[7]
2	**Agile Scrum Framework:** Introduction to Scrum, project phases, Agile estimation, planning game, product backlog, sprint backlog, iteration planning, user story definition, characteristics and content of user stories, acceptance tests and verifying stories, project velocity, burn down chart, sprint planning and retrospective, daily scrum, Scrum roles – product owner, Scrum master, Scrum team, Scrum case study, tools for Agile project management.	[9]
3	**Agile Testing:** The Agile lifecycle and its impact on testing, test driven development (TDD), unit framework and tools for TDD, testing user stories – acceptance tests and scenarios, planning and managing testing cycle, exploratory testing, risk-based testing, regression tests, test automation, tools to support the Agile tester, securing Agile software.	[10]
4	**Agile Software Design and Development:** Agile design practices, role of design principles including single responsibility principle, open closed principle, Liskov substitution principle, interface segregation principles, dependency inversion principle, Agile design, need and significance of refactoring, refactoring techniques, continuous integration, automated build tools, version control.	[10]
5	**Industry Trends:** Market scenario and adoption of Agile, Agile ALM, roles in an Agile project, Agile applicability, Agile in distributed teams, business benefits, challenges in Agile, risks and mitigation, Agile project on cloud, balancing Agility with discipline, Agile rapid development technologies.	[4]

Outcome(s): On successful completion of this course, students will be able to

- Understand concept of agile software engineering and its advantages in software development. Recognize various agile methods.
- Design and manage a project using Scrum.
- Write user stories for project requirements.
- Write test cases for developing features.

Text Books:

1. Ken Schawber, Mike Beedle, Agile Software Development with Scrum, Pearson, 2008.
2. Robert C. Martin, Agile Software Development Principles, Patterns and Practices, Prentice Hall

	Total Credits	**26**

Detailed course syllabus for First Semester- M. Tech (NST)

MA 521 Engineering Mathematics and Numerical Analysis 3-1-0-4

1. Ordinary Differential Equations: Ordinary differential Equations of first order and first Degree (Equations in which variables are separable, homogeneous, linear, exact), linear differential equations with constant coefficients and variable coefficient . **[10]**

2. Partial Differential Equations: First order partial differential equations with constant coefficients (variables separation method), one dimensional heat and wave equation, Laplace equation in two dimension, power series solution of differential equation (Frobenius method). **[08]**

3. Special Functions: Bessel's function and equation, Legendre function, Green function **[06]**

4. Numerical Methods: Use of interpolation formula (equal and unequal intervals), numerical integration (Trapezoidal and Simpson's rules), numerical differentiation, solution of linear system of equation (Gauss elimination and Gauss Seidel method), solution of nonlinear equation (Bisection method, Regula Falsi and Newton's Raphson method),numerical solution of ordinary differential equation (Predictor - Corrector methods, Runga-Kutta method). **[16]**

Text Books:

1. E. Kreyzig , Advanced Engineering Mathematics" 2nd edition, John Wiley & Sons, 2004
2. B. V. Ramana, Higher Engineering Mathematics, McGraw-Hill, New Delhi
3. S.S. Sastry, Introductory Methods of Numerical Analysis, PHI, 5th edition,2012

Reference Books:

1 S.C. Chapara and, R. P. Canale, Numerical methods for Engineers", 2nd Edition, Tata McGraw-Hill, New Delhi, 2002
2. Ram Babu, Engineering Mathematics, Pearson Publication, New Delhi, 2010
3. Ram Babu, Numerical Methods, Pearson Publication, New Delhi, 2010

NU 501 Quantum Mechanics and Electrodynamics 3-1-0-4

Quantum Mechanics

1. Origin of quantum theory and related experiments, wave-particle duality, wave function and its Born interpretation, uncertainty principle, Schrodinger equation, wave functions, wave packets, probability amplitudes, solutions to Schrodinger equation in one dimensions; Barrier penetration, Potential wells, Simple harmonic oscillator, Schrodinger equation in three dimensions. [**7**]
2. Formalism of quantum mechanics; Liner vector space, Function spaces, Hilbert space formalism, inner product and probability, completeness of Eigen functions, delta functions, Bra & Ket notation, matrix representation of an operator, change of basis, unitary transformations. [**6**]
3. General treatment of angular momentum, spin, identical particles; SHM problem by operator method; Pauli exclusion principle; Scattering theory; some calculations, Perturbation theory, WKB approximation. [**7**]

Electrodynamics

4. Coulomb law and electrostatics, Laplace and Poisson equations, Maxwell's equations, partial polarization, Lorentz force, Poynting theorem. Scalar and vector potentials, Gauge transformations and gauge invariance. [**5**]
5. Special theory of relativity, four vectors, Field tensor, Relativistic formulation of electrodynamics, Maxwell equations in covariant form [**4**]
6. Relativistic charged particle in an electromagnetic field, Motion in uniform electric and magnetic fields and combinations of E and B fields, Non uniform static magnetic field [**4**]
7. Green's function for wave equation (relativistic), Radiation from localized moving charges, Multi pole expansion, dipole and quadrupole radiation, Radiation from accelerated charge [**4**]
8. Power radiated by point charge, Larmor's formula, Angular distribution of power, Bremsstrahlung and synchrotron radiation, Dispersion theory, Radiative reaction, Radiative damping [**5**]

Text Books:

1. Griffiths D. J., Introduction to Quantum Mechanics, 2nd edition, Pearson, 2009.
2. Griffiths D. J., Introduction to Electrodynamics, 3rd edition, Prentice Hall India, 1999.
3. Ghatak A. K. & Lokanathan S., Quantum Mechanics: Theory and Applications, 5th edition, Macmillan India, 2004.

Reference Books:

1. Schiff L. I., Quantum Mechanics, 3rd edition, Tata McGraw-Hill, 2010.
2. Zettili N., Quantum Mechanics: Concepts & Applications, 2nd edition, Wiley, 2009.
3. Jackson J. D. Classical Electrodynamics, 3rd edition, Wiley, 1998.
4. Lifshitz E. M. & Landau L. D., Quantum Electrodynamics (Course of Theoretical Physics), 2nd edition, Pergamon Press, 1981.

NU 503 **Nuclear Physics** **3-1-0-4**

1. **Introduction:** Basic properties of the nucleus and nuclear radiations **[4]**

2. **Two Nucleon Problem:** The Two Nucleon Problem, Quadrupole & Magnetic moments of Deuteron, S_{12} operator, Existence of non-central forces. Deuteron bound state wave function & energy **[7]**

3. **Nuclear Forces:** np scattering cross-section, ortho & para hydrogen states, Nuclear forces, spin dependence, pp scattering, Existence of repulsive core inside a nucleon**. [7]**

4. **Nuclear Stability:** Binding energy and nuclear stability. **[4]**

5. **Nuclear Reactions:** Kinematics, Direct and Compound Nucleus Reactions, Energetic and general cross section behavior in nuclear reactions**.** **[6]**

6. **Radioactive Decays:** Alpha decay, Beta decay, Fermi's theory of beta decay, determination of mass of neutrino and Gamma decay **[6]**

7. **Nuclear Models:** Liquid drop Model, Nuclear Fission, Shell Model, Spin-Orbit interaction. Application of Shell Model **[6]**

Text Book:

1. Kenneth S. Krane, *Introductory Nuclear Physics*. Hoboken: John Wiley & Sons, Inc., 1987
2. Walter E. Meyerhof, *Elements of Nuclear Physics*. New York: McGraw-Hill, 1967.
3. R.R. Roy & B.P. Nigam, Nuclear Physics: Theory and experiments, 1st edition, New Age nternational, 1967.

Reference Book:

1. Bernard L. Cohen, *Concepts of Nuclear Physics*. New York: McGraw-Hill, (1971)

NU 505 **Nuclear Reactor Theory** **3-1-0-4**

1. **Basics Neutron Physics Concepts:** Neutron and its properties, Neutron and its interaction with matter, Neutron sources, Neutron-nuclear interaction cross sections, Reaction rate density, macroscopic cross section and mean free path. Cross-sections of elements, compounds and mixtures **[7]**
2. **Nuclear Fission**: Fissile and fertile atoms, conversion of fertile into fissile atoms, Fission power, fission chain, control of fission chain, Core physics involving criticality with introduction of four factor formula, Effective multiplication factor, concept of criticality, sub criticality and super criticality, conversion/ breeding ratio, fuel burn-up, Energy release from fission, Neutron yield, Energy distribution among fission neutrons and fragments. **[7]**
3. **Slowing Down and Energy Dependence:** Mechanism of energy loss by scattering collisions, Neutron Slowing-down and Thermalization, Neutron lethargy and average logarithmic decrement, Moderating ratio **[5]**
4. **Neutron Transport equation and Neutron diffusion equation**: Dependence of neutron flux on space, energy, direction and time, Boltzmann equation, Neutron balance equation, Simplified diffusion equation through Fick's law, Diffusion equation in Multiplying and non-multiplying media , Neutron slowing down-moderators-Fermi age model, Slowing down length, Migration length, One group Diffusion equation for finite bare homogeneous reactor, Critical equation and Reactor Buckling, Critical size and Geometrical Buckling (Cube and Semi-Cubic shape, sphere, cylinder), Critical volume and critical mass calculations, Reference to multi group approach, Reflected reactors, reflector saving, flux flattening, Heterogeneous reactors **[16]**
5. **Reactor Kinetics:** Time dependent diffusion equation, Point kinetics, Prompt neutrons, Delayed neutron precursors, Reactor period, period versus reactivity, In hour formula, Short term & long term variation of reactivity, Fission Product Poisoning **[5]**

Text Books:

1. J. R. Lamarsh**,** *Introduction to Nuclear Reactor Theory*, Addison- Wesley Publishing Company ,1966
2. S. Glasstone & A. Sessonske, *Nuclear Reactor Engineering*, Vol. I and Vol. II CBS Publishers & Distributors, New Delhi,2009
3. S. Garg, F. Ahmed and L. S. Kothari, *Physics of Nuclear* Reactors, Tata McGraw Hill, New Delhi, 1986

Reference Book:

1. W. M. Stacey, Nuclear Reactor Physics (Second edition), Wiley- VCH verlag GmbH, 2007

NU 507 Radiation Physics & Instrumentation 3-1-0-4

1. **Radiation**: Ionizing and non ionizing radiation, Natural and artificial radiation, Exposure and dose, units, Absorbed dose, effective dose, radiation sources, synchrotron radiation sources, Biological effects of ionizing radiation, Radiation protection standards and their implementation **[6]**
2. **Interaction of radiation with matter**: Interaction of charged particles, gamma rays, and neutrons with matter, energy loss of heavy charged particles in matter, electronic stopping power (Bohr, and Bethe-Bloch formulae), energy loss of electrons and positrons, Bragg curve, energy straggling, Range and Range straggling, energy loss by Bremsstrahlung radiation, Cerenkov radiation, photoelectric absorption, Compton scattering, pair production, Attenuation, Neutron elastic scattering, inelastic scattering, radiative capture, (n, p), (n, 2n), (n, α), (n, fission) reactions **[8]**

3. **Radiation Detectors**: Gas-filled ionization detectors-Ionization chambers, proportional counters and GM counters, Pulse height spectra and energy resolution. Working of a p-n junction detector, partially and totally depleted detectors, surface barrier detectors, Lithium drifted Silicon detectors (Si(Li)), high-purity Germanium(HPGe) gamma detectors, typical gamma-ray spectrum with an HPGe detector, Scintillation mechanism in inorganic crystal scintillators and organic scintillators, Characteristics and operation of alkali halide scintillators with details of NaI(Tl),Photomultiplier tubes. Pulse height spectrum using a monoenergetic gamma ray source, TLD, Production and detection of neutrons-typical neutron sources, slow neutron detection, BF3 counter, boron-lined proportional counter, boron loaded scintillators, Lithium containing slow eutron detectors, He proportional counters, fission counters, time of flight techniques **[16]**
4. **Reactor Instrumentation**: General considerations – Reactor Nuclear Instrumentation systems– an overview – pressurized water nuclear instrumentation, boiling water reactor nuclear instrumentation, In core detectors, self powered neutron detectors, detectors based on beta decay, detectors based on secondary electrons from gamma decay **[5]**
5. **Shielding & protection against radiation exposure**: Radiation Shielding, Different Geometric configurations, Requirement for Shielding, Biological shielding, Thermal shielding, Shielding Materials for Different Types of Radiation, Criterion for Selecting Shielding Material, External radiation protection, Internal radiation protection **[5]**

Text Book:

1. S. N. Ahmed, *Physics & Engineering of Radiation detection*, Academic Press, 2007
2. Herman Cember, *Introduction to Health Physics*, 3rd edition, McGraw-Hill, 1996
3. G. F. Knoll, *Radiation Detection and Measurement*, 3rd Edition, John Wiley and Sons, 2000

Reference Books:

1. J. E. Martin, *Physics of Radiation protection: A hand book*, 2nd edition, Wiley-VCH, 2006
2. N. Tsoulfanidis, *Measurement and detection of Radiation*, 2nd edition, Taylor Francis, 1995

NU 509 Simulation Methods 2-0-0-2

1. **Finite Difference Method:** Forward difference, Back-ward difference, Central difference, Differential coefficients of various orders and their equivalent finite difference forms with associated errors. Classification of second order differential equations-elliptic, parabolic and hyperbolic equations, Case studies of the three different equations and converting equations in finite difference form, Dirichlet and Neumann boundary conditions and conversion of the boundary conditions to finite difference forms to solve the differential equations of various types **[8]**

2. **Finite Volume Method**: Introduction to finite volume method, Application of boundary conditions, Expression of heat conduction at specified boundary conditions, Applications of finite volume method **[4]**

3. **Finite Element Method**: Introduction, Steps of solution procedure in FEM, Formulation of finite element equations, Galerkin Method, Variational Formulation, Application of FEM to problems related to Nuclear Engineering **[4]**

4. **Monte Carlo Simulation Techniques:** Introduction - Monte Carlo Methods, Random number generation, Monte Carlo Techniques, Crude Monte Carlo, Acceptance – Rejection Monte Carlo, Stratified Sampling, Importance of Sampling, Program Implementation, Other Applications for Monte Carlo Techniques **[4]**

Text Books:

1. B. S. Grewal, Numerical Methods in Engineering and Science, Khanna Publishers, Delhi.
2. O.C. Zienkiewicz, R.L. Taylor, J.Z. Zhu, Finite Element Method: Its Basis and Fundamental, 6^{th} ed., Tata Mc Graw Hill, 2005
3. Malvin H. Kalos, Paula A. Whitlock, Monte Carlo Methods, 2nd edition, Wiley-vch verlag Gmbh, 2008.

Reference Books:

2. R. Herblin, Finite volume for Complex Applications III, Kogan Page, 2002
3. D. C. Handscomb & M. H. John, Monte Carlo Methods, Methuen Young Books, 1964.

NU 511 Modeling & Simulation Lab 0-0-4-2

Programs will be implemented using MATLAB/ FORTRAN

1. Write a program to implement Simpson's $1/3^{rd}$ rule for integration.
2. Write a program to implement Gauss Elimination Method to solve a system of equation.
3. Write a program to solve 1-dimensional heat transfer problem using symmetric banded matrix.
4. Write a program to solve 1-dimensional heat flow equation using Gauss Elimination Method.
5. Write a program to solve 2-dimensional heat flow equation using Gauss Elimination Method.
6. Write a program to solve 3-dimensional heat flow equation using Gauss Elimination Method
7. Write a program to solve heat transfer problem using FEM
8. Write a program to do stress calculations using FEM
9. Write a program to do structural Analysis using FEM
10. Introduction to CANDU Simulator

Suggested Books:

1. O.C. Zienkiewicz, R. L. Taylor, J.Z. Zhu, Finite Element Method: Its Basis and Fundamental, 6^{th} ed., Tata Mc Graw Hill, 2005

2. Getting Started with MATLAB: A Quick Introduction for Scientists and Engineers by Rudra Pratap

NU 513 Integrated Engineering Lab 0-0-4-2

1. To measure temperature using different types of measurement devices.
   a) J and K type thermometer b) Bimetal and gas (vapour) pressure thermometer
   c) PT 100 platinum resistance thermometer (four wire); d) NTC thermistor

2. To study and determine the various properties of steam with steam generator

3. To study and determine the performance characteristics of Francis Turbine

   a) At different flow rates b) At different guide vane setting
   c) To determine the overall conversion efficiency of fluid to mechanical energy
   d) To compare experimental results with theoretical results

4. To study and determine the performance characteristics of Centrifugal Pump.

   a) To plot a graph between head v/s flow. b) To plot a graph between efficiency v/s flow
   c) To study non dimensional characteristics d) To demonstrate Cavitations

5. To study and determine the performance characteristics of Positive displacement pumps

6. To Study Bourdon tube pressure gauge.

7. To demonstrate and measure the change in friction factor from laminar to turbulent.

8. To study friction loss in pipe .

   a) To investigate laminar and turbulent flow in pipe.
   b) To verify Poiseulle's Equation and the coefficient of viscosity for water in the laminar flow region.

9. Experiments related to A.C. Machines

   a) To demonstrate and measure the change in friction factor from laminar to turbulent.
   b) To determine the Regulation of 3φ Alternator by ZPF Method.
   c) Determination of Regulation of Alternator by EMF and MMF Method.
   d) To determine the performance characteristics of 3φ squirrel cage induction motor by direct loading method.

10. Experiments related to Instrumentation Lab

   a) Study of characteristics of Platinum RTD and Thermistor.
   b) Study of input-output characteristics of LVDT.

c) Study of characteristics of NTC Thermistor.

d) To measure unknown resistance using Wheat stone Bridge

e) To measure unknown inductance, capacitance and resistance using Maxwell Bridge.

Suggested Books:

1. S. Som and G. Biswas, "Introduction to Fluid Mechanics and Fluid Machines", 2nd ed., Tata McGraw-Hill, 2007

2. David A. Bell, Electronic Instrumentation and Measurements, 2nd Ed, PHI, New Delhi, 2008.

3. Y. A. Cengal and M. A. Boles, "Thermodynamics: An Engineering Approach", McGraw Hill, 6th ed. 2008.

Mody University of Science & Technology
Lakshmangarh (Sikar)

Detailed syllabus for First year M. Tech. (Nuclear Science and Technology)

Semester II

Subject Code	Subject	Credits
NU 502	Nuclear Power Engineering	4
NU 504	Plasma Physics and Nuclear Fusion	4
NU 506	Nuclear Engineering Materials	4
NU 508	Fluid dynamics and Heat Transfer	4
NU 510	Radiation Technology and its applications	4
NU 512	Nuclear Measurement Lab	3
NU 514	Plasma Laboratory	1
	Total Credits	**24**

Detailed course syllabus for Second Semester- M. Tech (NST)

NU 502 Nuclear Power Engineering 3-1-0-4

1. Principles of the conversion of nuclear energy to useful power, various types of nuclear power plants that have been designed, built and operated. Advanced future types of nuclear power plants that are in the design or developing stages. **[5]**

2. Reactor designs of power plants, their energy conversion principles, cycles and load-following characteristics, Economics of nuclear vs. other types of power plants. Power plant design and utility industries, reactivity coefficients. **[5]**

3. Problems involving core hydrodynamics of boiling-water reactors, their void and pressure coefficients, stability, and their effects on the design of the balance-of-plant. Detailed features of pressurized water reactor components, including steam generators, pressurizers and chemical-shim control systems, nuclear reactor plant design. **[8]**

4. Problems related to features of gas-cooled reactor cycles and components, and compare/contrast those features with those of conventional LWRs. Examples include, but are not limited to, fuel geometries (hex vs rod vs pebble-bed), fuel type (uranium vs thorium) and coolant type (helium vs water). **[7]**

5. Economics of nuclear power plants, accounting for capital costs, fuel costs and O&M (operations and maintenance) costs, as well as environmental aspects - sustainability, proliferation, safety. Compare and contrast the relative merits of different types of power plants. **[5]**

6. Nuclear Radiation Safety: Integration of reactor physics and engineering sciences into nuclear power plant design. Topics include materials issues in plant design and operations, aspects of thermal design, fuel depletion and fission-product poisoning, and temperature effects on reactivity. Safety considerations in regulations and operations, such as the evolution of the regulatory process, the concept of defense in depth, General Design Criteria, accident analysis, probabilistic risk assessment, and risk-informed regulations. **[10]**

Text Books:

1. M. M. El-Wakil, *Nuclear Energy Conversion,* American Nuclear Society; Revised edition, 1982
2. John R. Lamarsh and Anthony J. Baratta, *Introduction to Nuclear Engineering*, 3rd Edition, Prentice Hall, 2001

NU 508 Fluid Dynamics and Heat Transfer 3-1-0-4

I. Navier-Stokes Equations, Classification of partial differential equations and boundary conditions **[7]**

II. Flow classifications, flow properties, turbulent flow analysis **[6]**

III. Application of FEM & FVM method in heat conduction in multi dimensional system, stability analysis, numerical methods for inviscid flows **[8]**

IV. Viscous laminar flows, compressible flows, turbulent flows, Convection, Conduction and Radiation Heat Transfer **[8]**

V. Critical Thickness of Insulation, Variable Thermal Conductivity, Conduction Heat Transfer with Internal Heat Generation, Heat Exchanger, Pressure Drop Analysis. **[6]**

VI. Fuel, Clad and Coolant Temperatures, Sub channel Analysis of Rod Bundle Fuels, Hotspot and Hot channel Factors, Coolant Channel Orificing, Two-phase Flow and Boiling, Critical Heat Flux **[5]**

Text Books:

2. R. T. Lahey and F. J. Moody, The Thermal-Hydraulics of Boiling Water Nuclear Reactor, 2nd Edition, 1993

NU 510 Radiation Technology and its Applications 3-1-0-4

1. Radioisotopes Engineering and Industrial applications

Applications using gamma ray attenuation, Applications using gamma ray scattering, Borehole logging, Radio gauging principles, Alpha particle gauges based on transmissions, Scattering and ionization effects. Beta transmission gauges for measurements of sheets thickness, density and composition analysis. X-ray fluorescence principles, Neutron gauges, Well logging, Gamma and neutron radiography. Radioisotope power packs. High level radio-isotope applications including radiation therapy sterilization plants, radiation processing and food irradiation. **[15]**

2. Medical applications

Projection imaging, imaging with external radiation and internal radiation, computerized tomography, positron emission tomography, magnetic resonance imaging, radiation therapy – using photons and electrons, radionuclides, neutrons and heavy charged particles. **[10]**

3. Nuclear techniques for materials analysis

Basic principles of materials analysis, basic requirements for the technique, nuclear techniques for elemental analysis, main nuclear processes useful for materials analysis, the quantitative estimate, Rutherford back scattering (RBS) and elastic recoil detection analysis(ERDA), Nuclear reaction analysis – principle of the technique and required instrumentation, Nuclear reactions suitable for nuclear reaction analysis, neutron activation analysis, PIXE and XRF techniques. **[15]**

Text Books:

NU 512 **Nuclear Measurement Lab** **0-0-6-3**

List of experiments

1. Characteristics and dead time of a G.M. counter. Counting statistics using a GM counter.
2. Gamma ray absorption in lead/aluminum using a GM counter.
3. Determination of end point energy of β–particles by absorption method using a GM counter.
4. Determination of half-life of 116 In using a GM counter.
5. Determination of gamma-ray energy by using a scintillation detector.
6. Determination of the energy resolution of a Si-surface Barrier detector with an 241Am alpha-source.
7. Determination of beta end-point energy from Fermi-Curie plot using an Anthracene scintillation detector.
8. Determination of the photo peak efficiency of a NaI (Tl) scintillation detector as a function of gamma ray energy.
9. Determination of the energies of gamma rays using an HPGe detector.
10. Study of γ-γ directional correlation using a 60Co source and a pair of scintillation detectors.
11. Study of angular distribution of Compton scattered gamma rays using a scintillation spectrometer and deduction of total scattering cross section.
12. Determination of rest mass of electron by measuring the energy of Compton scattered gamma rays using a scintillation spectrometer.

