Mody University of Science & Technology

B.Sc. (Hons) Biotechnology

Session 2016-2017

Curriculum Structure

MODY UNIVERSITY
OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

B.Sc. (H)-Biotechnology-Three years programme
2016-2017 and onwards
FIRST YEAR

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW	MTE	ETE
Autumn Semester	CORE (Compulsory)									
	BT 151	Cell Biology	3	1	-	4	3	25	25	50
	BT 161	Cell Biology Laboratory	-	-	2	1	4	25	25	50
	BC 111	General Biochemistry	3	-	-	3	3	25	25	50
	BC 121	General Biochemistry Laboratory	-	-	2	1	4	25	25	50
	CH 113	Chemistry I	3	-	-	3	3	25	25	50
	CH 123	Chemistry Laboratory I	-	-	2	1	4	25	25	50
	GENERAL ELECTIVES (Compulsory)									
	BT 171	Biotechnology and Human Welfare	2	-	-	2	3	25	25	50
	BT 181	Bioethics and IPR	2	-	-	2	3	25	25	50
	AECC: ABILITY ENHANCEMENT COMPULSORY COURSE									
	EL 101	Foundation Course in English	2	-	-	2	3	25	25	80
		Sub Total	15	1	6	19				
	GE 101	Proficiency (Non-Credit) #	-	-	-	1				

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW*	MTE	ETE
Spring Semester	CORE (Compulsory)									
	BT 152	Genetics	3	1	-	4	3	25	25	50
	MB 331	General Microbiology	3	-	-	3	3	25	25	50
	MB 341	General Microbiology Laboratory	-	-	2	1	4	25	25	50
	CH 114	Chemistry II	3	-	-	3	3	25	25	50
	CH 124	Chemistry Laboratory II	-	-	2	1	4	25	25	50
	GENERAL ELECTIVES (Compulsory)									
	BT 172	Basics of Drug Designing	2	-	-	2	3	25	25	50
	BT 182	Basics of Forensic sciences	2	-	-	2	3	25	25	50
	AECC: ABILITY ENHANCEMENT COMPULSORY COURSE									
	MDC 003	Environmental Studies	3	1	-	4	3	25	25	50
		Sub Total	16	1		20				
	GE 102	Proficiency (Non-Credit) #	-	-	-	1				

B.Sc. (H)-Biotechnology-Three years programme
(2016-2017 and onwards)
Second Year

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW	MTE	ETE
Autumn Semester	Core Compulsory (CC)									
	BC 211	Bio-Instrumentation	3	1	-	4	3	25	25	50
	BC 221	Bio-Instrumentation Lab	-	-	2	1	4	25	25	50
	BT 271	Food Technology	2	-	-	2	3	25	25	50
	BT 261	Food Technology Laboratory	-	-	2	1	4	25	25	50
	ZO 212	Animal Physiology	3	-	-	3	3	25	25	50
	ZO 222	Animal Physiology Laboratory	-	-	2	1	4	25	25	50
	BO 211	Plant Anatomy and Physiology	3	-	-	3	3	25	25	50
	BO 221	Botany Laboratory-III	-	-	2	1	4	25	25	50
	GENERAL ELECTIVES (GE, Compulsory)									
	BT 291	Introductory Biomedical Science	2	-	-	2	3	25	25	80
	ABILITY ENHANCEMENT COMPULSORY COURSE (AECC)									
		Foreign Language-I‡	3	-	-	3	2	25	25	50
		Sub Total				21				
	GE 201	Proficiency (Non-Credit) #	-	-	-	1				

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW	MTE	ETE
Spring Semester	Core Compulsory (CC)									
	BT 212	Molecular Biology	3	1	-	4	3	25	25	50
	BT 232	Molecular Biology Laboratory	-	-	2	1	4	25	25	50
	ZO 232	Developmental Biology	3	-	-	3	3	25	25	50
	ZO 242	Developmental Biology Laboratory	-	-	2	1	4	25	25	50
	BO 212	Plant Developmental Biology	2	-	-	2	3	25	25	50
	BO 222	Plant Developmental Biology Laboratory	-	-	2	1	4	25	25	50
	GENERAL ELECTIVES (GE, Compulsory)									
	BT 381	Modern Biology	3	-	-	3	3	25	25	50
	ABILITY ENHANCEMENT COMPULSORY COURSE (AECC)									
		Foreign Language-II‡	3	-	-	3	2	25	25	50
		Sub Total				18				
	GE 202	Proficiency (Non-Credit) #	-	-	-	1				

B.Sc (H)-Biotechnology-Three years programme
(2016-2017)
Third Year

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW	MTE	ETE
Autumn Semester	Core Compulsory (CC)									
	BT 311	Genetic Engineering	3	1	-	4	3	25	25	50
	BT 341	Genetic Engineering Lab	-	-	2	1	4	25	25	50
	BT 324	Bioprocess Engineering	3	-	-	3	3	25	25	50
	BT 344	Bioprocess Engineering Laboratory	-	-	2	1	4	25	25	50
	MB 232	Immunology	3	1	-	4	3	25	25	50
	MB 321	Immunology Laboratory	-	-	2	1	4	25	25	50
	BT 241	Mathematics and Statistics for Biology	2	1	-	3	3	25	25	50
	GENERAL ELECTIVES (GE, Compulsory)									
	BT 333	Introduction to Research Methodology	2	-	-	2	3	25	25	50
	DISCIPLINE CENTRIC SUBJECTS(DCS)*									
	ZO 111	Animal Diversity-I	3	-	-	3	3	25	25	50
	BO 111	Botany-I	3	-	-	3	3	25	25	50
	BC 311	Nutritional and Clinical Biochemistry	2	1	-	3	3	25	25	50
		Sub Total				22/25				
	GE 301	Proficiency (Non-Credit) #	-	-	-	1				

B.Sc (H)-Biotechnology-Three years programme
(2016-2017)
Third Year

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW	MTE	ETE
Spring Semester	Core Compulsory (CC)									
	BT 352	Bioinformatics	3	-	-	3	3	25	25	50
	BT 314	Bioinformatics Lab	-	-	2	1	4	25	25	50
	BT 322	Plant Biotechnology	3	-	-	3	3	25	25	50
	BT 313	Animal Tissue Culture	3	-	-	3	3	25	25	50
	BT 323	Tissue Culture Laboratory	-	-	2	1	4	25	25	50
	BT 342	Environmental Biotechnology	3	-	-	3	3	25	25	50
	BT 392	Environmental Biotechnology Laboratory	-	-	2	1	4	25	25	50
	GENERAL ELECTIVES (GE, Compulsory)									
	BT 334	Enzyme Technology	3	-	-	3	3	25	25	50
	BT 324	Entrepreneurship Development	2	-	-	2	3	25	25	50
	DISCIPLINE CENTRIC SUBJECTS(DCS)*									
	ZO 132	Animal Diversity-II	3	-	-	3	3	25	25	50
	ZO 312	Ethology and Evolution	3	-	-	3	3	25	25	50
	BO 132	Botany -II	3	-	-	3	3	25	25	50
		Sub Total				23/26				
	GE 302	Proficiency (Non-Credit) #	-	-	-	1				

The syllabus for already approved courses is not enclosed herein.

*The student has to take maximum two courses in each semester of Third year from the DCS. The minimum strength of student should be five (5) in the particular DCS course.

.

BT 171 Biotechnology and Human Welfare **2-0-0-2**

[8]

UNIT I

Industry Application: protein engineering; enzyme and polysaccharide synthesis, Metabolites: Alcohol and antibiotic production.

UNIT II [8]

Agriculture Application: N_2 fixation: transfer of pest resistance genes to plants; interaction between plants and microbes; qualitative improvement of livestock.

UNIT III [10]

Human Health: Diagnostics and Treatment: development of non-toxic therapeutic agents, recombinant live vaccines, gene therapy, Human genome project.

Text Book

1. Concepts in Biotechnology by Balasubrahmanian et. al.,University press, 2010

Reference Book

2. Recombinant DNA technology by Watson et. al., Scientific American Books, 2012.
3. Principles of Gene Manipulation by Old and Primrose. Blackwell, 2010
4. Biotechnology: Applications In Human Healthcare Hardcover, Sampat Nehra, Pointer Publishers (2009)

BT 181 Bioethics and IPR **2-0-0-2**

UNIT I [11]

Bioethics – Meaning and Necessity of Bioethics, different paradigms of Bioethics – National & International, Ethical issues against the molecular technologies

UNIT II [8]

IPR- Introduction to Indian Patent Law. World Trade Organization and its related intellectual property provisions.

UNIT III [7]

Intellectual/Industrial property and its legal protection in research, design and development. Patenting in Biotechnology, economic, ethical and depository considerations.

Text Book:

1. Patterns of Entrepreneurship 2005: Jack M. Kaplan. Wiley,
2. Sateesh MK. 2010 Bioethics and Biosafety, I. K. International Pvt Ltd.

References:

3. Entrepreneurship: New Venture Creation: David H. Holt Tata McGraw – Hill 2002
4. Entrepreneurship and Small Business Management: C.B. Gupta, S.S. Khanka, Sultan Chand & Sons.
5. Sree Krishna V (2007) Bioethics and Biosafety in Biotechnology, New age international publishers

BT 172 Basics of Drug Designing 2-0-0-2

UNIT I [5]
Drug designing-Meaning and Introduction, Disease and drug target identification

UNIT II [5]
Identification of Lead compound, SAR, optimising target interactions

UNIT III [8]
Toxicology and safety issues, Development and Production, Clinical trials, Patenting issues

UNIT IV [8]
Newer drugs, Drug discovery in cancer research/new target based drugs in clinical trials. Microbial genomics for new antibiotics, immunotoxin drug

Text Book

1. A.R Leach, Molecular Modeling Principles and Applications, Longman, 1996
2. J.M. Haile , Molecular Dynamics Simulation Elementary methods, , John Wiley and Sons ,1997

References:

3. Leon Lachman et al Theory and Practice of Industrial Pharmacy, 3 Edition, Lea and Febiger, 1986
4. Remington's Pharmaceutical Science, Mark Publishing and Co.
5. The Organic Chemistry of Drug Design and Drug Action, by R. B. Silverman
6. An Introduction to Medicinal Chemistry by G. L. Patrick

BT 182 Basics of Forensic Science 2-0-0-2

UNIT I [8]
Introduction and principles of forensic science, tools and techniques in forensic science, Classification of injuries and their medico-legal aspects, method of assessing various types of deaths

UNIT II [6]
Fire arms and explosives, Handwriting analysis, Significance of toxicological findings

UNIT III [6]
Fundamental principles of fingerprinting, classification of fingerprints, development of finger print as science for personal identification

UNIT IV [6]
Principle of DNA fingerprinting, application of DNA profiling in forensic medicine, Introduction to Cyber security.

Text Book:

1. Molecular Biotechnology- Principles and Applications of recombinant DNA. ASM Press, Washington.
2. B.B. Nanda and R.K. Tiwari, Forensic Science in India: A Vision for the Twenty First Century, Select Publishers, New Delhi (2001).

References:

3. M.K. Bhasin and S. Nath, Role of Forensic Science in the New Millennium, University of Delhi, Delhi (2002).
4. S.H. James and J.J. Nordby, Forensic Science: An Introduction to Scientific and Investigative Techniques, 2nd Edition, CRC Press, Boca Raton (2005).
5. W.G. Eckert and R.K. Wright in Introduction to Forensic Sciences, 2nd Edition, W.G. Eckert (ED.), CRC Press, Boca Raton (1997).
6. R. Saferstein, Criminalistics, 8th Edition, Prentice Hall, New Jersey (2004).
7. W.J. Tilstone, M.L. Hastrup and C. Hald, Fisher's Techniques of Crime Scene Investigation, CRC Press, Boca Raton (2013).

BT 291 Introductory Biomedical Science **2-0-0-2**

UNIT I [8]

Introduction to human biology, Clinical biochemistry of human diseases, microbiology, epidemiology, and biomedical engineering

UNIT II [6]

Screening for disease, Application of biochemical techniques to inborn errors of metabolism, tumor markers, liver function, iron and porphyrins

UNIT III [7]

Enzymes and their use in laboratory medicine, clinical applications of protein biochemistry, nutrition in health and disease, lipids and atherosclerosis

UNIT IV [5]

Electronic devices used as sensors

Text Book

1. Raven, P.H et al (2006) Biology 7th edition Tata McGrawHill Publications, New Delhi

Reference

2. Campbell, N.A. and Reece, J.B. (2008) Biology 8th edition, Pearson Benjamin Cummings, San Francisco.
3. Griffiths, A.J.F et al (2008) Introduction to Genetic Analysis, 9th edition, W.H. Freeman & Co. NY

BO 212 Plant Developmental Biology **2-0-0-2**

UNIT I

Development and morphology of gametophyte – formation of vegetative and generative cells, microsporogenesis, organization of mature pollen grain, types of ovules, integument, nucellus, megasporogenesis, types of embryo sacs. [6]

UNIT II [4]

Pollination and fertilization – Pollen transfer, artificial pollination, pollen germination, double fertilization, self-incompatibility.

UNIT III [5]

Endosperm – development, cytology and functions of endosperm
Endosperm types - nuclear, cellular - helobial - Ruminate endosperms, function of endosperms.

UNIT IV [5]

Embryo – Development of embryo in Dicot (Capsella) and Monocot (Najas). A brief account on Polyembryony, parthenocarpy.

UNIT V [6]

Seed – Development, classification, dispersal and dormancy

Text Book

1. Plant Physiology by Taiz and Zeiger, Sinauer Associate Inc. Publishers

Reference

2. The Arabidopsis Book, ASPB publication (available freely at www.aspb.org)
3. Biochemistry and Molecular Biology of plants Ed. Buchanan, Grussem and Jones, ASPB publication.
4. Bhojwani. S.S. and Bhatnagar. S.P. 1978. The embryology of Angiosperms. Vikes Publishing Pvt. Ltd., Delhi.
5. Maheswari P.1971. An introduction to embryology of Angiosperms Tata Mc Graw Hill, Delhi.
6. Swamy B.G.L. and Krishnamurthy K.V. 1950. From flower to fruit. Tata Mc Graw Hill, Hew Delhi.

BO 222 Plant Developmental Biology Laboratory 0-0-2-1

Assignments are based on the course BO 212 Plant Developmental Biology containing exercises on plant developmental studies using permanent slides and embryo development related experiments.

BT 333 Introduction to Research Methodology 2-0-0-2

UNIT I [5]

Introduction to Research Methodology: Objectives and motivation in research

UNIT II

Defining the Research Problem, Selecting and defining a research problem, Reviewing and conducting literature search, developing a research plan [7]

UNIT III

Designing of Experiment, Number of Different experimental designs – single and multifactorial design [6]

UNIT IV

Making measurements and sources of error in measurements, Methods of data collection and record keeping. Report writing, Writing a research paper - abstract, introduction, methodology, results and discussion. [8]

Text Book

1. Kothari C.K. (2004) 2/e, Research Methodoloy – Methods and Techniques (New Age International, New Delhi)

Reference

2. Montgomary, Douglas C. (2007) 5/e, Design and Analysis of Experiments (Wiley India)
3. Montgomary, Douglas C. &Runger, George C. (2007) 3/e, Applied Statistics & probability for Engineers (Wiley India)
4. Krishnswamy, K.N., Shivkumar, AppaIyer and Mathiranjan M. (2006) Management Research Methodology; Integration of Principles, Methods and Techniques (Pearson Education, New Delhi)

BT 324 Entrepreneurship Development **2-0-0-2**

UNIT I [10]

Introduction: Meaning, Needs and Importance of Entrepreneurship, Promotion of entrepreneurship, Factors influencing entrepreneurship, Features of a successful Entrepreneurship

UNIT II [8]

Establishing an Enterprise Forms of Business Organization, Project Identification, Selection of the product, Project formulation, Assessment of project feasibility, Financing the Enterprises, Fixed and Working Capital

UNIT III [8]

Entrepreneurship and International Business, Marketing of Product Meaning of International business, Selection of a product, Selection of a market for international business, Export financing, Institutional support for exports

Text Book

1. Gupta CB, Khanka SS. Entrepreneurship and Small Business Management, Sultan Chand & Sons.

Reference

2. Holt DH. Entrepreneurship: New Venture Creation.
3. Kaplan JM Patterns of Entrepreneurship.

Mody University of Science and Technology

College of Arts, Science and Humanities

BSc PCM
2016-17

Department of Science

B. Sc. (PCM/PMC)
Physics, Mathematics, Computer Science/ Chemistry
Three-Year Programme
Academic Curriculum (2012 – 13 onwards)
First Year

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW*	MTE	ETE

	CH 314	Inorganic Chemistry-IV	2	-	-	2	3	25	25	50
	CH 324	Organic Chemistry–VI	2	-	-	2	3	25	25	50
	CH 382	Laboratory Course in Chemistry-VI	-	-	3	1.5	4			
		Sub Total				**21.5/19**				
		Proficiency (Non-Credit) #				**1**				

CW: *Course Work;* ***MTE:*** *Mid Term Examination;* ***ETE:*** *End Term Examination*

* *Course work (CW) would include regularity, evaluation of assignments, surprise tests, etc.*

Evaluation of proficiency will be based on the participation in extra-curricular/co-curricular activities.

$ *Evaluation of internship would comprise project report and viva-voce.*

Optional Courses

§ -***Chemistry courses***

¢ -**Computer Science**

Note: **1**.*The Programme includes two different combinations:*

(i) PCM (Physics, Chemistry and Maths) &

(ii) PMC (Physics, Maths and Computer Science)

2. *In addition to the compulsory courses, either all courses of* ***Chemistry Or Computer Science*** *may only be opted in each semester*

Overall Credits: Physics: 41; Mathematics:40; Chemistry: 41: Computer Science: 36 (+5)

Total Credits (With Chemistry as optional) 135
Total Credits (With Computer Science as optional) 130

Course Description

Compulsory Courses

EL 101 Foundation Course in English 2-0-0-2

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand& Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

EV 111 Environmental Science 1-0-0-1

Introduction to Environment and Environmental Studies, its scope and importance [2]

Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem [2]

Natural Resources: Renewable and Nonrenewable resources. [2]

Human Population and Environment: Population Growth, World and Indian scenario [2]

Environmental pollution: Types of Environmental Pollution and cause , prevention of pollution [2]

Global Environmental Issues: Climate Change, Global Warming and Green House Effect [3]

Visit to a local area to document environmental assets

Suggested Readings:

Text Books:

1. Bharucha, E;.Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH,Beiswenger RE, Purdom; Environmental Sciences, Paperback.

Reference Books:

5. Rastogi V.B. &Jayraj M.S.; Animal Ecology and Distribution of Animals, KedarNath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

3-0-0-3

CA 111 Fundamentals of Computers and Information Technology

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets [6]

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

Physics

PH 111 Mechanics, Properties of Matter and Relativity 3-0-0-3

Mechanics: Laws of motions, Inertial and non-inertial frames of reference, Rotating frame, Effect of centrifugal and Coriolis forces due to earth's rotation, Center of mass (C.M), Lab and C.M frame of reference, Conservation of linear and angular momenta. [8]

Properties of Matter: Elasticity, Young's modulus, Modulus of rigidity, Poisson's ratio, relation connecting different elastic-constants, twisting couple of a cylinder(solid and hallow), Dynamical method (Maxwell's needle) for determining the modulus of rigidity, Bending moment, Cantilever, Determination of Young's modulus by bending of beam. [10]

Fluid Mechanics: Kinematics of moving fluids, equations of continuity, Euler's equation, Bernaulli's theorem, viscous fluids, streamline and turbulent flow, Poiseulle's law, Capillary tube flow, Reynold's number, Stokes law. [7]

Relativity: Postulates of special theory of relativity, Derivation of Lorentz transformation and physical significance of Lorentz invariance, Length contraction and time dilation, Concept of simultaneity, Relativistic velocity transformation relations, mass energy relation, Concept of zero rest mass of photon, Relativistic relation between energy and momentum. [14]

Text Books:

1. D.S.Mathur. Mechanics, S. Chand Publications, New Delhi
2. Resanick and Halliday: Physics Part –1

Reference Books:

1. H.C.Verma : Concept in Physics Vol. I
2. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol I.

PH 121 Electromagnetism 2-0-0-2

Vector Calculus: Gradient, divergence and curl operators, Physical significance [7]

Electromagnetism: Laws of Electromagnetism using vector calculus; electrostatics and magnetostatics in matter, Biot and Savart's law, calculation of H order in simple geometrical situations, Ampere's Law $\nabla.B=0$, $\nabla xB=\mu_0\mathbf{J}$, field due to magnetic dipole, magnetization current, magnetization vector, Half order field, magnetic permeability (linear cases), interpretation of a bar magnet as surface distribution of Solenoidal current. [10]

Time Varying Fields: Electromagnetic induction, Faraday's law, electromotive force, $\varepsilon = \int$ E.dr. integral and differential forms of Faraday's Law. Mutual and self inductance, transformers, energy in a static magnetic field, Maxwell's displacement current, Maxwell's equations, Electromagnetic field density. [10]

EM wave propagation: The wave equation satisfied by E and B, Plane electromagnetic waves in vacuum, Poynting's vector, Reflection at plane boundary of dielectrics, Polarization by reflection and total internal reflection, Faraday effect, Waves in a conducting medium [12]

Text Books:

1.David J. Griffiths: Introduction to Electrodynamics (3rd Edition)

2. Gupta and Kumar: Electromagnetics

Reference Books:

1.P. Lorrain and O. Corson: EM Waves and Fields

2.A. S. Mahajan and AA Rangwal: Electricity and Magnetism

PH 131 Physics Laboratory-I 0-0-4-2

Assignments are based on the course PH 111 and PH 141

PH 122 Thermodynamics and Statistical Physics 3-0-0-3

Thermodynamics: Reversible and irreversible processes, Carnot's cycle and Carnot's theorem, Second law of thermodynamics, Thermodynamic scale of temperature. [7]

Concept of entropy: Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram [8]

Thermodynamic functions, Internal energy, Enthalpy, Helmholtz function and Gibb's free energy, Maxwell's thermodynamical equations and their applications, TdS equations, Energy and heat capacity equations, Clapeyron equations, Adiabatic demagnetization, Third law of thermodynamics, Nernst heat theorem. [10]

Joule-Thomson effect, Thermodynamic analysis, Inversion temperature, Thermodynamic equations for a Vander Waals gas. Liquefaction of gases. Regenerative principle, Properties of liquid helium, Introduction to super fluidity [6]

Statistical Mechanics: State of a system (Microscopic and Macroscopic); Phase space, density of states and Liouville's theorem; Postulates of statistical mechanics; Relation between statistical and thermodynamic parameters. [8]

Text Books:

1. K.W. Zeemansky: Heat and Thermodynamics
2. BrijLal and N. Subramanyam.:Heat and Thermodynamics

Reference Books:

1. B.K. Agarwal: Thermal Physics
2. Frederick Reif : Fundamentals of Statistical and Thermal Physics
3. R.K. Pathria: Statistical Mechanics (2nd Edition):

PH 132 Oscillations and Waves 2-0-0-2

Oscillations: Simple harmonic oscillations, Differential equation of SHM and its solution, Amplitude, Frequency, Time Period and Phase, Velocity and acceleration. Kinetic, Potential and total energy and their time average values. Free oscillations of systems with one degree of freedom : (i) Mass-Spring system, (ii) Simple Pendulum, (iii) Torsional Pendulum, (iv) Compound pendulum (v) Bar Pendulum. [6]

Superposition of Two Collinear Harmonic Oscillations: Linearity and superposition principle. (i) Oscillations having equal frequencies and (ii) Oscillations having different frequencies (Beats). Superposition of N Collinear Harmonic oscillations [6]

Free Oscillations; Damped oscillations; Damping coefficient, Log decrement; Forced oscillations : Transient and steady states, Amplitude, Phase, Resonance, Sharpness of resonance, Power, Dissipation and Quality Factor. [7]

Waves: Plane and spherical Waves, Longitudinal and transverse waves, Plane progressive (Traveling) waves. Wave equation. Particle and wave velocities. Differential Equation. Pressure of a longitudinal wave. Velocity of waves : Velocity of transverse vibrations of stretched strings, Newton's formula for velocity of sound; Laplace's correction [7]

Text Books:

1. N.K. Bajaj: The Physics of Waves and Oscillations, Tata cGraw-Hill, 1988.
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Oscillations and Waves, CBC, Jaipur
3. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.

Reference Books:

1. A. P. French : Vibrations and Waves ,CBS Publications, 1987
2. BrijLal and N. Subramanyam: Waves and Oscillations

PH 132 Physics laboratory-II 0-0-4-2

Assignments are based on the course PH 122 and PH 132, etc.

PH 211 Semiconductor Physics and Electronics 3-0-0-3

Semiconductor Physics: Intrinsic and extrinsic semiconductors, P-N junction diode, Diode equation, depletion width and potential barrier, junction capacitance, I-V characteristics, Rectifier, ripple factors, filter circuits, efficiency and percentage regulation, LED, photodiode. [9]

Electronics : Transistor circuits, Input, Output characteristics and CB and CE modes, DC load line, operating point, biasing and bias-stabilization circuits: Transistor as an amplifier (CE mode) and frequency response. [6]

Hybrid parameter: Analysis of transistor amplifier (with and without load) using h- parameters, simplified hybrid model, brief idea about hybrid model Single stage amplifier in CE,CB and CC modes. RC coupled CE amplifier and its frequency response, tuned voltage amplifier. Power amplifier classification, distortion and efficiency, push pull amplifier [10]

Feedback in amplifiers: Positive and negative feedback, effect of negative feedback on the characteristics of different types of amplifiers, voltage and current series feedback circuits. Field effect transistors, I-V Characteristics of JFET and MOSFET, FET biasing, FET as an amplifier. [8]

Digital Electronics: Diode and transistor equivalent circuits of basic and derived gates, Universal gates, X-OR and equivalence. Simplification of Boolean expressions using K- maps. Sequential circuits, Flip flops. [6]

Text Books:

1. Millman and Halkias: Integrated Electronics:
2. Chattopadhyay and Rakshit: Electronics Fundamental and Application

Reference Books:

1. Malvino and Leach: Principle of Digital Electronics:
2. Gupta and Kumar: Hand book of Electronics

PH 221 Optics and Lasers 3-0-0-3

Interference: Young's experiment, Conditions for sustained interference, Theory of interference, Fresnel's biprism, Determination of wavelength of light, Interference in parallel and edge shaped films, Colour of thin films. Newton's rings [10]

determination of wavelength of light, Michelson interferometer and their applications.

Diffraction: Definition, Frenel's diffraction, Zone plate, diffraction due to straight edge. Fraunhoffer diffraction due to single and double slits, Plane transmission grating and its resolving power. [10]

Polarization: Polarized light and its mathematical representation, Polarization by double refraction and Huygen's theory, Nicol prism, Retardation plates, Production and analysis of circularly and elliptically polarized light, Optical activity. [9]

Lasers: Einstein's A and B coefficients, Spontaneous and Stimulated conditions for laser action population inversion, optical pumping, Working of different types of lasers: semiconductor, rubey and He-Ne Lasers. [10]

Fiber optics: Working, Numerical aperture

Text Books:

1. N. Subrahmanyam, Brijlal and M. N. Avadhanulu: A textbook of Optics
2. A.Ghatak: Optics, Tata McGraw-Hill

Reference Books:

1. B. K. Mathur and T. P. Pandya: Physical Optics

PH 231 Physics laboratory-III 0-0-4-2

Assignments are based on the course PH 211 and PH 221

PH 212 Mathematical Physics and Special Theory of Relativity 3-1-0-4

Curvilinear Coordinates: Orthogonal curvilinear coordinate systems, scale factors, expression for grade, divergence, curl and their application to Cartesian, circular cylindrical and spherical polar coordinate systems. [9]

Coordinate transformation and Jacobean, Transformation of covariant, contra variant and mixed tensor. Addition, multiplication and contraction of tensors. Metric tensor and its use in transformation of tensors [7]

Dirac-delta function and its properties. Lorentz transformation and rotation in space-time, time like and space like vectors, world line, and macro-causality [6]

Four vector formulation: energy- momentum Four vector, relativistic equation of motion invariance of rest mass, orthogonality, four force and four velocity, Lorentz force as an example of four force transformation of four frequency vector, longitudinal and transverse Doppler's effect. [12]

Transformation of electric and magnetic fields between two inertial frame

Differential Equations: The second order liner differential equation with variable coefficient and singular points, series solution method and it application to the Hermite's Legendre's and Laguerre's differential equation. Basic properties (without proof) like orthogonality, recurrence relation, Graphical representation and generating functions of Hermite, Lagendre, Leguerre and Associated Legendre functions (very simple application) [13]

Fourier Analysis: Fourier theorem, Fourier analysis of square wave, saw-tooth wave, plucked strings, half wave/full wave rectifier wave forms [5]

Text Books:

1. George Arfken: Mathematical Method for Physicists (Academic Press).
2. S.L.Kakani, C. Hemrajani, T.C. Bansal: Mathematical Physics and Special Theory of Relativity, CBC, Jaipur
3. D. E. Bourne, P C Kendall: Vector Analysis and Cartesian Tensors, 3ed (Chapman & Hall, 1992)

Reference Books:

1. A.P. French: Special Relativity
2. P. K. Chattopadhyay: Mathematical Physics.
3. Gupta and Kumar: Mathematical physics

PH 222 Physics Laboratory IV 0-0-4-2

Assignments are based on Course PH 211 etc.

PH 311 Quantum Mechanics and Spectroscopy 3-1-0-4

Failure of Classical Physics: Black body radiation (without derivation), Photoelectric effect, Compton effect Wave Packets and Uncertainty Relation: de-Broglie hypothesis, Wave-particle duality, Wave packets, Group velocity and phase velocity, Uncertainty principle. [10]

Wave Mechanics: Schrödinger equation, Physical interpretation of wave function, Probability current density and conservation of probability, Free particle wave function, Schroedinger equation in the presence of a potential, Linear operators, Hermitian operators, Observables, Eigenvalues and Eigenfunctions, Expectation values, Ehrenfest's theorem, Commutation relations [15]

Schrödinger Wave Equation and Applications: Particle in one dimensional Box, Square well, Rectangular potential barrier and tunneling, Linear harmonic oscillator, Spherically symmetric potential, Angular momentum operators and their eigen functions, Concept of spin, Hydrogen atom. [12]

Spectroscopy: Quantum futures for spectra of single valence electron atom: Orbital magnetic dipole moment, Orbital, spin and total angular momentum, Larmor precession, Vector model of atom, Electronic configuration and atomic states, Spin-orbit interaction and fine structure, Intensity of spectral lines, General selection rules. Zeeman Effect, Two valence electron atoms: LS and JJ coupling schemes and resulting spectra, Idea of normal and inverted doublets. [15]

Text Books:

1. V. Devanathan:Quantum Mechanics
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Elementary Quantum Mechanics and Spectroscopy, CBC, Jaipur

Reference Books:

1. Loknathan and Ghatak:Quantum Mechanics
2. S. Gasiorowicz: Quantum Physics
3. B. H. Bransden and C. J. Joachain: Quantum Mechanics:
4. H.E. White, Introduction to Atomic Physics
5. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol VIII.

PH 331 Electromagnetic Theory 4-0-0-4

1. **Maxwell's Equations:** Concept of Displacement Current, Vector and Scalar Potentials, Boundary Conditions at boundary of different media, Wave equations and plane waves in Dielectric media, Poynting Theorem, Physical concept of Electromagnetic field, Energy density, Momentum density. [8]

2. **Reflection and Refraction of EM Waves:** Reflection and refraction of a plane wave by interface between dielectrics, Fresnel Formulae, Total internal reflection, Brewster's angle, Waves in conducting media, Metallic reflection for normal incidence. [10]

3. **Plasma and Ionosphere:** Concept of skin depth, Microscopic media (Plasma) and Maxwell's equations, Plasma frequency, Refractive index, Conductivity of an ionized Gas, Propagation of e.m. waves through Ionosphere. [12]

4. **Polarization of EM Waves:** Different types of polarizations (Linear, Circular and Elliptical), e.m. Fresnel's formula, Uniaxial and biaxial crystals, Polarization by double refraction, Nicol Prism, Ordinary and Extraordinary Refractive indices, Phase retardation plates: Quarter-Wave and Half-Wave Plates, Analysis of Polarized Light, Polarimeter. [10]

5. **Rotatory Polarization:** Optical rotation, Biot's Laws for Rotatory Polarization, Fresnel's Theory of Optical Rotation, Experimental verification of Fresnel's Theory, Specific Rotation, Laurent's Half-Shade Polarimeter. [8]

6. **Fiber Optics:** Planar Optical Wave Guides, Propagation through optical fiber, Types, Numerical aperture, Modes of Propagation (Basic Concepts only). [4]

Text Books:

1. A.Z. Capri and P.V. Panat: Introduction to Electrodynamics, Narosa Pub. House, New Delhi, 2002
2. David J. Griffiths: Introduction to Electrodynamics, 3rd Edition, Benjamin Cummings 1998
3. J. D. Jackson: Classical Electrodynamics, 3rd Edition, Wiley, New York, 1998
4. M. Lifshitz and L. D. Landau: Classical Theory of Fields

(Course of Theoretical Physics), 2nd Edition, Pergamon Pr., 1981.

Reference Books:

1. Joseph A. Edminister: Electromagnetics, 2nd Edition, Tata McGraw Hill, New Delhi, 2006.
2. M.A.W. Miah: Fundamentals of Electromagnetic, Tata McGraw Hill,1992
3. Liang Chi Shen, Jin Au Kong: Applied electromagnetism, PWS Pub. Co., 1995.

PH 341 Atomic and Molecular Physics 4-0-0-4

1. **Atomic Physics:** Spectra of Hydrogen, Deuteron and alkali atoms spectral terms, doublet fine structure, screening constants for alkali spectra for s, p, d and f states, selection rules. [7]

2. **Earth Spectra:** Singlet and triplet fine structure in alkaline earth spectra [5]

3. **Week spectra:** continuous X-ray spectrum and its dependence on voltage, Duane and Hunt's law. Characteristic X rays, Moseley's law, doublet structure of X-ray spectra, X-ray absorption spectra. [8]

4. **Molecular Physics:** Discrete set of electronic energies of molecules, quantization of vibrational and rotational energies, determination of internuclear distance, pure rotational and vibrational spectra. [10]

5. **Vibration Spectra**: Dissociation limit for the ground and other electronic states, transition rules for pure vibration and electronic vibration spectra. [6]

6. **Raman Effect:** raman Effect, Stokes and anti-Stokes lines, complimentary character of Raman and infrared spectra, experimental arrangements for Raman spectroscopy. [8]

7. **Spectroscopic Techniques**: Sources of excitation, prism and grating spectrographs for visible, UV and IR, absorption spectroscopy, double beam instruments. [8]

Text Books:

1. Robert Eisberg and Robert Resnick: Quantum Physics of Atoms, Molecules, Solids, Nuclei, and Particles, John Wiley & Sons Inc, 1985

2. H.E. White: Introduction to Atomic Spectra, McGraw-Hill book

company, Inc.

3. C.N. Banwell: Molecular Spectroscopy, Tata-McGraw Hill Publishers, New Delhi, 1993

Reference Books:

1. R.C. Johnson: Introduction to Molecular Spectra, Pitman Publishing Corp., New York, 1949
2. D. P Khandelwal : Optics and Atomic Physics, Shiva Lai Agarwala & Company, Educational Publisher, 1973
3. Arthur Beiser: Concepts of Modern Physics, McGraw-Hill Book Company, 1987.

PH 351 Elements of Classical Mechanics 2-0-0-2

1. System of particles, Constraints, Generalized coordinates, D'Alemberts principle and Lagrange's equation, Velocity dependent potential of electro-magnetic field. [10]

2. Calculus of Variation, Hamilton's principle, Lagrange's equation, Lagrangian for simple systems, Cyclic coordinates, symmetries and conservation laws. [6]

3. Advantages of Lagrangian: electro-mechanical analogies, Lagrange's undetermined multipliers, Lagrange's equation for nonholonomic systems, Virial theorem, Principle of mechanical similarity. [10]

Text Books

1.H. Goldstein: Classical Mechanics: 3rd Edition, Addison-Wesley Pub, 2001

2. L . D. Landau and E. M. Lifshitz: Classical Mechanics: A Course of Theoretical Physics, Vol.1, 3rd Edition , Pergamon Press, 1976.

3. K. C. Gupta: Classical Mechanics of Particles and Rigid Bodies, Wiley Eastern, New Delhi, 1988

Reference Books:

1. R. G. Takwale and Puranik: . Introduction to Classical Mechanics, 24th Edition, Tata-McGraw Hill, New Delhi, 1991
2. N. C. Rana and P. Joag: Introduction to Classical Mechanics, Tata McGraw Hill, 1992.

PH 361 General and Optics Based Laboratory 0-0-4-2

Assignments are based on the course PH 341,etc

PH 371 Electronics Laboratory 0-0-4-2

Assignments are based on the course PH 331,etc

PH 342 Solid State Physics 3-0-0-3

1. **Structure**: Crystal structure, periodicity, lattices and bases, fundamental translational vectors, unit cell, lattice types, Bravais lattices, Miller indices for direction and planes, Common crystal structures like NaCl, ZnS and Diamond; Close packed structures, Lau theory of X-ray diffraction, X-ray diffraction, Bragg's law. [9]
2. **Bonding**: Potential between a pair of atoms, concept of cohesive energy, covalent, Vander Waals, ionic and metallic Crystals, reciprocal lattice, Brillouin Zones [6]
3. **Thermal Properties**: Lattice vibrations, Vibrational modes of continuous medium, Debye's model: lattice specific heat, Phonons, Density of states. [7]
4. **Electronic Properties**: Free electron gas, Electrons in periodic potential, Kronig-Penny model, Bloch theorem, energy bands, metals, insulators and semiconductors; Hall Effect, Fermi surface [10]
5. **Magnetic Properties**: Magnetic moment, magnetic susceptibility, Dia-, Para and Ferromagnetism, Ferromagnetic domains. [7]

Text Books:

1. C. Kittel: Solids State Physics, 6th edition, John Wiley & Sons, NY, 1986
2. R. L. Singhal, Solid state Physics, KNRN Pub., Meerut, 1998

Reference Books:

1. Decker: Solids State Physics, Prentice-Hall, New York, 1962
2. Azarof: .Introduction to Solids, Mc-Graw-Hill Book Co., Inc.
3. S.O. Pillai, Solid State Physics, 6th Edition, New Age International Pub, 2005.

PH 352 Nuclear and Particle Physics 4-0-0-4

1. **Nuclear Structure**: Properties of Nuclei and Models, Introduction to the nucleus, Fermi gas model, Deutron Binding energy, Semiemperical mass formula, Mass diffect, Packing fraction and its application to explain most stable isobars and nuclear fission, Magnetic dipole moment, quadrapole moment, angular momentum, Effect of mass number on size of nucleus Condition of stability for isobars. [9]

2. **Nuclear Models**: Liquid drop model, fission and potential barrier, N-N and P-P chains, Nuclear reactors, Nuclear fission and fusion. [6]

3. **Nuclear Force and Two-Nucleon System:** Properties of nucleon-nucleon interaction, General forms of nucleon- nucleonpotential, Neutron-proton scattering for low energies: scattering length, Ground state properties of deuteron, Simple consideration of deuteron using central potential (square well). [10]

4. **Nuclear Stability:** Nucleon emission, separation energy, Alpha decay and its energy spectrum, WKB Approximation, Beta decay and its energy spectrum (for example,137Cs), Need for neutrinos, Q-values, Gamma decay, Parity and Selection rules for gamma transitions (no derivation). [10]

5. **Accelerators and Detectors**: Cyclotron, Betatron, Van de Graaff and Linear accelerators, Synchrotrons, Geiger-Mueller detector, Scintillation detector. [5]

6. **Elementary Particles**: Properties of particles, classification in to leptons mesons and baryons, matter and antimatter, conservation laws (qualitative discussion), energy, momentum, angular momentum, charge, lepton number, Baryon number, Isospin, strangeness. [5]

7. **Classification of Particles:** Interactions, Quantum numbers, Quarks as the building blocks of hadrons, Colour degree of freedom. [7]

Text Books:

1. S. S. M. Wong: Introductory Nuclear Physics, 2nd Edition, John Wiley & Sons, New York, 1998
2. D.C. Tayal, Nuclear Physics, Himlaya Publishing House, 5th Ed, 1992
3. S.L.Kakani, C. Hemrajani, T.C. Bansal, Nuclear Physics, CBC, Jaipur, 2005
4. S. N. Ghosal: Nuclear Physics, **S**. Chand Limited, 1997

Reference Books:

1. B. L. Cohen: Concepts of Nuclear Physics, Tata McGraw-Hill New Delhi, 1971
2. H.A. Enge, Introduction to Nuclear physics, Addison Wesley, Publishing company, Inc. New York, 1 974
3. A. Bieser, prospective of Modern Physics, 22nd Reprint, Tata McGraw-

Hill, New Delhi, 2008

PH 362 Statistical Mechanics 4-0-0-4

1. **Random Walk Problem:** Probability distribution, Mean and Dispersion and Simple Numerical Problems. [8]

2. **Basic Concepts of Statistical Physics**: Entropy and thermodynamic probability, Ensemble theory, partition function, applications to classical ideal gas, Gibbs paradox; Statistical equivalence of three ensembles. [7]

3. **Classical Theory of Radiation:** Properties of Thermal Radiation, Blackbody Radiation, Stefan-Boltzmann Law and Wien's Displacement law. [6]

4. **Quantum Nature of Radiation:** Planck's Postulates. Planck's Law and Blackbody Radiation, Experimental Verification. Derivations of Wien's Distribution Law, Rayleigh-Jeans Law from Planck's Law. [8]

5. **Bose-Einstein's Condensation:** B-E Distribution law, Completely Degenerate Bose Gas, Bose-Einstein condensation, Properties of liquid He, Radiation as photon gas. [10]

6. **Fermi-Dirac Statistics:** F-D Distribution Law, ideal completely Degenerate Fermi Gas and Thermodynamic functions, Fermi Energy, Electron gas in a metal, Specific Heat of Metals. Maxwell-Boltzmann statistics as a classical limit, Comparison of the three statistics, White Dwarf Stars, Chandrasekhar Mass Limit. [13]

Text Books:

1. Frederick Reif: Fundamentals of Statistical and Thermal Physics, Waveland Press 2009
2. R. K. Patharia: Statistical Mechanics, Oxford: Butterworth, 1996
3. K. Huang: Statistical Mechanics, Wiley, 1987 .

Reference Books:

1. S. Lokanathan and R.S. Gambhir: Statistical and Thermal Physics: an introduction, P.H.I., 1991
2. F. Reif: Statistical Physics, Berkeley Physics Course Volume 5, Tata McGraw-Hill Company Ltd, 2008

PH 372 Basics of Nano-Science and Exotic Materials 3-0-0-3

1. **Physics for Nano-Science:** Electron Band Structure and Its [6]

Modification due to change in dimensionality. Phonon absorption in Nanomaterials.

2. **Basic Concepts of Nanomaterials:** Physical, Chemical and Bio-routes for Synthesis of Nanomaterials (basic idea), Metal Nanoparticles, Carbon Nanostructures, Electronic Properties of Nanomaterials, Nano photonics, Some applications of Nano Materials. [15]

3. **Introduction to Exotic Materials:** High Temperature Superconductors and Colossal Magnetoresistance Materials. Meissner Effect, Discovery of HTSC Materials, Structure and Properties, Elements of Proposed Mechanisms of high temperature superconductivity, Elementary Concepts of CMR Materials, Some Application of CMR materials. [14]

4. **Quasicrystals:** Basic definition of quasicrystal and Structure of Quasicrystals. [4]

Text Books:

1. C.P. Poole and F.J. Owens: Introduction to Nanotechnology, John Wiely & Sons, NJ, 2003

2 .C.M. Niemeyer and C.A. Mikin: Nanobiotechnology : Concepts, Applications and Perspectives, John Wiley & Sons, NJ, 2004

Reference Books:

1. Charles Kittel: Introduction to Solid State Physics, 5thEdition, John Wiley & Sons, NY, 1986.

PH 382 Solid State and Nuclear Laboratory 0-0-4-2

Assignments are based on the course PH 342, PH 352, etc

PH 392 Optoelectronics Laboratory 0-0-4-2

Combined Assignments are based on Lasers, Optical Fibers, PH 341, etc.

Mathematics

MS 111 Calculus 3-0-0-3

Curvature: Curvature, Radius of curvature for Cartesian curves, parametric curves, Polar curves and Pedal curves, Centre of curvature. Circle of curvature, Chord of curvature, Tests for concavity and convexity, Points of inflexion, Multiple points. [8]

Asymptotes and Curve Tracing:: Asymptotes in Cartesian and polar coordinates, Intersection of a curve with its asymptotes**, a**pplication of differential calculus in curve sketching in Cartesian and polar co-ordinates. [8]

Differentiation: Partial differentiation, Euler's theorem for homogeneous functions,Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers. [8]

Integral Calculus:*:* Double integrals in Cartesian and polar coordinates, Change of order of integration, Triple integral, Applications of double and triple integrals in finding areas and volumes. [8]

Vector Calculus: Gradient, Divergence and Curl. Greens, Stokes and Gauss Theorems (without proof) and problems based on these theorems. [7]

Text Books:

1. Thomas and Finney: Calculus and Analytic Geometry, Ninth Edition.
2. Shanti Narayna : A Text Book of Vector Calculus. S. Chand & Co., New Delhi.

Reference Books:

1. N. Saran and S.N. Nigam: Introduction to Vector Analysis, Pothishala Pvt. Ltd., Allahabad.
2. Differential and Integral Calculus: Shanti Narayan.
3. D. C. Gokhroo, Differential Calculus, Navkar Prakashan.
4. N. Piskunov: Differential and integral Calculus. Peace Publishers, Moscow.
5. Gorakh Prasad: Differential Calculus. Pothishasla Pvt. Ltd., Allahabad.
6. Gorakh Prasad: Integral Calculus. Pothishala Pvt. Ltd., Allahabad.

MS 121 Matrices and Theory of Equations 3-0-0-3

Matrix: Matrices, Symmetric, Skew symmetric, Hermitian and skew Hermitian matrices. Elementary Operations on matrices Rank of a matrices, Inverse of a matrix. Linear dependence and independence of rows and columns of matrices, Row rank and column rank of a matrix, [13]

Eigenvalues, eigenvectors and the characteristic equation of a matrix, Cayley Hamilton theorem and its use in finding the inverse of a matrix

Applications of Matrices: Applications of matrices to a system of linear (both homogeneous and non–homogeneous) equations. Theorems on consistency of a system of linear equations. Unitary and Orthogonal Matrices, Bilinear and Quadratic forms [9]

Theory of Equations: Relations between the roots and coefficients of general polynomial equation in one variable, Solutions of polynomial equations having conditions on roots. Common roots and multiple roots. Transformation of equations. [9]

Solution of equations: Nature of the roots of an equation, Descarte's rule of signs. Solutions of cubic equations (Cardon's method). Biquadratic equations and their solutions . [8]

Text Books:

1. Higher Algebra: A. Kurosh (Moscow Mir Publisher 1972).
2. Theory of Equations: (Lecture notes for inter University Leadership project in Mathematics by R.N. Gupta, Surjeet Singh and R.J. Hans.

Reference Books:

MS 112 Abstract Algebra 3-0-0-3

1. H.S. Hall and S.R. Knight: Higher Algebra, H.M. Publications 1994.
2. Shanti Narayan: A Text Books of Matrices.
   Chandrika Prasad: Text Book on Algebra and Theory of Equations. Pothishala Private Ltd., Allahabad.

Group: Algebraic structure**,** Definition of a group with examples and simple properties, Abelian group, semi group, Order of an element of a group, Cyclic groups, Coset decomposition. [11]

Subgroup and quotient Groups: Subgroups, Normal subgroups, Normalizer of an element, Quotient group [10]

Group Morphism: Homomorphism, kernel of homomorphism, Isomorphism and automorphism, Fundamental theorem of Homomorphism, Cayley's theorem. [10]

Permutations: Definition and examples of Permutation, group of permutations, Cyclic Permutation, Even and odd permutation. [8]

Text Books:

1. I.N.Herstein: Topics in Algebra, 2nd edition, Wiley Eastern Ltd. 1988.
2. P.B.Bhattacharya, S.K.Jain and S.R.Nagpaul: Basic Abstract Algebra, 2nd Edition, Cambridge University Press 1995.

Reference Books:

1. J.B.Fraleigh : A first course in Abstract Algebra, 3rd Edition Addison-Wesely/Narosa 1998..
2. Surjeet Singh and QuaziZameeruddin : Modern Algebra, Revised Edition,Vikas Publishing House, 1992.

   D. C. Gokhroo: Algebra, Navkar publication, Ajmer, Revised Edition , 2005.

MS 122 Differential Equations-I 3-0-0-3

Basic Concepts: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines.	[4]
First Order Differential Equations: Differential equation of first order and first degree, Homogeneous form and reducible to homogeneous form, Linear equations and equations reducible to linear form, Exact differential equations, Equations reducible to exact forms, First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations, Equation reducible to Clairaut's form.	[14]
Second order differential equations: Second order differential equations with variables coefficients, Homogeneous and exact forms, Change of dependent equations, change of independent variables, normal form, Method of variation of Parameters	[12]
Series Solution: Regular singular points, ordinary points, , series solution of second order linear differential equations with variable coefficients(Complementary Functions only)	[9]

Text Books:

1. D.A. Murray : Introductory Course in Differential Equations. Orient Longaman (India) . 1967
2. A.R.Forsyth : A Treatise on Differential Equations, Machmillan and Co. Ltd. London

Reference Books:

1. D. C. Gokhroo : Ordinary Differential equations, NavkarPrakashan.
2. S.L.Ross: Differential Equations, John Wiley & Sons
   B.Rai& D.P. Chaudhary : Ordinary Differential Equations; Narosa, Publishing House, Pvt. Ltd.

MS 211 Linear Algebra 3-0-0-3

Vector Space: Vector spaces, subspaces, Sum and Direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space. Finitely generated vector space, Existence theorem for basis of a finitely generated vactor space, Finite dimensional vector spaces, Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension [12]

Linear transformations: Linear transformations and linear forms on vactor spaces, Vactor space of all the linear transformations, Kernal and range of a linear transformation, Rank and Nullity, Matrix of a Linear Transformation, Change of basis. [10]

Dual Spaces: Dual Spaces, Dual Basis, Bidual Spaces, annihilator of subspaces of finite dimentionalvactor spaces. [9]

Inner Product Space: Inner produt space, norm of a vector, Orthogality. [8]

Text Books:

1. I.N. Herstein : Topics in Algebra, Wiley Eastern Ltd., New Delhi, 1975
2. P.B. Bhattacharya, S.K. Jain and S.R. Nagpal : Basic Abstract Algebra (2^{nd} edition).

Reference Books:

1. VivekSahai and VikasBist : Algebra, Narosa Publishing House.
2. I.S. Luther and I.B.S. Passi : Algebra, Vol.-II, Narosa Publishing House.

D. C. Gokhroo : Linear Algebra, NavkarPrakashan.

MS 221 Differential Equations-II 3-1-0-4

Partial Differential equations: Formation, order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, singular solution, General solution, Solution of Lagrange's linear equations, Charpit's general method of solution. [13]

Second and higher Order PDE: Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant co-efficients, Partial differential equation with variable co-efficients reducible to equations with constant coefficients, their complimentary functions and particular Integrals, Equations reducible to linear equations with constant co-efficients. [14]

Solution of Second order PDE: Classification of linear partial differential equations of second order, Hyperbolic, parabolic and elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method. [12]

Text Books:

1. Ian N. Sneddon : Elements of Partial Differential Equations, McGraw-Hill Book Company, 1988.
2. S.B. Rao and H.R. Anuradha : Differential Equations, University Press, 1996.

Reference Books:

1. W.T.H. Piaggio : Elementary Treatise on Differential Equations and their applications, CBS Publishers N.Delhi,1985.
2. D.A.Murray: Introductory Course on Differential Equations, Orient Longman, (India), 1967
3. Erwin Kreyszing : Advanced Engineering Mathematics, John Wiley & Sons, Inc. New York, 1999
4. Frank Ayres : Theory and Problems of Differential Equations, McGraw Hill Book Company, 1972
   J.N. Sharma &Kehar Singh : Partial Differential Equations

MS 212 Numeric Analysis 3-1-0-4

Interpolation: Interpolation with equal intervals: Newton's forward and Newton's backward interpolation formulae. Newton's divided difference, Lagrange's Interpolation formulae. [10]

Central Differences: Gauss forward and Gauss's backward interpolation [8]

formulae, Sterling, Bessel Formula.

Iterative Methods: Newton Raphson Method, Successive Bi-Section, RegulaFalsi, Successive Approximation Method. [11]

Numerical Methods: Newton-Cote's Quadrature formula, Trapezoidal rule, Simpson's one-third and three-eighth rule, Picard method, Euler method, Runge-Kutta Methods. [10]

Text Books:

1. Babu Ram: Numerical Methods, Pearson Publication.
2. R.S. Gupta, Elements of Numerical Analysis, Macmillan's India 2010.

Reference Books:

1. M.K. Jain, S.R.K.Iyengar, R.K. Jain : Numerical Method, Problems and Solutions, NewAge International (P) Ltd., 1996
2. S.S.Sastry: Introductory Methods of Numerical Analysis, 3rd edition(2000), Prentice Hall of India Pvt. Ltd., New Delhi.5. C.E. Froberg : Introduction to Numerical Analysis (2nd Edition).
   S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

MS 222 Real Analysis 3-0-0-3

Neighborhood and Limit Points: Boundedness of the set of real numbers, least upper bound, greatest lower bound of a set, neighborhoods, interior points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weierstrass theorem. [10]

Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence. [9]

Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, D-Alembert's ratio test, Cauchy's general principle of Convergence of series, Leibnitz test, Absolute and conditional convergence. [12]

Riemann integral: Lower and upper Riemann integrals, Riemann Integrability, Mean value theorem of integral Calculus, Fundamental theorem of Integral Calculus. [8]

Text Books:

1. R.R. Goldberg : Real Analysis, Oxford & I.B.H. Publishing Co., New Delhi, 1970
2. S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

Reference Books:

1. Shanti Narayan : A Course in Mathematical Analysis, S.Chand and company, New Delhi.
2. D. C. Gokhroo, Real analysis, NavkarPrakashan.
3. T.M. Apostol: Mathematical Analysis, Narosa Publishing House, New Delhi, 1985
   Earl D. Rainville : Infinite Series, The Macmillan Co., New York

Chemistry

CH 181 Physical and Inorganic Chemistry-I 2-0-0-2

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective **[5]**

nuclear charge.

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule-Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 4thEdition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I 2-0-0-2

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer compounds and field effects. **[5]**

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogeniccentre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogeniccentresdiastereomers, threo and erythrodiastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation,Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivityin alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes- mechanisms involved in hydrogenation, electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration- reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I 3-0-0-1.5

Experiments based on the contents of CH 181 and CH 191.

CH 182 Physical and Inorganic Chemistry-II 2-0-0-2

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphurtetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D. Tuli&ArunBahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.

2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand &Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand& Co .Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 192 Organic Chemistry-II 2-0-0-2

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed. 2007, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II 3-0-0-1.5

Experiments based on the contents of CH 182 and CH 192.

CH 291 Physical Chemistry-I 2-0-0-2

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU&dHfor the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A &G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it.

Concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. Expression for the rate constant based on equilibrium constant and thermodynamic aspects. **[11]**

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I 2-0-0-2

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series: General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. **[7]**

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.

3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand &Co.Ltd.

CH 223 Organic Chemistry-III 2-0-0-2

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and **[6]**

hypochromic shifts, UV spectra of conjugated enes and enones.

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, LedererManasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel'smethod. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 20th Ed. 2008, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III 3-0-0-1.5

Experiments based on the contents of CH 291, CH 213 and CH 223.

CH 272 Physical Chemistry-II 2-0-0-2

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibriaof one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point ($NaCl-H_2O$), ($FeCl_3-H_2O$) and ($CuSO_4-H_2O$) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-$HCl-H_2O$ and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications. **[10]**

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorfand moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometrictitrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using hydrogen quinhydrone and glass electrodes. **[12]**

Chemical Equilibrium: Equilibrium constant and free energy.

Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, Clausius-Clapeyron equation and their applications. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2^{nd} revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II 2-0-0-2

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand &Co.Ltd.

CH 292 Organic Chemistry-IV 2-0-0-2

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagelcondensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions

of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic). **[6]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV 3-0-0-1.5

Experiment based on the contents of CH 272, CH 282 and CH 292.

Computer Science

CA 121 Programming Concepts using C Language 3-0-0-3

Development of Algorithms and Flowcharts: Importance, Symbols and Structure. [5]

Structure: Basic Structure of C Program, Constant, Variable, Data Types, Data Declaration, Operations (Arithmetic, Relational, Logical), Increment and Decrement Operators, Assignment Operator, Precedence of Arithmetic Operators, Operator Expression, Type Conversions in Expressions, Assignment Statements. [8]

Control Structure: Input and Output using getchar and putchar, Printf, Scanf Functions, Condition Statements, Simple if- else, Switch, Concept of Loop (While, For, Do-While), Break and Continue. [8]

Array: One Dimensional Array, Iterative Programs, 2-D Arrays, Matrix Operations. [5]

Concept of Sub Programming: Functions, External Variable Scope Rules, Header Files, Static Variables, Parameter Passing (Call By Values And Call By Reference), Recursion, C Preprocessor, Pointers. [7]

Advanced C concepts: Structure, Union, Argument Passing Using Pointer, Array of Pointers. [6]

CA 151 C Language Laboratory 0-0-4-2

Assignments are based on the Course CA 121 Programming Concepts Using C Language.

CA 122 Data Structure Through C 3-0-0-3

Introduction: Concept of Data Structure, Types of Data Structure. [3]

Array: Representation of Single and Multidimensional Array. [2]

Stack and Queue: Introduction and Primitive Operations on Stack: Stack Application; Infix, Postfix, Prefix Expressions, Evaluation of Postfix Expression, Conversion from Infix to Postfix (Algorithms only), Introduction and Primitive Operations on Queues. [9]

Sorting Techniques: Insertion Sort, Selection Sort, Merge Sort and Quick Sort. [7]

Searching Techniques: Linear Search, Binary Search. [6]

List: Introduction to Linked List, Sequential and Link Lists Operation such as Traversal, Insertion, Deletion, Searching. [8]

Tree: Introduction and Terminology, Traversal of Binary Trees, Recursive Algorithms for Tree Operation (Concept). [4]

Text Books:

1. Schaum Series, “Data Structures”,TMH, New Delhi
2. Langsam , Augenstein, Tannenbaum, “Data Structure Using C and

C++", PHI,

Reference Books:

1. Horowithz and Sahani, "Fundamentals of Data Structure", Galgotia Book Source Pvt. Ltd.
2. Kanitker Y., "Let us C", BPB Publication New Delhi
3. Balagurusamy E , "Programming in C", TMH, New Delhi
4. Schaum Series, "Programming in C", TMH, New Delhi

CA 112 Operating System 3-0-0-3

Introduction: Various Categories of Software, Operating System and its functions, Types of Operating Systems, Structure of Operating System. (Case study of Unix, DOS). [4]

Process Management: Process Concept, ProcessStates, Process Control Block, Interprocess Communication, and Scheduling Algorithms, Performance Evaluation. [7]

DeadLock: Deadlock Characterization, Prevention, Avoidance, Detection of Deadlock, SafeState, Banker's Algorithm. [7]

Memory Management: Swapping, Memory Allocation Schemes, Paging, Segmentation, Virtual Memory Concept, Page Replacement Algorithms. [6]

File Management: Directories, File System Implementation, Allocation Methods, Free Space Management. [6]

Device Management: Disk Structure, Disk Scheduling, Disk Management Control of Various Devices, Device Drivers, Interrupt Driven and Poll Driven Data Transfer. [5]

Security and Protection Mechanism: Computer Security classification, Authentication, System threats, Goals of Protection, Access Matrix. [4]

Text Books:

1. Silbersachatz and Galvin, "Operating System Concepts", Pearson Education.
2. Tannenbaum, "Operating Systems", PHI, New Delhi

Reference Books:

1. William Stalings, "Operating Systems", New Delhi
2. Ritchie, "Operating System", BPB Publication , New Delhi
3. Dhamdhere D. M. "System Programming and Operating System", TMH New Delhi
4. Achyut S Godbole, "Operating Systems", TMH, New Delh

CA 162 Data Structure Laboratory 0-0-4-2

Assignments are based on the Course CA 122 Data Structure through C.

CA 241 Object Oriented Programming through C++ 3-0-0-3

Introduction: Structured Programming vs. Object Oriented Programming, Basic Concepts (Encapsulation, Information Hiding, Inheritance, Polymorphism), Difference Between C and C++. [4]

Basics of C++: Token, Keyword, Identifiers, Basic Data Type, User Define Data Type, Type Compatibility, Declaration of Variables, Dynamic Initialization of Variables, Reference Variables, Scope Resolution Operators, Member Referencing Operators, Operator Precedence, Control Structures. [8]

Function: Definition, Function Prototype, Call By Reference, inline Function, Function Overloading. [8]

Classes and Objects: Classes, Defining Member Function, Private, Public and Protected Member Elements and Function, Static Data Member, Static Member Function, Array Object, Constructors, Destructors, this Pointer, Operator Overloading, Comparison Between Structures and Classes, Copy Constructor, Dynamic Constructor, Friend Function, Friend Classes. [8]

Inheritance: Introduction, Derived Classes, Types of Inheritance (Single Inheritance, Multiple, Hierarchical, Hybrid), Virtual Base Classes, Abstract Classes. [6]

Virtual Functions: Introduction to Virtual Function, Virtual Function in Derived Classes, Overview of Exception Handling. [5]

Text Books:

1. KanitkerYashwant, “Let Us C++”, BPB Publication, New Delhi
2. GopalVenu, Rajkumar , Ravishanker, “Mastering C++” , TMH, New Delhi

Reference Books:

1. HerbertsSchildt, “C++ The Complete Refernce”, TMH, New Delhi.
2. Lafore R, “Object Oriented Programming Using C++”, GalgotiaPulications, New Delhi
3. Parasons D., “Object Oriented Programming With C++”,BPB, New Delhi
4. LaelorSteaven C., “The Art of Programming Computer With C++”, Vikas Publication.
5. Dietel&Dietal, “Introduction to C++”.

CA 231 Management Information System 3-0-0-3

MIS and Concept of Management: Elements, Characteristics, Need, Objectives, Importance, and Limitations, Relationship between MIS and Computer and Role of MIS in the Functions of Management. [9]

Information Concept: Classification of Information, Levels of Information, Techniques of Data Collection, Quality aspect of Information, Value of Information, Relation between MIS and Information. [6]

Decision Making: Decision Making Concepts, Rationality in Decision Making, Decision Support System, MIS as a Technique for Programmed Decisions, Model of Decision Making, Methods, MIS and Role of Decision Making. [6]

Manager and Computers: Database Concept, Database Models, Database Design, RDBMS, MIS and RDBMS, Introduction, Topology, LAN, MAN, WAN and Data Communication, Introduction to ERP. [5]

Typical Information Systems: MIS for Marketing, Financial, Production Management, Human Resource Management Information System. [6]

Development of MIS: Strategic and Project Planning for MIS, Conceptual System Design, Detailed Design, Implementation, Evaluation and Maintenance of the MIS. [7]

Text Books:

1. Murdick R G, Ross J E, Clagget J R, "Information Systems for Modern Management", PHI, New Delhi
2. Jawadkar, "Management Information System", TMH, New Delhi

Reference Books:

1. Sadagopan, "Management Information System"PHI, New Delhi
2. Parker, Case, Thomas, "Management Information System: Strategies and Action", TMH, New Delhi.

CA 271 Object Oriented Programming Laboratory 0-0-4-2

Assignments are based on the Course CA 241 Object Oriented Programming through C++.

CA 132 System Analysis and Design 3-0-0-3

System: Concept, Types and Characteristics, Elements, Computer based Information Systems, Candidate System, Role of System Analyst. [5]

System Development Life Cycle: Recognition of Need, Feasibility Study, Design, Implementation and Maintenance, System Planning and Alternatives. [7]

Feasibility and Proposal: User and Management Involvement, Alternative Design Consideration, System Feasibility, The System Proposal. [5]

System Analysis: Effective Communication in System Analysis, Tools of System Analysis, Problem Definition, Classification of Data Collection and Analysis. [9]

System Cost Determination: Types of Costs/Benefits, System Cost and System Benefits and Data Processing Costs. [8]

Implementation: System Testing, Quality Assurance, Implementation and Software Maintenance. [5]

Text Books:

1. Awad Elias M, "System Analysis and Design", TMH, New Delhi
2. Hawayszkiewyez Igor, "Introduction To System Analysis and Design" PHI, New Delhi

Reference Books:

1. Mark Lejk& David Deeks "An Introduction To System Analysis Techniques" PHI, New Delhi
2. Jeffrey L Whitten & Lonnie, D Bentey, "System Analysis and Design Methods", TMH. New Delhi
3. Manish soni&SanjeevPatwa "System Analysis and Design" UBH Jaipur

CA 272 Computational Numerical Analysis Laboratory 0-0-4-2

Assignments are based on the Course Numerical Analysis.

Mody University of Science & Technology

M.Sc. Food and Nutrition
Session 2016-2017

Curriculum Structure

MODY UNIVERSITY
OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

M.Sc-Food & Nutrition
Two Year Programme
Academic Year (2016-17) and onwards

Intake: 10

The specialists in F& N play a vital role in promoting the quality of life of individuals and communities, which contributes significantly to the economic and overall development of the nation. This achieved through a blend of academics, research training and extension as well as industrial applications. The post graduate programme in this discipline has been designed to provide the students intensive and extensive theoretical and experimental learning. The programme allows flexibility in the choice of thrust areas, which students can select, based on their career goals. It is envisaged that the current scenario at the regional and national level require trained professional in areas such as Public Nutrition, Dietetics and clinical Nutrition, Institutional Food administration as well as food science and quality control. Alternatively a broad-based programme covering several varied aspects in this discipline is also possible.

Objectives

The curriculum integrating several courses to provide professionally competent manpower for:

1. Academic and research institutions.
2. Hospital, food service intuitions and industry
3. Managerial roles in agencies and intuitions-both government and NGO sector
4. Planning & monitoring health programme
5. Ensuring food safety and quality for consumers
6. Entrepreneurial ventures
7. Advocacy and consultancy.

Careers

Nutritionists and dieticians could find employment in hospitals, health and recreation clubs, canteens, nursing care facilities; teach the science of nutrition and dietetics in colleges and universities, catering departments of star hotels, research labs of food manufacturers, in health departments of government etc. Moreover they could find openings in the mass media where top priority is given to disseminating vital information on healthy living. The main fields in which a dietician or nutritionists can work is in Food service field, Institutional Catering, Health Care field, Research & Development and Social Welfare. Food service field include food Catering service, Restaurants etc where professionals can do menu planning, monitoring the food preparation etc. Institutional Catering is another field where Nutrition and dietetics professionals are needed to plan, supervise and prepare nutritious and well-balanced meals for schools, colleges, factories or office cafeterias etc. Their work may also include the estimation and purchase of food supplies and equipment; receiving, checking and taking inventories of provisions etc. In Health Care field, people suffering from certain diseases such as diabetics, heart diseases, obesity etc, need to take extra care of their eating habits and the kind of food they eat. Research and Development involves conducting research on various food items to ensure their quality as well as studying the effects of various types of diet on the body chemistry in labs.

Eligibility

Pass with 50% aggregate marks in Bachelor's degree (Sciences, Medical and Applied Medical Sciences, Health and Allied health/Agriculture/ Food Sciences/ Bio-Sciences) or equivalent.

Evaluation Procedure:

All the Rules and Regulations as provided in the Ordinances and Regulations of the Post graduate Programmes of MITS shall be followed.

Resource Requirement:

One or two faculty of F&N specialist (depends on intake)
Consumables: Rs. 5 Lakhs per year

M.Sc.-Food & Nutrition

$Evaluation of proficiency will be based on the participation in co-curricular/extra-curricular activities.

#Student will perform dissertation work in a recognized Organization for a period of 4 months and submit two copies of dissertation to the department latest by first week of May. Dissertation and presentation will carry 50% weightage each.

(II year curricular and structure and syllabus got passed in AC 30, Syllabus in AC30 minutes)

FN 511 BASIC PRINCIPLES OF AYURVEDIC DIET 1-0-0-1

History of Ahara Nutrition, Vedic and Madhyayugin diet and its processing, Basic Principle: Ayurveda and Aharashastra, Ayurvedic components, Ritucharya (Seasonal regimen) [4]

Ayurvedic Principles: Lokpurushasamya (Doctrine of Macrocosm and Microcosm), Karyakarana Siddhanta (Principles of Caouse and Effect), Samanya-Vishesh Siddhanta (Principles of Similarity and Dissimilarity), **Panchamahabhoota Siddhanta** (Theory of Five Elements), Swabhavoparmvada Siddhanta (Theory of Healing)- in relation with diet and its importance [5]

Fundamentals of Dosha-Dhatu-Mala: Doshavigyana Dhatuvigyana - Tissue/ Cell metabolism, Malavigyana – Excretary, Vigyana Strotovidyana – Systematic circulation, Dhatusharta - Cell replenishing, Prakriti – Constitution, Dosha-Dhatu-Mala vigyana – The importance of diet in physiological process. [4]

FN 521 BASICS OF HUMAN PHYSIOLOGY 3-0-0-3

Cell structure and function

Levels of cellular organisation and fucntion-organelles, tissues, organs and systems-Brief review. Cell membrane, transport across cell membrane and intercellular communication. Regulation of cell multiplication. [4]

Nervous system [4]

Review of structure and function of neuron, conduction of nerve impulse, synapses, role of neurotransmitters.

Organisation of central nervous system, structure and function of brain

and spinal cord, afferent and efferent nerves, Blood brain barrier, CSF. Hypothalamus and its role in various body function-obesity, sleep, memory.

Endocrine system [4]

Endocrine glands-structure, function, role of hormones, regulation of hormonal secertion. The neuroendcrime axis.Disorders of endocrine glands. Emphasis on physiology of diabetes and stress hormones.

Sense organs [3]

Review of structure and function. Role of skin, eye, ear, nose and tongue in preception of stimuli.

Digestive System [4]

Review of structure and function. Secretory, Digestive and absorptive functions. Role of liver, pancreas and gall bladder and their dysfunction. Motility and hormones of GIT

Respiratory system [4]

Review of structure and function. Role of lings in the exchange of gases. Trasport of oxygen and CO_2. Role of haemoglobin and buffer sstems. Cardio-respiratory response to excercise and physiological effects of training.

The circulatroy system [3]

Structure and function of heat and blood vessel. Regulation of cardic output and blood pressure, heart failure, hypertension.