.

NU- 514 **Plasma Laboratory** **0-0-2-1**

List of Plasma Experiments

1. Glow discharge characteristic- Paschen curve
2. Density and electron temperature measurement using Langmuir probes in the glow Discharge
3. To study the conditions of striations in Plasma
4. Plasma confinement studies using magnetic field
5. Dielectric barrier discharge- plasma generation at atmospheric pressure
6. Ion acoustic wave propagation in plasma

Mody University of Science & Technology
Lakshmangarh (Sikar)

Detailed syllabus for Second year M. Tech. (Nuclear Science and Technology)

Semester III

Subject Code	Subject	Credits
NU 601	Fast Breeder Reactor	3
NU 603	Nuclear Waste storage and Management	3
NU 605	Nuclear security, safety and safeguards	3
NU 607	Seminar	2
NU 609	Preliminary Dissertation	10
	Total Credits	**21**

NU-601 Fast Breeder Reactor 2-1-0-3

1. **Core Physics:** criticality, control rod calculations, excess reactivity computations, enrichment requirements, fuel burn-up and fission product formation. [5]
2. **Thermal Hydraulics**: convective and/or boiling heat transfer at fuel element surface, conductive heat transfer inside elements, pressure drops, heat exchanger calculations, thermodynamic cycle efficiency, steam turbine reheat and regeneration, preheating and inlet sub cooling, fuel chemistry. [4]
3. **Materials:** selection of fuel and cladding, corrosion, pressure vessel materials, post irradiation examination of nuclear fuels. [3]
4. **Pressure Vessel:** stress calculations, materials selection/thicknesses, ASME codes. [3]
5. **Safety:** Safety design principles, Safety in operation, temperature and void coefficients, emergency cooling, hazards considerations. Thermal limits on reactor performance, thermal converters, and fast breeders. [4]
6. **Fast breeder Reactor:** Breeding requirements and fast reactors, Fast reactor system features, Oxide fuels in fast reactors, Carbide/Nitride fuels in fast reactors, Metal fuel development (emphasis on U-Pu-Zr), Zr-Nb applications in reactors. [3]
7. **Fast reactor physics**, Four-group flux and adjoint flux distributions, Reactivity and stability, System response to accident initiators, Fast reactor thermal hydraulics: sodium heat transfer, Natural circulation in fast reactors, SGTR mitigation. [3]
8. Solve problems related to conversion, breeding and doubling times of fast breeder reactors. Difference in neutron spectrum and fuel type between a fast reactor and a LWR affect fast reactor physics and performance. Examples include, but are not limited to, fast reactor kinetics, sodium void coefficients and designs to suppress reactivity excursions. Describe methods of direct nuclear energy conversion such as thermionic, thermoelectric, betavoltaic and fission-electric cells. [5]

1. A.E. Waltar, and A.B. Reynolds, *Fast Breeder Reactors*, Pergamon Press, New York (1981).
2. Richard T. Lahey and Frederick J. Moody, *The Thermal-Hydraulics of Boiling Water Reactors*, 2nd Edition, American Nuclear Society (1993).
3. A.E. Bergles et al., *Two Phase Flow and Heat Transfer in the Power and Process Industries*, Hemisphere Publishing (1981).
4. J.C. Collier, *Convective Boiling and Condensation*, McGraw Hill (1972).

NU–603 Nuclear Waste Storage and Management 2-1-0-3

1. **Introduction to Nuclear Radioactive Waste:**
   Nuclear decay law, naturally occurring radioactive materials, background radiation, nuclear fuel cycle **[5]**

2. **Nuclear Waste and Classification:**
   Low, intermediate and high level nuclear waste, Short-lived waste radionuclides and long-lived waste radionuclides, high-level waste from reprocessing of spent fuel **[5]**

3. **Treatment of Radioactive Waste:**
   Pre-treatment of radioactive wastes, treatment of liquid and solid radioactive wastes, hydraulic cements in waste immobilization and cementation technology. **[5]**

4. **Radioactive waste immobilization:**
   Vitrification technology, long term durability of silicate glasses, Ceramic and metallic matrices **[4]**

5. **Nuclear waste storage and disposal:** Deep geologic disposal, Repository Requirements and site selection, The multi-barrier concept, Design principles and evaluation methods for geologic waste disposal systems, Regulatory environment and community Issues, International scenarios for permanent disposal **[6]**

6. **Nuclear Waste radionuclide migration in environment**: Fundamental processes and governing equations of radionuclide transport in the environment. Potential environmental impact and assessment of overall Repository performance **[5]**

Text Books:

1. R. L. Murray, *Understanding Radioactive Waste*, 4th edition, Battelle Press, 1994

Reference Book:

2. Arnold P. Lattefer, *Nuclear Waste Research, Nova Science* Publishers Inc (2008-07-30)

NU-605 Nuclear Security, Safety and Safeguards 2-1-0-3

Unit I

Introduction to nuclear security; International and national legal framework regulating of nuclear security; Vulnerability assessment of physical protection systems; Risk assessment and management of State nuclear security measures; Threat assessment; **[5]**

Unit II

Physical protection systems design and evaluation; Physical protection technologies and equipment; Transport security for nuclear and other radioactive material; Nuclear forensics, Nuclear security culture. **[8]**

Unit III

Nuclear security at major public events; Infrastructure and procedures for detection and response to incidents involving nuclear or other radioactive material out of regulatory control; Cooperation of stakeholders at national and international level; IT/cyber security. **[8]**

Unit IV

Nuclear power plant safety requirements, Basic concepts in safety and reliability, Conceptual design of safety systems, Risk and reliability analysis of systems, PSA, DSA, Nuclear Safeguard, Nuclear material accountancy and inventory control of radioactive material.

[9]

Text Books:

1. E. E. Lewis, Nuclear Power Reactor Safety, **Wiley-Inter science** publication, 1977

Reference Books:

M.Tech. VLSI Design

Two-Year Programme

Academic Curriculum (2019-20 Batch Onwards)

List of Electives

Autumn Semester (Elective I)

1.	EC 19.551	Design of Digital Systems
2.	EC 19.553	ASIC Design
3.	EC 19.555	Advanced Digital Communication
4.	EC 19.557	RF and Microwave Engineering

Spring Semester (Elective II)

5.	EC 19.552	VLSI Physical Design and Design Automation
6.	EC 19.554	MEMS and Microsystems (Elective II)
7.	EC 19.556	Advanced Wireless Communication
8.	EC 19.558	Advanced Antenna & Wave Propagation

Spring Semester (Elective III)

9.	EC 19.560	Low power VLSI Technology
10.	EC 19.562	Mixed-Signal Systems
11.	EC19.564	Advanced Digital Signal Processing
12.	EC19.566	Wireless Sensor Networks

EC 19.541	**Semiconductor Device Models for Circuit Simulation**	**3-1-0-4**
	Total Lectures:	**40**

Objectives: To provide foundation in various semiconductor device models.

Pre-requisite: **Semiconductor Devices and Circuits**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to Diode Models:** Principle of circuit simulation and its objectives. Introductions to SPICE- DC, small signal, large signal, high frequency, noise models of diodes and measurement of diode model parameters.	**[10]**
2.	**Bipolar Junction Transistor Models:** DC, small signal, high frequency and noise models of bipolar junction transistors, extraction of bipolar junction transistor model parameters.	**[8]**
3.	**MOSFET Models:** DC, small signal, high frequency and noise model of MOSFETs. MOSFET channel mobility model, level-1 and level-2 large signal MOSFET Models.	**[10]**
4.	**MOSFET Scaling and other Effects:** Devices scaling, short and narrow channel MOSFETs. Extraction of MOSFET model parameters.	**[6]**
5.	**Devices Models:** JFET, Heterojunction FET, Heterojunction bipolar transistor and MESFETs, JFET and MESFET model parameters.	**[6]**

Course Outcomes: At the end of the course student will be able

1. Explain the equations, approximations and techniques available for deriving a model with specified properties, for a general device characteristic with known qualitative theory.
2. Apply suitable approximations and techniques to derive the model referred to above starting from drift-diffusion transport equations.
3. Simulate characteristics of a simple device using MATLAB, SPICE.
4. Explain how the equations get lengthy and parameters increase in number while developing a compact model

Text Books:

1. Dasgupta, Nandita, and Amitava Dasgupta. *Semiconductor devices: modelling and technology*. PHI Learning Pvt. Ltd., 2004.
2. Streetman, Ben G., and Sanjay Kumar Banerjee. *Solid State Electronic Devices: Global Edition*. Pearson education, 2016.

Reference Books:

1. Adir Bar-Lev. *Semiconductors and electronic devices*. Prentice-Hall International.

EC 19.542 **Analog VLSI Design** **3-1-0-4**

Total Lectures: 40

Objectives:

- To develop the ability design and analyze MOS based Analog VLSI circuits to draw the equivalent circuits of MOS based Analog VLSI and analyze their performance.
- To develop the skills to design analog VLSI circuits for a given specification.

Pre-requisite: **Electronics Devices and Circuits, Network Theory**

Unit No.	Course Contents	Lecture Hours
1.	**Basic consideration in analog VLSI design**: Basic Concepts, Common Source Stage, Source Follower, Common Gate Stage, Cascode Stage.	**[8]**
2.	**Differential Amplifiers**: Single Ended and Differential Operation, Basic Differential Pair, Common-Mode Response, Differential Pair with MOS loads, Gilbert Cell. Passive and Active Current Mirrors – Basic Current Mirrors, Cascode Current Mirrors, Active Current Mirrors.	**[8]**
3.	**Frequency Response of Amplifiers**: General Considerations, Common Source Stage, Source Followers, Common Gate Stage, Cascode Stage, Differential Pair. Noise – Types of Noise, Representation of Noise in circuits, Noise in single stage amplifiers, Noise in Differential Pairs. CMOS comparators.	**[8]**
4.	**Feedback Amplifiers**: General Considerations, Feedback Topologies, Effect of Loading. Operational Amplifiers – General Considerations, One Stage Op Amps, Two Stage Op Amps, Gain Boosting, Common – Mode Feedback, Input Range limitations, Slew Rate, Power Supply Rejection, Noise in Op Amps. Stability and Frequency Compensation. Mixed signal circuits.	**[8]**
5.	**MOS circuit components:** Switched capacitor filters realization by MOS technology.	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Draw the equivalent circuits of MOS based Analog VLSI and analyze their performance.
2. Design analog VLSI circuits for a given specification.
3. Analyse the frequency response of the different configurations of an amplifier.
4. Understand the feedback topologies involved in the amplifier design.
5. Appreciate the design features of the differential amplifiers.

Text Books:

1. Razavi, Behzad. *Design of Analog CMOS Integrated Circuits*. McGraw-Hill Higher Education, 2001.
2. Johns, David A., and Ken Martin. *Analog integrated circuit design*. John Wiley & Sons, 2008.

Reference Books:

1. Gray, Paul R., et al. *Analysis and design of analog integrated circuits*. Wiley, 2001.

EC 19.543	VLSI Fabrication Technology	3-1-0-4
	Total Lectures:	**40**

Objectives: To provide rigorous foundation in MOS and CMOS fabrication process.

Pre-requisite: **Semiconductor Physics**

Unit No.	Course Contents	Lecture Hours
1.	**Crystal Growth and Oxidation:** Electron grade silicon. Crystal growth. Wafer preparation. Vapour phase and molecular beam epitaxy. SOI. Epitaxial evaluation. Oxidation techniques, systems and properties. Oxidation defects.	**[8]**
2.	**Lithography:** Optical, electron, X-ray and ion lithography methods. Plasma properties, size, control, etch mechanism, etch techniques and equipment's.	**[8]**
3.	**Deposition:** Deposition process and methods. Diffusion in solids. Diffusion equation and diffusion mechanisms.	**[8]**
4.	**Process Simulation:** Ion implantation and metallization. Process simulation of ion implementation, diffusion, oxidation, epitaxy, lithography, etching and deposition. NMOS, CMOS, MOS memory and bipolar IC technologies. IC fabrication.	**[8]**
5.	**Packaging**: Analytical and assembly techniques. Packaging of VLSI devices.	**[8]**

Course Outcomes: At the end of the course student will be able

1. Appreciate the various techniques involved in the VLSI fabrication process.
2. Understand the different lithography methods and etching process.
3. Appreciate the deposition and diffusion mechanisms.
4. Analyze the fabrication of NMOS, CMOS memory and bipolar devices
5. Understand the nuances of assembly and packaging of VLSI devices.

Text Books:

1. S. M. Sze. *VLSI Technology*. Second Edition, McGraw-Hill 2017.
2. Gandhi, Sorab K. *VLSI fabrication principles: silicon and gallium arsenide*. Vol. 117. John Wiley, 2003.

Reference Books:

1. Wolf, Wayne. *Modern VLSI design: systems on silicon*. Prentice-Hall, Inc., 2002.
2. A.I.C.T.E, Design and Fabrication Technology, A.I.C.T.E, Bangalore, 2001.

EC 19.544 **VLSI Systems and Subsystems** **3-1-0-4**

Total Lectures: 40

Objectives:

- To prepare the student to understand the HDL language feature to realize the complex digital systems.
- To design and simulate sequential and concurrent techniques in HDL
- To explain modeling of digital systems using HDL and design methodology
- Understand the concepts of Memories and Programmable logic
- Understand the concepts of Physical Design Process such as partitioning, Floorplanning, Placement and Routing.

Pre-requisite: **Digital VLSI Design**

Unit No.	Course Contents	Lecture Hours
1.	**System specification using HDL:** Basic Concepts, Structural Gate-Level Modeling, Switch-Level Modeling, Behavioral and RTL Modeling.	**[8]**
2.	**General VLSI Components:** Multiplexers, Binary Decoders, Equality Detectors and Comparators, Priority Encoder, Shift and Rotation Operations, Latches and Flip-flops, Registers.	**[8]**
3.	**Arithmetic circuits in CMOS VLSI:** Bit Adder Circuits, Ripple carry adders, Carry-Look Ahead Adders, High speed adders, Multipliers.	**[8]**
4.	**Memories and Programmable logic:** SRAM, SRAM arrays DRAM, ROM arrays, Logic arrays.	**[8]**
5.	**System level physical design:** Interconnect Delay Modeling, Interconnect Scaling, Floorplaning and Routing, Input and Output Circuits, VLSI clocking and system design. Reliability and testing of VLSI circuits	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Model, simulate, verify, and synthesize with hardware description languages.
2. Understand and use major syntactic elements of HDL - entities, architectures, processes, functions, common concurrent statements, and common sequential statements
3. Design digital logic circuits in different types of modeling
4. Demonstrate timing and resource usage associated with modeling approach.
5. Use computer-aided design tools for design of complex digital logic circuits.

Text Books:

1. Uyemura, John P. *Introduction to VLSI circuits and systems*. John Wiley, 2002.
2. Wolf, Wayne. *Modern VLSI design: system-on-chip design*. Pearson Education, 2002.

Reference Books:

1. Hill, Frederick J., Gerald R. Peterson, and Fredrick J. Hill. *Computer aided logical design with emphasis on VLSI*. Vol. 4. New York: Wiley, 1993.

EC 19.545 **Elements of Digital VLSI Design** **3-1-0-4**

Total Lectures: 40

Objectives:

- To provide rigorous foundation in MOS and CMOS digital circuits
- To train the students in transistor budgets, clock speeds and the growing challenges of power consumption and productivity

Pre-requisite: **Electronics Devices and Circuits**

Unit No.	Course Contents	Lecture Hours
1.	**CMOS Technology:** CMOS Technology & Device Scaling, Stick Diagram, Layout and Full Custom Mask Design, CMOS process enhancement, Technology related CAD issues.	**[8]**
2.	**Introduction to CMOS circuits:** MOS inverters : Static and Dynamic Characteristics, Inverter Delay and Power Dissipation, Interconnect delay	**[8]**
3.	**MOS Logic Circuits:** Combinational MOS Logic Circuits, Sequential MOS Logic Circuits, Circuit characterization and performance estimation: Delay estimation, Logical effort and transistor sizing, Power dissipation, Interconnect design margin, Reliability.	**[10]**
4.	**VLSI Circuits:** Dynamic Logic Circuits, Low power VLSI Circuits	**[8]**
5.	**Advance VLSI Circuits:** Introduction to BiCMOS Circuits, Introduction to FPGA and ASICS.	**[6]**

Course Outcomes:

At the end of the course student will be able

1. Implement the logic circuits using MOS and CMOS technology.
2. Analyze various circuit configurations and their applications
3. Analyze the merits of circuits according to the technology and applications change.
4. Design low power CMOS VLSI circuits.
5. understand the rapid advances in CMOS Technology

Text Books:

1. Kang, Sung-Mo, Yusuf Leblebici, and Chulwoo Kim. *CMOS digital integrated circuits: analysis & design*. McGraw-Hill Higher Education, 2014.
2. Weste, Neil HE, and Kainran Eshraghian. *Principles of CMOS VLSI design: A systems perspective*. Pearson Education Asia, 2001.

Reference Books:

1. Baker, Jacob R., Harry W. Li, and David E. Boyce. *CMOS Circuit Design, Layout and Simulation*, Prentice-Hall of India, 2000.

EC 19.546	Embedded System Design	3-1-0-4
	Total Lectures:	**40**

Objectives:

- To learn basics of embedded hardware and software
- To understand the basics of the Embedded Processor Architecture and Microcontrollers
- To Understand the issues related to Embedded software Architecture & Development

Pre-requisite: **Microcontroller and Interfacing**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to Embedded System & Design Concepts:** Introduction & examples of embedded system, Concept of embedded system design , design challenges, processor technology & IC technology, Embedded processor & general purpose processor, trades-offs, development phase of embedded system & use of software tools for development of embedded system.	**[4]**
2.	**Embedded Processor Architecture/Microcontrollers:** Role of processor selection in embedded system, overviews of 8-bits/16-bits/32-bits microcontrollers, 8051 microcontroller: Architecture, basic assembly language programming concepts, instruction sets, addressing modes, logical operations, arithmetic operations, branching instructions, Boolean instructions, subroutines, timing subroutine, serial data communication & interrupt process, assembly language programming examples	**[12]**
3.	**Interfacing, programming & real-time applications:** Memory & I/O interfacing, Timer & counter operation & Programming, Serial communication, & interrupt handling, LCD & keyboard interfacing, DS 12887 RTC interfacing, interfacing ADC/DAC, real world interfacing & applications.	**[12]**
4.	**Embedded software Architecture & Development:** Challenges & issues in an embedded software development, real-time programming language & embedded OS, Embedded software architecture: Round-Robin, Round-Robin with interrupt, RTOS architecture, tasks & tasks states, priority based scheduling, Semaphore & shared data, timer function, memory management, encapsulating semaphore & queue, hard real-time scheduling consideration, saving memory space & power. Embedded software development process & tools.	**[6]**
5.	**Networks for Embedded system:** 12C two wire busses, the can bus, SHARC link ports, Ethernet, Myrinet, IEEE 1451.1 & IEEE 1451.2 plugs & play standards, embedded TCP/IP	**[6]**

Course Outcomes: At the end of the course student will be able Understand the embedded systems and embedded software architecture

Text Books:

1. Simon, David E. *An embedded software primer*. Vol. 1. Addison-Wesley Professional, 1999.
2. Ali, Mazidi Muhammad. *The 8051 Microcontroller and Embedded Systems: Using Assembly and C*. Pearson Education India, 2007.
3. Vahid, Frank, and Tony Givargis. *Embedded system design: a unified hardware/software introduction*. Vol. 52. New York: Wiley, 2002.

Reference Books:

1. Shibu K V. *Introduction to Embedded Systems*. Tata McGraw Hill Education Private Limited, 2009

EC 19.551	**Design of Digital Systems (Elective I)**	**3-1-0-4**
	Total Lectures:	**40**

Objectives:

- To get an idea about designing complex, high speed digital systems and how to

Pre-requisite: **Digital Electronics**

Unit No.	Course Contents	Lecture Hours
1.	**Mapping algorithms into Architectures:** Data path synthesis, control structures, critical path and worst case timing analysis. FSM and Hazards.	**[8]**
2.	**Combinational network delay:** Power and energy optimization in combinational logic circuit. Sequential machine design styles. Rules for clocking. Performance analysis.	**[8]**
3.	**Sequencing static circuits:** Circuit design of latches and flip-flops. Static sequencing element methodology. Sequencing dynamic circuits. Synchronizers.	**[8]**
4.	**Data path and array subsystems:** Addition / Subtraction, Comparators, counters, coding, multiplication and division. SRAM, DRAM, ROM, serial access memory, context addressable memory.	**[8]**
5.	**Reconfigurable Computing:** Fine grain and Coarse grain architectures, Configuration architectures-Single context, Multi context, partially reconfigurable, Pipeline reconfigurable, Block Configurable, Parallel processing.	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Identify mapping algorithms into architectures.
2. Summarize various delays in combinational circuit and its optimization methods.
3. Summarize circuit design of latches and flip-flops.
4. Construct combinational and sequential circuits of medium complexity that is based on VLSIs, and programmable logic devices.
5. Summarize the advanced topics such as reconfigurable computing, partially reconfigurable, Pipeline reconfigurable architectures and block configurable.

Text Books:

1. Weste, Neil HE, and David Harris. *CMOS VLSI design: a circuits and systems perspective*. Pearson Education India, 2015.
2. Wolf, Wayne. *FPGA-based system design*. Pearson education, 2004.

Reference Books:

1. John F. Wakerly. *Digital Design: Principles and Practices*. Prentice Hall.

EC 19.552	VLSI Physical Design and Design Automation (Elective II)	3-1-0-4

Total Lectures: 40

Objectives:

- To learn basics of embedded hardware and software
- To understand the basics of the Embedded Processor Architecture and Microcontrollers
- To Understand the issues related to Embedded software Architecture & Development

Pre-requisite: **Elements of VLSI Design**

Unit No.	Course Contents	Lecture Hours
1.	**VLSI design automation tools-** algorithms and system design. Structural and logic design. Transistor level design. Layout design. Verification methods. Design management tools.	**[6]**
2.	**Placement and Routing:** Layout compaction, placement and routing. Design rules, symbolic layout. Applications of compaction. Formulation methods. Algorithms for constrained graph compaction. Circuit representation. Wire length estimation. Placement algorithms. Partitioning algorithms.	**[10]**
3.	**Floor planning and routing-** floor planning concepts. Shape functions and floor planning sizing. Local routing. Area routing. Channel routing, global routing and its algorithms.	**[8]**
4.	**Simulation and logic synthesis-** gate level and switch level modeling and simulation. Introduction to combinational logic synthesis. ROBDD principles, implementation, construction and manipulation. Two level logic synthesis.	**[8]**
5.	**High-level synthesis-** hardware model for high level synthesis. Internal representation of input algorithms. Allocation, assignment and scheduling. Scheduling algorithms. Aspects of assignment. High level transformations.	**[8]**

Course Outcomes: At the end of the course student will be able

1. Students are able to know how to place the blocks and how to partition the blocks while for designing the layout for IC.
2. Students are able to solve the performance issues in circuit layout.
3. Students are able to analyze physical design problems and Employ appropriate automation algorithms for partitioning, floor planning, placement and routing

Text Books:

1. S.H. Gerez. *Algorithms for VLSI Design Automation*. John Wiley, 1998.
2. N.A.Sherwani. *Algorithms for VLSI Physical Design Automation*. Kluwer, 1999.

Reference Books:

1. R. Geiger, P. Allen, and N. R Strader. *VLSI Design Techniques for Analog and Digital Circuits*. McGraw-Hill, New York, 1990.

EC 19.553	ASIC Design (Elective I)	3-1-0-4
	Total Lectures:	**40**

Objectives:

- To prepare the student to be an entry-level industrial standard ASIC or FPGA designer.
- To give the student an understanding of issues and tools related to ASIC/FPGA design and implementation.
- To give the student an understanding of basics of System on Chip and Platform based design.
- To give the student an understanding of High performance algorithms

Pre-requisite: **Digital Electronics**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to Technology**: Types of ASICs, VLSI Design flow, Design and Layout Rules, Programmable ASICs - Antifuse, SRAM, EPROM, EEPROM based ASICs. Programmable ASIC logic cells and I/O cells. Programmable interconnects. Advanced FPGAs and CPLDs and Soft-core processors.	**[8]**
2.	**ASIC physical design issues**: System Partitioning, Floorplanning and Placement. Algorithms: K-L, FM, Simulated annealing algorithms. Full Custom Design: Basics, Needs & Applications. Schematic and layout basics, Full Custom Design Flow.	**[8]**
3.	**Semicustom Approach:** Synthesis (RTL to GATE netlist) - Introduction to Constraints (SDC), Introduction to Static Timing Analysis (STA). Place and Route (Logical to Physical Implementation): Floorplan and Power-Plan, Placement, Clock Tree Synthesis (clock planning), Routing, Timing Optimization, GDS generation.	**[8]**
4.	**Extraction**: Logical equivalence and STA: Parasitic Extraction Flow, STA: Timing Flow, LEC: Introduction, flow and Tools used. Physical Verification: Introduction, DRC, LVS and basics of DFM.	**[8]**
5.	**System-On-Chip Design** - SoC Design Flow, Platform-based and IP based SoC Designs, Basic Concepts of Bus-Based Communication Architectures. High performance algorithms for ASICs/ SoCs as case studies – Canonic Signed Digit Arithmetic, KCM, Distributed Arithmetic, High performance digital filters for sigma-delta ADC.	**[8]**

Course Outcomes: At the end of the course student will be able

1. Demonstrate VLSI tool-flow and appreciate FPGA and CPLD architectures
2. Understand the issues involved in ASIC design, including technology choice, design management and tool-flow.
3. Understand the algorithms used for ASIC construction.
4. understand Semicustom Design Flow and Tool used - from RTL to GDS and Logical to Physical Implementation
5. understand the basics of System on Chip and on chip communication architectures appreciate high performance algorithms for ASICs

Text Books:

1. Smith, Michael John Sebastian. *Application-specific integrated circuits*. Vol. 7. Reading, MA: Addison-Wesley, 2003.
2. Pasricha, Sudeep, and Nikil Dutt. *On-chip communication architectures: system on chip interconnect*. Morgan Kaufmann, 2010.

Reference Books:

Gerez, Sabih H. *Algorithms for VLSI design automation*. John Wiley & Sons, Inc., 1999.

EC 19.554 **MEMS and Microsystems (Elective II)** **3-1-0-4**

Total Lectures: 40

Objectives:
- To learn basics of MEMS and Microsystems

Pre-requisite: **Electronic Devices**

Unit No.	Course Contents	Lecture Hours
1.	**Overview of Mems and Microsystems:** Mems And Microsystems, Evolution of micro fabrication, Microsystems and miniaturization, Application of Microsystems, Markets for Microsystems	**[8]**
2.	**Working Principles of Microsystems:** Introduction, MEMS and Micro actuators, Microfluidics, Micro actuators with Mechanical inertia	**[8]**
3.	**Engineering Science for Microsystems Design:** Introduction, Molecular theory of matter and intermolecular forces, Doping of semiconductor, Plasma physics, Electrochemistry	**[8]**
4.	**Thermo-fluid Engineering and Microsystems Design:** Introduction, Clock Skew and Sequential Circuit Performance, Clock Generation and Synchronization	**[8]**
5.	**Designing Arithmetic Building Blocks:** Introduction, Basic equation in continuum fluid dynamics, Laminar fluid flow in circular conduits, Computational fluid dynamics, incompressible fluid flow in micro-conduits	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Understand the products and materials used in MEMS and Micro sensors.
2. Use the reconfigurable design implementation in MEMS.
3. Apply different bio medical applications

Text Books:

1. Tai-Ran Hsu, *MEMS and Microsystems*, 2nd Edition, Wiley, 2008.
2. Mohamad Gad El Hak, *MEMS Design and Fabrication*, 2nd Edition, CRC Press, 2006.

Reference Books:

1. Vijay. K. Varadan, K.J. Vinoy, and K.A. Jose, *RF MEMS and their Applications*, Wiley-India, 2011.

EC 19.555	Advanced Digital Communication (Elective I)	3-1-0-4
	Total Lectures:	**40**

Objectives:

- To give the student an understanding of issues related to Channel models and Modulation Schemes.
- To give the student an understanding of issues related to Digital Communications through Fading Channels.

Pre-requisite: **Digital Communication**

Unit No.	Course Contents	Lecture Hours
1.	**Channel models and Modulation Schemes:** Digital communication system model, communication channels and their characteristics, mathematical models for communication channels, AWGN channel, Probability and Stochastic Processes. Selected modulation schemes, digital PAM, PSK, QAM and FSK modulations, geometric (signal space) representation of modulated signals, Spectral Characteristics of Digitally Modulated Signals.	**[12]**
2.	**Receivers for AWGN channel**: Demodulation by correlation and matched filter receiver, detection by maximum likelihood detectors, performance analysis of optimum receiver for selected modulation schemes over AWGN channel.	**[6]**
3.	**Channel Capacity and Coding:** Channel capacity, Channel capacity with Orthogonal Signals, Random Selection of Codes – probabilistic approach and algebraic approach, Linear Block Codes, Cyclic Codes, Convolutional Codes, Soft-Decision Decoding and Hard-Decision Decoding	**[8]**
4.	**Channels and Mutual Information:** Channel capacity theorem (without proof), uncoded performance and Shannon limit, Information channels, probability relations in a channel, *a priori* and *a posteriori* entropies, generalization of Shannon's first theorem, mutual information, conditional mutual information, noiseless and deterministic channels, cascaded channels.	**[8]**
5.	**Digital Communications through Fading Channels:** Characterization of multipath fading channels, channel correlation and power spectra, statistical models of fading channels, frequency-nonselective, slowly fading, fast fading models, diversity techniques, digital signaling over fading channel, coded waveforms for fading channels, multiple antenna systems.	**[8]**

Course Outcomes: At the end of the course student will be able understand different digital modulation techniques, fading effects and information theory

Text Books:

1. John G. Proakis, *Digital Communications*, McGraw-Hill International Edition (4th Edition)
2. Bernard Sklar, Pabitra Kumar Ray, *Digital Communications – Fundamentals and Applications*, Pearson (2nd Edition)

Reference Books:

1. B. P. Lathi, Zhi Ding, *Modern Digital and Analog Communication Systems*, Oxford (International 4th Edition)

EC 19.556	**Advanced Wireless Communication (Elective II)**	**3-1-0-4**
	Total Lectures:	**40**

Objectives:

- To give the student an understanding of issues related to Wireless Channel Characteristics and Fading Channel Capacity and Diversity Techniques.
- To give the student an understanding of issues related to Modulation, Detection and Multiple access for wireless communication.

Pre-requisite: **Digital Communication**

Unit No.	**Course Contents**	**Lecture Hours**
1.	**Introduction:** Recent wireless systems and applications, cellular system concept and design fundamentals, dynamic resource allocation, frequency re-use concepts in time, frequency and code-division systems, improving coverage and capacity in cellular system-cell-splitting, microcell &picocell zone concept.	**[8]**
2.	**Wireless Channel Characteristics:** Concept of wireless channels- time varying channel impulse function. Basic propagation mechanisms- path loss and shadowing, outdoor and indoor propagation model- Okumura, Hata models, partition loss, log-distance loss, large-scale and small-scale propagation, multipath fading, outage probability, correlation, power-spectral density, average fade duration, channel coherency-coherence time and coherence bandwidth, Doppler shift.	**[8]**
3.	**Fading Channel Capacity And Diversity Techniques:** Capacity of AWGN and fading channels, MIMO-channel capacity, error probability over fading channels, diversity techniques to remove fading effects- space, time, frequency, polarization and transmit diversity techniques.	**[8]**
4.	**Channel coding for wireless communication:** coding as a means of time diversity, multiple- antennas coding, Alamouti codes, space- time block codes, design principle, coded modulation in MIMO frequency-selective channels, OFDM-MIMO system.	**[8]**
5.	**Modulation, Detection and Multiple access for wireless communication:** signal-space analysis, PSK, FSK, MSK, QAM modulation and signal constellation , multi-dimensional signals, orthogonal expansion of signals, spread spectrum modulation techniques-DS-SS & FH-SS in AWGN channels, multiple access techniques- FDMA, TDMA, spread – spectra multiple access, CDMA, space- division multiple access.	**[8]**

Course Outcomes:

At the end of the course student will be able

Understand different digital Wireless Channel Characteristics, Fading Channel Capacity And Diversity Techniques, Channel coding for wireless communication, Detection and Multiple access for wireless communication.

Text Books:

1. Andrea Goldsmith, *Wireless Communications*, Cambridge University Press, 2007.
2. Theodore S Rappaport, *Wireless Communication*, Pearson Education, Asia, New Delhi, 2002.

EC 19.557	RF and Microwave Engineering (Elective I)	3-1-0-4
	Total Lectures :	**40**

Objective 1. To Understand the basics of RF passive components and circuits.
2. To Analyze and evaluate the RF circuits using various RF circuit tools.

Pre-requisite Basic understanding of Electromagnetic field theory and Low frequency Electronics

Unit No.	Course Contents	
1.	**Two Port Network Theory:** Review of Low frequency parameters: Impedance, Admittance, ABCD parameters, High Frequency parameters, Formulation of S parameters, Properties of S parameters, Reciprocal and lossless Network, Transmission matrix, RF behavior of Resistors, Capacitors and Inductors.	**[8]**
2.	**Passive Microwave Devices:** Terminations, Attenuators, Phase shifters, Directional couplers, Hybrid Junctions, Power dividers, Circulator, Isolator, Impedance matching devices: Tuning screw, Stub and quarter wave transformers.	**[8]**
3.	**Microwave Generation:** Review of conventional vacuum Triodes, Tetrodes and Pentodes, High frequency effects in vacuum Tubes, Gunn diode oscillator, Varactor diode. Theory and application of Two cavity Klystron Amplifier, Reflex Klystron oscillator, Traveling wave tube amplifier, Magnetron oscillator using Cylindrical, Linear, Coaxial Voltage tunable Magnetrons, Backward wave Crossed field amplifier and oscillator.	**[10]**
4.	**Filters:** Analysis of periodic structures, filter design by insertion loss method, maximally flat and Chebyshev designs.	**[6]**
5.	**Microwave Measurements:** Measuring Instruments : Principle of operation and application of VSWR meter, Power meter, Spectrum analyzer, Network analyzer, Measurement of Impedance, Frequency, Power, VSWR, Q-factor, Dielectric constant, Scattering coefficients, Attenuation, S-parameters.	**[8]**

Outcome Student will be able to understand the fundamentals of RF and Microwave Engineering. They are also able to design and analyze the RF passive circuit using various RF circuit tools.

Text Books:

1. Collin, R.E., "*Foundations for Microwave Engineering*", 2nd Ed., John Wiley & Sons, 2000.
2. Pozar, D.M., "*Microwave Engineering*", 3rd Ed., John Wiley & Sons, 2004.

Reference Books:

1. Edwards, T.C. and Steer M.B., "*Foundations for Interconnects and Microstrip Design*", 3rd Ed., John Wiley & Sons, 2001.
2. Ludwig, R. and Bretchko, P., "*RF Circuit Design*", 2nd Ed., Pearson Education, 2000.
3. Hunter, I., "*Theory and Design of Microwave Filters*", 3rd Ed., IEE Press., 2001.

EC 19.558	**Advanced Antenna & Wave Propagation**	**(Elective II)**	**3-1-0-4**
		Total Lectures :	**40**

Objective 1. To Understand the basics of advanced antenna systems.
2. To Analyze different wave propagations.

Pre-requisite Basic understanding of Electromagnetic field theory

Unit No.	**Course Contents**	
1.	**Introduction of Antenna & its Parameters:** Reciprocity theorem, Review of microwave antennas-Parabolic Reflector, Cassegrain feeds, Horn Antennas, Open-ended wave guides, lens antennas, Dielectric rod Antennas, Antennas for mobile communication.	**[9]**
2.	**Frequency-independent antennas:** Scattering and diffraction. Internal-equation methods, current distribution: Self and mutual impedances, arrays: design and synthesis.	**[7]**
3.	**Different Antennas and their Characterization:** Full wave analysis of Microstrip Antenna (MSA),Active Integrated MSA, Compact MSA with enhanced gain, Broadband Antenna(MSA), Dual frequency & Dual polarized MSA. Antenna Measurements, Standardization and characterization of antennas, Anechoic Chamber, Open-air test range.	**[10]**
4.	**Review of Modes of Propagation:** Surface wave, Ground wave, Sky wave, Space wave, Troposphere propagation.	**[6]**
5.	**Propagation**: Propagation over plane-Earth, Spherical Earth, Refraction, Anomalous Propagation, Diffraction, Modified refractive index- Its effects on wave propagation, Duct and other nonstandard propagation. Environmental noise, Radiation Hazards.	**[8]**

Outcome Student will be able to understand the fundamentals of advanced antennas. They are also able to analyze different wave propagations.

Text Books:

1. R.E Collin, *Antennas & Radio Wave Propagation*, Mc-Graw Hill
2. R. Garg, P. Bhartia , InduBhal& A. Ittipibom, Microstrip, *Antenna Design Handbook*, Artech house
3. Jordan &Balmain, *Electromagnetic Waves and Radiating Systems*, PHI

Reference Books:

1. M. Dolukhanov, *Propagation of Radio Waves*, Mir Publication
2. Girish Kumar & K.P.Roy, *Broad band Microstrip Antenna*, Artech House
3. Kin. Lu. Wong, *Compact and Broadband Microstrip Antenna*, John Wiley & Sons

EC 19.560 **Low Power VLSI Technology (Elective III)** **3-1-0-4**

Total Lectures: 40

Objectives:

- To expose the students to the low voltage device modeling, low voltage, low power VLSI CMOS circuit design.

Pre-requisite: **Elements of VLSI Design**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to low power VLSI technology**: Voltage scaling and power-delay tradeoff, Sources of Power Dissipation, Static Power Dissipation, Active Power Dissipation Designing for Low Power, Circuit Techniques For Leakage Power Reduction	**[8]**
2.	**Threshold Voltage Scaling:** Multi-threshold CMOS, Standard Adder Cells, CMOS Adders Architectures, Low Voltage Low Power Design Techniques, Current Mode Adders	**[8]**
3.	**Dynamic Logic Circuits:** Variable threshold CMOS. Estimation and optimization of switching activity. Various problems associated with dynamic logic circuits. Differential, BiCMOS and low voltage dynamic logic circuits	**[8]**
4.	**Switched Capacitance:** Reduction of switched capacitance. Adiabatic logic circuits. Basic background on testing, Unsuitable design techniques for safety-critical applications, Low power and safely operating circuits, Case study – A Low power subsystem design	**[8]**
5.	**Low-Power Memories:** Sources of power dissipation in SRAMs, Low power SRAM circuit techniques, Sources of power dissipation in DRAMs, Low power DRAM circuit techniques, DC-DC converters. Low-power architecture.	**[8]**

Course Outcomes:

At the end of the course student will be able

1. Identify clearly the sources of power consumption in a given VLSI Circuit
2. Analyze and estimate dynamic and leakage power components in a DSM VLSI circuit
3. Choose different types of SRAMs/ DRAMs for Low power applications
4. Design low power arithmetic circuits and systems
5. Decide at which level of abstraction it is advantageous to implement low power techniques in a VLSI system design

Text Books:

1. Yeo K., Rofail S. S., and Goh W. *CMOS/BiCMOS ULSI Low Voltage, Low Power*. Pearsons Education Asia, 2003.
2. Weste N. H. *Principles of CMOS VLSI Design* Pearsons Education Asia, 2001.

Reference Books:

1. Geiger R. L. *VLSI Design Techniques for Analog and Digital Circuits*. McGraw-Hill, New York, 1990.

EC 19.562 **Mixed-Signal Systems (Elective III)** **3-1-0-4**

Total Lectures: 40

Objectives:

- To make the students to understand the design and performance measures concept of mixed signal circuit.

Pre-requisite: **Analog VLSI Design**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction to Mixed-Signal Systems:** Concepts of Mixed-Signal Design and Performance Measures. Fundamentals of Data Converters. Nyquist Rate Converters and Over sampling Converters.	**[4]**
2.	**Design methodology** for mixed signal IC design using gm/Id concept.	**[8]**
3.	**Static and dynamic logic**, OTA-C circuits. Silicon compilers.	**[8]**
4.	**CMOS Digital Circuits Design:** Design of MOSFET Switches and Switched-Capacitor Circuits, Layout Considerations.	**[10]**
5.	**Filter design strategies.** Design of frequency and Q tunable continuous time filters, Image processing.	**[10]**

Course Outcomes:

At the end of the course student will be able

1. Appreciate the fundamentals of data converters and also optimized their performances.
2. Understand the design methodology for mixed signal IC design using gm/Id concept.
3. Analyze the design of current mirrors and operational amplifiers
4. Design the CMOS digital circuits and implement its layout.
5. Design the frequency and Q tunable time domain filters.

Text Books:

1. R. Jacob Baker, Harry W. Li, David E. Boyce, CMOS, Circuit Design, Layout, and Simulation, Wiley-IEEE Press, 1998
2. David A. Johns and Ken Martin, Analog Integrated Circuit Design, John Wiley and Sons, 1997.

Reference Books:

1. Christoph G. *Languages for System Specification - Selected Contributions on UML, SystemC*. System Verilog, Mixed-Signal Systems, and Property Specifications from FDL'03, Springer Publisher, 1996.
2. Nishath K. V. *Simulation Techniques and Solutions for Mixed-signal Coupling in Integrated Circuits*. Springer Publisher, 1994.

EC 19.564 **Advanced Digital Signal Processing (Elective III)** **3-1-0-4**

Total Lectures: 40

Objectives:

- To give the student an understanding of issues related to Filter Structure and Design and Finite Word-length Effects.
- To give the student an understanding of Multi-rate DSP and Wavelets

Pre-requisite: **Digital Signal Processing**

Unit No.	Course Contents	Lecture Hours
1.	**Introduction:** Analog versus digital signal processing, Sampling and sampling theorem, Quantization, AD- and DA-conversion, AD- and DA hardware realizations, Digital signal processors.	**[4]**
2.	**Filter Structure and Design:** Short review of DFT and FFT, DCT, IIR and FIR, block diagram representation of filters, IIR and FIR structures, design aspects of digital filters, IIR filter design methods - Impulse Invariance method, Bilinear transformation, Butterworth and Chebyshev approximation, FIR filter design – Rectangular window, Kaiser window, comparison between IIR and FIR filters.	**[8]**
3.	**Finite Word-length Effects:** quantization of fixed-point and floating-point numbers, analysis of coefficient quantization effects, noise analysis in A/D conversion, analysis of round-off errors, dynamic range scaling, SNR in low-order IIR filters, low-sensitivity digital filters, limit cycles, limit-cycle free structures.	**[10]**
4.	**Multi-rate DSP:** Up-sampler and down-sampler, filters in sampling rate alternation systems; multi-stage design of decimator and interpolator, polyphase decomposition; arbitrary sampling rate converter, Lagrange interpolation, digital filter banks, uniform DFT filter banks, Nyquist filters, quadrature-mirror filter banks, perfect reconstruction two-channel FIR filter banks, multi-level filter banks.	**[10]**
5.	**Wavelets:** Wavelet Analysis, The Continuous Wavelet Transform, scaling, shifting scale and frequency, The Discrete Wavelet Transform, One Stage filtering, Approximation and Details, Filter bank analysis, Multilevel Decomposition, Number of levels, Wavelet reconstruction, Reconstruction filter- Reconstructing Approximations and details, Multilevel Reconstruction, Wavelet packet synthesis, Typical Applications.	**[8]**

Course Outcomes:

At the end of the course student will be able

Understand different filter Structure and Design and Finite Word-length Effects, Multi-rate DSP and Wavelets.

Text Books:

1. S. K. Mitra, *Digital Signal Processing*, McGraw Hill
2. Martin Vetterli & Jelena Kovacevic, *Wavelets and Subband Coding*, PHI
3. Oppenheim, Wilsky & Nawab, *Signals and Systems*, PHI

Reference Books:

1. Simon Haykin & Bary Van Veen, *Signals and Systems*, Wiley Eastern
2. Lathi, Bhagwandas Pannalal. *Signal processing and linear systems*. New York: Oxford University Press, 1998.

EC 19.566 **Wireless Sensor Networks (Elective III)** **3-1-0-4**

Total Lectures: 40

Objectives:

- To give the student an understanding of issues related to Wireless Sensor Networks.
- To give the student an understanding of Sensor Tasking and Control and Operating Systems for WSNs.

Pre-requisite: **Digital Communication**

Unit No.	Course Contents	Lecture Hours
1.	**Overview of Wireless Sensor Networks (WSNs):** Introduction, Constraints and Challenges, Advantages of Sensor Networks, Sensor Network Applications, Key definitions of Sensor Networks. Wireless Sensor Technological Background: Wireless Communication Technology, Hardware and Software Platforms.	**[8]**
2.	**Networking Sensors:** Medium Access Control – The S-MAC Protocol, The IEEE 802.15.4 Standard, Zigbee Standard; Geographic, Energy-Aware Routing – Unicast Geographic Routing, Routing on a Curve, Energy-Minimizing Broadcast, Energy-Aware Routing to a Region; Attribute-Based Routing – Directed Diffusion, Rumor Routing.	**[10]**
3.	**Infrastructure Establishment:** Topology Control, Clustering, Time Synchronization, Localization and Localization Services.	**[8]**
4.	**Sensor Tasking and Control:** Task-Driven Sensing, Roles of Sensor Nodes and Utilities, Information-Based Sensor Tasking, Joint Routing and Information Aggregation.	**[6]**
5.	**Operating Systems for WSNs:** Introduction, Operating System Design Issues, Examples of Operating Systems – TinyOS, Mate, MagnetOS, EYES OS, Node-Level Simulators – ns-2, TOSSIM.	**[8]**

Course Outcomes:

At the end of the course student will be able

Understand the Networking Sensors, Infrastructure Establishment, Sensor Tasking and Control.

Text Books:

1. Sohraby, Kazem, Daniel Minoli, and Taieb Znati. *Wireless sensor networks: technology, protocols, and applications*. John Wiley & Sons, 2007.
2. Zhao, Feng, Leonidas J. Guibas, and Leonidas Guibas. *Wireless sensor networks: an information processing approach*. Morgan Kaufmann, 2004.

Reference Books:

1. Zaman, Noor, ed. *Wireless Sensor Networks and Energy Efficiency: Protocols, Routing and Management: Protocols, Routing and Management*. IGI Global, 2012.
2. Raghavendra, Cauligi S., Krishna M. Sivalingam, and Taieb Znati, eds. Wireless sensor networks. Springer, 2006.

MA 19.509	Advanced Mathematics	3-1-0-4
	Total Lectures:	**40**

Objectives: To acquire fundamental knowledge computational numerical techniques and fundamentals of statistics and probability and apply in inter-disciplinary engineering disciplines.

Prerequisite: **Engineering Mathematics**

Unit No.	Course Contents	Lecture Hours
1.	**Computer based numerical methods:** Methods for numerical solution of algebraic and transcendental equations: Direct methods e.g. Bisection method, Regula-Falsi method; Iterative method e.g. Newton-Raphson method. Methods for the solution of simultaneous linear equations: Direct methods e.g. Gauss elimination method; Iterative method e.g. Gauss-Seidel method, Jacobi method.	**[8]**
2.	**Finite difference** table for equal and unequal intervals in the independent variable values. Newton's forward and backward interpolation formula; Newton's interpolation formula for divided differences. Numerical differentiation.	**[8]**
3.	**Numerical Integration methods:** Simpson's rules, Trapezoidal rule and Romberg's method. Numerical solution of ordinary differential equations: Euler method, Modified Euler method and Runge-Kutta methods. Numerical solution of elliptic and parabolic differential equations using finite difference approach.	**[8]**
4.	**Statistics and Probability:**Concept of random variable, total and conditional probability, Bayes' theorem, probability distributions and probability density functions, moments and moment generating functions. Some theoretical probability distributions such as binomial, Poisson, normal, uniform, exponential, rectangular, χ^2, t, F.	**[8]**
5.	**Sampling theory:** sampling distributions and sampling techniques. Estimation theory, Point and Interval estimation of mean and variance of data. Testing of hypotheses. Simple and Composite hypothesis. Correlation and Regression. Multiple and Partial correlation and regression. Concepts of stochastic processes with special reference to Monte Carlo methods.	**[8]**

Course Outcomes: After completion of the course, students would be able to apply the knowledge of computational numerical techniques with statistics and probability theory in inter-disciplinary engineering and solve curriculum problems.