Blood formation, compsotion, blood clotting and haemostasis [3]

Formation and function of plasma proteins. Erythropoesis. Blood groups and histocompatibility. Blood indices. Use of blood for investigation and diagnosis of specific disorders. Anemia.

The excretory system [2]

Structure and function of nephron. Urine formation. Role of kidney in maintaining ph of blood. Water, electrolytes and acid base balance, diuretics

The Musculo-skeletal system [2]

Structure and function of bone, cartilage and connective tissue. Disorders of the skeletal system. Types of muscles, structure and function.

Immune System [3]

Cell mediated and humoral immunity. Activation of WBC and production of anitbodies. Role in inflammation and defence.

Reproduction [3]

Menstrual cycle, spermatogenesis, physiological changes in pregnancy

Text Book:

1. Jain A.K. (2010) Textbook of Physiology, Vol. I and II, Avichal publishing co., New Delhi.
2.

References:

FN 531 HUMAN NUTRITION 3-0-0-3

Energy: Energy content of foods. Physiological fuel value-review. Measurment of energy expenditure: BMR, RMR, Thermic effects of feeding and physical activity, methods of mesaurment. Estimating energy requirments of individuals and groups. Regulation of energy metabolism: control of food intake, digetio, absorption and body weight. [4]

Carbohydrates: Types, calssification, digestion and transprt-review, dietry fibre, fructo-oligosaccharides, resistant strach-chemical copmposition and physilogical effects. Glycemic index of food. Sweeteners-nutritive and non-nutritive. [5]

Proteins: Classification, digestion, absorption and transport – review. Metabolism of proteins: Role of muscle, liver, and gastro intestinal tract. Protein quality, metods of evaluating protein quality. Protein and amino acid requirements. Therapeutic applications of specific amino acids: Branched chain, glutamine arginine, homocysteine, cysteine, taurine. [4]

Lipids: Classification, digetion, absorption, transport-review. Functions of EFA. Role of n-3, n-6 fatty acids in health and disease. Requirements of total fat and fatty acids. Trans fatty acids. Prostaglandins. [6]

Water: Regulation of intra and extra cellular volume. Osmolality, water balance and its regulation. [7]

Minerals: (Note: For each nutrient sources, bioavailability, metabolism, function, requirements, RDI/ESDDI, deficiency and toxicity, interactions with other nutrients are to be discussed).

Macro minerals: calcium, phosphorus, magnesium, sodium, potassium and chloride.

Micro minerals: Iron, copper, zinc, manganese, iodine, fluoride.

Trace minerals: selenium, cobalt, chromium, vanadium, silicon, boron, nickel.

Vitamins: Historical background, structure, food sources, absorption and transport, metabolism, biochemical function, assrssment of status. Interactions with other nutrients. Physiological, pharmacological and therapeutic effects, toxicity and deficiency with respect to the following: [7]

a) *Fat soluble:* Vitamins A,D, E & K.
b) *Water soluble:* Thiamine, riboflavin, niacin, biotin, pyridoxine, folic acid, pantothenic acid, ascorbic acid, cyanocobalamin, choline, inositol.

Non-nutritive food components with potential health effects: Polyphenols, tannins, phytate, phytoestrogens, cyanogenic compounds, lectins and saponins. [6]

Nutritional regulation of gene expression.

Nutrition management in special conditions: Space travel, high altitudes, low temperatures, submarines.

FN 541 BASIC RESEARCH METHODOLOGY 2-0-0-2

Research Methodology- Meaning, objectives and Significance of research. Types of research, research approaches and scientific methods. Research process and criteria of good research [2]

Definition and identification of a research problem- Selection of research problem, Justification, development of hypothesis, basic assumptions. Limitations and delimitations of the problem, Methods of data collection [4]

Research design- Meaning and needs, Different research designs- exploratory, descriptive and diagnostic (epidemiology and clinical trials). Pilot studies. Qualitative vs quantitative research [5]

Sampling design- Steps in sampling design, Criteria for selecting a sampling procedure, Different types of sampling techniques- Merits and demerits of sampling [5]

Basic principles and regulations in humans and animal research. [3]

Report writing – Significance of report writing, Different steps in writing report, Types of reports, Mechanics of writing reports and precautions to be taken while writing research reports [7]

BC 522 NUTRITIONAL BIOCHEMISTRY 3-0-0-3

Basic concepts – Function of nutrients. Measurement of the fuel values of foods. Direct and indirect calorimetry. Basal metabolic rate: factors affecting BMR, measurement and calculation of BMR. Measurement of energy requirements. Specific dynamic action of proteins. [5]

Elements of nutrition – Dietary requirement of carbohydrates, lipids and proteins. Biological value of proteins. Concept of protein quality. Protein sparing action of carbohydrates and fats. Essential amino acids, essential fatty acids and their physiological functions. [10]

Minerals – Nutritional significance of dietary calcium, phosphorus, magnesium, iron, iodine, zinc and copper. [5]

Vitamins – Dietary sources, biochemical functions, requirements and deficiency diseases associated with vitamin B complex, C and A, D, E & K vitamins. [5]

Malnutrition – Prevention of malnutrition, improvement of diets. Recommended dietary allowances, nutritive value of common foods. Protein-calorie malnutrition. Requirement of proteins and calories under different physiological states- infancy, childhood, adolescence, pregnancy, lactation and ageing. [10]

Starvation – Techniques for the study of starvation. Protein metabolism in prolonged fasting. [2]

Obesity – Definition, Genetic and environmental factors leading to obesity [2]

FN 512 FOOD PACKAGING AND QUALITY CONTROL 3-0-0-3

[6]

Packaging- Concepts, Definition, Significance, Classification.
Packaging-development, Unit/Retail.
Packaging of food(s)- fresh and processed, general characteristics & food preservation.
Primary Packaging Media- Properties and applications

a) Paper boards, metals, plastics, wood & plywood, glass, flexible etc.
b) Labels, caps & closures & wads, adhesives, inks & lacquers, cushioning materials, reinforcements etc.

Testing & evaluation of packing media – retail packs (including shelf life evaluation) and transport packages. [9]
Packaging systems and methods for food products- vacuum packaging, gas flush. Packaging, CAP & MAP, Aseptic & retort packing, Bag-in Box etc.
Food products- General classification and packing types, varieties and trends.
Storage, handling and distribution of packages (foods) – including palletisation & Containerizetion.
Food marketing and role of packaging.
Packaging Aesthetic & graphic design.
.
Packaging – Laws & Regulations - FDA, PFA, Packaging commodity Rules, Weight & Measures Act etc [3]
Introduction to quality assurance and food safety assurance. Current concepts of quality control.
Quality assurance programme: Quality plan, documentation of records, product standards Product and purchase specifications, process control and HACCP hygiene and housekeeping, corrective action, quality and programme and total quality process.
Quality costs: Measurement and analysis.

[10]

Product Evaluation: [11]

- Sampling for product evaluation and line control.

- Statistical quality and process control.
- Specifications and food standards. International, national-Mandatory, Voluntary.
- Sample Preparation.
- Reporting results and reliability of analysis.
- Tests for specific raw food ingeredients and processed. Foods including additives:
  a) Proximate principles
  b) Nurient analysis
  c) Quality parameters and test of adulterants.

Consumer protection.

FN 522 WOMEN NUTRITION AND HEALTH 3-0-0-3

Role of women in National Development.

Women in Family and Community

- Demographic Changes, menarche, marrige, fertility, morbidity, mortality, life-expactancy, sec ratio, aging and wodowhood, female-headed families.

Women and Work

- Environmental stress, production activities, nutrition, health and gender, living conditions, occupational health, health facilities.

Women's nutritional requirements and food needs.

Women and Society

- Women's role, their resoures and contribution to family and community and effect on nutritional status.
- Effect of urbanisation on women.
- Impact of economic policies, industrializzation, and globlization on women.

Women and Health

- Health facilities
- Disease patterns and Reproductive health
- Gender and health
- Health seeking behaviour
- Women- pregnancy and lactation

Safe motherhood
Care of at-risk mothers
Family planning
Women and aging- Special concerns in developed and developing societies: Menopause, osteoporosis, chronic degenerative diseases, neurological problems.
Women and AIDS
Women and Nutrition

- Situation of women in global, national and local context. Improving the nutritional and health status. Intervantions throughout the life cycle.

Policies and Legislations

- CEDAW (Convention on elimination of all forms of Discrimination Against Women), Women's Right to Life and Health (WRLH).

Empowerment of Women-Role of Education and various national schemes

MB 514 FOOD TECHNOLOGY 3-0-0-3

Food and Fermentation Technology: Origin, Scope and development of fermented food products, [10]
Microbial starters for food fermentations.
Fermented Foods- Bread, Vinegar, Beer, Wine, polysaccharides, low calorie sweeteners, Vitamins, Fermented vegetables, Nutraceuticals, Prebiotic and Probiotic foods, Genetically modified foods, Nano foods.
Fermented dairy products- Milk and Curd, Yoghurt, Buttermilk, Cheese, Oriental fermented foods,
Single cell protein, Mushroom cultivation

Spoilage and Preservation: [10]
Factors affecting microbial growth in foods- extrinsic and intrinsic,
Contamination of foods (cereals, Vegetables and Fruits, Meat and Meat products and Fish, Milk and milk products, canned foods) and their involvement in disease outbreaks,
Spoilage detection and characterization.
Methods of food preservation (thermal processing, refrigeration, dehydration, irradiation, microfiltration, chemical preservatives).

Food Borne Infections and Intoxications: Microbial toxins in food- Chemical Structure and Types, Food borne illnesses caused by- *Brucella, Clostridium, Escherichia, Salmonella, Shigella, Staphylococcus, Vibrio and Yersinia*, Diseases caused by Fungi, Emerging pathogens, *E.coli* O157:H7, *Listeria monocytogens*, *Campylobacter jejuni, Helicobacter pylori* [10]

Packaging and Quality Control: [9]
Need and method of packaging (glass, metal, plastics, moulded pulp and aluminium foil), Controlled atmosphere packaging, Tetra pack, Nano capsule, Nano membrane.
Detection of food pathogens- Culture methods, Rapid detection using PCR
Food standards- Standards for Milk, Poultry, Food control agencies- BIS, Codex commission,
Food laws and current concepts in food safety (HACCP, quantitative risk assessment and prediction based systems)
Disposal and treatment of food industry waste

FN 532 NUTRITION FOR HEALTH AND FITNESS 3-0-0-3

Definition, components and assessment criteria of age: Specific fitness and health status. [8]

Holisitic approache to the management of fitness and health: Enrgy input and output. Diet and exercise. Effect of specific nutrient on work eperformance and physical fitness. Nutrition, exercise, physical fitness and health inter-relationship

Review of fifferent energy system for endurance and power activity: Fuel and nutrients to support physical activity. Shifts in carbohydrates and fat metabolism. Mobilization of fat stores during exercise. [6]

Nutrition in sports: Sports specific requirments. Dient manipulation. Pre-game and post game meals. Assessment of different nutragenic aids and commercial supplements. Diets for persons with high enrgy requirments, stress, fractures and injury.

Water and electrolytesbalances: Losses and their replenishment during excerse and sports events, effects of dehydration, sports drinks. [7]

Significance of physical fitness and nutrition in the prevention and management of weight control, obesity, diabetes mellitus, CV disorders, bone health and cancer**.**

Nutrition and exercise regimes for management of obesity: Critical review of various dietary regimes for weight and fat reduction. Prevention of weight cycling. [8]

Definign nutriitonal goals.guidelines approporiate to health, fitness and prevention and management of the above chronic degenerative disorders.

Nutrition and exercise regimes for pre-post-natal fitness: Alternative systmes for health and fitness lile ayurveda, yoga, meditation, vegetarianism and traditional diets. [10]

FN 542 NEUTRACEUTICALS AND FUNCTIONAL FOODS 3-0-0-3

Nutraceuticals: Use of neutraceuticals in traditional health sciences. Their role in preventing /controlling diseases. [4]

Definition, Classification, food and non food sources, mechanism of action. Role of omega-3,fatty acids, carotenoids, dietary fiber, phytoestrogens; glucosinates; organosulphur compounds as neutraceuticals. [8]

Prebiotics and probiotics: Usefulness of probiotics and prebiotics in gastro intestinal health and other benefits. Beneficiary microbes; prebiotic ingredients in foods; types of prebiotics and their effects on gut microbes. [9]

Functional foods Definition, development of functional foods, benefits and sources of functional foods in Indian diet. Effects of processing conditions and storage; Development of biomarkers to indicate efficacy of functional ingredients; Research frontiers in functional foods. [8]

Development of nutraceutical and functional foods – Standards for health claims. Process of developing - preclinical & clinical studies, Marketing and Regulatory issues, Regulatory bodies in India. [10]

FN 562 FOOD AND NUTRITION LABORATORY -I 0-0-4-2

Practical exercises related to BC 522, MB 514 and FN 542

FN 641 FOOD SERVICE MANAGEMENT 3-0-0-3

UNIT-I [9]

Food service Institutions- Definition and importance, various types of food service institutions like hospitals, school meals, hostels, industrial canteens, commercial hotel/ canteens etc. Institutions catering to different types of handicapped personnel.

UNIT-II [5]

Theories about approaches to food service management -
Developing objectives and goals- Definition and importance, types of goals Policies, procedures and rules.

UNIT-III [5]

Principles and procedures of management- Managerial roles and responsibilities, the manager and leadership quality. Tools of management – organization chart, types, structure, function; work improvement techniques

UNIT-IV [6]

Personnel management – recruitment, training, placement, promotion, personnel records, work appraisals

UNIT-V [5]

Material management – Principles of quantity food purchase- selection, buying and accounting of different foods. Inventory management- assessing requirements, receiving and release of stocks. Record maintenance.
Quantity food preparation and service- Factors in menu planning for large groups, systems for maintaining quality in food preparation and service. Kitchen control and maintenance of kitchen records

UNIT-VI [4]

Financial management – Budgeting, costing and cost control, accounting

UNIT-VII [5]

Marketing and advertising, Changing food trends and marketing-influencing factors: Life style changes: economic, socio-cultural, psychological influences and marketing influences, Compatibilities/Challenges in Food Storage and its commercialization, Means of Marketing, National and International measurements

FN 611 PUBLIC HEALTH AND NUTRITION **3-1-0-4**

UNIT-I [9]

Concept of public nutrition - Relationship between health and nutrition, role of public nutritionists in the health care delivery system. Population dynamics- Demographic transition, population structure, population policy, fertility behaviour, nutrition and quality of life interrelationship. Nutritional status -methods for assessing nutritional status – Indirect methods – demography, population dynamics and vital events and their health implications, indicators of health and nutrition (IMR, TMR, MMR) - Direct – anthropometry, biochemical, clinical, dietary and functional methods of assessments.

UNIT-II [4]

Nutrition during life span – pregnancy, lactation, infancy, preschool age, school going and adolescents, adults and old age.

UNIT-III [9]

Assessment and surveillance of nutritional status in emergency affected populations- Scope for malnutrition assessment, indicators and simple screening methods. Organization for nutritional surveillance. Nutritional relief and rehabilitation- Assessment of food needs, food distribution strategy, targeting food aid, mass and supplementary feeding, special foods/rations for nutritional relief, organization for mass feeding/food distribution, transportation and storage, feeding centers, sanitation and hygiene and public nutrition approach to tackle nutritional and health problems in emergencies, ethical considerations.

UNIT-IV [8]

Approaches and strategies for improving nutritional status and health - Programmatic options – their advantages and demerits. Intervention Programmes – Health based interventions, Food – based interventions including fortification and genetic improvement of foods, supplementary feeding. Malnutrition and Health economics - Its impact on productivity and national development. Cost management.

UNIT-V [9]

Information Education Communication approaches to improve health and nutrition: Concepts – Scope- Elements- Models of communication - Communication Process - Approaches and Barriers to communication, Communication for Extension Education and Development - Introduction to IEC Aims and Objectives, Importance of IEC, relevance to programmes - Nutrition education for behaviour change – Rationale, Planning Execution and evaluation of Department of Food Science and Technology.

FN 621 INSTITUTIONAL FOOD ADMINISTRATION 3-1-0-4

UNIT-I [3]

Review of different types of institutional food service operations, canteens, hotels, restaurants and hospitals.

UNIT-II [7]

Meal planning, Food preparation and Service: Basic factors in successful institutional meal planning, considerations with regard to religion, region, availability of food and season, food habits, personnel, equipment, physical plant and financial resources. Procedures involved in constructions of recipes in large scale cooking. Processes of food preparation in large quantities. Type of food service in different institutions: Formal and informal food service.

UNIT-III [4]

Management: Definition, functions, tools of management-organization chart, job description, job specification, work sheet. Work improvement and work simplification.

UNIT-IV [8]

Personnel Management: Personnel and leadership qualifications for food service administrator, responsibilities and importance of good human relationship in organization. Criteria for selection of staff personnel, employment conditions, employee-training, role of employee unions, welfare provisions for labour.

UNIT-V [9]

Management of Resources: Budget, records and book keeping. Food cost control and Labour cost control: Factors affecting cost-menu, types of service, methods of purchasing, serving and pricing, maintenance of standard portions, waste, and meals for employee, wages. Physical plant: Its location, floor plans, space allowances for food preparation activities, storage units, service units and washing units.

UNIT-VI [8]

Importance of food standards, criteria for good quality products, hazards of adulteration and poor quality, quality control, specifications for quality in food products, food laws regarding quality and adulteration.

Labour laws regarding health and safety of employees, health examination, sanitary working conditions, labour regulations, welfare policies.

FN 631 CLINICAL AND THERAPEUTIC NUTRITION **3-1-0-4**

UNIT-I [6]

Nutritional screening and assessment of nutritional satus of hospitalized and outdoor patients.identification of high risk patiets. Assessment of patient needs based interpretation of patient data-clinical, biochmecial, biophysical, personal etc. Newer trends in delivery of nutritional care and dietary counselling

UNIT-I [10]

Diet nutrient and drug interaction. Effect of drugs on ingestion, digestion, absorption and metabolism of nutrients, effect of foods, nutrients and nutritional status on drug dosage and efficacy.

Nutritional support-recent advances in techniques and feeding substrates

UNIT-I [18]

Etiopathophysiology, metabolic and clinical aberrations, complications, prevention and recent advances in the medical nutritional management of:

Weight imbalances
Cardio vascular disorders
Diabetes mellitus and other metabolic disorders
GI tract disorders
Liver and gall bladder, pancreatic disorders
Renal disorder
Stress and trauma
Cancer
Neurological disorders
Musculo-skeletal disorders
Immuno-deficiency disorder
Genetic disorders
Infection and AIDS
Respiratory problems

UNIT-I [5]

Childhood problems/disorders including inborn errors of metabolism and their nutritional management.

MB 641 INDUSTRIAL MICROBIOLOGY AND FERMENTATION TECHNOLOGY 3-0-0-3

UNIT-I

General Concepts: Isolation, Preservation and Improvement of Industrially important organisms, Enrichment culture technique, Storage at low temperature, Liquid nitrogen, Lyophilization, Strain improvement by mutation, Feedback repression and inhibition, Modification in characteristics of inhibitors, Isolation of auxotrophic mutants, Use of recombinant methods. [9]

UNIT-I

Growth Kinetics: Microbial growth kinetics and product kinetics, Microbial biomass, Enzymes, metabolites, Batch and continuous culture- comparison, external and internal, Fed batch and its applications. [6]

UNIT-I

Basic Concepts in Fermentation: Fermentation media, Sterilization, Batch and Continuous Sterilization, Filter sterilization, Fermenter design, Control of Fermenter, Mass and gas transfer, Product recovery and Effluent treatment. [7]

UNIT-I

Industrial Production: Industrial production of Ethanol, Acetone, Butanol, Citric acid, Gluconic acid, Acetic acid, Lactic acid and Kojic acid, Glutamic acid, Lysine and Tryptophan, Amylases, Proteases and Lipases, Antibiotics (β-lactam, aminoglycosides). [12]

UNIT-I [5]

Production of other Metabolites: Production of single cell proteins, Recombinant vaccines, Interferon and Steroids.

Total Credits (all Semester)- 139/139

$ CW (Course work): It would include attendance, assignments, class /quiz test.

MS 331 **Combinatorics** **3-0-0-3**

1. Relation: Definition, different forms, properties and operations on sets, principle of inclusion and exclusion, partition of a set, definition of relation, types of relation, composition, properties and graphical representation of relation, equivalence classes, closure of a relation, Warshall's algorithm, Hasse diagrams, definition of lattice and different forms. **[10]**

2. Function: Properties, definition of function and different forms, composition and properties of functions, recursively defined functions, applications of functions. **[10]**

3. Induction: Mathematical induction, strong induction and well-ordering, definition of recursive, structural induction. **[10]**

4. Counting: Basics of counting, pigeonhole principle, permutations and combinations, binomial coefficients, generalized permutations and combinations, generating permutations and combinations. **[09]**

Text Books:

1. Kenneth H. Rosen (2008), Discrete Mathematics and Its Applications with Combinatorics and Graph Theory, 7th ed., TMH Education.
2. Kolman, Busby and Ross (2009), Discrete Mathematical Structure, 6th ed., Pearson.

Reference Books:

1. Liu and Mohapatra (2000) , Elements of Discrete Mathematics , 2nd edt., Mc Graw Hill Education, New Delhi.
2. Narsingh Deo (2004), Graph Theory with Applications to Engineering and Computer Science, reprint ed.,PHI.
3. K.D. Joshi (1989), Foundations of Discrete Mathematics, 2003 reprint, New Age International

MS 341 **Vector Calculus** **3-0-0-3**

1. Vector Differentiation I: Vector algebra, operations with vectors, scalar and vector product of three vectors, product of four vectors, reciprocal vectors, scalar-valued functions over the plane and the space, vector function of a scalar variable, curves and paths, vector differentiation. **[10]**

2. Vector Differentiation II: Directional derivative, gradient of a scalar function, conservative field, divergence, curl, related properties of gradient, divergence and curl of sums, second order differential operator, cylindrical and spherical coordinates. **[10]**

3. Vector Integration I: Integration of a vector function of a scalar argument, line integral, work done , potential, conservative field and area, surface integrals, surface area and flux, volume integrals. **[10]**

4. Vector Integration II: Green's theorem in plane, transformation between line integral and double integral, area in Cartesian and polar coordinate, Stoke's theorem, Gauss divergence theorem. **[09]**

Text Books:

1. Shanti Narayna, A Text Book of Vector Calculus by, S. Chand & Co., New Delhi.
2. R.Murrary, Theory and Problems of Advanced Calculus by Spiegal, Schaum's Publishing Company, New York.

Reference Books:

1. N. Saran and S.N. Nigam, Introduction to Vector Analysis by Pothishala Pvt. Ltd., Allahabad.
2. Thomas, Calculus by Thomas, 11 Editions, Pearson.
3. G. Paria, A Text Book on Vector Calculus by Scholar's Publishing House, Indore.
4. B.V. Ramana(2006), Higher Engineering Mathematics by TMH.

MS 351 **Probability and Statistics Theory** **3-1-0-4**

1. Basic Statistics: Mean, mode, median for grouped and ungrouped data, variance, standard deviation, dispersion and measures of dispersion, skewness and measures of skewness, moments. **[10]**

2. Probability Theory: Recapitulation of basic probability theory, law of addition and law of multiplication, conditional probability, total probability, Bayes' theorem and its applications. **[10]**

3. Random Variables and Distribution: Discrete and continuous random variables, types of distribution, probability mass and density functions, mean variance and standard deviation of distribution, discrete distributions (binomial and Poisson), continuous distributions (normal and uniform). **[10]**

4. Hypothesis and Correlation-Regression: Simple and composite hypothesis, type I and type II errors, tests of significance, simple correlations, linear regression. **[09]**

Text Books:

1. Baisnab A.P. and Manoranjan Jas (2003), Elements of Probability and Statistics, 2nd ed., TMH .
2. Pugalararasu(2011) , Probability and Queuing Theory , 1st ed., TMH.

Reference Books:

1. Papoulis(2002), Probability, Random Variables and Stochastic Processes,4th ed., TMH.
2. Palaniammal(2012), Probability and Random Processes , 3rd ed., PHI.
3. Gupta and Kapoor (2002), Fundamental of Mathematical Statistics, 3rd ed., SCS Publisher.

MS 361 **Analytical Solid Geometry** **3-1-0-4**

1. Plane and Straight Line: Different form of plane, angle between two planes, perpendicular distance of a point from a plane, plane through intersection of two planes, bisectors of two intersecting planes, locus of a plane, different form of straight line, angle between two lines, distance of a point from a straight line, coplanarity of straight lines, shortest distance between two lines, intersection of three planes. **[10]**

2. Sphere: Different form of sphere, plane section of a sphere, intersection of two spheres, sphere through a given circle, intersection of a straight line and sphere, tangent planes and normal, touching spheres and condition of orthogonality. **[10]**

3. Conicoids I: Different form of cone, equation of the cone with given vertex and a given conic for its base, angle between the lines in which a plane cuts a con, tangent lines and tangent plane, reciprocal con, right circular con, different form of cylinder, equation of tangent plane, enveloping cylinder, right circular cylinder. **[10]**

4. Conicoids II: Ellipsoid, hyperboloid of one and two sheets, elliptic paraboloid , hyperbolic paraboloid, tangent plane , equation of normal, director sphere, polar plane and pole of the plane. **[09]**

Text Books:

1. R.J.T. Bell (1994), Elementary Treatise on Co-Ordinate Geometry of Three Dimensions by, Macmillan India Ltd.
2. Shanti Narayan, Analytical Solid Geometry by S. Chand & Company, New Delhi.

Reference Books:

1. Deepak Chatterjee, Analytic Solid Geometry by PHI Learning Private Ltd., New Delhi.
2. H.M. Vasavada (1992), Analytical Geometry of Two and Three Dimensions.

MS 332 **Advanced Calculus** **3-0-0-3**

1. Preliminary: Functions, continuity, the derivative, composite functions Rolle's theorem, theorem of the mean, Taylors's series with remainder indeterminate forms, fundamental theorems on infinitesimals. **[10]**

2. Power Series: Definition, tests for convergence, region of convergence, uniform convergence, integral and derivative of power series, operations with two power series, exponential, trigonometric, hyperbolic and dominant functions, conditionally convergent series. **[10]**

3. Partial Differentiation: Functions of two variables, partial derivatives of composite function, Euler's theorem on homogeneous functions, directional derivative, higher differential, implicit functions, one equation of two or more variables, two equations of four variables, four equations of six variables, Jacobians. **[10]**

4. Definite Integral: Definition and properties, existence proof, Simpson's rule, change of variables, differentiation of a definite integral, differentiation under the integral sign, differentiation and integration of integral with infinite limit, infinite integrand, multiple integrals, beta and gamma functions, Dirichlet's integral. **[09]**

Text Books:

1. Frederick S Woods (1934), Advanced Calculus by Ginn and Company.
2. George B. Thomas, Jr., Maurice D. Weir, Joel R. Hass, Thomas Calculus by Pearson.

Reference Books:

1. R.C Buck , Advanced Calculus by Waveland Press, Inc.
2. Walter Rudin, Principles of Mathematical Analysis by McGraw-Hill.
3. Gerald B. Folland, Advanced Calculus by Pearson.

MA 342 **Graph Theory** **3-0-0-3**

1. Graphs: Introduction, definition and applications of graphs, finite and infinite graphs, null graph, sub graphs, incidence and degree, isolated vertex, pendant vertex, walk, path and circuits, connected graphs, disconnected graphs and components, isomorphism, Euler graphs, operations on graphs, Hamiltonian paths and circuits, the travelling sales man problem, matrix representation of graphs, properties and some standard theorems on graphs. **[10]**

2. Directed Graphs: Definition, in-degree, out-degree, isomorphic digraphs, types of digraphs, digraph and binary relations, relation matrices, directed paths and connectedness, Euler digraphs, fundamental circuits in digraphs, properties and some standard theorems on digraphs. **[10]**

3. Trees: Definition and properties of trees, distance and centers in a tree, rooted and binary trees, on counting trees, spanning trees, rank, nullity and cyclomatic number, Kruskal's algorithm and Prim's algorithm. **[10]**

4. Cut-Sets and Cut-Vertices: Cut sets and their properties, all cut sets, connectivity and separability, 1-Isomorphism and 2-Isomorphism, some standard theorems. **[09]**

Text Books:

1. Deo N.(2001)Graph Theory with Applications to Engineering and Computer Science, PHI.
2. Chartland G., Zhang P. (2006) Introduction to Graph Theory, Fourth reprint, Mc Graw Hill Education.

Reference Books:

1. Wilson R. J. (2010) Introduction to Graph Theory, 4th Edition, Pearson.
2. Jonathan L.G. Yellen J. (2004) Handbook of Graph Theory, CRC Press.
3. West D. B. (2001) Introduction to Graph theory, 2nd Edition, PHI Learning.

MS 352 **Basic Differential Geometry** **3-0-0-3**

1. Preliminaries: Graphs and level sets, vector fields, the tangent space, surfaces, vector fields on surfaces orientation, the gauss map. **[10]**

2. Tensors: Definition of tensors and basic properties, Christoffel symbols, uses of tensors in differential geometry. **[10]**

3. Geodesics I: Parallel transport, Weingarten map, curvature of plane curves, arc length and the line integrals, curvature of surfaces. **[10]**

4. Geodesics II: Envelops and evolutes, first fundamental form, metric potentials, direction coefficient and angle between two curves on a surface. **[09]**

Text Books:

1. Chuan-Chih Hsiung (1997), A First Course in Differential Geometry by International Press, Cambridge.
2. T.J. Willmore(1964), An Introduction to Differential Geometry by Oxford University Press.

Reference Books:

1. M. Abate and F. Tovena, Curves and Surfaces by Springer.
2. A. K. Peters (2010), Differential Geometry of Curves and Surfaces by Ltd., Natick.
3. D.J. Struik(1988) , Lectures on Classical Differential Geometry by 2nd Edition, Addison-Wesley.

Course Description

Compulsory Courses

EL 101 Foundation Course in English 2-0-0-2

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand& Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

EV 111 Environmental Science 1-0-0-1

Introduction to Environment and Environmental Studies, its scope and importance [2]

Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem [2]

Natural Resources: Renewable and Nonrenewable resources. [2]

Human Population and Environment: Population Growth, World and Indian scenario [2]

Environmental pollution: Types of Environmental Pollution and cause , prevention of pollution [2]

Global Environmental Issues: Climate Change, Global Warming and Green House Effect [3]

Visit to a local area to document environmental assets

Suggested Readings:

Text Books:

1. Bharucha, E;.Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH,Beiswenger RE, Purdom; Environmental Sciences, Paperback.

Reference Books:

5. Rastogi V.B. &Jayraj M.S.; Animal Ecology and Distribution of Animals, KedarNath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

3-0-0-3

CA 111 Fundamentals of Computers and Information Technology

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets [6]

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

Physics

PH 111 Mechanics, Properties of Matter and Relativity 3-0-0-3

Mechanics: Laws of motions, Inertial and non-inertial frames of reference, Rotating frame, Effect of centrifugal and Coriolis forces due to earth's rotation, Center of mass (C.M), Lab and C.M frame of reference, Conservation of linear and angular momenta. [8]

Properties of Matter: Elasticity, Young's modulus, Modulus of rigidity, Poisson's ratio, relation connecting different elastic-constants, twisting couple of a cylinder(solid and hallow), Dynamical method (Maxwell's needle) for determining the modulus of rigidity, Bending moment, Cantilever, Determination of Young's modulus by bending of beam. [10]

Fluid Mechanics: Kinematics of moving fluids, equations of continuity, Euler's equation, Bernaulli's theorem, viscous fluids, streamline and turbulent flow, Poiseulle's law, Capillary tube flow, Reynold's number, Stokes law. [7]

Relativity: Postulates of special theory of relativity, Derivation of Lorentz transformation and physical significance of Lorentz invariance, Length contraction and time dilation, Concept of simultaneity, Relativistic velocity transformation relations, mass energy relation, Concept of zero rest mass of photon, Relativistic relation between energy and momentum. [14]

Text Books:

1. D.S.Mathur. Mechanics, S. Chand Publications, New Delhi
2. Resanick and Halliday: Physics Part –1

Reference Books:

1. H.C.Verma : Concept in Physics Vol. I
2. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol I.

PH 121 Electromagnetism 2-0-0-2

Vector Calculus: Gradient, divergence and curl operators, Physical significance [7]

Electromagnetism: Laws of Electromagnetism using vector calculus; electrostatics and magnetostatics in matter, Biot and Savart's law, calculation of H order in simple geometrical situations, Ampere's Law $\nabla.B=0$, $\nabla xB=\mu_0\mathbf{J}$, field due to magnetic dipole, magnetization current, magnetization vector, Half order field, magnetic permeability (linear cases), interpretation of a bar magnet as surface distribution of Solenoidal current. [10]

Time Varying Fields: Electromagnetic induction, Faraday's law, electromotive force, $\varepsilon = \int$ E.dr. integral and differential forms of Faraday's Law. Mutual and self inductance, transformers, energy in a static magnetic field, Maxwell's displacement current, Maxwell's equations, Electromagnetic field density. [10]

EM wave propagation: The wave equation satisfied by E and B, Plane electromagnetic waves in vacuum, Poynting's vector, Reflection at plane boundary of dielectrics, Polarization by reflection and total internal reflection, Faraday effect, Waves in a conducting medium [12]

Text Books:

1.David J. Griffiths: Introduction to Electrodynamics (3rd Edition)
2. Gupta and Kumar: Electromagnetics

Reference Books:

1.P. Lorrain and O. Corson: EM Waves and Fields
2.A. S. Mahajan and AA Rangwal: Electricity and Magnetism

PH 131 *Physics Laboratory-I* 0-0-4-2

Assignments are based on the course PH 111 and PH 141

PH 122 Thermodynamics and Statistical Physics 3-0-0-3

Thermodynamics: Reversible and irreversible processes, Carnot's cycle and Carnot's theorem, Second law of thermodynamics, Thermodynamic scale of temperature. [7]

Concept of entropy: Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram [8]

Thermodynamic functions, Internal energy, Enthalpy, Helmholtz function and Gibb's free energy, Maxwell's thermodynamical equations and their applications, TdS equations, Energy and heat capacity equations, Clapeyron equations, Adiabatic demagnetization, Third law of thermodynamics, Nernst heat theorem. [10]

Joule-Thomson effect, Thermodynamic analysis, Inversion temperature, Thermodynamic equations for a Vander Waals gas. Liquefaction of gases. Regenerative principle, Properties of liquid helium, Introduction to super fluidity [6]

Statistical Mechanics: State of a system (Microscopic and Macroscopic); Phase space, density of states and Liouville's theorem; Postulates of statistical mechanics; Relation between statistical and thermodynamic parameters. [8]

Text Books:

1. K.W. Zeemansky: Heat and Thermodynamics
2. BrijLal and N. Subramanyam.:Heat and Thermodynamics

Reference Books:

1. B.K. Agarwal: Thermal Physics
2. Frederick Reif : Fundamentals of Statistical and Thermal Physics
3. R.K. Pathria: Statistical Mechanics (2nd Edition):

PH 132 Oscillations and Waves 2-0-0-2

Oscillations: Simple harmonic oscillations, Differential equation of SHM and its solution, Amplitude, Frequency, Time Period and Phase, Velocity and acceleration. Kinetic, Potential and total energy and their time average values. Free oscillations of systems with one degree of freedom : (i) Mass-Spring system, (ii) Simple Pendulum, (iii) Torsional Pendulum, (iv) Compound pendulum (v) Bar Pendulum. [6]

Superposition of Two Collinear Harmonic Oscillations: Linearity and superposition principle. (i) Oscillations having equal frequencies and (ii) Oscillations having different frequencies (Beats). Superposition of N Collinear Harmonic oscillations [6]

Free Oscillations; Damped oscillations; Damping coefficient, Log decrement; Forced oscillations : Transient and steady states, Amplitude, Phase, Resonance, Sharpness of resonance, Power, Dissipation and Quality Factor. [7]

Waves: Plane and spherical Waves, Longitudinal and transverse waves, Plane progressive (Traveling) waves. Wave equation. Particle and wave velocities. Differential Equation. Pressure of a longitudinal wave. Velocity of waves : Velocity of transverse vibrations of stretched strings, Newton's formula for [7]

velocity of sound; Laplace's correction

Text Books:

1. N.K. Bajaj: The Physics of Waves and Oscillations, Tata cGraw-Hill, 1988.
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Oscillations and Waves, CBC, Jaipur
3. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.

Reference Books:

1. A. P. French : Vibrations and Waves ,CBS Publications, 1987
2. BrijLal and N. Subramanyam: Waves and Oscillations

PH 132 Physics laboratory-II 0-0-4-2

Assignments are based on the course PH 122 and PH 132, etc.

PH 211 Semiconductor Physics and Electronics 3-0-0-3

Semiconductor Physics: Intrinsic and extrinsic semiconductors, P-N junction diode, Diode equation, depletion width and potential barrier, junction capacitance, I-V characteristics, Rectifier, ripple factors, filter circuits, efficiency and percentage regulation, LED, photodiode. [9]

Electronics : Transistor circuits, Input, Output characteristics and CB and CE modes, DC load line, operating point, biasing and bias-stabilization circuits: Transistor as an amplifier (CE mode) and frequency response. [6]

Hybrid parameter: Analysis of transistor amplifier (with and without load) using h- parameters, simplified hybrid model, brief idea about hybrid model Single stage amplifier in CE,CB and CC modes. RC coupled CE amplifier and its frequency response, tuned voltage amplifier. Power amplifier classification, distortion and efficiency, push pull amplifier [10]

Feedback in amplifiers: Positive and negative feedback, effect of negative feedback on the characteristics of different types of amplifiers, voltage and current series feedback circuits. Field effect transistors, I-V Characteristics of JFET and MOSFET, FET biasing, FET as an amplifier. [8]

Digital Electronics: Diode and transistor equivalent circuits of basic and derived gates, Universal gates, X-OR and equivalence. Simplification of Boolean expressions using K- maps. Sequential circuits, Flip flops. [6]

Text Books:

1. Millman and Halkias: Integrated Electronics:
2. Chattopadhyay and Rakshit: Electronics Fundamental and Application

Reference Books:

1. Malvino and Leach: Principle of Digital Electronics:
2. Gupta and Kumar: Hand book of Electronics

PH 221 Optics and Lasers 3-0-0-3

Interference: Young's experiment, Conditions for sustained interference, Theory of interference, Fresnel's biprism, Determination of wavelength of light, Interference in parallel and edge shaped films, Colour of thin films. Newton's rings determination of wavelength of light, Michelson interferometer and their applications. [10]

Diffraction: Definition, Frenel's diffraction, Zone plate, diffraction due to straight edge. Fraunhoffer diffraction due to single and double slits, Plane transmission grating and its resolving power. [10]

Polarization: Polarized light and its mathematical representation, Polarization [9]

by double refraction and Huygen's theory, Nicol prism, Retardation plates, Production and analysis of circularly and elliptically polarized light, Optical activity.

Lasers: Einstein's A and B coefficients, Spontaneous and Stimulated conditions for laser action population inversion, optical pumping, Working of different types of lasers: semiconductor, rubey and He-Ne Lasers. [10]

Fiber optics: Working, Numerical aperture

Text Books:

1. N. Subrahmanyam, Brijlal and M. N. Avadhanulu: A textbook of Optics
2. A.Ghatak: Optics, Tata McGraw-Hill

Reference Books:

1. B. K. Mathur and T. P. Pandya: Physical Optics

PH 231 Physics laboratory-III 0-0-4-2

Assignments are based on the course PH 211 and PH 221

PH 212 Mathematical Physics and Special Theory of Relativity 3-1-0-4

Curvilinear Coordinates: Orthogonal curvilinear coordinate systems, scale factors, expression for grade, divergence, curl and their application to Cartesian, circular cylindrical and spherical polar coordinate systems. [9]

Coordinate transformation and Jacobean, Transformation of covariant, contra variant and mixed tensor. Addition, multiplication and contraction of tensors. Metric tensor and its use in transformation of tensors [7]

Dirac-delta function and its properties. Lorentz transformation and rotation in space-time, time like and space like vectors, world line, and macro-causality [6]

Four vector formulation: energy- momentum Four vector, relativistic equation of motion invariance of rest mass, orthogonality, four force and four velocity, Lorentz force as an example of four force transformation of four frequency vector, longitudinal and transverse Doppler's effect. [12]

Transformation of electric and magnetic fields between two inertial frame

Differential Equations: The second order liner differential equation with variable coefficient and singular points, series solution method and it application to the Hermite's Legendre's and Laguerre's differential equation. Basic properties (without proof) like orthogonality, recurrence relation, Graphical representation and generating functions of Hermite, Lagendre, Leguerre and Associated Legendre functions (very simple application) [13]

Fourier Analysis: Fourier theorem, Fourier analysis of square wave, saw-tooth wave, plucked strings, half wave/full wave rectifier wave forms [5]

Text Books:

1. George Arfken: Mathematical Method for Physicists (Academic Press).
2. S.L.Kakani, C. Hemrajani, T.C. Bansal: Mathematical Physics and Special Theory of Relativity, CBC, Jaipur
3. D. E. Bourne, P C Kendall: Vector Analysis and Cartesian Tensors, 3ed (Chapman & Hall, 1992)

Reference Books:

1. A.P. French: Special Relativity
2. P. K. Chattopadhyay: Mathematical Physics.
3. Gupta and Kumar: Mathematical physics

PH 222 Physics Laboratory IV 0-0-4-2

Assignments are based on Course PH 211 etc.

PH 311 Quantum Mechanics and Spectroscopy 3-1-0-4

Failure of Classical Physics: Black body radiation (without derivation), Photoelectric effect, Compton effect Wave Packets and Uncertainty Relation: de-Broglie hypothesis, Wave-particle duality, Wave packets, Group velocity and phase velocity, Uncertainty principle. [10]

Wave Mechanics: Schrödinger equation, Physical interpretation of wave function, Probability current density and conservation of probability, Free particle wave function, Schroedinger equation in the presence of a potential, Linear operators, Hermitian operators, Observables, Eigenvalues and Eigenfunctions, Expectation values, Ehrenfest's theorem, Commutation relations [15]

Schrödinger Wave Equation and Applications: Particle in one dimensional Box, Square well, Rectangular potential barrier and tunneling, Linear harmonic oscillator, Spherically symmetric potential, Angular momentum operators and their eigen functions, Concept of spin, Hydrogen atom. [12]

Spectroscopy: Quantum futures for spectra of single valence electron atom: Orbital magnetic dipole moment, Orbital, spin and total angular momentum, Larmor precession, Vector model of atom, Electronic configuration and atomic states, Spin-orbit interaction and fine structure, Intensity of spectral lines, General selection rules. Zeeman Effect, Two valence electron atoms: LS and JJ coupling schemes and resulting spectra, Idea of normal and inverted doublets. [15]

Text Books:

1. V. Devanathan:Quantum Mechanics
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Elementary Quantum Mechanics and Spectroscopy, CBC, Jaipur

Reference Books:

1. Loknathan and Ghatak:Quantum Mechanics
2. S. Gasiorowicz: Quantum Physics
3. B. H. Bransden and C. J. Joachain: Quantum Mechanics:

PH 331 Electromagnetic Theory 4-0-0-4

1. **Maxwell's Equations:** Concept of Displacement Current, Vector and Scalar Potentials, Boundary Conditions at boundary of different media, Wave equations and plane waves in Dielectric media, Poynting Theorem, Physical concept of Electromagnetic field, Energy density, Momentum density. [8]

2. **Reflection and Refraction of EM Waves:** Reflection and refraction of a plane wave by interface between dielectrics, Fresnel Formulae, Total internal reflection, Brewster's angle, Waves in conducting media, Metallic reflection for normal incidence. [10]

3. **Plasma and Ionosphere:** Concept of skin depth, Microscopic media (Plasma) and Maxwell's equations, Plasma frequency, Refractive index, Conductivity of an ionized Gas, Propagation of e.m. waves through Ionosphere. [12]

4. **Polarization of EM Waves:** Different types of polarizations (Linear, Circular and Elliptical), e.m. Fresnel's formula, Uniaxial and biaxial crystals, Polarization by double refraction, Nicol Prism, Ordinary and Extraordinary Refractive indices, Phase retardation plates: Quarter-Wave and Half-Wave Plates, Analysis of Polarized Light, Polarimeter. [10] [8]

5. **Rotatory Polarization:** Optical rotation, Biot's Laws for Rotatory Polarization, Fresnel's Theory of Optical Rotation, Experimental verification of Fresnel's Theory, Specific Rotation, Laurent's Half-Shade Polarimeter.

6. **Fiber Optics:** Planar Optical Wave Guides, Propagation through optical fiber, Types, Numerical aperture, Modes of Propagation (Basic Concepts only). [4]

Text Books:

PH 341 Atomic and Molecular Physics 4-0-0-4

1. **Atomic Physics:** Spectra of Hydrogen, Deuteron and alkali atoms spectral terms, doublet fine structure, screening constants for alkali spectra for s, p, d and f states, selection rules. [7]

2. **Earth Spectra:** Singlet and triplet fine structure in alkaline earth spectra [5]

3. **Week spectra:** continuous X-ray spectrum and its dependence on voltage, Duane and Hunt's law. Characteristic X rays, Moseley's law, doublet structure of X-ray spectra, X-ray absorption spectra. [8]

4. **Molecular Physics:** Discrete set of electronic energies of molecules, quantization of vibrational and rotational energies, determination of internuclear distance, pure rotational and vibrational spectra. [10]

5. **Vibration Spectra**: Dissociation limit for the ground and other electronic states, transition rules for pure vibration and electronic vibration spectra. [6]

6. **Raman Effect:** raman Effect, Stokes and anti-Stokes lines, complimentary character of Raman and infrared spectra, experimental arrangements for Raman spectroscopy. [8]

7. **Spectroscopic Techniques**: Sources of excitation, prism and grating spectrographs for visible, UV and IR, absorption spectroscopy, double beam instruments. [8]

PH 361 General and Optics Based Laboratory 0-0-4-2

Assignments are based on the course PH 341,etc

PH 371 Electronics Laboratory 0-0-4-2

Assignments are based on the course PH 331,etc

PH 342 Solid State Physics 3-0-0-3

1. **Structure**: Crystal structure, periodicity, lattices and bases, fundamental translational vectors, unit cell, lattice types, Bravais lattices, Miller indices for direction and planes, Common crystal structures like NaCl, ZnS and Diamond; Close packed structures, Lau theory of X-ray diffraction, X-ray diffraction, Bragg's law. [9]
2. **Bonding**: Potential between a pair of atoms, concept of [6]

cohesive energy, covalent, Vander Waals, ionic and metallic Crystals, reciprocal lattice, Brillouin Zones

3. **Thermal Properties**: Lattice vibrations, Vibrational modes of continuous medium, Debye's model: lattice specific heat, Phonons, Density of states. [7]
4. **Electronic Properties**: Free electron gas, Electrons in periodic potential, Kronig-Penny model, Bloch theorem, energy bands, metals, insulators and semiconductors; Hall Effect, Fermi surface [10]
5. **Magnetic Properties**: Magnetic moment, magnetic susceptibility, Dia-, Para and Ferromagnetism, Ferromagnetic domains. [7]

Text Books:

1. C. Kittel: Solids State Physics, 6th edition, John Wiley & Sons, NY, 1986
2. R. L. Singhal, Solid state Physics, KNRN Pub., Meerut, 1998

Reference Books:

2. Azarof: .Introduction to Solids, Mc-Graw-Hill Book Co., Inc.
3. S.O. Pillai, Solid State Physics, 6th Edition, New Age International Pub, 2005.

PH 352 Nuclear and Particle Physics 4-0-0-4

1. **Nuclear Structure**: Properties of Nuclei and Models, Introduction to the nucleus, Fermi gas model, Deutron Binding energy, Semiemperical mass formula, Mass diffect, Packing fraction and its application to explain most stable isobars and nuclear fission, Magnetic dipole moment, quadrapole moment, angular momentum, Effect of mass number on size of nucleus Condition of stability for isobars. [9]

2. **Nuclear Models**: Liquid drop model, fission and potential barrier, N-N and P-P chains, Nuclear reactors, Nuclear fission and fusion. [6]

3. **Nuclear Force and Two-Nucleon System:** Properties of nucleon-nucleon interaction, General forms of nucleon-nucleonpotential, Neutron-proton scattering for low energies: scattering length, Ground state properties of deuteron, Simple consideration of deuteron using central potential (square well). [10]

4. **Nuclear Stability:** Nucleon emission, separation energy, Alpha decay and its energy spectrum, WKB Approximation, Beta decay and its energy spectrum (for example,137Cs), Need for neutrinos, Q-values, Gamma decay, Parity and Selection rules for gamma transitions (no derivation). [10]

5. **Accelerators and Detectors**: Cyclotron, Betatron, Van de Graaff and Linear accelerators, Synchrotrons, Geiger-Mueller detector, Scintillation detector. [5]

6. **Elementary Particles**: Properties of particles, classification in to leptons mesons and baryons, matter and antimatter, conservation laws (qualitative discussion), energy, momentum, angular momentum, charge, lepton number, Baryon number, Isospin, strangeness. [5]

7. **Classification of Particles:** Interactions, Quantum numbers, Quarks as the building blocks of hadrons, Colour degree of freedom. [7]

Text Books:

3. A. Bieser, prospective of Modern Physics, 22nd Reprint, Tata McGraw-

Hill, New Delhi, 2008

PH 362 Statistical Mechanics 4-0-0-4

1. **Random Walk Problem:** Probability distribution, Mean and Dispersion and Simple Numerical Problems. [8]

2. **Basic Concepts of Statistical Physics**: Entropy and thermodynamic probability, Ensemble theory, partition function, applications to classical ideal gas, Gibbs paradox; Statistical equivalence of three ensembles. [7]

3. **Classical Theory of Radiation:** Properties of Thermal Radiation, Blackbody Radiation, Stefan-Boltzmann Law and Wien's Displacement law. [6]

4. **Quantum Nature of Radiation:** Planck's Postulates. Planck's Law and Blackbody Radiation, Experimental Verification. Derivations of Wien's Distribution Law, Rayleigh-Jeans Law from Planck's Law. [8]

5. **Bose-Einstein's Condensation:** B-E Distribution law, Completely Degenerate Bose Gas, Bose-Einstein condensation, Properties of liquid He, Radiation as photon gas. [10]

6. **Fermi-Dirac Statistics:** F-D Distribution Law, ideal completely Degenerate Fermi Gas and Thermodynamic functions, Fermi Energy, Electron gas in a metal, Specific Heat of Metals. Maxwell-Boltzmann statistics as a classical limit, Comparison of the three statistics, White Dwarf Stars, Chandrasekhar Mass Limit. [13]

Text Books:

1. Frederick Reif: Fundamentals of Statistical and Thermal Physics, Waveland Press 2009
2. R. K. Patharia: Statistical Mechanics, Oxford: Butterworth, 1996
3. K. Huang: Statistical Mechanics, Wiley, 1987 .

Reference Books:

PH 372 Basics of Nano-Science and Exotic Materials 3-0-0-3

1. **Physics for Nano-Science:** Electron Band Structure and [6]

Its Modification due to change in dimensionality. Phonon absorption in Nanomaterials.

2. **Basic Concepts of Nanomaterials:**Physical, Chemical and Bio-routes for Synthesis of Nanomaterials (basic idea), Metal Nanoparticles, Carbon Nanostructures, Electronic Properties of Nanomaterials, Nano photonics, Some applications of Nano Materials. [15]

3. **Introduction to Exotic Materials:** High Temperature Superconductors and Colossal Magnetoresistance Materials. Meissner Effect, Discovery of HTSC Materials, Structure and Properties, Elements of Proposed Mechanisms of high temperature superconductivity, Elementary Concepts of CMR Materials, Some Application of CMR materials. [14]

4. **Quasicrystals:** Basic definition of quasicrystal and Structure of Quasicrystals. [4]

Text Books:

1. C.P. Poole and F.J. Owens: Introduction to Nanotechnology, John Wiely & Sons, NJ, 2003

2 .C.M. Niemeyer and C.A. Mikin: Nanobiotechnology : Concepts, Applications and Perspectives, John Wiley & Sons, NJ, 2004

Reference Books:

1. Charles Kittel: Introduction to Solid State Physics, 5thEdition, John Wiley & Sons, NY, 1986.

PH 382 Solid State and Nuclear Laboratory 0-0-4-2

Assignments are based on the course PH 342, PH 352, etc

PH 392 Optoelectronics Laboratory 0-0-4-2

Combined Assignments are based on Lasers, Optical Fibers, PH 341, etc.

Mathematics

MS 111 Calculus 3-0-0-3

Curvature: Curvature, Radius of curvature for Cartesian curves, parametric curves, Polar curves and Pedal curves, Centre of curvature. Circle of curvature, Chord of curvature, Tests for concavity and convexity, Points of inflexion, Multiple points. [8]

Asymptotes and Curve Tracing:: Asymptotes in Cartesian and polar coordinates, Intersection of a curve with its asymptotes**, a**pplication of differential calculus in curve sketching in Cartesian and polar co-ordinates. [8]

Differentiation: Partial differentiation, Euler's theorem for homogeneous functions,Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers. [8]

Integral Calculus:*:* Double integrals in Cartesian and polar coordinates, Change of order of integration, Triple integral, Applications of double and triple integrals in finding areas and volumes. [8]

Vector Calculus: Gradient, Divergence and Curl. Greens, Stokes and Gauss Theorems (without proof) and problems based on these theorems. [7]

Text Books:

1. Thomas and Finney: Calculus and Analytic Geometry, Ninth Edition.
2. Shanti Narayna : A Text Book of Vector Calculus. S. Chand & Co., New Delhi.

Reference Books:

1. N. Saran and S.N. Nigam: Introduction to Vector Analysis, Pothishala Pvt. Ltd., Allahabad.
2. Differential and Integral Calculus: Shanti Narayan.
3. D. C. Gokhroo, Differential Calculus, Navkar Prakashan.
4. N. Piskunov: Differential and integral Calculus. Peace Publishers, Moscow.
5. Gorakh Prasad: Differential Calculus. Pothishasla Pvt. Ltd., Allahabad.
6. Gorakh Prasad: Integral Calculus. Pothishala Pvt. Ltd., Allahabad.

MS 121 Matrices and Theory of Equations 3-0-0-3

Matrix: Matrices, Symmetric, Skew symmetric, Hermitian and skew Hermitian matrices. Elementary Operations on matrices Rank of a matrices, Inverse of a matrix. Linear dependence and independence of rows and columns of matrices, Row rank and column rank of a matrix, Eigenvalues, eigenvectors and the characteristic equation of a matrix, Cayley Hamilton theorem and its use in finding the inverse of a matrix [13]

Applications of Matrices: Applications of matrices to a system of linear [9]

(both homogeneous and non–homogeneous) equations. Theorems on consistency of a system of linear equations. Unitary and Orthogonal Matrices, Bilinear and Quadratic forms

Theory of Equations: Relations between the roots and coefficients of general polynomial equation in one variable, Solutions of polynomial equations having conditions on roots. Common roots and multiple roots. Transformation of equations. [9]

Solution of equations: Nature of the roots of an equation, Descarte's rule of signs. Solutions of cubic equations (Cardon's method). Biquadratic equations and their solutions . [8]

Text Books:

1. Higher Algebra: A. Kurosh (Moscow Mir Publisher 1972).
2. Theory of Equations: (Lecture notes for inter University Leadership project in Mathematics by R.N. Gupta, Surjeet Singh and R.J. Hans.

Reference Books:

1. H.S. Hall and S.R. Knight: Higher Algebra, H.M. Publications 1994.
2. Shanti Narayan: A Text Books of Matrices.
   Chandrika Prasad: Text Book on Algebra and Theory of Equations. Pothishala Private Ltd., Allahabad.

MS 112 Abstract Algebra 3-0-0-3

Group: Algebraic structure**,** Definition of a group with examples and simple properties, Abelian group, semi group, Order of an element of a group, Cyclic groups, Coset decomposition. [11]

Subgroup and quotient Groups: Subgroups, Normal subgroups, Normalizer of an element, Quotient group [10]

Group Morphism: Homomorphism, kernel of homomorphism, Isomorphism and automorphism, Fundamental theorem of Homomorphism, Cayley's theorem. [10]

Permutations: Definition and examples of Permutation, group of permutations, Cyclic Permutation, Even and odd permutation. [8]

Text Books:

1. I.N.Herstein: Topics in Algebra, 2nd edition, Wiley Eastern Ltd. 1988.
2. P.B.Bhattacharya, S.K.Jain and S.R.Nagpaul: Basic Abstract Algebra, 2nd Edition, Cambridge University Press 1995.

Reference Books:

1. J.B.Fraleigh : A first course in Abstract Algebra, 3rd Edition Addison-Wesely/Narosa 1998..
2. Surjeet Singh and QuaziZameeruddin : Modern Algebra, Revised Edition,Vikas Publishing House, 1992.
   D. C. Gokhroo: Algebra, Navkar publication, Ajmer, Revised Edition , 2005.

MS 122 Differential Equations-I 3-0-0-3

Basic Concepts: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines. [4]

First Order Differential Equations: Differential equation of first order and first degree, Homogeneous form and reducible to homogeneous form, Linear equations and equations reducible to linear form, Exact differential equations, Equations reducible to exact forms, First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations, Equation reducible to Clairaut's form. [14]

Second order differential equations: Second order differential equations with variables coefficients, Homogeneous and exact forms, Change of dependent equations, change of independent variables, normal form, Method of variation of Parameters [12]

Series Solution: Regular singular points, ordinary points, , series solution of second order linear differential equations with variable coefficients(Complementary Functions only) [9]

Text Books:

1. D.A. Murray : Introductory Course in Differential Equations. Orient Longaman (India) . 1967
2. A.R.Forsyth : A Treatise on Differential Equations, Machmillan and Co. Ltd. London

Reference Books:

1. D. C. Gokhroo : Ordinary Differential equations, NavkarPrakashan.
2. S.L.Ross: Differential Equations, John Wiley & Sons
   B.Rai& D.P. Chaudhary : Ordinary Differential Equations; Narosa, Publishing House, Pvt. Ltd.

MS 211 Linear Algebra 3-0-0-3

Vector Space: Vector spaces, subspaces, Sum and Direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space. Finitely generated vector space, Existence theorem for basis of a finitely generated vactor space, Finite dimensional vector spaces, Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension [12]

Linear transformations: Linear transformations and linear forms on vactor spaces, Vactor space of all the linear transformations, Kernal and range of a linear transformation, Rank and Nullity, Matrix of a Linear Transformation, Change of basis. [10]

Dual Spaces: Dual Spaces, Dual Basis, Bidual Spaces, annihilator of subspaces of finite dimentionalvactor spaces. [9]

Inner Product Space: Inner produt space, norm of a vector, Orthogality. [8]

Text Books:

1. I.N. Herstein : Topics in Algebra, Wiley Eastern Ltd., New Delhi, 1975
2. P.B. Bhattacharya, S.K. Jain and S.R. Nagpal : Basic Abstract Algebra (2^{nd} edition).

Reference Books:

1. VivekSahai and VikasBist : Algebra, Narosa Publishing House.
2. I.S. Luther and I.B.S. Passi : Algebra, Vol.-II, Narosa Publishing House.
   D. C. Gokhroo : Linear Algebra, NavkarPrakashan.

MS 221 Differential Equations-II 3-1-0-4

Partial Differential equations: Formation, order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, singular solution, General solution, Solution of Lagrange's linear equations, Charpit's general method of solution. [13]

Second and higher Order PDE: Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant co-efficients, Partial differential equation with variable co-efficients reducible to equations with constant coefficients, their complimentary functions and particular Integrals, Equations reducible to linear equations with constant co-efficients. [14]

Solution of Second order PDE: Classification of linear partial differential equations of second order, Hyperbolic, parabolic and elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method. [12]

Text Books:

1. Ian N. Sneddon : Elements of Partial Differential Equations, McGraw-Hill Book Company, 1988.
2. S.B. Rao and H.R. Anuradha : Differential Equations, University Press, 1996.

Reference Books:

1. W.T.H. Piaggio : Elementary Treatise on Differential Equations and their applications, CBS Publishers N.Delhi,1985.
2. D.A.Murray: Introductory Course on Differential Equations, Orient Longman, (India), 1967
3. Erwin Kreyszing : Advanced Engineering Mathematics, John Wiley & Sons, Inc. New York, 1999
4. Frank Ayres : Theory and Problems of Differential Equations, McGraw Hill Book Company, 1972
   J.N. Sharma &Kehar Singh : Partial Differential Equations

MS 212 Numeric Analysis 3-1-0-4

Interpolation: Interpolation with equal intervals: Newton's forward and Newton's backward interpolation formulae. Newton's divided difference, Lagrange's Interpolation formulae. [10]

Central Differences: Gauss forward and Gauss's backward interpolation formulae, Sterling, Bessel Formula. [8]

Iterative Methods: Newton Raphson Method, Successive Bi-Section, RegulaFalsi, Successive Approximation Method. [11]

Numerical Methods: Newton-Cote's Quadrature formula, Trapezoidal rule, Simpson's one-third and three-eighth rule, Picard method, Euler method, Runge-Kutta Methods. [10]

Text Books:

1. Babu Ram: Numerical Methods, Pearson Publication.

2. R.S. Gupta, Elements of Numerical Analysis, Macmillan's India 2010.

Reference Books:

1. M.K. Jain, S.R.K.Iyengar, R.K. Jain : Numerical Method, Problems and Solutions, NewAge International (P) Ltd., 1996
2. S.S.Sastry: Introductory Methods of Numerical Analysis, 3rd edition(2000), Prentice Hall of India Pvt. Ltd., New Delhi.5. C.E. Froberg : Introduction to Numerical Analysis (2nd Edition).
   S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

MS 222 Real Analysis 3-0-0-3

Neighborhood and Limit Points: Boundedness of the set of real numbers, least upper bound, greatest lower bound of a set, neighborhoods, interior points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weierstrass theorem. [10]

Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence. [9]

Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, D-Alembert's ratio test, Cauchy's general principle of Convergence of series, Leibnitz test, Absolute and conditional convergence. [12]

Riemann integral: Lower and upper Riemann integrals, Riemann Integrability, Mean value theorem of integral Calculus, Fundamental theorem of Integral Calculus. [8]

Text Books:

1. R.R. Goldberg : Real Analysis, Oxford & I.B.H. Publishing Co., New Delhi, 1970
2. S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd.,

Allahabad.

Reference Books:

1. Shanti Narayan : A Course in Mathematical Analysis, S.Chand and company, New Delhi.
2. D. C. Gokhroo, Real analysis, NavkarPrakashan.
3. T.M. Apostol: Mathematical Analysis, Narosa Publishing House, New Delhi, 1985
   Earl D. Rainville : Infinite Series, The Macmillan Co., New York

Chemistry

CH 181 Physical and Inorganic Chemistry-I 2-0-0-2

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective nuclear charge. **[5]**

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule-Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 4thEdition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I 2-0-0-2

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer compounds and field effects. **[5]**

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogeniccentre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogeniccentresdiastereomers, threo and erythrodiastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation,Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivityin alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes- mechanisms involved in hydrogenation, electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration- reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I 3-0-0-1.5

Experiments based on the contents of CH 181 and CH 191.

CH 182 Physical and Inorganic Chemistry-II 2-0-0-2

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphurtetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D.

Tuli&ArunBahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand &Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand& Co .Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 192 Organic Chemistry-II 2-0-0-2

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed. 2007, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II 3-0-0-1.5

Experiments based on the contents of CH 182 and CH 192.

CH 291 Physical Chemistry-I 2-0-0-2

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU&dHfor the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A &G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it.

Concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. Expression for the rate constant based on equilibrium constant and thermodynamic aspects. **[11]**

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

CH 223 Organic Chemistry-III 2-0-0-2

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and hypochromic shifts, UV spectra of conjugated enes and enones. **[6]**

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, LedererManasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel'smethod. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 20th Ed. 2008, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III 3-0-0-1.5

Experiments based on the contents of CH 291, CH 213 and CH 223.

CH 272 Physical Chemistry-II 2-0-0-2

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibriaof one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point ($NaCl-H_2O$), ($FeCl_3-H_2O$) and ($CuSO_4-H_2O$) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-$HCl-H_2O$ and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications. **[10]**

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorfand moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometrictitrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using hydrogen quinhydrone and glass electrodes. **[12]**

Chemical Equilibrium: Equilibrium constant and free energy. Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, Clausius-Clapeyron equation and their applications. **[4]**

Suggested Readings:

Text Books:

4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand &Co.Ltd.

CH 292 Organic Chemistry-IV 2-0-0-2

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagelcondensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic). **[6]**

CH 262 Laboratory Course in Chemistry-IV 3-0-0-1.5

Experiment based on the contents of CH 272, CH 282 and CH 292.

Computer Science

CA 121 Programming Concepts using C Language 3-0-0-3

Development of Algorithms and Flowcharts: Importance, Symbols and Structure. [5]

Structure: Basic Structure of C Program, Constant, Variable, Data Types, Data Declaration, Operations (Arithmetic, Relational, Logical), Increment and Decrement Operators, Assignment Operator, Precedence of Arithmetic Operators, Operator Expression, Type Conversions in Expressions, Assignment Statements. [8]

Control Structure: Input and Output using getchar and putchar, Printf, Scanf Functions, Condition Statements, Simple if- else, Switch, Concept of Loop (While, For, Do-While), Break and Continue. [8]

Array: One Dimensional Array, Iterative Programs, 2-D Arrays, Matrix Operations. [5]

Concept of Sub Programming: Functions, External Variable Scope Rules, Header Files, Static Variables, Parameter Passing (Call By Values And Call By Reference), Recursion, C Preprocessor, Pointers. [7]

Advanced C concepts: Structure, Union, Argument Passing Using Pointer, Array of Pointers. [6]

CA 151 *C Language Laboratory* 0-0-4-2

Assignments are based on the Course CA 121 Programming Concepts Using C Language.

CA 122 Data Structure Through C 3-0-0-3

Introduction: Concept of Data Structure, Types of Data Structure. [3]

Array: Representation of Single and Multidimensional Array. [2]

Stack and Queue: Introduction and Primitive Operations on Stack: Stack Application; Infix, Postfix, Prefix Expressions, Evaluation of Postfix Expression, Conversion from Infix to Postfix (Algorithms only), Introduction and Primitive Operations on Queues. [9]

Sorting Techniques: Insertion Sort, Selection Sort, Merge Sort and Quick Sort. [7]

Searching Techniques: Linear Search, Binary Search. [6]

List: Introduction to Linked List, Sequential and Link Lists Operation such as Traversal, Insertion, Deletion, Searching. [8]

Tree: Introduction and Terminology, Traversal of Binary Trees, Recursive Algorithms for Tree Operation (Concept). [4]

Text Books:

1. Schaum Series, "Data Structures",TMH, New Delhi
2. Langsam , Augenstein, Tannenbaum, "Data Structure Using C and C++", PHI,

Reference Books:

Assignments are based on the Course Numerical Analysis.

Mody University of Science & Technology

B.Sc. (Hons) Psychology
Session 2016-2017

Curriculum Structure

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

B.Sc. (Hons.) Psychology
Starting from year 2015-2016
College of Arts, Science and Humanities

A new programme B.Sc. (Hons.) Psychology is being proposed as a new programme. Since one student had already taken admission in this programme in academic year 2015-16, therefore, the new programme would be effective with retrospective approval from academic year 2015-16. The first year of the programmes comprises a few existing courses from B.Sc. / B.Sc. (Hons.) programme along with few additional existing courses of B.A / B.A. (Hons.) Psychology. The need, input qualification, number of seats, the first year curricular structure etc. is given as under. The second and third year curricular structure would be approved in due time.

Programme Level: Undergraduate **Duration:** Three Years (Six Semesters)

No. of Seats: 10

Introduction:

Psychology is one of the important disciplines in the area of behavioural sciences. It is the scientific study of human behaviour. In the present era of stress and change, there has been rapid increase in the demand of professionals in the various fields of Psychology. Considering such requirements, it is proposed to start an undergraduate programme in Psychology, namely, B. Sc. (Hons.) in Psychology, with the aim of acquiring basic knowledge and skills in the fields of Psychology. The first batch of the programme in CASH is proposed to be admitted in the session 2015-2016.

Input Qualification:

Candidate should have passed 10+2 from a recognized Board with proficiency in English. The candidates should have studied Physics, Chemistry and Biology at 10+2 or equivalent stage.

Programme and Teaching Methodology

The teaching methods include lectures, practicals, field visits, workshops, seminars, field visits, guest lectures etc.

Evaluation Procedure:

Students are assessed through examinations, assignments, laboratory skills and presentations as per the University examination system.

B.Sc. (Hons.) Psychology

PL 111 Basic Psychological Processes-I 3-0-0-3

UNIT-I

Introduction: Meaning and Definition of Psychology, Historical Background, Psychology as a Scientific Study of Behaviour, Scope of Psychology. [9]

UNIT-II

Methods of Psychology: Experimental Method, Observational Method, Case Study, Survey Method, Field Study and Field Experiment. [7]

UNIT-III [6]

Motivation: Meaningand Nature, Types of Motives: Primary and Secondary, Conflicts in Motives: Approach-Approach, Avoidance-Avoidance and Approach-Avoidance.

UNIT-IV [9]

Learning: Meaning and Nature, Theories of Learning: Trial and Error, Learning by Insight, Classical and Instrumental Conditioning. Schedules of Positive Reinforcements.

UNIT-V [8]

Personality: Meaning and Nature, Determinants of Personality, Personality Traits, Development of Personality: Freudian's Psycho-Sexual Theory and Erikson's Psycho-Social Theory.

Text Book

1. Morgan, C. T., King, R. A., Weisz, J. R., & Schopler, J. Introduction to Psychology. Tata McGraw-Hill, New Delhi.

Reference Book:

2. Atkinson, R. L., Atkinson, R. C., & Hilgard, E. R. Introduction to Psychology. Harcourt Brace Jovanovich, New York.
3. Baron, R. A. Psychology: The Essential Science. Allyn & Bacon, New York.
4. Zimbardo, P. G., & Weber, A. L. Psychology.Harper Collins College Publisher, New York.

PL 121 Experimental Methodology & Elementary Statistics-I 3-0-0-3

UNIT-I

Scientific Foundations of Research: Nature of Science and Scientific Method, Steps Involved in Experimentation. [5]

[5]

UNIT-II

Problems and Hypothesis: Nature, Type and Sources.

[7]

UNIT-III

Variables: Nature and Types; Control of Variables.

UNIT-IV [5]

Meaning and Purpose of Statistics in Psychology: Discrete and Continuous Scores. Nature and Levels of Measurement.

UNIT-V

Frequency Distribution and Their Graphical Presentation: Frequency Polygons, Histograms and Ogive. Percentile Point and Percentile Ranks. [6]

UNIT-VI [8]
Measures of Central Tendency: Mean, Median and Mode.