Text Books:

1. Shastri S.S., *Introductory Method of Numerical Analysis, Prentice-Hall of India*, 3rd Ed., 2002.
2. Trivedi K.S., *Probability and Statistics with Reliability Queuing and Computer Science Application*, Prentice-Hall of India, 2002.

Reference Books:

1. Papoulis, Probability, *Random Variables and Stochastic Processes*, TMH, 2018.
2. Gupta & Kapoor, *Fundamental of Mathematical Statistics, SCS Publisher*, 2002.
3. Dass and Verma, *Higher Engineering Mathematics*, S.Chand, 2019.

*** If a student opts for this optional course the corresponding credits will be added to her account.

***Proficiency (Non-Credit/NonGrade) shall be measured through level of participation in skill development programs i.e., sports, Yoga, Life skills, Music, Fine Arts which are being conducted at University Level**

**** Project Based Learning in Group of 3-5 Students**

List of Electives

Program Elective I

1. CS 19.563 Advances in Distributed Computing
2. CS 19.565 Advanced Compiler Construction
3. CS 19.567 BioInformatics
4. CS 19.569 Advanced Computer Graphics
5. CS 19.571 Advances in Algorithm Design

Program Elective II

1. CS 19.562 Mobile Cloud Computing
2. CS 19.564 Machine Intelligence & Robotics
3. CS 19.566 Natural Language Processing
4. CS 19.568 Advanced Software Engineering
5. CS 19.570 Mathematical Modelling

M. Tech. Computer Science & Engineering

Two-Year Programme

* **Theory:** Assignments and regularity will be evaluated out of 10(ten) marks in a semester.

****Theory :** Two mid-term examinations of 20 (twenty) marks each.

******* The student may decide to take HS 501 in the even semester as an optional paper by consulting the course coordinator. If a student opts to take this paper, the appropriate credit shall be added to her account.

CS 19.521 **Big Data Analytics** **Total Lectures: 40**

Credit:3-1-0-4

Prerequisite: Data Mining, Database Management Systems

Objective(s):

- To learn Big Data characteristics
- To learn Hadoop architecture and functioning of Map-Reduce.
- To learn other Big data tools like HIVE, HIVEQL and HBASE.

1. **INTRODUCTION: D**istributed file system – Big Data and its importance, four Vs, drivers for Big data, Big data analytics, Big data applications, algorithms using map reduce, matrix-vector multiplication by Map Reduce. [8]

2. **Introduction to HADOOP:** Apache HADOOP & HADOOP ecosystem , moving data in and out of Hadoop , understanding inputs and outputs of MapReduce , data serialization [8]

3. **HADOOP Architecture:** HADOOP architecture, HADOOP storage: HDFS, common HADOOP shell commands , anatomy of file write and read., namenode, secondary namenode, and datanode, HADOOP MapReduce paradigm, map and reduce tasks, job, task trackers ,cluster setup, SSH & HADOOP configuration, HDFS administering, monitoring & maintenance. [8]

4. **HADOOP Ecosystem and YARN**: HADOOP ecosystem components, schedulers, fair and capacity, HADOOP 2.0 new features, namenode, high availability, HDFS federation, mrv2, YARN, running mrv1 in YARN. [8]

5. **HIVE and HIVEQL, HBASE**: HIVE architecture and installation, comparison with traditional database, hiveql, querying data, sorting and aggregating, map reduce scripts, joins & subqueries, Hbase concepts, advanced usage, schema design, advance indexing - Pig, Zookeeper - how it helps in monitoring a cluster, Hbase uses Zookeeper and how to build applications with Zookeeper. [8]

Outcome(s): The students will be able to carry out research in Big Data using the latest tools.

Text Books:

[1] Chris Eaton, Dirk deroos et al., Understanding Big data , McGraw Hill, 2012.

[2] Tom White, HADOOP: The definitive Guide , O Reilly 2012.

Reference Books:

[1] Boris lublinsky, Kevin t. Smith, Alexey Yakubovich, Professional Hadoop Solutions, Wiley, 2015.

[2] Jy Liebowitz, Big Data and Business analytics, CRC press, 2013.

CS 19.511 **Ad hoc Sensor Networks** **Total Lectures: 40**

Prerequisite: Computer Networks **Credit: 3-1-0-4**

Objective(s):

- To learn the Ad hoc networks and related protocols
- To learn QoS parameters of Ad hoc network
- To learn the basic principles of sensor networks
- To understand the functionality of wireless sensor network and respective securities issues

1	**Ad hoc Networks:** Introduction and Definitions, Ad hoc Network Applications, Design Challenges. Routing in Mobile Ad hoc Networks: Introduction, Flooding, Proactive Routing, On Demand Routing, Proactive Versus on demand Debate, Location based Routing.	[7]
2	**Multicasting and Transport layer Protocols in Ad hoc Networks:** Introduction, Classifications of Protocols, Multicasting Protocols, Broadcasting. Protocol Comparisons, Overarching Issues. Transport layer Protocols in Ad hoc Networks: Introduction, TCP and Ad hoc Networks, Transport Layer for Ad hoc Networks: Overview, Modified TCP, TCP-aware Cross-layered Solutions. Ad hoc Transport Protocol.	[9]
3	**QoS Issue in Ad hoc Networks:** Introduction, Definition of QoS, Medium Access Layer, QoS Routing, Inter- Layer Design Approaches. Security in Mobile Ad hoc Networks: Vulnerabilities of Mobile Ad hoc Networks, Potential Attacks, Attack Prevention Techniques. Intrusion Detection Techniques.	[8]
4	**Overview of Wireless Sensor Networks (WSNs)**: Introduction, Constraints and Challenges, Advantages of Sensor Networks, Sensor Network Applications' Routing Protocols: Geographic, Energy-Aware Routing – Unicast Geographic Routing, Routing on a Curve, Energy-Minimizing Broadcast, Energy-Aware Routing to a Region; Attribute-Based Routing – Directed Diffusion, Rumor Routing.	[10]
5	**Security in WSNs:** Introduction: IEEE 802.11b Security Mechanisms, WEP Security Issues, WEP Improvements, Wireless Security Threats and Risks: Types of Security Threats, Physical Security of Wireless Devices, WLAN Attacks. Risk Mitigation and Countermeasures: Basic Countermeasures, AAA Infrastructure Solutions, Additional Enhancements.	[6]

Outcome(s): On successful completion of this course, students will be able to
Understand the basic working of sensor networks
Understand security aspects of WSN

Text Books:

[1] Prasant Mohapatra and Srihanamurthy, "Ad Hoc Networks Technologies and Protocols", Springer, Springer International Edition, 2009.

[2] Kazem Sohraby, Daniel Minoli, Taieb Znati, "Wireless Sensor Networks", John Wiley & Sons, Inc., Pub!ication, 2007.

Reference Books:

[2] Zhao, Guibas, "Wireless Sensor Networks" , Elsevier, 2004.

CS 19.515 **Machine Learning** **Total Lectures: 40**

Credit:3-1-0-4

Prerequisite: Artificial Intelligence

Objective(s):

- To learn the Machine learning concepts.
- To learn different models of Machine learning.

1. **Foundations of Learning:** Components of learning, learning models, geometric models, probabilistic models, logic models, grouping and grading, learning versus design, supervised learning, unsupervised learning, reinforcement learning , theory of learning, feasibility of learning, error and noise, training versus testing, theory of generalization, generalization bound, approximation generalization trade off, bias and variance, learning curve. [8]

2. **Linear Models:** Linear classification, univariate linear regression, multivariate linear regression, regularized regression, logistic regression, perceptron, multilayer neural networks, learning neural networks structures, support vector machines, soft margin SVM, going beyond linearity, generalization and overfitting, regularization, validation. [8]

3. **Distance-based Models:** Nearest neighbour models, K-means clustering, hierarchical clustering, k-d trees, locality sensitive hashing, non-parametric regression, ensemble learning, bagging and random forests, boosting, meta learning. [8]

4. **Tree and Rule Models:** Decision trees, learning decision trees, ranking and probability estimation trees, regression trees, clustering trees, learning ordered rule lists, learning unordered rule lists, descriptive rule learning, association rule mining, first-order rule learning. [8]

5. **Reinforcement Learning:** Passive reinforcement learning, direct utility estimation, adaptive dynamic programming, temporal-difference learning, active reinforcement learning, exploration, learning an action utility function, generalization in reinforcement learning, policy search, applications in game playing, applications in robot control. . [8]

Outcome(s): Students will be able to

- Compare and apply Machine learning models for different problems.
- Carry out research in the area of Machine learning.

Text Books:

[1] T. M. Mitchell, Machine Learning, McGraw Hill, 1997.

CS 19.523 **Operations Research** **Total Lectures: 40**
Credit: 3-0-0-3

Prerequisite: Engineering Mathematics

Objective(s): To learn major Operations research techniques.

1. **Introduction to Operation Research:** Origins of or, nature, impact and phases of OR, solving the OR Model , operation research as tool for decision support system, productivity improvement, overview of OR research techniques. [6]

2. **Linear Programming Extensions:** Formulation of linear programming problem, linear programming models, assumptions of linear programming, graphical method of solving LP problem, Simplex method for solving LP problem, special cases in Simplex method application. Formulation of transportation problem, types of transportation problems, methods of initial feasible solution, methods of optimum solution, unbalanced transportation problem, assignment problem, transshipment model. [14]

3. **Decision, Game & Queueing Theory:** Formulation of two person, zero-sum games, solving simple games, mixed strategies, non-zero sum games, basic structure & components of decision, decision criteria, decision trees, basic characteristics of queueing system, terminologies & notation, Poisson process of queueing, M/M/1 system queueing model. queueing decision models. [8]

4. **Hybrid OR Models, Project Management PERT & CPM:** Assumption and comparison PERT & CPM, algorithms of PERT CPM techniques, fundamentals of network model, guidelines for network construction, critical path analysis, methods based on time estimates to find critical paths, concept of slack & oats in network analysis, Project Evaluation & Review Techniques (PERT) [6]

5. **Dynamic Programming:** Terminologies, multi decision process, Bellman's principles of optimality, characteristics of dynamic programming problems, dynamic programming algorithms, solving LPP using dynamic programming, recent applications of dynamic programming in OR. [6]

Outcome(s): Students will be able to apply Operation Research techniques relevant to their area of research.

Text Books:

[1] Hamdy A Taha, Operations Research: An Introduction, Pearson education India, 8th Edition, 2011.

[2] Frederick S. Hillier, Gerald J. Lieberman, Introduction to Operations Research, 8th edition McGraw-Hill, 2001.

RM 19.101 **Research Methodology** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):

- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. **Introduction**: Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches, Research Process, Validity and Reliability in Research. [6]
2. **Problem Formulation**: Identification, Selection and Formulation of a Research Problem, Criteria of a good Research Problem, Review of Literature, Research Gaps. [10]
3. **Research Design**: Research Framework, Meaning &Significance of Research Designs, Features of a good Research Design, Types of Research Design. [10]
4. **Data Analysis and Simulation Tool**: Types of Data, Sources of Data, Methods of Collecting Data, Data Presentation Techniques. Methods of Data Analysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. **Report Writing**: Types of Reports, Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books:

1. R.Pannershelvam, "ResearchMethodology" PrenticeHall India, New Delhi, 2nd Edition, 2013.

CS 19.517 Ad-hoc Sensor Networks Laboratory Total Hours: 26

Credit: 0-0-2-1

Prerequisite: Computer Network

Objectives: The objective of this course is to:

- Become comfortable with network simulation
- Provide the foundation of to explore simulation of various types networks.

Contents:

- Basics of Network Simulation
- Simulating a Local Area Network
- Measuring Network Performance
- Simulation of a Satellite Network
- Simulating a Wi-Fi Network
- Simulating a Wi-MAX Network
- Simulating a Mobile Ad-hoc Network
- Simulating a Wireless Sensor Network
- Setting up a Bluetooth Network
- Setting up a Zig-Bee Network

Outcomes: Upon completion of this course, students will be:

- Able to simulate different types of networks and performance measures of network
- Able to setting up Bluetooth and Zig-Bee network

CS 19.525 **Machine Learning Lab** **Total Hours: 26**

Credit: 0-0-2-1

Prerequisite: Artificial Intelligence

Objective(s): To learn the implementation of different Machine learning models.

Contents:

Experiments based upon basic learning models, classification, generalization.

Experiments based upon linear models of learning.

Experiments based upon distance models.

Experiments based upon tree and rule models.

Experiments based upon reinforcement learning.

Outcome(s): Students will be able to apply and compare different Machine learning models.

CS 19.527 **Operations Research Lab** **Total Hours: 26**

Credit: 0-0-2-1

Prerequisite: Engineering Mathematics

Objective(s): To implement the Operations Research techniques.

Contents:

Experiments based upon linear programming.

Experiments on Simplex method.

Experiments based upon Assignment problem and Transportation model.

Experiments based upon Game theory and Queuing theory.

Experiments based upon CPM/PERT.

Experiments based upon dynamic programming.

Outcome(s): Students will be able to implement and analyze different OR techniques.

UC 19.101 **Social and Professional Ethics** **Total Lectures: 26**

2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

Pre-requisite:

1. **Basic Human Values:** Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. **[5]**

2. **Theories of Ethics:** Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. **[4]**

3. **Professional Ethics:** Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. **[7]**

4. **Corporate Social Responsibility:** Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. **[6]**

5. **Ethics and Environment:** Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. **[4]**

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books:

1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books:

1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

CS 19.506 **Distributed Operating Systems** **Total Lectures: 40**

Credit: 3-0-0-3

Prerequisite: Operating System

Objective(s):

- To learn the operating system and distributed computing environment
- To learn remote procedure call and Remote method invocation.
- To learn the principles of distributed shared memory
- To learn distributed file system..

1 **Introduction and distributed computing environment**: Definition, Evolution of distributed computing system, Distributed computing system models- Minicomputer model, workstation model, workstation –server model, processor –pool model, hybrid model. Advantages of distributed operating system. [8]

Design issues of distributed operating system- Transparency, Reliability, concurrency, scalability, heterogeneity, openness, security.

2 **Message Passing:** Introduction, issues in IPC by message passing, Synchronization, buffering –null buffer, single message buffer, unbounded capacity buffer, finite bound buffer. Multi datagram message, encoding and decoding of message data. Process addressing, failure handling, group communication. [6]

3 **Remote Procedure call and Remote Method Invocation:** RPC model, Transparency of RPC, Implementing RPC mechanism, Stub generation, RPC Messages, Parameter passing, semantics, call semantics. Communication protocols for RPC-request protocol, request/reply protocol, request/reply/acknowledge protocol, RPC heterogeneous environment, Light weight RPC. Remote Method Invocation(RMI) : Introduction, communication between distributed objects, design issues for RMI implementation of RMI , clock synchronization, logical clock- Lamport time stamps, deadlock, election algorithms- Bully algorithm, Ring algorithm , distributed transactions. [15]

4 **Distributed shared memory:** Introduction, message passing vs DSM, implementation approaches to DSM, design and implementation issues- Structure and synchronization model. Granularity, Structure of shared memory space, consistency model, replacement strategy, thrashing. [8]

5 **Distributed File System:** Design, implementation, trends in distributed file system. [7]

Outcome(s): On successful completion of this course, students will be able to

- Understand the primary functionalities of operating system.
- Understand Message passing efficiently in an operating system environment
- Develop new operating systems as well as work on existing ones to develop them further

Text Books:

[1] Pradeep K. Sinha, "Distributed Operating Systems: Concepts and Design", Prentice-Hall of India, 3rd Printing, October 2001 .
[2] Andrew S. Tanenbaum and Maarten van Steen, " Distributed Systems", PHI, second Printing, July 2003.

Reference Books:

[1] G. Coulorius, J. Dollimore and T. Kinderberg, "Distributed Systems: Concepts and Design", fourth edition, Addison Wesley, May 2005.

CS 19.508 **Soft Computing Paradigms** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite: Artificial Intelligence

Objective(s):

- To familiarize with soft computing concepts
- To introduce the idea of artificial neural networks, fuzzy logic and use of heuristics based on human experience
- To introduce the concept of genetic algorithm and its applications to soft computing using some applications

1. **Artificial Neural Networks:** Definition, benefits of Artificial Neural Networks, terminology, neuron models, activation function, network architectures, learning process, types of learning: Hebbian, competitive, error-correction, Boltzmann learning. [8]

2. **Types of Neural Networks:** Feed forward neural network: Single layer perceptron, limitations, multi layer perceptron, back propagation algorithm, practical considerations, radial basis function network. Recurrent networks: Hopfield network, NARX model, state space model, recurrent multi layer, perceptron, second order networks. Self-organizing map, and principal component analysis. [12]

3. **Fuzzy Logic and applications :** Basic concepts of fuzzy logic, crisp sets and fuzzy sets, operations and properties of crisp sets and fuzzy sets, crisp and fuzzy relations, fuzzy rules, fuzzification and defuzzification. Pattern recognition, control engineering, image processing, neuro fuzzy application. [10]

4. **Genetic Algorithms:** Basic concepts, working principles, genetic operators, genetic programming, parsing trees and mathematical foundation of genetic algorithm. . Other optimization methods: Swarm Intelligence, ant colony optimization. [6]

5. **Hybrid Systems:** Neuro genetic systems, fuzzy genetic systems and neuro fuzzy genetic systems, applications. [4]

Outcome(s): On successful completion the students will be able to:

- Identify and describe soft computing techniques and their roles in building intelligent machines
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems
- Apply genetic algorithms to combinatorial optimization problems
- Apply neural networks to pattern classification and regression problems
- Evaluate and compare solutions by various soft computing approaches for a given problem

Text Books:

[1] Li Min Fu, "Neural Networks in Computer Intelligence", Tata McGraw Hill Edition, 2008.

[2] S.N. Sivanandam, S. N. Deepa, "Principles of Soft Computing", Wiley India, 2008.

[3] D.E. GoldBerg, "Genetic Algorithms in Search, Optimization and Machine Learning", Pearson Education, 2009.

[4] S. Rajsekaran, G. A. Vijayalaxmi Pai, "Neural Networks, Fuzzy Logic and Genetic Algorithms: Synthesis and Application", Prentice Hall, 2010

CS 19.510 **Digital Image Processing and Analysis** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite: Computer Programming, Computer Graphics

Objective(s):

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study image restoration procedures.
- To study the image compression procedures.
- To study the image segmentation and representation techniques
- To study the image representation in form of features and descriptors

1. **Image Representation:** Sampling, Quantization, Image Basis Function, Image Types, Fourier Transform, Discrete Cosine Transform, Walsh- Hadamard Transform, Wavelet Transform, Principal Component Analysis [6]

2. **Image Enhancement and Restoration:** Contrast Stretching, Histogram Specification, Histogram Equalization, Enhancement Using Arithmetic/Logic Operations, Smoothing Sharpening, Low-Pass Filters, High-Pass Filters, Bandpass Filters, Homomorphic Filtering, Restoration Process Model, Noise Models, Inverse Filtering , Minimum Mean-Square Error Restoration. [8]

3. **Image Morphology**: Introduction, Logic Operations Involving Binary Images, Dilation and Erosion, Opening And Closing, Boundary Extraction, Region Filling, Extraction of Connected Components, Convex Hull, Thinning, Thickening. [5]

4. **Image Segmentation:** Region Extraction, Pixel-Based Approach, Thresholding, Edge And Line Detection, Pattern Fitting Approach, Hough Transform, Radon Transform, Edge Linking And Edge Following, Edge, Corner Detection**.** [6]

5. **Pattern Recognition , Compression and Feature Extraction** [15]
Recognition: Deterministic Methods, Clustering, Neural Network, Template Matching, Statistical Classification, Syntactic Recognition, Tree Search, Graph Matching.Image Compression: Information Content of an Image, Lossless and Lossy Compression Algorithms, Compression Standards. Feature Extraction: Representation, Topological Attributes, Geometric Attributes, spatial Moments, Texture, Boundary Based Description, Region Based Description, Intensity Based and Relational Description.

Outcome(s): On successful completion of this course, students will be able to

- Discuss digital image fundamentals.
- Apply image enhancement and restoration techniques.
- Use image compression, segmentation and features extraction Techniques.

Text Books:

[1] Gonzaloz R. C. and Woods R.E., “Digital Image Processing”, Prentice Hall 2002.

[2] Jain A.K., “Fundamentals of Digital Image Processing”, Prentice Hall 1989.

Reference Books:

[1] William K. Pratt, “Digital Image Processing”, John Wiley, 2001.
[2] B. Chanda and D. Dutta Majumder ,” Digital Image Processing and Analysis”,PHI, 2002

CS 19.512 **Advances in Database Management Systems** **Total Lectures: 40**

Credit: 3-1-0-4

Prerequisite: Database Management System

Objective(s): The objectives of this Course are :

- To learn object relational databases
- To learn query processing and optimization
- To learn database recovery and database security
- To learn distributed databases

1. **Object and Object-Relational Databases:** Introduction, Object relational features, Object database extensions to SQL, ODMG object model and the object definition language (ODL) [8]

2. **Query Processing and Optimization:** Translating SQL queries into relational algebra. Algorithms for external sorting, select, join, project and set operations. Implementing aggregate operations and outer joins. Combining operations using pipelining, heuristic query optimization, selectivity and cost estimates in query optimization, semantic query optimization. [8]

3. **Database Recovery:** Recovery concepts, no-undo/redo recovery based on deferred update, recovery techniques based on immediate update, shadow paging, ARIES algorithm, recovery in multi database systems, database backup and recovery from catastrophic failures. [8]

4. **Database Security:** Security issues, granting and revoking privileges, role based access control for multilevel security, SQL injection, statistical database security, flow control, encryption and public key infrastructures, privacy issues and preservation, challenges of database security**.** [8]

5. **Distributed Databases:** Distributed database architecture, fragmentation, and query processing and optimization management in distributed databases. Database concepts, types, distributed distribution and allocation techniques, in distributed databases, transaction [8]

Outcome(s): After completion of the course, students will be able to:

- Understand object and object relational databases.
- Understand Structured Query Language (SQL) with query optimization.
- Understand issues in database recovery and database security

Text Books:

[1] Elmasri, Navathe, "Fundamentals of Database systems", Addison Wesley, sixth ed, 2010.

[2] Raghu Ramakrishnan, Gehrke, "Database Management systems", McGraw Hill, third ed, 2009.

Reference Books:

[1] Thomas m. Connolly, Carolyn E. Begg, "Database Systems", Pearson education, fifth ed, 2009.

CS 19.514 Distributed Operating Systems Laboratory Total Hours: 26

Credit: 0-0-2-1

Prerequisite: Operating System Laboratory

Objectives: The objective of this course is to:

- To develop skills to design and analyze Inter process communication in shared memory
- To Strengthen the ability to implement Operating system in distributed environment

Contents:

- Study of UNIX commands with all their important options
- Study system calls related to process & process control
- Study system calls related to semaphore
- Inter process communication using shared memory
- Incrementing a counter in shared memory
- Implement concurrent echo client-server application
- Implement a distributed chat server using TCP sockets in java.
- Simulation of Distributed mutual exclusion in java.
- Write a program to implement RPC in "C"
- Implement „Java RMI" mechanism for accessing methods of remote systems.
- Write a program to simulate the functionality of Lamport's Logical clock in C.
- Write a program to Implement Vector clock in C.

Objectives:

Upon completion of this course, students will be able to :

- Understand process and process control and semaphore
- Understand working of client server application
- Understand working of TCP sockets in Java

CS 19.516 Digital Image Processing and Analysis Laboratory Total Hours: 26

Credit: 0-0-2-1

Prerequisite: Computer Programming Laboratory

Objectives:

The objective of this course is to:

- To learn MATLAB environment for image processing
- To learn various types of functions Image restoration, Region extraction and features extraction.

Contents:

- Overview of MATLAB environment, Programming, Data types, Structure, Arithmetic Logical operations, Cell arrays, Script files, Functions.
- Implement following image processing concepts using MATLAB.
- Fourier transform, discrete cosine transform, Walsh- Hadamard transforms and principal component analysis.
- Contrast Stretching, Histogram Equalization, and Enhancement using Arithmetic/Logic Operations.
- Smoothing, Mean filter, Ordered Statistic Filter, Sharpening, Low-pass, High-pass filters, Bandpass and Homomorphic Filtering.
- Image Restoration using Inverse filtering, Minimum Mean-square Error Restoration.
- Logic Operations involving Binary Images, Dilation and Erosion, Opening and Closing, Boundary Extraction, Region Filing, Extraction of Connected Components, Convex Hull, Thinning, Thickening.
- Region Extraction, Thresholding, Edge and Line Detection using gradient operators, Hough transform, Radon transform.
- Object representation, topological attributes, Extraction of object by Boundary based descriptors.
- Feature Extraction of object by Region based descriptors.
- Object recognition problem with preprocessing, segmentation, feature extraction, and classification steps.

Outcomes:

On successful completion of this course, students will be able to

- Implement digital image processing fundamentals.
- Apply image enhancement and restoration techniques.

Use image compression, segmentation and features extraction Techniques

CS 19.518 Advanced Database Management Systems Laboratory

Total Hours:26

Credit: 0-0-2-1

Prerequisite: DBMS laboratory

Objectives:

The objectives of this course are:

- To learn object relational databases
- To develop skill to design and analyze cost functions and query optimization
- To implement horizontal and vertical fragmentation

Contents:

- Lab Exercises based on Developing objects, member functions and implementing Object oriented features in SQL
- Lab Exercises based on Developing cost functions and optimizing SQL Queries
- Lab Exercises based on developing strategies for physical database design and tuning in relational systems
- Lab exercises based implementing horizontal fragmentation, vertical fragmentation, total replication and partial replication in distributed database systems.

Outcomes:

After completion of the course, students will be able to:

- Understand total replication and partial replication in distributed database
- Understand Structured Query Language (SQL) with query optimization.

CS 19.563 **Advances in Distributed Computing** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Computer network, Computer Architecture, Distributed System

Objective(s): The objectives of this Course are :

- To learn distributed systems and distributed computing
- To learn synchronous and asynchronous system
- To learn fault tolerant and non-fault tolerant systems.
- To learn synchronous shared memory systems.

1. **Introduction:** Distributed Systems, Cluster Computing, Supercomputing, Cloud Computing. [6]
2. **Synchronous networks and Fault-tolerant Systems:** Leader election in synchronous ring networks. Leader election in rings. Basic computational tasks in general synchronous networks: leader election. Fault-tolerant Systems: Consensus, Link failures: the two generals problem. Process failures (stopping, Byzantine). Algorithms for agreement with stopping and Byzantine failures. Exponential information gathering. [12]
3. **Asynchronous distributed computing and Non-fault-tolerant Systems:** Formal modeling of asynchronous systems using interacting state machines (I/O automata). Proving correctness of distributed algorithms. Non-fault-tolerant Systems: Algorithms for asynchronous networks. Leader election. [10]
4. **Time, clocks, and the ordering of events:** State-machine simulation. Vector timestamps. Stable property detection. Distributed termination. Global snapshots. Deadlock detection, Synchronizers: Synchronizer applications. Synchronous vs. Asynchronous distributed systems. [12]
5. **Asynchronous shared-memory systems and Locking:** The mutual exclusion problem. Mutual exclusion algorithms. Bounds on shared memory for mutual exclusion. Resource allocation. The Dining Philosophers problem. Locking: Locking algorithms, optimistic algorithms, lock-free algorithms, lazy algorithms, Load scheduling and balancing techniques. [12]

Outcome(s): On successful completion the students will be able to:

- Understand distributed algorithms for synchronous and asynchronous distributed computing
- Understand various synchronizer applications with synchronous and asynchronous systems..

Text Books:

[4] Sunita Mahajan, Seema Shah, “Distributed Computing”, Oxford University Press,2010

CS 19.565 **Advanced Compiler Construction** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Compiler design, Theory of automata

Objective(s):

- To learn the major conceptual areas of language translation and compiler design.
- To learn the knowledge in code optimization and register allocation techniques
- To extend the knowledge of different parsers.
- To provide practical programming skills necessary for construction of a compiler.

1. **Advanced Issues in Elementary topics:** Compiler, phases and passes, finite state machines, regular expressions and their applications to lexical analysis, implementation of lexical analyzer using FLEX, CFG, bottom-up and top-down parsers, implementation of parsers using YACC. [10]

2. **Symbol Table Structure and Intermediate Representations:** Storage classes, visibility and lifetime. Symbol attributes and symbol table entries, local symbol table management, and global symbol table structure, storage binding and symbolic registers. Intermediate Representations: Issues in designing intermediate languages, High level, medium level, low level and multi-level intermediate languages. Representing all intermediate languages in informal compiler algorithm notation (ICAN). [14]

3. **Code Optimization:** Introduction, early optimization, redundancy elimination. Loop optimization: Induction variable optimizations, bounds checking elimination. Procedure optimization: Tail-call optimization and Tail-recursion optimization, procedure integration, In-line expansion, leaf routine optimization and shrink wrapping. [8]

4. **Register Allocation**: Register allocation and assignment, local methods, graph coloring, priority based graph coloring. Code Scheduling: Instruction Scheduling, Speculative loads and boosting, speculative scheduling, trace scheduling, percolation scheduling. [12]

5. **Inter procedural Analysis and Optimization** Call graph, inter procedural data flow analysis, constant propagation, alias analysis, optimizations and register allocation. [8]

Outcome(s): On successful completion of this course, the students will be able to

- Use lexical analyzer and parser generator tools.
- Generate intermediate code.
- Be familiar with register allocation. and compiler code optimization

Text Books:

CS 19.567 **Bioinformatics** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Computer Programming, DBMS

Objective(s):

- To learn the basics of bioinformatics
- To learn the bioinformatics databases and web techniques
- To extend the knowledge bioinformatics and distributed computing

1. **Introduction to Bioinformatics:** Definition and History of Bioinformatics, Internet and Bioinformatics, Introduction to Data Mining, Applications of Data Mining to Bioinformatics Problems and Applications of Bioinformatics. [6]

2. **Bioinformatics Databases:** Introduction, Nucleotide sequence database - Protein sequence databases, Sequence motif databases, Protein structure databases, other relevant databases. Data storage and retrieval and Interoperability: Flat files, relational, object oriented databases and controlled vocabularies. File Format (Genbank, DDBJ, FASTA, PDB, SwissProt).Introduction to Metadata and search; Indices, Boolean, Fuzzy, Neighboring search. The challenges of data exchange and integration. Ontologies, interchange languages and standardization efforts. General Introduction to XML, UMLS, CORBA, PYTHON. [19]

3. **Sequence Alignments and Visualization:** Introduction to Sequences, alignments and Dynamic Programming; Local alignment and Global alignment (algorithm and example),Pairwise alignment (BLAST and FASTA Algorithm) and multiple sequence alignment (Clustal W algorithm).Methods for presenting large quantities of biological data: sequence viewers (Artemis, SeqVISTA), 3D structure viewers (Rasmol, SPDBv, Chime, Cn3D, PyMol), Anatomical visualization. [16]

4. **Bioinformatics and Web Techniques:** Clustal V, Clustal W 1.7, RasMol, Oligo, Molscript, Tree view, Alscript, Genetic Analysis Software, Phylip. Semantic Web Techniques: Bridging databases, browsing space of information, life sciences identifiers, RDF data representation. [10]

5. **Bioinformatics and Distributed Computing:** Java Distributed computing platform, DPRml, DSEARCH. [5]

Outcome(s): On successful completion of the course, the students will be able to

- Use different bioinformatics databases and web techniques
- Understand sequence alignment algorithms

Text Books:

[1] Dan E. Krane ,"Fundamental Concepts of Bioinformatics", third edition, Pearson Education, 2009.

[2] Claverie, J.M. and Notredame C. ," Bioinformatics for Dummies", Wiley Editor , January 2003.

Reference Books:

CS 19.569 **Advanced Computer Graphics** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Computer Graphics

Objective(s):

- To introduce the students with the principles of animation
- The objective of the course is to equip students with fundamental knowledge and technical competence in the field of computer graphics.
- Provide an understanding of rendering and 3D modeling.
- To learn three dimensional object representation.

1. **3D Transformation and Viewing**: 3D transformation, composite transformation, viewing pipeline, parallel and perspective projection, visible surface detection: classification of visible surface detection algorithms, back face detection, depth buffer method, A-buffer method, scan-line method, depth sorting method. [7]

2. **Animation:** Introduction of computer Animation, Principles of Animation, Keyframing, Kino-dynamics Planning- motion blending, skinning-skeleton animation, rigid skinning ,linear skinning, dual skinning, physics modeling-Physics-based animation, rigid body systems, articulated rigid bodies, forward and inverse dynamics. [7]

3. **Rendering:** Basic concepts of graphics models-illumination& reflection models Shading-Scanning polygons, Gourad and Phong shading , texture mapping- bump & environmental maps , mipmaps , shading languages-vertex shedders and fragment shedders. [12]

4. **Modeling:** Representation, Using homogeneous Coordinate systems, Modeling process, terrain-representation, methods , fault formation & weather, plants modeling , animals modeling. [12]

5. **Surface Representation:** Three dimensional object representation –polygon representations, implicit representation , Beziers ,B-splines-basis function, knot insertion, conversion , rational B-splines (NURBS)-properties and examples , evaluators, subdivision surfaces-coarse mesh and subdivision rule, types of subdivisions , Voxels . [14]

Outcome(s): On successful completion of this course, students will be able to.

- Perform 3D transformation and viewing techniques.
- Understand various styles of animation.
- Acquire knowledge about illumination models, color models and surface rendering.

Text Books:

[3] James D.Foley, Andries van Dam, Steven K. Feiner, John F. Hughes , “Computer Graphics , Principles & Practice”, 3rd Edition, Pearson Prentice Hall, 2013

CS 19.571 **Advances in Algorithm Design** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Data Structures, Design and Analysis of Algorithm

Objective(s):

- To learn the algorithm analysis techniques.
- To become familiar with the different algorithm design techniques.
- To understand the limitations of the algorithms complexity

1. **Pattern matching algorithms:** Finite automata and regular expression, recognition of regular expression patterns, recognition of substrings, Two – way deterministic pushdown automata, position trees and substring identifiers. [11]

2. **Computability theory:** Turing machines, variants of Turing machines, Hilbert‟s problem, decidable languages, the halting problem, Un-decidable problems from language theory, mapping reducibility, the recursion theorem, decidability of logical theories, Turing reducibility, definition of information. [11]

3. **Fast Fourier Transform and Polynomials:** Representation of polynomials, the DFT and FFT algorithms, efficient FFT implementation, the FFT using bit operations, products of polynomials, the Schonhage – Strassen integer multiplication algorithm. [11]

4. **Randomized Algorithm and Parallel Algorithm:** Monte-Carlo algorithm, Las-Vegas algorithm, Game tree evaluation, De-randomization. Models for parallel computation basic techniques; Parallel matrix algorithms: matrix-vector multiplication, matrix multiplication, triangular system solution, sorting networks-parallel merging networks, zero –one principle. [8]

5. **Complexity theory:** Time complexity, the classes P,NP,NP complete and NP hard, Hierarchy theorems, Relativization, Circuit Complexity, approximation algorithms, probabilistic algorithms, circuit complexity, alteration, interactive proof systems, parallel computation, cryptography. [11]

Outcome(s): On the successful completion of the course, the student will be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the different algorithm design techniques for a given problem.

Text Books:

CS 19.562 **Mobile Cloud Computing** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Computer Networks, Cloud Computing

Objective(s):

- To learn the cloud services and requirements of cloud
- To become familiar with different cloud models and solutions
- To learn mobile computing architectures

1. **Introduction:** Cloud, Business and IT Perspective, Virtualization, Cloud Services Requirements, Cloud And Dynamic Infrastructure, Cloud Computing Characteristics, Cloud Adoption. [8]
2. **Cloud at a Service:** Internet Software Evolution, Web Services Deliver from the Cloud, Communication-as-a-Service, Infrastructure-as-a-Service, Monitoring-as-a-Service, Platform-as-a-Service, Software-as-a-Service, Building Cloud Network. [8]
3. **Cloud Models and Solutions:** Cloud Models, Cloud Characteristics, Measured Service, Security in a Public Cloud, Public Verses Private Clouds, Cloud Infrastructure Self Service. Cloud Solutions: Cloud Ecosystem, Cloud Business Process Management, Cloud Service Management, Cloud Stack, Computing On Demand, Cloud Sourcing. [16]
4. **Cloud Offerings and Virtualization technology:** Virtual Desktop Infrastructure, Storage Cloud. Cloud Virtualization technology: Virtualization, Virtualization Benefits, Server Virtualization, Hypervisor Management Software, Virtualized Data Center. [12]
5. **Mobile Computing:** Motivation, Applications, Architectures, Platforms For Mobile Cloud Computing, Windows Phone, Android, IPhone, Popular Mobile Apps, 3G, 4G, Bluetooth, Wi-Fi. [8]

Outcomes(s): On the successful completion of the course, the student will be able to:

- To understand the cloud infrastructure
- To understand the different services provided by cloud.
- To understand mobile computing

Text Books:

CS 19.564 **Machine Intelligence and Robotics** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Artificial Intelligence

Objective(s):

- To learn artificial intelligence and knowledge representation
- To become familiar with knowledge organization and control strategies
- To learn robotics and robot programming

1. **Introduction:** Importance of AI, Knowledge Based System, Knowledge organization & manipulation, Conceptual Introduction to LISP and other AI programming Languages. [10]

2. **Knowledge Representation:** Syntax, Semantics, Inference Rules, Non-deductive Inference methods, and representations using rules. Forward chaining and backward chaining. Fuzzy Logic & Natural languages computations. Probabilistic Reasoning. Object Oriented Representation. [10]

3. **Knowledge Organization & Manipulation:** Search & control strategies, matching techniques, knowledge organization & management, Genetic Algorithms based search techniques. [10]

4. **Robotics:** Types of Robots, spatial transformation and kinematics of open chain linkages. Mobile robots, Actuators, sensors, programming and control. Applications - motion planning, grasping and industrial automation. [12]

5. **Robot Programming:** Languages, characteristics of Languages, Position Specification, Motion Specification. Robot Program synthesis, Programming solution using VAL Robot programming Language, Artificial Intelligence, search strategies, Heuristic search, Rule based problem solving, Knowledge Representation, Robot programming using LEGO robots. [10]

Outcomes(s): On the successful completion of the course, the student will be able to:

- To understand robot programming using LEGO NXT EV3
- To understand VAL robot programming language
- • To understand knowledge representation and AI Programming Languages.

Text Books:

[1] R.D. Klafter, Chemieleskio, T.A. and Negin M., "Robotics Engineering an Integrated approach", Prentice Hall , 1989.

[3] G. Bekey, "Autonomous Robots", MIT Press, 2005.

CS 19.566 **Natural Language Processing** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Artificial Intelligence

Objective(s):

- To learn language modeling, syntactic analysis and parsing
- To learn semantic analysis and parsing
- To learn robotics and robot programming

1. **Language Modelling and Syntactic Analysis :** Definition, Origin of NLP, Language and Knowledge, The challenges of NLP, Language and Grammar, NLP application, Successful early NLP systems, Information retrieval. Various grammar-based language models, statistical language models. [16]

   Word Level Analysis and Syntactic Analysis: Introduction, Regular Expressions, Finite State Automata, Morphological Parsing, Spelling Error Detection and correction, words and words classes, Part-of-speech tagging . Context Free grammar, Constituency, Parsing, Probability Parsing.

2. **Semantic Analysis and Discourse Processing:** Introduction, Meaning Representation, Lexical Semantics, Ambiguity, word sense Disambiguation. Cohesion, Reference Resolution, Discourse Coherence and Structure. [8]

3. **Natural Language generation and Machine Translation:** Introduction, Architecture of NLG systems, Generation task and representation, Problems in Machine Translations, Machine Translation approaches, Direct Machine Translation, Rule based machine translation, corpus-based MT, Semantic or knowledge based MT systems. [10]

4. **Application and Lexical Resources:** Speech Recognition and Synthesis, Information Retrieval Systems, Information Extraction, Automatic Text Summarization, Question-Answering; Resources**:** WordNet, FrameNet, Stemmers, Part-of Speech Tagger. [10]

5. **NLP with Python:** Introduction, Processing Raw Text, Writing Structured Program, Categorizing and Tagging words, learning to Classify Text, Analyzing Sentence Structure. [8]

Outcome(s): On the successful completion of the course, the student will be able to:

- To understand Implementation of Natural language processing using Python
- To understand VAL robot programming language
- To understand knowledge representation and AI Programming Languages.

Text Books:

[1] Steven Bird, Ewan Klein and Edward Loper, "Natural Language Processing with Python", O" Reilly Media , 2009.

Reference Books:

[1] U. S. Tiwary and Tanveer Siddiqui, "Natural Language Processing and Information Retrieval", Oxford University Press, 2008.

CS 19.568 **Advanced Software Engineering** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Software Engineering

Objective(s):

- To understand the software engineering approaches, software development process models, project planning, software size estimation, software effort and cost estimation and risk management.
- To acquire knowledge on implementation issues in software design..
- To learn coding style guidelines and standard and software testing, different type of testing strategies and their application in real time system.
- To study object oriented system analysis, design and testing.

1. **Introduction:** Software life cycle models, Waterfall, Prototype, Evolutionary and Spiral Models, Overview of Quality Standards like ISO 9001, SEI – CMM, Software Requirements analysis & specifications, Software Project Management. [10]
2. **Fundamental issues in software design:** Goodness of design, cohesions, coupling, Classification of Cohesiveness & Coupling, Function-oriented design: structured analysis and design. [8]
3. **Software Testing:** Testing process, Design of test cases, functional testing: Boundary value analysis, Equivalence class testing, Decision table testing, Cause effect graphing, Structural testing, Path Testing, Data flow and mutation testing, Unit Testing, Integration and System Testing, Debugging, Alpha & Beta Testing, Regression Testing, Testing Tools & Standards. [8]
4. **Object Oriented System Analysis. Design and Testing:** Object oriented and object basics, object oriented system development cycle, process framework of OOSAD, unified approach UML, UML Diagrams: class diagram, use-case diagram, behavior diagram, OOAP, OOD and OODBMS. [16]

   Object-Oriented Testing: Testing Object Oriented Systems overview. Broadening the View of Testing, Testing OOA and OOD Models, Object-Oriented Testing Strategies, Test Case Design for OO Software , Testing Methods Applicable at the Class Level.
5. **Advanced Topics in Software Engineering:** Overview of Formal Methods, Cleanroom Software Engineering, Component-Based Software Engineering, Client-Server Software Engineering, Web Engineering, Reengineering, Computer-Aided Software Engineering, and the Road Ahead. [10]

Outcome(s): On successful completion of this course, students will be able to

- Demonstrate knowledge of the distinction between critical and non-critical systems and ability to manage a project including planning, scheduling and risk assessment/management.
- Demonstrate proficiency of different life cycle models.
- Identify specific components of a software design that can be targeted for reuse.
- Demonstrate proficiency in software development cost estimation, software testing plan and advanced topics of software engineering.

CS 19.570 **Mathematical Modeling** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite: Engineering Mathematics

Objective(s):

- To acquire knowledge about basics of various mathematical models
- To learn methods of model fitting
- To study modeling with differential equations

1. **Introduction :** Basics of modeling, mathematical models, Modeling change with difference equations, Approximate change with difference equations, solutions to dynamical systems, systems of difference equations. Modeling using proportionality, modeling using geometric similarity. [12]

2. **Model fitting and Experimental modeling** : Fitting models to data graphically, analytic method of model fitting, applying the least square criterion, choosing a best model, one term models , high order polynomial models, smoothing of low order polynomial models, cubic spline models. [10]

3. **Simulation modeling:** Introduction, simulating deterministic behavior: area under a curve, generating random numbers, simulates probabilistic behavior, queuing models. Introduction to some simulators. [10]

4. **Discrete modeling:** Probability modeling with discrete systems, linear regression, an overview of discrete optimization modeling, linear programming: geometric and algebraic solutions, simplex method. [10]

5. **Modeling with differential equations:** Introduction, population growth, graphical solutions of autonomous differential equations, numerical approximation methods, graphical solutions of autonomous systems of First order differential equations. [10]

Outcome(s): On successful completion of this course, students will be able to

- Understand simulation modeling and discrete optimization modeling
- Understand queueing models and low order polynomial models

**** Project Based Learning in Group of 3-5 Students**

$ After 1 year and during summer vacation, the student is expected to complete a summer Internship in organization outside the university. The work will be evaluated on the basis of presentation in autumn semester of 2nd year.

 # Student will have the option of choosing the project in an external organization.

% Program Elective-I and Program Elective-II will be offered on the basis of single track chosen by the Student.

Program Elective Tracks		
Web Designing and Digital Marketing (Track1)

UC 19.101
Social and Professional Ethics Total Lectures: 26
2-0-0-2

Objective: To create an awareness on professional ethics and human values, To instill moral and social values and loyalty and to appreciate the rights of others.

Pre-requisite:

1. Basic Human Values: Morals, Values and Ethics – Truth, Rights Conduct (Righteousness), Love, non-violence and peace, Humility and character. Core areas of ethics: Social ethics, Personal ethics Integrity and Trustworthiness, Honesty, Loyalty, Courage, Prudence, Confidence, Confidentiality. [5]

2. Theories of Ethics: Kohlberg and Gilligan's analysis of moral development, - Deontology, Utilitarianism, Virtue Theory Rights Theory, Casuist Theory of Consequentialism – Robert Nozick's Theory of Entitlement and Property Rights. [4]
3. Professional Ethics: Introduction, meaning of work ethics, professional ethics for Journalists, Physicians, Lawyers, Engineers and Accountants. Intellectual property Rights, scope of ethics, code of conduct, business values and inner consciousness, Ethics at the workplace cybercrime, plagiarism, misconduct, fraudulent use of institutional resources, etc. [7]
4. Corporate Social Responsibility: Evolution of Corporate Social Responsibility (CSR) in India, CSR models, CSR to different stakeholders, Corporate Social Responsibility Initiatives of Major Companies of India, Promoting value based governance in organization. Whistle blower policy. [6]

5. Ethics and Environment: Introduction to environmental Issues- Industry and Environmental Pollution, Ethics of Controlling environmental pollution – Impact of environmental pollution on human health – Rights, Duties and care in environmental protection - Sustainable development. [4]

Outcome: The students will understand the basic perception of profession, professional ethics, various moral issues and uses of ethical theories.

Text Books: 1. B.N Ghosh "Business Ethics and Corporate Governance", McGraw Hill Education, Chennai, 2016
2. John R Boatright, "Ethics And The Conduct Of Business", Pearson Education, New Delhi, 2013.

Reference Books: 1. Raju Ramachandran, "Professional Ethics: Changing Profession and Changing Ethics", LexisNexis, Butterworths, 2nd Edition 2014.
2. Andrew Crane and Dirk Matten, "Business Ethics", Oxford University Press, 2nd Edition, 2015.
3. S.K Mandal "Ethics in Business and Corporate Governance" McGraw Hill Education, New Delhi, 2013.
4. R. Subramanian "Professional Ethics", Oxford University Press, 2015.