UNIT-VII
Reliability of Statistics: Significance of Difference Between Two Means [3]

Text Book

1. McGuigan, F. J. Experimental Psychology. Prentice-Hall of India, New Delhi.

Reference Book:

2. Broota, K. D. Experimental Design in Behavioural Research. Wiley Eastern, New Delhi.
3. Garrett, H. E. Statistics in Psychology and Education. Paragon International Publishers, New Delhi.
4. Guilford, J. P., &Fruchter. Fundamentals of statistics in Psychology and Education. Kogakusha, Tokyo.

PL 131 Psychology Lab.-I 0-0-2-1

Assignments are based on the course PL 111 Basic Psychological Processes-I containing exercises on learning and personality.

PL 112 Basic Psychological Processes-II 3-0-0-3

UNIT-I
Sensory and Perceptual Processes: Visual and Auditory Senses: Structure and Functions, Attention: Nature and Types, Perception: Nature and Determinants, Perceptual Organization, Form, Space and Depth Perception. [8]

UNIT-II
Memory and Forgetting: Sensory,Short-Term and Long-Term Memories; Theories of Memory: Information-Processing and the Levels-of-Processing Theories; Causes and Theories of Forgetting, Forgetting Curve, Reconstructive Memory. [7]

[6]

UNIT-III
Emotion: Nature of Emotions, Physiological Correlates, Theories of Emotion: James-Lange, Cannon-Bard and Schachter-Singer.

[9]

UNIT-IV
Thinking: The Thinking Process, Problem Solving and Creative Thinking, Role of Set and Insight, Concept Formation.

[9]

UNIT-V
Intelligence: Nature, Theories of Intelligence: Factor and Process Theories of Intelligence; Assessing Intelligence: Stanford-Binet Intelligence Scale and Wechsler Tests.

Text Book

1. Morgan, C. T., King, R. A., Weisz, J. R., &Schopler, J. Introduction to Psychology. Tata McGraw-Hill, New Delhi.

Reference:

2. Atkinson, R. L., Atkinson, R. C., &Hilgard, E. R. Introduction to Psychology. Harcourt Brace Jovanovich, New York.

4. Zimbardo, P. G., & Weber, A. L. Psychology.Harper Collins College Publisher, New York.

PL 122 Experimental Methodology & Elementary Statistics-II 3-0-0-3

UNIT-I [4]

The Measurement of Variables: Types of Scales: Nominal, Ordinal, Interval and Ratio Scales.

[7]

UNIT-II

Sampling Methods: Probability and Non-Probability Sampling Methods.

[8]

UNIT-III

Experimental Design: Single Group Design, Between Subject Design, Randomized, Matched Groups and Factorial Designs.

[5]

UNIT-IV

Measures of Variability: Range, Quartile Deviation and Standard Deviation.

[4]

UNIT-V

Normal Probability Curve: Properties and Applications. Skewness and Kurtosis.

[6]

UNIT-VI

Reliability of Statistics: Chi-Square.

[5]

UNIT-VII

Correlations: Product-Moment and Rank Order.

Text Book

1. McGuigan, F. J. Experimental Psychology. Prentice-Hall of India, New Delhi.

Reference Book:

2. Broota, K. D. Experimental Design in Behavioural Research. Wiley Eastern, New Delhi.
3. Garrett, H. E. Statistics in Psychology and Education. Paragon International Publishers, New Delhi.
4. Guilford, J. P., & Fruchter. Fundamentals of statistics in Psychology and Education. Kogakusha, Tokyo.

PL 132 Psychology Lab.-II 0-0-2-1

Assignments are based on the course PL 112 Basic Psychological

Processes-II containing exercises on memory and intelligence.

PL 221 Psychology of Human Development-I 3-0-0-3

UNIT-I [8]
Concept of Development: Principles of Growth. Maturation and Development, Developmental Stages.

UNIT-II [6]
Determinants of Development: Biological and Socio- Cultural.

UNIT-III [9]
Methodological Approaches: Longitudinal and Cross-Sectional; Sequential Strategies and Cohorts. Methods of Study: Observational, Experimental, Field Study, Interview and Testing.

UNIT-IV [8]
Prenatal Development: Stages and Factors Affecting Prenatal Development.

UNIT-V [8]
The Neonate: Physical Characteristics, Reflexes, Sensory and Motor Capacities.

Text Books:

1. Hurlock, E. Child Development. Tata McGraw-Hill, New Delhi.
2. Berk, L. E. Child Development. Prentice-Hall of India, New Delhi.

Reference Book:

3. Kaluger, G. S., &Kaluger, M. F. Human Development: The Span of Life. Times Mirror, St. Louis.
4. Santrock, J. W. Life-Span Development. McGraw-Hill, New York.
5. Shaffer, D. R. Developmental Psychology. Brooks &Cole, California.

PL 231 Applied Psychology-I 3-0-0-3

UNIT-I [8]
Introduction: Nature and Fields of Applied Psychology.

UNIT-II
Guidance: Definition and Objectives, Type of Guidance: Personal Guidance, Educational Guidance and Vocational Guidance, Role of Family and School in Guidance Services. [7]

UNIT-III [6]
Counseling: Meaning and Definition, Objectives and Functions of Counselor, Phases of Counseling: Initial, Middle and Follow-Up, Modern Trends in Counseling, Ethical Issues in Counseling.

UNIT-IV [9]
Psychology in Education: School as an Agent of Socialization, Factors Influencing School Achievement, Learning and Motivational Problems,

Exceptional Children: Problems and Remedial Measures.

UNIT-V [9]

Psychology and Anti – Social Behaviour: Crime and Delinquency, Techniques of Crime Detection, Treatment of Offenders, Drug Addiction and Remedial Measures.

Text Book:

1. Anastasi, A. Fields of Applied Psychology. Tata McGraw-Hill, New Delhi.

Reference Book

2. Goldstein, A. P., & Krasner, B. Modern Applied Psychology. Pergmon Press, New York.
3. Rao, S. N. Counselling and Guidance. Tata McGraw-Hill, New Delhi.
4. Charles, J. G., & Bruce, R. F. Counseling Psychology: Practices, Issues and Intervention. CENGAGE Learning, New Delhi.
5. Sue, R., Sue, D., & Sue, S. Understanding Abnormal Behaviour. Houghton Mifflin.

PL 241 Psychology Lab.-III 0-0-2-1

Assignments are based on the courses PL 221 Psychology of Human Development-I and PL 231 Applied Psychology-I containing exercises on the study of the characteristics of the neonate and guidance and counseling.

PL 212 Psychology of Human Development-II 3-0-0-3

UNIT-I

Development during Infancy: PhysicalGrowth and Motor Development; Sensory and Perceptual Development; Language, Emotional and Social Development. [8]

UNIT-II

Development during Childhood: Cognitive, Social, Emotional and Moral Developments. Development of Self-Identity. [6]

UNIT-III [9]

Puberty and Adolescence: Developmental Tasks; Physical and Psychological Changes; Development of Identity.

UNIT-IV [8]

Adulthood: Developmental Tasks; Choice of Vocation; Adjustment to Careers, Marriage and Family.

UNIT-V [8]

Old Age: Physical, Physiological, Psychological and Social Changes. Adjustment Problems and Specific Issues.

Text Book:

1. Hurlock, E. Child Development. Tata McGraw-Hill, New Delhi.
2. Berk, L. E. Child Development. Prentice-Hall of India, New Delhi.

Reference Book:

3. Kaluger, G. S., &Kaluger, M. F. Human Development: The Span of Life. Times Mirror, St. Louis.
4. Santrock, J. W. Life-Span Development. McGraw-Hill, New York.
5. Shaffer, D. R. Developmental Psychology. Brooks &Cole, California.

PL 222 Applied Psychology-II 3-0-0-3

UNIT-I

Psychology in Organization: Personnel Selection, Job Analysis and Performance Appraisal, Fatigue and Accidents, Advertising and Consumer Behaviour. [7]

UNIT-II

Psychology and Health: Mental Health and General Health, Dimensions of Health and Health Behaviour, Mental Retardation. Major Therapies: Psychoanalytic, Behaviour and Person- Centered. [10]

UNIT-III

Stress Management: Meaning and Definition of Stress, Causes and Effects of Stress, Techniques of Stress Management. [9]

UNIT-IV

Psychology and Social Behaviour: Social Cognition: Prejudice and Stereotype. Conflicts and Resolution. [8]

UNIT-V

Psychology and Sports: Personality Traits of Efficient Sportsmen, Team Feeling, Motivational Problems. [5]

Text Book:

1. Anastasi, A. Fields of Applied Psychology. Tata McGraw-Hill, New Delhi.

Reference Book:

PL 232 Psychology Lab.-IV 0-0-2-1

Assignments are based on the courses PL 212 Psychology of Human Development-II and PL 222 Applied Psychology-II containing exercises on the study of developmental pattern of various stages of human life and stress management.

PL 311 Social Psychology - I 3-0-0-3

UNIT-I [3]

Social Psychology: Nature and Subject Matter; Relationship with other social sciences.

UNIT-II [5]
Methods: Experimental, Observation, and Sociometry.

UNIT-III
Socialization: Nature, Process and Agents of Socialization. [4]

UNIT-IV [8]
Group: Nature, Types and Functions; Psychology of Crowd, Mob and Audience.

UNIT-V [5]
Social Norms: Meaning, Characteristics and Formation

UNIT-VI [6]
Prosocial Behavior: Co-operation and Helping Behavior -Nature and Determinants

UNIT-VII [8]
Leadership: Nature, Types and Functions. Theories- Trait , Situational and Interactional

Text Book:

1. Baron, R.A., Byrne, D. Social Psychology (10th Edn)-Prentice-Hall.
2. Daniel, P, Cozby, P.C.Social Psychology, New York: CBS College Publishing Holt, Rinehart and Winston.

PL 321 Biological Basis of Behaviour 3-0-0-3

UNIT-I

Biological basis of Behaviour: Evolutionary and genetic foundations. Research Methods – Neuroanatomical, Neurophysiologic, Neurochemical and Neuroelectrical. [6]

UNIT-II [7]
Cell and Neurons: Structure and types and functions of neurons; Neural impulse: Origin, Conduction and Measurement. Neurotransmitters.

UNIT-III [9]
Nervous System: Central nervous system and Peripheral nervous system – Structure and Functions. Endocrine system and its behavioral implications.

UNIT-IV [6]
Sleep, arousal, and dreaming: Nature, stages of sleep, sleep deprivation, brain mechanisms of sleep and dreaming. Neural basis of arousal and attention.

UNIT-V [5]
Motivation: Neural mechanism of Hunger, Thirst and Sex

UNIT-VI [6]
Biological basis of learning and memory: Neurophysiology of learning. Biological basis of memory: the search for the engram, PET scan and Biochemical factors in memory.

Text Book:

1. Carlson, N.Biology of Behavior. Boston : Allyn and Bacon.
2. Graham, R.B.Physiological Psychology. California :Wadsworth.

Reference Book

8. Rosenzweig, M.R. and Liemen, A.L.Physiological Psychology. New York : Random House.

PL 331 Systems of Psychology 3-0-0-3

UNIT-I [4]
Nature and scope of Psychology: Psychology as science; Historical Origins: Pre-experimental period- Science Among Greeks, British Empiricism, German Nativism.

UNIT-II [5]
Schools of psychology: Structuralism, Functionalism, Behaviourism, Psycho analysis, Gestalt psychology. Psychology in the post school era: cognitive revolution. Contemporary status

UNIT-III [7]
Learning: Concept and Theories: Hull, Tolman Spence, Miller and Dollard and Skinner.

UNIT-IV [6]
Intelligence: Nature, Determinants Theories: Spearman, Thurstone, Cattell,

Guilford, Sternberg, Gardner.

UNIT-V [6]
Memory: Concepts and Models. Level of Processing (Craik and Lockhart), working memory (Buddelay and Hitch), Monohierarichal (Tulving), PDP (McClelland).

UNIT-VI [5]
Personality: Nature, Determinants,Theories- Psychoanalytic, Neo-Freudian, Rogress, Allport, Cattell, Eysenck.

UNIT-VII [6]
Language Behaviour: Nature, Development of Language, Theories of Language Development: Mowrer, Skinner and Chomsky Language and thought: Whorfian Hypothesis.

Text Book

PL 341 Psychopathology-I 3-0-0-3

UNIT-I [3]
Psychopathology: Meaning, Concept and Criteria of Normality and Abnormality.

UNIT-II [7]
Models of Psychopathology: Biological, Psychodynamic, Behavioral, Cognitive and Humanistic- Existential.

UNIT-III [3]
Classification System: Classification of Disorders, Need for Classification, DSM system of Classification.

UNIT-IV [5]
Diagnostic Assessment: Case History, Interview, Projective Techniques

UNIT-V [12]
Anxiety Based Disorders: Nature, Symptoms and Etiology-Generalized Anxiety Disorders, Phobia, O.C.D, Conversion Hysteria and Dissociative Disorders

UNIT-VI [5]

Psycho physiological Disorders: Nature, Symptoms and Etiology – Asthma, Peptic Ulcer, CHD, Hypertension

UNIT-VII [4]
Mental Retardation: Nature, Types, Causes and its Management

Text Book:

1. Carson, R.C.; Butcher, J.N., et al. Abnormal Psychology ; New Delhi: Pearson Education.

Reference Book

2. Sarason, I.G. and Sarason, B.R. Abnormal Psychology: The Problem of Maladaptive Behavior ;New Delhi: PearsonEducation Inc.
3. Davison, G.C. & Neale, J.M. Abnormal Psychology ;New York: Willy.

PL 351 Industrial and Organizational Psychology-I 3-0-0-3

UNIT-I
Industrial/Organizational Psychology: Nature, historical development and scope. [5]

UNIT-II
Personnel selection and development: Procedures and Assessment method for selection. Measurement of individual differences. Basic selection model. Techniques of selection. Application blank, interview and testing. [9]

UNIT-III [9]
Training of Personnel: Nature, Principles and Methods.On the job and of the job training methods. Evaluation of training programme

UNIT-IV [10]
Performance Appraisal: Necessity. Performance criteria, Techniques of performance appraisal

UNIT-V [6]
Work environment: Noise, atmospheric conditions. Illumination and performance

Text Book

PL 361 Psychological Testing-I 3-0-0-3

UNIT-I [9]
Psychological Tests: Historical antecedents. Characteristics, types and applications. Sources of bias in Psychological Testing. Ethics of Psychological Testing.

UNIT-II [9]
Psychometric properties of tests: Reliability: Meaning, sources of error, methods of estimate, and special problems.

UNIT-III [9]
Validity: meaning, validation procedures, and special problems.

UNIT-IV [12]
Construction and Standardization of Psychological Tests
General steps of test construction: Preparation for Item writing, item analysis, reliability, validity. Development of norms, Item analysis for speed test; cross validation.

Text Book:

1. Aiken, L.R. Psychological Testing and Assessment. Boston : Allyn and Bacon.
2. Anastasi, A. and Urbina, S Psychological Testing. upper saddle River (NJ) : Prentice Hall.

PL 322 Guidance and Counseling **3-0-0-3**

UNIT-I
Guidance: Historical Perspective, Objectives and Principles of guidance. Types of Guidance: Personal, Educational and Vocational. [5]

UNIT-II [5]
Counseling: Defining features, Goals. Necessary personal characteristics/qualities of effective counselors.

[9]

UNIT-III
Counseling approaches: Affectively oriented approaches: psychoanalytic, person-centered and existential; Cognitively oriented approaches: Eclectic and behavioral.

[9]

UNIT-IV
Counseling process: External conditions and preparation; Structuring the counseling relationship; Counseling interview and degrees of lead by the counselor, nonverbal behavior; Group counseling approaches.

UNIT-V

Areas of counseling: Educational, career, family and marital gerontological and weaker sections; Stress management oriented counseling. [7]

UNIT-VI
Evaluation of counseling: Nature and purpose, steps in evaluation, and outcome research. [4]

Text Book

1. Bernard, H.W. and Fullmer, D.W.Principles of Guidance. New York : Crowell.
2. Burnard, Philips; Counseling skills for Health Professional. Madras: Chapman and Hall.

PL 332 Experimental Psychology 3-0-0-3

UNIT-I
Experimental Psychology: Nature and History, Experimental Method [4]

UNIT-II
Sensory Processes: Visual, Auditory – Structure and Functions of Eye and Ear. Perception: Nature, Perception of form – Figure and Ground, Perceptual Organization, Depth Perception–Cues. [9]

UNIT-III
Psychophysics: Problems and Methods of Classical Psychophysics. [8]

UNIT-IV
Selective and sustained attention: Concepts and theories. Filter theory, response selection theory. [6]

UNIT-V
Learning: Nature, Classical Conditioning- Phenomena and Procedure: Instrumental Conditioning- Appetitive and Aversive; Operant Conditioning [5]

UNIT-VI
Verbal Learning: Methods, Materials, Organizational Processes. [3]

UNIT-VII [4]
Discrimination Learning: Phenomena, Procedures and paradigms

Text Book

1. Bourne, L.E. Jr., Dominowski, R.L., & Loftus, E.F.Cognitive Processes. New Jersey. Prentice Hall.
2. D' Amato, M.R. Experimental Psychology. New Delhi: Tata McGraw Hill.

Reference Book

3. Flaherty, C.F. et. Al. Learning and Memory. Chicago: Rn McNally Pub.Co.
4. Gordon, W.C. Learning and Memory. California: Brooks / Cole.
5. Kling, J.W. and Riggs, L.A. Woodworth and Schlosberg's Experimental Psychology.London: Methuen & Co.
6. Mazur. Learning and Behavour, New Delhi: Prentice Hall of India.
7. Snodgrass, J.G., Berger, G.L., & Haydon, M. Human Experimental Psychology, New York: Oxford.
8. Solso, R.L.Cognitive Psychology Allyn& Bacon.

PL 342 Psychopathology-II 3-0-0-3

UNIT-I

Substance Abuse Disorder: Alcoholism and Drug Dependence; Causes Consequences and Rehabilitation. [6]

UNIT-II [10]

Mood Disorders: Unipolar and Bipolar Symptoms and Etiology

UNIT-III [11]

Schizophrenia: Nature , Symptoms , Types and Etiology

UNIT-IV

Psychotherapy: Nature and Goals – Psychoanalysis, Behavior Therapy, Cognitive-Behavior Therapy, Client Centered Therapy, Chemotherapy and ECT [12]

Text Book

1. Carson, R.C.; Butcher, J.N., et al.. Abnormal Psychology NewDelhi: Pearson Education.

Reference Book

2. Davison, G.C. & Neale, J.M. Abnormal Psychology New York: Willy
3. Sarason, I.G. and Sarason, B.R. Abnormal Psychology: The Problem of Maladaptive Behavior New Delhi: Pearson Education Inc.

PL 352 Industrial and Organizational Psychology-II 3-0-0-3

UNIT-I

Work motivation: Nature, Theories: Need theories, Expectancy theory, equity, goal setting, reinforcement and self- efficacy theory. [7]

UNIT-II

Job Satisfaction: Concept, determinants and measurement. [5]

[6]

UNIT-III

Supervision and leadership: Functions and approaches. Trait, behavioral and contingency models.

UNIT-IV

Accident and safety: Risk taking behavior and accidents. Accident [6]

proneness. Causes. Preventive and safety measures of accidents.

UNIT-V [6]
Human engineering: Man-machine system. Designs, displays, controls and action.

UNIT-VI
Occupational stress: counter productive behavior, role conflicts, absenteeism and burnouts, their causes and interventions. [9]

Text Book

1. Blumm M.L. and Nylor, J.C. Industrial Psychology. N.Y. : Harper & Row.
2. Davis. K. Human Behaviour at Work. New Delhi : Tata McGraw Hill.

Reference Book

3. Dunnet, M.D. (Ed.).Handbook of Industrial and Organizational Psychology. Chicago :Raud McNally.

8. Luthans. F. Organizational Behaviour. New York :McGraw Hill.
9. Mohanty G. Industrial and Organizational psychology New Delhi: Oxford and IBH.

PL 362 Psychological Testing-II **3-0-0-3**

UNIT-I [9]
Personality Tests: Purpose and Types, Inventories-Cattell's 16 PF, MMPI and Neo-five factors.

UNIT-II [9]
Projective- Rorschach and TAT.

UNIT-III [8]
Intelligence Tests: WAIS, WISC, Raven's Standard and Color progressive Matrices, Bhatia battery.

UNIT-IV [6]
Measurement of aptitude and Interest

UNIT-V [7]
Measurement of Creativity- Torrance Test
Anxiety and Depression,

Text Book:

1. Aiken, L.R. Psychological Testing and Assessment. Boston : Allyn and Bacon.

2. Anastasi, A. and Urbina, S Psychological Testing. upper saddle River (NJ) : Prentice Hall.

Reference Book

3. Freeman, F.S. Theory and practice of psychological testing. New Delhi :Oxford and IBH.

SYLLABUS FOR NEW PAPERS OF BIOTECHNOLOGY

BT 271 Food Technology 2-0-0-2

1. **Food & Fermentation Technology**: Origin, scope and development of fermented food products. **[2]**

2. **Development of novel food and food ingredients**: Single cell protein, Mushroom cultivation, Nutraceuticals, Probiotic foods, genetically modified foods. **[5]**

3. **General principles:** Food spoilage and preservation, contamination of foods and their involvement in disease outbreaks. Methods of food preservation. **[9]**

4. **Packaging of foods:** Packaging Materials, Controlled atmosphere packaging. **[4]**

5. **Food plant Sanitation:** Disposal and treatment of food industry waste, food laws and current concepts in food safety **[6]**

Suggested Readings

Text Book

1. Frazier and Westhoff, Food Microbiology, Tata McGraw Hill Publishing Company Ltd, New Delhi
2. Banwart,GJ: Basis of Food Microbiology, CBS Publishers and Distributors, New Delhi

References

3. Adams and Moss, Food Microbiology, Royal Society of Chemistry Publication, Cambridge

BT 261 Food Technology Laboratory 0-0-2-1

Assignments are based on the course BT 251 Food Technology containing exercises on manufacturing and preservations of food products

BT 242 Plant and Animal Biotechnology 2-0-0-2

1. Introduction to animal tissue culture, Disaggregation techniques, Sterilization, Normal and transformed cell lines, primary culture, secondary culture, Media formulation, Growth characteristics, preservation of cell lines, Embryo culture and IVF **[12]**

2. Plant Tissue culture Introduction: Terms and Definition, Historical aspects and scope, Classical vs modern approach, Totipotency and cell theory; Growth and Differentiation; Culture media and its **[9]**

constituents; Sterilization

3. Micropropagation Technique, Genetic Variability, Protoplast fusion Technique and somatic hybridization **[5]**

Suggested Readings

Text Book

1. Freshney Y; Culture of Animal Cells; John Wiley and Sons Publication, New York
2. Spler R.E. & Grifith J.B.; Anianl Cell Biotechnology
3. Bhojwani S.S.; Plant Tissue Culture: Applications and Limitations; Elsevier, Amsterdam.

References

4. Razdan M.K; An Introduction to Plant Tissue Culture; Rastogi Publication, Meerut.
5. Chawla H.S; Introduction to Plant Biotechnology; Oxford and IBH Publishers, New Delhi.

BT 252 Tissue Culture Laboratory **0-0-2-1**

Assignments are based on the course BT 242 Plant and Animal Biotechnology containing exercises on media preparation and different culturing methods of plant and animal cells.

BT 391 Medical Biotechnology **2-0-0-2**

1. **Gene therapy** – background, types of gene therapy, vectors in gene therapy, epigenetic inheritance, problems & ethics. **[3]**
2. **Gene Delivery methods** – Viral delivery, Non-viral delivery, Antibody engineering. **[3]**
3. **Gene therapy Models** – Liver diseases, Lung diseases, Hematopoietic diseases, Circulated gene products, Cancer & Auto-immune diseases. **[4]**
4. **Vaccines** – Vaccine vectors, nucleic acid vaccines, immuno-enhancing technology. **[3]**
5. **Synthetic therapy** – synthetic DNAs, therapeutic Ribozymes, synthetic drugs. **[4]**
6. **Tissue Engineering** – Skin, Liver, Pancreas. **[3]**
7. **Xenotransplantation** – terminology, technology behind it, organ donors, social & ethical issues. **[3]**
8. **Drug delivery** – conventional & new approaches to drug delivery. **[3]**

Suggested Readings

Text Book

1. King R.J.B., Cancer Biology, Addision Wesley Longmann Ltd, U.K., 1996.
2. Ruddon.R.W. Cancer Biology, Oxford University Press, Oxford, 1995.
3. Maly B.W.J., Virology a practical approach, IRL press, Oxford, 1987.
4. Dunmock.N.J and Primrose S.B., Introduction to modern Virology, Blackwell Scientific Publications,Oxford, 1988.

References

5. Leon Lachman et al Theory and Practice of Industrial Pharmacy, 3 Edition, Lea and Febiger, 1986
6. Remington's Pharmaceutical Science, Mark Publishing and Co.
7. A.R Leach, Molecular Modeling Principles and Applications, Longman, 1996
8. J.M. Haile, Molecular Dynamics Simulation Elementary methods, John Wiley and Sons ,1997

BC 312 Enzyme and Industrial Biochemistry 3-0-0-3

1. **Extraction & Purification of Enzymes:** Different sources of enzymes, Extraction of soluble enzymes and membrane bound enzymes. Preliminary purification of enzymes by various fractionation methods – advanced purification methods **[5]**

2. **Enzyme Kinetics:** Factors affecting the enzyme rates. Kinetics of single substrate enzyme catalyzed reactions. Transformation of MM plots into Lineweaver Burk plot and Eddle Hofstee plots. Enzyme inhibitors, Introduction to irreversible and reversible. Allosteric enzymes, feedback inhibition and its significance in metabolic regulation. (Sequential and concerted). **[12]**

3. **Applications of Enzymes:** Importance of enzyme immobilization, Uses of enzymes in food and beverages, textile industries, leather industries and detergents. **[4]**

4. **Introduction to fermentation technology**: Isolation and screening of industrially important microbes, Inoculum preparation, strain improvement for better yield. Primary and secondary detection and assay of fermentation products. Microbial products: production of microbial enzymes-Amylase, cellulose, Pectinase and protease, Industrial production of alcohol, alcoholic beverages – Wine and Beer. **[10]**

5. **Microbes and Environment**: Microbes in mineral recovery-Bioleaching and Biosorption, microbial recovery of petroleum. Microbial degradation of xenobiotics. Sewage biodegradation. **[8]**

Suggested Readings

Text Book

1. Trevor Palmer; Enzymes – Biochemistry, Biotechnology, Clinical chemistry, 2004 East – West Press Edition.
2. Patel A.H.; Industrial microbiology, 2nd edition, 2012, Macmillan India Limited
3. Prescott, Harley and Klein Microbiology, 2nd edition, 1993, W.C.

Brown Publishing Co
4. Engal Paul; Enzyme 1977, John Willey and Sons Inc.
5. Pelczar. and Chan Microbiology, , McGraw – Hill Inc. NY
6. Ananthanarayanan. R. and Jayaram Panicker; Textbook of microbiology, C.K. Orient

References

7. Price Nicholas C. and Stevens Lewis; Fundamentals of Enzymology 2003 Oxford University Press.
8. Dixon; Enzymes, Web. Acad. Press.
9. Stanburry. P.Whitalcer and Hall, S.J. Principles of Fermentation technology, 1995.

BC 322 Enzyme and Industrial Biochemistry Laboratory 0-0-2-1

Assignments are based on the course BC 312 Enzyme and Industrial Biochemistry containing exercises on enzymes and their application in industries.

SYLLABUS FOR NEW PAPERS OF BIOCHEMISTRY

BC 231 Metabolism 2-0-0-2

1. **Bioenergetics:** Role of high energy compounds as energy currency of the cell; free energy of hydrolysis of ATP and other organophosphates. Biological oxidation, redox potential, phosphate potential. **[4]**

2. **The basic metabolic pathways:** anabolic, catabolic and amphibolic pathways. Interrelation between carbohydrates, fat and protein metabolism. **[3]**

3. **Carbohydrate metabolism:** oxidation of pyruvate, metabolism of glycogen, pentose phosphate pathway, C3, C4 and CAM pathway, oxidative phosphorylation, Regulation of committed step in each pathway. **[5]**

4. **Oxidation of fatty acids:** Carnitine cycle; beta oxidation. Alpha oxidation and omega oxidation. Biosynthesis of saturated fatty acids, Biosynthesis of unsaturated fatty acids. **[5]**

5. **Metabolism of amino acid:** Oxidative deamination, transamination, catabolism of carbon skeleton of amino acids. **[5]**

6. **Metabolism of purines:** de novo synthesis, salvage pathways; catabolism. Metabolism of pyramidines: - de novo synthesis, salvage pathways; catabolism. **[4]**

Suggested Readings

Text Book

1. Lehninger, L.S., et al., - Principles of Biochemistry. 4nd edition. CBS Publishers,
2. Murray, K. Robert, et al., - Harper's Biochemistry. 21st edition, 1998.

References

3. Voet and Voet - Biochemistry. 2nd edition. John Wiley and Sons, 1995.
4. Mathews, Freeland and Miesfeld - Biochemistry – a short course.Wiley & sons. 1996.

BC 212 Plant Biochemistry 2-0-0-2

1. **Photosynthesis:** Ultra structure and organization of chloroplast membranes, Biochemistry of RuBP carboxylase/oxygenase, Hatch and slack pathway, productivity of C4 plants, photorespiration and compensation point. **[7]**

2. **Nitrogen fixation**: nitrogenase and mechanism action of nitrogenase. Enzymes of nitrate metabolism, regulation of their synthesis and activity. **[4]**

3. **Plant growth regulators:** Plant growth regulators and their metabolic functions, synthetic growth hormones. **[7]**

4. **Secondary metabolites:** A brief account of secondary metabolites Importance of secondary metabolites: Protection of the producer plant from predators and insects. General biosynthetic pathways and functions of the secondary metabolites **[8]**

Suggested Readings

Text Book

1. H.D. Kumar and H.N. Singh; Plant Metabolism (1980) Publisher: Macmillan
2. Ramawat KG; Biotechnology: Secondary Metabolites (2000) Publisher: Science Publishers,U.S.
3. Dey PM and Harborne JB(Editors); Plant Biochemistry (1997) Publisher: Academic Press

References

4. Dennis, Turpin, Lefebvre and Layzell (Editors) Plant Metabolism (1997) Publisher: Longman.
5. Hans-Walter Heldt; Plant Biochemistry (3ed 2004) Publisher: Academic

BC 311 Nutritional and Clinical Biochemistry 2-1-0-3

Nutritional Biochemistry

1. **Basic Concepts Of Nutritional Biochemistry:** Introduction and definition of food and nutrition, functions of food, factors altering nutritional requirements, Macronutrients and Micronutrients and their functions. **[6]**

2. **Nutritive And Calorific Value Of Foods:** Basic concepts of energy expenditure, units of energy, measurement of energy expenditure by calorimetry, determination of amount of protein metabolized and **[7]**

calculation of total heat production; basal metabolic rate (BMR), energy requirements under physical activities, calculation of energy expenditure

Clinical Biochemistry

3. **Basic Concepts Of Clinical Biochemistry**

(a) Definition and scope of clinical biochemistry in diagnosis; setting up and solving problems related to operation of clinical biochemistry; internal and external quality assurance producers **[7]**

(b) Collection and preservation of biological fluids; physical and chemical analysis of urine and CSF; physiological factors affecting the composition of body fluids.

4. **Diagnostic Enzymology**

Principles of diagnostic enzymology; definition of functional and non-functional plasma enzymes, enzyme and enzymes pattern in health and diseases with special mention of plasma lipase, amylase, cholinesterase, alkaline and acid phosphates, SGOT, SGPT, LDH & CPK. Disorders of carbohydrate and lipid metabolism **[6]**

Suggested Readings

Text Book

1. Chatterjee M.N and Sinde R; Text book of Medical Biochemistry,
2. Thomas M. Devlin; Text book of Biochemistry with clinical correlation, , 3rd edition, A. John Wiley-Liss Inc. Publication.
3. Harold Varley; Practical Clinical Biochemistry, 4th edition, CBS Publication and Distributors, New Delhi.
4. Harrison T.R., Braunwald F, Isselbacher Principles of Internal Medicine, 14th edition, MC-graw hill, Newyork. Volume I and II.

References

5. Burtis C.A., Ashwood E.R. (eds) Tietz Fundamentals of Clinical Chemistry- (5th edition) Saunders WB Co.

8. Wong DWS; Mechanism and theory in food chemistry, CBS New Delhi, 1996

BC 321 Nutritional and Clinical Biochemistry Laboratory 0-0-2-1

Assignments are based on the course BC 311 Nutritional and Clinical Biochemistry containing exercises on qualitative and quantitative analysis of biomolecules and clinically important enzymes.

BC 312 Enzyme and Industrial Biochemistry 3-0-0-3

1. **Extraction & Purification of Enzymes:** Different sources of enzymes, Extraction of soluble enzymes and membrane bound enzymes. Preliminary purification of enzymes by various fractionation methods – advanced purification methods **[5]**

2. **Enzyme Kinetics:** Factors affecting the enzyme rates. Kinetics of single substrate enzyme catalyzed reactions. Transformation of MM plots into Lineweaver Burk plot and Eddle Hofstee plots. Enzyme **[12]**

inhibitors, Introduction to irreversible and reversible. Allosteric enzymes, feedback inhibition and its significance in metabolic regulation. (Sequential and concerted).

3. **Applications of Enzymes:** Importance of enzyme immobilization, Uses of enzymes in food and beverages, textile industries, leather industries and detergents. **[4]**

4. **Introduction to fermentation technology**: Isolation and screening of industrially important microbes, Inoculum preparation, strain improvement for better yield. Primary and secondary detection and assay of fermentation products. Microbial products: production of microbial enzymes-Amylase, cellulose, Pectinase and protease, Industrial production of alcohol, alcoholic beverages – Wine and Beer. **[10]**

5. **Microbes and Environment**: Microbes in mineral recovery-Bioleaching and Biosorption, microbial recovery of petroleum. Microbial degradation of xenobiotics. Sewage biodegradation. **[8]**

Suggested Readings

Text Book

1. Trevor Palmer; Enzymes – Biochemistry, Biotechnology, Clinical chemistry, 2004 East – West Press Edition.
2. Patel A.H.; Industrial microbiology,
3. Prescott, Harley and Klein Microbiology, 2nd edition, 1993, W.C. Brown Publishing Co
4. Engal Paul; Enzyme 1977, John Willey and Sons Inc.
5. Pelczar. and Chan Microbiology, , McGraw – Hill Inc. NY
6. Ananthanarayanan. R. and Jayaram Panicker; Textbook of microbiology, C.K. Orient

References

7. Price Nicholas C. and Stevens Lewis; Fundamentals of Enzymology 2003 Oxford University Press.
8. Dixon; Enzymes, Web. Acad. Press.
9. Stanburry. P.Whitalcer and Hall, S.J. Principles of Fermentation technology, 1995

BC 322 Enzyme and Industrial Biochemistry Laboratory 0-0-2-1

Assignments are based on the course BC 312 Enzyme and Industrial Biochemistry containing exercises on enzymes and their application in industries.

SYLLABUS FOR NEW PAPERS OF MICROBIOLOGY

MB 211 Microbial Physiology and Genetics 2-0-0-2

1. **Nutritional classification and metabolite transport:** carbon, energy and electron sources. Diffusion and active transport. **[3]**

2. **Chemolitho- and photo-trophic metabolism:** Physiological groups of aerobic and anaerobic chemolithotrophs. physiology of bacterial photosynthesis: light reactions, cyclic and non-cyclic photophosphorylation. **[5]**

3. **Microbial Energetics:** Concept of aerobic respiration, anaerobic respiration and fermentation. Central metabolic pathways: EMP pathway, ED pathway, PP pathway, Calvin and TCA cycle. bacterial electron transport, oxidation-reduction potential and energetic of electron transport. Oxidative phosphorylation. **[8]**

4. **Microbial Gene Transfer:** Transformation, Transduction, Conjugation, Plasmids, Transposons Life cycle and uses of following phages in microbial genetics- Lytic and Lysogenic phages. **[7]**

5. **Mutations**: Basic concepts of mutation, Molecular nature of mutations. [**3**]

Suggested Readings

Text Books

1. Moat AG and Foster JW. (2002). Microbial Physiology. John Wiley and Sons.

2. Madigan MT, and Martinko JM. (2006). Brock Biology of Micro-organisms. 8th edition. Parker J. Prentice Hall International, Inc.

3. Pelczar Jr MJ, Chan ECS, and Krieg NR. (2004). Microbiology. 5th edition Tata McGraw Hill.

References

4. Srivastava S and Srivastava PS. (2003). Understanding Bacteria. Kluwer Academic Publishers, Dordrecht

5. Stanier RY, Ingraham JL, Wheelis ML and Painter PR. (2005). General Microbiology. 5th edition McMillan.

MB 221 Microbial Physiology and Genetics Laboratory 0-0-2-1

Assignments are based on the course MB 211 Microbial Physiology and Genetics containing exercises on physiological and genetics aspects of microbes.

MB 212 Food and Industrial Microbiology 2-0-0-2

1. **Foods as a substrate for microorganisms:** Intrinsic and extrinsic factors that affect growth and survival of microbes in foods. **[3]**

2. **Food preservation and Fermented foods:** Principles, physical methods of food preservation, chemical methods of food preservation, fermented dairy products: yogurt, kumiss, kefir, and cheese, other fermented foods: dosa, sauerkraut, soy sauce and tampeh and probiotics. **[7]**

3. **Food borne diseases and control:** Food intoxications: *Staphylococcus aureus*, *Clostridium botulinum* and mycotoxins; Indices of food sanitary quality and sanitizers. **[5]**

4. **Introduction to industrial microbiology:** Brief history and developments in industrial microbiology, Batch, fed batch and continuous fermentations, strain development, preservation and maintenance of industrial strains. Crude and synthetic media; molasses, corn-steep liquor, sulphite waste liquor, whey and yeast extract. **[6]**

5. **Down-stream Processing and industrial application:** Filtration, centrifugation, cell disruption, solvent extraction, precipitation and ultrafiltration, lyophilization, spray drying. Citric acid, ethanol, and enzymes **[5]**

Suggested Readings

Text Books

1. Adams MR and Moss MO. (1995). Food Microbiology. 4th edition, New Age International (P) Limited Publishers, New Delhi, India.

2. Banwart JM. (1987). Basic Food Microbiology. 1st edition. CBS Publishers and Distributors, Delhi, India.

3. Davidson PM and Brannen AL. (1993). Antimicrobials in Foods. Marcel Dekker, New York.

4. Dillion VM and Board RG. (1996). Natural Antimicrobial Systems and Food Preservation. CAB International, Wallingford, Oxon.

References

6. Crueger W and Crueger A. (2000). Biotechnology: A textbook of Industrial Microbiology. 2nd edition. Panima Publishing Co. New Delhi.

7. Patel AH. (1996). Industrial Microbiology. 1st edition, Macmillan India Limited.

MB 222 Food and Industrial Microbiology 0-0-2-1

Assignments are based on the course MB 212 Food and Industrial Microbiology containing exercises on the role of microbes in foods and industries.

MB 351 Medical Microbiology 2-0-0-2

1. **Normal microflora and Host-pathogen interaction:** Skin, throat, gastrointestinal tract, urogenital tract Definitions of invasion, pathogen, parasite, pathogenicity, toxigenicity, virulence, carriers and their types, nosocomial infections, opportunistic infections, septicemia, septic shock, transmission and spread of infection. **[6]**

2. **Sample collection, transport and diagnosis:** Collection, transport and culturing of clinical samples, principles of different diagnostic tests. **[4]**

3. **Bacterial diseases:** *Bacillus anthracis, Streptococcus pyogenes, Escherichia coli, Salmonella typhi Neisseria gonorrhoeae, Mycobacterium tuberculosis.* **[7]**

4. **Viral, protozoan and fungal diseases:** Polio, Influenza AIDS, Malaria, Different types of mycoses. **[6]**

5. **Antimicrobial agents and drug resistance** Mechanism of action of important chemotherapeutic agents. Principles of drug resistance in bacteria. **[3]**

Suggested Readings

Text Book

1. Ananthanarayan R and Paniker CKJ. (2005). Textbook of Microbiology. 7th edition (edited by Paniker CKJ). University Press Publication.

2. Brooks GF, Carroll KC, Butel JS and Morse SA. (2007). Jawetz, Melnick and Adelberg's Medical Microbiology. 24th edition. McGraw Hill Publication.

5. Willey JM, Sherwood LM, and Woolverton CJ. (2008). Prescott, Harley and Klein's Microbiology. 7th edition. McGraw Hill Higher Education.

MB 361 Medical Microbiology Laboratory 0-0-2-1

Assignments are based on the course MB 351 Medical Microbiology containing exercises on the prevention and diagnosis of pathogenic microbes.

MB 312 Microbial Ecology 2-0-0-2

1. **Microorganisms & their natural habitats:** Terrestrial Environment, Aquatic Environment: Atmosphere: Aeromicroflora, Animal Environment, Extreme Habitats. **[6]**

2. **Biological Interactions:** Microbe–Microbe Interaction, Microbe–Plant Interactions, Microbe–Animal Interactions. **[6]**

3. **Biogeochemical cycles:** Carbon cycle, Nitrogen cycle, Phosphorous cycle, Iron cycle and Sulphur Cycle. **[6]**

4. **Solid/liquid Waste Management:** Sources and types of solid waste, methods of disposal of solid waste, primary, secondary and **[5]**

tertiary sewage treatment.

5. **Bioleaching/Biodeterioration:** Microbial deterioration of metals (corrosion), textile and paper. **[3]**

Suggested Readings

Text Book

1. Madigan MT, Martinko JM and Parker J. (2009). Brock Biology of Microorganisms. 12th edition. Pearson/ Benjamin Cummings.
2. Maier RM, Pepper IL and Gerba CP. (2009). Environmental Microbiology. 2nd edition, Academic Press.

MB 322 Microbial Ecology Laboratory 0-0-2-1

Assignments are based on the course MB 312 Microbial Ecology containing exercises on the relationship of microbes with one another and with their environment.

NEW SYLLABUS FOR ENVIRONMENTAL STUDIES

EV 111 Environmental Science 1-0-0-1

1. Introduction to Environment and Environmental Studies, its scope and importance **[2]**
2. Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem **[2]**
3. Natural Resources: Renewable and Nonrenewable resources. **[2]**
4. Human Population and Environment: Population Growth, World and Indian scenario. **[2]**
5. Environmental pollution: Types of Environmental Pollution and cause, prevention of pollution. **[2]**
6. Global Environmental Issues: Climate Change, Global Warming and Green House Effect. **[3]**
   Visit to a local area to document environmental assets

Suggested Readings:

Text Book

1. Bharucha, E;. Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH, Beiswenger RE, Purdom; Environmental Sciences, Paperback.

References

5. Rastogi V.B. & Jayraj M.S.; Animal Ecology and Distribution of Animals, Kedar Nath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

COURSE DESCRIPTION
B.Sc.CBZ/B.Sc(H)-Biotech/Chemistry

EL 101 Foundation Course in English **2-0-0-2**

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand & Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

BT 151 Cell Biology **3-1-0-4**

Diversity of Cell: Size and shape, cell theory, structure of prokaryotic and eukaryotic cells [2]

Cell membrane: Molecular structure and models of cell membrane, Membrane transport – Passive (diffusion, osmosis and facilitated) and active transport, Cell junctions. [8]

Cell organelles 1: Structure, function and biogenesis of Mitochondria, Plastid, Endoplasmic reticulum, Golgi complex, Lysosome. [8]

Cell organelles 2: Ribosome, Centrioles, Cilia, Flagella and Cytoskeletal system. Introduction to extra cellular matrix [7]

Nucleus: Interphase nucleus, Nuclear envelope, nucleoplasm, Nucleolus and Chromatin (nucleosome model, Structure of

eukaryotic chromosome, Giant chromosome) [6]

Cell Division: Cell cycle, mitosis and meiosis, structure and function of spindle apparatus, synapses and synaptonemal complex and crossing over [8]

Suggested Books:

1. De Robertis and De Robertis: Cell and Molecular Biology B.I. Publications, US.
2. Gardner, Principle of Genetics; John Willey and Sons, US.
3. Becker *et al*; The World of Cell; Pearson Publications, Singapore.
4. Strickberger; Genetics; MacMillan Publications, US.
5. Sarin; Genetics; Tata McGraw Hill Publications, New Delhi.
6. Rastogi V.B.; Genetics; Kedar Nath and Ram Nath, Meerut.

ZO 111 Animal Diversity-I **3-0-0-3**

Taxonomy: General principles of taxonomy, Five-kingdom concept. Protozoa, Metazoa and Levels of organization, Origin of metazoa, Coelom, metamerism and symmetry. [4]

Principles of Classification: Salient features and classification upto class level in non-chordates. [5]

Protozoa – Locomotion, nutrition, reproduction, Life cycle of parasite (plasmodium). [4]

Porifera: Canal system; Endoskeleton, Reproduction. [3]

Coelenterata: Nematocysts, polymorphism. [3]

Ctenophora: Affinities. [1]

Platyhelminthes and Aschelminthes: Reproduction and larval forms (Fasciola and Ascaris). [4]

Annelida: Excretion in annelids. Type study – Earthworm. [6]

Mollusca: Respiration. [1]

Arthropoda: Larval forms of crustacea, Mouthparts of insects, Social life in insects. [3]

Ecinodermata: Water vascular system, larval forms and their significance; Origin and phylogeny of echinoderms. [4]

Lower chordates: Taxonomic position and affinities. [1]

Suggested Books:

1. Kotpal R.L; Modern Textbook of Zoology - Invertebrate; Rastogi Publication, Meerut
2. Bhamrah H.S. and Juneja A. K; Textbook of Invertebrates; Anmol Publications Pvt. Ltd., New Delhi
3. Kapoor V.C; Theory and Practice of Animal Taxonomy; Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi
4. Hickman C.P., Roberts, L.S. and Larson A; Integrated Principles of Zoology; WCB Mc Graw-Hill, New Delhi
5. Grove A.J; and Newell G. E; Animal Biology. University Book Stall, New Delhi

CH 181 Physical and Inorganic Chemistry-I **2-0-0-2**

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave

equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective nuclear charge. **[5]**

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule- Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.

2. The elements of Physical Chemistry, P.W. Atkins, 4th Edition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.

Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I **2-0-0-2**

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer compounds and field effects. **[5]**

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogenic centre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centres diastereomers, threo and erythro diastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation, Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivity in alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes- mechanisms involved in hydrogenation,

electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration- reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.

Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I **3-0-0-1.5**

Experiments based on the contents of CH 181 and CH 191.

BC 111 General Biochemistry **3-0-0-3**

Basic Concepts: Law of mass action, pH and buffers, calculation of pH, biological importance of pH and buffers, law of thermodynamics, concept of free energy **[5]**

Carbohydrates: Structure, classification and function, properties of monosaccharide and its derivatives, structural and storage carbohydrates **[5]**

Proteins: Classification of amino acids, different reactions of –NH2 and –COOH group, Structure and classification of proteins, Bohr's effect, hemoglobin, myoglobin, antibodies **[5]**

Lipids: Basic structure of lipids, classification, importance of triacyglycerols, glycerolipids, sphingolipids, steroids, lipid bilayers **[6]**

Nucleic Acids: Nucleic acid as a genetic material, composition of DNA and RNA, linkage between purines and pyrimidines, types of DNA **6]**

Vitamin: Role of vitamin in the growth and differentiation of body, chemistry of fat and water-soluble vitamins, vitamins as coenzymes. Hormones as signal molecules **[6]**

Cellular Metabolism: Glycolysis, Gluconeogenesis, Krebs [6]

cycle, Electron transport chain, β-oxidation, Overview of amino acid metabolism

Suggested Books:

1.Jain J.L.; Biochemistry; S. Chand Publication, New Delhi.

2. Cohn and Stump; Outline of Biochemistry; Cambridge,UK.

3. Nelson and Cox; Principles of Biochemistry; Panima, New Delhi.

4.Mathew *et al.;*Biochemistry; Pearson, New York.

5.Sadasivam and Manickam; Biochemical Methods; New Age International, New Delhi.

BT 161 **Cell Biology Laboratory** **0-0-2-1**

Assignments are based on the course BT 151 Cell Biology meiosis, mitosis etc.

ZO 121 **Animal Diversity Laboratory-I** **0-0-2-1**

Assignments are based on the course ZO 111 Animal Diversity-I containing exercises on taxonomy and organization of non-chordates

BC 121 **Biochemistry Laboratory** **0-0-2-1**

Assignments are based on the course BT 121 Biochemistry containing exercises on qualitative and quantitative analysis of biomolecules

CA 111 Fundamentals of Computers and Information Technology 3-0-0-3

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets [6]

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

ZO 132 Animal Diversity-II 3-0-0-3

Chordata: General organization, classification upto class level. [9]

Comparative Anatomy of Chordates 1: Integument, Endoskeleton and Digestive system and Brain. [11]

Comparative Anatomy of Chordates 2: Heart, Aortic arches and Venous system, Respiratory system, Urogenital system. [10]

Fishes: Accessory respiratory organs. [2]

Amphibia: Parental Care in Amphibia. [1]

Reptilia: Poison apparatus, snake venom, antivenin, biting mechanism and first aid. [2]

Aves: Flight adaptations. [2]

Mammals: Origin of mammals. [2]

Suggested Books:

1. Kotpal R. L; Modern Textbook of Zoology - Vertebrate; Rastogi Publication, Meerut.
2. Bhamrah H. S. and Juneja A. K; Textbook of Vertebrates; Anmol Publications Pvt. Ltd., New Delhi.
3. Young J.W; The Life of Vertebrates; Oxford University Press, New York.
4. Pough F. H., Jains C. M. and Heiser J. B; Vertebrate Life; Pearson Education Pvt. Ltd., Singapore.
5. Colbert E. H; Evolution of Vertebrates; Wiley Eastern Ltd, New Delhi.
6. Rastogi V. B; Organic evolution; Kedar Nath Ram Nath Publication, Meerut.

CH 182 Physical and Inorganic Chemistry-II **2-0-0-2**

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphur tetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon

compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:
Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D. Tuli & Arun Bahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand & Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand & Co .Ltd.

Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd

CH 192 Organic Chemistry-II **2-0-0-2**

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond

lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed. 2007, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II **3-0-0-1.5**

Experiments based on the contents of CH 182 and CH 192.

BT 152 Genetics **3-1-0-4**

Mendelian inheritance and gene interaction: Mendel's Law of Inheritance, Allelic and non-allelic, complementary, supplementary, epistasis, hypostasis and lethal genes. Multiple alleles and pleiotrophism. [10]

Theory of sex determination: A brief account, linkage and crossing over, linkage maps. Sex linked traits: Eye color and lethals in drosophila, Hemophilia and color blindness in humans. Primary and secondary non-disjunction of sex chromosomes. Sex influenced traits: horn character in sheep, sex limited traits: Cock feathering in poultry and baldness in man [10]

Extranuclear inheritance: Plastid, mitochondria and cytoplasm. [5]

Mutations: Chromosomal aberrations and meiotic consequences. [4]

Human genetics: Chromosomal and genetic disorders; genetic counseling, somatic cell genetics. [5]

Population genetics: Gene pool and gene frequencies, Hardy [5]

Weinberg Law, change in gene frequencies (mutation, selection and migration), random drift. Heterosis.

Suggested Books:

1. Gardner, Principle of Genetics; John Willey and Sons, New York,US.
2. Strickberger; Genetics; MacMillan, UK.
3. Sarin; Genetics; Tata McGraw Hill, New Delhi
4. Rastogi V.B.; Genetics; Kedar Nath and Ram Nath, Meerut**.**
5. Gupta, P.K., Genetics, Rastogi publications, Meerut.

PH 112 Basic Physics **2-0-0-2**

Optics: Ray optics (Reflection and Refraction), Interference, Fresnel's biprism, Optical filters, Diffraction, Plane diffraction grating, Grating and prism spectra, Polarization, Brewsters's law, Light as electromagnetic wave [9]

Modern Physics: Corpuscular nature of light, Photoelectric effect, de Broglie wavelength, X-rays, Radioactivity, Half-life and mean life [6]

Semiconductor Physics: Intrinsic and extrinsic semiconductors, Diodes, Semiconductor Devices [3]

Lasers and Fibre Optics: Basic principles of Lasers, He-Ne laser, Optical fibre communication, Applications in Biosciences [5]

Physics in Biosciences: Application of Physics in Biological science, Introduction to Biophysics [3]

Suggested Books:

1. Ghatak A. Optics Tata McGraw-Hill Publishing Comp Ltd, New Delhi.
2. Subrahmanyam N., Lal B and Avadhanulu M N. A Text Book of Optic S Chand & Co Ltd, New Delhi.
3. Sears, Zemansky and Young, University Physics Narosa Publishing House, New Delhi.
4. Pattabhi V and Gautham N. Biophysics Narosa Publishing House, New Delhi.
5. Beiser A. Concept of Modern Physics Tata McGraw-Hill Publishing Comp Ltd, New Delhi.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

ZO142 Animal Diversity-II Laboratory **0-0-2-1**

Assignments are based on the course ZO 132 Animal Diversity-II containing exercises on taxonomy and organization of chordates.

BT 162 Genetics Laboratory **0-0-2-1**

Assignments are based on the course BT 152 Genetics, Basic Mendelian concepts etc.

EV 101 Environmental Studies **3-0-0-3**

The Multidisciplinary Nature of Environmental Studies: Definition, scope and importance, Need for public awareness. [2]

Natural Resources (Renewable and Non-renewable Resources): Natural resources and associated problems. Forest resources – Use and over-exploitation, Mining, Dams and their effects on forest and tribal people. Water resources – Use and over-utilization of surface and Ground Water, Floods, Water Logging, Salinity, Drought, Dams – Benefits and problems. Mineral resources – Use and exploitation, Role of an individual in conservation of natural resources [6]

Ecosystems: Ecosystem, Structure and function of an ecosystem, Energy flow in ecosystem, Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structures and functions of Forest, Grassland and Desert ecosystems [7]

Biodiversity and its Conservation: Introduction to Genetics, Species and Ecosystem Diversity, Population Growth, Variation among Nations, Biogeographical classification of India. Value of Biodiversity, consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, national and local level, India as a mega-diversity nation. Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity – *In-situ* and *Ex-situ* conservation of biodiversity. [7]

Environmental Pollution: Definition, Causes, Effects and Control measures of Air Pollution, Water Pollution, Soil Pollution, Marine Pollution, Noise Pollution and Thermal Pollution, Nuclear hazards. Disaster management – Floods, Earthquakes, Cyclones and Landslides. [6]

Social Issues and the Environment: Urban problems related to Energy, Water conservation, Rainwater Harvesting, Watershed management, Environmental ethics – Issues and possible solutions, Climate change, Global Warming, Acid Rain, Ozone layer depletion, Nuclear accidents and holocaust, Environmental Protection Laws in India. [6]

Human Population and the Environment: Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health. [5]

Visit to a local area to document environmental assets: River/forest/grassland/hill/ mountain. Visit to a local polluted site – Urban/Rural/Industrial/Agricultural. Study of common plants, insects, birds. Study of simple ecosystems—pond, river, hill slopes, etc.

Suggested Books:

1. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
2. Rastogi V.B. & Jayraj M.S.; Animal Ecology and Distribution of Animals, Kedar Nath Ram Nath Publication, Meerut
3. Kumar H.D; General Ecology; Vikas Publishing House Pvt.

Ltd, India

BC 211 Bio-Instrumentation **3-1-0-4**

Principle of pH meter. [1]

Sterilization Techniques: Heat sterilization (Autoclave and Hot Air Oven), Filter sterilization, Incubator and Laminar Air Flow. [6]

Centrifugation: Principles of centrifugation, Design and care of rotor, Analytical and Preparative centrifugation, Safety aspects and applications. [8]

Spectroscopy: Principles of spectrophotometry, Ultra-violet and Visible Spectroscopy, Atomic spectroscopy. [8]

Electrophoresis: Principles of Gel electrophoresis, Agarose and SDS gel electrophoresis, IEF, 2-D PAGE. [8]

Chromatography: Principles of chromatography, Paper, Thin layer, Column chromatography, Permeation, Ion exchange and Affinity chromatography. [8]

Suggested Readings:

Text Book:

1. Wilson and Walker-Principles of Molecular Biology and Biochemistry, Cambridge University Press, 3rd Edition, New Delhi.
2. Upadhayay, Upadhayay and Nath-Biophysical Chemistry, Himalayan Publishers,4th Edition, New Delhi.
3. David T Plummer- An Introduction to Practical Biochemistry, Tata McGraw Hill, 2nd Edition, New Delhi.

Reference Book:

4. Lehninger: Principles of Biochemistry 4th edition - David L. Nelson and M.M. Cox (2005) Maxmillan/ Worth publishers/ W. H. Freeman & Company.
5. Fundamentals of Biochemistry 3rd edition- Donald Voet and Judith G Voet (2004), John Wiley & Sons, NY
6. J G Webster- Bioinstrumentation, John Wiley & Sons Inc, New York

ZO 212 Animal Physiology **3-0-0-3**

Physiology of Digestion: Digestion of food material, control of digestive juice secretion, Absorption of digested food material. [4]

Physiology of Respiration: External and internal respiration, control mechanism, transport of gases, respiratory pigments. [4]

Physiology of Circulation: Concept of haematopoesis and haemolysis, blood coagulation, heartbeat and cardiac cycle, mechanism of controlling heartbeat, electrocardiogram, blood pressure. [4]

Physiology of Excretion: Excretory products, Ornithine cycle, structure and function of kidney, mechanism of urine formation. [4]

Physiology of Muscle Contraction: Chemical composition, mechanism of muscle contraction. [4]

Nervous System: Basic concept of CNS, PNS, ANS, Propagation of nerve impulses, Synaptic transmission, Reflex action. [4]

Endocrine Glands: Structure and functions: Pituitary, adrenal, thyroid, parathyroid, pancreas, testis and ovary, Mechanism of hormone action, pheromones. [3]

Reproduction: Structure of male and female reproductive organs, hormonal control, menstrual cycle, implantation parturition and lactation in mammals. [4]

Homeostasis: Basic concept, osmotic conformers, osmoregulation, thermoregulation. [4]

Physiological Disorders: Disorders related to Brain, Blood, Heart, Kidney and Bone. [4]

Suggested Books:

1. Chatterjee C.C.; Human Physiology; Medical Book Depot.India.
2. Guyton et al.; Medical Physiology, W.B Sauders Co., Philadelphia Toronto.
3. Berry A.K.; Physiology, Rastogi Publication, Meerut
4. Tatora et al.; Human Physiology, Wiley International, New York.

BT 241 Mathematics and Statistics for Biology **2-1-0-3**

Algebra: Number system, Logarithms, Permutations and Combinations. [3]

Calculus: Functions, Derivative of standard function, Successive Differentiation. [5]

Integration: Indefinite Integrals, Methods Of Integration By Substitution. Definite Integrals, Properties of Definite Integration. [5]

Statistics: Measure of Central Tendency-Mean, Median & Mode, Measures of Dispersion-Range, Quartile Deviation, Mean Deviation, Standard Deviation, Variance [6]

Correlation and Regression: Correlation-Meaning and Significance, Karl Pearson's coefficient of linear correlation between two variables, Coefficient of correlation by Spearman's Rank Differences method, Lines of Regression, Relationship between Correlation and Regression. [7]

Suggested Books:

1. Kapoor and Gupta; Fundamental of Mathematical Statistics; S. Chand and Company, New Delhi.
2. Gupta, S.P., Statistical methods; S.Chand and Company, New

Delhi.
3. Prasad S.; Elements of Biostatistics; Rastogi Publication, Meerut.
4. Bailey; Statistical Methods in Biology; Cambridge Publications, UK.

CH 291 Physical Chemistry-I **2-0-0-2**

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU & dH for the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A & G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it. Concentration dependence of rates, mathematical characteristics of simple chemical reactions-zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. **[11]**

Expression for the rate constant based on equilibrium constant and thermodynamic aspects.

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I **2-0-0-2**

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series:

General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. **[7]**

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 18th Ed. 2009, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand & Co.Ltd.

CH 223 Organic Chemistry-III **2-0-0-2**

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and hypochromic shifts, UV spectra of conjugated enes and enones. **[6]**

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization .

of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, Lederer Manasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel's method. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl, 20th Ed. 2008, S. Chand & Co. Ltd.

Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III **3-0-0-1.5**

Experiments based on the contents of CH 291, CH 213 and CH 223.

BC 221 Bio-instrumentation Laboratory **0-0-2-1**

Assignments are based on the course BC 211 Instrumentation containing exercises on principle and working of instruments and performance of important techniques.

ZO 222 Animal Physiology Laboratory **0-0-2-1**

Assignments are based on the course ZO 212 Animal Physiology containing exercises on structural and physiological different in animals.

BT 212 Molecular Biology **3-1-0-4**

Introduction: Molecular basis of life, genetic material and its properties, structure of DNA, central dogma, organization of DNA in chromosome. [5]

DNA Replication: Nature of DNA replication, prokaryotic and eukaryotic DNA replication, fidelity of replication in prokaryotes and eukaryotes. [5]

DNA Damage and DNA Repair: Mutations, Causes of mutation and their mechanisms, effect of mutation on DNA, Mutation detection – Ames test to detect mutagenicity and carcinogenicity. DNA repair – Excision repair, Mismatch repair. [5]

Transcription: Enzymatic synthesis of RNA, classes of RNA molecule, transcription in prokaryotes and eukaryotes, splicing mechanism [8]

Translation: Outline of translation, genetic code, ribosome as protein synthesis machinery, protein synthesis in pro- and eukaryotes – initiation, elongation and termination [8]

Gene Regulation: Regulation of gene activity and gene products in prokaryotes and eukaryotes. [8]

Suggested Books:

1. Chunnarayappa; Molecular Biotechnology; Universities Press, London.
2. Gupta P.K.; Elements of Biotechnology; Rastogi Publication, Meerut.
3. Singh B.D.; Biotechnology; Kalyani Publication, New Delhi.

ZO 232 Developmental Biology **3-0-0-3**

Introduction: History and scope of animal developmental biology [1]

Male Gonads and Spermatogenesis: Structure of seminiferous tubule, interstitial cells, morphology of sperm, process and control mechanism of spermatogenesis. [4]

Female Gonads and Oogenesis: Ovarian Structure, Oogenesis: pre- vitellogenesis and vitellogenesis, types of eggs. Control mechanism of ovulation [5]

Reproductive Cycles: Breading and non-breading seasons**,** Estrous and Menstrual cycles – regulation. [4]

Fertilization: Types and Mechanism of fertilization, post fertilization changes in the egg cytoplasm, monospermic and polyspermic fertilization, significance of fertilization. [5]

Parthenogenesis: Types and significance [1]

Cleavage: Planes, patterns and rate of cleavage, mitotic peculiarity, physiology and significance of cleavage. [3]

Embryonic Development: Morulation, Blastulation (types and significance), Gastrulation (Characteristics, morphogenetic movements, physiology and significance), Tubulation, Concept of fate maps (Frog and Chick). [5]

General Concepts of Differentiation: Regeneration, and Metamorphosis, extra embryonic membrane, organizer concept and embryonic induction. Embryo sexing and ageing. [8]

Brief Introduction: Birth control, impotency, Artificial insemination, test tube baby and GIFT. [3]

Suggested Books:

1. Sastry & Shukla; Development Biology; Rastogi Publication, Meerut.
2. Bhojwani & Bhatnagar; The Embryology of Angiosperms; Vikas Publishing House, New Delhi.
3. Balinsky B. I; An Introduction to Embryology; W. B. Saunders, New Delhi.
4. Verma P.S., Agarwal V.K. and Tyagi B.S; Chordate Embryology. S. Chand and Co., New Delhi.
5. Berrill N. J; Developmental Biology; Mc Graw Hill, New York

MB 311 Immunology **3-1-0-4**

Historical Background: Innate immunity, adaptive immunity, natural and artificial immunity, active and passive immunity, humoral and cell-mediated immune response. [4]

Cells and Organs of Immune System: Lymphoid organs – Mast cells, basophils, eosinophils, monocytes, macrophages, neutrophils, NK cells, B and T lymphocytes. [5]

Antigens: Characteristics of antigens, characteristics of B-cell and T-cell epitopes, haptens and adjuvants. [5]

Immunoglobulins: Structure and functions, Classes and subclasses, Antigenic determinants of antibody molecules. [5]

Antigen-Antibody Interactions: Forces involved in Ag-Ab interactions, antibody affinity and avidity, primary and secondary interactions and agglutination and precipitation reactions. [5]

Humoral Immune System: Development and activation of B-lymphocytes, Primary and secondary response, Complement system – components, activation pathways and biological consequences [5]

Cell Mediated Immune Response: Development and activation of T-lymphocytes, Antigen processing and presentation, Major histocompatibility complex – structure and cellular distribution, Leukocyte trafficking, Cytokines, Tc-cell mediated target cell killing [5]

Immune System in Health and Disease: Immunodeficiency diseases, autoimmune diseases, hypersensitivity and allergies, transplantation immunology, tumor immunology, concept of vaccines development. [5]

Suggested Books:

1. Rao C.V.; An Introduction to Immunology; Narosa Publication, New Delhi.
2. Goldsby *et al;* Kuby Immunology; Freeman and Company, New York
3. Tizzard, I; Principle of Immunology, Thomson Publication, Singapore.
4. Ananthanarayn and Panicker; Textbook of Microbiology; Orient Longman Publishers, Hyderabad.

CH 272 Physical Chemistry-II **2-0-0-2**

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibria of one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point (NaCl-H_2O), ($FeCl_3$-H_2O) and ($CuSO_4$-H_2O) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-HCl-H_2O and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications. **[10]**

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorf and moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometric titrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using hydrogen quinhydrone and glass electrodes. **[12]**

Chemical Equilibrium: Equilibrium constant and free

energy. Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, Clausius-Clapeyron equation and their applications. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 5th Ed. 2004, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II **2-0-0-2**

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare,

Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co.Ltd.

CH 292 Organic Chemistry-IV **2-0-0-2**

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagel condensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic **[6]**

acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic).

Suggested Readings:
Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl , 19th Ed. 2005, S. Chand & Co. Ltd.

Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV **3-0-0-1.5**

Experiment based on the contents of CH 272, CH 282 and CH 292.

BT 232 Molecular Biology Laboratory **0-0-2-1**

Assignments are based on the course BT 212 Molecular Biology containing exercises on techniques involved in study of Nucleic acids.

ZO 242 Developmental Biology Laboratory **0-0-2-1**

Assignments are based on the course ZO 232 Developmental Biology containing exercises on reproductive cycle and embryonic development.

MB 321 Immunology Laboratory **0-0-2-1**

Assignments are based on the course MB 311 Immunology containing exercises on antigen-antibody interaction techniques.

BT 381 Modern Biology **3-0-0-3**

Nanoscience and Nanotechnology: Overview of different nanomaterials available, Brief idea of their synthetic methods; Risk and hazard associated with their use; Potential uses and applications of Nanotechnology in Agriculture, Energy and Environment, Food Science, Medical science etc. [12]

Biosensors: Introduction; Generation of an electronic signal; Amperometirc, Potentiometric, Conductimetric, Optical, Thernal and Microbial Biosensors. [9]

Intellectual Property Rights: Types of protection: Patent, Copyright, Trade secrets and Breeders right for variety protection; Moral issues in patenting Biotechnological inventions; Significance of IPR in the protection of Biodiversity, Traditional knowledge and geographical indications; Brief idea of IPR protection for Bio-informatics' components. [9]

Scientific communication: Scientific literature: Structure of Research article, Review article, Short communication, Book review etc. Literature database- NCBI, EMBL; Use of library and internet for scientific literature search; Abstracting methodology; Scientific Literature Standardization; Concept of Impact factor; Citation Index; Preparation of a scientific article [9]

Suggested Books:

1. Poole Jr., C.P., Owens, F.J. Introduction to Nanotechnology, Wiley, New York.
2. Bhushan, Bharat. Handbook of Nanotechnology. Springer, US.
3. CNR Rao et. al., Chemistry of nanomaterials : Synthesis, properties and applications. Springer, US.
4. Donnell et al., Intellectual Property in Food Technology Industry. Springer, US.

6. Ganguly P., Intellectual Property Rights. Tata McGraw Hill. New Delhi, India.
7. Barker RDJ et al., Technological applications of Biocatalysts. Butterworth-Heinemann Ltd. Oxford, UK.

BT 322 Plant Biotechnology **3-0-0-3**

General Principles: Terms and Definition, Historical aspects and scope Classical vs. modern approach, totipotency and cell theory, Principles underlying in vitro culture, Growth and differentiation, Culture media and its constituents, Media preparation, Sterilization and Organization of plant tissue culture laboratory. [7]

Micropropagation: Basic technique, Automation in the area scope as a commercial venture, Production of disease free plants, shoot tip culture, anther culture and ovule culture. [8]

Genetic Variability in Tissue Culture: Somaclonal and gametoclonal variation, Selection, Sources and causes of variation, Application in crop improvement. [8]

Protoplast Related Techniques: Protoplast isolation, Protoplast culture and fusion, Selection of hybrid cells, regeneration of hybrid plants, somatic hybridization and cybridization, Applications in crop improvement. [8]

Gene Transfer in Plants: Agrobactrium tumefaciens and

Agrobacterium rhizogenes, structure of T-DNA, virulence and other gene organization, application in genetic transformation, Gene transfer methods in plants – Direct and Indirect methods. [8]

MB 331 General Microbiology **3-0-0-3**

Definition and scope of Microbiology: History and recent developments – Spontaneous generation versus biogenesis, Germ theory of diseases, pure-culture concept.-contributions of Louis Pasteur – Leuwenhoek, Lazaro Spallanzani, John Tyndall, Joseph Lister, Robert Koch. Microscopy: simple, compound light microscopy – Dark Field, Bright Field, Phase contrast, Fluorescence and Electron Microscopy. Classification of Microbes – Systems of classification, General properties, principles and types of classification of microorganisms, Bergey's manual, Nutritional types, Classification on the basis of physical parameters. [12]

General characteristics and functions of Bacteria: structure and function of cell wall, cilia, flagella, slime layer, capsule, pilli, Cytoplasmic membrane and Cytoplasmic inclusions, sporulation. Kingdom prokaryotes - classical techniques of microbial identification - morphological, physiological and biochemical properties. [8]

Kinetics of Bacterial growth: Different types of bacterial culture (Batch, Synchronous, Arithmetic) – Definition and brief description. Growth Phases, Growth Kinetcs, Calculation of duration of Phases and generation time, Growth yields, Methods of growth determination, Environmental factors affecting growth - temperature, pH, osmotic pressure, partial pressure of oxygen and nutrient concentration. Concept of Sterilization - Definition of sterilization, Physical and Chemical methods of sterilization. [7]

Basic concepts of Virology: General characteristics of viruses, differences between bacteria and viruses. Classification of viruses Physical and chemical Structures of different Viruses on the basis of capsid symmetry - enveloped (Herpes virus), helical (TMV) and icosahedral (Polyoma viruses), Complex (Bacteriophage), Bacteriophages: Stages in the Lytic and Lysogenic Life Cycle of a typical phage, Properties of a phage infected bacterial culture. Viroids and prions. [6]

Brief description of Algae, Fungi and protozoa: General characteristics of Algae, Fungi and Protozoa. [6]

Suggested Books:

1. Pelczar *et. al*.; Microbiology; Tata McGraw Hill; New Delhi.
2. Powar & Daginawala; General Microbiology I & II; Himalaya Publishing House, Mumbai.
3. Stanier *et al.;* General Microbiology; Prentice Hall of India, New Delhi.
4. Prescott, Harley, Klein; Microbiology; Mc Graw Hill Publication, New York.