CA 20.501 Programming Concepts Total Lectures: 40
Credit: 3-0-0-3

Prerequisite(s): Nil

Objective(s):
- To learn the basics of programming skills through C-Programming language.
- To understand the fundamentals concepts like syntax, and statements with essentials of efficient compiling, running and debugging processes.

1. Introduction: Brief History, Library& Linking, Compilation & Execution, Data Types, Operator and Expression Identifier, Keyword and Token, Constant, Data Declaration and Definition, Operators and Expression,Precedence & Associability of Operators. [7]
2. Control and Loop Statement: Introduction, Selection Statements, If, The Conditional Expression, switch, Iteration Statements: for loop, while loop, do-While loop, Jump, Goto label, break and continue, exit() function. [7]
3. Array, Function and String: Definition, declaration and Types of Array, Operation and application of array, Brief introduction on string header files and applications of strings. Function, argument passing, scope of variable, call byreference and call by value, recursion, passing array to function. [5]
4. Structure, Union and Pointer: Definition, Declaration and Initialization, AccessingStructure members, Arrays of Structure, Passing Structure to function,Structure to Pointer, Union. Definition, declaration, Pointer to Pointer, NULL Pointer, De-referencing Pointer, array to pointer (1-D array ,2-D array) pointer array, function to pointer. [12]
5. File handling and Storage Classes: Introduction, Defining and Opening a File in read and writes mode, Closing a file and ending of file, Enumerated data types, Error Handling During I/O Operation Random Access to Files, Command Line Arguments. Storage Classes, Preprocessor Directive. [9]

Outcome(s): At the end of the course student will be able to:
- Describe the process of problem solving through C.
- Write a justifiable C program for a given algorithm.
- Trace the certain C program manually.

Text Books: 1. Scheldt Herbert, "C The Complete Reference" Tata McGraw hill 6th edition,2010.
2. Kernighan & Ritchie, "C Programming Language" Prentice Hall Second Edition, 1988

Reference Books: 1. Kanetkar Y.P., "Let us C Solutions" 10th edition, BPB publication, 2010.

2. Balaguruswamy E., “Programming in ANSI C “5th Edition Tata McGraw-Hill Education, 2004.

CA 20.503 Management Information Systems Total Lectures:40
3-0-0-3

Prerequisite(s): CA 19.106 (System Analysis and Design)
Objective(s): • To introduce the concept of system analysis for managing the projects
• To analyze and document systems, design new systems and implement their plans.
• Understanding paradigm shift to E-enterprise
• Applications of IS and IT to management functions of the industry
1. MIS and Enterprise:Management Information System(MIS) concepts, definition, role, impact, management as a control system, MIS: A support to the management, goals, objectives and target, MIS for a digital firm, E-Business Enterprise: A digital firm-organization of business in digital firm, E-business, E-commerce, real time enterprise. [8]
2. Strategic management of business performance: Concept of corporate planning, essentiality of strategic planning, development of business strategies, types of strategies, short range planning, tools of planning,MIS: Strategic business planning. [6]
3. Information andKnowledge: Information Concepts, Classification of information,System Engineering: Analysis and Design- System concepts, system control, types of system, handling system complexity, system development model, Relationship between Information and Knowledge. [8]
4. Development and implementation of MIS: Determining the information requirement, Development and implementation of the MIS,Management of information, Quality of MIS, Business process reengineering. [8]
5. Application of Management Information Systems: Applications in manufacturing sector-personnel management, financial management, production management, raw material management, marketing management, applications in service sector, Decision support system. [10]
Outcome(s): By learning the course, the students will be able to
• Learn MIS and enterprise and strategic management of business performance.
• Learn management information system and its application
• Develop and implementation of MIS

Text Books:
[1] W. S.Jawadekar, Management Information Systems, , New York, 4thed, 2009..
Reference Books:
[1] J. A.O’ Brien, Management Information Systems, McGraw-Hill, 2004.

CA 20.505 Database Management Systems Total Lectures: 40
Credit:3-0-0-3
Prerequisite(s): NIL
Objective(s): The objective of this Course is to:
• Understand the fundamental concepts of database management.
• Design and Normalize databases.
• Understand transaction processing control.
• Understand basic of object concepts and object relations.
• Understand the role of the DBMS, RDBMS& ODBMS in the organization

Introduction: Databases and database users, database system concepts and architecture, data modeling using the Entity-Relationship (ER) model, Enhanced Entity Relationship model.

[6]
Relational Data Model: Concepts, relational model constraints, relational database schemas, update operations, dealing with constraint violations, relational algebra operations, relational calculus, mapping ER model to relational model.
Structured Query Language (SQL): SQL data definition and data types, specifying constraints, schema change statements, basic queries, complex queries, update statements, views

[12]
Database Design: Functional dependencies and normalization of relational databases, First Normal Form (1NF), 2NF, 3NF, Boyce-Codd normal form (BCNF), multivalued dependency, 4NF.

[6]
TransactionProcessing:Introduction,properties,recoverability,serializability. Concurrency control techniques: Two phase locking protocol, database recovery techniques: Recovery concepts, recovery techniques based on deferred and immediate update

[8]
Object and Object-Relational Databases: Concepts for object databases, object database standards and design, object relational systems, object relational features, object database extensions to SQL, ODMG object model and the object definition language (ODL)

[8]

Outcome(s): After completion ofthecourse, students willbe able to:
- Analyze database models & entity relationship models. Understand architecture for database development.
- Design E-R diagram
- Use Structured Query Language (SQL) with complex queries.
- Design and normalize the relations for any organization.
- Understand transaction processing control.
- Understand Object Oriented databases

Text Books: [1] R.Elmasri&S.B.Navathe,FundamentalsofDatabaseManagementSystems,7thEdition, Pearson Education, 2016.

CA 20.507 Mathematical Foundation Total Lectures: 40
Credit: 3-1-0-4
Prerequisite(s): Elementary Mathematics
Objective(s): To acquire fundamental knowledge of higher Mathematics and apply in Science and engineering disciplines.
1. Matrix Theory: Introduction to the matrix theory, types of matrices, inverse of matrices, rank of matrices, solving system of linear equations. [10]
2. Eigen Values: Eigen values and Eigen vectors, Sparse matrix, diagonalization and triangulization of matrices. [6]
3. Three-dimensional geometry and Vector calculus: Basic concepts of three-dimensional geometry (viz. direction cosines and direction ratios), equation of aplane and of a straight line. Basic concepts of vectors, gradient, divergence and curl of a vector. [8]
4. Calculus: Introduction of differential and integral calculus, derivatives of various types of functions, basic idea of differential equations, solutions of ordinary differential equations with constant coefficients. [10]
5. Complex Algebra: Introduction to the complex algebra, complex numbers, geometrical representation of complex numbers, Argand diagram, De-Moirvre'stheorem. [6]
Outcome(s): After completion of the course, students would be able to apply fundamentals of higher mathematical knowledge in science and engineering and also solve curriculum problems.
Text Books: 1. Ramana B. V. , " Higher Engineering Mathematics", Tata McGraw – Hill PublishingCompany Ltd., P 1390, 2nd edition, 2001

CA 20.509 Programming Laboratory
Credit: 0-0-4-2
Prerequisite(s): NIL
Objective(s):

Contents To learn the basics of programming skills through C-Programming language.
To understand the fundamentals concepts like syntax, and statements with essentials of efficient compiling, running and debugging processes.
1. Testing
Data Types & Operators, Control Statements,Arrays,Strings,Apply logic to print different patterns(at least 5).Max and min of a given list of numbers, their sum and average, Result of a student using switch-case, Implementing matrix operations, Searching and Sorting, String Manipulations, Program to understand the decision making constructs and find the roots of a quadratic equation,Program to understand the implementation of library function.
2. Functions, Pointers, Structure and Union
Function & Function Calling, Storage Classes, Function Declaration and Definition, Function call by value and call by reference,Illustration of storage classes, Pointer, Structure, Union
3. File Handling

Program to Create a File & Store Information,Program to illustrate Reading of Data from a File and to delete or replace a specific Line from a Text File, Program to Create Employee Record and Update it

Outcome(s): At the end of the course student will be able to:

- Describe the process of problem solving through C.
- Write a justifiable C program for a given algorithm.
- Trace the certain C program manually.

CA 20.511 Data Base Management Systems Laboratory Credit:0-0-4-2

Pre-requisites: C-Programming, and DBMS

Objective: By the end of the practical sessions of this section,students will be able to:

- Create Databases using auser interface and SQL command.
- Create Integrity and constraints on databases.
- Write SQLqueries.
- Provideapracticaloverviewofadvancedconceptsliketriggers,assertion, views, etc.

Contents: LabmanualbaseduponthetheorycourseCA 19.607andtoachievethelisted courseobjectives andoutcomes

Outcomes: After undergoingthislaboratorymodule, thestudentsshouldbe able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies.
- Designand implement adatabaseschemafor a given problem-domain.
- Populate and queryadatabaseusingSQLDML/DDLcommands.
- Declareandenforceintegrityconstraintsonadatabaseusingastate-of-the-art
- RDBMS.
- ProgrammingPL/SQLincludingstoredprocedures,storedfunctions,cursors, packages.

CA 20.500 Computer Information System* Total Lectures: 40

Credit: 3-0-0-3

Prerequisite(s): None.

Objective(s): To give essential knowledge about computer information system and its components.

1. Introduction: Evolution of Computers, Generation of Computers, Classification of Computers, Block Diagram of Digital Computers, Memory Unit, ALU,CPU, I/O Devices, Basic Bus Architecture. Software Classification, Machine Language, Assembly Languages And High Level Languages, Assembler, Compilers And Interpreters, Process of Compilation, Programming Language Generations, Introduction to Operating Systems and Role of the Operating System. [8]
2. Digital Logic: Introduction to Boolean Algebra and Logic Gates, K-map Representation and Boolean Function Simplification, Number Systems: Conversion from One Number System to Another, Binary Operations, Complement Representation of Numbers , Alphanumeric Codes, Floating Point Representation of Numbers, Floating Point Arithmetic Operations. [6]
3. Digital Circuit Building Blocks: Adders, Subtractors, Comparators, Encoders, Decoders, Multiplexers, De-Multiplexers, Latches, Flip-Flops, Master Slave Flip Flops, Shift Registers and Counters. [10]
4. Internet Technologies: Introduction to Computer Networks, Internet, WWW and E Mail, Web Browsers,

Introduction to LAN,MAN, WAN, An Introduction to the Design of Web Pages, HTML tags and CSS, Web Servers, Server Scripting, XML.
[8]

5. Software Development: A Systematic Approach to Program Design, Coding, Testing, and Debugging. Application of these Skills to the Construction of Robust Programs. Use of Programming Environments and Tools to Aid in the Software Development Process.
[8]

Outcome(s): On successful completion of this course, students will be able to take specialized courses with strong fundamentals of Computer Information Systems.

Text Books:

1. P.K. Sinha, Computer Fundamentals, BPB Publications, 6th Edition, 2004.
2. M. Morris Mano, Digital Logic & Computer Design, Pearson, 1st Edition, 2008.
3. Roger S. Pressman, Software Engineering: A Practitioner's Approach, McGraw-Hill Higher Education, 7th Edition, 2009.
4. Thomas Powell, HTML and CSS: The Complete Reference, Tata McGraw-Hill, 5th Edition, 2010.

Reference Books:

1. Andrew S.Tanenbaum, Computer Networks, Pearson Education, 5th Edition, 2013.
2. V. Rajaraman, Fundamentals of Computers, PHI, 6th Edition, 2014.

UC 19.102
Communication Skills Total Lectures: 26
2-0-0-2

Objective: This Course aims to develop and enhance the linguistic and communicative competence of the students. The students will be exposed to various forms of personal and professional communication. The self-learning tasks designed will facilitate to enhance effective communication skills.

Pre-requisite:

1. Introduction to Communication: Need for Effective Communication, The Process of Communication, Use of language in communication; Barriers to Communication: Types of barriers (Semantic, Intrapersonal, Interpersonal, And Organizational); Miscommunication; Noise; Overcoming measures.
Technology-based Communication: Netiquettes: effective e-mail messages; power-point presentation; enhancing editing skills using computer software. [5]

2. Listening and Reading Skills : Listening as an active skill; Types of Listeners; Listening for general content; Listening to fill up information; Intensive Listening; Listening for specific information; Developing effective listening skills; Barriers to effective listening skills. Reading Skills: Previewing techniques; Skimming; Scanning; Understanding the gist of an argument; Identifying the topic sentence; recognizing coherence and sequencing of sentences; Improving comprehension skills. [6]
3. Writing Skills: Sentence formation; Use of appropriate diction; Paragraph and Essay Writing; Coherence and Cohesion. Common Errors. Letter Writing: Formal, informal and demi-official letters; Job Application: Cover letter, Differences between bio-data, CV and Resume. Report Writing: Basics of Report Writing; Structure of a report; Types of reports. [6]

4. Non-verbal Communication and Body Language: Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language. [3]

5. Interview Skills: Types of Interviews; Ensuring success in job interviews; Appropriate use of non-verbal communication. Group Discussion: Differences between group discussion and debate; Ensuring success in group discussions. Presentation Skills: Oral presentation and public speaking skills. [6]

Outcome: The students would hone the skills of reading, writing, listening, and speaking and become adept at communicating in the current modern context.

Text Books:

1. Raman, M., & Singh, P. (2017). Business Communication (2nd edition.). New Delhi: Oxford University Press.
2. Lesikar, Raymond V and Marie E. Flatley. Basic Business Communication: Skills for Empowering the Internet Generation: Ninth Edition. New Delhi: Tata McGraw-Hill,

Reference Books:

1. Prasad, H. M. How to Prepare for Group Discussion and Interview. New Delhi: Tata McGraw-Hill Publishing Company Limited
2. Bonet, Diana. The Business of Listening: Third Edition. New Delhi: Viva Books, 2004.

CA 20.502 Operating system Total Lectures: 40
Credit: 3-0-0-3

Prerequisite(s): NIL

Objective(s): • Understand the fundamental operating system abstractions like processes, threads, files, semaphores, IPC and deadlocks.

- Understand operating system from user's perspective as well as from system's perspective.
- Understand the principles of concurrency and synchronization.
- Understand basic resource management techniques.

1. Introduction: Overview, Evolution,Types, operating system functions andcharacteristics. [3]
2. Process Management and Memory Management: The process concept, operating system services for process management, scheduling algorithms and multiple processor scheduling. Storage allocation methods, paging, segmentation, virtual memory concept, demand paging, page replacement algorithms and trashing. [10]
3. Input /Output and File Systems: Hardware organization, device scheduling policies, Functions of file systems, file access and allocation methods, directory systems, structured organizations, directory and file protection mechanisms and implementation issues. Device dependent and device independent software. [7]
4. Deadlocks and Process Synchronization: Characterization, prevention and avoidance, deadlock detection and recovery and practical consideration. Critical section problem, semaphores, classical process co-ordination problems and their solutions, inter process communication and message-passing mechanisms. Client-server modeling, RPC, threads. [10]
5. Protection & Security: Goals of Protection, Principles of Protection. Domain of protection Access Matrix, Implementation of Access Matrix. Access control, Revocation of Access Rights. Capability- Based systems, Language - Based Protection, Security problem, program threats, system and network threats cryptography as a security tool, user authentication, implementing security defenses, fire walling to protect systems. [9]

Outcome(s): By learning the course, the students will be able to,
describe, contrast and compare differing structures for operating systems
understand and analyse theory and implementation of: processes, resource control (concurrency etc.), physical and virtual memory, scheduling, I/O and files

Text Books: 1. Silberschatz A., and Galvin P.B., Operating System Concepts, John Wiley &Sons, 6th Edition, 2005.
2. Tanenbaum A.S., Modern Operating Systems, Pearson Education Asia, 4th Edition, 2003

Reference Books: 1. Stallings W., Operating Systems, Pearson Education Asia, 5thEdition, 2008.
2. Tanenbaum A.S. and Woodhull A. S., Operating Systems- Design and Implementation, Pearson Education Asia, 2nd Edition, 2009.

CA 20.504 Object Oriented Programming through Java Total Lectures: 40
Credit: 3-0-0-3

Prerequisite(s): (C-Programming)

Objective(s):
- Cover issues related to the definition, creation and usage of classes, objects and methods.
- Discuss the principles of inheritance and polymorphism.
- Provide the foundation of good programming skills by discussing key issues of the design of object- oriented software, including programming design and documentation.
- Cover the basics of API and to explore the java abstract programming interface.

1. Overview: Introduction to Java, importance of Java, interactive Development Environments: Eclipse/Net Beans, basics of OOP.
Data Types, Variable, and Arrays: Primitive data types, typecasting, arrays, operators and control structures, identifiers, constants and literals [10]
2. Classes and Objects: Class fundamentals, declaring objects, assigning object reference variables, introducing methods, constructors, this keyword, garbage collection,the finalize()method, overloading methods, using objects as parameters and return type, introducing access control, understanding static, introducing final, introducing nested and inner classes, exploring the string class, using command-line arguments. [10]
3. Inheritance: Inheritance basics, using super, multilevel hierarchy, constructor inhierarchy, method overriding, dynamic method dispatch, using abstract classes, using finalin inheritance, the object class. [4]
4. Package, Interfaces and Exception Handling: Packages, access protection, importing packages, interfaces, exception-handling fundamentals, exception types, using try and catch, multiple catch clauses, nested try statements, throw, throws, finally, JAVA's built-in exceptions, user defined exception. [8]
5. Multithreaded Programming: The Java thread model, the main thread,creating multiple threads, threads priorities, managing threads, thread class built-in functions. I/O and String Handling: I/O basics, reading console input, writing console output, the print writer class, reading and writing files, string constructors, operations on string, string tokenizing, string buffer. [8]

Outcome(s): Upon completion of this course, students are able to:
- Understand the concepts of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.
- Identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- Develop programs using the in-built Java API and the Java standard class library.
- Create Java application programs using sound OOP practices (e.g., interfaces and APIs) and proper program structuring (e.g., by using access control identifies, automatic documentation through comments, error exception handling).
- Use of development environment like Eclipse for collaborative programming

Text Books: [1] H.Schildt, Java The Complete Reference, Herbert Schildt, 10th Edition, 2017.
[2] John Jukowski, Mastering Java J2SE 1.4,SYBEX, 2002.

Reference Books: [1] A.B. Downey, ThinkJava:HowtoThinkLikeaComputer Scientist, 2011.
[2] P.Deitel andH.Deitel,JavaHowTo Program (EarlyObjects),10thEdition, 2015.

CA 20.506 Software Engineering Total Lectures:40
Credit:3-0-0-3
Prerequisite(s): NIL
Objective(s): • To understand the basic software engineering approaches, software development process models, project planning, software size estimation, software effort and cost estimation and risk management.
• To know about software requirements specification, requirement elicitation, structured system analysis and introduction of object-oriented analysis and design, design techniques.
• To acquire knowledge on implementation issues such as modularity and coding standards.
• To learn coding style guidelines and standard and software testing, different type of testing strategies and their application in real time system.
• To study web based-system and application, software re-use, software re-engineering, agile software engineering, software engineering and testing tools.
• To develop teamwork and have project based experience.
1. Introduction: Software crisis, Software engineeringApproach and Challenges, Software development process models with comparison: Waterfall, Rapid Prototyping, Spiral, Iterative, V-shape and Evolutionary Model, SEI-CMM. [6]
2. Software Processes and Requirement Analysis: Software engineering: a layered technology requirement elicitation, requirement analysis, software requirement and specifications, data flow diagrams, data dictionaries, entity-relationship diagrams. Software Measurement, planning schedule, Risk management,Quality Assurance. [10]
3. Software Design and Estimation Techniques: Introduction to object-oriented design, Function and Object Oriented Design concepts, Verification and Validations, Software size and cost estimation Techniques: Size oriented Metrix, FPA and COCOMO. [8]
4. Testing: Software testing fundamentals, test case design, white box testing:-basis path testing, control structure testing, black box testing: boundary value analysis, equivalence class testing, decision table testing, cause effect graphing, debugging, testing tools & standards, testing for client/server architecture, [9]
5. Special Topics: Brief of software re-use, reverse engineering, software re-engineering, agile software engineering, CASE Tools. [7]
Outcome(s): • Demonstrate knowledge of the distinction between critical and non-critical systems and ability to manage a project including planning, scheduling and risk assessment/management.
• Author a software requirements document and understanding of the proper contents of a software requirements document.
• Demonstrate proficiency of different life cycle models.
• Identify specific components of a software design that can be targeted for reuse.
Demonstrate proficiency in software development cost estimation, software testing plan and advanced topics of software engineering.
Text Books: [1] R. S. Pressman, Software Engineering – A practitioner's approach,Tata-McGraw- Hill Int. Ed., 8th edition, 2014.
[2] K. K. Aggarwal, Yogesh Singh, Software Engineering, New Age International, 1st edition, 2008.
Reference Books:
[1] Pankaj Jalote, An Integrated Approach to Software Engineering, Narosa Publisher, 3rdedition, 2005.
[2] Rajib Mall, Fundamentals of Software Engineering, Prentice-Hall, 2ndedition, 2004

CA 20.508 Data Structure ConceptsTotal Lectures: 40
Credit: 3-0-0-3
Prerequisite(s): C Programming
Objective(s): • To provide knowledge of ways of structuring and operating on data, the nature of some fundamental problems, methods for addressing those problems,
• To promote an analytical and empirical appreciation of the behavior of algorithms using data structures.
1. Introduction: Data Structure definition, Requirement of different Data Structures, Abstract Data Type, Analysis of Algorithm [3]
2. Linear Data Structure: One and Two-dimensional Arrays, Array Representation, Selection Sort, Bubble Sort, Quick Sort, Heap Sort and Merge Sort,SequentialSearch, Binary Search. Linked List and itsrepresentations, Operations on LinkedList, Types of Linked List, Stack and its representation, Operations on Stack,Queue and its representation, Operations on Queue, Applications of these data structures. [15]
3. Tree : Binary Tree and its travesals (Breadth-First, Depth-First), Expression Trees (Infix, Prefix, Postfix Traversals), Binary Search Trees, Heaps,AVL Tree [12]
4. Graph: Matrix Representation, List representation and applications, Minimum Spanning Tree finding algorithms, Shortest Path finding algorithms. [5]
5. Hashing Techniques: Hash Function, Address Calculation Techniques, Common Hashing Functions, Collision Resolution, Linear Probing, Double Hashing, Bucket Hashing, Deletion and Rehashing. [5]
Outcome(s): On the successful completion of the course, the student will be able to:
• be knowledgeable of certain abstract data types (ADT)
• be able to make a critical assessment of different implementations of an ADT
• be familiar with a number of fundamental computational problems, and be aware of real world instances of those problems
Text Books: 1. Horowitz and Sahani, "Fundamental of data structures",Galgotia Publication,1998.
2. Lipschutz, "Data Structures Schaum's Outline Series", Tata Mcgraw Hills,2006.

Reference Books: 1. TenenbaumAaron M., YedidyahLangsam and Moshe J. Augenstein “Data
2. Kruse R. etal, “Data Structures and Program Design in C”, Pearson Education,2007.

CA 20.510 R Programming Total Lectures: 40
Credit: 3-1-0-4

Prerequisite(s): Programming Concepts (CA 20.501)

Objective(s): • To understand and learn programming concepts of R
• To Apply R programming to solve various statistical, graphics and modeling problems

1. Fundamentals of R : Evolution of R, Features of R, R environmental Setup, R Script file,
Data types- Vectors, Lists, Matrices, Arrays, Factors, Data Frames, Variables, finding and deleting variables, Operators in R. [6]
2. Control Statements in R: if-else statement, switch statement, Repeat loop, while loop, for loop, break statement, next statement [8]
3. Functions, Strings and Vectors : Function Definition , Function Components
Built-in Function, User-defined Function, Calling a Function, Lazy Evaluation of Function,
Strings and Strings Manipulation, Vector creation, accessing vector elements, vector manipulation, [10]
4. Lists, Matrices and Arrays : List Creation, Naming list elements, Accessing list elements, Manipulating list elements, Merging list, Converting list to Vector, Accessing elements of matrix, matrix computations, Naming row and column of array, accessing array elements, manipulating array elements, calculation across array elements [10]
5. Data frames, factors and packages: Extract data from data frame, expand data frames, factors in data frames, changing the order of levels, generating factor levels, packages [6]

Outcome(s): After completing the course the student is expected to
• be able to use and program in the R programming language
• be able to use R programming to solve statistical problems
• be able to apply R Programming concept to solve real world problems

Text Books: 1. Hadley Wickham, Garrett Grolemund, R for Data Science, O’Reilly, January 2017.
2. John Maindonald and John Braun, Data Analysis and Graphics Using R, Cambridge University Press, Cambridge, 2007.

Reference Books: 1. Peter Dalgaard, Introductory Statistics with R, Springer Verlag, 2008.
2. Phil Spector. Data Manipulation with R. Springer, New York, 2008.

CA 20.512 Data Structures Laboratory Total Hours: 26
Credit: 0-0-4-2
Prerequisite(s): C Language
Objective(s):
Contents: To develop skills to design and analyze simple linear and nonlinear data structures
To Strengthen the ability to identify and apply the suitable data structure for the given real world problem
1. Arrays
1. To implement the array concepts for matrix applications.
2. To implement the 1-D, 2-D and 3-D array concepts for data storage and retrieval.
2. Linked List Testing:
1. To implement various operations over the linked list.
2. To implement variations of linked list e.g. Circular linked list.
3. To implement various operations over the stack.
4. To demonstrate applications of stack e.g. infix to prefix conversion.
3. Queue Testing:
1. To implement various operations over the queue.
2. To demonstrate variations of queue e.g. dequeue.
4. Tree Testing:
• To demonstrate variations of Tree e.g. binary search tree.
• To implement different operations on Tree (traversal,insertion,deletion).
5. Graph Testing:
• To implement various traversing of Graph.
• To demonstrate applications of Graph.
6. Searching Testing:
To implement searching algorithms.
7. Sorting Testing:
• Bubble Sort, Insertion Sort, Selection Sort, Heap Sort and Quick Sort.
Outcome(s): At the end of this course, the student will
Be able to design and analyze the time and space efficiency of the data structure.

Be capable to identity the appropriate data structure for given problem.

CA 20.514 Java Programming Laboratory Credit:0-0-4-2

Prerequisite: C++Programming Lab.

Objectives: The objective of this course is to:
- Become comfortable with object-oriented programming and learn to think in terms of objects.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, documentation.

Contents: Lab manual based upon the theory course CA 20.504 and to achieve the listed course objectives and outcomes.

Outcomes: Upon completion of this course, students are able to:
- Understand the concepts of OOP as well as the purpose and usage principles of
- Inheritance, polymorphism, encapsulation and method overloading.
- Create Java application programs

Use of development environment like Eclipse for collaborative programming/editing

CA 20.516 R Programming Laboratory Credit: 0-0-4-2

Prerequisite(s): CA20.509 (Programming Laboratory)
Objective(s): • To learn R programming constructs
- To learn use R for statistical analysis
- To learn R for modeling.

Contents:

Lab manual based upon the theory course CA20.510 and to achieve the listed course objectives and outcomes.
Outcome(s): On successful completion of this course, the students will be able to
- Write programs using R programming
- Use R programming for statistical analysis of data
- Use R programming for data visualization
- Use R programming for problem modeling

UC 19.201
Introduction to Management and Leadership Total Lectures: 26
2-0-0-2

Objective: This Course, Management and leadership focus on understanding seminal and contemporary leadership theories and principles. To provide a basis of understanding to the students with reference to the working of the business organization through the process of management.

Pre-requisite:
1. Introduction to Management : Nature of Management, Meaning, Definition, it's nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization [4]

2. Evolution of Management Thought: Contribution of F.W.Taylor, Henri Fayol ,Elton Mayo , Chester Barhard & Peter Drucker to the management thought. Various approaches to management (i.e. Schools of management thought)Indian Management Thought. [5]

3. Functions of Management: Planning - Meaning - Need & Importance, types levels - advantages & limitations. Organizing - Elements of organizing & processes, Delegation of authority - difficulties in delegation – Decentralization, Staffing - Meaning & Importance, Controlling - Process & Techniques, Coordination - Need – Importance. [6]
4. Introduction to Leadership: Leadership styles, qualities of a good leader, role of a leader, trait approach to leadership, behaviour approaches to leadership; Situational theories; Transformational Leadership transactional leadership, Neutralizers and substitutes to leadership. [6]

5. Emerging Challenges to Leadership: Leadership in changing workplace, Leader's role in fostering teamwork, Overcoming traditional thinking Methods to enhance creative problem solving, Climate for creative thinking, Leadership practices for innovation, Ethical leadership development, Cultural sensitivity, intelligence, and global leadership skills. [5]

Outcome: On successful completion of the course, students will be able to Work effectively and collaboratively with others in diverse management contexts.

Text Books: 1. Dr. L.M.Parasad, "Principles & practice of management", Sultan Chand & Sons - New Delhi, 2015
2. Stephen P.Robbins "Organizational Behavior" Pearson Publisher,16th Edition, 2014

Reference Books: 1. Principles of Management, By Tripathi, Reddy Tata McGraw Hill, 2012
2. Essential of Business Administration - K.Aswathapa Himalaya Publishing House, 2014
3. Hughes, R., Ginnett, R., & Curphy, G. Leadership: Enhancing the lessons of experience, McGraw Hill, 7th Edition, 2017
4. Northouse, P. G. "Leadership: Theory and Practice" Sage Publications, New Delhi, 7th Edition 2015.

CA 20.603 Data Communication and Network Total Lectures: 40
Credit: 3-0-0-3

Prerequisite(s): Nil

Objective(s):
- To become familiar with layered communication architectures (OSI and TCP/IP).
- To understand the client/server model and key application layer protocols.
- To construct large-scale computer networks
- To understand fundamentals of computer networks and major protocols.
- To analyze and evaluate major Internet protocols.
- To program simple network applications using socket API
- To learn and adopt newly introduced computer network technologies by themselves.

1. Introduction to Network Model: History and development of computer networks, categories of networks, layering and protocols.
Physical Layer: Different types of transmission media, transmission impairments, encoding schemes (NRZ, NRZI, Manchester, 4B/5B, Manchester etc.) [8]
2. Data Link Layer: Framing concept, Aloha, CSMA/CA, CSMA/CD protocols, performance evaluation and characteristics, error detection (parity, CRC), sliding window, stop and wait protocols,stop performance and efficiency,packet and circuit switching. [8]
3. Local Area Network and Network Layer: IEEE 802.3, 802.4, 802.5, 802.11, performance evaluation.IPv4, IP address classes, classless addressing, IPv6, ARP, RARP, DHCP, ICMP, routing algorithms: distance vector, metrics, RIP, OSPF, BGP, congestion control algorithms, leaky bucket, token bucket. [10]
4. Transport Layer: Duties of the transport layer, connection, TCP, TCP services, TCP header, UDP, evaluating protocol such as TCP/UDP using simulator like NS2. [6]
5. Application Layer: DNS, FTP, HTTP, SMTP, POP, basics of network security (cryptography, digital signature and firewall). [8]

Outcome(s): On successful completion of this course, students will be able to
- Analyze computer network component and devices.
- Synthesize how communication works in a network and internet.
- Formulate the concept of topologies and their applications.
- Analyze protocol at different layers and how they play important role in network implementation.
- Identify and analyze the latest technology with existing one.
- Enumerate the layers of OSI and TCP/IP models.
- Configure network and wireless technology including client/server programming.

Text Books: [1]Forouzan B. A., Data Communications and Networking, Tata McGraw-Hill, 5th edition, 2013
[2] Stallings W., Data and Computer Communications, Prentice-Hall of India, 10th edition, 2013.
Reference Books: [1] Tanenbaum A. S., Computer Networks, Prentice-Hall of India, 5th edition, 2010.
[2]Hayes J. F., Modeling and Analysis of Computer Communication Networks, Plenum Press, 1st edition, 1987.

CA 20.605 Research Methodology Total Lectures: 40
Credit: 3-0-0-3

Prerequisite(s): Communication Skills

Objective(s):
- To understand a general definition of research design.
- To identify the overall process of designing a research study from its inception to its report.
- To be familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.

- To understand the primary characteristics of quantitative research and qualitative research.
- To identify a research problem stated in a study

1. Introduction: Meaning of research, Objectives, Motivation for Research, Types of Research, Research Approaches,ResearchProcess,ValidityandReliabilityin Research. [6]
2. ProblemFormulation:Identification,Selection andFormulation ofa ResearchProblem, Criteria ofagoodResearchProblem,Reviewof Literature, Research Gaps. [10]
3. Research Design:ResearchFramework, Meaning &SignificanceofResearchDesigns,Featuresofa goodResearch Design, Types of Research Design. [10]
4. Data Analysis and Simulation Tool:TypesofData,Sources of Data, Methods of CollectingData,DataPresentation Techniques.Methodsof DataAnalysis, SPSS, MATLAB, Network Simulators, ETAP, Solid Works, MultiSim. [12]
5. ReportWriting:Types of Reports,Contents, Style Manuals, Results & Findings, Contributions, Implications, Scope for future work and conclusion, Referencing Styles, Anti Plagiarism Policy. [2]

Outcome(s): On successful completion of this course, the students will be able to

- Assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

Text Books: 1. R.Pannershelvam, "ResearchMethodology" PrenticeHall India, New Delhi, 2nd Edition, 2013.
2. C.R.Kothari,"ResearchMethodology: MethodsandTechniques",New Age International (p) Limited,Publishers New Delhi, 4ndedition,2018.

Reference Books: 1 William G.Zikmund, “Business Research Methods”, Cengage Learning New Delhi, 8th edition, 2016.
2. Mark Saunders, “Research Methods for Business Students” Pearson Education New Delhi, 7th edition, 2015.
3. Donald R Cooper, “Business Research Methods” Tata McGraw-Hill Publishing Company Limited New Delhi, 12th edition, 2013

CA 20.609 Web Technology Laboratory 0-0-4-2

Objectives: The objective of this course is to:

- Become comfortable with HTML tags
- Develop Web Pages by use of HTML tags

Contents

- Markup Tags
- Formatting Tags
- Frames
- Form Elements
- Cascading Style sheets
- Dragging
- Dropping
- Div tag.
- java Script Declaration and Expressions
- Control Structure and Functions
- Java Script: Properties and Methods
- Array Object
- Date Object
- Math Object
- String Object
- Events in java Script: Onblur, Onclick, on change, on focus.
- Form validation through JavaScript

Outcomes: Upon completion of this course, students will be:

- Able to Design web pages based on above Tags
- Able to Program for Event handling
- Able to Working with Date and Time Functions
- Able to Program for calculator
- Able to Access XML document elements through programs

CA 20.611 Python Programming Laboratory
Credit:0-0-4-2

Prerequisite: (CA 20.509) Programming Laboratory

Objectives: The objective of this course is to:
- Become comfortable with Python programming, starting from basics of data types to deep learning.
- Provide the foundation of to explore any expansions of Python whether it is machine learning, deep learning, web development or gaming. It will also put focus to learn various skills to design object-oriented software.

Contents:
- Code different data types and operations on list, dictionaries, sets, String etc
- Code basic programs like factorial, Fibinocci etc. to understand functions and recursions.
- Implement different built-in functions in Python like eval, exec, map, lambda etc.
- Implement the concept of class, objects, inheritance and polymorphism
- Implement constructor and self
- Code programs to implement exceptions and assertions
- Implement regular expressions
- Code programs to implement the logic for machine and deep learning

Outcomes: Upon completion of this course, students will be:
- Able to develop application in Python
- Able to develop scientific applications for machine learning
- Able to use python to implement a given logic.
- Able to use various Python IDE like Anaconda, Pycharm etc.

Program Elective Tracks
CA20.431 Advanced Java Total Lectures: 40
Credit: 3-0-0-3
Prerequisite(s): CA 20.504 (Object Oriented Programming through Java)
Objective(s): This course extends the study of Web Programming Fundamentals. Advanced concepts of program design, implementation and testing will be introduced with J2EE framework. Student will learn various concept of advance Java for implementation of small to medium sized application programs that illustrate professionally acceptable coding and performance standards.

1 Introduction: OOPS principle, class and objects, basics of HTML, web development introduction, web framework, J2EE building blocks, web application structure
[4]
2 Servlets: Servlet needs, servlet request-response model, servlet life cycle (init, service, doGet, doPost), servlet configuration, scopes (session, request, page), servlet parameters, servlet context, forms processing (get, post), HTTP header processing, HTTP responses.
[10]

3 Java Server Pages: JSP life cycle, JSP a servlet, creating dynamic content with use of JSP elements: expressions, scriptlets& declarations, JSP composition, redirecting, forwarding, accessing default objects (request, response, session, application, config, pageContext), error processing with use of JSP, Servlets vs. JSP pages
[10]
4 Session management: Http session, the Http session interface session tracking: cookies, hidden fields, cookies and JSP, sending and receiving cookies.
[6]
5 Using Beans and tag libraries: Separating presentation and business logic, JSP actions, JavaBeans, working with properties, <jsp:useBean>, <jsp:getProperty> and <jsp:setProperty>,using form parameters with Beans, custom tags, types of tags.
[10]

Outcome(s): Upon successful completion of this course you should be able to:
- Demonstrate knowledge of the advance Java along with object oriented development process and apply this understanding to the analysis and design of solutions for small to medium scale problems.
- Implement web application using all the feature of J2EE covered in the course.

Text Books: 1. Phillip Hanna, Osborne, "JSP 2.0: The Complete Reference", 2nd ed, McGraw-Hill,2003.
2. Martin Bond, Debbie Law, Andy Longshaw, Dan Haywood, Peter Roxburgh, "SAMS Teach Yourself J2EE in 21 Days", 2nd ed, SAMS, 2004.
Reference Books: 1. Bryan Basham, Kathy Sierra & Bert Bets, Head First Servlets and JSP, 2nd Edition, , Oreilly publication, 2008.
Web Designing and Digital Marketing (Track1)

CA 20.432 Web Development with PHP Total Lectures: 40
Credit: 3-0-0-3
Prerequisite(s): CA 20.501 (Programming Concepts), CA 20.504 (Object Oriented Programming through Java)
Objective(s): Build dynamic Web applications. Semantics and syntax of the PHP language, including discussion on the practical problems that PHP solves. Write server-side cross-platform HTML-embedded scripts to implement dynamic Web pages that interact with databases and files.

1 Introduction: Introduction to PHP, storing and retrieving data, using arrays, string manipulation and regular expressions, reusing code and writing functions. [8]
2 MySQL: Designing and creating web database, accessing MySQL database from web with PHP, advanced MySQL. [6]
3 E-Commerce and Security: Running an E-Commerce site, E-Commerce security issues, implementing authentication with PHP and MySQL. [10]
4 Advanced PHP Techniques: Interacting with file system and server, using network and protocol functions, managing date and time, generating images, using session control in PHP. [6]
5 Building Practical PHP and MySQL projects: Applying software engineering for web development, debugging, building user authentication and personalization, building a shopping cart, building web forms, generating personalized documents in PDF. [10]

Outcome(s): After Successful completion of this course student will be able to:
- Write PHP scripts to handle HTML forms
- Write regular expressions including modifiers, operators, and meta-characters.
- Create PHP programs that use various PHP library functions, and that manipulate files and directories
- Analyze and solve various database tasks using the PHP language
- Analyze and solve common Web application tasks by writing PHP programs

Text Books: 1. Luke Welling and Laura Thomson, PHP and MySQL Web Development, Addison Wesley, 5th edition, 2017.
Reference Books: 1. Adrian W. West, Practical PHP and MySQL Website Databases, Apress, 4th edition, 2017.

CA 20.433 E-Commerce and E-Business Total Lectures: 40
Credit: 3-0-0-3
Prerequisite(s): CA 20.501 (Programming Concepts),
Objective(s): • To introduce the fundamental principles of E-Business and E-Commerce and the role of management.

- To develop an enhanced knowledge among students of the potential of information technology to enable E-Business.
- To understand the application of tools and services to the development of small-scale E-Commerce applications.

1 Introduction to E-Commerce and E-Business: Meaning and concept, E-Commerce vs. traditional commerce, media convergence business applications and need for E-Commerce, E-Business basics, network and electronic transactions. [8]
2 The Internet Environment for E-Commerce: B2B, B2C, providers and vendors, EDI, UN/EDIFACT standard, identification and tracking tools for E-Commerce, overview of Internet bandwidth and technological issues. [8]
3 Security Framework: Security concerns, security solutions, cryptography, digital signature, PKCS, protocol for secure messaging, key management, SET protocols, E-cash over the Internet. [6]
4 Legal Issues: Paper document vs. electronic documents, technology for authenticating electronic document, laws for E-Commerce, EDI interchange agreement, legal issues for internet commerce, cyber security, cybercrimes. [6]
5 Case Study: Designing and building E-Commerce website, managing products, database, shopping cart applications, integrating mobile E-Commerce, payment gateway, tracking orders, study of Amazon and eBay. [12]

Outcome(s): On successful completion the students will be able to:
- Recognize the fundamental principles of E-Business and E-Commerce.
- Examine applications of E-Commerce in relation to the applied strategic.
- Explain the added value, risks and barriers in the adoption of E-Business and E-Commerce.

Text Books: 1. K K Bajaj and D Nag, "E-Commerce: The Cutting Edge of Business", 2nd edition, Tata McGraw Hill, 2009
2. H Chan, R Lee, T Dillon and E Chang, "E-Commerce: Fundamentals and Applicaiotns", Willey India, 2008
Reference Books: 1. P T Joseph, "E-Commerce – An Indian Perspective", 3rd edition, PHI, 2008
2. A Kahate, "Cryptography and Network Security", 4th edition, Tata McGraw Hill, 2008
3. J Botha and C Bothma, "Managing E-Commerce in Business", 2nd edition, Juta& Company, 2008

CA 20.434 Social Media and Digital Marketing Total Lectures: 40
Credit: 3-0-0-3
Prerequisite(s)
:CA 20.503 (Management Information System)
Objective(s): To examine and explore the role and importance of social media and digital marketing in today's rapidly changing business environment. It also focuses on how digital marketing can be utilized by organizations and how its effectiveness can measured.

1 Social Media and Customer Engagement: The social feedback cycle, the social web and engagement, the operations and marketing connections, social interactions, customer relationships, outreach and influencer relation, social business and measurement, employees as change agents. [6]
2 The Social Business Ecosystem: Social profiles, social applications, using brand outposts and communities, the social ecosystem. [4]
3 Social Technology and Business Decisions: Create a social business, understand the conversations that matters, social CRM and decision support, social analytics, web analytics, business analytics, best practices in social business. [8]
4 Social Business Building Blocks: Engagement on the social web, engagement as a customer activity, engagement as a business activity, extend engagement, social CRM and business design, building a social CRM program, enterprise 2.0 and Internet collaboration, build on existing social objects, create new social objects, use social objects in business, use the social graph in business, measure the social graph. [10]
5 Digital Marketing: Digital marketing strategy, user experience design, online advertising, affiliate marketing, video marketing, email marketing, mobile marketing, data analytics. [12]

Outcome(s): On successful completion the students will be able to:
- Explain the role and importance of digital marketing in a rapidly changing business landscape.
- Discuss the key elements of social media marketing strategy
- Illustrate how the effectiveness of a digital marketing campaign can be measured

Text Books: 1. Dave Evans and Jake McKee, "Social Media Marketing: The Next Generation of Business Engagement", Wiley Publishing, 2010
2. Rob Stokes, "eMarketing: The Essential Guide to Marketing in a Digital World", 5th edition, Quirk Education, 2013
Reference Books: 1. McDonald Malcolm and Wilson Hugh, "E-Marketing: Improving Marketing Effectiveness in a Digital World", Prentice Hall, 1999
2. Ryan Deiss and Russ Henneberry, "Digital Marketing for Dummies", Wiley, 2017

CA 20.435 Search Engine Optimization Total Lectures: 40
Credit: 3-0-0-3
Prerequisite(s): CA 20.501 (Programming Concepts), CA 20.503 (Management Information System)
Objective(s): To introduce the foundational elements of how search engines work.

Discuss core SEO strategies and tactics used to drive more organic search results to specific website or set of websites.

1 Introduction: Choose a topic, find your target audience, set a budget, set goals, put a team together, keep up with industry news, and attend an industry conference, introduction to keyword generation, using the word tracker keyword suggestion tool, google trends tool, creating pages, optimize meta description and keyword tags, optimize images, create link and validate html. [4]
2 Creating Contents and Communities:Introduction write for people, not search engines, avoid duplicate contents, keep content current, optimize non-html document, creating communities, create a blog with wordpress, blogger, tumblr. [10]
3 Using Google Analytics: Introductioncreate account, install tracking code, exclude your IP address with filter, track external links, automate reporting, set up e-commerce tracking, tracking code in thank you page, and third-party shopping cart. [10]
4 Social Media Optimization: Introduction, network with facebook, google+, facebook business pages, facebook ads, microblog with twitter, network with webmaster world, paper click campaign, adwords account, bidding strategies, PPC reports. [8]
5 Optimization for Search Engines: Introduction, blogpost for Technorati, google images, exposure on ask.com, drive traffic, eBay auctions, local search and local page, media ranking, offsite ranking, SEO tools, plugins and comparison tools, WordPress SEO plugin by Yoast. [8]

Outcome(s): On successful completion the students will be able to:
- Critique the role of advertisements and corporate funding in the development of search.
- Write their own content for a website that will improve search results
- Compare and contrast the functionality of search engine algorithms update.

Text Books: 1. Kristopher B. Jones, “Search Engine Optimization”, Wiley India Pvt. Ltd, 3rd Edition, 2013
Reference Books: 1. Eric Enge, Stephan Spencer, Rand Fishkin and Jessie C Stricchiola, “The Art of SEO: Mastering Search Engine Optimization”, O'Reilly, 2009
2. Jerri L. Ledford, “SEO: Search Engine Optimization Bible”, 2nd Edition, Wiley India, 2009
3. John I Jerkovic, “SEO Warrior: Essential Techniques for Increasing Web Visibility”, O'Reilly, 2009

AI & Data Analytics (Track 2)
CS 20.316 Artificial Intelligence Total Lectures: 40
Credit: 3-1-0-4
Prerequisite(s):
Objective(s): • To Describe the field of AI and its subfields machine learning, NLP and computer vision
- To Describe the types of AI
- To Describe the types of machine learning: Supervise learning, unsupervised learning, and deep learning
- To Describe the purpose of training the various Watson services to adapt them to a closed-domain
- To Use Watson API Explorer to interact with the Watson services REST API, to rest your calls to the

1. Artificial intelligence overview: Introduction to Artificial Intelligence, Machine Learning, Natural Language Processing, Computer vision, Cognitive Computing. [5]
2. Artificial intelligence foundations: Introduction to IBM Watson, Evolution from DeepQA to Watson services on IBM Cloud, Build with Watson, Exploring Watson services with Watson API Explorer. [10]
3. Artificial intelligence analyst: Introduction to Natural Language Processing, Pipeline and concepts, NLP and IBM Watson, Exercises on Ingest, Convert, Enrich, and Query with Watson Discovery Service. [10]
4. Chatbots: Introduction to Chatbots, Chatbot fundamentals, IBM Watson conversation service. [8]
5. Computer Vision: Introduction to Computer Vision, Computer Vision fundamentals, IBM Watson Visual Recognition service, Exercise on Classifying images with Watson Visual Recognition. [7]

Outcome(s): • Understand the relationship between AI and NLP
- Know the history and advancement of Computer Vision
- Understand Computer Vision components
- Learn about the Vision services that are available from IBM Watson.