BT 342 Environmental Biotechnology **3-0-0-3**

Introduction to Biodiversity: Applications of biotechnology in biodiversity conservation. [4]

Bioleaching: Use of microbial source for enhanced oil recovery, metal leaching (Copper and Uranium). [5]

Biofuels: Bioethanol, Biodiesel, Methanogenesis. [4]

Biopesticides: Bacterial, Fungal and Viral pesticides. [4]
Biofertilizers: Nitrogen fixing microbes and their application in crop productions. [5]

Biodegradation: General characteristics of xenobiotics, Technology development of bioremediation, Case study of hydrocarbon and pesticide biodegradation, Biobleaching of industrial effluents. [6]

Biogeochemical Cycling: Sulphur, Nitrogen and Phosphorus cycles, Role of microbes in biogeochemical cycling. [6]

Waste Treatment and Disposal: Waste water treatment, industrial and municipal waste, BOD removal, activated sludge process, trickling filters, lagoons, land farming, contact stabilization and anaerobic digestion, nitrification and denitrification in the activated sludge process. [5]

BT 313 Animal Tissue Culture **3-0-0-3**

Introduction to animal cell sciences: Structure, organization and biology of animal cell. General concepts of animal cell culture. General concept of differentiation and dedifferentiation. Expression of proteins in animal cells. [8]

Growth requirements and kinetics: Media -Development of simple growth media, BSS. Chemical, physical and metabolic functions of different constituents of culture medium. Role of CO2 and serum. Serum and protein free defined media and their applications. Growth kinetics of cultured cells. [8]

Animal cell culture and its types: Primary and established cell line cultures, Cell lines: A general concept. Disaggregation of tissue and primary culture. Cell separation, Organ and histotypic cultures. [8]

Techniques used in Animal Cell Culture : Cell cloning and micromanipulation, Transfection techniques, Cell transformation, Scaling-up of animal cells [8]

Application of animal cell culture: Cell culture based vaccines, Stem cell culture, Embryonic stem cells and their applications, Cell hybridization, Hybridomas and their selection, application of cell hybridization. [7]

Suggested Readings:

1. R. Ian Freshney, (3rd ed., 2007), Culture of Animal Cells, Wiley,New York..
2. John R.W., (2nd ed., 2004), Animal Cell Culture-Practical Approach Masters, Oxford Press, UK.
3. J.M. Davis, (2nd ed., 2007), Basic Cell Culture, Oxford, UK.
4. Jennie P. Mather and David Barnes, (2nd ed., 2008), Animal Cell Culture Methods, Academic Press,US.
5. S.J. Higgins and B.D. Hames, (3rd ed., 2008), Protein Expression: A Practical Approach, Oxford University Press, UK.
6. S.B. Primrose, R.M. Twyman and R.W. Old, (3rd ed., 2007), Principles of Gene Manipulation, Blackwell Science, US.

MB 341 General Microbiology Laboratory **0-0-2-1**

Assignments are based on the course MB 331 General Microbiology containing exercises on microscopic and cultural study of microorganisms and their isolation from natural sources.

BT 392 Environmental Biotechnology Laboratory **0-0-2-1**

Assignments are based on the course BT 342 Environmental Biotechnology containing exercises on analysis of environmental samples.

BT 323 Tissue Culture Laboratory

Assignments are based on the courses BT 322 Plant Biotechnology and BT 313 Animal Tissue Culture containing exercises on media preparation and different culturing methods of plant and animal cells.

BT 371 Internship **0-0-0-6**

Each student shall undergo project work of six to eight weeks during the Summer after Spring Semester of second year in an approved Organization and submit a Project Report.

BT 311 Genetic Engineering **3-1-0-4**

Introduction: Nucleic acid structure, properties and isolation. [5]

Enzymes in Molecular Cloning: Principal enzymes used to manipulate DNA in vitro with their activities and major applications – Restriction endonucleases, Nucleases, DNA ligases, Topoisomerase. [6]

Cloning and Expression Vectors: Brief outline of plasmids, phagemids, bacteriophage lambda vectors, cosmids, and high capacity cloning vectors like BACs, PACs and YACs. Binary and shuttle vectors, brief outline of expression vectors. [6]

DNA Cloning Strategies: Criteria for the choice of suitable vectors and host, methods of gene transfer to bacterial cells, cDNA and genomic library, and screening methods for [6]

selection of recombinant DNA molecules.

Tools of Recombinant DNA Technology: Fragmentation and separation of DNA fragments, PCR, Northern, Southern and Western hybridization, sequencing. [7]

Applications of Recombinant DNA Technology: Role of genetic fingerprinting in diagnostics, novel drug and therapies for genetic diseases, combating infectious diseases, protein engineering, medicinal and plant breeding applications, production of commercially important proteins like insulin, growth hormone and tissue plasminogen. [6]

BT 352 Bioinformatics 3-0-0-3

Introduction to Networking: Definition and scope of networking, Basic network topology, Concept of LAN, MAN and WAN, Introduction to Internet and data transfer protocol (TCPI/P, FTP) [5]

Biological Information Resources: Introduction to biological data and database management, Biological databases – Protein databanks (Primary and Secondary databank; Sequence and structure databank), Genomic databanks (Sequence and specialized databanks). [7]

Sequence Alignment: Introduction to biological sequence alignment, Database searching, Algorithm for sequence alignment, Pairwise alignment (Needleman and Wunsch algorithm, Smith-Waterman algorithm), Multiple Sequence Alignment, Concept of Gaps, Gap penalties and scoring matrices. [7]

Tools for Sequence Alignment: FASTA, BLAST, Variations of BLAST, Alignment scores and statistical significance of database searches. [5]

Genomics: Genome, Gene structure of prokayotes and eukaryotes, Concept of ORFs, GC-content, Codon Usage, cDNAs and ESTs, Serial analysis of gene expression (Microarrays). [5]

Proteomics: Introduction to proteome and proteome analysis (2D electrophoresis, Mass spectrophotometry, Protein microarray and X-ray crystallography), Algorithm for modeling protein folding. [5]

Phylogenetics: Introduction to phylogenetics, Parsimony, Molecular phylogenetics, Methods of phylogenetic tree construction [5]

Suggested Books:

1. Peruski and Peruski: The Internet and the new Biology: tools for Genomic and Molecular Research, ASM Publishing House, India.
2. Higgins and Taylor, Bioinformatics, Oxford University Press, US.

BT 324 Bioprocess Engineering 3-0-0-3

Introduction: History and role of bioprocess engineering in biotechnology industries, Concept of unit operation unit processes. Introduction to Engineering calculation: Variables, their dimensions and units, dimensionally homogeneous and non- homogeneous equations, standard conditions and ideal gases, physical and chemical property data, basics of materials and energy balances in a macroscopic view point. [10]

Fluid Mechanics: Principle of microbial nutrition, formulation of culture media, selective media, factors influencing the choice of various carbon and nitrogen sources, vitamins, minerals, precursors and antifoam agents, importance of pH, fluid vs. solids, fluid static's mass and energy balance in fluid flow, Bernoulli's equation, flow past immersed bodies and drag coefficient. Sterilization of process fluids, recovering and purifying products, integration of reaction and separation. [10]

Heat Transfer: Principles and design of processes involving biochemical reactions, including aerobic and anaerobic respiration and fermentation (involving pure and mixed cultures). Shake flask, batch and continuous operations. Solid state fermentations. Primary and secondary metabolites Energy balances and biochemical kinetics. [10]

Diffusion and Mass Transfer: Biological production consideration, large scale production, Enzyme kinetics, cell growth, energetics and mass transfer. Production of Penicillin, Streptomycin, Tetracycline and other Antibiotics. [9]

Suggested Readings:

1. Shuler ML; Kargi F (2nd ed.,), Bioprocess Engineering, Prentice Hall PTR, New Jersey.
2. Ward, O.P. Bioprocessing, John Wiley and Sons, New York.*
3. Reinhold Van Nostrand, Belter P.A, Cussler E.L, Hu W.S. (2nd ed.), Bioseparations- Downstream processing for biotechnology. New York.

***latest edition**

BT 334 Enzyme Technology 3-0-0-3

Introduction: General properties of enzyme; Classification; Nomenclature; Cofactor & Coenzyme; Activation Energy; Fisher's Lock and Key hypothesis; Khosland Induced-Fit Model; Entropy reduction; Factors affecting the enzyme activity: Reversible and irreversible covalent modifications; Uni substrate and bi substrate reactions. [5]

Enzyme Kinetics: Mechanism of enzyme substrate reaction; Michaelis- Menten Knetics; Double reciprocal plot ; Enzyme inhibition & regulation. [6]

Enzymes in metabolic regulation: Structure and properties; Allosteric behavior; Deviation from Michaelis-Menten Kinetics; Role of allostric enzymes in metabolic pathway; Sigmoidal kinetics and their physiological significance. [8]

Methods in Enzymology: Isolations and activity [12]

measurements; Extraction and purification; Structure determination; Investigation of active sites and catalytic mechanism; enzyme engineering, ribozyme and abzymes.

Enzymes in Industry: Immobilization methods; Effect of partition on kinetics and performance of enzyme system with particular emphasis on change in pH and hydrophobicty [8]

Suggested Readings:

1. Nelson D L and Cox M M, (3rd ed.), Lehninger Principles of Biochemistry , MacMillian Worth Publishers, US.
2. Palmer T and Bonner P, (5th Ed.), Enzymes: Biochemistry, Biotechnology and Clinical Chemistry, East West Press Pvt. Ltd. New Delhi.
3. Wilson, (5th Ed.), Bimolecular Interactions: I Enzymes in Wilson K and Walker J Practical Biochemistry: Principles and techniques Cambridge University Press UK.
4. Barker RDJ et al., (2005), Technological applications of Biocatalysts. Butterworth-Heinemann Ltd. Oxford,US.
5. Voet D, Voet J D and Pratt C W, (2007), Fundamentals of Biochemistry, John Wiley and Sons, Inc.US.
6. Berg J M, Tymoczko J L and Stryer L , (2003), Biochemistry, W H Freeman and Company New York.

BT 341 Genetic Engineering Laboratory **0-0-2-1**

Assignments are based on the course BT 311 Genetic Engineering containing exercises on nucleic acid isolation from different biological sources and amplification techniques.

BT 314 Bio-informatics Laboratory **0-0-2-1**

Assignments are based on the course BT 352 Bioinformatics containing excercises on internetworking, sequence homology search (BLAST) and phylogenetic tree construction and analysis

BT 344 Bioprocess Engineering Laboratory **0-0-2-1**

Assignments are based on the course BT 324 Bioprocess Engineering containing exercises on fermentation, primary and secondary metabolites.

BT 354 Enzyme Technology Laboratory **0-0-2-1**

Assignments are based on the course BT 334 Enzyme Technology containing exercises on enzymes kinetics.

Mody University of Science & Technology

B.Sc. (Hons) Chemistry

Session 2016-2017

Curriculum Structure

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

B. Sc. (Hons.) Chemistry
(With Physics and Mathematics or Biotechnology and Zoology) Three-Year Programme
Academic Curriculum (2014 – 15 onwards)
First Year-Autumn Semester

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW*	MTE	ETE
Autumn Semester	Compulsory Courses									
	EL 101	Foundation Course in English	2	-	-	2	3	25	25	50

						16.5				

Total Credits: 16.5

Total Course Credits: 115.5*/121.5**

Sr No	Sem I	Sem II	Sem III	Sem IV	Sem V	Sem VI	Total
Chemistry with BT and Zoology**	20.5	22.5	19.5	19.5	18	16.5	116.5
Chemistry with Physics and Maths*	20.5	23.5	22.5	20.5			121.5

▲CW: Course Work; MTE: Mid Term Examination; ETE: End Term Examination
* Course work (CW) would include regularity, evaluation of assignments, surprise tests, etc.
# Evaluation of proficiency will be based on the participation in extra-curricular/co-curricular activities.

Detailed Syllabus
PTO.

COURSE DESCRIPTION
B. Sc. Honors Chemistry
Compulsory Courses

EL 101 Foundation Course in English **2-0-0-2 26**

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand & Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

EV 111 Environmental Science **1-0-0-1 13**

1. Introduction to Environment and Environmental Studies, its scope and importance [**2**]

2. Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem [**2**]

3. Natural Resources: Renewable and Nonrenewable resources. [**2**]

4. Human Population and Environment: Population Growth, World and Indian scenario. [**2**]

5. Environmental pollution: Types of Environmental Pollution and cause, prevention of pollution. [**2**]

6. Global Environmental Issues: Climate Change, Global Warming and Green House Effect. [**3**]

Visit to a local area to document environmental assets

Suggested Reading

Text Book

1. Bharucha, E;. Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH, Beiswenger RE, Purdom; Environmental Sciences, Paperback.

References

5. Rastogi V.B. & Jayraj M.S.; Animal Ecology and Distribution of Animals, Kedar Nath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

3-0-0-3

CA 111 Fundamentals of Computers and Information Technology

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, [6]

Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

Course Description
Chemistry

CH 181 Physical and Inorganic Chemistry-I **2-0-0-2**

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective nuclear charge. **[5]**

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule-Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 4th Edition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I **2-0-0-2**

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer **[5]** compounds and field effects.

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogenic centre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centres diastereomers, threo and erythro diastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation, Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivity in alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes-mechanisms involved in hydrogenation, electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration-reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I 3-0-0-1.5

Experiments based on the contents of CH 181 and CH 191.

CH 182 Physical and Inorganic Chemistry-II **2-0-0-2**

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphur tetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D. Tuli & Arun Bahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand & Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand & Co .Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 192 Organic Chemistry-II 2-0-0-2

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed. 2007, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II 3-0-0-1.5

Experiments based on the contents of CH 182 and CH 192.

CH 291 Physical Chemistry-I 2-0-0-2

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU & dH for the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual

entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A & G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it. Concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. Expression for the rate constant based on equilibrium constant and thermodynamic aspects. **[11]**

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I 2-0-0-2

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series: General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. **[7]**

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 18th Ed. 2009, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand & Co.Ltd.

CH 223 Organic Chemistry-III 2-0-0-2

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and

hypochromic shifts, UV spectra of conjugated enes and enones. **[6]**

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, Lederer Manasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel's method. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl, 20th Ed. 2008, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III 3-0-0-1.5

Experiments based on the contents of CH 291, CH 213 and CH 223.

CH 272 Physical Chemistry-II 2-0-0-2

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibria of one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point (NaCl-H_2O), ($FeCl_3$-H_2O) and ($CuSO_4$-H_2O) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-HCl-H_2O and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications. **[10]**

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorf and moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometric titrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using **[12]**

hydrogen quinhydrone and glass electrodes.

Chemical Equilibrium: Equilibrium constant and free energy. Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, **[4]** Clausius-Clapeyron equation and their applications.

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 5^{th} Ed. 2004, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5^{th} Ed. 2003, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2^{nd} revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II 2-0-0-2

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co.Ltd.

CH 292 Organic Chemistry-IV 2-0-0-2

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagel condensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic). **[6]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV 3-0-0-1.5

Experiment based on the contents of CH 272, CH 282 and CH 292.

CH 371 Physical Chemistry-III 2-0-0-2

Elementary Quantum Mechanics: Black-body radiation, Planck's radiation law, photoelectric effect, heat capacity of solids, Bohr's model of hydrogen atom (no derivation) and its defects. Compton effect. De Broglie hypothesis, Heisenberg's uncertainty principle, Sinusoidal wave equation, Hamiltonian operator, Schrodinger wave equation and its importance, physical interpretation of the wave function, postulates of quantum mechanics, particle in a one dimensional box. Schrodinger wave equation for H-atom, separation into three equations (without derivation), quantum numbers and their importance, hydrogen

like wave functions, radial wave functions, angular wave functions, Molecular orbital theory, basic ideas-criteria for forming M.O. from A.O., construction of M.O.'s by LCAO-H_2^+ ion, calculation of energy levels from wave functions, physical picture of bonding and antibonding wave functions, concept of σ, σ*, π, π* orbitals and their characteristics. Hybrid orbitals-sp, sp^2, sp^3, calculation of coefficients of A.O.'s used in these hybrid orbitals. Introduction to valence bond model of H_2, comparison of M.O. and V.B. models. **[12]**

Spectroscopy: Electromagnetic radiation of the spectrum, basic features of different spectrometers, statement of the Born-Oppenheimer approximation, degrees of freedom. Rotational Spectrum -Diatomic molecules, Energy levels of a rigid rotor (semi-classical principles), selection rules, spectral intensity, distribution using population distribution (Maxwell-Boltzmann distribution), determination of bond length, qualitative description of non-rigid rotor, isotope effect. **[6]**

Vibrational spectrum: Infrared spectrum: Energy levels of simple harmonic oscillator, selection rules, pure vibrational spectrum, intensity, determination of force constant and qualitative relation of force constant and bond energies, effect of harmonic motion and isotope on the spectrum, idea of vibrational frequencies of different functional groups. Raman Spectrum concept of polarizability, pure rotational and pure vibrational Raman spectra of diatomic molecules, selection rules. Electronic Spectrum: Concept of potential energy curves for bonding and antibonding molecular orbitals, qualitative description of selection rules and Frank-Condon principle. Qualitative description of σ, π and n M.O. their energy levels and the respective transitions. **[8]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P.D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 7th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Edition 2005, S. Chand & Co. Ltd.
4. Practical Chemistry, A.O. Thomas, 8th Ed. Geethanjali

Offset Prints, Calicut.

CH 381 Inorganic Chemistry-III 2-0-0-2

Hard and Soft Acids and Bases (HSAB): Classification of acids and bases as hard and soft. Pearson's HSAB concept, acid-base strength and hardness and softness. Symbiosis, theoretical basis of hardness and softness, electronegativity and hardness and softness. **[7]**

Metal-ligand Bonding in Transition Metal complexes: Limitations of valence bond theory, an elementary idea of crystal-field theory, crystal-field splitting in octahedral, tetrahedral and square planar complexes, factors affecting the crystal-field parameters. Magnetic Properties of Transition Metal Complexes, Types of magnetic behavior, methods of determining magnetic susceptibility, spin-only formula, L-S coupling, correlation of μ_S and μ_{eff} values, orbital contribution to magnetic moments, application of magnetic moment data for 3d metal complexes. **[9]**

Electron Spectra of Transition Metal Complexes: Types of electronic transitions, selection rules for d-d transitions, spectroscopic ground states, spectrochemical series. Orgel-energy level diagram for d^1 and d^9 states, discussion of the electronic spectrum of $[Ti(H_2O)_6]^{3+}$ complex ion. **[7]**

Volumetric Estimation: Theory of oxidation-reduction titrations and complexometric titrations. **[3]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 2008, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2009, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Ed. 1995, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2009, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 391 Organic Chemistry-V 2-0-0-2

Nuclear magnetic resonance (NMR) spectroscopy: Proton magnetic resonance (^{1}H-NMR) spectroscopy, nuclear shielding and deshielding, chemical shift and molecular structure, spin-spin splitting and coupling constants, areas of signals, interpretation of PMR spectra of simple organic molecules such as ethyl bromide, ethanol, acetaldehyde, 1,1, 2-tribromoethane, ethyl acetate, toluene and acetophenone. Problems pertaining to the structure elucidation of simple organic compounds using UV, IR and PMR spectroscopic techniques. **[9]**

Organometallic Compounds: Organomagnesium Compounds: the Grignard reagents-formation, structure and chemical reactions. Organozinc compounds: formation and chemical reactions. Organolithium compounds: formation and chemical reactions. **[3]**

Organosulphur Compounds: Nomenclature, structural features. Methods of formation and chemical reactions of thiols, thioethers, sulphonic acids, sulphonamides and sulphaguanidine. **[3]**

Heterocyclic Compounds: Introduction: Molecular orbital picture and aromatic characteristics of pyrrole, furan, thiophene and pyridine. Methods of synthesis and chemical reactions with particular emphasis on the mechanism of electrophilic substitution. Mechanism of nucleophilic substitution reactions in pyridine derivatives. Comparison in basicity of pyridine, piperidine and pyrrole. Introduction to condensed five and six-membered heterocycles.

Preparation and reactions of indole, quinoline and isoquinoline with special reference to Fisher indole synthesis, Skraup synthesis and Bischler-Napieralski synthesis, Mechanism of electrophilic substitution reactions of indole, quinoline and isoquinoline. **[7]**

Organic Synthesis via Enolates: Acidity of α-hydrogens, alkylation of diethyl malonate and ethyl acetoacetate. Synthesis of ethyl acetoacetate; the Claisen condensation. Keto-enol tautomerism of ethyl acetoacetate. Alkylation of 1, 3-dithianes. Alkylation and acylation of enamines. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand & Co. Ltd.

CH 313 Instrumental Methods of Analysis **2-0-0-2**

Spectroscopic techniques: Mass Spectrometry: Introduction, Ion production (EI and CI techniques), molecular ion peak, base peak, ion analysis, ion abundance, modes of fragmentation, metastable peak, retro-Diels Alder reaction, Mc-Lafferty rearrangement, double charged ion, nitrogen rule, double bond equivalent, mass spectral fragmentation of organic compounds (alkanes, alkenes, arenes, alcohols, aldehydes, ketones, acids and phenols). Basic Principles, instrumentation and applications of Atomic absorption, Photoelectron and Mossbauer spectroscopy. **[11]**

Chromatography: Theory, Behavior of solutes, Column efficiency and band broadening, Resolution,Column process, Reduced variable, Time of analysis, Qualitative & quantitative analysis, Problems. Gas Chromatography: Optimization of experimental condition, Retention time and Retention volume, Detectors: Thermionic, Flame photometric, Helium and Coulson conductivity detectors, Supercritical fluid chromatography, Qualitative and Quantitative analysis, Problems. Liquid Column Chromatography: Introduction, Solvent delivery system, Sample injection, Separation, columns detectors, Optimization of column performance, Problems. High Performance Liquid Chromatography: Adsorption HPLC, Partition HPLC, Ion Exchange HPLC, Exclusion HPLC, Problems**.** Ion Chromatography: Introduction, Technique and Applications **[11]**

Other Separation Methods:-Ultracentrifugation-Principle, sedimentation constant, sedimentation equilibrium, sedimentation velocity, methodology and applications. **[4]**

Suggested Readings:

Text Books:

1. Instrumental methods of chemical analysis, B. K. Sharma, 2008, Goel Publishing House.
2. Instrumental methods of analysis, B. Sivasankar, 2012, Oxford higher education.

Reference Books:

3. Vogel's: Textbook of quantitative Chemical Analysis; Mendham, Denney, Barnes, Thomas and Sivasankar, 2009, Pearson.
4. Instrumental methods of Chemical analysis, G. W. Ewing, 2003, Mc-Graw Hill.

CH 323 Chemistry of Polymers and Petrochemicals 2-0-0-2

Origin, formation & composition of petroleum:
Introduction, Occurrence of Petroleum by Biological method - Composition of Petroleum, Properties of Paraffins, Olefins, Naphthalene, Aromatics and Inorganic impurities (sulphur, nitrogen, chlorine) Exploration of Petroleum by gravity, Magnetic and Seismic Method -Refineries & its capacity in India **[6]**

Evaluation of petroleum properties: Evaluation of Petroleum, U.O.P Characterization factor, Correlation Index - TBP Apparatus and its necessity in Refinery - Testing methods and its importance – ASTM Distillation, Reid vapor pressure, Oxidation stability, Smoke Point, Aniline Point - Carbon residue by Rams bottom method, Copper Corrosion test and Softening point Test - Refinery Products and its uses - Definition of- Heat of Combustion, Specific heat, Latent Heat of fusion, Latent heat of Vaporization, Viscosity index. **[10]**

Polymers: Monomers, classification, polymerization methods: addition and condensation; mechanism and their kinetics, metallocene polymers and other newer techniques of polymerization, copolymerization, fire retarding polymers, electrically conducting polymers, biopolymers, contact lens, dental polymers, artificial heart. Inorganic Polymers: Silicones and Phosphazenes as inorganic polymers. Nature of bonding in triphosphazenes. Organic Polymers: Condensation polymers- Polyesters, Polyamides, Phenol-formaldehyde resin, Urea-formaldehyde resin, Epoxy resins, Polyurathanes. **[10]**

Suggested Readings:

Text Books:

1. The Chemistry and technology of petroleum, J. G. Speight, 2007, CRC Press.
2. Introductory polymer Chemistry, G. S. Mishra, 2005, New Age International.

Reference Books:

3. Handbook of petroleum processing, D. S. G. Jones, 2006, Springer.
4. The Chemistry of polymers, J. W. Nicholson, 4th Edition, RSC Publications.

CH 361 Laboratory Course in Chemistry-V 3-0-0-1.5

Experiments based on the contents of CH 371, CH 381 and CH 391.

CH 333 Laboratory Course for Instrumental Methods of Analysis 3-0-0-1.5

Experiments based on the contents of CH 313. .

CH 343 Project 3-0-0-1.5

Problems will be based on the application part of the curriculum. . .

CH 392 Physical Chemistry-IV 2-0-0-2

Colloidal State: Definition, classification of colloids. Solids in liquids (sols): properties-kinetic, optical and electrical; stability of colloids, protective action. Hardy-Schulze law, gold number. Liquids in solids (gels): classification, preparation and properties, inhibition, general application of colloids. Liquids in **[6]**

liquids (emulsions): types of emulsions, preparation, emulsifier.

Photochemistry: Interaction of radiation with matter, difference between thermal and photochemical processes. Laws of photochemistry: Grothus- Drapper law, Stark-Einstein law, Jablonski diagram depicting various processes occurring in the excited state, qualitative description of fluorescence, phosphorescence, non-radiative processes (internal conversion, intersystem crossing), quantum yield, photosensitized reactions-energy transfer processes (simple examples). **[6]**

Physical Properties and Molecular Structure: Optical activity, polarization-(Clausius-Mossotti equation), orientation of dipoles in an electric field, dipole moment, induced dipole moment, measurement of dipole moment-temperature method and refractivity method, dipole moment and structure of molecules, magnetic properties-paramagnetism, diamagnetism and ferromagnetism. **[6]**

Solutions: Dilute Solutions and Colligative Properties: Ideal and non-ideal solutions, methods of expressing concentrations of solutions, activity and activity coefficient. Dilute solution, colligative properties, Raoult's law, relative lowering of vapour pressure, molecular weight determination. Osmosis, law of osmotic pressure and its measurement, determination of molecular weight from osmotic pressure, elevation of boiling point and depression in freezing point. Thermodynamic derivation of relation between molecular weight and elevation of boiling point and depression in freezing point. Experimental methods for determining various colligative properties. Abnormal molar mass, degree of dissociation and association of solutes. **[8]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 7th Ed. 2003, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 7th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.

4. Practical Chemistry, A.O. Thomas, 8th Ed. Geethanjali Offset Prints, Calicut.

CH 314 Inorganic Chemistry-IV 2-0-0-2

Thermodynamic and Kinetic Aspects of Metal Complexes: A brief outline of thermodynamic stability of metal complexes and factors affecting the stability, substitution reactions of square planar complexes. **[6]**

Organometallic Chemistry: Definition, nomenclature and classification of organometallic compounds. Preparation, properties, bonding and applications of alkyls and aryls of Li, Al, Hg, Sn and Ti, a brief account of metalethylenic complexes and homogeneous hydrogenation, mononuclear carbonyls and the nature of bonding in metal carbonyls **[8]**

Bioinorganic Chemistry: Essential and trace elements to Biological processes, metalloporphyrins with special reference to haemoglobin and myoglobin. Biological role of alkali and alkaline eath metal ions with special reference to Ca^{2+}. Nitrogen fixation. **[6]**

Silicones and Phosphazenes: Silicones and phosphazenes as examples of inorganic polymers, nature of bonding in triphosphazenes. **[6]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, S. Chand & Co. Ltd., 1999.
2. Inorganic Chemistry B.Sc. Part III, Shivahare and Lavania, Ed. 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Ed. 1995, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R. L. Madan, G. D. Tuli, reprint 2007, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.
5. Practical Chemistry, A.O. Thomas, 8th Ed. Geethanjali Offset

Prints, Calicut.

CH 324 Organic Chemistry-VI 2-0-0-2

Carbohydrates: Classification and nomenclature, Monosaccharides, mechanism of osazone formation, interconversion of glucose and fructose, chain lengthening and chain shortening of aldoses. Configuration of monosaccharide. Erythro and threo diastereomers. Conversion of glucose into mannose. Formation of glycosides, ethers and esters. Determination of ring size of monosaccharides. Cyclic structure of D (+)- glucose. Mechanism of mutarotation. Structures of ribose and deoxyribose. An introduction to disaccharides (maltose, sucrose and lactose) and polysaccharides (starch and cellulose) without involving structure determination. **[7]**

Amino Acids, Peptides, Proteins and Nucleic Acids: Classification, structure and stereochemistry of amino acids. Acid-base behavior, isoelectric point and electrophoresis. Preparation and reactions of α-amino acids. Structure and nomenclature of peptides and proteins. Classification of proteins. Peptide structure determination, end group analysis, selective hydrolysis of peptides. Classical peptide synthesis, solid-phase peptide synthesis. Structures of peptides and proteins. Levels of protein structure. Protein denaturation/renaturation. Nucleic acids: Introduction. Constituents of nucleic acids. Ribonucleosides and ribonucleotides. The double helical structure of DNA. **[7]**

Fats, Oils and Detergents: Natural fats, edible and industrial oils of vegetable origin, common fatty acids, glycerides, hydrogenation of unsaturated oils. Saponification value, iodine value, acid value, soaps, synthetic detergents, alkyl and aryl sulphonates. **[4]**

Synthetic Polymers: Addition or chain-growth polymerization. Free radical vinyl polymerization, ionic vinyl polymerization, Ziegler-Natta polymerization and vinyl polymers. Condensation or step growth polymerization. Polyesters, polyamides, phenol-formaldehyde resins, urea-formaldehyde resins, epoxy resins and polyurethanes. Natural and synthetic rubbers. **[4]**

Synthetic Dyes: Colour and constitution (electronic concept). Classification of dyes. Chemistry and synthesis of Methyl orange, Congo red, Malachite green, Crystal violet, Phenolphthalein, Fluorescein, Alizarin and Indigo. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla, 28th Ed.1999, S. Chand & Co Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2000, S. Chand & Co. Ltd.
4. Practical Chemistry, A.O. Thomas, 8th Ed. Geethanjali Offset Prints Calicut.

CH 334 Green and Environmental Chemistry **2-0-0-2**

Atmospheric Chemistry: Atmosphere, reactions in atmosphere, earth's radiation balance, particles, ion and radicals in the atmosphere, stratospheric chemistry: ozone layer, The role of chemicals in ozone destruction, The green-house effect and Global warming, El-Nino phenomenon. Hydrosphere : Complex formation in natural water and waste-water, micro-organism in aquatic chemical reactions, eutrophication, re-cycle of waste-water in process industry, treatment of sewage and reuse of water in industry and agriculture, nitrogen transformation by bacteria. Lithosphere : The terrestrial environment, soil formations, soil properties (physical/chemical), inorganic and organic components in soil, acid-base and ion-exchange reactions in soil, micro and macro nutrients, nitrogen pathways and NPK in soil, waste and pollutants in soil, classification of waste and disposal. **[15]**

Green Chemistry: Green reagent-dimethyl carbonate and other polymer supported reagents, green catalysts-acid catalyst, basic catalysts, oxidation catalysts, polymer supported catalysts, photocatalyst, green synthesis-phase transfer catalyst. microwave and ultrasound assisted synthesis, green solvents- reactions in acidic and neutral ionic liquids, green synthesis of polycarbonates, paracetamol, ibuprofen, citral, urethane, adipic acid and styrene. **[11]**

Suggested Readings:

Text Books:

1. Environmental Chemistry; Sharma and Kaur, 2009, Krishna Publications.
2. Fundamentals of Environmental Chemistry; Manahan, 2001, Lewis publishers.

Reference Books:

3. Environmental Chemistry, A. K. Dey, 2003, APH Publishing Corporation.
4. Environmental Chemistry C. Baird, W. H. Freem, 1998, Wiley Interscience.

CH 344 Organic Reaction Dynamics, Reactive Intermediates and Photochemistry **2-0-0-2**

Organic Reaction Dynamics: General methods for the determination of reaction mechanism including energetics, energy profile diagrams, detection of intermediates, reaction kinetics and thermodynamics, substituent, solvent and isotope effects and stereochemical evidences. **[8]**

Reactive Intermediates: Classical and non-classical carbocations, carbanions, free radicals, arenes, carbenes and nitrenes, general methods of generation, structure, stability and reactivity of these reactive intermediates. **[8]**

Photochemistry: Basic principle, electron excitation, modes of dissipation of energy, jablownski diagram, photochemistry of olefins, dienes, carbonyl compounds, Norrish type-I and Norrish type II cleavage, Paterno-Buchi reaction, photo reduction. Photo-Fries rearrangement, ethers, nitriles, pyridinium ylides, quantum efficiency and quantum yield. **[10]**

Suggested Readings:

Text Books:

1. Advanced organic chemistry; B. S. Bahal and Arun Bahl, 2002, S. Chand and Co.Ltd.

Reference Books:

2. Organic chemistry, A. C. Francis, 2000, Mc-Gra Hill.
3. Advanced organic Chemistry, Jerry March, 2000, Wiley Interscience.
4. Organic chemistry; Morrison and Boyd, 6th Edition, Pearson.
5. Photochemistry and Pericyclic reactions, J. Singh, 2008, New Age International.

CH 354 Pharmaceutical Chemistry **2-0-0-2**

Introduction: Concept of drug, Structure activity relationship (SAR), quantitative structure-activity relationship (QSAR); Factors affecting bioactivity – resonance, inductive effect, isosterism, bio-isosterism, spatial considerations; Theories of drug activity – occupancy theory, rate theory, induced fit theory Concept of drug receptors-elementary treatment of drug-receptor interactions; Factors affecting modes of drug administration, absorption, metabolism and elimination; Significance of drug meta-bolism in medicinal chemistry. **[15]**

Antibiotics: Isolation, structure elucidation, synthesis, SAR and mode of action of following antibiotics: Penicillins, amoxicillins, streptomycin, tetracyclines and chloroamphanicol. **[12]**

Chemotherapeutic agents: Structure and applications of cardiovascular agents: cardiotonic, antiarrthymic drugs, antihypertensive agents, diuretics anti histamines, analgesics, antiviral, anti inflammatory, antipyretic antimalarial, CNS drugs: hypnotics and sedatives, anticonvulsant drugs, CNS stimulants, anti-anxiety and tranquilizers. **[12]**

Suggested readings:

Text Books:

1. An introduction to medicinal chemistry; Patrick, G. L. Oxford press, 4th Ed.

Reference Books:

2. Burger's Medicinal Chemistry; Drug discovery and development, Alfred, Burger. 7th Ed. Wiley Interscience Publications.
3. The Organic Chemistry of Drug Synthesis; Vol. I st, D. Lednicer and L. A. Mitscher, 2008, Wiley Interscience.
4. Medicinal Chemistry, Ashutosh Kar, 2005, New Age International.

CH 382 Laboratory Course in Chemistry-VI 3-0-0-1.5

Experiments based on the contents of CH 392, CH 314 and CH 324.

CH 364 Photochemistry and Green Chemistry Laboratory 3-0-0-1.5

Experiments based on the contents of CH 344. .

CH 374 Pharmaceutical Chemistry Laboratory 3-0-0-1.5

Experiments based on the contents of CH 354. .

Course Description
Physics

PH 111 Mechanics, Properties of Matter and Relativity 3-0-0-3

Mechanics: Laws of motions, Inertial and non-inertial frames of reference, Rotating frame, Effect of centrifugal and Coriolis forces due to earth's rotation, Center of mass (C.M), Lab and C.M frame of reference, Conservation of linear and angular momenta. [8]

Properties of Matter: Elasticity, Young's modulus, Modulus of rigidity, Poisson's ratio, relation connecting different elastic-constants, twisting couple of a cylinder(solid and hallow), Dynamical method (Maxwell's needle) for determining the modulus of rigidity, Bending moment, Cantilever, Determination of Young's modulus by bending of beam. [10]

Fluid Mechanics: Kinematics of moving fluids, equations of continuity, Euler's equation, Bernaulli's theorem, viscous fluids, streamline and turbulent flow, Poiseulle's law, Capillary tube flow, Reynold's number, Stokes law. [7]

Relativity: Postulates of special theory of relativity, Derivation of Lorentz transformation and physical significance of Lorentz invariance, Length contraction and time dilation, Concept of simultaneity, Relativistic velocity transformation relations, mass energy relation, Concept of zero rest mass of photon, Relativistic relation between energy and momentum. [14]

Text Books:

1. D.S.Mathur. Mechanics, S. Chand Publications, New Delhi
2. Resanick and Halliday: Physics Part –1

Reference Books:

1. H.C.Verma : Concept in Physics Vol. I
2. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol I.

PH 121 Electromagnetism 3-0-0-3

Vector Calculus: Gradient, divergence and curl operators, Physical significance

Electromagnetism: Laws of Electromagnetism using vector calculus; electrostatics and magnetostatics in matter, Biot and Savart's law, calculation of H order in simple geometrical situations, Ampere's Law .B=0, ΔxB=μ0 J, field due to magnetic dipole, magnetization current, magnetization vector, Half order field, magnetic permeability (linear cases), interpretation of a bar magnet as surface distribution of Solenoidal current. [7]

Time Varying Fields: Electromagnetic induction, Faraday's law, electromotive force, $\varepsilon = \int$ E.dr. integral and differential forms of Faraday's Law. Mutual and self inductance, transformers, energy in a static magnetic field, Maxwell's displacement current, Maxwell's equations, Electromagnetic field density. [10] [10]

EM wave propagation: The wave equation satisfied by E and B, Plane electromagnetic waves in vacuum, Poynting's vector, Reflection at plane boundary of dielectrics, Polarization by reflection and total internal reflection, Faraday effect, Waves in a conducting medium [12]

Text Books:

1.David J. Griffiths: Introduction to Electrodynamics (3rd Edition)
2. Gupta and Kumar: Electromagnetics

Reference Books:

1. P. Lorrain and O. Corson: EM Waves and Fields
2. A. S. Mahajan and AA Rangwal: Electricity and Magnetism

PH 131 Physics Laboratory-I 0-0-4-2

Assignments are based on the course PH 111 and PH 121

PH 122 Thermodynamics and Statistical Physics 3-0-0-3

Thermodynamics: Reversible and irreversible processes, Carnot's cycle and Carnot's theorem, Second law of thermodynamics, Thermodynamic scale of temperature. [7]

Concept of entropy: Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram [8]

Thermodynamic functions, Internal energy, Enthalpy, Helmholtz function and Gibb's free energy, Maxwell's thermodynamical equations and their applications, TdS equations, Energy and heat capacity equations, Clapeyron equations, Adiabatic demagnetization, Third law of thermodynamics, Nernst heat theorem. [10]

Joule-Thomson effect, Thermodynamic analysis, Inversion temperature, [6]

Thermodynamic equations for a Van der Waals gas. Liquefaction of gases. Regenerative principle, Properties of liquid helium, Introduction to super fluidity

Statistical Mechanics: State of a system (Microscopic and Macroscopic); Phase space, density of states and Liouville's theorem; Postulates of statistical mechanics; Relation between statistical and thermodynamic parameters. [8]

Text Books:

1. K.W. Zeemansky: Heat and Thermodynamics
2. Brij Lal and N. Subramanyam.:Heat and Thermodynamics

Reference Books:

1. B.K. Agarwal: Thermal Physics
2. Frederick Reif : Fundamentals of Statistical and Thermal Physics
3. R.K. Pathria: Statistical Mechanics (2nd Edition):

PH 132 Oscillations and Waves 2-0-0-2

Oscillations: Simple harmonic oscillations, Differential equation of SHM and its solution, Amplitude, Frequency, Time Period and Phase, Velocity and acceleration. Kinetic, Potential and total energy and their time average values. Free oscillations of systems with one degree of freedom : (i) Mass-Spring system, (ii) Simple Pendulum, (iii) Torsional Pendulum, (iv) Compound pendulum (v) Bar Pendulum. [6]

Superposition of Two Collinear Harmonic Oscillations: Linearity and superposition principle. (i) Oscillations having equal frequencies and (ii) Oscillations having different frequencies (Beats). Superposition of N Collinear Harmonic oscillations [6]

Free Oscillations; Damped oscillations; Damping coefficient, Log decrement; Forced oscillations : Transient and steady states, Amplitude, Phase, Resonance, Sharpness of resonance, Power, Dissipation and Quality Factor. [7]

Waves: Plane and spherical Waves, Longitudinal and transverse waves, Plane progressive (Traveling) waves. Wave equation. Particle and wave velocities. Differential Equation. Pressure of a longitudinal wave. Velocity of waves : Velocity of transverse vibrations of stretched strings, Newton's formula for velocity of sound; Laplace's correction [7]

Text Books:

1. N.K. Bajaj: The Physics of Waves and Oscillations, Tata cGraw-Hill, 1988.
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Oscillations and Waves, CBC, Jaipur
3. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.

Reference Books:

1. A. P. French : Vibrations and Waves ,CBS Publications, 1987 2. Brij Lal and N. Subramanyam: Waves and Oscillations

PH 142 Physics laboratory-II 0-0-4-2

Assignments are based on the course PH 122 and PH 132, etc.

PH 211 Semiconductor Physics and Electronics 3-0-0-3

Semiconductor Physics: Intrinsic and extrinsic semiconductors, P-N junction diode, Diode equation, depletion width and potential barrier, junction capacitance, I-V characteristics, Rectifier, ripple factors, filter circuits, efficiency and percentage regulation, LED, photodiode. [9]

Electronics : Transistor circuits, Input, Output characteristics and CB and CE modes, DC load line, operating point, biasing and bias-stabilization circuits: Transistor as an amplifier (CE mode) and frequency response. [6]

Hybrid parameter: Analysis of transistor amplifier (with and without load) using h- parameters, simplified hybrid model, brief idea about hybrid model Single stage amplifier in CE,CB and CC modes. RC coupled CE amplifier and its frequency response, tuned voltage amplifier. Power amplifier classification, distortion and efficiency, push pull amplifier [10]

Feedback in amplifiers: Positive and negative feedback, effect of negative feedback on the characteristics of different types of amplifiers, voltage and current series feedback circuits. Field effect transistors, I-V Characteristics of JFET and MOSFET, FET biasing, FET as an amplifier. [8]

Digital Electronics: Diode and transistor equivalent circuits of basic and derived gates, Universal gates, X-OR and equivalence. Simplification of Boolean expressions using K- maps. Sequential circuits, Flip flops. [6]

Text Books:

1. Millman and Halkias: Integrated Electronics:
2. Chattopadhyay and Rakshit: Electronics Fundamental and Application

Reference Books:

1. Malvino and Leach: Principle of Digital Electronics:
2. Gupta and Kumar: Hand book of Electronics

PH 221 Optics and Lasers 3-0-0-3

Interference: Young's experiment, Conditions for sustained interference, Theory of interference, Fresnel's biprism, Determination of wavelength of light, Interference in parallel and edge shaped films, Colour of thin films. Newton's rings determination of wavelength of light, Michelson interferometer and their applications. [10]

Diffraction: Definition, Frenel's diffraction, Zone plate, diffraction due to straight edge. Fraunhoffer diffraction due to single and double slits, plane transmission grating and its resolving power. [10]

Polarization: Polarized light and its mathematical representation, Polarization by double refraction and Huygen's theory, Nicol prism, [9]

Retardation plates, Production and analysis of circularly and elliptically polarized light, Optical activity.
Lasers: Einstein's A and B coefficients, Spontaneous and Stimulated conditions for laser action population inversion, optical pumping, Working of different types of lasers: semiconductor, rubey and He-Ne Lasers. [10]
Fiber optics: Working, Numerical aperture

Text Books:

1. N. Subrahmanyam, Brijlal and M. N. Avadhanulu: A textbook of Optics
2. A.Ghatak: Optics, Tata Mc Graw-Hill

Reference Books:

1. B. K. Mathur and T. P. Pandya: Physical Optics

PH 231 Physics laboratory-III 0-0-4-2

Assignments are based on the course PH 211 and PH 221

PH 212 Mathematical Physics and Special theory of Relativity 3-1-0-4

Curvilinear Coordinates: Orthogonal curvilinear coordinate systems, scale factors, expression for grade, divergence, curl and their application to Cartesian, circular cylindrical and spherical polar coordinate systems. [9]

Coordinate transformation and Jacobean, Transformation of covariant, contra variant and mixed tensor. Addition, multiplication and contraction of tensors. Metric tensor and its use in transformation of tensors [7]

Dirac-delta function and its properties. Lorentz transformation and rotation in space-time, time like and space like vectors, world line, and macro-causality [6]

Four vector formulation: energy- momentum Four vector, relativistic equation of motion invariance of rest mass, orthogonality, four force and four velocity, Lorentz force as an example of four force transformation of four frequency vector, longitudinal and transverse Doppler's effect. Transformation of electric and magnetic fields between two inertial frame [12]

Differential Equations: The second order liner differential equation with variable coefficient and singular points, series solution method and it application to the Hermite's Legendre's and Laguerre's differential equation. Basic properties (without proof) like orthogonality, recurrence relation, Graphical representation and generating functions of Hermite, Lagendre, Leguerre and Associated Legendre functions (very simple application) [13]

Fourier Analysis: Fourier theorem, Fourier analysis of square wave, saw-tooth wave, plucked strings, half wave/full wave rectifier wave forms [5]

Text Books:

1. George Arfken: Mathematical Method for Physicists (Academic Press).

2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Mathematical Physics and Special Theory of Relativity, CBC, Jaipur
3. D. E. Bourne, P C Kendall:Vector Analysis and Cartesian Tensors, 3ed (Chapman & Hall, 1992)

Reference Books:

1. A.P. French:Special Relativity
2. P. K. Chattopadhyay: Mathematical Physics.
3. Gupta and Kumar: Mathematical physics

PH 222 Physics Laboratory IV 0-0-4-2

Assignments are based on Course PH 211 etc.

Course Description
Mathematics

MS 111 Calculus **3-0-0-3**

Curvature: Curvature, Radius of curvature for Cartesian curves, parametric curves, Polar curves and Pedal curves, Centre of curvature. Circle of curvature, Chord of curvature, Tests for concavity and convexity, Points of inflexion, Multiple points. [8]

Asymptotes and Curve Tracing: : Asymptotes in Cartesian and polar coordinates, Intersection of a curve with its asymptotes**,** **a**pplication of differential calculus in curve sketching in Cartesian and polar co-ordinates. [8]

Differentiation: Partial differentiation, Euler's theorem for homogeneous functions, Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers. [8]

Integral Calculus: *:* Double integrals in Cartesian and polar coordinates, Change of order of integration, Triple integral, Applications of double and triple integrals in finding areas and volumes. [8]

Vector Calculus: Gradient, Divergence and Curl. Greens, Stokes and Gauss Theorems (without proof) and problems based on these theorems. [7]

Text Books:

1. Thomas and Finney: Calculus and Analytic Geometry, Ninth Edition.
2. Shanti Narayna : A Text Book of Vector Calculus. S. Chand & Co., New Delhi.

Reference Books:

1. N. Saran and S.N. Nigam : Introduction to Vector Analysis, Pothishala Pvt. Ltd., Allahabad.
2. Differential and Integral Calculus : Shanti Narayan.
3. D. C. Gokhroo, Differential CAlculus, Navkar Prakashan.
4. N. Piskunov : Differential and integral Calculus. Peace Publishers, Moscow.
5. Gorakh Prasad : Differential Calculus. Pothishasla Pvt. Ltd., Allahabad.
6. Gorakh Prasad : Integral Calculus. Pothishala Pvt. Ltd., Allahabad.

MS 121 Matrices and Theory of Equations 3-0-0-3

Matrix: Matrices, Symmetric, Skew symmetric, Hermitian and skew Hermitian matrices. Elementary Operations on matrices Rank of a matrices, Inverse of a matrix. Linear dependence and independence of rows and columns of matrices, Row rank and column rank of a matrix, Eigenvalues, eigenvectors and the characteristic equation of a matrix, Cayley Hamilton theorem and its use in finding the inverse of a matrix [13]

Applications of Matrices: Applications of matrices to a system of linear (both homogeneous and non–homogeneous) equations. Theorems on consistency of a system of linear equations. Unitary and Orthogonal Matrices, Bilinear and Quadratic forms [9]

Theory of Equations: Relations between the roots and coefficients of general polynomial equation in one variable, Solutions of polynomial equations having conditions on roots. Common roots and multiple roots. Transformation of equations. [9]

Solution of equations: Nature of the roots of an equation, Descarte's rule of signs. Solutions of cubic equations (Cardon's method). Biquadratic equations and their solutions . [8]

Text Books:

1. Higher Algebra: A. Kurosh (Moscow Mir Publisher 1972).
2. Theory of Equations: (Lecture notes for inter University Leadership project in Mathematics by R.N. Gupta, Surjeet Singh and R.J. Hans.

Reference Books:

MS 112 Abstract Algebra 3-0-0-3

1. H.S. Hall and S.R. Knight: Higher Algebra, H.M. Publications 1994.
2. Shanti Narayan: A Text Books of Matrices.
   Chandrika Prasad: Text Book on Algebra and Theory of Equations. Pothishala Private Ltd., Allahabad.

Group: Algebraic structure**,** Definition of a group with examples and simple properties, Abelian group, semi group, Order of an element of a group, Cyclic groups, Coset decomposition. [11]

Subgroup and quotient Groups: Subgroups, Normal subgroups, Normalizer of an element, Quotient group [10]

Group Morphism: Homomorphism, kernel of homomorphism, Isomorphism and automorphism, Fundamental theorem of Homomorphism, Cayley's theorem. [10]

Permutations: Definition and examples of Permutation, group of permutations, Cyclic Permutation, Even and odd permutation. [8]

Text Books:

1. I.N.Herstein: Topics in Algebra, 2nd edition, Wiley Eastern Ltd. 1988.
2. P.B.Bhattacharya, S.K.Jain and S.R.Nagpaul: Basic Abstract Algebra, 2nd Edition, Cambridge University Press 1995.

Reference Books:

1. J.B.Fraleigh : A first course in Abstract Algebra, 3rd Edition Addison-Wesely/Narosa 1998..
2. Surjeet Singh and Quazi Zameeruddin : Modern Algebra, Revised Edition,Vikas Publishing House, 1992.
   D. C. Gokhroo: Algebra, Navkar publication, Ajmer, Revised Edition , 2005.

MS 122 Differential Equations-I 3-0-0-3

Basic Concepts: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines. [4]

First Order Differential Equations: Differential equation of first order and first degree, Homogeneous form and reducible to homogeneous form, Linear equations and equations reducible to linear form, Exact differential equations, Equations reducible to exact forms, First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations, Equation reducible to Clairaut's form. [14]

Second order differential equations: Second order differential equations with variables coefficients, Homogeneous and exact forms, Change of dependent equations, change of independent variables, normal form, Method of variation of Parameters [12]

Series Solution: Regular singular points, ordinary points, , series solution of second order linear differential equations with variable coefficients(Complementary Functions only) [9]

Text Books:

1. D.A. Murray : Introductory Course in Differential Equations. Orient Longaman (India) . 1967
2. A.R.Forsyth : A Treatise on Differential Equations, Machmillan and Co. Ltd. London

Reference Books:

1. D. C. Gokhroo : Ordinary Differential equations, Navkar Prakashan.
2. S.L.Ross : Differential Equations, John Wiley & Sons
   B.Rai & D.P. Chaudhary : Ordinary Differential Equations; Narosa, Publishing House, Pvt. Ltd.

MS 211 Linear Algebra **3-0-0-3**

Vector Space: Vector spaces, subspaces, Sum and Direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space. Finitely generated vector space, Existence theorem for basis of a finitely generated vactor space, Finite dimensional vector spaces, Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension [12]

Linear transformations: Linear transformations and linear forms on vactor spaces, Vactor space of all the linear transformations, Kernal and range of a linear transformation, Rank and Nullity, Matrix of a Linear Transformation, Change of basis. [10]

Dual Spaces: Dual Spaces, Dual Basis, Bidual Spaces, annihilator of subspaces of finite dimentional vactor spaces. [9]

Inner Product Space: Inner produt space, norm of a vector, Orthogality. [8]

Text Books:

1. I.N. Herstein : Topics in Algebra, Wiley Eastern Ltd., New Delhi, 1975
1. P.B. Bhattacharya, S.K. Jain and S.R. Nagpal : Basic Abstract Algebra (2^{nd} edition).

Reference Books:

1. Vivek Sahai and Vikas Bist : Algebra, Narosa Publishing House.
2. I.S. Luther and I.B.S. Passi : Algebra, Vol.-II, Narosa Publishing House.

D. C. Gokhroo : Linear Algebra, Navkar Prakashan.

MS 221 Differential Equations-II **3-1-0-4**

Partial Differential equations: Formation, order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, singular solution, General solution, Solution of Lagrange's linear equations, Charpit's general method of solution. [13]

Second and higher Order PDE: Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant co-efficients, Partial differential equation with variable co-efficients reducible to equations with constant coefficients, their complimentary functions and particular Integrals, Equations reducible to linear equations with constant co-efficients. [14]

Solution of Second order PDE: Classification of linear partial differential equations of second order, Hyperbolic, parabolic and elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method. [12]

Text Books:

1. Ian N. Sneddon : Elements of Partial Differential Equations, McGraw-Hill Book Company, 1988.
2. S.B. Rao and H.R. Anuradha : Differential Equations, University Press, 1996.

Reference Books:

1. W.T.H. Piaggio : Elementary Treatise on Differential Equations and their applications, CBS Publishers N.Delhi,1985.
2. D.A.Murray: Introductory Course on Differential Equations, Orient Longman, (India), 1967
3. Erwin Kreyszing : Advanced Engineering Mathematics, John Wiley & Sons, Inc. New York, 1999
4. Frank Ayres : Theory and Problems of Differential Equations, McGraw Hill Book Company, 1972
   J.N. Sharma & Kehar Singh : Partial Differential Equations

MS 212 Numeric Analysis 3-1-0-4

Interpolation: Interpolation with equal intervals: Newton's forward and Newton's backward interpolation formulae. Newton's divided difference, Lagrange's Interpolation formulae.	[10]
Central Differences: Gauss forward and Gauss's backward interpolation formulae, Sterling, Bessel Formula.	[8]
Iterative Methods: Newton Raphson Method, Successive Bi-Section, Regula Falsi, Successive Approximation Method.	[11]
Numerical Methods: Newton-Cote's Quadrature formula, Trapezoidal rule, Simpson's one-third and three-eighth rule, Picard method, Euler method, Runge-Kutta Methods.	[10]

Text Books:

1. Babu Ram: Numerical Methods, Pearson Publication.
2. R.S. Gupta, Elements of Numerical Analysis, Macmillan's India 2010.

Reference Books:

1. M.K. Jain, S.R.K. Iyengar, R.K. Jain : Numerical Method, Problems and Solutions, NewAge International (P) Ltd., 1996
2. S. S. Sastry: Introductory Methods of Numerical Analysis, 3rd edition(2000), Prentice Hall of India Pvt. Ltd., New Delhi.5. C.E. Froberg : Introduction to Numerical Analysis (2nd Edition).
   S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

MS 222 Real Analysis 3-0-0-3

Neighborhood and Limit Points: Boundedness of the set of real numbers, least upper bound, greatest lower bound of a set, neighborhoods, interior points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weierstrass theorem. [10]

Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence. [9]

Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, D-Alembert's ratio test, Cauchy's general principle of Convergence of series, Leibnitz test, Absolute and conditional convergence. [12]

Riemann integral: Lower and upper Riemann integrals, Riemann Integrability, Mean value theorem of integral Calculus, Fundamental theorem of Integral Calculus. [8]

Text Books:

1. R.R. Goldberg : Real Analysis, Oxford & I.B.H. Publishing Co., New Delhi, 1970
2. S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

Reference Books:

1. Shanti Narayan : A Course in Mathematical Analysis, S.Chand and company, New Delhi.
2. D. C. Gokhroo, Real analysis, Navkar Prakashan.
3. T.M. Apostol: Mathematical Analysis, Narosa Publishing House, New Delhi, 1985
   Earl D. Rainville : Infinite Series, The Macmillan Co., New York

COURSE DESCRIPTION
Biotechnology

BT 151 Cell Biology **3-1-0-4**

Diversity of Cell: Size and shape, cell theory, structure of prokaryotic and eukaryotic cells [2]

Cell membrane: Molecular structure and models of cell membrane, Membrane transport – Passive (diffusion, osmosis and facilitated) and active transport, Cell junctions. [8]

Cell organelles 1: Structure, function and biogenesis of Mitochondria, Plastid, Endoplasmic reticulum, Golgi complex, Lysosome. [8]

Cell organelles 2: Ribosome, Centrioles, Cilia, Flagella and Cytoskeletal system. Introduction to extra cellular matrix [7]

Nucleus: Interphase nucleus, Nuclear envelope, nucleoplasm, Nucleolus and Chromatin (nucleosome model, Structure of eukaryotic chromosome, Giant chromosome) [6]

Cell Division: Cell cycle, mitosis and meiosis, structure and function of spindle apparatus, synapses and synaptonemal complex and crossing over [8]

Suggested Books:

1. De Robertis and De Robertis: Cell and Molecular Biology B.I. Publications, US.
2. Gardner, Principle of Genetics; John Willey and Sons, US.
3. Becker *et al*; The World of Cell; Pearson Publications, Singapore.
4. Strickberger; Genetics; MacMillan Publications, US.
5. Sarin; Genetics; Tata McGraw Hill Publications, New Delhi.
6. Rastogi V.B.; Genetics; Kedar Nath and Ram Nath, Meerut.

BC 111 General Biochemistry **3-0-0-3**

Basic Concepts: Law of mass action, pH and buffers, calculation of pH, biological importance of pH and buffers, law of thermodynamics, concept of free energy **[5]**

Carbohydrates: Structure, classification and function, properties of monosaccharide and its derivatives, structural and storage carbohydrates **[5]**

Proteins: Classification of amino acids, different reactions of –NH2 and –COOH group, Structure and classification of proteins, Bohr's effect, hemoglobin, myoglobin, antibodies **[5]**

Lipids: Basic structure of lipids, classification, importance of triacyglycerols, glycerolipids, sphingolipids, steroids, lipid bilayers **[6]**

Nucleic Acids: Nucleic acid as a genetic material, composition **6]**

of DNA and RNA, linkage between purines and pyrimidines, types of DNA

Vitamin: Role of vitamin in the growth and differentiation of body, chemistry of fat and water-soluble vitamins, vitamins as coenzymes. Hormones as signal molecules **[6]**

Cellular Metabolism: Glycolysis, Gluconeogenesis, Krebs cycle, Electron transport chain, β-oxidation, Overview of amino acid metabolism [6]

Suggested Books:

1.Jain J.L.; Biochemistry; S. Chand Publication, New Delhi.

2. Cohn and Stump; Outline of Biochemistry; Cambridge,UK.

3. Nelson and Cox; Principles of Biochemistry; Panima, New Delhi.

4.Mathew *et al.;*Biochemistry; Pearson, New York.

5.Sadasivam and Manickam; Biochemical Methods; New Age International, New Delhi.

BT 161 **Cell Biology Laboratory** **0-0-2-1**

Assignments are based on the course BT 151 Cell Biology meiosis, mitosis etc.

BC 121 **Biochemistry Laboratory** **0-0-2-1**

Assignments are based on the course BT 121 Biochemistry containing exercises on qualitative and quantitative analysis of biomolecules

BT 152 **Genetics** **3-1-0-4**

Mendelian inheritance and gene interaction: Mendel's Law of Inheritance, Allelic and non-allelic, complementary, supplementary, epistasis, hypostasis and lethal genes. Multiple alleles and pleiotrophism. [10]

Theory of sex determination: A brief account, linkage and crossing over, linkage maps. Sex linked traits: Eye color and lethals in drosophila, Hemophilia and color blindness in humans. Primary and secondary non-disjunction of sex chromosomes. Sex influenced traits: horn character in sheep, sex limited traits: Cock feathering in poultry and baldness in man [10]

Extranuclear inheritance: Plastid, mitochondria and

cytoplasm. [5]

Mutations: Chromosomal aberrations and meiotic consequences. [4]

Human genetics: Chromosomal and genetic disorders; genetic counseling, somatic cell genetics. [5]

Population genetics: Gene pool and gene frequencies, Hardy Weinberg Law, change in gene frequencies (mutation, selection and migration), random drift. Heterosis. [5]

Suggested Books:

1. Gardner, Principle of Genetics; John Willey and Sons, New York,US.
2. Strickberger; Genetics; MacMillan, UK.
3. Sarin; Genetics; Tata McGraw Hill, New Delhi
4. Rastogi V.B.; Genetics; Kedar Nath and Ram Nath, Meerut**.**
5. Gupta, P.K., Genetics, Rastogi publications, Meerut.

BC 211 Bio-Instrumentation **3-1-0-4**

Principle of pH meter. [1]

Sterilization Techniques: Heat sterilization (Autoclave and Hot Air Oven), Filter sterilization, Incubator and Laminar Air Flow. [6]

Centrifugation: Principles of centrifugation, Design and care of rotor, Analytical and Preparative centrifugation, Safety aspects and applications. [8]

Spectroscopy: Principles of spectrophotometry, Ultra-violet and Visible Spectroscopy, Atomic spectroscopy. [8]

Electrophoresis: Principles of Gel electrophoresis, Agarose and SDS gel electrophoresis, IEF, 2-D PAGE. [8]

Chromatography: Principles of chromatography, Paper, Thin layer, Column chromatography, Permeation, Ion exchange and Affinity chromatography. [8]

Suggested Readings:

Text Book:

1. Wilson and Walker-Principles of Molecular Biology and Biochemistry, Cambridge University Press, 3rd Edition, New Delhi.
2. Upadhayay, Upadhayay and Nath-Biophysical Chemistry, Himalayan Publishers,4th Edition, New Delhi.

3. David T Plummer- An Introduction to Practical Biochemistry, Tata McGraw Hill, 2nd Edition, New Delhi.

Reference Book:

4. Lehninger: Principles of Biochemistry 4th edition - David L. Nelson and M.M. Cox (2005) Maxmillan/ Worth publishers/ W. H. Freeman & Company.
5. Fundamentals of Biochemistry 3rd edition- Donald Voet and Judith G Voet (2004), John Wiley & Sons, NY
6. J G Webster- Bioinstrumentation, John Wiley & Sons Inc, New York

BC 221 Bio-instrumentation Laboratory **0-0-2-1**

Assignments are based on the course BC 211 Instrumentation containing exercises on principle and working of instruments and performance of important techniques.

BT 212 Molecular Biology **3-1-0-4**

Introduction: Molecular basis of life, genetic material and its properties, structure of DNA, central dogma, organization of DNA in chromosome. [5]

DNA Replication: Nature of DNA replication, prokaryotic and eukaryotic DNA replication, fidelity of replication in prokaryotes and eukaryotes. [5]

DNA Damage and DNA Repair: Mutations, Causes of mutation and their mechanisms, effect of mutation on DNA, Mutation detection – Ames test to detect mutagenicity and carcinogenicity. DNA repair – Excision repair, Mismatch repair. [5]

Transcription: Enzymatic synthesis of RNA, classes of RNA molecule, transcription in prokaryotes and eukaryotes, splicing mechanism [8]

Translation: Outline of translation, genetic code, ribosome as protein synthesis machinery, protein synthesis in pro- and eu-karyotes – initiation, elongation and termination [8]

Gene Regulation: Regulation of gene activity and gene products in prokaryotes and eukaryotes. [8]

Suggested Books:

1. Chunnarayappa; Molecular Biotechnology; Universities Press, London.
2. Gupta P.K.; Elements of Biotechnology; Rastogi Publication,

Meerut.
3. Singh B.D.; Biotechnology; Kalyani Publication, New Delhi.

BT 232 Molecular Biology Laboratory **0-0-2-1**

Assignments are based on the course BT 212 Molecular Biology containing exercises on techniques involved in study of Nucleic acids.

BT 251 Food Technology **2-0-0-2 26**

1. **Food & Fermentation Technology**: Origin, scope and development of fermented food products. **[2]**

2. **Development of novel food and food ingredients**: Single cell protein, Mushroom cultivation, Nutraceuticals, Probiotic foods, genetically modified foods. **[5]**

3. **General principles:** Food spoilage and preservation, contamination of foods and their involvement in disease outbreaks. Methods of food preservation. **[9]**

4. **Packaging of foods:** Packaging Materials, Controlled atmosphere packaging. **[4]**

5. **Food plant Sanitation:** Disposal and treatment of food industry waste, food laws and current concepts in food safety **[6]**

Suggested Readings

Text Book

1. Frazier and Westhoff, Food Microbiology, Tata McGraw Hill Publishing Company Ltd, New Delhi
2. Banwart,GJ: Basis of Food Microbiology, CBS Publishers and Distributors, New Delhi

References

3. Adams and Moss, Food Microbiology, Royal Society of Chemistry Publication, Cambridge

BT 261 Food Technology Laboratory **0-0-2-1 13**

Assignments are based on the course BT 251 Food Technology containing exercises on manufacturing and preservations of food products

BT 242 Plant and Animal Biotechnology **2-0-0-2 26**

1. Introduction to animal tissue culture, Disaggregation techniques, Sterilization, Normal and transformed cell lines, primary culture, secondary culture, Media formulation, Growth characteristics, preservation of cell lines, Embryo culture and IVF **[12]**

2. Plant Tissue culture Introduction: Terms and Definition, Historical aspects and scope, Classical vs modern approach, Totipotency and cell theory; Growth and Differentiation; Culture media and its constituents; Sterilization **[9]**

3. Micropropagation Technique, Genetic Variability, Protoplast fusion Technique and somatic hybridization **[5]**

Suggested Readings

Text Book

1. Freshney Y; Culture of Animal Cells; John Wiley and Sons Publication, New York
2. Spler R.E. & Grifith J.B.; Aniaml Cell Biotechnology
3. Bhojwani S.S.; Plant Tissue Culture: Applications and Limitations; Elsevier, Amsterdam.

References

4. Razdan M.K; An Introduction to Plant Tissue Culture; Rastogi Publication, Meerut.
5. Chawla H.S; Introduction to Plant Biotechnology; Oxford and IBH Publishers, New Delhi.

BT 252 Tissue Culture Laboratory **0-0-2-1 13**

Assignments are based on the course BT 242 Plant and Animal Biotechnology containing exercises on media preparation and different culturing methods of plant and animal cells.

MB 331 General Microbiology **3-0-0-3 39**

Definition and scope of Microbiology: History and recent developments – Spontaneous generation versus biogenesis, [12] Germ theory of diseases, pure-culture concept.-contributions of Louis Pasteur – Leuwenhoek, Lazaro Spallanzani, John Tyndall, Joseph Lister, Robert Koch. Microscopy: simple, compound light microscopy – Dark Field, Bright Field, Phase contrast, Fluorescence and Electron Microscopy. Classification of Microbes – Systems of classification, General properties, principles and types of classification of microorganisms, Bergey's manual, Nutritional types, Classification on the basis

of physical parameters.

General characteristics and functions of Bacteria: structure and function of cell wall, cilia, flagella, slime layer, capsule, pilli, Cytoplasmic membrane and Cytoplasmic inclusions, sporulation. Kingdom prokaryotes - classical techniques of microbial identification - morphological, physiological and biochemical properties. [8]

Kinetics of Bacterial growth: Different types of bacterial culture (Batch, Synchronous, Arithmetic) – Definition and brief description. Growth Phases, Growth Kinetcs, Calculation of duration of Phases and generation time, Growth yields, Methods of growth determination, Environmental factors affecting growth - temperature, pH, osmotic pressure, partial pressure of oxygen and nutrient concentration. Concept of Sterilization - Definition of sterilization, Physical and Chemical methods of sterilization. [7]

Basic concepts of Virology: General characteristics of viruses, differences between bacteria and viruses. Classification of viruses Physical and chemical Structures of different Viruses on the basis of capsid symmetry - enveloped (Herpes virus), helical (TMV) and icosahedral (Polyoma viruses), Complex (Bacteriophage), Bacteriophages: Stages in the Lytic and Lysogenic Life Cycle of a typical phage, Properties of a phage infected bacterial culture. Viroids and prions. [6]

Brief description of Algae, Fungi and protozoa: General characteristics of Algae, Fungi and Protozoa. [6]

Suggested Books:

Pelczar *et. al*.; Microbiology; Tata McGraw Hill; New Delhi.
Powar & Daginawala; General Microbiology I & II; Himalaya Publishing House, Mumbai.
Stanier *et al.;* General Microbiology; Prentice Hall of India, New Delhi.
Prescott, Harley, Klein; Microbiology; Mc Graw Hill Publication, New York.

MB 341 General Microbiology Laboratory **0-0-2-1**

Assignments are based on the course MB 331 General Microbiology containing exercises on microscopic and cultural study of microorganisms and their isolation from natural sources.

COURSE DESCRIPTION
Zoology

ZO 111 **Animal Diversity-I** **3-0-0-3**

Taxonomy: General principles of taxonomy, Five-kingdom concept. Protozoa, Metazoa and Levels of organization, Origin of metazoa, Coelom, metamerism and symmetry. [4]

Principles of Classification: Salient features and classification upto class level in non-chordates. [5]

Protozoa – Locomotion, nutrition, reproduction, Life cycle of parasite (plasmodium). [4]

Porifera: Canal system; Endoskeleton, Reproduction. [3]

Coelenterata: Nematocysts, polymorphism. [3]

Ctenophora: Affinities. [1]

Platyhelminthes and Aschelminthes: Reproduction and larval forms (Fasciola and Ascaris). [4]

Annelida: Excretion in annelids. Type study – Earthworm. [6]

Mollusca: Respiration. [1]

Arthropoda: Larval forms of crustacea, Mouthparts of insects, Social life in insects. [3]

Ecinodermata: Water vascular system, larval forms and their significance; Origin and phylogeny of echinoderms. [4]

Lower chordates: Taxonomic position and affinities. [1]

Suggested Books:

1. Kotpal R.L; Modern Textbook of Zoology - Invertebrate; Rastogi Publication, Meerut
2. Bhamrah H.S. and Juneja A. K; Textbook of Invertebrates; Anmol Publications Pvt. Ltd., New Delhi
3. Kapoor V.C; Theory and Practice of Animal Taxonomy; Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi
4. Hickman C.P., Roberts, L.S. and Larson A; Integrated Principles of Zoology; WCB Mc Graw-Hill, New Delhi
5. Grove A.J; and Newell G. E; Animal Biology. University Book Stall, New Delhi

0-0-2-1

ZO 121 **Animal Diversity Laboratory-I**

Assignments are based on the course ZO 111 Animal Diversity-I containing exercises on taxonomy and organization of non-chordates

ZO 132 **Animal Diversity-II** **3-0-0-3**

Chordata: General organization, classification upto class level. [9]

Comparative Anatomy of Chordates 1: Integument, Endoskeleton and Digestive system and Brain. [11]

Comparative Anatomy of Chordates 2: Heart, Aortic arches and Venous system, Respiratory system, Urogenital system. [10]
Fishes: Accessory respiratory organs. [2]
Amphibia: Parental Care in Amphibia. [1]
Reptilia: Poison apparatus, snake venom, antivenin, biting mechanism and first aid. [2]
Aves: Flight adaptations. [2]
Mammals: Origin of mammals. [2]

Suggested Books:

1. Kotpal R. L; Modern Textbook of Zoology - Vertebrate; Rastogi Publication, Meerut.
2. Bhamrah H. S. and Juneja A. K; Textbook of Vertebrates; Anmol Publications Pvt. Ltd., New Delhi.
3. Young J.W; The Life of Vertebrates; Oxford University Press, New York.
4. Pough F. H., Jains C. M. and Heiser J. B; Vertebrate Life; Pearson Education Pvt. Ltd., Singapore.
5. Colbert E. H; Evolution of Vertebrates; Wiley Eastern Ltd, New Delhi.
6. Rastogi V. B; Organic evolution; Kedar Nath Ram Nath Publication, Meerut.

ZO142 **Animal Diversity-II Laboratory** **0-0-2-1**

Assignments are based on the course ZO 132 Animal Diversity-II containing exercises on taxonomy and organization of chordates.

ZO 212 **Animal Physiology** **3-0-0-3**

Physiology of Digestion: Digestion of food material, control of digestive juice secretion, Absorption of digested food material. [4]
Physiology of Respiration: External and internal respiration, control mechanism, transport of gases, respiratory pigments. [4]
Physiology of Circulation: Concept of haematopoesis and haemolysis, blood coagulation, heartbeat and cardiac cycle, mechanism of controlling heartbeat, electrocardiogram, blood pressure. [4]
Physiology of Excretion: Excretory products, Ornithine cycle, structure and function of kidney, mechanism of urine formation. [4]
Physiology of Muscle Contraction: Chemical composition, mechanism of muscle contraction. [4]
Nervous System: Basic concept of CNS, PNS, ANS, Propagation of nerve impulses, Synaptic transmission, Reflex action. [4]
Endocrine Glands: Structure and functions: Pituitary, adrenal, thyroid, parathyroid, pancreas, testis and ovary, Mechanism of [3]

hormone action, pheromones.

Reproduction: Structure of male and female reproductive organs, hormonal control, menstrual cycle, implantation parturition and lactation in mammals. [4]

Homeostasis: Basic concept, osmotic conformers, osmoregulation, thermoregulation. [4]

Physiological Disorders: Disorders related to Brain, Blood, Heart, Kidney and Bone. [4]

Suggested Books:

1. Chatterjee C.C.; Human Physiology; Medical Book Depot.India.
2. Guyton et al.; Medical Physiology, W.B Sauders Co., Philadelphia Toronto.
3. Berry A.K.; Physiology, Rastogi Publication, Meerut
4. Tatora et al.; Human Physiology, Wiley International, New York.

ZO 222 Animal Physiology Laboratory **0-0-2-1**

Assignments are based on the course ZO 212 Animal Physiology containing exercises on structural and physiological different in animals.

ZO 232 Developmental Biology **3-0-0-3**

Introduction: History and scope of animal developmental biology [1]

Male Gonads and Spermatogenesis: Structure of seminiferous tubule, interstitial cells, morphology of sperm, process and control mechanism of spermatogenesis. [4]

Female Gonads and Oogenesis: Ovarian Structure, Oogenesis: pre- vitellogenesis and vitellogenesis, types of eggs. Control mechanism of ovulation [5]

Reproductive Cycles: Breading and non-breading seasons**,** Estrous and Menstrual cycles – regulation. [4]

Fertilization: Types and Mechanism of fertilization, post fertilization changes in the egg cytoplasm, monospermic and polyspermic fertilization, significance of fertilization. [5]

Parthenogenesis: Types and significance [1]

Cleavage: Planes, patterns and rate of cleavage, mitotic peculiarity, physiology and significance of cleavage. [3]

Embryonic Development: Morulation, Blastulation (types and significance), Gastrulation (Characteristics, morphogenetic movements, physiology and significance), Tubulation, Concept of fate maps (Frog and Chick). [5]

General Concepts of Differentiation: Regeneration, and Metamorphosis, extra embryonic membrane, organizer concept [8]

and embryonic induction. Embryo sexing and ageing.

Brief Introduction: Birth control, impotency, Artificial insemination, test tube baby and GIFT. [3]

Suggested Books:

1. Sastry & Shukla; Development Biology; Rastogi Publication, Meerut.
2. Bhojwani & Bhatnagar; The Embryology of Angiosperms; Vikas Publishing House, New Delhi.
3. Balinsky B. I; An Introduction to Embryology; W. B. Saunders, New Delhi.
4. Verma P.S., Agarwal V.K. and Tyagi B.S; Chordate Embryology. S. Chand and Co., New Delhi.
5. Berrill N. J; Developmental Biology; Mc Graw Hill, New York

ZO 242 Developmental Biology Laboratory **0-0-2-1**

Assignments are based on the course ZO 232 Developmental Biology containing exercises on reproductive cycle and embryonic development.

Mody University of Science & Technology

B.Sc. (Hons) Food and Nutrition

Session 2016-2017

Curriculum Structure

MODY UNIVERSITY
OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

FN 111 Principle of Nutrition 3-0-0-3

UNIT-I [7]

Indian foods - Food and culture, Traditional Indian Dietary patterns and Indian ethnic cuisines, Nutritional/medicinal quality of traditional foods - Traditional food beliefs, foods in Ayurveda. Food processing technologies

UNIT-II [6]

Nutrition and Food Science – Definition, history, RDA (Recent), factors affecting RDA – Methods used for deriving RDA, Basic four/five food groups and the functions of food, Food pyramid

UNIT-III [6]

Carbohydrates – classification, functions, digestion and absorption, Sources, deficiency diseases. Role fo fibre in human Nutrition

UNIT-IV [4]

Protein – classification – functions, sources digestion and absorption, sources and deficiency disorders.

UNIT-V [4]

Lipids – Classification, functions, digestion and absorption, sources, excess and deficiency disorder

UNIT-VI [6]

Vitamins – Fat soluble vitamins A, D, E & K, functions, sources, requirements deficiency diseases. Water soluble vitamins – B like thiamine, Riboflavin, Niacin, Phridoscin, Folic acid, B2 and Vitamin C and their functions sources requirements and deficiency diseases.

UNIT-VII [6]

Minerals – Calcium, phosphorus, Sodium, Potassium, Iron, Iodine, Flourine and their functions, sources requirements and deficiency diseases.

FN 121 Nutrition through life 3-0-0-3

UNIT-I [6]

Principles of meal planning: Balanced diet, Food groups, Food exchange list, Factors effecting meal planning and food related behavior, Dietary guidelines for Indians and food pyramid

UNIT-II [3]

Nutrient requirements: Dietary Concept, Overview of methods for assessment of

nutrient needs

UNIT-III [10]

Nutrition for adulthood and old age : Adult: Nutrient requirements for adult man and woman, RDA, nutritional guidelines, nutritional concerns, diet and lifestyle related diseases and their prevention, Elderly – Physiological changes in elderly, RDA, nutritional guidelines, nutritional and health concerns in old age and their management, factors contributing to longevity

UNIT-IV [10]

Nutrition during pregnancy and lactation: Pregnancy – Physiological changes in pregnancy, RDA, nutritional guidelines, nutritional needs, effect of nutritional status on pregnancy outcome, optimal weight gain and its components, nutrition related problems in pregnancy and ways to control them, Lactation – Physiology of lactation, RDA and nutritional needs of a nursing mother, nutritional guidelines

UNIT-V [10]

Nutrition during childhood: Growth and development, growth reference/ standards, RDA, nutritional guidelines, nutritional concerns and healthy food choices - Infants - Preschool children - School children – Adolescents

FN 112 Food Science 3-0-0-3

UNIT-I [10]

Cereals and Cereal Products: Structure Nutritive value of rice, wheat, maize and locally available millets, Enrichment and fortification. Batters and Doughs; Milling and parboiling; Malting of cereals. b. Pulses and Nuts : Composition and Nutritive value, factors affecting cooking quality of pulses, germination of whole grams.

UNIT-II [5]

Vegetables and Fruits – classification, Nutritive value, changes during cooking of vegetables, changes during ripening of fruits. Storage

UNIT-III [12]

Milk & Milk Products: Composition and Nutritive value, Different types of milk products; pasteurization of milk. b. Egg: Structure, Composition and Nutritive

value. Measure of quality, factors affecting foam formation, uses of egg in cookery. Home preservation and storage. c. Fleshy Foods: Composition and Nutritive value of meat, fish and poultry selection and storage – Effect of cooking on colour, texture and flavour. Factors affect tenderness.

UNIT-IV [12]

Fats & Oils : Composition and Nutritive value of common fats and oils, and reuse of oils, smoking temperature, rensidity of fat, absorption. b. Beverages : Classification, Nutritive value – Coffee, Tea, Cocoa, milk based fruit juices, aerated and alcoholic beverages. c. Spices and Condiments : Types, uses in Indian cookery

FN 122 Food Science laboratory 0-0-2-1

Experiments based on the contents of FN 112

CH 113 Chemistry - I 3-0-0-3

UNIT-I [6]

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, quantum numbers, shapes of s, p, d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Electronic configurations of the elements, effective nuclear charge.

UNIT-II [8]

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. *Critical Phenomena:* PV isotherms of real gases; continuity of states, the isotherms of Van der Waals equation, relationship between cirtical constants and Vander-Waals constants, reduced equation of state.

UNIT-III [10]

Mechanism of Organic Reactions: homolytic and heterolytic bond cleavage. Types of reagents, electrophiles and nucleophiles, inductive effect, resonance effect and hyperconjugation. Types of organic reactions. Mechanisms of nucleophilic substitution SN1 and SN2. Reactive intermediates - carbocations, carbanions, free radicals, carbenes, arynes and nitrenes (with examples). Methods of determination of reaction mechanism.

UNIT-IV [5]

Periodic Properties : Atomic and ionic radii, ionization energy, electron affinity

and electronegativity - definition, methods of determination of evaluation, trends in periodic table and applications in predicting and explaining the chemical behavior.

UNIT-V [10]

Stereochemistry of Organic Compounds : Optical Isomerism- Elements of symmetry, molecular chirality, enantiomers, stereogenic centre, optical activity, chiral and achiral molecules with two stereogenic centres, diastereomers, resolution of enantiomers, inversion, retention. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. Geometric Isomerism: cis-trans and E-Z nomenclature, geometric isomerism in oximes and alicylic compound. Conformational isomerism: Conformational analysis of ethane, propane and n-butane by the Newman projection.

CH 123 Chemistry Laboratory-I 0-0-2-1

The laboratory experiment will be based on the theory paper CH 113

CH 114 Chemistry - II 3-0-0-3

UNIT-I [9]

Chemical Bonding: Covalent Bond: Valence bond Theory, Valence shell electron pair repulsion theory. MO theory, homonuclear (B_2, C_2, N_2 and O_2) and heteronuclear (CO and NO) diatomic molecules, concept of multicentric bonding, percentage ionic character. Ionic Solids: Ionic structures, radius ratio effect and coordination number, lattice energy and Born haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule.

UNIT-II **[9]**

S and p Block Elements: S-Block elements- Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies. P-Block Elements -Comparative study of groups 13-18 elements, compounds like hydrides, oxides, oxyacids and halides of groups 13-16, hydrides of boron- diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, silicates (structural principle), tetrasulphur tetranitride. Structure of Xenon compounds.

UNIT-III **[7]**

Chemical Kinetics and Catalysis: Chemical kinetics and its scope, rate of reaction, factors influencing the rate of reaction. Mathematical characteristics of simple chemical reactions - zero order, first order, second order, pseudo order, half-life and Radioactive decay as a first order phenomenon. Theories of chemical kinetics: effect of temperature on rate of reaction, Arrhenius equation, collision theory, transition state theory. Catalysis & types of catalysis,

Mechanism of catalysis, Enzyme catalysis

UNIT-IV **[6]**

Alkanes and Cycloalkanes: Classification of carbon atoms in alkanes, isomerism, sources, methods of formation (with special reference of Wurtz reaction, Kolbe reaction, Corey house reaction and decarboxylation of carboxylic acids). Physical properties and chemical reaction of alkanes.

[8]

UNIT-V

Alkenes and Alkynes: Nomenclature, preparation and reactions of alkenes, Saytzeff and Hofmann elimination, Mechanisms of hydrogentation, electrophilic and free radical additions, Markownikoff's rule, hydroboration-oxidation, oxymercuration-reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, Polymerization. Chemical reaction of alkynes, mechanism of electrophilic and nucleophilic addition reaction, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization.

FN 211 Food Safety 3-0-0-3

UNIT-I [4]

Introduction to Food Safety

Definition, Types of hazards, biological, chemical, physical hazards Factors affecting Food Safety ,Importance of Safe Foods

UNIT-II [5]

Food Hazards of Physical and Chemical Origin

Introduction ,Physical Hazards with common examples ,Chemical Hazards(naturally occurring ,environmental and intentionally added , Packaging material as a threat ,Impact on health ,Control measures

UNIT-III [5]

Food Hazards of Biological Origin

Introduction ,Indicator Organisms, Food borne pathogens: bacteria, viruses and eukaryotes ,Seafood and Shell fish poisoning , Mycotoxins

UNIT-IV [4]

Management of hazards

Need ,Control of parameters ,Temperature control, Food storage

UNIT-V [5]

Hygiene and Sanitation in Food Service Establishments

Introduction, Sources of contamination, Control methods using physical and chemical agents, Waste Disposal ,Pest and Rodent, Control Personnel Hygiene

UNIT-VI [4]

Food Safety Management Tools

Basic concept Prerequisites- GHPs, GMPs, HACCP ISO series TQM - concept and need for quality, components of TQM, Kaizen. Risk Analysis Accreditation and Auditing

UNIT-VII [5]

Microbiological criteria

Microbiological standards and limits (for processed food, water) Sampling Basic steps in detection of food borne pathogens Water Analysis

UNIT-VIII [3]

Food laws and Standards

Indian Food Regulatory Regime Global Scenario Other laws and standards related to food

UNIT-IX [4]

Recent concerns

New and Emerging Pathogens Genetically modified foods \ Transgenics Organic foods Newer approaches to food safety

FN 212 Public Health Nutrition 3-0-0-3

UNIT-I [8]

Concept of public health nutrition- relationship between health and nutrition, role of public health nutritionists in the health care delivery. Public health and nutrition policies- plan of action and programs.

UNIT-II [6]

Food and nutrition security- food production, distribution, access, availability and consumption. Socio cultural aspects and dietary patterns: their implication for nutrition and health.

UNIT-III [4]

Health care facility- primary health care of the community, health care delivery system.

UNIT-IV [10]

Determinants of nutrition and health status- socio cultural, biologic, environmental and economic factor, indicators of health and malnutrition. Economics of malnutrition- impact on productivity and national development. Socio demographic, health and nutrition transitions

UNIT-V [11]

Approaches and strategies for improving nutritional status and health: national and international contributions, role of government and non-government organizations. Case studies of selected strategies and programs: their rationale and context- health based, intervention, food based interventions including fortification, genetic improvement of foods, supplementary feeding, and nutrition education for behavior change

FN 222 Food Chemistry 3-0-0-3

UNIT-I [9]

Water and Ice: Physical properties, structure of water and ice, water soluble interaction, water activity and relative vapor pressure. Dispersed systems: Surface phenomena, colloidal interactions, Liquid dispersions, gels, emulsions and Foam.

UNIT-II [8]

Carbohydrates:Monosaccharides,Oligosaccharides,Polysaccharides,Starch,Cellulose,Guar and Locust Bean Gum, Xanthan, Carrageenans, Algins, Pectins, Gum Arabica and Dietary fiber

UNIT-III [7]

Lipids: Classification, physical aspects, chemical aspects, chemistry of fats and oil processing, role of food lipids in flavor, physiological effects of Lipids.

UNIT-V [7]

Amino Acids, Peptides and Proteins: Physiochemical properties of amino acids, protein structure, protein denaturation, functional properties of proteins, nutritional properties of proteins, processing induced physical and chemical changes of protein.

UNIT-VI [8]

Food colorants: pigments in animal and plant tissues. Flavors: Taste and nonspecific saporous sensations, vegetable, fruit and spice flavor. Food additives: Acid, bases, buffer systems, chelating agent, antioxidant, antimicrobial agent, sweeteners, fat replacers and Mastigatory substances.

FN 232 Therapeutic Nutrition 3-0-0-3

UNIT-I

Diet in Cardiovascular diseases : Aetiology, Symptoms, Risk factors, pathophysiology, dietary management and prevention of Atherosclerosis, Coronary Artery Disease, Myocardial Infarction, Ischemic Heart Disease, Rheumatic Heart Disease(RHD), Congestive Cardiac Failure (CCF), Hypercholesterolemia, Hypertension – classification, sodium restricted diet, dangers of severe sodium restriction [16]

UNIT-II

Diet in Diseases of Liver and Gall Bladder: Aetiology, Symptoms, Dietary treatment in Jaundice, Hepatitis, Pancreatitis, Cirrhosis, Hepatic Coma. Role of food and alcohol in developing liver diseases. Biliary Tract Diseases- Cholecystitis Cholelithiasis and Choled ocholithiasis [8]

UNIT-III

Diet in Renal disease: Causes, Symptoms and dietary management in Nephritis, Nephrosis, Acute and chronic renal failure, Renal calculi, Acid and alkali producing foods, End Stage Renal Diseases (ESRD), Dialysis. [7]

UNIT-IV

Diet in Cancer: Tumor markers and their applications, Types of cancer, Risk factors, Symptoms, Metabolic alterations and Nutritional problems of cancer and cancer therapy, Medical Nutrition Therapy, Role of food in prevention of cancer. [8]

FN 242 Nutritional Laboratory-I 0-0-4-2

Experiments based on the contents of FN 212, FN 222 and FN 232

FN 311 Maternal And Child Nutrition 3-1-0-4

UNIT-I [13]

Nutritional needs during pregnancy, common disorders of pregnancy (Anaemia, HIV infection, Pregnancy induced hypertension), relationship between maternal diet and birth outcome. Maternal health and nutritional status, maternal mortality and issues relating to maternal health.

UNIT-II [10]

Nutritional needs of nursing mothers and infants, determinants of birth weight and consequences of low birth weight, Breastfeeding biology, Breastfeeding support and counselling

UNIT-III [10]

Infant and young child feeding and care - Current feeding practices and nutritional concerns, guidelines for infant and young child feeding, Breast feeding, weaning and complementary feeding. Assessment and management of moderate and severe malnutrition among children, Micronutrient malnutrition among preschool children. Child health and morbidity, neonatal, infant and child mortality, IMR and U5MR; link between mortality and malnutrition;

UNIT-IV [6]

Overview of maternal and child nutrition policies and programmes.

Text Book

FN 321 Nutrigenomics & Personalised Nutrition 3-1-0-4

UNIT-I [6]

Introduction. Concept of functional genomics, systems biology, nutrigenomics, nutrigenetics, personalised nutrition

UNIT-II [13]

Molecular biology and genomics: Nutritional requirements and metabolic responses at cellular level, Impact of a changing nutrient environment, Introduction to molecular diagnostics: nutrients influences on genomes

UNIT-III [9]

Diet and gene expression: nutrients as regulators of activity and transcription factors. Nutrients as epigenetic exchange agents.

UNIT-IV [11]

Diet in early life and metabolic programming. V Diet as a possible risk or preventive factor in illnesses. Gene polymorphisms and responses to diet. Examples related to cardiovascular disease, cancer, osteoporosis. Risk/benefit biomarkers

Text Book

1. Principles and Applications by FransKok, Laura Bouwman, Frank Desiere, CRC press

R**eference**:

2. Nutrigenomics and Nutrigenetics in Functional Foods and Personalized Nutrition by Lynnette R. Ferguson, CRC press

FN 331 Nutritional Laboratory-II 0-0-4-2

Exercises based on Courses BC 311, FN 311 and FN 321

FN 312 Dietetics 3-1-0-3

UNIT-I [3]
Concept of Diet therapy: growth and source of dietetics, purpose and principles of therapeutic diets, modification of normal diet, classification of therapeutic diets.

UNIT-II [3]
Role of Dietician: Definition of nutritional care, interpersonal relationship with patient, planning and implementary dietary care, Team approach to nutritional care.

UNIT-III [6]
Diet in surgical conditions, burns and cancer.
Obesity and leanness- causes, complication and health effects, dietary treatment and other recommendation

UNIT-IV [3]
Diet in fever and infections- Types- metabolism in fever, general dietary consideration diet in influenza, typhoid fever, recurrent malaria and Tuberculosis.

UNIT-V [3]
Diet in gastritits, peptic ulcer- symptoms, clinical findings, treatment, dietary modification, adequate nutrition, amount of food, and intervals of feeding, Chemically and mechanically irrigating foods, four stage diet (Liquid, soft, convalescent, liberalized diet).

UNIT-VI [3]
Diet in disturbances of small intestine and color. Diarrhoea- (child and adult)- classification, modification of diet , fibre, residue. Fluids & nutritional adequacy. Constipation- flatulence - dietary considerations. Ulcerative colitis (adults) - symptoms, dietary treatment. Spruce, coeliac disease- disaccharide intolerance, dietary treatment.

UNIT-VII [6]
Diet in diseases of the liver, gall bladder and pancreas, a) Etiology, symptoms and dietary treatment in - Jaundice, hepatitis, cirrhosis and hepatic coma. b) Role of alcohol in liver diseases. c) Dietary treatment in cholecystitis, cholelithiasis and pancreatitis. Gout- Nature and occurrence of uric acid, causes, symptoms and diet.

UNIT-VIII [3]
Diet in allergy and skin disturbances: Definition, classification, manifestations, common food allergies and test and dieteric treatment.

UNIT-IX [3]
Diet in Diabetes mellitus: a) Incidence and predisposing factors. b) Symptoms-types and tests for detection. c) Metabolism in diabetes d) Dietary treatment & meal management e) Hypoglycemic agent, insulin and its types. f) Complication of diabetes.

UNIT-X [3]
Diet in Renal diseases: Basic renal function, symptoms and dietary treatment in acute and chronic glomerulonephritis, Nephrosis, renal failure, dialysis. Urinary calculi-causes & treatment, acid and alkali producing and neutral foods and dietary treatment.

UNIT-XI [3]
Diet in Cardiovascular diseases: Role of nutrition in cardiac efficiency, incidence of Atherosclerosis, dietary principles, Hyperlipidenmia, Hypertension- causes and dietary treatment, Sodium restricted diet, level of sodium restriction, sources of sodium, danger of severe sodium restriction.

FN 322 Food Service Management 3-0-0-3

UNIT-I [6]

Food service Institutions- Definition and importance, various types of food service institutions like hospitals, school meals, hostels, industrial canteens, commercial hotel/ canteens etc. Institutions catering to different types of handicapped personnel

UNIT-II [6]

Developing objectives and goals- Definition and importance, types of goals Policies, procedures and rules. Theories about approaches to food service management

UNIT-III [10]

Principles and procedures of management- Managerial roles and responsibilities, the manager and leadership quality. Tools of management – organization chart, types, structure, function; work improvement techniques
Personnel management – recruitment, training, placement, promotion, personnel records, work appraisals

UNIT-IV [9]

Material management – Principles of quantity food purchase- selection, buying and accounting of different foods. Inventory management- assessing requirements, receiving and release of stocks. Record maintenance. Quantity food preparation and service- Factors in menu planning for large groups, systems for maintaining quality in food preparation and service. Kitchen control and maintenance of Kitchen records.

UNIT-V [8]

Financial management – Budgeting, costing and cost control, accounting. 8. Hygiene and sanitation in preparation and serving area – Personal hygiene, types and sources of contamination, prevention and safety measures. Methods of controlling infestation. Methods of dish washing.

FN 332 Neutraceuticals and Health Foods 3-1-0-3

UNIT-I

Nutraceuticals: (a) Use of neutraceuticals in traditional health sciences. Their role in preventing /controlling diseases (b) Definition, Classification, food and non-food sources, mechanism of action. Role of omega-3,fatty acids, carotenoids, dietary fiber, phytoestrogens; glucosinates; organosulphur compounds as neutraceuticals. [13]

UNIT-II

Prebiotics and probiotics: Usefulness of probiotics and prebiotics in gastro intestinal health and other benefits. Beneficiary microbes; prebiotic ingredients in foods; types of prebiotics and their effects on gut microbes. [8]

UNIT-III

Functional foods Definition, development of functional foods, benefits and sources of functional foods in Indian diet. Effects of processing conditions and storage; Development of biomarkers to indicate efficacy of functional ingredients; Research frontiers in functional foods. [9]

UNIT-IV

Development of nutraceutical and functional foods – Standards for health claims. Process of developing - preclinical & clinical studies, Marketing and Regulatory issues, Regulatory bodies in India [9]

FN 342 Food Quality And Sensory Evaluation 3-1-0-3

UNIT-I [4]

Introduction to quality attributes of food, Appearance, flavour, textural factors and additional quality factors

UNIT-II [10]

Gustation: introduction and importance of gustation, Structure and physiology of taste organs- tongue, papillae, taste buds, salivary glands. Mechanism of taste perception Chemical dimensions of basic tastes- sweet, salt, sour, bitter and umami, Factors affecting taste quality, reaction time, taste modification, absolute and recognition threshold, Taste measurement- Electronic Tongue, Taste abnormalities

UNIT-III [10]

Olfaction: Introduction, definition and importance of odour and flavor, Anatomy of nose, physiology of odour perception, Mechanism of odour perception, Theories of odour classification, chemical specificity of odour. Odour measurement techniques – historical perspective and emphasis on recent techniques- e- nose etc. Olfactory abnormalities

UNIT-IV [5]

Colour: Introduction and importance of colour, Dimensions of colour and attributes of colour; gloss etc. Perception of colour. Colour Measurement: Munsell colour system, CIE colour system, Hunter colour system, etc. Colour abnormalities

UNIT-V [10]

Texture: Introduction, definition and importance of texture, Phases of oral processing, Texture perception, receptors involved in texture perception, Rheology of foods Texture classification, Texture measurement – basic rheological models, forces involved in texture measurement and recent advances in texture evaluation. Application of texture measurement in cereals, fruits and vegetables, dairy, meat and meat products

FN 352 Nutritional Lab-III **0-0-4-2**

Exercises based on Courses FN 312,FN 322, FN 332 and FN 342

BT 324 Entrepreneurship Development **2-0-0-2**

UNIT-I [10]

Introduction: Meaning, Needs and Importance of Entrepreneurship, Promotion of entrepreneurship, Factors influencing entrepreneurship, Features of a successful Entrepreneurship

UNIT-II

Establishing an Enterprise Forms of Business Organization, Project Identification, Selection of the product, Project formulation, Assessment of project feasibility, Financing the Enterprises, Fixed and Working Capital [8]

UNIT-III

Entrepreneurship and International Business, Marketing of Product Meaning of International business, Selection of a product, Selection of a market for international business, Export financing, Institutional support for exports [8]

Mody University of Science & Technology

B.Sc. (Hons) Physics
Session 2016-2017

Curriculum Structure

B. Sc. (Hons.) Physics

Programme Level: Undergraduate **Duration:** Three Years (Six Semesters)

No. of Seats: 20

Objectives:

.

The programme offers core skills in physics as well as maths, which instills in the knowledge about the fundamental aspects of physics. With this course, Mody University aims to open many doors for their students by offering Courses in Atomic and Molecular Physics, Electronics, Applied Electronics, Nuclear Physics, Nano sciences, etc. The student will be able to select various options for higher studies like M.Sc. in Physics, Applied Physics, and Electronics. In addition, the programme provides good combinations to create interest of undergraduate students towards M. Tech. in Allied Sciences including Electronics, Astrophysics, Material Science, Laser Technology, Nuclear Science, Opto- electronics and Nanoscience. Further, they have scope for absorption in research Labs.

The first batch of this programme in MUST/ Mody University proposed to be admitted in the session 2015-16.

Input Qualification:

A pass in 10+2 examination of CBSE, or its equivalent from any Board, in Science stream with Physics and Mathematics as subjects and adequate proficiency in English.

Evaluation Procedure:

All the Rules and Regulations as provided in the Ordinances and Regulations of the Undergraduate Programmes of MUST/ Mody University shall be followed.

B. Sc.(Hons.) Physics

Three-Year Programme

Academic Curriculum (2015 – 16 onwards)

First Year

First Semester

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)

CW: *Course Work;* ***MTE:*** *Mid Term Examination;* ***ETE:*** *End Term Examination*
** Course work (CW) would include regularity, evaluation of assignments, surprise tests, etc.*
# Evaluation of proficiency will be based on the participation in extra-curricular/co-curricular activities.

Optional Courses

§ -*Chemistry courses*
¢ -Computer Science

Note:**1**. *The Programme includes two types of subsidiaries:*
(i) Chemistry and Maths
(ii) Maths and Computer Science

2. *In addition to the compulsory courses, either all courses of* ***Chemistry Or Computer Science*** *may only be opted in each semester of first two years.*

Credits: Physics:64, Maths:26, Chemistry:26, Comp Sc.:26

Total Credits (With Chemistry and Maths as Subsidiaries) 129
Total Credits (With Computer Science and Maths as Subsidiaries) 129

Course Description

Compulsory Courses

EL 101 Foundation Course in English 2-0-0-2

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand& Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

EV 111 Environmental Science 1-0-0-1

Introduction to Environment and Environmental Studies, its scope and importance [2]

Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem [2]

Natural Resources: Renewable and Nonrenewable resources. [2]

Human Population and Environment: Population Growth, World and Indian scenario [2]

Environmental pollution: Types of Environmental Pollution and cause , prevention of pollution [2]

Global Environmental Issues: Climate Change, Global Warming and Green House Effect [3]

Visit to a local area to document environmental assets

Suggested Readings:

Text Books:

1. Bharucha, E;.Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH,Beiswenger RE, Purdom; Environmental Sciences, Paperback.

Reference Books:

5. Rastogi V.B. &Jayraj M.S.; Animal Ecology and Distribution of Animals, KedarNath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

3-0-0-3

CA 111 Fundamentals of Computers and Information Technology

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets [6]

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

Physics

PH 111 Mechanics, Properties of Matter and Relativity 3-0-0-3

Mechanics: Laws of motions, Inertial and non-inertial frames of reference, Rotating frame, Effect of centrifugal and Coriolis forces due to earth's rotation, Center of mass (C.M), Lab and C.M frame of reference, Conservation of linear and angular momenta. [8]

Properties of Matter: Elasticity, Young's modulus, Modulus of rigidity, Poisson's ratio, relation connecting different elastic-constants, twisting couple of a cylinder(solid and hallow), Dynamical method (Maxwell's needle) for determining the modulus of rigidity, Bending moment, Cantilever, Determination of Young's modulus by bending of beam. [10]

Fluid Mechanics: Kinematics of moving fluids, equations of continuity, Euler's equation, Bernaulli's theorem, viscous fluids, streamline and turbulent flow, Poiseulle's law, Capillary tube flow, Reynold's number, Stokes law. [7]

Relativity: Postulates of special theory of relativity, Derivation of Lorentz transformation and physical significance of Lorentz invariance, Length contraction and time dilation, Concept of simultaneity, Relativistic velocity transformation relations, mass energy relation, Concept of zero rest mass of photon, Relativistic relation between energy and momentum. [14]

Text Books:

1. D.S.Mathur. Mechanics, S. Chand Publications, New Delhi
2. Resanick and Halliday: Physics Part –1

Reference Books:

1. H.C.Verma : Concept in Physics Vol. I
2. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol I.

PH 121 Electromagnetism 2-0-0-2

Vector Calculus: Gradient, divergence and curl operators, Physical significance [7]

Electromagnetism: Laws of Electromagnetism using vector calculus; electrostatics and magnetostatics in matter, Biot and Savart's law, calculation of H order in simple geometrical situations, Ampere's Law $\nabla.B=0$, $\nabla xB=\mu_0\mathbf{J}$, field due to magnetic dipole, magnetization current, magnetization vector, Half order field, magnetic permeability (linear cases), interpretation of a bar magnet as surface distribution of Solenoidal current. [10]

Time Varying Fields: Electromagnetic induction, Faraday's law, electromotive force, $\varepsilon = \int$ E.dr. integral and differential forms of Faraday's Law. Mutual and self inductance, transformers, energy in a static magnetic field, Maxwell's displacement current, Maxwell's equations, Electromagnetic field density. [10]

EM wave propagation: The wave equation satisfied by E and B, Plane electromagnetic waves in vacuum, Poynting's vector, Reflection at plane boundary of dielectrics, Polarization by reflection and total internal reflection, Faraday effect, Waves in a conducting medium [12]

Text Books:

1.David J. Griffiths: Introduction to Electrodynamics (3rd Edition)

2. Gupta and Kumar: Electromagnetics

Reference Books:

1.P. Lorrain and O. Corson: EM Waves and Fields

2.A. S. Mahajan and AA Rangwal: Electricity and Magnetism

PH 131 Physics Laboratory-I 0-0-4-2

Assignments are based on the course PH 111 and PH 141

PH 122 Thermodynamics and Statistical Physics 3-0-0-3

Thermodynamics: Reversible and irreversible processes, Carnot's cycle and Carnot's theorem, Second law of thermodynamics, Thermodynamic scale of temperature. [7]

Concept of entropy: Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram [8]

Thermodynamic functions, Internal energy, Enthalpy, Helmholtz function and Gibb's free energy, Maxwell's thermodynamical equations and their applications, TdS equations, Energy and heat capacity equations, Clapeyron equations, Adiabatic demagnetization, Third law of thermodynamics, Nernst heat theorem. [10]

Joule-Thomson effect, Thermodynamic analysis, Inversion temperature, Thermodynamic equations for a Vander Waals gas. Liquefaction of gases. Regenerative principle, Properties of liquid helium, Introduction to super fluidity [6]

Statistical Mechanics: State of a system (Microscopic and Macroscopic); Phase space, density of states and Liouville's theorem; Postulates of statistical mechanics; Relation between statistical and thermodynamic parameters. [8]

Text Books:

1. K.W. Zeemansky: Heat and Thermodynamics
2. BrijLal and N. Subramanyam.:Heat and Thermodynamics

Reference Books:

1. B.K. Agarwal: Thermal Physics
2. Frederick Reif : Fundamentals of Statistical and Thermal Physics
3. R.K. Pathria: Statistical Mechanics (2nd Edition):

PH 132 Oscillations and Waves 2-0-0-2

Oscillations: Simple harmonic oscillations, Differential equation of SHM and its solution, Amplitude, Frequency, Time Period and Phase, Velocity and acceleration. Kinetic, Potential and total energy and their time average values. Free oscillations of systems with one degree of freedom : (i) Mass-Spring system, (ii) Simple Pendulum, (iii) Torsional Pendulum, (iv) Compound pendulum (v) Bar Pendulum. [6]

Superposition of Two Collinear Harmonic Oscillations: Linearity and superposition principle. (i) Oscillations having equal frequencies and (ii) Oscillations having different frequencies (Beats). Superposition of N Collinear Harmonic oscillations [6]

Free Oscillations; Damped oscillations; Damping coefficient, Log decrement; Forced oscillations : Transient and steady states, Amplitude, Phase, Resonance, Sharpness of resonance, Power, Dissipation and Quality Factor. [7]

Waves: Plane and spherical Waves, Longitudinal and transverse waves, Plane progressive (Traveling) waves. Wave equation. Particle and wave velocities. Differential Equation. Pressure of a longitudinal wave. Velocity of waves : Velocity of transverse vibrations of stretched strings, Newton's formula for velocity of sound; Laplace's correction [7]

Text Books:

1. N.K. Bajaj: The Physics of Waves and Oscillations, Tata cGraw-Hill, 1988.
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Oscillations and Waves, CBC, Jaipur
3. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.

Reference Books:

1. A. P. French : Vibrations and Waves ,CBS Publications, 1987
2. BrijLal and N. Subramanyam: Waves and Oscillations

PH 132 Physics laboratory-II 0-0-4-2

Assignments are based on the course PH 122 and PH 132, etc.

PH 211 Semiconductor Physics and Electronics 3-0-0-3

Semiconductor Physics: Intrinsic and extrinsic semiconductors, P-N junction diode, Diode equation, depletion width and potential barrier, junction capacitance, I-V characteristics, Rectifier, ripple factors, filter circuits, efficiency and percentage regulation, LED, photodiode. [9]

Electronics : Transistor circuits, Input, Output characteristics and CB and CE modes, DC load line, operating point, biasing and bias-stabilization circuits: Transistor as an amplifier (CE mode) and frequency response. [6]

Hybrid parameter: Analysis of transistor amplifier (with and without load) using h- parameters, simplified hybrid model, brief idea about hybrid model Single stage amplifier in CE,CB and CC modes. RC coupled CE amplifier and its frequency response, tuned voltage amplifier. Power amplifier classification, distortion and efficiency, push pull amplifier [10]

Feedback in amplifiers: Positive and negative feedback, effect of negative feedback on the characteristics of different types of amplifiers, voltage and current series feedback circuits. Field effect transistors, I-V Characteristics of JFET and MOSFET, FET biasing, FET as an amplifier. [8]

Digital Electronics: Diode and transistor equivalent circuits of basic and derived gates, Universal gates, X-OR and equivalence. Simplification of Boolean expressions using K- maps. Sequential circuits, Flip flops. [6]

Text Books:

1. Millman and Halkias: Integrated Electronics:
2. Chattopadhyay and Rakshit: Electronics Fundamental and Application

Reference Books:

1. Malvino and Leach: Principle of Digital Electronics:
2. Gupta and Kumar: Hand book of Electronics

PH 221 Optics and Lasers 3-0-0-3

Interference: Young's experiment, Conditions for sustained interference, Theory of interference, Fresnel's biprism, Determination of wavelength of light, Interference in parallel and edge shaped films, Colour of thin films. Newton's rings determination of wavelength of light, Michelson interferometer and their applications. [10]

Diffraction: Definition, Frenel's diffraction, Zone plate, diffraction due to straight edge. Fraunhoffer diffraction due to single and double slits, Plane transmission grating and its resolving power. [10]

Polarization: Polarized light and its mathematical representation, Polarization by double refraction and Huygen's theory, Nicol prism, Retardation plates, Production and analysis of circularly and elliptically polarized light, Optical activity. [9]

Lasers: Einstein's A and B coefficients, Spontaneous and Stimulated conditions for laser action population inversion, optical pumping, Working of different types of lasers: semiconductor, rubey and He-Ne Lasers. [10]

Fiber optics: Working, Numerical aperture

Text Books:

1. N. Subrahmanyam, Brijlal and M. N. Avadhanulu: A textbook of Optics
2. A.Ghatak: Optics, Tata McGraw-Hill

Reference Books:

1. B. K. Mathur and T. P. Pandya: Physical Optics

PH 231 Physics laboratory-III 0-0-4-2

Assignments are based on the course PH 211 and PH 221

PH 212 Mathematical Physics and Special Theory of Relativity 3-1-0-4

Curvilinear Coordinates: Orthogonal curvilinear coordinate systems, scale factors, expression for grade, divergence, curl and their application to Cartesian, circular cylindrical and spherical polar coordinate systems. [9]

Coordinate transformation and Jacobean, Transformation of covariant, contra variant and mixed tensor. Addition, multiplication and contraction of tensors. Metric tensor and its use in transformation of tensors [7]

Dirac-delta function and its properties. Lorentz transformation and rotation in space-time, time like and space like vectors, world line, and macro-causality [6]

Four vector formulation: energy- momentum Four vector, relativistic equation of motion invariance of rest mass, orthogonality, four force and four velocity, Lorentz force as an example of four force transformation of four frequency vector, longitudinal and transverse Doppler's effect. [12]

Transformation of electric and magnetic fields between two inertial frame

Differential Equations: The second order liner differential equation with variable coefficient and singular points, series solution method and it application to the Hermite's Legendre's and Laguerre's differential equation. Basic properties (without proof) like orthogonality, recurrence relation, Graphical representation and generating functions of Hermite, Lagendre, Leguerre and Associated Legendre functions (very simple application) [13]

Fourier Analysis: Fourier theorem, Fourier analysis of square wave, saw-tooth wave, plucked strings, half wave/full wave rectifier wave forms [5]

Text Books:

1. George Arfken: Mathematical Method for Physicists (Academic Press).
2. S.L.Kakani, C. Hemrajani, T.C. Bansal: Mathematical Physics and Special Theory of Relativity, CBC, Jaipur
3. D. E. Bourne, P C Kendall: Vector Analysis and Cartesian Tensors, 3ed (Chapman & Hall, 1992)

Reference Books:

1. A.P. French: Special Relativity
2. P. K. Chattopadhyay: Mathematical Physics.

3. Gupta and Kumar: Mathematical physics

PH 222 Physics Laboratory IV 0-0-4-2

Assignments are based on Course PH 211 etc.

PH 311 Quantum Mechanics and Spectroscopy 3-1-0-4

Failure of Classical Physics: Black body radiation (without derivation), Photoelectric effect, Compton effect Wave Packets and Uncertainty Relation: de-Broglie hypothesis, Wave-particle duality, Wave packets, Group velocity and phase velocity, Uncertainty principle. [10]

Wave Mechanics: Schrödinger equation, Physical interpretation of wave function, Probability current density and conservation of probability, Free particle wave function, Schroedinger equation in the presence of a potential, Linear operators, Hermitian operators, Observables, Eigenvalues and Eigenfunctions, Expectation values, Ehrenfest's theorem, Commutation relations [15]

Schrödinger Wave Equation and Applications: Particle in one dimensional Box, Square well, Rectangular potential barrier and tunneling, Linear harmonic oscillator, Spherically symmetric potential, Angular momentum operators and their eigen functions, Concept of spin, Hydrogen atom. [12]

Spectroscopy: Quantum futures for spectra of single valence electron atom: Orbital magnetic dipole moment, Orbital, spin and total angular momentum, Larmor precession, Vector model of atom, Electronic configuration and atomic states, Spin-orbit interaction and fine structure, Intensity of spectral lines, General selection rules. Zeeman Effect, Two valence electron atoms: LS and JJ coupling schemes and resulting spectra, Idea of normal and inverted doublets. [15]

Text Books:

1. V. Devanathan:Quantum Mechanics
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Elementary Quantum Mechanics and Spectroscopy, CBC, Jaipur

Reference Books:

1. Loknathan and Ghatak:Quantum Mechanics
2. S. Gasiorowicz: Quantum Physics
3. B. H. Bransden and C. J. Joachain: Quantum Mechanics:
4. H.E. White, Introduction to Atomic Physics
5. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol VIII.

PH 331 Electromagnetic Theory 4-0-0-4

1. **Maxwell's Equations:** Concept of Displacement Current, Vector and Scalar Potentials, Boundary Conditions at boundary of different media, Wave equations and plane waves in Dielectric media, Poynting Theorem, Physical concept of Electromagnetic field, Energy density, Momentum density. [8]

2. **Reflection and Refraction of EM Waves:** Reflection and refraction of a plane wave by interface between dielectrics, Fresnel Formulae, Total internal reflection, Brewster's angle, Waves in conducting media, Metallic reflection for normal incidence. [10]

3. **Plasma and Ionosphere:** Concept of skin depth, Microscopic media (Plasma) and Maxwell's equations, Plasma frequency, Refractive index, Conductivity of an ionized Gas, Propagation of e.m. waves through Ionosphere. [12]

4. **Polarization of EM Waves:** Different types of polarizations (Linear, Circular and Elliptical), e.m. Fresnel's formula, Uniaxial and biaxial crystals, Polarization by double refraction, Nicol Prism, Ordinary and Extraordinary Refractive indices, Phase retardation plates: Quarter-Wave and Half-Wave Plates, Analysis of Polarized Light, Polarimeter. [10]

5. **Rotatory Polarization:** Optical rotation, Biot's Laws for Rotatory Polarization, Fresnel's Theory of Optical Rotation, Experimental verification of Fresnel's Theory, Specific Rotation, Laurent's Half-Shade Polarimeter. [8]

6. **Fiber Optics:** Planar Optical Wave Guides, Propagation through optical fiber, Types, Numerical aperture, Modes of Propagation (Basic Concepts only). [4]

Text Books:

1. A.Z. Capri and P.V. Panat: Introduction to Electrodynamics, Narosa Pub. House, New Delhi, 2002
2. David J. Griffiths: Introduction to Electrodynamics, 3rd Edition, Benjamin Cummings 1998
3. J. D. Jackson: Classical Electrodynamics, 3rd Edition, Wiley, New York, 1998
4. M. Lifshitz and L. D. Landau: Classical Theory of Fields (Course of Theoretical Physics), 2nd Edition, Pergamon Pr., 1981.

Reference Books:

1. Joseph A. Edminister: Electromagnetics, 2nd Edition, Tata

McGraw Hill, New Delhi, 2006.
2. M.A.W. Miah: Fundamentals of Electromagnetic, Tata McGraw Hill,1992
3. Liang Chi Shen, Jin Au Kong: Applied electromagnetism, PWS Pub. Co., 1995.

PH 341 Atomic and Molecular Physics 4-0-0-4

1. **Atomic Physics:** Spectra of Hydrogen, Deuteron and alkali atoms spectral terms, doublet fine structure, screening constants for alkali spectra for s, p, d and f states, selection rules. [7]

2. **Earth Spectra:** Singlet and triplet fine structure in alkaline earth spectra [5]

3. **Week spectra:** continuous X-ray spectrum and its dependence on voltage, Duane and Hunt's law. Characteristic X rays, Moseley's law, doublet structure of X-ray spectra, X-ray absorption spectra. [8]

4. **Molecular Physics:** Discrete set of electronic energies of molecules, quantization of vibrational and rotational energies, determination of internuclear distance, pure rotational and vibrational spectra. [10]

5. **Vibration Spectra**: Dissociation limit for the ground and other electronic states, transition rules for pure vibration and electronic vibration spectra. [6]

6. **Raman Effect:** raman Effect, Stokes and anti-Stokes lines, complimentary character of Raman and infrared spectra, experimental arrangements for Raman spectroscopy. [8]

7. **Spectroscopic Techniques**: Sources of excitation, prism and grating spectrographs for visible, UV and IR, absorption spectroscopy, double beam instruments. [8]

Text Books:

1. Robert Eisberg and Robert Resnick: Quantum Physics of Atoms, Molecules, Solids, Nuclei, and Particles, John Wiley & Sons Inc, 1985

2. H.E. White: Introduction to Atomic Spectra, McGraw-Hill book company, Inc.

3. C.N. Banwell: Molecular Spectroscopy, Tata-McGraw Hill Publishers, New Delhi, 1993

Reference Books:

1. R.C. Johnson: Introduction to Molecular Spectra, Pitman Publishing Corp., New York, 1949
2. D. P Khandelwal : Optics and Atomic Physics, Shiva Lai Agarwala & Company, Educational Publisher, 1973
3. Arthur Beiser: Concepts of Modern Physics, McGraw-Hill Book Company, 1987.

PH 351 Elements of Classical Mechanics 2-0-0-2

1. System of particles, Constraints, Generalized coordinates, D'Alemberts principle and Lagrange's equation, Velocity dependent potential of electro-magnetic field. [10]

2. Calculus of Variation, Hamilton's principle, Lagrange's equation, Lagrangian for simple systems, Cyclic coordinates, symmetries and conservation laws. [6]

3. Advantages of Lagrangian: electro-mechanical analogies, Lagrange's undetermined multipliers, Lagrange's equation for nonholonomic systems, Virial theorem, Principle of mechanical similarity. [10]

Text Books

1.H. Goldstein: Classical Mechanics: 3rd Edition, Addison-Wesley Pub, 2001

2. L . D. Landau and E. M. Lifshitz: Classical Mechanics: A Course of Theoretical Physics, Vol.1, 3rd Edition , Pergamon Press, 1976.

3. K. C. Gupta: Classical Mechanics of Particles and Rigid Bodies, Wiley Eastern, New Delhi, 1988

Reference Books:

1. R. G. Takwale and Puranik: . Introduction to Classical Mechanics, 24th Edition, Tata-McGraw Hill, New Delhi, 1991

2. N. C. Rana and P. Joag: Introduction to Classical Mechanics, Tata McGraw Hill, 1992.

PH 361 General and Optics Based Laboratory 0-0-4-2

Assignments are based on the course PH 341,etc

PH 371 Electronics Laboratory 0-0-4-2

Assignments are based on the course PH 331,etc

PH 342 Solid State Physics 3-0-0-3

1. **Structure**: Crystal structure, periodicity, lattices and bases, fundamental translational vectors, unit cell, lattice types, Bravais lattices, Miller indices for direction and planes, Common crystal structures like NaCl, ZnS and Diamond; Close packed structures, Lau theory of X-ray diffraction, X-ray diffraction, Bragg's law. [9]
2. **Bonding**: Potential between a pair of atoms, concept of cohesive energy, covalent, Vander Waals, ionic and metallic Crystals, reciprocal lattice, Brillouin Zones [6]
3. **Thermal Properties**: Lattice vibrations, Vibrational modes of continuous medium, Debye's model: lattice specific heat, Phonons, Density of states. [7]
4. **Electronic Properties**: Free electron gas, Electrons in periodic potential, Kronig-Penny model, Bloch theorem, energy bands, metals, insulators and semiconductors; Hall Effect, Fermi surface [10]
5. **Magnetic Properties**: Magnetic moment, magnetic susceptibility, Dia-, Para and Ferromagnetism, Ferromagnetic domains. [7]

Text Books:

1. C. Kittel: Solids State Physics, 6th edition, John Wiley & Sons, NY, 1986
2. R. L. Singhal, Solid state Physics, KNRN Pub., Meerut, 1998

Reference Books:

1. Decker: Solids State Physics, Prentice-Hall, New York, 1962
2. Azarof: .Introduction to Solids, Mc-Graw-Hill Book Co., Inc.
3. S.O. Pillai, Solid State Physics, 6th Edition, New Age International Pub, 2005.

PH 352 Nuclear and Particle Physics 4-0-0-4

1. **Nuclear Structure**: Properties of Nuclei and Models, Introduction to the nucleus, Fermi gas model, Deutron Binding energy, Semiemperical mass formula, Mass diffect, Packing fraction and its application to explain most stable isobars and nuclear fission, Magnetic dipole moment, quadrapole moment, angular momentum, Effect of mass number on size of nucleus Condition of stability for isobars. [9]

2. **Nuclear Models**: Liquid drop model, fission and potential barrier, N-N and P-P chains, Nuclear reactors, Nuclear fission and fusion. [6]

3. **Nuclear Force and Two-Nucleon System:** Properties of nucleon-nucleon interaction, General forms of nucleon- nucleonpotential, Neutron-proton scattering for low energies: scattering length, Ground state properties of deuteron, Simple consideration of deuteron using central potential (square well). [10]

4. **Nuclear Stability:** Nucleon emission, separation energy, Alpha decay and its energy spectrum, WKB Approximation, Beta decay and its energy spectrum (for example,137Cs), Need for neutrinos, Q-values, Gamma decay, Parity and Selection rules for gamma transitions (no derivation). [10]

5. **Accelerators and Detectors**: Cyclotron, Betatron, Van de Graaff and Linear accelerators, Synchrotrons, Geiger-Mueller detector, Scintillation detector. [5]

6. **Elementary Particles**: Properties of particles, classification in to leptons mesons and baryons, matter and antimatter, conservation laws (qualitative discussion), energy, momentum, angular momentum, charge, lepton number, Baryon number, Isospin, strangeness. [5]

7. **Classification of Particles:** Interactions, Quantum numbers, Quarks as the building blocks of hadrons, Colour degree of freedom. [7]

Text Books:

1. S. S. M. Wong: Introductory Nuclear Physics, 2nd Edition, John Wiley & Sons, New York, 1998
2. D.C. Tayal, Nuclear Physics, Himlaya Publishing House, 5th Ed, 1992
3. S.L.Kakani, C. Hemrajani, T.C. Bansal, Nuclear Physics, CBC, Jaipur, 2005
4. S. N. Ghosal: Nuclear Physics, S. Chand Limited, 1997

Reference Books:

1. B. L. Cohen: Concepts of Nuclear Physics, Tata McGraw-Hill New Delhi, 1971
2. H.A. Enge, Introduction to Nuclear physics, Addison Wesley, Publishing company, Inc. New York, 1 974
3. A. Bieser, prospective of Modern Physics, 22nd Reprint, Tata McGraw-Hill, New Delhi, 2008

PH 362 Statistical Mechanics 4-0-0-4

1. **Random Walk Problem:** Probability distribution, Mean and Dispersion and Simple Numerical Problems. [8]

2. **Basic Concepts of Statistical Physics**: Entropy and thermodynamic probability, Ensemble theory, partition function, applications to classical ideal gas, Gibbs paradox; Statistical equivalence of three ensembles. [7]

3. **Classical Theory of Radiation:** Properties of Thermal Radiation, Blackbody Radiation, Stefan-Boltzmann Law and Wien's Displacement law. [6]

4. **Quantum Nature of Radiation:** Planck's Postulates. Planck's Law and Blackbody Radiation, Experimental Verification. Derivations of Wien's Distribution Law, Rayleigh-Jeans Law from Planck's Law. [8]

5. **Bose-Einstein's Condensation:** B-E Distribution law, Completely Degenerate Bose Gas, Bose-Einstein condensation, Properties of liquid He, Radiation as photon gas. [10]

6. **Fermi-Dirac Statistics:** F-D Distribution Law, ideal completely Degenerate Fermi Gas and Thermodynamic functions, Fermi Energy, Electron gas in a metal, Specific Heat of Metals. Maxwell-Boltzmann statistics as a classical limit, Comparison of the three statistics, White Dwarf Stars, Chandrasekhar Mass Limit. [13]

Text Books:

1. Frederick Reif: Fundamentals of Statistical and Thermal Physics, Waveland Press 2009
2. R. K. Patharia: Statistical Mechanics, Oxford: Butterworth, 1996
3. K. Huang: Statistical Mechanics, Wiley, 1987 .

Reference Books:

1. S. Lokanathan and R.S. Gambhir: Statistical and Thermal Physics: an introduction, P.H.I., 1991
2. F. Reif: Statistical Physics, Berkeley Physics Course Volume 5, Tata McGraw-Hill Company Ltd, 2008

PH 372 Basics of Nano-Science and Exotic Materials 3-0-0-3

1. **Physics for Nano-Science:** Electron Band Structure and Its Modification due to change in dimensionality. Phonon absorption in Nanomaterials. [6]

2. **Basic Concepts of Nanomaterials:**Physical, Chemical and Bio-routes for Synthesis of Nanomaterials (basic idea), Metal Nanoparticles, Carbon Nanostructures, Electronic Properties of Nanomaterials, Nano photonics, Some applications of Nano Materials. [15]

3. **Introduction to Exotic Materials:** High Temperature Superconductors and Colossal Magnetoresistance Materials. Meissner Effect, Discovery of HTSC Materials, Structure and Properties, Elements of Proposed Mechanisms of high temperature superconductivity, Elementary Concepts of CMR Materials, Some Application of CMR materials. [14]

4. **Quasicrystals:** Basic definition of quasicrystal and Structure of Quasicrystals. [4]

Text Books:

1. C.P. Poole and F.J. Owens: Introduction to Nanotechnology, John Wiely & Sons, NJ, 2003

2 .C.M. Niemeyer and C.A. Mikin: Nanobiotechnology : Concepts, Applications and Perspectives, John Wiley & Sons, NJ, 2004

Reference Books:

1. Charles Kittel: Introduction to Solid State Physics, 5thEdition, John Wiley & Sons, NY, 1986.

PH 382 Solid State and Nuclear Laboratory 0-0-4-2

Assignments are based on the course PH 342, PH 352, etc

PH 392 Optoelectronics Laboratory 0-0-4-2

Combined Assignments are based on Lasers, Optical Fibers, PH 341, etc.

Mathematics

MS 111 Calculus 3-0-0-3

Curvature: Curvature, Radius of curvature for Cartesian curves, parametric curves, Polar curves and Pedal curves, Centre of curvature. Circle of curvature, Chord of curvature, Tests for concavity and convexity, Points of inflexion, Multiple points. [8]

Asymptotes and Curve Tracing:: Asymptotes in Cartesian and polar coordinates, Intersection of a curve with its asymptotes**, a**pplication of differential calculus in curve sketching in Cartesian and polar co-ordinates. [8]

Differentiation: Partial differentiation, Euler's theorem for homogeneous functions,Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers. [8]

Integral Calculus:*:* Double integrals in Cartesian and polar coordinates, Change of order of integration, Triple integral, Applications of double and triple integrals in finding areas and volumes. [8]

Vector Calculus: Gradient, Divergence and Curl. Greens, Stokes and Gauss Theorems (without proof) and problems based on these theorems. [7]

Text Books:

1. Thomas and Finney: Calculus and Analytic Geometry, Ninth Edition.
2. Shanti Narayna : A Text Book of Vector Calculus. S. Chand & Co., New Delhi.

Reference Books:

1. N. Saran and S.N. Nigam: Introduction to Vector Analysis, Pothishala Pvt. Ltd., Allahabad.
2. Differential and Integral Calculus: Shanti Narayan.
3. D. C. Gokhroo, Differential Calculus, Navkar Prakashan.
4. N. Piskunov: Differential and integral Calculus. Peace Publishers, Moscow.
5. Gorakh Prasad: Differential Calculus. Pothishasla Pvt. Ltd., Allahabad.
6. Gorakh Prasad: Integral Calculus. Pothishala Pvt. Ltd., Allahabad.

MS 121 Matrices and Theory of Equations 3-0-0-3

Matrix: Matrices, Symmetric, Skew symmetric, Hermitian and skew Hermitian matrices. Elementary Operations on matrices Rank of a matrices, Inverse of a matrix. Linear dependence and independence of rows and columns of matrices, Row rank and column rank of a matrix, Eigenvalues, eigenvectors and the characteristic equation of a matrix, Cayley Hamilton theorem and its use in finding the inverse of a matrix [13]

Applications of Matrices: Applications of matrices to a system of linear (both homogeneous and non–homogeneous) equations. Theorems on consistency of a system of linear equations. Unitary and Orthogonal Matrices, Bilinear and Quadratic forms [9]

Theory of Equations: Relations between the roots and coefficients of general polynomial equation in one variable, Solutions of polynomial equations having conditions on roots. Common roots and multiple roots. Transformation of equations. [9]

Solution of equations: Nature of the roots of an equation, Descarte's rule of signs. Solutions of cubic equations (Cardon's method). Biquadratic equations and their solutions . [8]

Text Books:

1. Higher Algebra: A. Kurosh (Moscow Mir Publisher 1972).
2. Theory of Equations: (Lecture notes for inter University Leadership project in Mathematics by R.N. Gupta, Surjeet Singh and R.J. Hans.

Reference Books:

1. H.S. Hall and S.R. Knight: Higher Algebra, H.M. Publications 1994.
2. Shanti Narayan: A Text Books of Matrices.
   Chandrika Prasad: Text Book on Algebra and Theory of Equations.
   Pothishala Private Ltd., Allahabad.

MS 112 Abstract Algebra 3-0-0-3

Group: Algebraic structure**,** Definition of a group with examples and simple properties, Abelian group, semi group, Order of an element of a group, Cyclic groups, Coset decomposition. [11]

Subgroup and quotient Groups: Subgroups, Normal subgroups, Normalizer of an element, Quotient group [10]

Group Morphism: Homomorphism, kernel of homomorphism, Isomorphism and automorphism, Fundamental theorem of Homomorphism, Cayley's theorem. [10]

Permutations: Definition and examples of Permutation, group of permutations, Cyclic Permutation, Even and odd permutation. [8]

Text Books:

1. I.N.Herstein: Topics in Algebra, 2nd edition, Wiley Eastern Ltd. 1988.
2. P.B.Bhattacharya, S.K.Jain and S.R.Nagpaul: Basic Abstract Algebra, 2nd Edition, Cambridge University Press 1995.

Reference Books:

1. J.B.Fraleigh : A first course in Abstract Algebra, 3rd Edition Addison-Wesely/Narosa 1998..
2. Surjeet Singh and QuaziZameeruddin : Modern Algebra, Revised Edition,Vikas Publishing House, 1992.
   D. C. Gokhroo: Algebra, Navkar publication, Ajmer, Revised Edition , 2005.

MS 122 Differential Equations-I 3-0-0-3

Basic Concepts: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines. [4]

First Order Differential Equations: Differential equation of first order and first degree, Homogeneous form and reducible to homogeneous form, Linear equations and equations reducible to linear form, Exact differential equations, Equations reducible to exact forms, First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations, Equation reducible to Clairaut's form. [14]

Second order differential equations: Second order differential equations with variables coefficients, Homogeneous and exact forms, Change of dependent equations, change of independent variables, normal form, Method of variation of Parameters [12]

Series Solution: Regular singular points, ordinary points, , series solution of second order linear differential equations with variable coefficients(Complementary Functions only) [9]

Text Books:

1. D.A. Murray : Introductory Course in Differential Equations. Orient Longaman (India) . 1967
2. A.R.Forsyth : A Treatise on Differential Equations, Machmillan and Co. Ltd. London

Reference Books:

1. D. C. Gokhroo : Ordinary Differential equations, NavkarPrakashan.

2. S.L.Ross: Differential Equations, John Wiley & Sons
   B.Rai& D.P. Chaudhary : Ordinary Differential Equations; Narosa, Publishing House, Pvt. Ltd.

MS 211 Linear Algebra 3-0-0-3

Vector Space: Vector spaces, subspaces, Sum and Direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space. Finitely generated vector space, Existence theorem for basis of a finitely generated vactor space, Finite dimensional vector spaces, Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension [12]

Linear transformations: Linear transformations and linear forms on vactor spaces, Vactor space of all the linear transformations, Kernal and range of a linear transformation, Rank and Nullity, Matrix of a Linear Transformation, Change of basis. [10]

Dual Spaces: Dual Spaces, Dual Basis, Bidual Spaces, annihilator of subspaces of finite dimentionalvactor spaces. [9]

Inner Product Space: Inner produt space, norm of a vector, Orthogality. [8]

Text Books:

1. I.N. Herstein : Topics in Algebra, Wiley Eastern Ltd., New Delhi, 1975
2. P.B. Bhattacharya, S.K. Jain and S.R. Nagpal : Basic Abstract Algebra (2^{nd} edition).

Reference Books:

1. VivekSahai and VikasBist : Algebra, Narosa Publishing House.
2. I.S. Luther and I.B.S. Passi : Algebra, Vol.-II, Narosa Publishing House.
   D. C. Gokhroo : Linear Algebra, NavkarPrakashan.

MS 221 Differential Equations-II 3-1-0-4

Partial Differential equations: Formation, order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, singular solution, General solution, Solution of Lagrange's linear equations, Charpit's general method of solution. [13]

Second and higher Order PDE: Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant co-efficients, Partial differential equation with variable co-efficients reducible to equations with constant [14]

coefficients, their complimentary functions and particular Integrals, Equations reducible to linear equations with constant co-efficients.

Solution of Second order PDE: Classification of linear partial differential equations of second order, Hyperbolic, parabolic and elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method. [12]

Text Books:

1. Ian N. Sneddon : Elements of Partial Differential Equations, McGraw-Hill Book Company, 1988.
2. S.B. Rao and H.R. Anuradha : Differential Equations, University Press, 1996.

Reference Books:

1. W.T.H. Piaggio : Elementary Treatise on Differential Equations and their applications, CBS Publishers N.Delhi,1985.
2. D.A.Murray: Introductory Course on Differential Equations, Orient Longman, (India), 1967
3. Erwin Kreyszing : Advanced Engineering Mathematics, John Wiley & Sons, Inc. New York, 1999
4. Frank Ayres : Theory and Problems of Differential Equations, McGraw Hill Book Company, 1972
   J.N. Sharma &Kehar Singh : Partial Differential Equations

MS 212 Numeric Analysis 3-1-0-4

Interpolation: Interpolation with equal intervals: Newton's forward and Newton's backward interpolation formulae. Newton's divided difference, Lagrange's Interpolation formulae. [10]

Central Differences: Gauss forward and Gauss's backward interpolation formulae, Sterling, Bessel Formula. [8]

Iterative Methods: Newton Raphson Method, Successive Bi-Section, RegulaFalsi, Successive Approximation Method. [11]

Numerical Methods: Newton-Cote's Quadrature formula, Trapezoidal rule, Simpson's one-third and three-eighth rule, Picard method, Euler method, Runge-Kutta Methods. [10]

Text Books:

1. Babu Ram: Numerical Methods, Pearson Publication.
2. R.S. Gupta, Elements of Numerical Analysis, Macmillan's India 2010.

Reference Books:

1. M.K. Jain, S.R.K.Iyengar, R.K. Jain : Numerical Method, Problems

and Solutions, NewAge International (P) Ltd., 1996
2. S.S.Sastry: Introductory Methods of Numerical Analysis, 3rd edition(2000), Prentice Hall of India Pvt. Ltd., New Delhi.5. C.E. Froberg : Introduction to Numerical Analysis (2nd Edition).
S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

MS 222 Real Analysis 3-0-0-3

Neighborhood and Limit Points: Boundedness of the set of real numbers, least upper bound, greatest lower bound of a set, neighborhoods, interior points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weierstrass theorem. [10]

Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence. [9]

Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, D-Alembert's ratio test, Cauchy's general principle of Convergence of series, Leibnitz test, Absolute and conditional convergence. [12]

Riemann integral: Lower and upper Riemann integrals, Riemann Integrability, Mean value theorem of integral Calculus, Fundamental theorem of Integral Calculus. [8]

Text Books:

1. R.R. Goldberg : Real Analysis, Oxford & I.B.H. Publishing Co., New Delhi, 1970
2. S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

Reference Books:

1. Shanti Narayan : A Course in Mathematical Analysis, S.Chand and company, New Delhi.
2. D. C. Gokhroo, Real analysis, NavkarPrakashan.
3. T.M. Apostol: Mathematical Analysis, Narosa Publishing House, New Delhi, 1985
Earl D. Rainville : Infinite Series, The Macmillan Co., New York

Chemistry

CH 181 Physical and Inorganic Chemistry-I 2-0-0-2

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective nuclear charge. **[5]**

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule-Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 4thEdition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I 2-0-0-2

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer compounds and field effects. **[5]**

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogeniccentre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogeniccentresdiastereomers, threo and erythrodiastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation,Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivityin alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes- mechanisms involved in hydrogenation, electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration- reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I 3-0-0-1.5

Experiments based on the contents of CH 181 and CH 191.

CH 182 Physical and Inorganic Chemistry-II 2-0-0-2

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphurtetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D. Tuli&ArunBahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand &Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.

6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand& Co .Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 192 Organic Chemistry-II 2-0-0-2

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed.

2007, S. Chand & Co. Ltd.

3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II 3-0-0-1.5

Experiments based on the contents of CH 182 and CH 192.

CH 291 Physical Chemistry-I 2-0-0-2

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU&dHfor the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A &G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it. Concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. Expression for the rate constant based on equilibrium constant and thermodynamic aspects. **[11]**

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I 2-0-0-2

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series: General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. **[7]**

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 18th Ed. 2009, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand &Co.Ltd.

CH 223 Organic Chemistry-III 2-0-0-2

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and hypochromic shifts, UV spectra of conjugated enes and enones. **[6]**

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-

.

Hoesch reaction, LedererManasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel'smethod. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 20th Ed. 2008, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III 3-0-0-1.5

Experiments based on the contents of CH 291, CH 213 and CH 223.

CH 272 Physical Chemistry-II 2-0-0-2

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibriaof one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point (NaCl-H_2O), ($FeCl_3$-H_2O) and ($CuSO_4$-H_2O) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-HCl-H_2O and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications.

[10]

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorfand moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometrictitrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using hydrogen quinhydrone and glass electrodes. **[12]**

Chemical Equilibrium: Equilibrium constant and free energy. Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, Clausius-Clapeyron equation and their applications. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 5th Ed. 2004, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S.

Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II 2-0-0-2

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand &Co.Ltd.

CH 292 Organic Chemistry-IV 2-0-0-2

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagelcondensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic). **[6]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV 3-0-0-1.5

Experiment based on the contents of CH 272, CH 282 and CH 292.

Computer Science

CA 121 Programming Concepts using C Language 3-0-0-3

Development of Algorithms and Flowcharts: Importance, Symbols and Structure. [5]

Structure: Basic Structure of C Program, Constant, Variable, Data Types, Data Declaration, Operations (Arithmetic, Relational, Logical), Increment and Decrement Operators, Assignment Operator, Precedence of Arithmetic Operators, Operator Expression, Type Conversions in Expressions, Assignment Statements. [8]

Control Structure: Input and Output using getchar and putchar, Printf, Scanf Functions, Condition Statements, Simple if- else, Switch, Concept of Loop (While, For, Do-While), Break and Continue. [8]

Array: One Dimensional Array, Iterative Programs, 2-D Arrays, Matrix Operations. [5]

Concept of Sub Programming: Functions, External Variable Scope Rules, Header Files, Static Variables, Parameter Passing (Call By Values And Call By Reference), Recursion, C Preprocessor, Pointers. [7]

Advanced C concepts: Structure, Union, Argument Passing Using Pointer, Array of Pointers. [6]

CA 151 C Language Laboratory 0-0-4-2

Assignments are based on the Course CA 121 Programming Concepts Using C Language.