Text Books: 1. Russell, Stuart J., and Peter Norvig. Artificial intelligence: a modern approach. Malaysia; Pearson Education Limited,, 2016.

Reference Books: 1. Michalski, Ryszard S., Jaime G. Carbonell, and Tom M. Mitchell, eds. Machine learning: An artificial intelligence approach. Springer Science & Business Media, 2013.
2. Nilsson, Nils J. Principles of artificial intelligence. Morgan Kaufmann, 2014.

CA-20.416 Predictive Modeling Analytics Total Lectures: 40
Credit:3-1-0-4
Prerequisite(s):
Objective(s): • To understand how analytics provided a solution to industries using real case studies

- To Explain what is analytics, the various types of analytics, and how to apply it
- To Improve efficiency, sample records, and work with sequence data
- To Integrate and collect data
- To Understand the principles of data mining

1. Business Analytics Overview: Analytics overview, Analytics trends, Towards a predictive enterprise, Analytics: Industry domains , Case studies and solutions.Business Intelligence and Analytics. [5]
2. Introduction to A Predictive Analytics Platform & Data Mining: Introduction to data mining, Working with modeler, A Data-mining tour ,Collecting initial data ,
Understanding your data ,Setting the unit of analysis ,Integrating data ,Deriving and reclassifying fields, Looking for relationships ,Introduction to modeling ,
Exercise: On the basis of all above topics. [10]
3. Advanced data preparation: Using functions, Data transformations, Working with sequence data, Sampling records, Improving efficiency. Exercise on the basis of all above topics. [10]
4. Automated Data Mining: Introduction to data mining ,The basics of using a modeler ,Reading data files , Data exploration , Automated data preparation ,Data partitioning, Predictor selection for modeling ,Automated models for categorical targets , Model evaluation , Automated models for continuous targets.[5]
5. Deploying models Exercise :Adding nodes and creating streams in the modeler ,Reading a data file and typing the data in the source node , Review missing values in modeler and use the data audit node on the charity data , Practice using the ADP node to prepare data for modeling ,Use a partition node to split the charity data for modeling ,Use the feature selection node to select fields and predict a response ,Using the auto classifier node to construct a model in order to predict a response, Evaluate the model created to predict the field response ,Develop a model to predict the total spending ,Use a scoring stream to make predictions [10]

Outcome(s): On the successful completion of the course, the student will be able to:

- Understand the principles of data mining
- Use the user interface of modeler to create basic program streams
- User a partition node to create training and testing data subsets
- Use a model to score new data

Text Books: 1. Frees, Edward W., Richard A. Derrig, and Glenn Meyers, eds. Predictive modeling applications in actuarial science. Vol. 1. Cambridge University Press, 2014.

Reference Books: 1. Kuhn, Max, and Kjell Johnson. Applied predictive modeling. Vol. 26. New York: Springer, 2013.
2. Siegel, Eric. Predictive analytics: The power to predict who will click, buy, lie, or die. Hoboken: Wiley, 2013.

Mody University of Science & Technology, Lakshmangarh (Sikar)

College of Engineering & Technology

Course structure for

PhD

Annexure-I

(In compliance of University Grants Commission (Minimum Standards and Procedures for Award of Ph.D. Degree) Regulations, 2016 & 2019)

SCHEME OF EVALUATION

for Research Methodology, Research and Publication Ethics

Ph.D.
PROGRAMME

SL. NO.	COURSE CODE	SUBJECT	CREDITS	MIN. QUALIFYING MARKS/ Grade	MAX. MARKS
1	RM20.711	Research Methodology	4	64/B	100
2	CPE-RPE101*	Research and Publication Ethics	2	64/B	100
3		Core Subject	4	64/B	100
4		Seminar-I, Seminar-II	4	64/B	100

***Amended w.e.f. January 01, 2020, as per UGC D.O. No. F-1-1/2018(Journal/CARE)**

Evaluation Scheme:

Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration	Weight age (%)		
		L	T	P		Hours	CW*	MTE	ETE
RM20.711	Research Methodology	3	-	2	4	3	30	20	50
CPE-RPE 101	Research and Publication Ethics	1	-	2	2	3	40	20	40

- *Practical evaluation is under the category of CW.

RM20.811 Research Methodology 3-0-2-4

Course Objectives:

1. To equip students with knowledge, abilities and insight in research methodology and related interdisciplinary fields.
2. To plan and design research using scientific and statistical methods.

1. Introduction to Research: Meaning, nature, purpose and motivation; Types of research – exploratory, descriptive, causal, and analytical; Research process; Definition of construct and variables and types of variables; Bases for choosing a topic; Problem definition; Literature review, Identification of research gap; Formulation of objectives; Signification and relevance of research objectives. **[06]**

2. **Research Design and Sampling:** Research Design - Meaning, need, features, types, important concepts, developing a research plan. **[06]**
Sampling: Census and Sample Survey, implications and types of sampling, process of sample selection, criteria and characteristics of selecting a good sample.

3. Scaling and Methods of Data Collection: Definition and types of scales, construction of measurement scale, errors, test of sound measurement scale. **[06]**
Methods of data collection: Types, sources and methods (Qualitative and Quantitative).

4. Statistical Tools for Data Analysis*: Measures of central tendency – Mean, Median, Mode, Quartiles, Deciles and Percentiles , Measures of Dispersion: Standard Deviation – Variance – Coefficient of Variance, Skewness, Correlation – Karl Pearson's coefficient of Correlation, Rank Correlation, Regression: Method of Least Squares. Formulation of hypothesis-Testing of hypothesis, Type I and Type II Errors. Parametric tests: Z-test, t-test, F-test, Analysis of Variance; One-Way and Two- way classification. Non parametric tests – Chi-Square test. **[09]**

5. Application of Computer in Research*: MS office and its application in Research, Use of Internet in Research – Websites, Search Engines, E-journal and E-Library – INFLIBNET. **[06]**
MS-Excel: Data representation, application of inbuilt formulas, formulation of equation using BODMAS rule in MS-Excel.

6. Foundation of Research and Report Writing*: Significance and technique of interpretation, importance of report writing, types of reports, structure and components, writing research proposal and synopsis, planning phase of report writing (cauterization), Bibliography, Appendices, referencing, Style Manuals – APA style, MLA style, ASA style, Harvard/IEEE etc), plagiarism, journals, citations and indexing, funding agencies, ethics in research, characteristics of a good research report. **[06]**

Remark: 39 Hours for Lecture and 26 Hours for Practical*.

Course Outcome:

1. Develop the ability to understand and analyse the problems and able to connect the problem with practical and present scenario.
2. Develop the ability to think independently as well as scientifically towards for continuous lifelong learning process.
3. Analyse the situation, convert into problem and find its solution.

CPE-RPE 101 Research and Publication Ethics 1-0-2-2 (3 hrs)

OBJECTIVE: This course has total 6 units focusing on basics of philosophy of science and ethics, research integrity, publication ethics. Hands-on-sessions are designed to identify research misconduct and predatory publications. Indexing and citation databases, open access publications, research metrics (citations, h-index, Impact Factor, etc.) and plagiarism tools will be introduced in this course.

Theory

RPE 01: Philosophy and Ethics (4)

1. Introduction to philosophy: defination, nature and scope, concept, branches
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions

RPE 02: Scientific Conduct (4)

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scintific misconducts: Falsification, Fabrication, and Plagiarism (FET)
4. Redundant publications: duplicate and overapping publications, salami slicing
5. Slective reporting and misrepresentation of data

RPE 03: Publication Ethics (7)

1. Publication ethics: defination, introduction and importance
2. Best practics/ standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflicts of interest
4. Publication misconduct: defination, concept, problem that lead to unethical behavior and vice versa, types
5. Violation of publuication ethics, authorship and contributorship
6. Identificationnof publication misconduct , complaints and appeals
7. Predatory publishers and journals

PRACTICE

RPE 04: Open Access Publishing (4)

1. Open access publications and initiatives
2. SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies
3. Software tool to identify predatory publications developed by SPPU
4. Journal finder / journal suggestion tools viz. JANE, Elsevier Journal Finder, Springer Journals Suggester, etc.

RPE 05: PUBLICATION MISCONDUCT

A. Group Discussions **(2)**
   1. Subject specific ethical issues, FFP, authorship
   2. Conflicts of interst
   3. Complaints and appeals: examples and fraud from India and abroad.

B. Software tools **(2)**
   - Use of plagiarism software like Turnitin, Urkund and other open source software tools

RPE 06: Databases and Research Metrics

A. Databases **(4)**
   1. Indexing databases
   2. Citation databases: Web of Science, Scopus, etc.

B. Research Metrics **(3)**
   1. Impact Factor of Journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score
   2. Metrics: h-index, g index, i10 index, altmetrics

CS 702 **Advances in Computer Science and Engineering** **Total Lectures: 52**
4-0-0-4

Prerequisite(s): Knowledge of core subjects of computer science and engineering.

Objective(s): To strengthen the knowledge of core subjects of computer science and engineering.
To provide research orientation to the students and latest developments in core areas.

1. **Digital Computer Organization and Architecture:** Boolean algebra, Combinational and sequential circuits. Minimization, Number representations and computer arithmetic (fixed and floating point), Machine instructions and addressing modes, ALU, data-path and control unit, Instruction pipelining, memory hierarchy: cache, main memory and secondary storage; I/O interface (interrupt and DMA mode). [10]
2. **Data Structures and Algorithms:** Arrays, stacks, queues, linked lists, trees, binary search, trees, binary heaps, graphs, recursion, searching, sorting, hashing, asymptotic worst case time and space complexity, algorithm design techniques: greedy, dynamic programming and divide-and-conquer, graph search, minimum spanning trees, shortest paths, programming in C. [10]
3. **Theory of computer science and compiler design:** Regular expressions and finite automata, context-free grammars and push-down automata, regular and context-free languages, pumping lemma, Turing machines and undecidability, compiler design: lexical analysis, parsing, syntax-directed translation, runtime environments, intermediate code generation. [10]
4. **Operating System and Database:** Processes, threads, inter-process communication, concurrency and synchronization, deadlock, CPU scheduling, memory management and virtual memory, file systems. **Databases:** ER-model, relational model: relational algebra, tuple calculus, SQL, Integrity constraints, normal forms, file organization, indexing (e.g., B and B+ trees), transactions and concurrency control. [12]
5. **Computer Networks:** Concept of layering. LAN technologies (Ethernet), flow and error control techniques, switching. IPv4/IPv6, routers and routing algorithms (distance vector, link state), TCP/UDP and sockets, congestion control, Application layer protocols (DNS, SMTP, POP, FTP, HTTP), basics of Wi-Fi, network security: authentication, basics of public key and private key cryptography, digital signatures and certificates, firewalls. [10]

Outcome(s): This course supports the achievement of the following outcomes:

1. Ability to apply knowledge of advanced principles of computing to the analysis of computer engineering problems.
2. Ability to apply the appropriate industry practices, emerging technologies, state-of-the-art design techniques, software tools, and research methods for solving engineering problems.
3. Ability to maintain life-long learning and continue to be motivated to learn new subjects.

EC702 Advances in Electronics & Communication Engineering **Total Lectures:52**

4-0-0-4

Objective: The course focuses on the basic theory and techniques used in the area of digital signal processing, VLSI design, Microwave Engineering, Antenna & Wave Propagation and Digital Data communication. It also offers a profound understanding of the design, analysis and applications of some complex circuits and devices with the help of computer aided simulation and synthesis tool for hardware design.

Prerequisite:

Basic understanding of core engineering courses given in the syllabus, is required.

VLSI Design Technology

MOS modeling and performance parameters, Design aspects: Review of MOS transistor models , Concept of Scaling and deep submicron VLSI design, Low Power VLSI design, Issues related to high speed VLSI Design (CMOS technology), New trends in Digital VLSI design, Example of Mixed VLSI Design, Advanced Testing and Verification Approaches, Wafer cleaning processes and wet chemical etching techniques. Introduction to hardware description languages (VHDL), logic, circuit and layout verification. MEMS **[10]**

Microwave & Radar Engineering

Maxwell's Equation, Wave Equation and Boundary conditions, Transmission lines, Microwave Passive Components, Measurements of Wavelength, Frequency, Impedance, SWR etc., Q of Cavity, Microwave Linear Beam Tubes, Reflex Klystron. Traveling Wave Tube, Transferred Electron Devices, Principle of operation of Radar, Radar equation, CW and Frequency Modulated Radar, MTI and Pulse Doppler Radar **[12]**

Antenna & Wave Propagation

Introduction of Antenna & its parameters. Reciprocity theorem, Review of microwave antennas- Parabolic Reflector, Cassegrain feeds, Horn Antennas, Open-ended wave guides, lens antennas, Dielectric rod Antennas, Antennas for mobile communication. Frequency- independent antennas, Scattering and diffraction. Internal-equation methods, current distribution: Self and mutual impedances. **[10]**

Digital Data Communications

Local Area networks:- token ring, Ethernet, Traditional, Fast and GIGA bit Ethernet, FDDI, DIGITAL MULTIPLEXING :- TDM , T1 carrier , CCITT , CODECS, COMBO CHIPS , North American Hierarchy , Line Encoding , T-carrier , Frame Synchronization Inter Leaving Statistical TDM FDM , **[10]**

Hierarchy ,Wave Division Multiplexing .

Signal Processing

Multi-rate Digital Signal Processing: Introduction, Decimation by a Factor D, Interpolation by a Factor I, Sampling Rate Conversion by a Rational Factor I/D, Filter Design and Implementation for sampling rate Conversion. Linear Prediction And Optimum Linear Filters: Forward and backward linear prediction; Properties of the linear prediction – error filters; Applications of linear prediction., Solution of the Normal Equations, Properties of linear prediction-Error Filter, AR Lattice and ARMA Lattice-Ladder Filters. Power Spectral Estimation: Principle and traditional methods of spectral estimation; Modern methods of parametric estimation; Applications of spectral analysis,. **[10]**

Course Outcomes:

This course supports the achievement of the following outcomes:

4. Ability to apply knowledge of advanced principles to the analysis of electrical and computer engineering problems.
5. Ability to apply the appropriate industry practices, emerging technologies, state-of-the-art design techniques, software tools, and research methods for solving engineering problems.
6. Ability to use the appropriate state-of-the-art engineering references and resources, including IEEE research journals and industry publications, needed to find the best solutions to electrical and computer engineering problems.
7. Ability to maintain life-long learning and continue to be motivated to learn new subjects.
8. Ability to be competitive in the engineering job market.

EE 702 **Advances in Electrical Engineering** **Total Lectures: 52**

4-0-0-4

Objective: To provide an exposure on the basic principles and techniques used in the area of ultra-capacitor, control systems and its sliding modes control, Smart Grid, Renewable Energy Integration. It also offers a profound understanding of the design, analysis and applications of Smart Grid, Renewable Energy integration with the help of computer aided simulation and synthesis tools / ETAP Software.

Pre-requisite: Basic understanding of core engineering courses given in the syllabus is required.

1. **Ultra- Capacitor:** Introduction, History, Basic principles of Ultracapacitors, Principles and energy storage mechanism, EC vs. Aluminum (Al) electrolytic capacitors, Capacitors vs. batteries, Benefits and limitations of Ultracapacitors, Ultracapacitor vs. Flywheels, Applications, Cell voltage, Comparison with battery or other energy storage devices, Cost of EC capacitors, Electrochemical Double Layer Capacitor: basic construction, Components of Ultracapacitor, EC capacitor sizes, Future of energy storage industry, Uninterruptible power supply and backup power. [8]
2. **Applications & Future Scenario of Ultra- Capacitor:** Modern day applications of Ultra capacitor, Future application growth, New material developments, Cost reduction, Ultra capacitor may overtake batteries, Market trends, ultra capacitors in the grid, Vehicular applications, Ultra capacitors in wind turbines, Water Desalination/Purification, New Ultra capacitor work at constant voltage, Electrochemical flow Ultra capacitor, Micro Ultra capacitor, Ultra capacitor for resistance welding. [8]
3. **Advanced control systems and Smart Meter :** Introduction, Intuitive theory of sliding mode control, Sliding Surface, sliding mode, concept of equivalent control, sliding mode equations, sliding mode observer/differentiator, second order sliding. Details Description of Smart Meter, Benefits of Smart Meter, Technical Configurations of Smart Meter, Components of Smart Meter Network in Distribution System, Characteristics, Communication Protocols. [12]
4. **Classical sliding modes:** Introduction, state feedback sliding mode control: Regular form, Eigen valve placement, quadratic minimization. State feedback control laws design: Single input system, multi-input system, unmatched uncertainty, output tracking with integral action. Output based hyper plane design, control law development. Integral sliding mode control: Problem formulations, control design objective, ISM control design. [8]
5. **Smart Grid and Renewable Energy:** Introduction, Characteristics of Smart Grid, Traditional Grid Versus Smart Grid, Evolution of Smart Grid, Components of Smart Grid, The Environmental Impacts of Smart Grid, Technologies Required for Smart Grid. Introduction, Solar Energy, Wind Energy, Distributed Energy Resources Integration Challenges, Forecasting and Scheduling, Impacts of Renewable Energy into the Grid. [16]

Course Outcomes: This course helps our students to apply the knowledge of advanced principles, state of -the-art design techniques, software tools, and research methods for solving challenges of Smart Grid, Renewable Energy Integration and ultra capacitor.

Text Books:

1. R. P. Deshpande, "Ultra -capacitors: Future of Energy Storage", Mc-Graw Hill

Education.

2. C-Edwards & S.K. Spurgeon, "Sliding mode control: Theory & Application", Taylor & Francis, 1998.
3. Shawkat Ali A. B. M., Smart Grids Opportunities, Developments and Trends, Springer-Verlag, London , 2013

Reference Books:

1. B. E. Conway, "Electrochemical Super capacitors: Scientific Fundamentals and Technological Applications", Kluwer Academic / Plenum Publishers (1999)
2. Utkin V.I., "Sliding modes in control & optimization", Springer-verlay, 1992.
3. Momoh James., Smart Grid Fundamentals of Design and Analysis, John Wiley &Sons, Inc., Hoboken, New Jersey, 2012

ME 702 **Advances in Mechanical Engineering** **Total Lectures: 52**

Credit: 4-0-0-4

Prerequisite(s): M.Tech./M.E. or equivalent degree in Mechanical Engineering, Production Engineering, Industrial Engineering, Metallurgical Engineering and knowledge of core subjects in these stream.

Objective(s):

- *To strengthen the knowledge of core subjects of mechanical engineering.*
- *To provide research orientation to the students and latest developments in core areas.*

6. Advanced Theory of Elasticity (3-dimensional problems): **[10]**

Theories of Stress and strain, Transformation of stress and strain, Linear stress-strain temperature relations, Applications of energy methods, Torsion (Narrow rectangular cross Section, Hollow thin wall torsion members) Bending (Unsymmetrical bending, Curved beam**),** Plates.

7. Experimental Stress Analysis: **[6]**

Strain Measurement Methods: Various types of strain gauges, Electrical Resistance strain gauges, semiconductor strain gauges, strain gauge circuits

8. Advances in Production & Industrial Engineering : **[16]**

Friction, Explosive welding, under water welding, Methods of measuring welding defects by Radiographs, Ultrasonic flow detector and metallurgical analysis to prevent-premature failure. Atomic emission spectrometer, Residual stress analysis in Welding, Solid Phase Welding and Cold Pressure welding. Full mould casting, Continuous Casting, Shape Casting, Casting Defects, Solidification process in casting. Metal cutting principles & design of machine tools, Conversion of cutting tool nomenclature, Thin and thick zone model. Trends towards development of new metal cutting processes including dry machining and environmentally conscious machining.ERP and Supply Chain Management (ERPSCM), the emergence and need for ERP concept; Modules and Architectures of a typical ERP System, Selection and implementation of ERP Systems.

9. Introduction to Optimization Techniques: **[6]**

Engineering application of Optimization, Formulation of design problems as mathematical programming problems, classification of optimization problems.

10. Advance Thermodynamics and Heat Transfer **[14]**

Thermodynamics Relations:- Mathematical theorems, Maxwell relations, T-ds equations, Energy Equations, General Relations involving internal energy, enthalpy & entropy, Thermodynamics Relations involving specific heat , Clapeyron equation, Joule Thomson Coefficient, Introduction to convection, review of conservation equations - Forced convection in laminar flow - Exact and approximate solutions of Boundary layer energy equation for plane isothermal plate in longitudinal flow - problems. Forced convection heat transfer in laminar tube flow - forced convection in turbulent flow – Internal Flows-Correlations-Problems

Outcome(s): *This course supports the achievement of the following outcomes*

- *Current trends in the rapidly evolving field*
- *The intellectual and philosophical framework necessary to explore wide spectrum of research in mechanical engineering.*
- *To contribute to expanding the frontiers of knowledge and to provide research training.*
- *Ability to apply the appropriate industry practices, emerging technologies, state-of-the-art design techniques, and research methods for solving engineering problems*

Text Books:

1. Timoschenko S.P. and Goodier J.N, "Theory of elasticity" McGraw-Hill Publishers

2. Dally and Riley, "Experimental stress analysis", McGraw-Hill Publishers

3. B.H. Amstead, Philip F, Ostwald and Myron L, "Manufacturing Processes" Begeman, John

NU–702 Advances in Nuclear Science & Technology **Total Lectures: 52**

4-0-0-4

1. **Thermal Hydraulics:** Thermal Hydraulic Characteristics of various reactors; Reactor Heat Generation & decay heat; Thermodynamics of fuel-coolant interaction & Containment pressurization; Thermal Analysis of Fuel Elements: Turbulent flow, Pressure Drop in bundles/area changes, Heat Transfer, Flow Regimes , Void-Quality-Slip Relations & Models, Pressure Drop, Critical Flow; 2-phase heat transfer: Boiling crises, Critical Heat flux, Thermal design and analysis: Multiple and Sub-channels **[8]**
2. **Nuclear Materials:** Survey of Material Selection and Mechanical Properties of fuel, structure, cladding, moderator and reflector, The Language of Materials Science Symmetry, Thermodynamics Phase of Diagrams & Phase Transformations, Free Energy Origins of Phase Diagrams, Material Deformation and Failure Free Energy, Point Defects, Dislocations, 2D & 3D Defects, Stress, Strain, Plasticity, Creep, Fracture, Failure, Radiation Damage and Effects, Stopping Power, Displacement Rates, Radiation Point Defect Kinetics, Radiation Effects in Materials & Fuels. **[8]**
3. **Nuclear Fuel Cycle:** Nuclear Fuel Resources: Mining and Milling, Conversion, Enrichment through Gas Diffusion, Centrifuge, Separation Nozzle and Lasers; Reactor Physics Calculations: Core Reload, Fuel Depletion, Burnable Poison & Control Rods, In core fuel management: multiple batches & fuel loading patterns, extendable burn up; Reprocessing and Recycling: PUREX, UREX; Materials Accountability, U & Pu recycle Economics **[10]**
4. **Nuclear Safety, Security and Safeguards:** Introduction to nuclear security; International and national legal framework regulating of nuclear security; Threat assessment; Physical protection systems design and evaluation; Physical protection technologies and equipment; Nuclear security culture; Nuclear power plant safety requirements, Basic concepts in safety and reliability, Conceptual design of safety systems, Nuclear Safeguard, Nuclear material accountancy and inventory control of radioactive material. **[10]**
5. **Radiation Detection and Plasma Technology :** Radiation sources, Synchrotron radiation, Counting statistics and error prediction, General properties of radiation detectors, Scintillation detectors, PMT & Photo diodes, Semiconductor diode detectors, Gamma ray spectroscopy, Background and detector shielding Plasma production in lab using D.C., A.C., RF and Microwave, Glow and Arc discharge, DBD discharges, Atmospheric Pressure plasma jets, Spectroscopic diagnostics, Applications of non- equilibrium plasmas, Plasma Torches & applications, Important Tokomak experiments, Plasma heating, Plasma wall interaction. **[16]**