CA 122 Data Structure Through C 3-0-0-3

Introduction: Concept of Data Structure, Types of Data Structure. [3]

Array: Representation of Single and Multidimensional Array. [2]

Stack and Queue: Introduction and Primitive Operations on Stack: Stack Application; Infix, Postfix, Prefix Expressions, Evaluation of Postfix Expression, Conversion from Infix to Postfix (Algorithms only), Introduction and Primitive Operations on Queues. [9]

Sorting Techniques: Insertion Sort, Selection Sort, Merge Sort and Quick Sort. [7]

Searching Techniques: Linear Search, Binary Search. [6]

List: Introduction to Linked List, Sequential and Link Lists Operation such as Traversal, Insertion, Deletion, Searching. [8]

Tree: Introduction and Terminology, Traversal of Binary Trees, Recursive Algorithms for Tree Operation (Concept). [4]

Text Books:

1. Schaum Series, “Data Structures”,TMH, New Delhi
2. Langsam , Augenstein, Tannenbaum, “Data Structure Using C and C++”, PHI,

Reference Books:

1. Horowithz and Sahani, “Fundamentals of Data Structure”, Galgotia Book Source Pvt. Ltd.
2. Kanitker Y., “Let us C”, BPB Publication New Delhi
3. Balagurusamy E , “Programming in C”, TMH, New Delhi
4. Schaum Series, “Programming in C”, TMH, New Delhi

CA 112 Operating System 3-0-0-3

Introduction: Various Categories of Software, Operating System and its functions, Types of Operating Systems, Structure of Operating System. (Case study of Unix, DOS). [4]

Process Management: Process Concept, ProcessStates, Process Control Block, Interprocess Communication, and Scheduling Algorithms, Performance Evaluation. [7]

DeadLock: Deadlock Characterization, Prevention, Avoidance, Detection of Deadlock, SafeState, Banker’s Algorithm. [7]

Memory Management: Swapping, Memory Allocation Schemes, Paging, Segmentation, Virtual Memory Concept, Page Replacement Algorithms. [6]

File Management: Directories, File System Implementation, Allocation Methods, Free Space Management. [6]

Device Management: Disk Structure, Disk Scheduling, Disk Management Control of Various Devices, Device Drivers, Interrupt Driven and Poll Driven Data Transfer. [5]

Security and Protection Mechanism: Computer Security classification, Authentication, System threats, Goals of Protection, Access Matrix. [4]

Text Books:

1. Silbersachatz and Galvin, “Operating System Concepts”, Pearson Education.
2. Tannenbaum, “Operating Systems”, PHI, New Delhi

Reference Books:

1. William Stalings, “Operating Systems”, New Delhi
2. Ritchie, “Operating System”, BPB Publication , New Delhi
3. Dhamdhere D. M. “System Programming and Operating System”, TMH New Delhi
4. Achyut S Godbole, “Operating Systems”, TMH, New Delh

CA 162 Data Structure Laboratory 0-0-4-2

Assignments are based on the Course CA 122 Data Structure through C.

CA 241 Object Oriented Programming through C++ 3-0-0-3

Introduction: Structured Programming vs. Object Oriented Programming, Basic Concepts (Encapsulation, Information Hiding, Inheritance, Polymorphism), Difference Between C and C++. [4]

Basics of C++: Token, Keyword, Identifiers, Basic Data Type, User Define Data Type, Type Compatibility, Declaration of Variables, Dynamic Initialization of Variables, Reference Variables, Scope Resolution Operators, Member Referencing Operators, Operator Precedence, Control Structures. [8]

Function: Definition, Function Prototype, Call By Reference, inline Function, Function Overloading. [8]

Classes and Objects: Classes, Defining Member Function, Private, Public and Protected Member Elements and Function, Static Data Member, Static Member Function, Array Object, Constructors, Destructors, this Pointer, Operator Overloading, Comparison Between Structures and Classes, Copy Constructor, Dynamic Constructor, Friend Function, Friend Classes. [8]

Inheritance: Introduction, Derived Classes, Types of Inheritance (Single Inheritance, Multiple, Hierarchical, Hybrid), Virtual Base Classes, Abstract Classes. [6]

Virtual Functions: Introduction to Virtual Function, Virtual Function in Derived Classes, Overview of Exception Handling. [5]

Text Books:

1. KanitkerYashwant, “Let Us C++”, BPB Publication, New Delhi
2. GopalVenu, Rajkumar , Ravishanker, “Mastering C++” , TMH, New Delhi

Reference Books:

1. HerbertsSchildt, “C++ The Complete Refernce”, TMH, New Delhi.
2. Lafore R, “Object Oriented Programming Using C++”, GalgotiaPulications, New Delhi
3. Parasons D., “Object Oriented Programming With C++”,BPB, New Delhi
4. LaelorSteaven C., “The Art of Programming Computer With C++”, Vikas Publication.
5. Dietel&Dietal, “Introduction to C++”.

CA 231 Management Information System 3-0-0-3

MIS and Concept of Management: Elements, Characteristics, Need, Objectives, Importance, and Limitations, Relationship between MIS and Computer and Role of MIS in the Functions of Management. [9]

Information Concept: Classification of Information, Levels of Information, Techniques of Data Collection, Quality aspect of Information, Value of Information, Relation between MIS and Information. [6]

Decision Making: Decision Making Concepts, Rationality in Decision Making, Decision Support System, MIS as a Technique for Programmed Decisions, Model of Decision Making, Methods, MIS and Role of Decision Making. [6]

Manager and Computers: Database Concept, Database Models, Database Design, RDBMS, MIS and RDBMS, Introduction, Topology, LAN, MAN, WAN and Data Communication, Introduction to ERP. [5]

Typical Information Systems: MIS for Marketing, Financial, Production Management, Human Resource Management Information System. [6]

Development of MIS: Strategic and Project Planning for MIS, Conceptual System Design, Detailed Design, Implementation, Evaluation and Maintenance of the MIS. [7]

Text Books:

1. Murdick R G, Ross J E, Clagget J R, "Information Systems for Modern Management", PHI, New Delhi
2. Jawadkar, "Management Information System", TMH, New Delhi

Reference Books:

1. Sadagopan, "Management Information System"PHI, New Delhi
2. Parker, Case, Thomas, "Management Information System: Strategies and Action", TMH, New Delhi.

CA 271 Object Oriented Programming Laboratory 0-0-4-2

Assignments are based on the Course CA 241 Object Oriented Programming through C++.

CA 132 System Analysis and Design 3-0-0-3

System: Concept, Types and Characteristics, Elements, Computer based Information [5]

Systems, Candidate System, Role of System Analyst.

System Development Life Cycle: Recognition of Need, Feasibility Study, Design, Implementation and Maintenance, System Planning and Alternatives. [7]

Feasibility and Proposal: User and Management Involvement, Alternative Design Consideration, System Feasibility, The System Proposal. [5]

System Analysis: Effective Communication in System Analysis, Tools of System Analysis, Problem Definition, Classification of Data Collection and Analysis. [9]

System Cost Determination: Types of Costs/Benefits, System Cost and System Benefits and Data Processing Costs. [8]

Implementation: System Testing, Quality Assurance, Implementation and Software Maintenance. [5]

Text Books:

1. Awad Elias M, "System Analysis and Design", TMH, New Delhi
2. Hawayszkiewyez Igor, "Introduction To System Analysis and Design" PHI, New Delhi

Reference Books:

Course work (CW) would include Regularity, evaluation of assignments, surprise tests, etc.;

$Evaluationof proficiency will be based on the participation in co-curricular/extra curricular activities.

#Student will perform dissertation work in a recognized Organization for a period of 4 months and submit two copies of dissertation to the department latest by first week of May. Presentation and viva voce of dissertation will be conducted in second week of May. Dissertation and presentation will carry 50% weightage each

COURSE DESCRIPTION
M. Sc. (Biotechnology)

BT 511 Cytogenetics 3-0-0-3

Cell Diversity: Cell as a basic unit of life, Cell theory, Cell size and shape. [2]

Cytology: Introduction to cell organelles (Structure and functions), Self-assembly and dynamic structure of cytoskeletal filaments and their cellular regulation, Molecular motors and cell behaviour, Microtubules motors and movement, Cell-cell interactions, Cell adhesion, Tight and gap junction, Plant cell adhesion and plasmodesmeta. [8]

Energy Metabolism: Chemotropic (mitochondria) and phototropic (chloroplast) energy metabolism of cell, Electron transport chain and proton pump, Evolution of electron transport chain. [5]

Membrane Biology: Structure, Chemistry and function of biological membrane, Transport across membrane- simple diffusion, facilitated diffusion, active transport, Energetics of transport, Signal transduction mechanism of cell-membrane potential, Action potential, Synaptic transmission, Messengers and receptors of signal transduction mechanism. [7]

Cellular Oncology: Cell cycle and its control, Molecular mechanism, Check points and cancer. [6]

Principles of Genetics: Introduction toMendelian and non-Mendelian genetics, Chromosomal theory of inheritance. Extra chromosomal inheritance. [4]

Linkage: Concept of linkage and crossing over, basic eukaryotic chromosome mapping, recombination of genes, two-point and three-point test cross, tetrad analysis, linkage maps, Interference. [4]

Mutation: Spontaneous and induced mutations, chromosomal aberrations, Cytological behavior and molecular basis. [4]

Population Genetics: The Sources of variation, Hardy Weinberg's Law, Genetic drift and change in gene frequency. [2]

BT 581 Biostatistics 3-0-0-3

Introduction: Collection of primary and secondary data, Classification and tabulation of data, Graphs of frequency distribution and Curves, Measures of central tendency — mean,median and mode, Mathematical properties of arithmetic mean, Geometric and harmonic Mean [6]

Measures of Dispersion: Absolute and Relative Measures of Dispersion, Range, Mean deviation, Standard deviation, Mathematical properties of standard deviation, Coefficient of variation, Variance, Skewness and its measures, Kurtosis and its measures [6]

Correlation and Regression Analysis: Meaning, significance and types, Scatter diagram method, Correlation graph, Karl Pearson's correlation coefficient, [9]

Coefficient of determination, Spearman's Rank correlation coefficient, Lines of Regression, Regression equations, Difference between correlation and regression analysis

Tests of Significance: Student's t-test, Chi-square tests, Yate's correction factor, ANOVA– One and two way classification with examples [9]

Probability and Probability Distributions: Elements of probability-definition, addition and multiplication, Probability distribution function-Binomial, Poisson and normal, Area under normal probability distribution curve [9]

MB 531 General Microbiology 3-0-0-3

History and Scope of Microbiology: Spontaneous Generation vs. Biogenesis, Contributions of various scientists to the field of microbiology and development of microbiology as a scientific discipline. Avenues for microbiologists. [6]

Classification: Microorganisms and place of microbes in Whittakers' five kingdom classification, Eight kingdom classification, Phenetic and phylogenetic classification. Bergeys' manual for classification of bacteria, Structure and organization of Prokaryotic and Eukaryotic cells. Structure of bacterial cell wall-difference between Gram positive, Gram negative and archaebacteria, Cell membrane, Flagella, Pilli, Capsule, Endospore, Mesosome, Reserve food material. [10]

Microbial Growth: Bacterial growth curve, Factors affecting the microbial growth, One step growth curve of bacteriophages, Concepts of batch culture, Continuous culture, fed batch culture, synchronous growth and measurement of growth. [8]

Recombination in Bacteria and Viruses: Transformation, Conjugation and Transduction. [5]

Methods of Studying microorganisms: Microscopy- light microscopy (bright field, dark field, phase contrast, fluorescent) and electron microscopy (SEM & TEM), Pure culture techniques, Microbiological media (Liquid, solid, semi solid, defined, selective, maintenance, enrichment & differential), Sterilization, Disinfection, Aseptic techniques. [6]

General Properties of Microorganisms: Brief study of characteristics of viruses, algae, protozoa and fungi. Economic importance of microorganisms, Microbes as agents of diseases. [4]

BC 511 Chemistry of Biomolecules 3-0-0-3

pH and Buffers: Importance of buffers with reference to biological aspect, Isoelectric points, pK values, Morality and Molality, Thermodynamics law, Free energy, Gibbs law, High energy compounds and their biological importance**.** [4]

Carbohydrates: Structure, Classification and important reactions of monosaccharides and their derivatives, Synthesis of biologically important structural and Storage carbohydrates, [5]

Lipids: Structure and classification of lipids, Fatty acids, Properties of fatty acids, Glycerolipids, Sphingolipids, Cholesterol and their biosynthesis, Alkaloids, Steroids and Flavonoids- properties and synthesis, Lipids as signal molecules, Alpha, beta and omega-oxidation, Lipopolysaccharides- structure and function. [6]

Proteins: Structural unit of proteins, Classification of amino acids, Properties of amino acids on the basis of $–NH_2$ and –COOH group, Protein structure and classification, Ramachandran plots, Stability of proteins, Folding and unfolding of proteins, Polypeptide synthesis and sequencing, Protein evolution, Structure and function of globular and fibrous proteins. [7]

Nucleic Acids: Nucleosides and nucleotides, Nucleic acid classification, Bond stability between purines and pyrimidines, Structure and reactions of purines and pyrimidines and their derivatives, Metabolism of purines and pyrimidines, Protein and nucleic acid interactions. [5]

Vitamins: Role of vitamins in growth and differentiation in human beings, Chemistry of fat and water-soluble vitamins, Vitamins as co-enzymes. [5]

Enzymes: Classification of enzymes, MichelisMenten equation, Km value, Linweaver-Burk equation, Kinetics of substrate and enzyme reactions, Isozymes, Effect of different physical and chemical factors, Active sites-nature and determination, Immobilization of enzymes and its application. [7]

BC 521 Biophysical Techniques 3-1-0-4

Basic Principles of Biophysics: Quantum Mechanics, Electronic structure of Atoms, Molecular orbitals and Covalent bond, Molecular interaction, Stereochemistry and chirality, Thermodynamics-Entropy, Enthalpy, Oxidation-Reduction potential, Zero order and first order reactions. [5]

Centrifugation: Principles of centrifugation, Design and care of rotor, Preparative and Analytical centrifuge, Density gradient centrifugation, Safety aspects and applications. [6]

Spectroscopic Techniques: Ultra violet- visible spectroscopy, Spectrofluorometry, Circular dichorism and Optical rotatory dispersion, Atomic spectroscopy, Raman and Infra-red spectroscopy, Electron spin resonance spectroscopy, Mass spectroscopy, NMR. [12]

Electrophoretic Techniques: Principle, Electrophoresis of proteins and nucleic acids, Isoelectric-focusing, 2-D electrophoresis, Capillary electrophoresis. [6]

Chromatographic Techniques: Principles of Chromatography, Chromatography theory and practice, Paper, Thin layer, and Column chromatography, Permeation, Ion exchange, Affinity, Adsorption, Partition, HPLC and Gas chromatography. [10]

Radioisotope Techniques: Radioactive decay, Interaction of radioactivity with matter, GM counter, Scintillation counter, Quenching and its correction, Autoradiography, Radio-immunoassay and ELISA. [5]

BT 551 Microbiology and Cytogenetics Laboratory 0-0-4-2

Assignments based on BT 511 and MB 531 containing exercises on study of cell and its various structures and functions and general characteristics of microorganisms will be conducted.

BC 541 Biochemistry and Instrumentation Laboratory 0-0-4-2

Assignments based on BC 511 and BC 521 containing exercises on working and maintenance of instruments and qualitative and quantitative analysis of biomolecules will be conducted.

BC 531 Biomolecules 3-0-0-3

Basic Concept of Biomolecules: Structure of prokaryotic and eukaryotic cells, intracellular organelles and their functions, comparison of plant and animal cells. Importance of buffers with reference to biological aspect, Isoelectric points, pK values, Morality and Molality, Thermodynamics law, Free energy, Gibbs law, High energy compounds and their biological importance**.** [5]

Carbohydrates: Structure, Classification and important reactions of monosaccharides and their derivatives, Synthesis of biologically important structural and Storage carbohydrates.Carbohydrate metabolism-Kreb's cycle, glycolysis, glycogenesis and glycogenolysis, gluconeogenesis, pentose phosphate pathway [8]

Lipids: Structure and classification of lipids, Fatty acids, Properties of fatty acids, Glycerolipids, Sphingolipids, Cholesterol and their biosynthesis, Alkaloids, Steroids and Flavonoids- properties and synthesis,Properties of lipid aggregates-micelles, bilayers, liposomes and their possible biological functions. Biological membranes. Lipids as signal molecules, Alpha, beta and omega-oxidation, Lipopolysaccharides- structure and function. Lipoproteins-composition and function, role in atherosclerosis. [7]

Proteins: Structural unit of proteins, Classification of amino acids, Properties of amino acids on the basis of $–NH_2$ and –COOH group, Protein structure and classification, Ramachandran plots, Stability of proteins, Folding and unfolding of proteins, Polypeptide synthesis and sequencing, Protein evolution, Structure and function of globular and fibrous proteins. Amino acid metabolism-degradation and biosynthesis of amino acids.Classification of enzymes, MichelisMenten equation Km value, Linweaver-Burk equation. [8]

Nucleic Acids: Nucleosides and nucleotides, Nucleic acid classification, Bond stability between purines and pyrimidines, Structure and reactions of purines and pyrimidines and their derivatives, Metabolism of purines and pyrimidines, Protein and nucleic acid interactions. [6]

Vitamins: Role of vitamins in growth and differentiation in human beings, Chemistry of fat and water-soluble vitamins, Vitamins as co-enzymes. [5]

Suggested Books:

1. Principles of Biochemistry, A.L. Lehninger, Worth Publishers.
2. Biochemistry, L. Stryer, W.H. Freeman.
3. Biochemistry, J. David Rawan, Neil Patterson.
4. Biochemistry, Voet and Voet, John Wiley.
5. Outlines of Biochemistry E.E. Conn and P.K. Stumpf, John Wiley.

BT 512 Plant Biotechnology 3-0-0-3

Plant Tissue Culture: Historical perspective, Tissue culture media, Totipotency, Organogenesis, Somatic embryogenesis- regulation and application, Artificial seed production, Micropropagation, Somaclonal variation, Androgenesis and its applications in genetics and plant breeding, Germplasm conservation and Cryopreservation. [5]

Protoplast Culture and Somatic Hybridization: Protoplast isolation, Culture and usage, Somatic hybridization-methods and applications, Cybrids and somatic cell genetics [6]

Agrobiology: *Agrobacterium*-plant interaction, Organization of virulence genes, Ti and Ri plasmids, Opines and their significance, T-DNA transfer mechanism, Disarming the Ti plasmid, *Agrobacterium* based vectors, Binary and shuttle vectors. [5]

Genetic Transformation: *Agrobacterium*-mediated gene delivery, Co - integrate and binary vectors and their utility, Direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods, Screenable and selectable markers, Characterization of transgenics, Marker-free Methodologies, Transgene stability and Gene silencing. [7]

Application of Plant Transformation: Herbicide resistance, Bacterial resistance, Viral resistance, Fungal resistance, Insects and pathogens resistance, Drought, Salinity, Thermal stress, Flooding and submergence tolerance Plants as Biofactories. [8]

Molecular Marker-aided Breeding: Conventional plant breeding, Non PCR and PCR based molecular markers- RFLP, RAPD Markers, STS, microsatellites, SCAR, SSCP, AFLP, QTL, map based cloning, molecular marker assisted selection. [8]

BT 522 Animal Biotechnology 3-0-0-3

Introduction: Brief account of animal tissue culture, Brief history and some established normal and transformed cell lines. [5]

Media formulations: Balanced salt solution, Semi-synthetic and synthetic media, Serum as a media supplement, Serum-free media, Feeder layers, Medium sterilization. [8]

Cell culture Methods: Disaggregation (mechanical, chemical and enzymatic), Primary culture, Secondary culture, Suspension and monolayer cultures, Immobilized cultures. [8]

Growth Characteristics of Animal Cells: Growth curve, Growth kinetics, Synchronization of cells, Differentiation of cells, Transformation, Bioreactors. [8]

Application of Animal Biotechnology: Tissue engineering, Production of monoclonal antibodies, Transgenic animals, Embryo culture and IVF, Gene therapy, Production of interferons and vaccines, Diagnostics. [10]

BT 592 Bioinformatics , Scientific Communication & Intellectual 3-1-0-4

Property Rights

Introduction to Bioinformatics: Biological Databases**:** Types-GenBank, EMBL, DDBJ, SwissProt and PDB (Data Submission and Retrieval via WWW) and their management.	6
Molecular Phylogenetics: Pattern and mode of substitution, Acquisition and origin of new function, Phylogenetic tree; Distance matrix and maximum Parsimony methods of phylogenetic tree constructions.	8
Data Searches and Pairwise Alignments: Dot Plots, Simple alignments, Gaps, Scoring Matrices; Global and Local Alignments; Database searches (BLAST and FASTA and their relatives); Multiple Sequence alignments; Genome analysis; Homology modeling and Secondary structure prediction of proteins.	8
Scientific Literature: Structure, Type (Research article, review article, Short communication, Book review). Abstracting methodology. Concept of Impact factor; Citation Index.	3
Introduction to Intellectual Property Rights, Basic Principles of Patent Law, Types of IPR ,Patent Application procedures (India and International)	7
Biotechnology and Intellectual Property Rights. Biotechnology and the Law-Objective, Evolution, Moral & ethical issues Issues. Protection of Geographical Indications - Objective, Multilateral Treaties, Protection of Traditional Knowledge-Objective, Bio-Prospecting and Bio-Piracy	7

Text Book

1. Introduction to Bioinformatics by Teresa K. Attwood, David Parry, Smith 1st Edition
2. Bioinformatics: a practical guide to the analysis of genes and proteins by Baxevanis A., Ouellette F.B.F. (Eds.). John Wiley and Sons, New York (1998) 2nd Edition.
3. Intellectual Property Rights and the Law by Reddy G.B., 2005

Reference Book

4. "BLAST": An Essential Guide to the Basic Local Alignment Search Tool by O'Reilly 2nd Edition.
5. Bioinformatics : Methods and Applications genomics, proteomics and drug discovery by Rastogi S.C., Prentice-hall Of India Pvt Ltd.

BT 534 Molecular Biology 3-0-0-3

Historical and Introductory Aspects: History of molecular biology; nucleic acids as hereditary material-experimental evidences, structure of DNA; Law of

constancy and C-value paradox, Cot curve, DNA denaturation and renaturation kinetics. [5]

DNA Replication: Enzymes and accessory proteins involved in DNA replication, Prokaryotic and eukaryotic DNA replication, Asymmetric and dimeric nature of DNA polymerase III. [5]

Transcription: General principles, Types of RNA polymerases, Promoter Enhancers and Regulatory sequences, RNA polymerases and general transcription factors, Prokaryotic and Eukaryotic transcription General and specific transcription factors, Control of transcription. [8]

Translation: Genetic code, Prokaryotic and Eukaryotic translation, Translation machinery, Mechanisms of initiation, elongation and termination, Regulation of translation. [6]

Maturation and Processing of RNA: Methylation, Cutting and trimming of rRNA, Capping, Polyadenylation and Splicing of mRNA, Cutting and modification of tRNA, Degradation system, Catalytic RNA group I and group II intron splicing RNase P. [7]

Regulation of Gene Expression: Operon concept, Catabolite repression, Positive and negative regulation, Inducers and co-repressors, Negative regulation - *E. coli* lac operon, Positive regulation, Regulation by attenuation his and trp operons, Antitermination, Environmental regulation of gene expression- Global regulatory responses - heat shock response, stringent response and regulation by small molecules such as ppGpp and cAMP. [8]

MB 532 Immunology 3-0-0-3

Overview of immune response: Historical background, Innate immunity, Adaptive immunity, Innate-adaptive cross-talk, Natural and artificial immunity, Active and Passive immunity, Humoral and Cell-mediated immune response, Early theories of immunity**.** [5]

Cells and Organs of Immune System: Lymphoid organs, Haematopoiesis and differentiation of stem cells into mast cells, Basophils, Eosinophils, Monocytes, Macrophages, Neutrophils, NK cells, B and T lymphocytes (Th and Tc cells)-characteristics, CD markers and biological functions, Development of B-lymphocytes, Immunoglobulin structure and diversity, Development of T lymphocytes, TCR complex and diversity, positive and negative selection. [7]

Antigens: Antigenicity vs. immunogenicity, Characteristics of antigens, Epitopes, Characteristics of B-cell and T-cell epitopes, Haptens, Adjuvants, Isotypes, Allotypes and Idiotypes [3]

Humoral Immune Response: Activation and differentiation of B-lymphocytes, immunoglobulin classes and subclasses, B-cell receptor–co receptor complex, Primary and Secondary response, Affinity maturation, Antigen- antibody interactions, forces involved in Ag-Ab interactions, Antibody affinity and avidity, Primary interactions and secondary interactions, RIA, ELISA, IFA, Flow cytometry, Western blotting, precipitation reactions (in gel and in solution), agglutination reactions, Complement system. [8]

Cell Mediated Immune Response: Development- antigen processing and presentation, Major Histocompatibility Complex- structure, diversity and

regulation of expression on cells, Leukocyte trafficking, Activation of T-cells, TCR signaling, Co-stimulatory signals, Effector functions, cytokines- types and biological role, Regulation of cytokine expression, Differentiation into Th1 and Th2 subclasses, Tc-cell mediated target cell killing. [8]

Immune System in Health and Disease: Immunologic tolerance, Autoimmune diseases, Immunodeficiency diseases, Hypersensitivity and allergies, Transplantation Immunology, Tumor immunology, Immunology of infectious diseases, Vaccines- concepts and strategies of development. [6]

MB 514 Food Technology 3-0-0-3

Food and Fermentation Technology: Origin, Scope and development of fermented food products, [10]
Microbial starters for food fermentations.
Fermented Foods- Bread, Vinegar, Beer, Wine, polysaccharides, low calorie sweeteners, Vitamins, Fermented vegetables, Nutraceuticals, Prebiotic and Probiotic foods, Genetically modified foods, Nano foods.
Fermented dairy products- Milk and Curd, Yoghurt, Buttermilk, Cheese, Oriental fermented foods,
Single cell protein, Mushroom cultivation

Spoilage and Preservation:
Factors affecting microbial growth in foods- extrinsic and intrinsic,
Contamination of foods (cereals, Vegetables and Fruits, Meat and Meat products and Fish, Milk and milk products, canned foods) and their involvement in disease outbreaks, [10]
Spoilage detection and characterization.
Methods of food preservation (thermal processing, refrigeration, dehydration, irradiation, microfiltration, chemical preservatives).
Food Borne Infections and Intoxications: Microbial toxins in food- Chemical Structure and Types, Food borne illnesses caused by- *Brucella, Clostridium, Escherichia, Salmonella, Shigella, Staphylococcus, Vibrio and Yersinia*, Diseases caused by Fungi, Emerging pathogens, *E.coli*O157:H7, *Listeria monocytogens*, *Campylobacter jejuni, Helicobacter pylori* [10]
Packaging and Quality Control:
Need and method of packaging (glass, metal, plastics, moulded pulp and aluminium foil), Controlled atmosphere packaging, Tetra pack, Nano capsule, Nano membrane. [9]
Detection of food pathogens- Culture methods, Rapid detection using PCR
Food standards- Standards for Milk, Poultry, Food control agencies- BIS, Codex commission,
Food laws and current concepts in food safety (HACCP, quantitative risk assessment and prediction based systems)
Disposal and treatment of food industry waste

BT 552 Seminar 0-0-0-1

Student will prepare a presentation on any area of recent research and deliver

seminar on it.

BT 514 Plant, Animal Biotechnology and Food Technology Laboratory **0-0-4-2**

Assignments based on BT 514, BT 512 and BT 522 containing exercises on application of food microbiology and biotechnological techniques in animals and plants will be conducted.

BT 572 Molecular Biology and Immunology Laboratory **0-0-4-2**

Assignments based on various techniques involved in BT 542 and MB 532 containing exercises on molecular biology, immunological analysis will be conducted.

BT 524 Laboratory Course in Bioinformatics & Scientific Communication **0-0-2-1**

Assignments based on BT 592 containing exercises on NCBI & It's elements, BLAST & It's relatives, Homology searching, Secondary structure prediction, Structure visualization, Phylogenetic analysis etc.

BT 611 Genetic Engineering 3-1-0-4

Introduction: Isolation and purification of nucleic acids, measuring nucleic acid concentration and purity. [2]

Enzymes in Molecular Cloning: Principal enzymes used to manipulate DNA *in vitro* with their activities and major applications including Restriction endonucleases, Nucleases, DNA ligases, topoisomerases, Enzymes involved in modifications including DNA methylases, DNA polymerases, kinases, phosphatases and DNA binding proteins (SSB, Rec A). [4]

Cloning and Expression Vectors: Brief study of features and applications of plasmids, phagemids, bacteriophage, lambda vectors, cosmids, high capacity cloning vectors like BACs, PACs and YACs, General considerations for design of expression vectors in prokaryotes. [5]

DNA Cloning Strategies: Criteria for the choice of suitable vectors and host, Modification of DNA ends, Methods of gene transfer to bacterial cells, Preparation of genomic and cDNA libraries, Screening methods for selection of recombinant DNA molecules by direct, indirect methods and by detection of specific proteins. [4]

Analysis of DNA Protein and Protein-Protein Interactions: Electromobility shift assay, Methyl interference assay, Footprinting technique, Dimethyl sulphate protection assay, Entrapment vectors, Yeast two hybrid systems, Phage display, Differential gene expression by microarray. [4]

Polymerase Chain Reaction: Principle and technique, Advances and extensions to basic PCR strategy including RT-PCR, Assymetric PCR, Inverse PCR, Nested PCR, anchored-PCR, overlap extension, DOP-PCR, Applications of PCR. [4]

Manipulation of Gene Expression in Prokaryotes: Production of fusion proteins and heterologous unique proteins in bacteria, Maturation, Transport and stability of eukaryotic proteins in bacteria, Strategies to increase protein production and stability. [5]

Cloning in Systems other than *E. coli*: Cloning in gram positive bacteria, *Saccharomycescereviciae*, Streptomyces, Yeast expression vectors. [4]

Common Genetic Engineering Techniques: Site directed mutagenesis, Sequencing, Probe labeling, Hybridization. [3]

Applications of rDNA Technology: Role of genetic fingerprinting in diagnostics, therapeutic, agricultural applications. [5]

BT 621 Environmental Biotechnology 3-0-0-3

Agricultural Microbiology: Types of soils-physical and chemical characteristics, microflora, Rhizosphere and Phyllosphere- general account, Microbial interactions- Study of positive and negative interactions among microbial populations, Biological nitrogen fixation- Symbiotic (Rhizobium, Frankia), Asymbiotic (Azotobacter, Azospirillum), Nitrogenase and nif genes, Biofertilizers, VAM- brief account and applications, Biofertilizers, Biopesticides. [12]

Water Microbiology: Assessment of water quality- water purification, Potability standards, Major water borne diseases. [6]

Biogeochemical Cycling: Carbon, Nitrogen and Sulphur cycle- role of microbes, Biodegradation- recalcitrant and xenobiotics, Degradation of pesticide, Wood and Textiles, Role of microbes in biodeterioration- Metal corrosion, Paper, Metal detoxification. [10]

Waste Treatment: Types of wastes-Solid and Liquid waste, Waste treatments- Physical, Chemical and Biological (Primary, Secondary and Tertiary treatment), Trickling filter, Activated sludge, Oxidation pond, Solid waste treatment- composting, biogas production. [10]

BT 641 Bioprocess Engineering 3-1-0-4

Microbial Growth and Product Kinetics: Microbial biomass, Enzymes and metabolites, Batch and Continuous culture, Feed back system, Comparison of batch and continuous culture, Fed batch system and its applications. [7]

Isolation, Preservation and Improvement of Industrially important Microorganisms: Enrichment culture technique, Storage at low temperature, Storage in Liquid nitrogen, Lyophlization, Strain improvement by mutation, Feed back inhibition and repression, Strain improvement by modifying the characteristics of inhibitor metabolite, Isolation of auxotrophic mutants, Resistant mutants, Revertant mutants, Use of Recombination methods and Improvement by modifying properties other than yield. [8]

Sterilization: Design of batch sterilization process, Calculation of Del factor, Holding time, Richard's rapid method for design of sterilization, scale up of batch sterilization process, Design of continuous sterilization process, Sterilization of air, Theory and design of depth filter. [5]

Mass Transfer in Microbial System: Fluid and its properties, Mass transfer co-efficient and its determination, Factor affecting mass transfer coefficient, Scale up and scale down. [7]

Downstream Processing: Introduction, Filtration, Product isolation and extraction– centrifugation, precipitation, cell disruption, liquid-liquid extraction, chromatography, membrane processes, Drying, Crystallization and whole broth processing. [7]

Bioreactor and Control: Basic design of fermenter and control system: automatic and manual, off line and on line, Bioreactor– Packed bed, Fluidized bed, Tickle bed, CSTR, Plug flow reactor, Scale up of bioreactor. [5]

BC 611 Enzymology 3-0-0-3

Introduction: Units of activity, Specific activity of enzymes and methods of enzyme assay, Enzyme specificity, Uni substrate enzyme kinetics, Factors affecting the rate of enzyme catalyzed reaction, Derivation of Michelis-Menten equation, Significance of $V_{max}$and $K_{m,}$ Enzyme inhibition- type of inhibition, Competitive non Competitive and uncompetitive kinetics. [5]

Enzyme Catalytic Efficiency: Factors associated with catalytic efficiency such as proximity, Orientation-distortion of strain, base nucleophilic catalysis with equation, Protein ligand binding co-operativity, Hill and Sat Chard plot protein sequencing. [6]

Immobilization: Immobilized enzymes and their industrial applications, Effect of partition on kinetics and performance with particular emphasis on change in pH and hydrophobicty. [6]

Allosteric Theory: Allosteric enzymes, Sigmoidal kinetics and their physiological significance, Symmetric and sequential modes for action of Allosteric enzyme and their significance. [6]

Multi-enzyme System: Occurrence, Isolation and their properties, Polygenic nature of multi-enzyme systems, Mechanism of action and regulation of pyruvate dehydrogenase and fatty acid synthetase complex, Coenzymes and co-factors, Detailed mechanism of catalysis of serine proteases, ribonuclease and triose phosphate isomerase. [8]

General Mechanism of Enzyme Regulation: Feedback inhibition and feed forward stimulation, Enzyme repression, Induction and degradation, Control of enzyme activity by products and substrates, Reversible and irreversible covalent modifications enzymes, Enzyme engineering and its applications. [8]

BT 661 Genetic Engineering and Environmental Biotechnology Laboratory 0-0-4-2

Assignments based on BT 611 and BT 621 containing exercises on genetic engineering and role of biotechnology in environment will be conducted.

BT 613 Enzymology and Bioprocess Laboratory 0-0-4-2

Assignments based on BC 611 and BT 641containing exercises on fermentation process and production of metabolites and role of enzymes in biotechnology will be conducted.

Mody University of Science & Technology

MSc Maths

Session 2016-2017

Curriculum Structure

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

M. Sc. Mathematics

(Session 2016-2017 Onwards)

Programme Level: Postgraduate **Duration:** Two Years (Four Semesters)

No. of Seats: 20

Objectives: The proposed PG programme in Mathematics is a highly interesting and promising with broader opportunity for absorption in teaching, research and industry for students. The M.Sc. Mathematics programme offers core fundamental skills in Mathematics which incorporate the ideas of applied mathematical knowledge as well as provide platform to the student's regarding research oriented programmes in various interdisciplinary areas of mathematics.

Scope: The programme will generate interest of students towards fundamental mathematical research and will be able to qualify eligibility test for various fellowships.. Student will be able to select various options for higher studies like doctoral programmes in Computational numerical analysis, Advanced graph and pebbling theory, Algebraic and numerical topology, Approximation theory, Optimization techniques , Economics Fluid dynamics, Financial mathematics, Theory of computation and artificial intelligence, Mathematical modeling and simulation etc. Further, they have scope for absorption in research Labs in India like BARC, IISc, TIFR, IITs, ISRO, DRDO etc. as well as may get opportunity for doctoral or post doctoral research in India and abroad.

Input Qualification:

Bachelor's Degree in Science from any recognized university with Mathematics as a core subject for three years/six semesters, with 50% of aggregate marks and adequate proficiency in English.

Evaluation Procedure: All the Rules and Regulations as a provided in the Ordinance and regulations of the Undergraduate/postgraduate programmes of Mody University shall be followed. The first batch of this programme is proposed to be admitted in the session 2016-2017.

M.Sc.(Mathematics)

Two-Year Programme (2016- 17 and onwards)

Second Year

Autumn Semester

Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration	Weightage (%)		
		L	T	P		Hours	CW*	MTE	ETE
MS 611	Advanced Linear Algebra	3	1	-	4	3	25	25	50
MS 621	Advanced Graph Theory and Combinatorics	3	1	-	4	3	25	25	50
MS 631	Real Analysis and Measure Theory	3	1	-	4	3	25	25	50
MS 641	Special Functions and Integral Equations	3	1	-	4	3	25	25	50
	Elective-I	3	1	-	4	3	25	25	50
	Sub Total	**15**	**5**	**-**	**20**				

Spring Semester

Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration	Weightage (%)		
		L	T	P		Hours	CW*	MTE	ETE
MS 612	Functional Analysis	3	1	-	4	3	25	25	50
MS 622	Inequality and Continued Fractions	3	1	-	4	3	25	25	50
MS 632	Basics of MATLAB	-	-	4	2	4	100		
	Elective-II	3	1	-	4	3	25	25	50
MS 642	Dissertation	-	-	-	8		100		
	Sub Total	**9**	**3**	**4**	**22**				

Total Credits: 88 (I Year +II year)

Elective- I	**Elective- II**
MS 651 Magneto Hydrodynamics	MS 652 Viscous Fluid Dynamics
MS 661 Sequence and Series	MS 662 Summability and Approximation Theory
MS 671 Tensor Analysis	MS 672 Mechanics and Calculus of Variations
MS 681 Reliability Theories	MS 682 Fourier Analysis
MS 691 Advanced Number Theory	MS 692 Differential Geometry

* CW (Course work): It would include attendance, assignments, class /quiz test.

Note: Combinations of electives are: MS 651 & MS 652; MS 661 & MS 662; MS 671 & MS 672; MS 681 & MS 682; MS 691 & MS 692.

(Above II year is taken from AC 30, syllabus in AC 30 minutes)

MS 511 Computer Based Advanced Numerical Analysis 3-1-0-4

1. Algebraic and Transcendental Equations: General iterative methods, Newton-Raphson method for finding multiple roots, system of non linear equations, convergence of Newton-Raphson method, Graeffe's root squaring method, Muller's method , Bairstow iterative method. **[08]**

2. System of Linear Equations: Existence of solution, ill-conditioned system, Gauss elimination with pivoting, Gauss-Jordan method, triangular factorization method, Jacobi iteration method, Gauss-Seidel method, relaxation method, convergence of iteration methods. **[08]**

3. Boundary Value and Eigen Value Problems: Solution of Eigen values problems by power method, Jacobi method, finite difference scheme for linear and non linear boundary value problems, shooting method, finite difference method. **[08]**

4. Partial Differential Equations: Numerical solution of partial differential equations, finite difference approximation to partial derivatives, solution of Laplace and Poisson equations, solutions of one and two dimensional heat and wave equations, Crank-Nicolson method for parabolic partial differential equations. **[09]**

5. Difference Equations and Curve Fitting: Homogeneous difference equations with constant coefficients, particular solutions of a difference equations, curve fitting and regression, least square method, fitting of straight line and second order polynomials. **[06]**

Text Books:

1. Shastry S.S. (2006), Introductory Methods of Numerical Analysis, 4th ed., PHI Pvt. Ltd.
2. Collatz L. (2013), Numerical Solution of Differential Equations, 6th ed., Springer.
3. Jain M.K. and Iyenger S.R.K.(2003), Numerical Methods for Scientists & Engineering Computations, 4th ed., Wiley Eastern Ltd.

Reference Books:

1. Balagurusamy E. (2008), Numerical Methods, 25th reprint, McGraw-Hill Education (India) Ltd.
2. Srimanta Pal (2009), Numerical Methods, 1st ed., Oxford University Press, Oxford.

MS 521 **Discrete Mathematics** **3-1-0-4**

1. Relation and Function: Definition of set, different forms, properties and operations, principle of inclusion and exclusion, partition of a set, definition and types of a relation, composition, properties, graphical representation, equivalence classes, closure of a relation, Warshall's algorithm, Hasse diagrams, definition of lattice, different forms, properties, definition and kinds of a function, composition and properties of functions, recursively defined functions. **[10]**

2. Logics and Proofs: Propositional logic, propositional equivalences, predicates and quantifiers, nested quantifiers, rules of inference, notion of a proof and methods for constructing proofs, normal forms (disjunctive and conjunctive), proof methods and strategy, statements of Fermat's last theorem, the $(3x + 1)$ conjecture and Godel's incompleteness theorem, program correctness. **[10]**

3. Induction and Counting: Mathematical induction, strong induction and well-ordering, recursive definitions and structural induction, recursive algorithms, basics of counting, pigeonhole principle, permutations and combinations, binomial coefficients, generalized permutations and combinations, generating permutations and combinations. **[09]**

4. Graphs and Finite Automata: Graph and digraphs,, Konigsberg bridge problem, finite and infinite graphs, incidence and degree, isolated vertex, pendant vertex, and null graph, isomorphism, sub graphs, walk, path and circuits, connected graphs, disconnected graphs and components, Euler graphs, operation on graphs, Hamiltonian paths and circuits, traveling salesman problem, types and properties of tree, matrix representation of graphs; deterministic and non-deterministic finite automata, transition table and transition diagram, Mealy and Moore machines, minimization of finite automation. **[10]**

Text Books:

1. Kenneth H. Rosen (2008), Discrete Mathematics and Its Applications with Combinatorics and Graph Theory, 7th ed., TMH Education.
2. Kolman, Busby and Ross (2009), Discrete Mathematical Structure, 6th ed., Pearson.
3. K.D. Joshi (1989), Foundations of Discrete Mathematics, 2003 reprint, New Age International.

Reference Books:

1. Tremblay(1997), Discrete Mathematical Structures with Application to Computer Science, 35th reprint 2008,Mc Graw Hill Education,
2. Liu and Mohapatra (2000) , Elements of Discrete Mathematics , 2nd ed., Mc Graw Hill Education, New Delhi.
3. Narsingh Deo (2004), Graph Theory with Applications to Engineering and Computer Science, reprint ed.,PHI.

MS 531 **General Topology** **3-1-0-4**

1. Metric and Topological Spaces: Definition and examples of metric spaces, open sets, closed sets, convergence, completeness and Baire's theorem, continuous mappings, spaces of continuous functions, Euclidean and unitary spaces, definition and examples of topological spaces, elementary concepts, open bases and open subbases, weak topologies, function algebras. **[08]**

2. Compactness: Compact spaces, products of spaces, Tychonoff's theorem and locally compact spaces, compactness for metric spaces, Ascoli's theorem. **[08]**

3. Separation: T_1 – spaces and Hausdorff spaces, completely regular spaces and normal spaces, Urysohn's lemma and the Tietze extension theorem, Urysohn's imbedding theorem, Stone – Cech compactification. **[08]**

4. Connectedness: Connected spaces, the component of spaces, totally disconnected spaces, locally connected spaces. **[08]**

5. Approximation: Weierstrass approximation theorem, Stone-Weierstrass theorems locally compact Hausdrorff spaces, extended Stone-Weierstrass theorems. **[07]**

Text Books:

1. George F. Simmons (2015), Topology and Modern Analysis, reprint ed., McGraw Hill Education, New Delhi
2. Sharma J. N. and Vashistha A. R.(2010), Topology, 37th ed., Krishna Prakashan Media, Meerut.
3. Adams (2008), Introduction to Topology: Pure and Applied, 3rd reprint ed., Pearson.

Reference Books:

1. Cain L.(2012), Introduction to General Topology,1st impression. Pearson.
2. Armstrong (2014), Basic Topology, reprint ed., CBS Publication.
3. Seymour Lipschutz(1965), Schaum's Outline of Theory and Problems of General Topology, 1st ed.,McGraw Hill Education.

MS 541 **Operations Research** **3-1-0-4**

1. Linear Programming: Dual simplex method, parametric linear programming, game theory, two person zero sum game, game with mixed strategies, graphical solution, solution by linear programming. **[10]**

2. Inventory and Replacement Models: Deterministic models purchase and manufacturing models, probabilistic models, replacement of items that deteriorate and whose maintenance and repair costs increases with time. **[10]**

3. Job Sequencing and Queuing Theory: N jobs two machines, N jobs three machines, two jobs N machines; elements of a queuing system, Kendall's notation, (M/M/1):(FCFS/∞/∞), (M/M/1):(FCFS/N/∞) models. **[10]**

4. Dynamic Programming and PERT-CPM: Bellman's principal, employment smoothing problem, cargo loading problem; project planning and scheduling using PERT-CPM. **[09]**

Text Books:

1. Gupta Prem Kumar and Hira D.S.(2007), Operations Research,4th ed., S. Chand & Company Ltd., New Delhi.
2. Kanti Swarup, Gupta P.K. and Man Mohan (2006), Operations Research, 3rd ed., Sultan Chand & Sons, New Delhi.
3. Hillier F.S. and Lieberman G.J. (2005), Introduction to Operations Research, 8th ed., McGraw Hill, New Delhi.

Reference Books:

1. Taha H.A. (2010),Operations Research-An Introduction, 9th ed., Macmillan Publishing Co., Inc., New York.
2. Hadly G.(1964), Nonlinear and Dynamic Programming , 2nd ed., Addison-Wesley, Reading Mass.

MS 551 **Statistics and Probability - I** **3-1-0-4**

1. Introductory Ideas: Recapitulation of basic probability theory, law of addition and multiplication, conditional probability, total probability, Bayes' theorem and its applications. **[06]**

2. Random Variables: Theorems on random variables, distribution function, properties of distribution, discrete random variable, probability mass function (pmf), discrete distribution function, continuous random variable, probability density function (pdf), cumulative distribution function(cdf), moments, covariance, moments generating function, two-dimensional random variables (discrete and continuous), transformation of random variables. **[12]**

3. Distributions: Discrete-binomial, Poisson, geometric, uniform distributions, continuous-uniform, exponential, gamma, weibull, normal distributions. **[12]**

4. Correlation and Regression: Simple and partial correlations, linear and non-linear regressions, regression coefficients, properties, angle between two lines of regression, standard error of estimate rank, regression curve correlation. **[09]**

Text Books:

1. Baisnab A.P. and Manoranjan Jas (2003), Elements of Probability and Statistics, 2nd ed., TMH .
2. Pugalararasu(2011) , Probability and Queuing Theory , 1st ed., TMH.
3. Gupta and Kapoor (2002), Fundamental of Mathematical Statistics , 3rd ed., SCS Publisher.
4. J. Susan Milton and Jesse C. Arnold (2016), Introduction to Probability and Statistics, 4th ed.,, Mc Graw Hill Education.

Reference Books:

1. Papoulis(2002), Probability, Random Variables and Stochastic Processes,4th ed., TMH.
2. Palaniammal(2012), Probability and Random Processes , 3rd ed., PHI.
3. Probability and Statistics (Schaum's outline Series) by Spiegel (2009), 3rd ed., TMH.
4. Miller and Freund's (2007), Mathematical Statistics with Applications, 7th Edition, Pearson.

1. Second Order Differential Equations: Review of the general solution of the second order homogeneous differential equations, use of a known solution to find another solution, homogeneous equations with constant coefficients, method of undetermined coefficient and method of variation of parameters. **[08]**

2. Non-Linear Ordinary Differential Equations: Two dimensional autonomous systems and phase space analysis- critical points, proper and improper nodes, spiral points and saddle points, definition of stability, Lyapunov function, stable, unstable and center subspaces, Riccati's equation-general solution and the solution when one, two or three particular solutions are known. **[10]**

3. Total Differential Equations: Different forms and solutions, necessary and sufficient condition, geometrical meaning of equation containing three and four variables, total differential equations of second degree. **[07]**

4. Power Series Solutions: Review of power series, series solutions of first order equations (Taylor series method), second order linear equations, solution near a regular singular point (method of Forbenius) for different cases, particular integral and the point at infinity. **[08]**

5. Existence and Uniqueness of Initial Value Problems: The existence and uniqueness of solutions, method of successive approximations, Picard's theorem, solution of initial-value problems by Picard method. **[06]**

Text Books:

1. Deo S. C., Lakshmikantham and Raghvendra V.(2000), Text book of Ordinary Differential Equations, 2nd ed.,Tata Mc-Graw Hill.
2. Dennis G. Zill, Michael R Cullen (2009), Differential Equations with Boundary-Value Problems, 7th ed., Brooks/Cole.
3. M. Rama Mohana Rao (1980), Ordinary Differential Equations: Theory and Applications, 2nd ed., Affiliated East-West Press Pvt. Ltd., New Delhi.

Reference Books:

1. Birkhoff and Rota G., G.C. (1978) , Ordinary Differential Equations , 4th ed., John Wiley and Sons Inc., NY.
2. Boyce, W.E. and Diprima, R.C.(1986), Elementary Differential Equations and Boundary Value Problems ,4th ed., John Wiley and Sons Inc., NY.
3. Raisinghaniya M.D. (2008), Ordinary and Partial Differential Equations , 18th ed.,S. Chand Limited.

MS 512 **Advanced Abstract Algebra** **3-1-0-4**

1. Groups: Introduction and preliminaries (equivalence relation, integers modulo n), group definition and basic axioms, examples (dihedral, symmetric, matrix, quaternion groups), subgroups, cyclic groups, cosets, Lagrange's theorem, normal subgroups and quotient groups, centralizers and normalizers, nilpotent groups, direct products. **[10]**

2. Homomorphism and Group Actions: Definition and examples, isomorphism theorems, groups acting on themselves by left multiplication (Cayley's theorem), groups acting on themselves by conjugation (the class equation), automorphisms, Sylow p-groups and Sylow theorem. **[10]**

3. Ring: Basic definitions, examples (polynomial rings, matrix rings, group rings), ideals, ring homomorphism, integral domains and fields, maximal and prime ideals, Euclidean domain, principal ideal domains, unique factorization domains, polynomial rings over fields, introduction to modules (vector space as a special case). **[10]**

4. Field: Basic theory of field extensions, algebraic extensions, splitting fields and algebraic closures, separable and inseparable extensions, finite fields, field automorphisms, fundamental theorem of Galois theory, Galois groups of polynomials, cyclotomic extension. **[09]**

Text Books:

1. Fraleigh J. B. (2003), Abstract Algebra, 7th Edition, Pearson.
2. Dummit and Foote(1991), Abstract Algebra,3rd ed., John Wiley & Sons, Inc.
3. Khanna and Bhambri (2009), A Course in Abstract Algebra , 3rd ed., Vikas Publishing.
4. Herstein I. N.(1996), Topics in Algebra, 3rd Edition, Wiley India.

Reference Books:

1. Thomas W. Hungerford (2012), AbstractAlgebra, 4th Edition, Springer.
2. Vashistha, Modern Algebra(2011), 4th ed., Krishna Prakashan Mandir, Meerut.
3. Artin(2012), Algebra, 7th Edition, PHI.

MS 522 **Complex Analysis and Integral Transform** **3-1-0-4**

1. Basics of Complex Analysis: Complex numbers, complex function and its derivative, basic transcendental functions, power series of functions, integration in the complex plane, residues and their use in integration. **[10]**

2. Laplace Transforms and Stability of Systems: Laplace transform and their inversion, introduction of stability, Nyquist stability criterion, generalized functions, Laplace transforms and stability. **[10]**

3. Mellin Transform: Definition and properties of Mellin transform, evaluation of Mellin transform complex variable method and applications. **[09]**

4. Hankel Transform: Elementary properties, inversion theorem, transform of derivatives of functions, transform of elementary functions, Parseval's relation, relation between Fourier and Hankel transforms, use of Hankel transform in the solution of partial differential equations, dual integral equations and mixed boundary value problems. **[10]**

Text Books:

1. David Wunsch A.(2009), Complex Variables with Applications, 3rd Edition, Pearson.
2. H.K. Pathak(2004), Complex Analysis , 3rd ed., Shiksha Sahitya Prakashan, Meerut.
3. Gupta and Vashistha(2010), Integral Transform,4th ed., Krishna publication Media, Meerut.
4. Ian N. Sneddon(1972), The Use of Integral transforms by, 2nd Printing Edition, McGraw Hill.

Reference Books:

1. Ahlfors(1987), Complex Analysis,3rd ed., McGraw Hill Education.
2. Rudin(2006), Real and Complex Analysis,2nd reprint , McGraw Hill Education.
3. Andrews & Shivamoggi(2007) , Integral Transforms for Engineers,3rd ed., PHI Learning.

MS 532 Mathematical Modeling and Simulation 3-1-0-4

1. Introduction to Simulation and Modeling: System concepts and theories, attributes and types of systems, discrete and continuous, deterministic and stochastic, open and closed, system dynamics- system flow, flow diagrams, notations and conventions, feedback systems and casual loops diagrams, developing system dynamic equations - first order (+ve, -ve) systems, pure second order (+ve, -ve) systems and general feedback systems, simulation of equations for different systems. **[14]**

2. Random Numbers and Random Variates: Random number generation, properties of random numbers, generation of pseudo random numbers, techniques for generating random numbers test for randomness, random variates, inverse transform methods (exponential, uniform, weibull), convolution methods and acceptance-rejection methods. **[10]**

3. Discrete Event Simulation: Concepts, event scheduling versus time advance scheduling, list processing. **[05]**

4. Verification and Validation of Simulation Models: Introduction, input modeling, identifying the distribution of data, parameter estimation, goodness of fit tests, model building, , verification calibration and validation of models, output analysis- measures of performance and their estimation. **[10]**

Text Books:

1. Jerry Banks, John S. Carson II, Barry L. Nelson and David M. Nicol (2013), Discrete- Event System Simulation , 5th ed.,, Pearson, 2013.
2. Averill M. Law(2006), Simulation Modeling and Analysis, 4th ed., McGraw Hill Education.
3. V.P. Singh (2009), System Modeling and Simulation, 3rd ed., New Age International Publishers.
4. Frank L. Severance (2009) System Modeling and Simulation: An Introduction , 4th ed., Wiley.

Reference Books:

1. Taha(2012), Operations Research: An Introduction, 15th Indian reprint, PHI.
2. Geoffrey Gordon (2012), System Simulation, 2nd ed.,, PHI.
3. J.N. Kapoor (1994), Mathematical Modeling, 2nd ed.,Wiley Eastern Limited, Fourth reprint.

MS 542 **Partial Differential Equations** **3-1-0-4**

1. Second Order Partial Differential Equations: Preliminaries of partial differential equations, review of the classification of second order partial differential equations to hyperbolic, elliptic and parabolic forms, reduction of linear and quasi-linear equations in two independent variables to their canonical forms, characteristic curves. **[06]**

2. Laplace equation: Solution by method of separation of variables, mean value property, weak and strong maximum principle, Poisson's formula, Dirichlet's principle, solution of Laplace equation in cylindrical and spherical polar coordinates. **[06]**

3. Heat Equation: Solution by method of separation of variables, initial value problem, fundamental solution, weak and strong maximum principle and uniqueness results. **[06]**

4. Wave Equation: Solution by method of separation of variables, uniqueness, D'Alembert's method, solution by spherical means and Riemann method of solution. **[06]**

5. Green's Functions: Introduction, Green's function for Laplace equation, method of images, eigenfunction method, Green's function for the wave and diffusion equations, Helmholtz theorem. **[08]**

6. Laplace and Fourier Transforms: Basics of Laplace transform solutions of diffusion and wave equations, basics of Fourier transform solution of diffusion, wave and Laplace equations. **[07]**

Text Books:

1. Sankara Rao K. (2003), Introduction to Partial Differential Equations , 4th ed., PHI Pvt. Ltd.
2. Asmar(2010), Partial Differential Equations and Boundary Value Problems with Fourier series, 2nd ed., Pearson.
3. Sundarapandian(2012), Ordinary and Partial Differential Equations, 3rd ed.,McGraw Hill Education, New Delhi.
4. Bhamra (2013), Partial Differential Equations: An Introductory Treatment with Applications ,4th ed., PHI Learning.

Reference Books:

1. Raisinghaniya M.D. (2008) , Ordinary and Partial Differential Equations , 3rd ed.,S. Chand Limited.
2. Zauderer(E. 1989), Partial Differential Equations of Applied Mathematics , 2nd ed., John Wiley and Sons, New York.
3. L Debnath(2007), Nonlinear PDE's for Scientists and Engineers , Birkhauser, Boston.
4. Sneddon I.N. (1957) , Elements of Partial Differential Equations, 2nd ed., McGraw Hill Book Company.

MS 552 **Statistics and Probability -II** **3-1-0-4**

1. Tests of Hypotheses: Simple hypothesis versus simple alternative, composite hypotheses, sampling from the normal distribution, tests on the mean and variance, tests on several means and variances, Chi-square tests, tests of hypotheses and confidence intervals, sequential tests of hypotheses. **[10]**

2. **Sampling and Sampling Distributions:** Sampling-inductive inference, populations and samples, distribution of samples, statistics and sample moments, sample mean and variance, law of large numbers, central limit theorem and its applications, sampling from the normal distributions, role of the normal distribution in statistics, sample mean, Chi-square distribution, F distribution, student's t distribution. **[10]**

3. Random Processes: Basics of random process, random process concept, continuous and discrete, statistics of random process, classification of random process, stationary and evolutionary random processes, cross-correlation, Markov process and Markov chain, binomial, Poisson, normal, Ergodic, random telegraph , sine wave random processes. **[11]**

4. Time Series Analysis: Introduction, characteristics movements in a time series, time series models, measurement of trends, secular trend, seasonal movements, cyclical movement, irregular movements, long cycles and applications. **[08]**

Text Books:

5. Baisnab A.P. and Manoranjan Jas (2003), Elements of Probability and Statistics, 2nd ed., TMH .
6. Pugalararasu(2011) , Probability and Queuing Theory , 1st ed., TMH.
7. Gupta and Kapoor (2002), Fundamental of Mathematical Statistics , 3rd ed., SCS Publisher.
8. J. Susan Milton and Jesse C. Arnold (2016), Introduction to Probability and Statistics, 4th ed.,, Mc Graw Hill Education.

Reference Books:

5. Papoulis(2002), Probability, Random Variables and Stochastic Processes,4th ed., TMH.
6. Palaniammal(2012), Probability and Random Processes , 3rd ed., PHI.
7. Probability and Statistics (Schaum's outline Series) by Spiegel (2009), 3rd ed., TMH.
8. Miller and Freund's (2007), Mathematical Statistics with Applications, 7th Edition, Pearson.

MS 562 **Modeling and Simulation Laboratory** **0-0-4-2**

Modeling and Simulation Laboratory related to Course Code MS 532 (Mathematical Modeling and Simulation).

(BELOW FROM 34TH PGRPC

MS 611 **Advanced Linear Algebra** **3-1-0-4**

1. Vector Spaces and Linear Equations: Fields, vector spaces, subspaces, bases, dimension, span, coordinates, row reduced echelon matrices, invertible matrices, row and column space, system of linear equations, direct sum, determinants. **[08]**

2. Linear Transformations: Definition of linear transformations, kernel, range, rank-nullity theorem, algebra of linear transformations, representation of transformations by matrices, eigenvalues, eigenvectors, diagonalization, invariant subspaces, invertibility and isomorphisms, linear functional, transpose of a linear transformation, dual spaces. **[08]**

3. Inner Product Space and Norms: Definition of an inner product and its properties, (including the Cauchy Schwartz inequality), orthogonality, Gram-Schmidt orthogonalization process, orthogonal projections, minimization problem (least squares), adjoints. **[08]**

4. Operators on Inner Product Spaces: Unitary and orthogonal operators and their matrices, normal and self-adjoint operators, bilinear and quadratic forms on inner product spaces, spectral theory. **[08]**

5. Rational and Jordan Forms: Cyclic subspaces and annihiliators, Jordon canonical form, minimal polynomial, block matrices and matrix factorization, SVD and pseudoinverse. **[07]**

Text Books:

1. Friedbeg, Insel, Spence (2011) Linear Algebra, 4th Edition, PHI.
2. David C. L. (2002) Linear Algebra and its Applications, 3rd Edition, Pearson.

Reference Books:

1. Kumaresan S. (2000) Linear Algebra: A Geometric Approach, PHI.
2. Charles. W. C. (2012) Linear Algebra: An Introductory Approach, 3rd Edition, Springer.
3. RomanS. (2008) Advanced Linear Algebra, 3rd Edition, Springer.
4. Cheney, Kincaid (2012) Linear Algebra: Theory and Applications, 2nd Edition, Jones and Bartlet.

MA 621 Advanced Graph Theory and Combinatorics 3-1-0-4

1.Preliminaries: Graphs(undirected and directed), sub graphs, degree-sum formula, graphic sequences, matrix representations of a graph, path and circuits, bipartite graphs, graph isomorphism, decomposition,Euler graph and its properties,operations on graphs, Hamiltonian paths and circuits, traveling –salesman problem. **[08]**

2. Trees, Cut-Sets and Cut-Vertices: Definition and properties of trees, distance and centers in a tree, rooted and binary trees, on counting trees, spanning trees, rank, nullity and cyclomatic number, Kruskal's and Prim's algorithms, cut sets and their properties, all cut sets, connectivity and separability, 1-Isomorphism and 2-Isomorphism. **[08]**

3. Planarity, Matching, Coloring and Covering: Combinatorial versus geometric graphs, geometric and combinatorial duals of a graph, planar embeddings, Euler's formula, triangulation, Kuratowski's theorem, dual graphs, factors and matching (in bipartite and non-bipartite graphs), Hall's matching theorem, chromatic number, chromating partitioning, chromatic polynomial, matching, coverings, the four color problem. **[08]**

4.Pebbling on Graph: Pebbling on undirected graph with properties, pebbling number, cover pebbling, the staching theorem, pebbling on directed graph with properties, pebbling on isomorphic graphs, pebbling of cyclic graph, alternating wheel graph, alternating fan graph and alternating complete graph with their properties, extension of graph pebbling. **[08]**

5. Advance Counting Techniques: Recurrence relations, solving linear recurrence relations, divide-and-conquer algorithms and recurrence relations, generating function, inclusion-exclusion with applications. **[07]**

Text Books:

1. Deo N.(2001)Graph Theory with Applications to Engineering and Computer Science, PHI.
2. Chartland G., Zhang P. (2006)Introduction to Graph Theory, Fourth reprint, Mc Graw Hill Education.

Reference Books:

1. Wilson R. J. (2010) Introduction to Graph Theory, 4th Edition, Pearson.
2. Jonathan L.G. Yellen J. (2004) Handbook of Graph Theory, CRC Press.
3. Yerger C.R.(2005) Extensions of Graph Pebbling, Thesis.
4. Ore O. (1991) Theory of Graphs, Volume 38, American Mathematical Society, Colloquium Publications.
5. West D. B. (2001) Introduction to Graph theory, 2nd Edition, PHI Learning.
6. Kenneth H R. (2007) Discrete Mathematics and Its Applications with Combinatorics and Graph Theory, 7thEdition, Mc Graw Hill Education.

MS 631 **Real Analysis and Measure Theory** **3-1-0-4**

1. Metric Spaces: Review of the real number system (supremum, infimum, field, order and completeness axioms, extended real number system, basic notions of sets, relation and functions), finite, countable and uncountable sets, open and closed sets, adherent and accumulation points, Bolzano-Weistrass theorem, Heine-Borel covering theorem, compactness in R^n and in general metric spaces, connectedness. **[08]**

2. Limits and Continuity: Convergent sequences, Cauchy sequences, complete metric spaces, limit of a function, continuous functions, uniform continuity, convergence of series, rearrangements, Abel's and Dirichlet's theorem, sequence of functions, point wise and uniform convergence, sequential compactness, Ascoli-Arzela theorem, real power series, Weistrass theorem. **[08]**

3. Differentiation and Riemann Integration: Algebra of derivatives, the chain rule, differentiation of monotone functions (leading to the mean value theorem and intermediate value theorem), upper and lower integrals, oscillations, integrality of continuous functions, fundamental theorem of calculus, interchange of limit and integration operations, vector valued differentiation and integration. **[08]**

4. Measure Theory: Indicator functions, fields and σ-fields, definition and fundamental properties of a non-negative measure, measurable sets, measure zero sets, positive Borel measures,Lebesgue measure,algebra of measurable functions, almost everywhere convergence, convergence in measure. **[08]**

5. Integration Theory on General Measure Spaces: The Lebesgue integral, Fatou's Lemma, the monotone and dominated convergence theorems, continuous functions with compact support, Tonelli and Fubini's theorems, comparison of proper and improper Lebesgue and Riemann integrals. **[07]**

Text Books:

1. Rudin W.(1976)Principles of Mathematical Analysis, 3rd Edition, TMH.
2. Bartle R. G., Donald R. S. (2011)Introduction to Analysis, 2nd Edition, Wiley and Sons.

4. Mallik S.C., Arora S. (1992) Mathematical Analysis, 2nd Edition New Age International Ltd.

MS 641 Special Functions and Integral Equations 3-1-0-4

1. Hypergeometric Functions: Definition, convergence, gamma and beta functions, Gauss hypergeometric function and its properties, series solution of Gauss hypergeometric equation, integral representation, linear and quadratic transformation formulas, contiguous function relations, differentiation formulae, Kummer's confluent hyper geometric function and its properties, integral representation. **[10]**

2.Bessel and Legendre Functions: Definition, connection with hypergeometric function, differential and pure recurrence relations, generating function, integral representation, orthogonal properties. **[10]**

3.Linear Integral Equations: Definition and classification, conversion of initial and boundary value problems to an integral equation, Eigen values and Eigen functions, solution of homogeneous and general Fredholm integral equations of second kind with separable kernels. **[10]**

4.Solution of Integral Equations: Solution of Fredholm and Volterra integral equations of second kind by methods of successive substitutions and successive approximations, Resolvent kernel and its results, conditions of uniform convergence and uniqueness of series solution, solution of Volterra integral equations of second kind with convolution type kernels by Laplace transform. **[09]**

Text Books:

1. Kanwal R.P. (1971)Linear Integral Equations: Theory and Techniques,Academic Press, New York.
2. Miller LieW. Jr. (1968)Theory and Special Functions,Academic Press, New York and London.

Reference Books:

4. Swarup S., Singh S. J. (2014) Integral Equation, 22nd Edition, Krishna Prakashan Meerut.

MS 612 **Functional Analysis** **3-1-0-4**

1. General Theory: Introduction of topological vector spaces, separation properties, linear mappings, finite-dimensional spaces, metrization, boundedness and continuity, seminorms and local convexity, quotient spaces, completeness, Baire category, Banach-Steinhaus theorem, open mapping theorem, closed graph theorem, bilinear mappings, convexity, Hahn-Banach theorems, weak topologies, compact convex sets, vector-valued integration, holomorphic functions. **[10]**

2. Completeness and Compactness: Completeness, Baire category, Banach-Steinhaus theorem, open mapping theorem, closed graph theorem, bilinear mappings, convexity, Hahn-Banach theorems, weak topologies, compact convex sets, vector-valued integration, holomorphic functions. **[10]**

3.Duality in Banach Spaces and Applications I: The normed dual of a normal space, adjoints, compact operators, continuity theorem, closed subspaces of Lp-spaces, the range of a vector-valued measure, **[10]**

4.Duality in Banach Spaces and Applications II: Generalized Stone-Weierstrass theorem, two interpolation theorems, Kakutani's fixed point theorem, Haar measure on compact groups, uncomplemented subspaces, sum of Poisson kernels, two more fixed point theorems. **[09]**

Text Books:

1. Rudin W. (2006) Functional Analysis, McGraw Hill Education (India).
2. Limaye B.V.(2013)Functional Analysis, 3rd Edition, New Age International.

Reference Books:

3. Somasundaram D. (2014) First Course in Functional Analysis, 1 Edition, Narosa Book Distribution Pvt. Ltd.
4. Corlson, Robert (2006) Concrete Introduction to Real Analysis, Vikas publishing House Pvt. Ltd.
5. Kreyszig E. (2007) Introductory Functional Analysis with Applications John Wiley & Sons.

MS 622 **Inequality and Continued Fractions** **3-1-0-4**

1. Inequalities: Definition and important properties**,** maximum and minimum values of algebraic functions and expressions with and without constraints, some important inequalities, Weirstrass inequality, Schwarz's or Cauchy's inequality,Tchebychef's inequality, important proofs and theorems. **[10]**

2. Continued Fractions I: Definition and different form of continued fractions, simple, infinite or non terminating and terminating continued fractions, continued fractions with positive quotients, conversion of fraction into continued fraction, successive convergent, law of formation of successive convergent of simple continued fraction. **[10]**

3. Continued Fractions II: Difference between the fraction and its convergent, equivalent numbers and periodic continued fractions, some special quadratic surds, recurring continued fraction. **[10]**

4. Continued Fractions III: Different theorems based on odd and even convergent, limits to error in convergent for the continued fraction, series of fractions and approximation. **[09]**

Text Books:

1. Hardy G. H., Littlewood J. E., Polya G. (1952) Inequalities, Cambridge University Press.
2. Hardy G. H., Wrihgt E.M. (1979) An Introduction to Theory of Numbers, 5th Edition, Oxford, University Press.

Reference Books:

1. Niven, Zuckerman H. S., Montgomery H. L. (2004) An Introduction to the Theory of Numbers, 5th Edition, John Wiley and Sons, Inc., New York.
2. Bruce C. B. (2005)Ramanujan's Note Books Volume-1 to 5, Springer.
3. ApostolT. M. (2013)Introduction to Analytic Number Theory, Narosa Publishing House, New Delhi.

MS 632 **Basics of MATLAB** **0-0-4-2**

1. Introduction: MATLAB interactive sessions, menus and the toolbar, arrays, files, and plots, script files and the editor, numeric, cell and structure arrays. **[08]**

2. Functions and Files: Elementary mathematical functions, user defined functions, additional functions, working with data files. **[06]**

3. Decision-Making Programs: Relational operators and logical variables, logical operators and functions, conditional statements, loops, the switch structure, debugging MATLAB programs. **[06]**

4. Advanced Plotting and Model Building: xy Plotting functions, additional commands and plot types, interactive plotting, function discovery, regression, basic fitting interface, three dimensional plots. **[06]**

Text Books:

1. Rudra Pratap (2003), Getting Started with MATLAB, Oxford University Press.
2. William J. Palm III (2012), A Concise Introduction to MATLAB, McGraw Hill Education (India) Private Limited.

Reference Books:

1. Chapra (Edition 3), Applied Numerical Methods with MATLAB, McGraw Hill Education (India) Private Limited.
2. Stormy A. (Edition 4), MATLAB: A Practical Introduction to Programming and Problem Solving, BH Publication.

MS 651 **Magneto Hydrodynamics** **3-1-0-4**

1. Fundamental Equations of MFD: Electromagnetic field equations(charge conservation equation, constitutive equations, Maxwell's equations, generalized Ohm's law),fluid dynamics field equations(equation of state, equation of motion, equation of energy), MFD approximation, magnetic field equation, magnetic Reynolds number, Alfven's theorem, magnetic energy, electromagnetic stresses, force free magnetic fields. **[10]**

2. Basic Equations of MHD Flow: Boundary conditions, flow between parallel plates, Hartmann flow, Couette flow with velocity and temperature distributions, flowin a tube of rectangular cross section, pipe flow, flow in a annular channel, flow between two rotating coaxial cylinder. **[10]**

3. Boundary Layer Approximation: Two dimensional boundary layer equations for flow over a plane surface for fluids of large electrical conductivity, flow past a semi infinite rigid flate plate in an aligned and transverse magnetic field, two dimensional thermal boundary layer equations for flow over a plane surface, heat transfer in MHD boundary layer flow past a flate plate in an aligned magnetic field. **[10]**

4. Magneto Hydrodynamics Waves: Waves in an infinite fluid of infinite electrical conductivity, Alfven waves, waves in a compressible fluid, waves in the presence of dissipative effects, stationary plane shock waves in absence of magnetic field. **[09]**

Text Books:

1. Cramer R.K., Pai S.I.(1973) Magnetofluid Dynamics for Engineers and Physicists, Scripta Publishing Company, Washington D. C.
2. Charlton P.(1985) Text Book on Fluid Dynamics, CBS Publications, Delhi.

Reference Books:

1. Shereliff J.A. (1965) Magneto Hhydrodynamics, Pergamon Press, London.
2. Rathy R.K. (1976)an Introduction to Fluid Dynamics Oxford and IBH Publishing Company, New Delhi.

MS 652 **Viscous Fluid Dynamics** **3-1-0-4**

1. Fluid Motion: Introduction and continuum hypothesis, constitutive equations for Newtonian fluids, viscosity, Navier Stoke's equation for viscous compressible flow, vorticity and circulation, equation of energy, flow between two concentric rotating cylinders, stagnation point it two dimensional flow, flow due to plane wall suddenly set in motion(Stoke's first problem). **[10]**

2. Temperature Distribution: Physical importance of non-dimensional parameters. Renold's number, Prandtl number, Mach number, Froude Number, Nusselt number , plane couette flow, plane poisseullecouette flow, plane poissuille flow, Haigen poissuille flow in a circular pipe, Stoke's equation of very slow motion, Stoke's stream function, flow past a sphere. **[10]**

3. Laminar Flow: Two dimensionalincompressible boundary layer equation, Blasuis Topfer solution of boundary layer on a flat plate, wedge flow, flow in a convergent channel, flow in the wake of flat plate, two dimensional plane jet flow. **[10]**

4. Boundary Layer Theory: Thermal boundary layer in two dimensional incompressible flows, Crocco's integrals, forced convection in laminar boundary layer on a flat plate, free convection from a heated vertical plate, Karman momentum and kinetic energy integral equations. **[09]**

Text Books:

1. Schliching H., Boundary Layer Theory, McGraw Hill.
2. Pai, S.I, Nostrand D.V. (1956) Viscous Flow Theory, Vol.I, Laminar Flow, Company, New York.

Reference Books:

1. BansalJ.L. (2004)Viscous Fluid Dynamics, Oxford and IBH.
2. Frank M. W. (1991)Viscous Fluid Flow,2nd edition, McGraw Hill.

MS 661 **Sequence and Series** **3-1-0-4**

1. **Real and Complex Numbers:**Introduction, field and order structures, bounded and unbounded sets with supremum and infimum, completeness, absolute value, limit points, closure, countable and uncountable sets,complex number system, triangle inequality, functions of single variable. **[12]**

2. Sequences: Sequences of real and complex numbers, limit points, limits, convergence and non-convergence, Cauchy's general principle of convergence, algebra of sequences, monotonic, point wise convergence, uniform convergence on an interval, tests for convergence, properties, Weierstrass approximation theorem. **[11]**

3.Infinite Series I: Introduction, series of real and complex numbers, positive term series, comparison, Cauchy's root, D'Alembert's ratio, Raabe's, Logarithmic, integral, Gauss's tests, series with arbitrary terms, rearrangement of terms. **[08]**

4.Infinite Series II: Properties of uniform convergent series, power series, properties of functions expressible as power series, Abel's theorem, Taylor's and Lauren's series with convergence. **[08]**

Text Books:

1. Mallik S.C., Arora S. (1992) Mathematical Analysis, 2nd Edition New Age International Ltd.
2. Rudin W.(1976) Principles of Mathematical Analysis, 3rd Edition, TMH.

Reference Books:

1. TitchmarchE. C. (1959) Theory of Functions, Oxford.
2. Zygmund A. (1959) Trignometric Series, Vol. 1, Cambridge University Press.
3. Lorentz G.G., Tinehart H., Winston (1966) Approximation of Functions.
4. Hardy G. H.(1967)Divergent Series, Clarendon Press, Oxford.
5. MaddoxI. J. (1970) Elements of Functional Analysis, Cambridge University Press.

MS 662 **Summability and Approximation Theory** **3-1-0-4**

1. Transformation and Summability Means: Matrix and linear transformation, definition of summability, Norlund means and its regularity condition, Cesaro means (C, 1) means, Cesaro and holders matrices, consistency of methods, examples and related theorems. **[15]**

2.Convergence of Fourier Series: Convergence of Fourier series, Dirichlet's integral, Riemann-Lebesgue theorem, (C, 1) summability of Fourier series, Fejer theorem, Fejer-Lebesgue theorem. **[08]**

3. L_p Space: Definition of L_2space, L_p space, Bessel's inequality, Holders inequality and Minkowski inequality. **[08]**

4.Approximation Theory: Best approximation in normed space, linear operators, Weierstrass's approximation theorem, Stone Weierstrass theorem, Chebyshev polynomials, trigonometric polynomials, error approximation function, Bernstein polynomial. **[08]**

Text Books:

1. Hardy G. H.(1967)Divergent Series, Clarendon Press, Oxford.
2. Lorentz G.G., Tinehart H., Winston (1966) Approximation of Functions.

Reference Books:

1. TitchmarchE. C. (1959) Theory of Functions, Oxford.
2. Zygmund A. (1959) Trigonometric Series, Vol. 1, Cambridge University Press.
3. PetersonG. M (1966) Regular Matrix Transformation, Mc-Graw Hill.
4. Boss J. (2000) Classical and Modern Methods in Summability, Oxford University Press.
5. Mursaleen M. (2014) Applied Summability Methods, Springer.
6. Hrushikesh N., Haskar M, Pai D.V. (2000) Fundamentals of Approximation Theory, Narosa Publishing House.
7. MaddoxI. J. (1970) Elements of Functional Analysis, Cambridge University Press.

MS 671 **Tensor Analysis** **3-1-0-4**

1. Vector Algebra: Vectors and scalars, operations on vectors, bases and transformations, product of vectors, reciprocal bases, variable vectors. **[10]**

2. The Tensor Concept: Zeroth-order tensors, first-order tensors, second-order tensors, higher-order tensors, transformation of tensors under rotation about a coordinate axis, invariance of tensor equations, curvilinear coordinates, tensors in generalized coordinate systems. **[10]**

3. Tensor Algebra: Addition of tensors, multiplication of tensors, contraction of tensors, symmetry properties of tensors, reduction of tensors to principal axes, invariants of tensors, pseudotensors. **[10]**

4. Vector and Tensor Analysis: Field concept, Gauss, Green And Stokes theorem, scalar fields, vector fields, second-order tensors fields, the operator ∇ and related differential operators. **[09]**

Text Books:

1. Vector and Tensor Analysis by A. I. Borisenko and I. E. Tarapov, Dover, 1979.
2. Introduction to Vector and Tensor Analysis by R. C. Wrede, Dover, 1972.

Reference Books:

1. DavisH. F., SniderA. D. (1995) Introduction to Vector Analysis, 7thEdition, Brown Publishers.
2. Schey H.M. (1997) Div, Grad, Curl and All That: An Informal Text on Vector Calculus, 2nd edition, W.W. Norton.
3. Bourne D.E., KendallP.C. (1977) Vector Analysis and Cartesian Tensors, Nelson.
4. Tensor Calculus by J. L. Synge and A. Schild, Dover, 1978.

MS 672 **Mechanics and Calculus of Variation** **3-1-0-4**

1. Generalized Coordinates: Holonomic and non holonomic systems, Scleronomic and Reonomic systems, generalized potential, Lagrange's equations of first kind, Lagrange's equations of second kind, uniqueness of solution, and energy equation of conservative fields. **[10]**

2. Hamilton's Variables: Donkin's theorem, Hamilton canonical equations, cyclic coordinates, Routh's equation, Poisson's bracket, Poisson's identity, Jacobi- Poisson theorem. **[10]**

3. Calculus of Variations: Motivating problems of calculus of variations, Brachistochrone problem, isoperimetric problem, geodesic, fundamentals lemma of calculus of variations, Euler's equation of one dependent function and its generalization to (i) 'n' dependent functions, (ii) higher order derivatives, conditional extremum under geometric constraints and integral constraints. **[10]**

4. Hamilton-Jacobi Theory: Hamilton's principal, principal of least action, Poincare Cartan integral invariant, Whittaker's equations, Jacobi's equations, statement of Lee Hwa Chung's theorem, Hamilton-Jacobi's equation, Jacobi's theorem, method of separation of variables. Lagrange's bracket and Poisson brackets, invariance of Lagrange's bracket and Poisson brackets under canonical transformations. **[09]**

Text Books

1. Ramsey A.S.(1941)Dynamics Part II, Cambridge University Press.
2. Goldstein H. (2002) Classical Mechanics, 3rd edition, Narosa Publishing House.

Reference Books:

1. Loney S.L. (2016) An Elementary Treatise on Statics, First paperback edition, Cambridge University Press.
2. Louis N. H., Janet D. F.(1999)Analytical Mechanics, Cambridge University Press.
3. Gelfand I M., Fomin S.V., Richard A. S. (2000) Calculus of Variations PHI.
4. Tiwari R.N., Takhur B.S. (2007) Classical Mechanics: Analytical Dynamics, PHI.

MS 681 **Reliability Theory** **3-1-0-4**

1. Basic Concepts of Reliability: Introduction, reliability and quality, failure and failure modes, causes of failures and unreliability, maintainability and availability, reliability analysis, mathematical models and numerical evaluation, designing for higher reliability, redundancy techniques, equipment hierarchy, reliability and cost. **[07]**

2. Reliability Mathematics: Random experiments and probability, random variables, discrete distribution (Binomial and Poisson) and Continuous distributions (uniform, exponential, Rayleigh, Weibull, gamma, normal, log normal, truncated normal, inverse Gaussian), numerical characteristics of random variables and Laplace transform. **[08]**

3. System Reliability and Hazard Models: Component reliability from test data, mean time to failure, time-dependent hazard models, stress-dependent hazard models, derivation of reliability function using Markov model, treatment of field data, system with components in series and parallel, k-out-of-m systems,non series-parallel systems, system with mixed-mode failures, fault-tree technique. **[08]**

4. System Design and Reliability Redundancy: Component versus unit redundancy, weakest-link technique, mixed redundancy, standby redundancy, redundancy optimization, double failures and redundancy, maintainability and availability concepts with two-unit parallel system with repair, preventive maintenance. **[08]**

5. Reliability Testing Demonstration and Acceptance: Problem of life testing, estimation of parameters and reliability using standard probability models using complete and censored samples, properties of these estimators, probability plotting and graphical procedures for estimating the parameter and testing validity of model by some standard statistical tests, life test acceptance sampling plans in exponential case, sequential life test in exponential case, accelerated life tests. **[08]**

Text Books:

1. Ebeling C. E. (2015), An Introduction to Reliability and Maintainability Engineering, Eighteenth reprint, McGraw Hill Education.

Reference Books:

1. Balagurusamy E. (2008) Reliability Engineering, Sixth reprint, TMH.
2. Srinath L.S., Reliability Engineering, Fourth Edition, EWP.

MS 682 **Fourier Analysis** **3-1-0-4**

1. Fourier Series: Recapitulation about piecewise continuous functions, odd and even functions, periodic and non-periodic functions, orthogonal and orthonormal functions, orthonormal sets, Dirichlet's conditions, Fourier series, change of interval, Fourier cosine series, Fourier sine series, complex form of Fourier series, convergence of Fourier series, generalized Fourier series, practical harmonic analysis,Fourier–Bessel series, Fourier – Legendre series. **[10]**

2. Fourier Integral and Applications: The Fourier integral formula, Dirichlet's integral, Fourier integral theorem, cosine and sine integrals, Eigen value problems on unbounded intervals, superposition of solutions, steady temperature in a semi-infinite strip, temperature in a semi-infinite solid, temperature in an unlimited medium. **[10]**

3.Fourier Transform and Applications I: Definition and properties of Fourier transform, Fourier cosine and sine transforms, complex Fourier transform, convolution theorem, Parseval's identities, finite Fourier transforms, solution of some partial differential equations. **[10]**

4. Fourier Transform and Applications II: Discrete Fourier Transform (DFT), approximation of Fourier coefficients of a periodic function, inverse DFT, properties of DFT, cyclical convolution and convolution theorem for DFT, Parseval's theorem for DFT, matrix form, N-point inverse DFT, fast Fourier transform(FFT). **[09]**

Text Books:

1. Ward Brown J., ChurchillR. V. (2015) Fourier Series and Boundary Value Problems, McGraw Hill Education.
2. Davis H.F. (1989) Fourier series and Orthogonal Functions, Dover Books on Mathematics.

Reference Books:

1. Spiegel (2015) Theory and Problems of Fourier Analysis with Applications to Boundary Value Problems (Schaum's Outline Series), McGraw Hill Education.
2. Jain R.K., Iyengar S.R.K. (2003) Advanced Engineering Mathematics, Narosa Publishing House.
3. Tolstov G.P. (1976) Fourier series, Dover Books on Mathematics.
4. JamesI.F. (2002) A Student's Guide to Fourier Transform with Applications in Physics and Engineering, 3rd edition, Cambridge.

MS 691 **Advanced Number Theory** **3-1-0-4**

1. Divisibility Theory and Factorization: Prime numbers and their distribution, greatest common divisor and the Euclidian algorithm, linear Diophantine equation, sieve of Eratosthenes, Mersenne primes and perfect numbers, sums of two squares. **[08]**

2. Theory of Congruences: Basic properties of congruences, linear congruences and the Chinese remainder theorem, Fermat's little theorem and pseudoprimes, $\varphi(n)$ (Euler's phi function), Euler generalization of Fermat's theorem, Wilson's theorem. **[08]**

3. Primitive Roots and Quadratic Reciprocity: Multiplicative orders of integers modulo$n$, primitive roots of primes and composites, Legendre and Jacobi symbols, quadratic reciprocity and quadratic congruences with multiple moduli. **[08]**

4. Special Functions and Recent Applications: Fermat numbers, amicable numbers, the Mobius inversion formula, sums of more than two squares, public key cryptosystems, primalty testing and factorization, Diffie-Helman key exchange, finite fields, cyclotomic polynomials, Gaussian integers, continued fractions, Pells equations, valuations, Deedkind domain, the Riemann zeta(ζ) function, modular (quadratic) forms, quadratic number fields. **[15]**

Text Books:

1. BurtonD.M. (2011) Elementary Number Theory, 2nd Edition, Tata Mc Graw Hills.
2. Telang S.G. (1996) Number Theory, 6th Edition, Tata Mc Graw Hills.

Reference Books:

2. Lang S. (1994) Algebraic Number Theory, 2ndEdition, Springer Textbooks.
3. LandauE. (1966)Elementary Number Theory, 2nd Edition, AMS.
4. Frohlich, Taylor, Taylor (1991) Algebraic Number Theory, 2nd Edition, Cambridge University Press.
5. Niven I., Zuckerman (1991) Introduction to Theory of Numbers, 5th Edition Montgomery, Wiley.

MS 692 **Differential Geometry** **3-1-0-4**

1. Space Curves I: Definition of space curves, arc length, natural equation of a line, and intersection of curves, intersection of curve and surface, order of contact, tangent, normal, osculating plane. **[10]**

2. Space Curves II: Principal normal and binormal at a point of a curve, curvature, torsion, Frenet – Serret formulae, plane curves, osculating circle and osculating sphere, fundamental theorem for space curves, helices, evolutes and involutes. **[10]**

3. Surfaces I: Definition of a surface, tangent plane and normal at a point of a surface, surfaces of revolution, conicoids and helicoids, envelopes and developable surfaces, ruled surfaces. **[10]**

4. Surfaces II: First fundamental form(metric), metric potentials, direction coefficients and angle between two curves on a surface, second fundamental form, lines of curvatures, principal curvatures, Meusnier's theorem, Euler's theorem, Dupin's indicatrix, means curvature, Gaussian curvature. **[09]**

Text Books:

1. Hsiung C. C. (1997) A First Course in Differential Geometry, International Press, and Cambridge, MA.
2. Willmore T.J. (1964) An Introduction to Differential Geometry, Oxford University Press,

Reference Books:

Course work (CW) would include Regularity, evaluation of assignments, surprise tests, etc.;

$Evaluationof proficiency will be based on the participation in co-curricular/extra-curricular activities.

#Student will perform dissertation work in a recognized Organization for a period of 4 months and submit two copies of dissertation to the department latest by first week of May. Presentation and viva voce of dissertation will be conducted in second week of May. Dissertation and presentation will carry 50% weightage each

COURSE DESCRIPTION
M. Sc. (Microbiology)

MB 511 Bacteriology and Phycology 3-0-0-3

General Concepts of Microbiology: History and development of Microbiology as a discipline of science, spontaneous generation vs biogenesis, Koch's postulates Basic features of microscopy-Compound, fluorescence, dark field, phase contrast, SEM and TEM, Staining methods-simple, differential and sample preparation for electron microscopy. [6]

Morphology and Ultrastructure of Bacteria: Basic ultrastructure, morphological types, cell walls of gram positive, gram negative and archeobacteria, cell wall biosynthesis, cytoplasmic membrane-structure, composition and functions, L-forms, Ultrastructure and types of flagella, capsule and its function, pilli. [8]

Cultivation of Bacteria: Aerobic and anaerobic cultivation, Nutrient media-selective and differential, Nutrient types of bacteria, Growth curve and kinetics of growth, Batch culture, fed-batch culture and continuous culture, synchronous growth, Factors affecting growth, Control of bacteria-physical and chemical agents. [10]

Classification: Bacterial classification, Hackle's three kingdom, Whittaker's five kingdom, Eight kingdom classification, Phenetic and phylogenetic classification, Outlines of Bergeys manual, Use of molecular approaches for classification of bacteria. [7]

Algae: General Characteristics, Classification, Nutrition, Reproduction, Algal ecology, Economic importance of Diatoms, Rhodophyta and Green algae. [8]

MB 521 Virology and Mycology 3-0-0-3

General Concepts of Viruses: Discovery of viruses, Distinctive features, Morphology and Ultrastructure, Envelope and its properties, Virus related agents (Viroids and Prions). Classification-General properties, Nomenclature and classification of bacterial, plant and animal viruses. [5]

General Methods of Diagnosis of Viruses: Cultivation methods-embryonated eggs, experimental animals, cell cultures (Primary and secondary), Serological methods- heamagglutination, complement fixation, immunofluoresecnce, ELISA and RIA, infectivity assay (end point method); Role of electron microscopy in study of viruses. [8]

Bacterial and Plant Viruses: Bacteriophage structure- general characteristics, Life cycle- Lytic and Lysogeny, One step growth curve, Regulation of lytic cycle, brief details of M13, Mu, Lambda and T4, Effect of viruses on plant appearance, histology, cytology, Transmission of plant viruses- Vector(insects, nematodes) and without vector, Common diseases of Paddy, Cotton, Tomato and Sugarcane, Life cycles- TMV, CMV and Potato Virus X. [10]

Animal Viruses: Life cycle and pathogenecity of RNA viruses- Picorna, Orthomyxo, Paramyxo, Rhabdo, Rota and HIV, Oncogenic viruses, DNA viruses- Pox, Herpes, Adeno, SV 40, Hepatitis viruses, Basic concepts of viral vaccine. [8]

General Concepts of Mycology: General features of fungi, Classification of fungi, Life cycles of *Aspergillus, Saccharomyces, Deuteromycetes*, Mycorrhiza: Ecto, endo and VAM, Lichens- general features, Fungal diseases- Systemic and Sub cutaneous Mycoses, Candidiasis, Dermatomycosis. [8]

BC 511 Chemistry of Biomolecules 3-0-0-3

pH and Buffers: Importance of buffers with reference to biological aspect, Isoelectric points, pK values, Molarity and Molality, Thermodynamics law, Free energy, Gibbs law, High energy compounds and their biological importance. [4]

Carbohydrates: Structure, Classification and important reactions of monosaccharides and their derivatives, Synthesis of biologically important structural and Storage carbohydrates. [5]

Lipids: Structure and classification of lipids, Fatty acids, Properties of fatty acids, Glycerolipids, Sphingolipids, Cholesterol and their biosynthesis, Alkaloids, Steroids and Flavonoids- properties and synthesis, Lipids as signal molecules, Alpha, beta and omega-oxidation, Lipopolysaccharides- structure and function. [6]

Proteins: Structural unit of proteins, Classification of amino acids, Properties of amino acids on the basis of $–NH_2$ and –COOH group, Protein structure and classification, Ramachandran plots, Stability of proteins, Folding and unfolding of proteins, Polypeptide synthesis and sequencing, Protein evolution, Structure and function of globular and fibrous proteins. [7]

Nucleic Acids: Nucleosides and nucleotides, Nucleic acid classification, Bond stability between purines and pyrimidines, Structure and reactions of purines and pyrimidines and their derivatives, Metabolism of purines and pyrimidines, Protein and nucleic acid interactions. [5]

Vitamins: Role of vitamins in growth and differentiation in human beings, Chemistry of fat and water-soluble vitamins, Vitamins as co-enzymes. [5]

Enzymes: Classification of enzymes, Michelis Menten equation, Km value, Linweaver-Burk equation, Kinetics of substrate and enzyme reactions, Isozymes, Effect of different physical and chemical factors, Active sites-nature and determination, Immobilization of enzymes and its application. [7]

BC 521 Biophysical Techniques 3-1-0-4

Basic Principles of Biophysics: Quantum Mechanics, Electronic structure of Atoms, Molecular orbitals and Covalent bond, Molecular interaction, Stereochemistry and chirality, Thermodynamics-Entropy, Enthalpy, Oxidation-Reduction potential, Zero order and first order reactions. [5]

Centrifugation: Principles of centrifugation, Design and care of rotor, Preparative and Analytical centrifuge, Density gradient centrifugation, Safety aspects and applications. [6]

Spectroscopic Techniques: Ultra violet- visible spectroscopy, Spectrofluorometry, Circular dichorism and Optical rotatory dispersion, Atomic spectroscopy, Raman and Infra-red spectroscopy, Electron spin resonance spectroscopy, Mass spectroscopy, NMR. [12]

Electrophoretic Techniques: Principle, Electrophoresis of proteins and nucleic acids, Isoelectric-focusing, 2-D electrophoresis, Capillary [6]

electrophoresis.

Chromatographic Techniques: Principles of Chromatography, Chromatography theory and practice, Paper, Thin layer, and Column chromatography, Permeation, Ion exchange, Affinity, Adsorption, Partition, HPLC and Gas chromatography. [10]

Radioisotope Techniques: Radioactive decay, Interaction of radioactivity with matter, GM counter, Scintillation counter, Quenching and its correction, Autoradiography, Radio-immunoassay and ELISA. [5]

BT 581 Biostatistics 3-0-0-3

Introduction: Collection of primary and secondary data, Classification and tabulation of data, Graphs of frequency distribution and Curves, Measures of central tendency — mean, median and mode, Mathematical properties of arithmetic mean, Geometric and harmonic Mean [6]

Measures of Dispersion: Absolute and Relative Measures of Dispersion, Range, Mean deviation, Standard deviation, Mathematical properties of standard deviation, Coefficient of variation, Variance, Skewness and its measures, Kurtosis and its measures [6]

Correlation and Regression Analysis: Meaning, significance and types, Scatter diagram method, Correlation graph, Karl Pearson's correlation coefficient, Coefficient of determination, Spearman's Rank correlation coefficient, Lines of Regression, Regression equations, Difference between correlation and regression analysis [9]

Tests of Significance: Student's t-test, Chi-square tests, Yate's correction factor, ANOVA– One and two way classification with examples [9]

Probability and Probability Distributions: Elements of probability-definition, addition and multiplication, Probability distribution function-Binomial, Poisson and normal, Area under normal probability distribution curve [9]

MB 541 Laboratory Course in Study of Microorganisms 0-0-4-2

Assignments based on MB 511 and MB 521containing exercises on staining and isolation of different microbial types on the basis of cultural and microscopic methods will be conducted.

BC 541 Biomolecules and Instrumentation laboratory 0-0-4-2

Assignments based on BC 511 and BC 521 containing exercises on working and maintenance of instruments and qualitative and quantitative analysis of biomolecules will be conducted.

MB 512 Microbial Physiology and Metabolism 3-0-0-3

Transport Mechanisms: Basic features of transport- Role of cell membrane in transport, Thermodynamics of transport, Types of transport- passive diffusion, facilitated diffusion, active transport, group translocation, uniport, symport and antiport, Transport of siderophores. [8]

Respiratory Metabolism: Glucose Metabolism- Reactions and control of Glycolysis, Pentose Phosphate Pathway, Gluconeogenesis, Citric acid cycle, Oxidative and Substrate level phosphorylation, Glyoxylate cycle, Homo and heterolactic fermentation, Pasteur effect. [10]

Photosynthesis: Brief account of photosynthetic and accessory pigments- Chlorophyll, Bacteriochlorophyll, Carotenoids and Phycobiliproteins, Details of Oxygenic and Anoxygenic photosynthesis, Major groups of photosynthetic bacteria, Fixation of CO_2- Calvin cycle, C3 and C4 pathway; Photorespiration. [10]

Nitrogen and Lipid Metabolism: Nitrogen cycle, Assimilation of nitrogen, Biosynthesis of amino acids, Nitrogen fixation- basic concepts, nitrogenase enzyme, Fatty acid oxidation- □-oxidation, Fatty acid biosynthesis. [6]

Sporulation and Morphogenesis: Endospore formation- structure, properties and germination; Dormancy in selected microbes [5]

MB 514 Food Technology 3-0-0-3

Food and Fermentation Technology: Origin, Scope and development of fermented food products, [10]
Microbial starters for food fermentations.
Fermented Foods- Bread, Vinegar, Beer, Wine, polysaccharides, low calorie sweeteners, Vitamins, Fermented vegetables, Nutraceuticals, Prebiotic and Probiotic foods, Genetically modified foods, Nano foods.
Fermented dairy products- Milk and Curd, Yoghurt, Buttermilk, Cheese, Oriental fermented foods,
Single cell protein, Mushroom cultivation

Spoilage and Preservation:
Factors affecting microbial growth in foods- extrinsic and intrinsic,
Contamination of foods (cereals, Vegetables and Fruits, Meat and Meat products and Fish, Milk and milk products, canned foods) and their involvement in disease outbreaks, [10]
Spoilage detection and characterization.
Methods of food preservation (thermal processing, refrigeration, dehydration, irradiation, microfiltration, chemical preservatives).
Food Borne Infections and Intoxications: Microbial toxins in food- Chemical Structure and Types, Food borne illnesses caused by- *Brucella, Clostridium, Escherichia, Salmonella, Shigella, Staphylococcus, Vibrio and Yersinia*, Diseases caused by Fungi, Emerging pathogens, *E.coli* O157:H7, *Listeria monocytogens*, *Campylobacter jejuni, Helicobacter pylori* [10]

Packaging and Quality Control:

Need and method of packaging (glass, metal, plastics, moulded pulp and aluminium foil), Controlled atmosphere packaging, Tetra pack, Nano capsule, Nano membrane. [9]

Detection of food pathogens- Culture methods, Rapid detection using PCR

Food standards- Standards for Milk, Poultry, Food control agencies- BIS, Codex commission,

Food laws and current concepts in food safety (HACCP, quantitative risk assessment and prediction based systems)

Disposal and treatment of food industry waste

BT 592 Bioinformatics , Scientific Communication & Intellectual Property Rights **3-1-0-4**

Introduction to Bioinformatics: Biological Databases**:** Types-GenBank, EMBL, DDBJ, SwissProt and PDB (Data Submission and Retrieval via WWW) and their management. 6

Molecular Phylogenetics: Pattern and mode of substitution, Acquisition and origin of new function, Phylogenetic tree; Distance matrix and maximum Parsimony methods of phylogenetic tree constructions. 8

Data Searches and Pairwise Alignments: Dot Plots, Simple alignments, Gaps, Scoring Matrices; Global and Local Alignments; Database searches (BLAST and FASTA and their relatives); Multiple Sequence alignments; Genome analysis; Homology modeling and Secondary structure prediction of proteins. 8

Scientific Literature: Structure, Type (Research article, review article, Short communication, Book review). Abstracting methodology. Concept of Impact factor; Citation Index. 3

Introduction to Intellectual Property Rights, Basic Principles of Patent Law, Types of IPR ,Patent Application procedures (India and International) 7

Biotechnology and Intellectual Property Rights. 7

Biotechnology and the Law-Objective, Evolution, Moral & ethical issues Issues. Protection of Geographical Indications - Objective, Multilateral Treaties, Protection of Traditional Knowledge-Objective, Bio-Prospecting and Bio-Piracy

Text Book

1. Introduction to Bioinformatics by Teresa K. Attwood, David Parry, Smith 1st Edition
2. Bioinformatics: a practical guide to the analysis of genes and proteins by Baxevanis A., Ouellette F.B.F. (Eds.). John Wiley and Sons, New York (1998) 2nd Edition.
3. Intellectual Property Rights and the Law by Reddy G.B., 2005

Reference Book

4. "BLAST": An Essential Guide to the Basic Local Alignment Search Tool by O'Reilly 2nd Edition.
5. Bioinformatics : Methods and Applications genomics, proteomics and drug discovery by Rastogi S.C., Prentice-hall Of India Pvt Ltd.

BT 534 Molecular Biology 3-0-0-3

Historical and Introductory Aspects: History of molecular biology; nucleic acids as hereditary material-experimental evidences, structure of DNA; Law of constancy and C-value paradox, Cot curve, DNA denaturation and renaturation kinetics. [5]

DNA Replication: Enzymes and accessory proteins involved in DNA replication, Prokaryotic and eukaryotic DNA replication, Asymmetric and dimeric nature of DNA polymerase III. [5]

Transcription: General principles, Types of RNA polymerases, Promoter Enhancers and Regulatory sequences, RNA polymerases and general transcription factors, Prokaryotic and Eukaryotic transcription General and specific transcription factors, Control of transcription. [8]

Translation: Genetic code, Prokaryotic and Eukaryotic translation, Translation machinery, Mechanisms of initiation, elongation and termination, Regulation of translation. [6]

Maturation and Processing of RNA: Methylation, Cutting and trimming of rRNA, Capping, Polyadenylation and Splicing of mRNA, Cutting and modification of tRNA, Degradation system, Catalytic RNA group I and group II intron splicing RNase P. [7]

Regulation of Gene Expression: Operon concept, Catabolite repression, Positive and negative regulation, Inducers and co-repressors, Negative regulation - *E. coli* lac operon, Positive regulation, Regulation by attenuation his and trp operons, Antitermination, Environmental regulation of gene expression- Global regulatory responses - heat shock response, stringent response and regulation by small molecules such as ppGpp and cAMP. [8]

MB 532 Immunology 3-0-0-3

Overview of immune response: Historical background, Innate immunity, Adaptive immunity, Innate-adaptive cross-talk, Natural and artificial immunity, Active and Passive immunity, Humoral and Cell-mediated immune response, Early theories of immunity**.** [5]

Cells and Organs of Immune System: Lymphoid organs, Haematopoiesis and differentiation of stem cells into mast cells, Basophils, Eosinophils, Monocytes, Macrophages, Neutrophils, NK cells, B and T lymphocytes (Th and Tc cells)-characteristics, CD markers and biological functions, Development of B-lymphocytes, Immunoglobulin structure and diversity, Development of T lymphocytes, TCR complex and diversity, positive and negative selection. [7]

Antigens: Antigenicity vs. immunogenicity, Characteristics of antigens, Epitopes, Characteristics of B-cell and T-cell epitopes, Haptens, Adjuvants, Isotypes, Allotypes and Idiotypes [3]

Humoral Immune Response: Activation and differentiation of B-lymphocytes, immunoglobulin classes and subclasses, B-cell receptor–co receptor complex, Primary and Secondary response, Affinity maturation, Antigen- antibody interactions, forces involved in Ag-Ab interactions, Antibody affinity and avidity, Primary interactions and secondary interactions, RIA, ELISA, IFA, Flow cytometry, Western blotting, precipitation reactions (in gel and in solution), agglutination reactions, Complement system. [8]

Cell Mediated Immune Response: Development- antigen processing and presentation, Major Histocompatibility Complex- structure, diversity and regulation of expression on cells, Leukocyte trafficking, Activation of T-cells, TCR signaling, Co-stimulatory signals, Effector functions, cytokines- types and biological role, Regulation of cytokine expression, Differentiation into Th1 and Th2 subclasses, Tc-cell mediated target cell killing. [8]

Immune System in Health and Disease: Immunologic tolerance, Autoimmune diseases, Immunodeficiency diseases, Hypersensitivity and allergies, Transplantation Immunology, Tumor immunology, Immunology of infectious diseases, Vaccines- concepts and strategies of development. [6]

MB 631 Microbial Genetics 3-0-0-3

Mutations: Basic concepts of mutation, Molecular nature of mutations, Spontaneous mutation, Reverse mutation, Frameshift mutation, Site directed mutagenesis- deletions, insertions, localized point mutation, Mutations by synthetic oligonucleotides, Evolutionary role of mutation. [8]

Gene Transfer: Transformation, Transduction- specialized and generalized, Conjugation- interrupted mating, Transfection. [8]

Vectors: Plasmids, Colicins and col factors, Plasmids as vectors for gene cloning, Transposons and their use in genetic analysis, Mechanisms of antibiotic resistance by transposons. [6]

Bacteriophage Genetics: Life cycle and uses of following phages in microbial genetics- Lytic phages- T4 and T7, Lysogenic phages- P1, M13, ΦX174, fd [9]

Gene Expression: Gene expression in eukaryotes and prokaryotes and its regulation [8]

MB 542 Seminar 0-0-0-1

Student will prepare a presentation on any area of recent research and deliver seminar on it.

MB 524 Microbial Physiology, Food Microbiology and Microbial Genetics Laboratory 0-0-4-2

Assignments based on MB 512 MB 514 and MB 592 containing exercises on microbial physiology, genetics and metabolisms of microorganisms and their role in food production and spoilage will be conducted.

BT 572 Molecular Biology and Immunology Laboratory 0-0-4-2

Assignments based on various techniques involved in BT 542 and MB 532 containing exercises on molecular biology, immunological analysis will be conducted.

BT 524 Laboratory Course in Bioinformatics & Scientific Communication 0-0-2-1

Assignments based on BT 592 containing exercises on NCBI & It's elements, BLAST & It's relatives, Homology searching, Secondary structure prediction, Structure visualization, Phylogenetic analysis etc.

MB 611 Medical Microbiology 3-1-0-4

Normal Flora of Human Body: Skin, Oral cavity, Gastrointestinal tract, Respiratory tract, Urinogenital tract, Concept of opportunistic pathogens. [3]

Infection: Sources of infection for man, Vehicles or reservoirs of infection, Vertical and horizontal transmission of infection, Pathogenesis of infecting microorganisms-Virulence factors (adhesions, enzymes-coagulases, fibrinolysins, mucinases, lipase, proteases, nucleases, collagenase, neuraminidase). Toxins-endotoxins and exotoxins as agents of disease. [5]

Microbial Strategies for Evading Immune Response: Evading phagocytosis, Survival in phagocytes, Immunosuppression, Induction of ineffective antibodies, Antigenic variation, Avoiding induction of immune response. [5]

Bacterial Diseases: Pathogenesis, epidemiology, laboratory diagnosis, treatment and vaccination of bacterial diseases caused by- *Staphylococcus, Streptococcus, Pneumococcus, Neisseria, Corynebacterium, Bacillus, Clostridium, Escherichia, Salmonella, Shigella, Vibrio, Yersinia, Mycobacterium, Treponema, Mycoplasma, Campylobacter, Helicobacter, Rickettsiae and Chlamydiae.* [9]

Viral Diseases: Pathogenesis, epidemiology, laboratory diagnosis, treatment and vaccination of viral diseases- Pox viruses (Small pox), Herpes viruses (HSV, Epstein-barr virus), Adenoviruses, Picorna viruses (Polio, Rhinoviruses), Orthomyxoviruses (Influenza), Paramyxoviruses (Mumps, Measles, RSV), Arboviruses (Dengue, Yellow fever,), Rhabdoviruses (Rabies), Hepatitis viruses, Rubella, Reovirus, Rotavirus, Viral Haemorrhagic Fevers, HIV, Oncogenic Viruses. [9]

Fungal and Protozoan Diseases: Pathogenesis, laboratory diagnosis and treatment of fungal and protozoan (Malaria, Kala Azar) diseases. [5]

Antimicrobial Agents: Mode of action of important antibacterial, antifungal, antiviral and antiprotozoan agents. [3]

MB 681 Environmental and Agricultural Microbiology 3-1-0-4

Aerobiology: Droplet nuclei, aerosols, Assessment of air quality- solid, liquid impingment, Air borne transmission of microbes [3]

Types of Soils- physical and chemical characteristics, microflora, Rhizosphere and Phyllosphere [3]

Water Microbiology: Fresh water and marine habitats- general characteristics, Types of microbes, Microbial activity, Eutrophication and its effects, Assessment of water quality- water purification, Potability standards. [7]

Biogeochemical Cycling: Carbon, Nitrogen and Sulphur cycle- role of microbes, Biodegradation- recalcitrant and xenobiotics, Degradation of pesticide, Wood and Textiles; Role of microbes in biodeterioration- Metal corrosion, Paper; Metal detoxification, Biopesticides. [10]

Microbes in Waste Treatment: Types of wastes- Solid and Liquid waste, Waste treatments- Physical, Chemical and Biological (Primary, Secondary and

Tertiary treatment), Trickling filter, Biocontactor, Activated sludge, Oxidation pond, Solid waste treatment- composting, biogas production. [8]

Nitrogen Fixation: Biological nitrogen fixation- Symbiotic (Rhizobium, Frankia), Asymbiotic(Azotobacter, Azospirillum), Nitrogenase and nif genes, Biofertilizers, VAM- brief account and applications. [8]

MB 641 Industrial Microbiology and Fermentation Technology 3-0-0-3

General Concepts: Isolation, Preservation and Improvement of Industrially important organisms, Enrichment culture technique, Storage at low temperature, Liquid nitrogen, Lyophilization, Strain improvement by mutation, Feed back repression and inhibition, Modification in characteristics of inhibitors, Isolation of auxotrophic mutants, Use of recombinant methods. [9]

Growth Kinetics: Microbial growth kinetics and product kinetics, Microbial biomass, Enzymes, metabolites, Batch and continuous culture- comparison, external and internal, Fed batch and its applications. [6]

Basic Concepts in Fermentation: Fermentation media, Sterilization, Batch and Continuous Sterilization, Filter sterilization, Fermenter design, Control of Fermenter, Mass and gas transfer, Product recovery and Effluent treatment. [7]

Industrial Production: Industrial production of Ethanol, Acetone, Butanol, Citric acid, Gluconic acid, Acetic acid, Lactic acid and Kojic acid, Glutamic acid, Lysine and Tryptophan, Amylases, Proteases and Lipases, Antibiotics (□-lactam, aminoglycosides). [12]

Production of other Metabolites: Production of single cell proteins, Recombinant vaccines, Interferon and Steroids. [5]

BT 611 Genetic Engineering 3-1-0-4

Introduction: Isolation and purification of nucleic acids, measuring nucleic acid concentration and purity. [2]

Enzymes in Molecular Cloning: Principal enzymes used to manipulate DNA *in vitro* with their activities and major applications including Restriction endonucleases, Nucleases, DNA ligases, topoisomerases, Enzymes involved in modifications including DNA methylases, DNA polymerases, kinases, phosphatases and DNA binding proteins (SSB, Rec A). [4]

Cloning and Expression Vectors: Brief study of features and applications of plasmids, phagemids, bacteriophage, lambda vectors, cosmids, high capacity cloning vectors like BACs, PACs and YACs, General considerations for design of expression vectors in prokaryotes. [5]

DNA Cloning Strategies: Criteria for the choice of suitable vectors and host, Modification of DNA ends, Methods of gene transfer to bacterial cells, Preparation of genomic and cDNA libraries, Screening methods for selection of recombinant DNA molecules by direct, indirect methods and by detection of specific proteins. [4]

Analysis of DNA Protein and Protein-Protein Interactions: Electromobility shift assay, Methyl interference assay, Footprinting technique, Dimethyl sulphate protection assay, Entrapment vectors, Yeast two hybrid systems, Phage display, Differential gene expression by microarray. [4]

Polymerase Chain Reaction: Principle and technique, Advances and extensions to basic PCR strategy including RT-PCR, Assymetric PCR, Inverse PCR, Nested PCR, anchored-PCR, overlap extension, DOP-PCR, Applications of PCR. [4]

Manipulation of Gene Expression in Prokaryotes: Production of fusion proteins and heterologous unique proteins in bacteria, Maturation, Transport and stability of eukaryotic proteins in bacteria, Strategies to increase protein production and stability. [5]

Cloning in Systems other than *E. coli*: Cloning in gram positive bacteria, *Saccharomyces cereviciae*, Streptomyces, Yeast expression vectors. [4]

Common Genetic Engineering Techniques: Site directed mutagenesis, Sequencing, Probe labeling, Hybridization. [3]

Applications of rDNA Technology: Role of genetic fingerprinting in diagnostics, therapeutic, agricultural applications. [5]

MB 651 Medical, Environmental and Agricultural Microbiology laboratory 0-0-4-2

Assignments based on MB 611 and MB 621 describing role of microorganisms in disease causing and prevention and their positive and negative role in environment and agriculture will be conducted.

MB 671 Genetic Engineering and Fermentation Technology laboratory 0-0-4-2

Assignments based on MB 641and BT 611 containing exercises on genetic engineering of microorganisms and their role in industrial production of various metabolites like antibiotics, vitamins and enzymes will be conducted.

Mody University of Science & Technology

M.Sc. Chemistry
Session 2016-2017

Curriculum Structure

MASTER OF SCIENCE IN CHEMISTRY
M. Sc. – Chemistry
(2014-2015 onwards)

Programme Level: Postgraduate **Duration:** Two Years (Four Semesters)

No. of Seats: 20
M Sc First Year curriculum will be common for ALL specialization

History:

There has been rapid increase in demand of Chemical science professionals. Considering such a requirement, it is proposed to start a new postgraduate programme namely Master of Science in Chemistry with aim of acquiring the knowledge and developing the skills to plan, design and build complex applications which are highly valued in all sectors like pharmaceutical, fertilizer, education, chemical, biotechnology etc.
The first batch of the programme in MITS is proposed to be admitted in the session 2010-2011.

Input Qualification:

Bachelor's degree with Chemistry as a subject for three years / six semesters/ B. Sc. Applied Chemistry / B. Sc. Biochemistry / B.Sc. Industrial Chemistry with 50 % of marks.

Evaluation Procedure:

All the Rules and Regulations as provided in the Ordinances and Regulations of Postgraduate Programmes of MITS shall be followed.

M. Sc.-Chemistry

COURSE DESCRIPTION
M. Sc. (Chemistry)

CH 511 **Inorganic Chemistry-I** **3-0-0-3**

Stereochemistry and Bonding in Main Group Compounds: Walsh diagrams (tri-atomic and penta-atomic molecules), dπ-pπ bond, Bent rule and energetics of hybridization, some simple reactions of covalently bonded molecules. [9]

Metal-Ligand Equilibria in Solution : Stepwise and overall formation constants and their interaction, trends in stepwise constant, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand. Chelate effect and its thermodynamic origin, determination of binary formation constants by pH-metry and spectrophotometry. [8]

Reaction Mechanism of Transition Metal Complexes : Energy profile of a reaction, reactivity of metal complex, inert and labile complexes, kinetic application of valence bond and crystal field theories, kinetics of octahedral substitution, acid hydrolysis, factors affecting acid hydrolysis, base hydrolysis, conjugate base mechanism, direct and indirect evidences in favour of conjugate mechanism, anation reactions, reactions without metal ligand bond cleavage. Substitution reactions in square planar complexes, the trans effect, mechanism of the substitution reaction. Redox reaction, electron transfer reactions, mechanism of one electron transfer reactions, outer sphere type reactions, cross reactions and Marcus-Hush theory, inner sphere type reactions. [15]

Metal-Ligand Bonding: Limitation of crystal field theory, molecular orbital theory, octahedral, tetrahedral and square planar complexes, π-bonding and molecular orbital theory. [7]

Suggested Books:

1. Advanced Inorganic Chemistry; F.A. Cotton and G. Wilkinson, 6^{th} Edn. John Wiley & Sons.
2. Inorganic Chemistry; James E. Huheey, 4^{th} Edn. Addison-Wesley Pub. Co.
3. Physical Methods in Inorganic Chemistry; R. S. Drago, International Edn. East-West Press.
4. Inorganic Chemistry; Keith F. Purcell and John C. Kotz, W. B. Sauders Com.

CH 513 Organic Chemistry-I 3-0-0-3

Nature of Bonding in Organic Molecules: Delocalized chemical bonding, conjugation, cross conjugation, resonance hyperconjugation, bonding in fullerenes, tautomerism. Aromaticity in benzenoid and non-benzenoid compounds, alternant and non-alternant hydrocarbons. Huckel's rule, energy level of π-molecular orbitals, annulenes, anti-aromaticity, homo-aromaticity. [6]

Stereochemistry: Conformational analysis of cycloalkanes, Decalines. Chirality, molecules with more than one chiral center, threo and erythro isomers, methods of resolution, optical purity, enantiotopic and diastereotopic atoms, groups and faces, stereospecific and stereoselective synthesis, Asymmetric synthesis. Optical activity in the absence of chiral carbon (biphenyls, allenes and spiranes), chirality due to helical shape. [10]

Reaction Mechanism, Structure and Reactivity: Type of mechanisms, types of reactions, thermodynamic and kinetic requirements, kinetic and thermodynamic control, Hammond's postulate, Curtin-Hammett principle. Potential energy diagrams, transition states and intermediates, methods of determining mechanisms. Generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes and nitrenes. The Hammett equation and linear free energy relationship, substituent and reaction constants. Taft equation. [8]

Aliphatic Nucleophilic Subsitution: The SN2, SN1 mixed SN1 and SN2 and SET mechanism. Neighbouring group participation mechanism by σ and π bonds, anchimeric assistance. Classical and nonclassical carbocations, phenonium ions, norbornyl system, common carbocation rearrangements. The SN i mechanism. Nucleophilic substitution at an allylic, aliphatic trigonal and a vinylic carbon. Ambident nucleophile, regioselectivity. [5]

Aliphatic Electrophilic Substitution: Bimolecular mechanisms SE2 and SEi, The SE1 mechanism, electrophilic substitution accompanied by double bond shifts. Effect of substrates, leaving groups and the solvent polarity on the reactivity. [6]

Aromatic Electrophilic Substitution: The arenium ion mechanism, orientation and reactivity, energy profile diagrams. The ortho/para ratio, ipso attack. Diazonium coupling, Vilsmeir reaction, Gatterman-Koch reaction. [4]

Suggested Books:

1. March's Advanced Organic Chemistry; M.B. Smith & Jerry March, 5th Edition. John Wiley & Sons.
2. A Guide book to Mechanism in Organic Chemistry; Peter Sykes, 6th Edition, Orient Longman Ltd..
3. Reaction Mechanism in Organic Chemistry; S. M. Mukherjee and S.P. Singh, Macmillan India Ltd.
4. Mechanism and Theory in Organic Chemistry; T.H. Lowry and K.S. Richardson, Addison – Wesley Longman Inc.
5. Organic Chemistry; R.T. Morrison and R.N. Boyd, Prentice- Hall of India.

6. Organic Reactions and Their Mechanisms; P.S. Kalsi, New Age International Publication.

CH 531 Physical Chemistry-I 3-0-0-3

Quantum Chemistry:

A. Introduction to Exact Quantum Mechanical Results: The Schrodinger equation and the postulates of quantum mechanics. Discussion of solutions of the Schrodinger equation to some model systems viz., particle in a box, the harmonic oscillator, the rigid rotor, the hydrogen atom.

B. Approximate Methods: The variation theorem, linear variation principle. Perturbation theory (First order and nondegenerate). Applications of variation method and perturbation theory to the Helium atom.

C. Angular Momentum: Ordinary angular momentum, generalized angular momentum, eigenfucntions for angular momentum, eigenvalues of angular momentum, operator using ladder operators, addition of angular momenta, spin, antisymmetry and Pauli exclusion principle.

D. Molecular Orbital Theory: Huckel theory of conjugated systems, bond order and charge density calculations. Applications to ethylene, butadiene, cyclopropenyl radical, cyclobutadiene etc. Introduction to extended Huckel theory.

[15]

Thermodynamics:

A. Classical Thermodynamics: Brief resume of concepts of laws of thermodynamics, free energy, chemical potential and entropies. Partial molar properties; Partial molar free energy, partial molar volume and partial molar heat content and their significances. Determinations of these quantities. Concept of fugacity and determination of fugacity. Non-ideal systems : Excess functions for non-ideal solutions. Activity, activity coefficient, Debye Huckel theory for activity coefficient of electrolytic solutions; determination of activity and activity coefficients; ionic strength. Application of phase rule to three component systems, second order phase transitions.

B. Statistical Thermodynamics: Concept of distribution, thermodynamic probability and most probable distribution. Ensemble averaging, postulates of ensemble averaging. Canonical, grand canonical and microcanonical ensembles, corresponding distribution laws (using Lagrange's method of undetermined multipliers). Partition functions-translational, rotational, vibrational and electronic partition functions, Calculation of thermodynamic properties in terms of partition functions. Application of partition functions. Heat capacity behaviour of solids-chemical equilibria and equilibrium constant in terms of partition functions, Fermi-Dirac Statistics, distribution law and applications to metal. Bose-Einstein statistics; distribution Law and application to helium.

C. Non Equilibrium Theromodynamics: Thermodynamic criteria for non-equilibrium states, entropy production and entropy flow, entropy balance equations for different irreversible processes (e.g., heat flow, chemical reaction etc.) transformations of the generalized fluxes and forces, non equilibrium stationary states, phenomenological equations, microscopic reversibility and Onsager's reciprocity

relations, electrokinetic phenomena, diffusion, electric conduction. [15]

Symmetry and group theory in chemistry: Symmetry elements and symmetry operations, definitions of group, subgroups, relation between orders of a finite group and its subgroup, similarity transformation and classes, point groups, Schonflies symbols, representation of groups by matrices(representation for the Cn, Cnv, Cnh, Dnh, etc. groups to be worked out explicity), character of a representation, the great orthogonality theorem (without proof) and its importance, character tables and their use. [9]

Suggested Books:

1. Modern Electrochemistry;J.O. M. Bockris and A. K. N. Reddy,Vol. 2 A & B, Second Edition, Plenum Press.
2. Chemical Kinetics; K. J. Laidler, Harper & Row.
3. Physical Chemistry; P. W. Atkins, Oxford University Press.
4. Physical Chemistry; I.N. Levine, Tata McGraw Hill Pub. Co. Ltd.
5. Kinetics and Mechanism of Chemical Transformations; J. Raja Ram and J.C. Kuriacose, MacMillan Indian Ltd.
6. Statistical Thermodynamics; Andrew Maczek, Oxford University Press.

CH 523 Spectroscopy-I 3-0-0-3

Microwave Spectroscopy: Classification of molecules, rigid rotor model, effect of isotopic substitution on the transition frequencies, intensities, non-rigid rotor. Stark effect, nuclear and electron spin interaction and effect of external field, applications [8]

Vibrational Spectroscopy: Symmetry and shapes of AB2, AB3, AB4, AB5 and AB6, mode of bonding of ambidentate ligands, ethylenediamine and diketonato complexes, application of resonance Raman spectroscopy particularly for the study of active sites of metalloproteins. [8]

Raman Spectroscopy: Classical and quantum theories of Raman effect. Pure rotational, vibrational and vibrational-rotational Raman spectra, selection rules, mutual exclusion principle, Resonance Raman spectroscopy, coherent anti stokes Raman spectroscopy (CARS). [8]

Electron Spin Resonance Spectroscopy: Basic principles, zero field splitting and Kramer's degeneracy, factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants spin Hamiltonian, spin densities and Mc Connell relationship, measurement techniques, applications. [7]

Mossbauer Spectroscopy: Basic principles, spectral parameters and spectrum display. Application of the technique to the studies of

(1) Bonding and structures of Fe^{+2} and Fe^{+3} compounds including those of intermediate spin.

(2) Sn^{+2} and Sn^{+4} compounds; nature of M-L bond, coordination number, structure.

(3) Detection of oxidation state and inequivalent MB atoms. [8]

Suggested Books:

1. Modern Spectroscopy, J.M. Hollas, John Viley.
2. NMR, NQR, ESR and Mossbauer Spectroscopy in Inorganic Chemistry, R.V. Parish, Ellis Harwood.
3. Physical Methods in Chemistry, R.S. Drago, Saunders College.
4. Introduction to Molecular Spectroscopy, G.M. Barrow, Mc Graw Hill.
5. Basic Principles of Spectroscopy, R. Chang, Mc Graw Hill.
6. Infrared and Raman Spectral : Inorganic and Coordination Compounds K. Nakamoto, Wiley.

CH 551 Mathematics for Chemists 3-0-0-3

Vectors and Matrix Algebra: A. Vectors: Vectors, dot, cross and triple products etc The gradient, divergence and curl, Vector Calculus.

B. Matrix Algebra: Addition and multiplication; inverse, adjoint and transpose of matrices, special matrices (Symmetric, skew-symmetric, Hermitian, Skew-Hermitian, unit, diagonal, unitary etc.) and their properties. Matrix equations: Homogeneous, non-homogeneous linear equations and conditions for the solution, linear dependence and independence. Introduction to vector spaces, matrix eigen values and eigen vectors, diagonalization, determinants (examples from Huckel theory).

[12]

Differential and Integral Calculus: Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima (examples related to maximally populated rotational energy levels, Bohr's radius and most probable velocity from Maxwell's distribution etc.).Integral calculus, basic rules for integration, integration by parts, partial fraction and substitution. Reduction formulae, applications of integral calculus.Functions of several variables, partial differentiation, co-ordinate transformations (e.g. cartesian to spherical polar).

[8]

Elementary Differential equations: Exact First-order differential equations, homogenous, exact and linear equations. Applications to chemical kinetics, secular equilibria, quantum chemistry etc, second order differential equation and their solutions.

[10]

Permutation and Probability: Permutations and combinations, probability and probability theorems, average, root means square and most probable errors, examples from the kinetic theory of gases etc., curve fitting (including least squares fit etc) with a general polynomial fit.

[9]

Suggested Books:

1. The chemistry Mathematics Book, E.Steiner, Oxford University Press.
2. Mathematics for chemists, Doggett and Suiclific, Longman.
3. Mathematical preparation for Physical chemistry: F. Daniels, Mc. Graw Hill.
4. Chemical Mathematics D.M. Hirst, Longman.
5. Applied Mathematics for Physical Chemistry, J.R. Bararnte, Prentice Hall.
6. Basic Mathematics for Chemists, Tebbutt, Wiley.

CH 561 **Biology for Chemists** **3-0-0-3**

Cell Structure and Functions: Structure of prokaryotic and eukaryotic cells, intracellular organelles and their functions, comparison of plant and animal cells. Overview of metabolic processes-catabolism and anabolism. ATP - the biological energy currency. Origin of life-unique properties of carbon chemical evolution and rise of living systems. Introduction to biomolecules, building blocks of bio-macromolecules. [8]

Carbohydrates: Conformation of monosaccharides, structure and functions of important derivatives of monosaccharides like glycosides, deoxy sugars, myoinositol, amino sugars. N-acetylmuramic acid, sialic acid, disaccharides and polysaccharides. Structural polysaccharides; cellulose and chitin. Storage polysaccharides-starch and glycogen. Structure and biological function of glucosaminoglycans of mucopolysaccharides. Carbohydrates of glycoproteins and glycolipids. Role of sugars in biological recognition. Blood group substances. Ascorbic acid. Carbohydrate metabolism-Kreb's cycle, glycolysis, glycogenesis and glycogenolysis, gluconeogenesis, pentose phosphate pathway. [8]

Lipid: Fatty acids, essential fatty acids, structure and function of triacylglycerols, glycerophospholipids, sphingolipids, cholesterol, bile acids, prostaglandins. Lipoproteins-composition and function, role in atherosclerosis. Properties of lipid aggregates-micelles, bilayers, liposomes and their possible biological functions. Biological membranes. Fluid mosaic model of membrane structure. Lipid metabolism-β-oxidation of fatty acids. [8]

Amino-acids, Peptides and Proteins: Chemical and enzymatic hydrolysis of proteins to peptides, amino acid sequencing. Secondary structure of proteins. Force responsible for holding of secondary structures. α- helix, -β-sheets, super secondary structure, triple helix structure of collagen. Tertiary structure of protein-folding and domain structure, Quaternary structure. Amino acid metabolism-degradation and biosynthesis of amino acids, sequence determination: chemical / enzymatic / mass spectral, racemization / detection. Chemistry of oxytocin and tryptophan releasing hormone (TRH). [8]

Nucleic Acids: Purine and pyrimidine bases of nucleic acids, base pairing via H -bonding. Structure of ribonucleic acid (RNA) and deoxyribonucleic acid (DNA), double helix model of DNA and forces responsible for holding it. Chemical and enzymatic hydrolysis of nucleic acids. The chemical basis for heredity, an overview of replication of DNA, transcription, translation and genetic code. Chemical synthesis of mono and trinucleoside [7]

Suggested Books:

1. Principles of Biochemistry, A.L. Lehninger, Worth Publishers.
2. Biochemistry, L. Stryer, W.H. Freeman.
3. Biochemistry, J. David Rawan, Neil Patterson.
4. Biochemistry, Voet and Voet, John Wiley.
5. Outlines of Biochemistry E.E. Conn and P.K. Stumpf, John Wiley.

CH 571 Inorganic Chemistry Laboratory - I 0-0-4-2

I. Synthesis and characterization of the following inorganic complex compounds

a) $VO(acac)_2$
b) Cis-$K[Cr(C_2O_4)_2(H_2O)_2]$
c) $Na[Cr(NH_3)_2(SCN)_4]$
d) $Mn(acac)_3$
e) $K_3[Fe(C_2O_4)_3]$
f) Prussian Blue, Turnbull's Blue

II. Qualitative and Quantitative Analysis; Two metal ions in cationic/ anionic forms.

Rare elements: Tl, W, Se, Mo, Ti, Zr, Ce, Th, V, U, Li
Insolubles: Oxides, sulphates and halides

Suggested Books:

1. Vogel's Textbook of Quantitative Analysis, revised, J. Bassett, R.C. Denney, G.H. Jeffery and J. Mendham, ELBS.
2. Synthesis and Characterization of Inorganic Compounds, W.L. Jolly.
3. Inorganic Experimens, J. Derek Woolings, VCH.
4. Microscale Inorganic Chemistry, Z. Szafran, R.M, Pike and M.M. Singh, Wiley.
5. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrad

CH 581 Organic Chemistry Laboratory - I 0-0-4-2

Qualitative Analysis: Separation, purification and identification of compounds of binary mixture (one liquid and one solid / two liquids / two solids) using TLC and Column Chromatography, chemical tests. IR spectra to be used for functional group identification.

Organic Synthesis:

a) Acetylation: Acetylation of cholesterol and separation of cholesteryl acetate by column chromatography.
b) Oxidation : Adipic acid by chromic acid oxidation of cyclohexanol
c) Grignard reaction : Synthesis of triphenylmethanol from benzoic acid
d) Aldol condensation: Dibenzal acetone from benzaldehyde.
e) Sandmeyer reaction: p-Chlorotoluene from p-toluidine.

Suggested Books:

1. Experiments and Techniques in Organic Chemistry, D.P. Pasto, C. Johnson and M. Miller, Prentice Hall.
2. Macroscale and Microscale Organic Experiments, K.L. Williamson, D.C. Health.

CH 591 Physical Chemistry Laboratory - I 0-0-4-2

a) To construct the phase diagram for three component system (e.g. chloroform-acetic acid-water).
b) To determine the electron polarization and electron polarizability of a liquid refractometrically.
c) To determine the concentration of a given solution of an optically active substance by polarimetric measurements.
d) To determine the specific and molar rotation of an optically active substance, like cane sugar at a number of concentrations and hence find the intrinsic rotation of the substance.
e) To verify the Beer's law for the solution of the potassium permanganate and determine the concentration of the given aqueous solution of unknown concentration of this salt.
f) To determine the equilibrium constant of the given reaction, potentiometrically.
g) To determine the heat of neutralization of hydrochloric acid using a classical calorimeter.
h) To determine the stability constant of a $FeSCN^{2+}$ complex ion keeping ionic strength constant.
i) To determine the solubility of Ca $(IO_3)_2$ in deionized water and in dilute solution of potassium chloride at room temperature. Also evaluate the thermodynamic solubility product.
j) To determine the formula and the stability constant of a metal ion complex (Lead oxalate complex.)

Suggested Books:

1. Advanced Practical Physical Chemistry, J. B. Yadav, Goel P.H.
2. Practical Physical Chemistry, A.M. James and F.E. Prichard, Longman.
3. Findley's Practical Physical chemistry, B.P. Levitt, Longman.
4. Experimental Physical Chemistry, R.C. Das and B. Behera, Tata McGraw Hill.

CH 512 Inorganic Chemistry-II 3-0-0-3

Electronic Spectra and Magnetic Properties of Transition Metal Complexes: Spectroscopic ground states, correlation. Orgel and Tanabe-Sugano diagrams for transition metal complexes (d^1-d^9 states), calculations of D_q, B and β parameters, charge transfer spectra, spectroscopic method of assignment of absolute configuration in optically active metal chelates and their stereochemical information, anomalous magnetic moments, magnetic exchange coupling and spin crossover.

[10]

Metal π-Complexes: Metal carbonyls, structure and bonding, vibrational spectra of metal carbonyls for bonding and structural elucidation,important reactions of metal carbonyls; preparation, bonding, structure and important reaction of transition metal nitrosyl, dinitrogen and dioxygen complexes; tertiary phosphene as ligand.

[8]

Metal Clusters: Higher boranes, carboranes, metalloboranes and metallocarboranes compounds with metal metal multiple bonds

[5]

Role of metal ions in biological processes: Brief study of various metal ions (Fe, Mo, Cu, Co, Ni, V, Cr, Mn, Zn, Se, B, Na, K and Ca) in biological processes.

[10]

Isopoly and Heteropoly Acids and Salts: Brief study

[6]

Suggested Books:

1. Mechanism of Inorganic Reactions; F. Basalo and R.G. Pearson, Wiley Eastern Ltd.
2. Inorganic Chemistry; D. F. Shriver and P. W. Atkins, ELBS.
3. Advanced Inorganic Chemistry; F. A. Cotton and G. Wilkinson, Edn. John Wiley & Sons.
4. Electronic Absorption Spectroscopy and Related Techniques; D.N. Sathyanarayana, Universities Press (India) Ltd.
5. Inorganic Chemistry; Keith F. Purcell and John C. Kotz, W. B. Sauders Com.
6. Inorganic Reaction Mechanisms; Martin L. Tobe and John Burgess, Longmans.

CH 514 **Organic Chemistry-II** **3-0-0-3**

Aromatic Nucleophilic Substitution: The SNAr, SN1, benzyne and SRN1 mechanism, Reactivity; effect of substrate structure, leaving group and attacking nucleophile. The Von Richter, Sommelet - Hauser, and Smiles rearrangments. [5]

Free Radical Reactions: Types of free radical reactions, free radical substitution mechanism, mechanism at an aromatic substrate, neighbouring group assistance. Allylic halogenation (NBS), oxidation of aldehydes to carboxylic acids, auto-oxidation, coupling of alkynes and arylation of aromatic compounds by diazonium salts, Sandmeyer reaction. Free radical rearrangement. Hunsdiecker reaction. [7]

Addition to Carbon Carbon Multiple Bonds: Mechanistic and stereochemical aspects of addition reactions involving electrophiles, nucleophiles and free radicals, regio-and chemoselectivity, orientation and reactivity. Addition to cyclopropane ring. Hydrogenation of double and triple bonds, hydrogenation of aromatic rings. Hydroboration, Michael reaction, sharpless asymmetric epoxidation. [7]

Addition to Carbon-Hetero Multiple bonds: Mechanism of metal hydride reduction of saturated and unsaturated carbonyl compounds, acid, esters and nitriles. Addition of Grignard reagents, organozinc and organolithium reagents to carbonyl and unsaturated carbonyl compounds. Wittig reaction. Mechanism of condensation reactions involving enolates-Aldol, Knoevenagel, Claisen, Mannich, Benzoin, Perkin and Stobbe reactions. Hydrolysis of esters and amides, ammonolysis of esters. [7]

Elimination Reactions: The E2, E1 and E1CB mechanisms and their spectrum. Orientation of the double bond. Mechanism and orientation in pyrolytic elimination. [5]

Pericyclic Reactions: Molecular orbital symmetry, Electrocyclic reactions, cycloaddition reactions and sigmatropic reactions, FMO and PMO approach. Correlation diagram, selection rules. Claisen, Cope and aza-Cope rearrangements, Ene reaction [8]

Suggested Books:

1. March's Advanced Organic Chemistry; M.B. Smith & Jerry March, John Wiley & Sons.
2. A Guide Book to Mechanism in Organic Chemistry; Peter Sykes, Orient Longman Ltd.
3. Reaction Mechanism in Organic Chemistry; S. M. Mukherjee and S.P. Singh, Macmillan India Ltd.
4. Mechanism and Theory in Organic Chemistry; T.H. Lowry and K.S. Richardson, Addison – Wesley Longman Inc.
5. Mechanism and Theory in Organic Chemistry; S.M. Mukherjee and S.P. Singh, Mac Millan India.

6. Organic Reactions and Their Mechanisms; P. S. Kalsi, New Age International Pub.

CH 532 Physical Chemistry II 3-0-0-3

Surface Chemistry:

A. Adsorption -Surface tension, capillary action, pressure difference across curved surface (Laplace equation), vapour pressure of dropletes (Kelvin equation), Gibbs adsorption isotherm, estimation of surface area (BET equation), Surface films on liquids (Electro-kinetic phenomenon).

B. Micelles: Surface active agents, classification of surface active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, counter ion binding to micelles, thermodynamics of micellization-phase separation and mass action models, solublization, micro emulsion, reverse micelles. [12]

Macromolecules: Polymer-definition, types of polymers, electrically conducting, fire resistant, liquid crystal polymers, kinetics of polymerization, mechanism of polymerization. Molecular mass, number and mass average molecular mass, molecular mass determination (Osmometry, viscometry, diffusion and light scattering methods), sedimentation, chain configuration of macromolecules, calculation of average dimension of various chain structures. [8]

Electrochemistry: Electrochemistry of solutions. Debye-Huckel-Onsager treatment and its extension, ion solvent interactions. Debye-Huckel-Jerum mode. Thermodynamics of electrified interface equations. Derivation of electro capillarity, Lippmann equations (surface excess), methods of determination. Structure of electrified interfaces. Guoy-Chapman, Stern, Graham- Devanathan - Mottwatts, Tobin, Bockris, Devanathan models, Overpotentials, exchange current density, derivation of Butler Volmer equation, Tafel plot. Quantum aspects of charge transfer at electrodes-solution interfaces, quantization of charge transfer, tunneling. Semiconductor interfaces-theory of double layer at semiconductor, electrolyte solution interfaces, structure of double layer interfaces. Effect of light at semiconductor solution interface. Polarography theory, Ilkovic equation; half wave potential and its significance. [10]

Chemical Dynamics: Methods of determining rate laws, collision theory of reaction rates, steric factor, activated complex theory, Arrhenius equation and the activated complex theory; ionic reactions, kinetic salt effects, steady state kinetics, kinetic and thermodynamic control of reactions, treatment of unimolecular reactions. Dynamic chain (hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane), photochemical (hydrogen-bromine and hydrogen-chlorine reactions) and homogenous catalysis, kinetics of enzyme reactions, general features of fast reactions, study of fast reactions by flow method, relaxation method, flash photolysis and the nuclear magnetic resonance method, dynamics of unimolecular reactions (Lindemann Hinshelwood and Rice-Ramsperger-Kassel-Marcus (RRKM) theories of unimolecular reactions). [9]

Suggested Books:

1. Modern Electrochemistry; J.O'M. Bockris and A. K. N. Reddy, Plenum Press.
2. Physical Chemistry; P. W. Atkins Oxford University Press.
3. Physical Chemistry; I. N. Levine, Tata McGraw Hill Pub. Co. Ltd.
4. Statistical Thermodynamics; Andrew Maczek, Oxford University Press.
5. Text Book of Polymer Science; F.W. Billmayer, Wiley-Interscience.
6. Modern Electrochemistry;J.O. M. Bockris and A. K. N. Reddy,Vol. 2 A & B, Second Edition, Plenum Press.
7. Chemical Kinetics; K. J. Laidler, Harper & Row.

CH 524 Spectroscopy-II 3-0-0-3

Ultraviolet and Visible spectroscopy: Various electronic transitions (185-800 nm) Beer-Lambert law, effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fieser-Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic compounds. Steric effect in biphenyls. [7]

Infrared Spectroscopy: Instrumentation and Sample handling.Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance. [7]

Nuclear Magnetic Resonance Spectroscopy: General introduction and definition, chemical shift, spin-spin interaction, shielding mechanism, mechanism of measurement, chemical shift values and correlation for protons bonded to carbon (aliphatic, olefinic, aldehydic and aromatic) and other nuclei (alcohols, phenols, enols, carboxylic acids, amines, amides & mercapto), chemical exchange, effect of deuteration, complex spin-spin interaction between two, three, four and five nuclei (first order spectra), Stereochemistry, hindered rotation, Karplus curve-variation of coupling constant with dihedral angle. Simplifications of complex spectranuclear magnetic double resonance, NMR shift reagents, solvent effects. Fourier transform technique, nuclear overhauser effect (NOE). [8]

Carbon-13 NMR Spectroscopy: General considerations, chemical shift (aliphatic, olefinic , alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants. Two dimension NMR spectroscopy-COSY, NOSY, DEPT, INEPT, APT and INADEQUATE techniques. [6]

Mass Spectrometry: Introduction ion production EI, CI, FD and FAB, factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, molecular ion peak, metastable peak, Mc Lafferty rearrangement. Nitrogen rule. High resolution mass spectrometry. Example of mass spectral fragmentation of organic compounds with [6]

respect to their structure determination.

Problems: Structure elucidation based on spectroscopic data. [5]

Suggested Books:

1. Practical NMR Spectroscopy, M.L. Martin. J.J. Delpeuch and G.J. Martin, Heyden.
2. Spectrometric Identification of Organic Compounds, R.M. Silverstein, G.C. Bassler adn T.C. Morrill, John Wiley.
3. Introduction to NMR spectroscopy, R.J. Abraham, J. Fisher and P. Loftus, Wiley.
4. Application of Spectroscopy of Organic Compounds, J.R. Dyer Prentice Hall.
5. Spectroscopic Methods in Organic Chemistry D.H. Williams, I. Fleming, Tata McGraw-Hill.

CH 534 Colloids and Surface Chemistry 3-0-0-3

Introduction: Introduction: Colloid & surface science - small particles, association structures, surfaces, interfaces, interphases and macromolecules, Survey of technologies reliant upon colloid and surface science. [5]

Particulate Dispersions (solids dispersed in fluids): Single particles, Scattering of electromagnetic radiation from matter, Single particles in external fields (gravity, electrical, etc.), Particle sizing (microscopy, scattering (ILS, DLS, x-ray, neutron), sedimentation, centrifugation, chromatography, acoustics, adsorption), Particles in fluids, Particle trajectories' Transport phenomena; Brownian motion, diffusion; Rheology & rheology of dispersions; Particle-particle interactions, potential energy diagrams; Colloid stability - aqueous, non-aqueous; Consequences of colloid stability (dispersal, flocculation, coagulation, phase separation); Measuring colloid stability; Particle-particle interactions: Dispersion forces (Hamaker theory); Solid-liquid interfaces (charging of surfaces, Electrical Double Layer, adsorption); Particle-particle interactions: Electrostatic forces; Analysis of surface charge and surface chemistry (electrokinetics [electrophoresis, streaming; potential, electro-osmosis, sedimentation potential], electroacoustics, surface spectroscopy, ESR); Particle-particle interactions: steric forces & polymer-mediated forces'' Particle-particle interactions: hydrophobic forces, Analysis of particle interactions (rheometry, AFM, CFM, MASIF, SFA); Flocculation & coagulation - Schulze-Hardy rule, inorganic coagulants, polymeric flocculants ; wastewater treatment

[15]

Wetting & Capillarity: Surface and interfacial tension; Phenomena of liquid surfaces - Phenomena of liquids near solid surfaces Wetting, spreading, penetration, film formation, adhesion, detergency and floation; Contact angles, their analysis and interpretation - component analysis; Surface roughness, chemical heterogeneity, contamination; Surface energy methods on planar, particulate, hollow and fiber surfaces; Relation of capillarity to phase diagrams; Adhesion & Contact mechanics.

[10]

Bubbles and Foams (gases dispersed in liquids): Foam stability; Film drainage; Film rupture; Film rheology; Emulsion and pseudo-emulsion films; Phase diagrams; Measuring thin film properties - disjoining pressure, thin film balance, Frothing agents', Foam breaking, Antifoaming agents & mechanisms, Flotation. [9]

Suggested Books:

1. Colloidal Dispersions: Suspensions, Emulsions, and Foams I.D. Morrison and S. Ross (2002, Wiley Interscience, NY; ISBN: 0-471-17625-7).
2. Basic Principle of Colloid Science, D.H. Everett (1988, Royal Society of Chemistry, London, ISBN : 0-85186-443-0)

CH 562 Inorganic Chemistry Laboratory - II 0-0-4-2

I. Synthesis and characterization of the following inorganic complex compounds

a) $[Co(NH_3)_6]\ [Co(NO_2)_6]$
b) Cis-$[Co(trien)\ (NO_2)_2]\ Cl.H_2O$
c) $Hg[Co(SCN)_4]$
d) $[Co(Py)_2Cl_2]$
e) $[Ni(NH_3)_6]Cl_2$
f) $Ni(dmg)_2$
g) $[Cu(NH_3)_4]SO_4H_2O$

II. Qualitative and Quantitative Analysis; Separation and determination of two metal ions Cu-Ni, Ni-Zn, Cu-Fe etc. involving volumetric and gravimetric methods.

III. Chromatography; Separation of cations and anions by
Paper Chromatography.
Column Chromatography : Ion exchange

Suggested Books:

1. Vogel's Textbook of Quantitative Analysis, revised, J. Bassett, R.C. Denney, G.H. Jeffery and J. Mendham, ELBS.
2. Synthesis and Characterization of Inorganic Compounds, W.L. Jolly.
3. Inorganic Experiments, J. Derek Woolings, VCH.
4. Microscale Inorganic Chemistry, Z. Szafran, R.M, Pike and M.M. Singh, Wiley.
5. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrad

CH 572 Organic Chemistry Laboratory - II 0-0-4-2

I. Organic Synthesis:

a) Cannizzaro reaction: 4-Chlorobenzaldehyde as substrate.
b) Friedel Crafts reaction: β-Benzoyl propionic acid from succinic anhydride and benzene.
c) Aromatic electrophilic substitutions: Synthesis of p-nitroaniline and p-bromoaniline. The Products may be Characterized by Spectral Techniques
d) Acetoacetic ester Condensation : Synthesis of ethyl-n-butylacetoacetate by A.E.E. condensation

II. Quantitative Analysis:

a) Determination of the percentage or number of hydroxyl groups in an organic compound by acetylation method.
b) Estimation of amines/phenols using bromate bromide solution/or acetylation method.
c) Determination of lodine and Saponification values of an oil sample.
d) Determination of DO, COD and BOD of water sample.
e) To estimate the percentage of sulphur in the given organic sample by Messenger's method
f) To estimate the percentage of nitrogen in the given organic sample by Kjeldahl's method.
g) To estimate a halogen in the given sample by the alkaline reduction method (Modified Stepenow method).

Suggested Books:

1. Systematic Qualitative Organic Analysis, H. Middleton, Adward Arnold.
2. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
3. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley.

CH 582 Physical Chemistry Laboratory - II 0-0-4-2

a) To determine the molecular weight of a macromolecule by viscometry.
b) To determine the order with respect to Ag(I) in the oxidation of Mn(II) by $S_2O_8^{2-}$ and the rate constant for the uncatalyzed reaction.
c) To determine the formation constant for the $[Ce^{IV}\text{-}H_3PO_2]$ intermediate complex and also the rate constant of its decomposition at 45° C.
d) Study the effect of hydrogen ion on the $H_2O_2 - I^-$ reaction and to determine the rate constants K_1 and K_2 of the given rate equation.
e) To determine the equivalent conductivity of an electrolyte at infinite dilutions, and to determine the dissociation constant of an acid at different dilutions.
f) To determine the standard electrode potential of the ferrous ferric system by titrating ferrous ammonium sulphates against potassium dichromate potentiometrically.
g) To determine the surface tension of an organic liquid (Ethyl acetate) at different temperatures by double capillary method and hence test the constancy of parachor.
h) To determine the critical micelle concentration of a soap (sodium laurate, sodium palmitate etc.) by surface tension measurements.
i) To determine the solubility and solubility product of sparingly soluble salts e.g. PbSO4, BaSO4) conductometrically.
j) To determine the strength of the given acid conductometrically using standard alkali solution. Select suitable pair for titration. (SA-SB, SA-WB, WA-SB, WA-WB)

Suggested Books:

1. Advanced Practical Physical Chemistry, J. B. Yadav, Goel P.H.
2. Practical Physical Chemistry, A.M. James and F.E. Prichard, Longman.
3. Findley's Practical Physical chemistry, B.P. Levitt, Longman.
4. Experimental Physical Chemistry, R.C. Das and B. Behera, Tata McGraw Hill.

CH 611 Photochemical Reactions 3-0-0-3

Photochemical Reactions: Interaction of electromagnetic radiation with matter, types of excitations, fate of excited molecule, quantum yield, transfer of excitation energy, actinometry. [7]

Determination of Reaction Mechanism: Classification, rate constants and life times of reactive energy state; determination of rate constants of reactions. Effect of light intensity on the rate of photochemical reactions. Types of photochemical reactions-photo dissociation, gas-phase photolysis. [8]

Photochemistry of Alkene: Intramolecular reactions of the olefinic bond-geometrical isomerism, cyclisation reactions, rearrangement of 1,4- and 1,5-dienes. [5]

Photochemistry of Carbonyl Compounds: Intramolecular reactions of carbonyl compounds-saturated, cyclic and acyclic, β,γ unsaturated and α, β unsaturated compounds, cyclohexadienones. Intermolecular cyloaddition reactions-dimerisations and oxetane formation. [8]

Photochemistry of Aromatic Compounds: Isomerisations, additions and substitutions. [5]

Miscellaneous Photochemical Reactions: Photo-Fries reactions of anilides, Photo-Fries rearrangement, Barton reaction, Singlet molecular Oxygen reaction, Photochemical formation of smog. Photodegradation of polymers. Photochemistry of vision. [6]

Suggested Books:

1. Fundamentals of photochemistry, K.K. Rohtagi - Mukherjee, Wiley-Eastern.
2. Essentials of Molecular Photochemistry, A Gilbert and J. Baggott, Blackwell Scientific Publication.
3. Molecular Photochemistry, N.J. Turro, W.A. Benjamin.
4. Introductory Photochemistry, A. Cox and t. Camp, McGraw Hill.
5. Photochemistry, R.P. Kundall and A. Gilbert. Thomson Nelson.
6. Organic Photochemistry, J. Coxon and B.halton, Cambridge University Press.

CH 621 Bioorganic Chemistry 3-0-0-3

Introduction: Basic considerations, Proximity effects and molecular adaptation. [4]

Enzymes: Introduction and historical perspective, chemical and biological catalysis, remarkable properties of enzymes like catalytic power, specificity and regulation. Nomenclature and classification, extraction and purification. Fischer's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by the use of inhibitors, affinity labelling and

enzyme modification by site-directed mutagenesis. Enzyme kinetics, Michaelis-Menten and Lineweaver - Burk plots, reversible and irreversible inhibition.

[11]

Mechanism of Enzyme Action: Transition-state theory, orientation and Steric effect, acid-base catalysis, covalent catalysis, strain or distortion. Examples of some typical enzyme mechanisms for chemotrypsin, ribonuclease, lysozyme and carboxypeptidase A.

[6]

Kinds of Reactions Catalysed by Enzymes: Nucleophilic displacement on a phosphorus atom, multiple displacement reactions and the coupling of ATP cleavage to endergonic processes. Transfer of sulphate, addition and elimination reactions, enolic intermediates in Isomerisation reactions, β-Cleavage and condensation, some isomerization and rearrangement reactions. Enzyme catalyzed carboxylation and decarboxylation.

[9]

Industrial Applications of Enzymes : Techniques and methods of immobilization of enzymes, effect of immobilization on enzyme activity, application of immobilized enzymes, use of enzymes in food and drink industry-Brewing and cheese-making, syrups from corn starch, enzymes as targets for drug design.

[9]

Suggested Books:

1. Bioorganic Chemistry: A chemical Approach to Enzyme Action, Hermann Dugas and C. Penny, Springer Verlag.
2. Understanding Enzymes, Trevor Palmer, Prentice Hall.
3. Enzyme Chemistry: Impact and applications, Ed. Collin J suckling, Chapman and Hall.
4. Enzyme Mechanisms Ed. M.I. Page and A Williams, Royal Society of Chemistry.
5. Fundamentals of Enzymology, N.C. Price and L. Stevens. Oxford University Press.
6. Immobilized Enzymes: An Introduction and Applications in Biotechnology, Michael B. Trevan, John Wiley.
7. Enzymatic Reaction Mechanisms. C. Walsh. W.H. Freeman.
8. Enzyme Structure and Mechanism, A Fersht, W.H. Freeman.
9. Biochemistry: The Chemical Reactions of Living Cells, D.E. Metzler, Academic Press.

CH 631 Organic Synthesis-I 3-0-0-3

Reagents and reactions: Gilman's reagent – Lithium dimethylcuprate, Lithium diisopropylamide (LDA), Dicyclohexyl carbodiimide (DDC), 1,3-Dithiane (Umpolungreagent), trimethylsilyliodide, Petersons synthesis, Bakers yeast, Organophosphorus compounds (Wittig reaction), Sulphur ylides, Phase transfer catalysts: Quaternary

ammonium and Phosphonium salts, Crown ethers. Heck reaction, Suzuki coupling and Mukaiyama reaction. [9]

Oxidation: Introduction, Different oxidative processes. Hydrocarbons-alkenes, aromatic rings, saturated C-H groups (activated and unactivated) Alcohols, diols, aldehyde's, ketones, ketals and carboxylic acids. Amines, hydrazines, and sulphides. Oxidations with ruthenium tetraoxide, iodobenzene diacetate and thallium. (III) Nitrate. [9]

Reduction: Introduction, Different reductive processes. Alkanes, alkenes, alkynes, and aromatic rings. Carbonyl compounds-aldehydes, ketones, acids and their derivatives. Epoxides. Nitro, nitroso, azo and oxime groups. Epoxide, Nitro, Nitroso, azo and oxime groups. Hydrogenolysis. [8]

Rearrangements: General mechanistic considerations-nature of migration, migratory aptitude, memory effects. A detailed study of the following rearrangements. Pinacol-pinacolone, Wagner-Meerwein, Demjanov, Benzil – Benzillic acid. Favorskii, Arndt-Eistert synthesis, Neber, Beckmann, Hofmann, Curtius, Schmidt, Baeyer-Villiger, Shapiro reaction. [8]

Metallocenes, Nonbenzenoid Aromatics and Polycyclic Aromatic Compounds: General consideration. Synthesis and reactions of some representative compounds. (Tropone, tropolone, azulene, ferrocene, phenanthrene, fluorine and undone). [5]

Suggested Books:

1. Modern Synthetic Reactions. H.O. House, W.A. Benjamin.
2. Some Modern Methods of Organic Synthesis, W. Carruthers, Cambridge Uni. Press.
3. Advanced Organic Chemistry, Reactions Mechanisms and Structure, J. March. John Wiley.
4. Principles of Organic synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional.
5. Advanced Organic Chemistry Part B.F.A. Carey and R.J. Sundberg Plenum Press.
6. Rodd's Chemistry of Carbon Compounds. Ed. S. Coffey, Elsevier

CH 641 Separation Techniques and Data Analysis 3-0-0-3

Adsorption and partition chromatography:
(a) Definition of terms, techniques and chemical concepts
(b) Column adsorption chromatography
(c)Partition chromatography-column, paper and TLC [8]

High performance liquid chromatography -
Introduction, choice of the system, instrumentation and applications. [5]

Gas liquid chromatography: Introduction, choice of the system, instrumentation, qualitative and quantitative analysis of mixtures. [5]

Gel permeation/size exclusion Chromatography: Introduction, theory and applications. [5]

Ion exchangers: Theory, action of ion-exchange resins, ion exchange chromatography, exchange capacity, ion-exchange resins and liquid ion-exchange resins, applications of cation and anion ion exchangers. [5]

Solvent Extraction: - Introduction, principles, factors that influence solvent extraction, ion association complexes and applications of solvent extraction. [5]

Data analysis: Types of errors, propagation of errors, accuracy and precision, and least- square analysis, average standard deviation. [6]

Suggested Books:

1. Principles of Instrumental Analysis; D.A. Skoog, Saunders College Publishing.
2. Instrumental Methods of Chemical Analysis; G.W. Ewing, McGraw Hill Books Co.
3. Modern Methods of Chemical Analysis; R. L. Pecsok, L. D. Shields, T. Cairns and L.C. Mc William, John Wiley.
4. Analytical Chemistry: Principles; J.H. Kennedy, Saunders Holt.

CH 651 Environmental and Green Chemistry 3-0-0-3

Atmosphere: Regions of the atmosphere, Reactions in atmospheric chemistry, Earth's radiation balance, Particles, ion and radicals in the atmosphere, stratospheric chemistry: The chemistry of ozone layer, The role of chemicals in ozone destruction, The green-house effect and Global warming, El-Nino phenomenon. [8]

Hydrosphere : Complexation in natural water and waste-water, Micro-organism in aquatic chemical reactions, Eutrophication, Re-cycle of waste-water in process industry, Treatment of sewage and reuse of water in industry and agriculture, Microbiology mediated redox reactions and Nitrogen transformation by bacteria. [8]

Lithosphere : The terrestrial environment, Soil formations, soil properties (physical/chemical), inorganic and organic components in soil, acid-base and ion-exchange reactions in soil, micro and macro nutrients, nitrogen pathways and NPK in soil, waste and pollutants in soil, waste classification and disposal. [8]

Chemical Toxicology: Toxic chemicals in the environments, Impact of toxic chemicals on enzymes, Biochemical effects of arsenic, cadmium, lead, mercury, carbon monooxide, nitrogen oxides, sulphur oxides, ozone, PAN, cyanide, pesticides, insecticides and carcinogens. [7]

Green Chemistry: Green chemistry – Green reagent-dimethyl carbonate and other polymer supported reagents, green catalysts-acid catalyst, basic catalysts, oxidation catalysts, polymer supported catalysts, photocatalyst, green synthesis-phase transfer catalyst. Microwave induction, ultrasound assisted, green solvents- reactions in acidic and neutral ionic liquids, green synthesis of polycarbonates, paracetamol, ibuprofen , citral, urethane, adipic acid and styrene. [8]

Suggested Books:

1. Green Chemistry, P. Anastas, RSC.
2. Environmental Chemistry, S.E. Manahan, Lewis Pub.
3. Environmental Chemistry, Sharma and Kaur, Krishna Pub.
4. Environmental Chemistry, A.K. De, Wiley Eastern
5. Environmental Chemistry, C. Baird, W.H. Freem

CH 661 Advanced Organic Chemistry Laboratory - I 0-0-4-2

I. Qualitative Analysis: Separation, purification and identification of the components of a mixture of three organic compounds (three solids or two liquids and one solid or two solids and one liquid), using TLC for checking the purity of the separated compounds, chemical analysis, IR, PMR and mass spectral data.

II. Multi –step Synthesis of Organic Compounds: The exercise should illustrate the use of organic reagents and may involve purification of the products by chromatographic techniques. (Any Five)

a) Photochemical reaction Benzophenone - Benzpinacol - Benzpinacolone
b) Beckmann rearrangement : Benzanilide from benzene Benzene - Benzophenone - Benzphenone oxime - Benzanilide
c) Benzilic acid rearrangement : Benzilic acid from benzoin Benzoin - Benzil -Benzilic acid.
d) Synthesis of heterocyclic compounds Skraup synthesis: Preparation of quinoline from aniline Fisher Indole synthesis: Preparation of 2-phenylindole from phenylhydrazine.
e) Enzymatic synthesis; Enzymatic reduction : reduction of ethyl acetoacetate using Baker's yeast to yield enantiomeric excess of S (+) ehtyl-3-hydroxybutanoate and determine its optical purity.
f) Biosynthesis of ethanol from sucrose.
g) Synthesis using microwave Alkylation of diethyl malonate with benzyl chloride.
h) Synthesis using phase transfer catalyst. Alkylation of diethyl malonate or ethylacetoacetate with an alkyl halide.

Suggested Books:

1. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
2. Vogel's Textbook of Practical Organic Chemistry, A.R.Tatchell,J.Wiley

CH 671 Advanced Organic Chemistry Laboratory - II 0-0-4-2

Extraction of Organic Compounds from Natural Sources. (Any Five)

a) Isolation of caffeine from tea leaves.
b) Isolation of benzoic acid from tea leaves.
c) Isolation of casein from milk (the students are required to try some typical colour reactions of proteins).
d) Isolation of lactose from milk (purity of sugar should be checked by TLC and PC and Rf values reported).
e) Isolation of nicotine dipicrate from tobacco.
f) Isolation of cinchonine from cinchona bark.
g) Isolation of piperine from black pepper.
h) Isolation of lycopene from tomatoes.
i) Isolation of β-carotene from carrots.
j) Isolation of oleic acid from olive oil (involving the preparation of complex with urea and separation of linoleic acid).
k) Isolation of eugenol from clove.
l) Isolation of (+) limonine from citrus rind.

Suggested Books:

1. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
2. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley

CH 681 Advanced Organic Chemistry Laboratory - III 0-0-4-2

I. Separation and identification of the sugars and Amino acids present in the given mixture by paper chromatography and determination of Rf values

II. Identification of organic compound with the help of spectral datas.

Suggested Books:

1. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
2. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley
3. Practical NMR Spectroscopy, M.L. Martin. J.J. Delpeuch and G.J.

Martin, Heyden.
4. Spectrometric Identification of Organic Compounds, R.M. Silverstein, G.C. Bassler adn T.C. Morrill, John Wiley.
5. Introduction to NMR spectroscopy, R.J. Abraham, J. Fisher and P. Loftus, Wiley.
6. Application of Spectroscopy of Organic Compounds, J.R. Dyer Prentice Hall.
7. Spectroscopic Methods in Organic Chemistry D.H. Williams, I. Fleming, Tata McGraw-Hill.

CH 612 Organic Synthesis-II 3-0-0-3

Disconnection Approach: An introduction to synthons and synthetic equivalents. Disconnection approach, functional group inter-conversions, the importance of the order of events in organic synthesis, one group C-X and two group C-X disconnections, chemoselectivity, reversal of polarity, cyclisation reaction, amine synthesis. [8]

Protecting Groups: Principle of protection of alcohol, amine, carbonyl and carboxyl groups. [6]

One Group C-C Disconnections: Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic Nitro compounds in organic synthesis. [6]

Two Group C-C Disconnections: Diels-Alder Reaction, 1,3-difunctionalised compounds, α, β- unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds. Micheal addition and Robinson annelation. [6]

Ring Synthesis: Saturated heterocycles, synthesis of 3-, 4-, 5- and 6-membered rings. aromatic heterocycles in organic synthesis. [5]

Synthesis of Some Complex Molecules: application of the above in the synthesis of following compounds : Camphor, Longifoline, Cortisone, Reserpine, Vitamin D, Juvabione, Aphidicolin and Fredericamycin A. [8]

Suggested Books:

1. Designing Organic Synthesis, S.Warren. Wiley.
2. Organic Synthesis-Concept, Methods and Starting Materials, J. Fuhrhop.
3. Some Modern Methods of Organic Synthesis. W. carruthers, Cambridge Univ. Press.
4. Modern Synthetic Reactions H.O. House, W.A Benjamin.
5. Advanced Organic Chemistry: Reactions, Mechanisms and Structure, J. March. Wiley.
6. Principles, of Organic Chemistry Part B. F.A. Carey and R.J. Sundberg, Plenum Press.

CH 622 Heterocyclic Chemistry 3-0-0-3

Aromatic Heterocycles: Nomenclature, General chemical behaviour of aromatic heterocycles, classification (structural type), criteria of aromaticity (bond lengths, ring current and chemical shifts in ^{1}H NMR-spectra. Empirical resonance energy, delocalization energy and Dewar resonance energy, diamagnetic susceptibility exaltations). Heteroaromatic reactivity and tautomerism in aromatic heterocycles. [6]

Non-aromatic Heterocycles: Strain-bond angle and torsional strains and their consequences in small ring heterocycles. Conformation of six-membered heterocycles with reference to molecular geometry, barrier to ring inversion, pyramidal inversion and 1, 3-diaxial interaction. Stereo-electronic effects, anomeric and related effects, Attractive interactions-hydrogen bonding and intermolecular nucleophilic electrophilic interactions. Heterocyclic Synthesis Principles of heterocyclic synthesis involving cyclization reactions and cycloaddition reactions. [7]

Small Ring Heterocycles: Three-membered and four-membered heterocycles-synthesis and reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes and thietanes. [4]

Benzo-Fused Five-Membered Heterocycles: Synthesis and reactions including medicinal applications of benzopyrroles, benzofuranes and benzothiophenes. [4]

Meso - ionic Heterocycles: General classification, chemistry of some important meso-ionic heterocycles of type-A and B and their applications. [4]

Six - Membered Heterocycles with one Heteroatom: Synthesis and reactions of pyrilium salts and pyrones and their comparison with pyridinium & thiopyrilium salts and pyridones. Synthesis and reactions of quinolinium and benzopyrylium salts, coumarins and chromones. [6]

Six Membered Heterocycles with Two Heteroatoms: Synthesis and reactions of diazines, triazines, tetrazines and thiazines. Seven-and Large-Membered Heterocycles Synthesis and reactions of azepines, oxepines, thiepines, diazepines thiazepines, azocines, diazocines, dioxocines and dithiocines. [8]

Suggested Books:

1. Heterocyclic Chemistry Vol. 1-3, R.R. Gupta, M. Kumar and V.Gupta, Springer Verlag.
2. The Chemistry of Heterocycles, T. Eicher and S. Hauptmann, Thieme.
3. Heterocyclic chemistry J.A. Joule, K. Mills and G.F. Smith, Chapman and Hall.
4. Heterocyclic Chemistry, T.L. Gilchrist, Longman Scientific Techinal.

5. Contemporary Hetrocyclic Chemistry, G,.R. Newkome and W.W. Paudler, Wiley-Inter Science.
6. An Introduction to the Heterocyclic Compounds, R.M.Acheson, Johnwiely.
7. Comprehensive Heterocyclic Chemistry, A.R. Katrizky and C.W. Rees, eds. Pergamon Press.

CH 632 Chemistry of Natural Products 3-0-0-3

Terpenoids and Carotenoids: Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Citral, Gereniol, α-Terpeneol, Menthol, Farnesol, Zingiberene, Santonin, Phytol, Abietic acid and β-Carotene. [9]

Alkaloids: Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, role of alkaloids in plants. Structure, stereochemistry, synthesis and biosynthesis of the following: Ephedrine, (+)-Coniine, Nicotine, Atropine, Quinine and Morphine. [9]

Steroids: Occurrence, nomenclature, basic skeleton, Diel's hydrocarbon and stereochemistry, Isolation, Structure determination and synthesis of Cholesterol, Bile acids, Androsterone, Testosterone, Estrone, Progestrone, Aldosterone, Biosynthesis of Steroids. [9]

Flavonoids and Anthocyanins: Occurrence, nomenclature, biogenesis and general methods of structure determination. Isolation and synthesis of Apigenin, Luteolin, Quercetin, Myrcetin, Quercetin-3-glucoside, Vitexin, Diadzein, Butein, Aureusin, Cyanidin-7-arabinoside, Cyanidine, Hirsutidin. [9]

Porphyrins: Structure and synthesis of Haemoglobin and Chlorophyll. [3]

Suggested Books:

1. Natural Products : Chemistry and Biological Significance, J. Mann, R.S. Davidson, J.B. Hobbs, D.V. Banthrope adn J.B. Harbome, Longman, Esses.
2. Organic Chemistry: Vol. 2 1L. Finar, ELBS
3. Stereoselective Synthesis: A Practical Approach, M. Norgradi, VCH.
4. Rodd's Chemistry of Carbon Compounds, Ed. S. Coffey, Elsevier.
5. Chemistry, Biological and Pharmacological Properties of Medicinal Plants from the Americas, Ed. Kurt Hostettmann, M.P. Gupta and A. Marston. harwood Academic Publishers.
6. Introduction to Flavonoids, B.A. Bohm. Harwood Academic Publishers.
7. New Trends in Natural Product chemistry, Atta-ur-Rahman and M.I. Choudhary, Harwood Academic Publishers.
8. Insecticides of Natural Origin, Sukh Dev, Harwood Academic

Publishers.

CH 642 Medicinal Chemistry 3-0-0-3

Structure and activity : Relationship between chemical structure and biological activity (SAR). Receptor Site Theory. Approaches to drug design. Introduction to combinatorial synthesis in drug discovery. [9]

Antibiotics and antibacterials: Introduction (i) Antibiotic β-Lactam type Penicillins, Cephalosporins (ii) Antitubercular Streptomycin(iii)Broad spectrumantibiotics-Tetracyclines (iv)Anticancer-Dactinomycin (Actinomycin D) (v)Antifungal –polyenes(vi) Antibacterial Ciprofloxacin,Norfloxacin(vii) Antiviral – Acyclovir [9]

Antimalarials: Chemotherapy of malaria. SAR. Chloroquine, Chloroguanide and Mefloquine. [4]

Non-steroidal Anti-inflammatory Drugs : Diclofenac Sodium, Ibuprofen and Netopam [4]

Antihistaminic and antiasthmatic agents: Terfenadine,Cinnarizine, Salbutamol and Beclomethasone dipropionate [4]

Antineoplastic Agents: Introduction, cancer chemotherapy, special problems, role of alkylating agents and antimetabolites in treatment of cancer. Mention of carcinolytic antibiotics and mitotic inhibitors. Synthesis of mechlorethamine, cyclophosphamide, melphalan, uracil, mustards, and 6-mercaptopurines. Recent development in cancer chemotherapy. Hormone and natural products. [9]

Suggested Books:

1. Medicinal Chemistry; Burger, Wiley Interscience Publications.
2. Principles of Medicinal Chemistry; W. O. Foye Lea & Febiger: Varghese Publishing House
3. The Organic Chemistry of Drug Synthesis; D. Lednicer and L. A. Mitscher Wiley Interscience.
4. Medicinal Chemistry ; Kar, , Wiley Eastern Ltd

CW: *Course Work;* ***MTE:*** *Mid Term Examination;* ***ETE:*** *End Term Examination*

* *Course work (CW) would include regularity, evaluation of assignments, surprise tests, etc.*

[#]*Student will perform* ***project work*** *for a period of 2 months and submit two copies of Dissertation report to the Ddepartment. Presentation and viva voce of project report will be conducted at the end of the spring semester. Dissertation report and presentation will carry 50% weightage each.*

Detailed Syllabus (M.Sc. Physics):

PH 511 Mathematical Physics-I 3 - 1 - 0 - 4

1. **Vector Analysis:** Gradient, divergence, Curl and their representations in Orthogonal curvilinear coordinates. [11]

   Linear algebra: Linear vector spaces, linear operators, dual space, ket and bra notation, Hilbert space, Metric space, Function spaces.

   Matrices: The algebra of matrices, Special matrices, Rank of a matrix. Elementary transformations, Elementary matrices, Equivalent matrices, Solution of linear equations. Linear transformations, Change of Basis, Eigenvalues and eigenvectors of matrices, The Cayley-Hamilton theorem, Diagonalisation of matrices.

2. **Tensor Analysis:** Tensor analysis, Coordinate transformations, scalars, Covariant and Contravariant tensors, Addition, Subtraction, Outer product, Inner product and Contraction, Symmetric and antisymmetric tensors, Quotient law, Metric tensor, Conjugate tensor. [8]

3. Partial Order Differential Equations and Special Functions: Separation of variables-ordinary differential equations, singular points, Bessel, Leguerre, Legendre, Hermite equations. Recurrence relations, generating functions and Rodrigues formulae for the Bessel, Leguerre, Legendre and Hermite functions [11]

4. **Greens Functions:** Sturm-Lioville operators and eigen values and eigen functions. Dirac delta functions-properties and representations, Definitions and physical significance of Greens functions, Eigen function expansion of Greens function, Greens function for ordinary differential operators [9]

Text Books:

1. G. Arfken and H.J. Weber: Mathematical Methods for Physicists, 5th Ed., Harcourt (India), New Delhi, 2001.
2. P.K. Chattopadhyay: Mathematical Physics, Wiley Eastern, Madras, 1990.
3. M.D. Greenberg:Advanced Engineering Mathematics, 2nd Edition, PHI, New Jersey, 1998.
4. B.D. Gupta: Mathematical Physics, 3rdedition, Vikas Publishing House, New Delhi. , 2006.

Reference Books:

1. E. Kreyszig: Advanced Engineering Mathematics, 8th ed., Wiley, New York, 1999.
2. T. Das and S.K. Sharma: Mathematical Methods in Classical and Quantum Physics, University Press India, 1998.
3. Satyaprakash, Mathematical Physics, Sultan Chand & sons, 6th edition, New Delhi, 2004.

PH 521 **Classical Mechanics** **3 - 0 - 0 - 3**

1. **Fundamental Principles and Lagrangian Formulation and Applications:** Newtonian Mechanics: Mechanics of a particle and system of particles, Conservation laws, Constraints, Generalized coordinates, D' Alembert's principle and Lagrange's equation, Hamilton's Variational principle, **Lagrangian Problems:** Double Pendulum, Spherical pendulum, Cylinder rolling down an inclined plane. [8]

2. **Hamiltonian Formulation and Application:** Hamilton's equations, cyclic variables, Principle of least action, **Hamiltonian Problems:** motion of a particle in a central force field, charged particle moving in an electromagnetic field, Equations of motion and first integrals, Kepler's laws, Scattering by central potential, Transformation from center of mass to laboratory frame. [10]

3. **Rigid Body Dynamics and Canonical Transformations:** Rigid body motion – Kinematics - Euler's angles - Angular momentum and kinetic Energy – Moment of inertia tensor - Euler's equations of motion –Canonical transformation and their generators – simple examples, Poisson brackets. [8]

4. **Jacobi Theory and Theory of Small Oscillations :** Hamilton-Jacobi equations – application to Linear Harmonic Oscillator problem - Action Angle variables - Application to Kepler's problem - Oscillatory motion - Theory of small oscillation –Two coupled pendulums, Vibrations of a triatomic molecule. [8]

5. **Relativity:** Reviews of basic ideas of special theory of relativity – Lorentz transformations, relativistic kinematics, mass-energy equivalence [5]

Text Books:

1. H. Goldstein, C.Poole and J.Safko; Classical Mechanics, Pearson, New Delhi, 3rd ed 2002.
2. N.C.Rana and P.S.Joag; Classical Mechanics, Tata Mc: Graw Hill, New Delhi, 1991.

Reference Books:

PH 531 Classical Electrodynamics and Plasma Physics 3 - 1 - 0 - 4

1. **Electrostatics:** Electric potential, Poisson and Laplace‟sequations.Boundary value problems, Uniqueness theorems, Green‟stheorem.Method of images, Method of separation of variables (Cartesian Coordinates, Spherical and Cylindrical Coordinates), Multipole expansion. [6]

2. **Electromagnetic Waves:** Maxwell‟s equations, Boundary conditions, Wave equation and its complex notation, Electromagnetic waves in vacuum, Electromagnetic waves in non-conducting and linear media, Electromagnetic waves in linear conducting media. Poynting theorem, Reflection, refraction and polarization of electromagnetic waves, [6]

3. **Waveguides and Cavities:** Metallic boundary conditions, Electromagnetic waves confined to hallow metallic pipe,TE, TM and TEM modes, TE and TM modes in rectangular waveguides, Bessel‟s function, TE and TM modes in cylindrical waveguides, Dielectric waveguides, TE and TM modes in rectangular and cylindrical Resonant cavities. [6]

4. **Potential, Fields and Radiations:**

   Scalar and vector potentials, Gauge transformation, Coulomb and Lorentz gauge, Retarded potential, Lienard-Wiechert potentials, Fields due to moving charge, Power radiated by an accelerated charge and angular distribution, Bremstrahlung Cerenkov and Synchrotron radiations. [6]

5. **Relativistic Electrodynamics:** Four vectors, Lorentz transformation in terms of Four vectors, Lorentz transformation matrix, Transformation of electromagnetic fields, Field Tensor, Dual field strength tensor, Maxwell's equations in terms of strength tensors, [6]

6. **Plasma Physics:** Elementary Concepts: Plasma Oscillations, Debye Shielding, Plasma Parameters, Magnetoplasma, Plasma Confinement, Motion of charged particles in electric and magnetic fields, Adiabatic Invariants Wave in Plasma: Polarisation, Phase Velocity, Group Velocity, Cut-offs, Resonance for Electromagnetic Wave Propagating Parallel and Perpendicular to the Magnetic Field Propagation at Finite Angle. [9]

Text Books:

1. David J. Griffith; Introduction to Electrodynamics, PHI Private Limited, 1999
2. John D. Jackson; Classical Electrodynamics, Wiley Eastern Limited, 1998
3. F.F. Chen; Plasma Physics and Controlled Fusion,Springer,2006

Reference Books:

1. Edward C. Jordan and Heith G. Balmain; Electromagnetic Waves and Radiating Systems, PHI, 1991
2. W.K.H. Panofsky and M. Phillips; Classical Electricity and Magnetism, Dover Publications; 2nd Ed., 2005
3. J A Bittencourt; Fundamentals of Plasma Physics, 3rd Ed, Springer, 2004

PH 541 **Quantum Mechanics** **3 - 1 - 0 - 4**

1. Limitations of classical mechanics, development of Schrodinger equation, continuity equation, wave packet, admissible wave functions, stationary states. Formalism of wave mechanics, expectation values, quantum mechanical operators for position and momentum in the coordinate representation, Construction of quantum mechanical operators for other dynamical variables from those of position and momentum, Ehrenfest‟s theorem, momentum Eigen functions in the coordinate representation, box normalization and Dirac delta function. Coordinate and momentum representations, Schrodinger equation in momentum representation [10]

2. Brief revision of linear vector spaces, inner or scalar product, Schwarz inequality, state vectors, general formalism of operator mechanics vector, operator algebra, commutation relations, Eigen values and Eigen vectors, Hermitian operators degeneracy, orthogonality eigenvectors of Hermitian operators, noncommutativity of two operators and uncertainty in the simultaneous measurements of the corresponding dynamical variables, the fundamental expansion postulate, representation of state vector, Dirac's bra-ket notations. Matrix representation of operators, change of basis, unitary transformations, quantum dynamics, Schrodinger, Heisenberg and interaction picture. [10]

3. Solution of Schrodinger equation for simple problems, 1-D Square well, step and barrier potentials, 1-D harmonic oscillator, zero point energy. harmonic oscillator problem by operator method. Angular momentum operator, commutation relations, expression for L2 operator in spherical polar coordinates, Role of L2 operators in central force problem, eigen value problem for L2 , separation of Schrodinger equation in radial and angular parts, solution of radial equation for hydrogen atom, 3-d square well potential, parity of wave function, parity operator. [10]

4. Generalized angular momentum, raising and lowering operators, matrices for J2, Jx, Jy, Jz operators, Pauli spin matrices, Addition of angular momenta, Clebich-Gordon Co-efficient, spin angular momentum, spin momentum functions. [9]

Text Books:

1. Ghatak and Loknathan; Quantum mechanics, Springer; 2004
2. D.J. Griffith; Introduction to Quantum Mechanics, Addison Wesley; 2 Ed., 2004.

Reference Books:

4. J.J.Sakurai; Modern quantum Mechanics, Addison Wesley; 2 ed., 2010

PH 551 Statistical Physics and Thermodynamics 3 - 1 - 0 - 4

1. **Review: (Elementary Probability Theory & Thermodynamics):** Preliminary concepts, Random walk problem, Binomial distribution, mean values, standard deviation, various moments, Gaussian distribution, Poisson distribution, mean values. Extensive and intensive variables, laws of thermodynamics, thermodynamic potentials, Maxwell relations, applications of thermodynamics to (a) ideal gas, (b) magnetic material, and (c) dielectric material. Laws of thermodynamics [4]

2. **Statistical Description of System of Particles and Statistical Thermodynamics:** State of a system, microstates, ensemble, basic postulates, behavior of density of states, density of state for ideal gas in classical limit. Thermal interaction between macroscopic systems, approach to thermal equilibrium, dependence of density of states on external parameters, Statistical calculation of thermodynamic variables [10]

3. **Classical Statistical Mechanics :** Microcanonical ensembles and their Equivalence, Canonical and grand canonical ensembles, partition function, thermodynamic variables in terms of partition function and grand partition function, ideal gas, Gibbs paradox, validity of classical approximation, equipartition theorem. Maxwell-Boltzmann gas velocity and speed distribution. Chemical potential, Free energy and connection with thermodynamic variables, First and Second order phase transition; phase equilibrium. [10]

4. **Quantum Statistical Mechanics :** Formulation of quantum statistics, Density Matrix, ensembles in quantum statistical mechanics, simple applications of density matrix. The theory of simple gases : Maxwell-Boltzmann, Bose-Einstein, Fermi Dirac gases. Statistics of occupation numbers, Evaluation of partition functions, Ideal gases in the classical limit. [10]

5. **Ideal Bose System :** Thermodynamic behavior of an Ideal Bose gas, Bose-Einstein condensation. Thermodynamics of Black body radiation, Stefan-Boltzmann law, Wien's displacement law. [5]

Text Books:

PH 561 General Physics and Optics Laboratory 0-0-4-2

Experiments based on Mechanics, Optics, Basic Electronics, PH 531.

PH 571 Programming Language Laboratory 0-0-4-2

Programming based on C^{++} related to Physics.

PH 512 Mathematical Physics -II 3 - 1 - 0 - 4

1. **Complex Analysis :**Analyticity and Cauchy-Reimann Conditions, Cauchy's integral theorem and formula, Taylor's series and Laurent's series expansion, Zeros and singular points, Multivalued functions, Branch Points and Cuts, Riemann Sheets and surfaces, Residues, Cauchy's Residue theorem, Evaluation of definite integrals. [11]

2. **Group Theory:** Definition of groups e.g. matrix groups- transformation groups , Representation of groups: matrix, faithful, Unitary, reducible and irreducible representations' Lie groups and algebras: Definition of Lie groups with examples- O(3), SO(3), SU (2) groups- representation of SU(2), SO(3). [9]

3. **Fourier Series & Transforms**: Integral transforms, Fourier transform, Sine, Cosine and Complex transforms with examples, Properties of Fourier Transforms, Transforms of derivatives [9]

4. **Laplace Transforms:** Convolution Theorems, Momentum representation, Laplace transform, Properties and examples of Laplace Transform, Laplace transforms of derivatives, Use for solving differential equations [10]

Text Books:

2. E. Kreyszig: Advanced Engineering Mathematics, 8^{th}ed., Wiley, New York, 1999.
3. M.D. Greenberg: Advanced Engineering Mathematics, 2^{nd}ed., PHI, New Jerrsey, 1998,

PH 522 **Atomic & Molecular Physics and Lasers** **3 - 1 - 0 - 4**

1. Time independent perturbation theory, First order perturbation theory applied to nondegenerate states, second order perturbation extension to degenerate state, Application of perturbation theory to the ground state energy, He atom (calculation given in Pauling and Wilson), Normal and anomalous Zeeman effect, First order Stark effect in the ground and first excited states of H atom and second order Stark effect of H atom, an-harmonic [11]

2. **Pauli's Principle and Shell Structure:** Systems with several electrons and spin functions. [2]

3. **Complex Spectra:** LS-Coupling scheme, normal triplets, basic assumptions of the theory, identification of terms, selection rules, jj- coupling (Qualitative). [2]

4. **Infrared and Raman Spectra:** Rigid rotator, energy levels, spectrum (no derivation of selection rules), Harmonic oscillator: energy levels, eigenfunctions, spectrum, comparison with observed spectrum, Raman effect, Quantum theory of Raman effect, Rotational and Vibrational Raman spectrum. Anharmonic oscillator: energy levels, Infrared and Raman Spectrum, Vibrational frequency and force constants. Non-rigid rotator: energy levels, spectrum, Vibrating-rotator energy levels, Infrared and Raman spectrum (no derivation of Dunham coefficients), Symmetry properties of rotational levels, influence of nuclear spin. [12]

5. **Electronic Spectra:** Electronic energy and potential curves, resolution of total energy,Vibrational Structure of Electronic transitions. General formulae, Deslandre's table, absorption sequences (qualitative) and Vibrational analysis, Rotational Structure of Electronicbands: General relations, branches of a band, band-head formation, Intensity distribution in avibrational band system. [6]

6. **Lasers:** Basic concept and principle of laser, Component of lasers, Einstein's and Gain coefficient, Types of lasers and pumping, Gas laser, YAG laser and chemical laser, Erbium lasers, Fibre lasers, Erbium-doped fibre lasers. Q-Switching:Laser Spiking and relaxation oscillations, Rate equations, TW and PW laser systems, Application of lasers. [6]

Text Books:

1. Kuhn H., Atomic Spectra, Academic Press, 1962
2. Herzberg I G., Molecular Spectra and Molecular Structure Van-Nostrand Rein-hold, 1950

4. Vishwakarma H. L., Applied Physics, Wiley India Pvt. Ltd., 1st Edition, 2013.

PH 532 **Condensed Matter Physics** **3 - 0 - 0 - 3**

1. **Elastic Constants:** Binding in solids; Stress components, stiffness constant, elastic constants, elastic waves in crystals. [5]

2. **Lattice Dynamics and Thermal Properties:** Rigorous treatment of lattice vibrations, normal modes; Density of states, thermodynamic properties of crystal, anharmonic effects, thermal expansion. [5]

3. **Energy Band Theory**: Electrons in a periodic potential: Bloch theorem, Nearly free electron model; tight binding method; Semiconductor Crystals, Band theory of pure and doped semiconductors; elementary idea of semiconductor superlattices. [8]

4. **Transport Theory:** Electronic transport from classical kinetic theory; Introduction to Boltzmann transport equation; electrical and thermal conductivity of metals; thermoelectric effects; Hall effect and magnetoresistance. [7]

5. **Dielectric Properties of Materials:** Polarization mechanisms, Dielectric function from oscillator strength, Clausius-Mosotti relation; piezo, pyro- and ferro-electricity. [6]

6. **Liquid Crystals:** Thermotropic liquid crystals, Lyotropic liquid crystals, long range order and order parameter, Various phases of liquid crystals, Effects of electric and magnetic field and applications, Physics of liquid crystal devices. [8]

Text Books:

1. Kittel C., Introduction to Solid State Physics, Wiley, New York, 2005.
2. Kittel C., Quantum Theory of Solids, Wiley, New York, 1987.
3. Ziman J., Principles of the Theory of Solids, Cambridge University Press, 1972.

Reference Books:

1. Ibach H. and Luth H., Solid State Physics, Springer Berlin, 3rd ed. 2002.

3. Chandrasekhar S. Liquid Crystals, Cambridge University, 2nd ed. 1992.
4. Sluckin T.J., The Liquid Crystal Phases, Physics & Technology, Contemporary Physics Taylor & Francis, 2000.

PH 542 **Computational Physics** **3 - 0 - 0 - 3**

1. **Errors analysis and curve fittings:** General formula for errors – Errors of observation and measurement, Empirical formula, Graphical method, Method of averages, Least square fitting, curve fitting, parabola, exponential. Least square curve fittings methods for linear and polynomial functions. [7]

2. **Numerical solution of algebraic and transcendental equations:**

   The bisection method, the iteration method, The method of false position, Newton – Raphson method. [7]

   Linear systems of equations: Direct methods, Gauss elimination method, Gauss–Seidel method.

3. **Interpolation:** Finite differences (Forward, backward and central difference), Newton Interpolation formula, Central difference Interpolation formula, Cubic spline interpolation formula, Newton's interpolation formula for unequal intervals. [8]

4. **Numerical Differentiation and Integration:** Newton's forward and backward difference formula for numerical derivatives, Numerical Integration: the trapezoidal rule and Simpson's rule. [7]

5. **Numerical Solutions of Ordinary and Partial Differential Equations:** Taylor's method, modified Euler's method, second and fourth order Runge-Kutta methods, Predictor-Corrector methods. Finite-difference approximation to derivatives, S.O.R. and Jacobi methods for solving Laplace equations, Parabolic equations and Hyperbolic equations. [10]

Text Books:

1. S.S. Sastry; Introductory Methods of Numerical analysis, PHI New Delhi, 3rd Ed, 2003.
2. E. Balagurusamy; Numerical methods, Tata Mc Graw Hill, New Delhi, 2008.

Reference Books:

1. Erwin Kreyszig; Advanced Engineering Mathematics, 10^{th}ed, John Wiley and Sons, 2011.
2. W.H. Press, B.P.Flannery, S.A.Teukolsky, W.T. Vetterling ; Numerical Recipes in C, , Cambridge University, 1996.

PH 552 **Elements of Nuclear and Particle Physics** **3 - 0 - 0 - 3**

1. **Nuclear Properties and Models:** General properties of Nuclei: nuclear size, Rutherford scattering, nuclear radius and charge distribution, nuclear form factor, mass and binding energy, Angular momentum, parity and symmetry, Magnetic dipole moment and electric quadrupole moment. Liquid drop model, Bethe-Weizs¨acker binding energy/mass formula, Fermi model, Shell model. [6]

2. **Nuclear Two-body Problem:** Properties of deuteron, Schr¨odinger equation and its solution for ground state of deuteron, rms radius, spin dependence of nuclear forces, electromagnetic moment and magnetic dipole moment of deuteron and the necessity of tensor forces. Experimental n-p scattering data, Partial wave analysis and phase shifts, scattering length, magnitude of scattering length and strength of scattering, Significance of the sign of scattering length; Scattering from molecular hydrogen and determination of singlet and triplet scattering lengths, effective range theory, low energy p-p scattering, Nature of nuclear forces: charge independence, charge symmetry and iso-spin invariance of nuclear forces. [10]

3. **α, β and γ Decay:** α-decay, Gamow theory, Barrier penetration, fine structure of α spectrum. alpha decay, neutrino hypothesis β emission and electron capture, Fermi's theory of allowed β decay, Selection rules for Fermi and Gamow-Teller transitions, Parity non-conservation and Wu's experiment, Gamma decay- Multiple transitions in nuclei- Angular momentum and parity selection rules [8]

4. **Nuclear Reactions and Fission:** Different types of reactions, Quantum mechanical theory, Resonance scattering and reactions — Breit Wigner dispersion relation; Compound nucleus formation and break-up, Statistical theory of nuclear reactions and evaporation probability, Optical model; Principle of detailed balance, Transfer reactions, Nuclear fission and fusion. [8]

5. **Elementary Particle Physics:** Elementary particles: Photons, quarks, baryons, mesons, leptons, hadrons, Elementary idea of quark model. Conservation laws in particle reactions, Spin and parity assignments, isospin, strangeness; Gell-Mann-Nishijima formula, C, P, T invariance and applications of symmetry arguments to particle reactions, parity non-conservation in weak interaction; Relativistic Kinematics. [7]

Text Books:

1. B L Cohen; Concepts of Nuclear Physics, Tata-McGraw Hill, 2008
2. Kenneth S. Krane; Introductory Nuclear Physics, Wiley India Pvt., 1988.
3. I.Kaplan;Nuclear Physics; Addison-Wesley, 1955

Reference Books:

2. S.B.Patel; Introductory Nuclear Physics, New Age International, 1991.
3. D.C.Tayal; Nuclear Physics, Himalayan Publishing House, 5th Edition, 2014.
4. R. R. Roy and B. P. Nigam; Nuclear Physics: Theory and Experiments, John Wiley & Sons, 1967.

PH 562 Computational Physics Laboratory **0-0-4-2**

Practical exercises based on 542, 512 and computational methods in Physics

PH 572 Advance Physics Laboratory **0-0-4-2**

Practical exercises based on 522, 532, 552 and related experiments.

PH 611 Semiconductor Physics and Devices 3 - 1 - 0 - 4

1. **Network Theorems:** Thevenin's, Norton's theorem and analysis of equivalent Circuits of networks. [9]

   Power Supplies: Half-Wave, Full-Wave and Bridge rectifiers with Capacitive input, Inductance input and PI filters, Shunt regulated power supplies using Zener diodes, Series regulated power supply. I. C. Voltage regulators.

2. **Transistor Amplifiers:** The CE, CB and CC configurations. Class A, Class B and Class C amplifiers. Low-frequency amplifiers. The transistor hybrid model and the h-parameters for a transistor. Conversion formulae for the h-parameters of the different transistor configurations. Analysis of a transistor CE amplifier at low frequencies using h-parameters. The CE amplifier with un-bypassed emitter resistor. The emitter follower at low frequencies. The emitter-coupled differential amplifier and its characteristics. Low frequency power amplifiers. The push-pull and the complementary - symmetry power amplifiers. Transistor biasing, Self-bias and thermal stability. [10]

3. **BJT and FET:** The BJT at high frequencies – the hybrid – model. Analysis of CE amplifier at high frequencies. Single stage CE amplifier and the gain-bandwidth product. Cascaded amplifiers. The emitter follower at high frequencies. The field effect transistor and its small signal model. The CS and CD amplifiers at low frequencies. Biasing the FET. The CS and CD amplifiers at high frequencies. [7]

4. **Feedback:** The Gain of an amplifier with feedback. General characteristics of negative feedback amplifiers. Stability of feedback amplifiers, The Barkhaussen Criteria. Grain and Phase margins. Compensation. Sinusoidal oscillators: RC oscillators – The Phase shift and the Wien's bridge oscillators. LC oscillators. Frequency stability and the crystal oscillators. [7]

5. **Operational Amplifiers:** Characteristics of an ideal operational amplifier. Applications of operational amplifiers – Inverting and Non-inverting amplifiers. Summing circuits, integration and Differentiation. Waveform generators. [6]

Text Books:

1. Maillman and Halkias, Integrated Electronics, Tata McGraw-Hill 1972.
2. V K Mehta; Principal of Electronics S. Chand and Sons 2008.
3. Donald Neamen; Semiconductor Physics and Devices, McGraw-Hill; 4th ed. 2011.

Reference Books:

1. M K Achuthan and K N Bhat; Fundamental of Semiconductor Devices, TMH 2006.
2. Rolf Enderlein, Norman J. M. Horing; Fundamentals of semiconductor physics and devices, World Scientific Pub, 1997.
3. John D. Ryder & Charles M. Thomson; Electronic Circuits & Systems, PHI Publication, 1976.

PH 621 **Digital Electronics** **3 - 1 - 0 - 4**

1. **Binary Number System:** Binary number system and other codes, binary arithmetic series and parallel processing of bites, logic of the addition operation, logic fundamentals, Boolean theorems, synthesis of Boolean functions, Karnaugh diagram. [8]

2. **Basics of Digital Electronics**: Basics and derived gates: OR gate, AND gate, NOT gate, NAND gate, NOR gate, XOR gate, Boolean identities and logic circuits using gates, Boolean algebra- DeMorgans Theorems, Sum of products and product of sums expressions, Minterm, Maxterm, SOP and POS from truth tables. [10]

3. **Combinational and Sequential Circuits:** Parity checker and generator, Half adders, full adders, Binary adders, decoders, multiplexer, demultiplexer, encoders, ROM and applications, Digital comparator, Flip-Flops- RS, JK, master slave JK, T-type and D-type flip flops, Shift-register and applications, Asynchronous counters and applications, A/D and D/A converters; Microprocessor and microcontroller basics. [12]

4. **Digital Circuits with MOS:** MOSFET, MOS invertors- static inverter, dynamic inverter, two phase inverter, MOS NAND gates, NOR gates, complementary MOSFET technology, CMOS inverter, CMOS NOR gates and NAND gates, MOS shift register and RAM. [9]

Text Books:

1. Malvino & Brown:Principle Of Digital Computer Electronics, 3rd Ed., McGraw-Hill, 1992.
2. Morris Mono: Digital logic Design, 4th edition, PHI, 2006.
3. J. Millman and C.C. Halkias: Integrated Electronics, Tata McGraw Hill, New Delhi, 1991.

Reference Books:

1. Mottershed: Electronics fundamentals and application, 8th edition, PHI, 2009.
2. A.P. Malvino and D.P. Leach, Digital Principles and. Applications, 6thed., TMH, 2003.

PH 631 **Physics of Nano-Materials** **3 - 0 - 0 - 3**

1. **Introduction**: An overview of quantum mechanical concepts related to low dimensional systems. [12]

   Concepts related to Electronic Structure: direct lattice, Reciprocal lattice, Brilloujn zones, Diffraction from 2D structures, Free —electron approximation, periodic boundary Conditions, allowed k values, Fermi energy, density of electronic states for electron gas, Energy bands, Electron statistics, carrier concentration and Fermi level, Direct- and Indirect- gap semiconductors, Lattice matching, Effective mass, Variation of energy bands with alloy compositoin and its exploitation for devices.

2. **Hetrostructures and Electron States**: Hetero junctions, Type I and Type II hetero structures, Classification of Quantum confined systems, Electrons and holes in Quantum wells. Surface to volume ratio in quantum confined systems, Electronic wave functions, energy sub bands and density of electronic states in Quantum wells, Quantum wires, and Quantum dots, Effective mass mismatch in hetero structures. Coupling between Quantum wells, Super lattices, Wave functions and Density of States for super lattices, Unit cell for quantum well, for quantum wire and for quantum dot. [12]

   EXCITONS: Excitons in bulk, in Quantum structures and in hetero structures.

3. **Nanoclusters and Nanoparticles**: Introduction, Particle shape and the surface, Collective surface area, Porosity, Spherical cluster approximation, Metal nanoclusters – Magic numbers, Geometric structures, Electronic structure, Bulk to nanotrasition, Magnetic clusters; Semiconducting nanoparticles; Rare-gas and molecular Clusters. [6]

4. **Carbon nanotubes**: Chiral vector, Chiral angle and the Unit cell for the Carbon nanotubes. [5]

5. Bulk Nanostructurs Materials: Solid disordered nanostructures, Nanostructured crystals, photonic crystals. [4]

Text Books:

1. V.V. Mitin, V.A. Kochelap, and M.A. Stroscio; Quantum Heterostructures: Microelectronics and Optoelectronics, Cambridge University Press, 1999.
2. C.P. Poole, Jr. and F.J. Owens; Introduction to Nanotechnology, Wiley India, 2003.
3. T. Pradeep; Nano: The essentials, Tata McGraw-Hill, New Delhi, 2007.
4. P. Harrison; Quantum Wells, Wires, and Dots: Theoretical and Computational Physics of Semiconductor Nanostructures, Wiley, 2009.

Reference Books:

1. G. Streetman and S. Banerjee; Solid State Electronic Devices, Prentice Hall of India, 6th Edition, 2005.
2. A. Y. Shik ; Quantum Wells: Physics and Electronics of two-dimensional systems, World Scientific, 1997.
3. G.L. Hornyak, J. Dutta, H.F. Tibbals and A.K. Rao; Introduction to Nanoscience, CRC Press, 2009.

PH 651 Electronics Laboratory 0-0-4-2

Practical exercises based on 611, 621 related to analog and digital electronics.

PH 641 Ancient Indian Science 2 - 0 - 0 - 2

1. **Reference of Science in Vedas** [3]

2. **SAGE Scientists and Their Achievements:** Baudhayan, Aryabhatta,Brahmgupta, Bhaskaracharya , varahamihira, Mahaviracharya, Acharya Kanad, Varahamihira, Nagarjuna, Acharya Bhardwaj, SusrutaAtreya, Acharya Charak, Patanjali. [8]

   Scientists of modern era: C. V. Raman (1888-1970), S. Ramanujan (1887-1920), J. C. Bose (1858-1937), H. J. Bhabha (1909-1966), V. A. Sarabhai (1919-1970), H. G. Khorana (1922-2011), Harish Chandra (1923 - 1983), S. N. Bose (1894 - 1974)), S. S. Bhatnagar (1894 – 1955), Visvesvaraya (1860 –1962)[, MeghnadSaha (1893–1956) etc.

3. **Discoveries in Astronomy and Physics of Ancient India:** Earth's rotation, Gravity, Speed of light, Lunar Eclipse, Planetary motion, Mechanics, Matter, Magnetism and Optics [5]

4. **Vedic Mathematics**: Algebra & Arithmetic, Geometry, Trigonometry [5]

5. **Chemical and Biological advancement of Ancient India**: Chemistry (Distillation, Caustic Alkali, Cell and Explosives), Metallurgy (Crucible, Furnaces, Air Blowers, Metal Powder, Binder), Botany, Medicine and Pharmacology. [5]

Text Books:

1. Pride of India- A Glimpse into India's Scientific Heritage. SamskritaBharati, New Delhi, 2006.
2. Science in Samskrit, SamskritaBharati, New Delhi, 2007.
3. N. K. Jain; Science and Scientists in India. Kalyani India, Delhi, 2001.
4. Awakening Indians to India, All India ChinmayaYuvaVendra, Central Chinmaya Mission Trust, Mumbai, 2003.

Reference Books:

1. N.K. Jain; History of Science and Scientific Methods. Oxford and IBM Publishing Co. Pvt. Ltd., New Delhi, 1990.
2. S. Soni; India's Glorious Scientific Tradition, Ocean Books Pvt. Ltd., New Delhi, 2006.

PH 612 **Advance Quantum Mechanics** **3 - 1 - 0 - 4**

1. Time dependent perturbation theory, transition rate, Fermi Golden rule, constant perturbation harmonic in time, radiative transitions, absorption and induced emission,atomic radiation, dipole approximation, Einstein's atomic radiation, Einstein‟s A and b coefficients and their calculations.Approximation methods: W. K. B. method and its application to barrier penetration.Variational principle and its application to simple cases like ground state of He atom and deuteron in Yukawa potential. [10]

2. System of identical particles, exchange and transposition operators, totally symmetric and antisymmetric wave function and their expressions for a system of non-interacting particles, statistics of systems of identical particles, Relation of statistics with spin, Ortho and para states of the helium atom and their perturbation by Coulomb repulsion.Hamiltonian of a molecule, Born-Oppenheimer approximation, outline of Heitler-London theory of the hydrogen molecule. [11]

3. Scattering theory, scattering cross-section in laboratory and centre of mass system, scattering by a central potential , Partial wave method, phase shifts and their importance, scattering by a square well; potential and a perfectly rigid sphere, resonance scattering. [6]

4. Relativistic wave equation, the Klein-Gordon equation and initial difficulties in interpreting its solutions, Dirac‟s relativistic equation, Dirac's matrices, explanation of the spin of the electron, equation for an electron in an electromagnetic field and explanation of the magnetic moment due to the electron spin, spin-orbit interaction, solution for hydrogen atom in Dirac‟s theory, negative energy states and their qualitative explanations. [12]

Text Books:

1. B.Crasemman and J.D.Powell; Quantum Mechanics, Addison-Weslev, 1965.
2. L.I.Schiff; Quantum Mechanics, TMH, 2010.

Reference Books:

2. Ghatak and Loknathan; Quantum mechanics, Springer; 2004
3. D.J. Griffith; Introduction to Quantum Mechanics, Addison Wesley; 2 Ed., 2004.

4. Pauling, Introduction to Quantum Mechanics, Dover Publication 2008.

PH 622 Instrumentation and Characterization Techniques 3 - 0 - 0 - 3

1. **Imaging Techniques:**

Optical microscopy: Use of polarized light microscopy, Phase contrast microcopy, Interference Microscopy, hot stage microscopy - surface morphology. [2]

Scanning electron microscopy: Basic design of the scanning electron microscopy , Modes of operation, Backscattered electrons, secondary electrons, X-rays – typical forms of contrast, Resolution and contrast, Specimen Preparation, application of SEM. [5]

Transmission electron microscopy: Basic principles, Modes of operation, Specimen preparation, Diffraction in imperfect crystals, Dislocations, precipitates, Structure of Grain boundaries and interface. [4]

Force microscopy: Basic concepts-Interaction force, AFM and the optical lever, force curves, measurements and manipulation, feedback control, different modes of operation, contact non-contact and tapping mode, Imaging and manipulation of samples in air or liquid environments-Imaging soft samples, Applications . [6]

Scanning tunneling microscopy: Principle, Instrumentation, importance of STM for nanostructures, surface and molecular manipulation using STM. [4]

2. **Qualitative and Quantitative analysis**

X-Rays powder diffraction: Single crystal diffraction techniques, Determination of accurate lattice parameters, structure analysis , profile analysis, particle size analysis using Scherer formula. [3]

Thermal analysis methods: Principle and Instrumentation of Thermogravimetry, Differential Thermal Analysis and Differential scanning calorimetry. Electron Energy Loss Spectroscopy; Atom probe field ion microscopy-X-Ray Photoelectron Spectroscopy, X-Ray Characterization, EDAX and WDA analysis, EPMA, ZAP corrections. [7]

Spectroscopic techniques: Introduction to Molecular Spectroscopy and Differences-With Atomic Spectroscopy-Infrared (IR) Spectroscopy and Applications- Microwave Spectroscopy-Raman Spectroscopy and CARS Applications-Electron Spin Resonance Spectroscopy; New Applications of NMR Spectroscopy; Dynamic Nuclear Magnetic Resonance; Double Resonance Technique. [8]

Text Books:

1. Cullity, B. D., Elements of X-ray Diffraction, 4th Edition, Addison Wiley, 1978.
2. Loretto, M. H., Electron Beam Analysis of Materials, Chapman and Hall, 1984.

Reference Books:

3. Rose, R.M., Shepard, L.A. and Wulff, J., The Structure and Properties of Materials, 2nd Ed., Wiley Eastern Ltd, 2005.

PH 661 **Elements of Nanoscience** **3 - 1 - 0 - 4**

1. **History , Scope and Classes of Nanomaterials:** Pre-nanotechnology, origins of concepts of Nano, Basics and basis of Nanotechnology, Generations and Development, Molecular aspects, Top down and Bottom up approaches, fullerenes: properties of fullerenes [8]

2. **Nanomagnetics**: Basics of Ferromagnetism, effect of bulk nanostructuring of magnetic properties, dynamics of nanomagnets, nanopore containment, giant and colossal magnetoresistance, applications in data storage, ferrofluids, Superparamagnetism, effect of grain size, magneto-transport, Magneto-electronics, magneto-optics, spintronics. [12]

   Quasicrystals: Basic definition of quasicrystal, Fibonaci Sequence, Penose Tiling and its Relevance to Structure of Quasicrystals.

3. **Optical and Vibrational Spectroscopy**: spectroscopy of semiconductor; infrared surface spectroscopy, Raman spectroscopy, Brillouin spectroscopy, luminescence (photoluminescence, thermoluminescence), [7]

4. **Biological Materials**: biological buildings blocks, nucleic acids, biological nanostructures. [6]

5. **Nanomachines and Nanodevices**: MEMS, MEMSs, molecular and super molecular switches. [6]

Text Books:

1. S. Shanmugam; Nanotechnology, MJP Publishers, Chennai, 2010.
2. Guozhong Cao; Nanostructures and Nanomaterials, Imperial College Press, London, 2004.
3. Charles P. Poole, Frank J Owens; Introduction to Nanotechnology, Wiley, 2003.
4. T. Pradeep; Nano: The Essentials, TMGH, New Delhi, 2009.

Reference Books:

1. Hari Singh Nalwa, “Nanostructured Materials and Nanotechnology”, Academic Press, 2002

PH 671 **Nano-Fabrication Techniques** **3 - 1 - 0 - 4**

1. **Physical and Chemical Methods:** Ball Milling – Electrodeposition - Spray Pyrolysis - Flame Pyrolysis - Inert Gas Condensation Technique (IGCT) – Thermal evaporation – Pulsed Laser Deposition (PLD) – DC/RF Magnetron Sputtering - Molecular Beam Epitaxy (MBE), Sol-Gel Process — Self-assembly – Metal Nanocrystals by Reduction - Solvothermal Synthesis - Photochemical Synthesis - Sonochemical Routes – Reverse Micelles and Micro emulsions - Combustion Method – Template Process - Chemical Vapor Deposition (CVD) – Metal Oxide Chemical Vapor Deposition (MOCVD) [12]

2. **Optical Lithography:** Introduction - Necessity for a clean room- different types of clean rooms-construction and maintenance of a clean room- Lithography -Optical lithography- Optical projection lithography- Multistage scanners resolution- Photomask- Binary mask- Phase shift mask - Attenuated phase shift masks - alternating phase shift masks - Off axis illumination- Optical proximity correction - Sub resolution assist feature enhancement-Optical immersion lithography- Optical interferometric lithography- Holographic lithography. [9]

   Maskless optical projection lithography - Zone plate array lithography-Extreme ultraviolet lithography.

3. **Electron Beam and Ion Beam Lithography:** Scanning electron-beam lithography- maskless EBL- parallel direct-write e-beam systems-electron beam projection lithography - Scattering with angular limitation projection e-beam lithography- Projection reduction exposure with variable axis immersion lenses. [8]

   Focusing ion beam lithography - Ion projection lithography - Projection focused ion multi-beam - Masked ion beam lithography- Masked ion beam direct structuring- atom lithography.

4. **Nanoimprint Lithography and Soft Lithography**: Nanoimprint lithography (NIL)- NIL- hot embossing- UV-NIL- Soft Lithography- Moulding/Replica moulding: Printing with soft stamps- Edge lithography -Dip-Pen Lithography-set up and working principle. [5]

5. **Etching Techniques**: Reactive Ion etching- RIE reactive ion etching- Magnetically enhanced RIE- IBE Ion beam etching- Other etching techniques. [5]

Text Books:

1. Zheng Cui; Nanofabrication-Principles, Capabilities and Limits, Springer, 2008
2. Guozhong Gao; Nanostructures & Nanomaterials: Synthesis, Properties & Applications, , Imperial College Press, 2004.

Reference Books:

1. K. Suzuki and B W Smith, Microlithography: Science and Technology, 2nd Ed., CRC Press, 2007.
2. M.Ratner, D Ratner. Nanotechnology - A Gentle Introduction to the Next Big Idea, Pearson, 2003.
3. Bhushan, B., Handbook of nanotechnology, 2nd Ed., Springer, 2007.

PH 632 CNT and Sensor Applications 3-1-0-4

1. **Structure of CNTs**
   Allotropes of carbon, Buckminsterfullerene, Fullerene-related carbon nanotubes, Single- and double-walled nanotubes, Catalytically produced carbon nanotubes, Bonding in carbon materials, Vector notation for carbon nanotubes, Unit cells of nanotubes, Symmetry classification of nanotubes, Defects in the hexagonal lattice, The layer structure of multiwalled nanotubes, Theory of nanotube capping, multiwalled nanotubes produced by arc-evaporation, multiwalled nanotubes produced by catalysis, experimental studies: single-walled nanotubes General features Electron diffraction of SWNTs, HRTEM of SWNTs, Scanning tunnelling microscope of SWNTs, Neutron diffraction.
   [9]

2. **Physical properties of CNTs**
   Electronic properties of graphite, Electronic properties of nanotubes, Band structure of single-walled tubes, Effect of curvature and of tube–tube interactions, Electron transport in nanotubes, Effect of a magnetic field, Correlation between electronic properties and structure of single-walled nanotubes, Quantum conductance, Electronic properties of nanotubes in a magnetic field, Superconductivity, Mechanical properties of carbon nanotubes, Optical properties of nanotubes, Thermal properties of nanotubes.
   [8]

3. **Chemistry and biology of CNTs**
   Covalent functionalization, Functionalization of nanotube ends and defects, Functionalization of sidewalls, Non-covalent functionalization, Characterizing chemically functionalized nanotubes, Biological functionalization, Proteins, Nucleic acids, Toxicity of carbon nanotubes.
   [6]

4. **Synthesis, Purification and processing of CNTs**
   Production of multiwalled nanotubes by arc-evaporation, Growth mechanisms of multiwalled nanotubes in the arc, Production of multiwalled nanotubes by high-temperature heat treatments, Production of single-walled nanotubes by arc-evaporation, Production of single-walled nanotubes by laser vaporization, Growth mechanisms of SWNTs in the arc and laser methods, Purification of single-walled and multiwalled tubes, Processing of single-walled and multiwalled nanotubes.

   [10]

5. **Probes and sensors Applications**
   Nanotube tips for atomic force microscopy, Preparing nanotube tips: mechanical assembly, Preparing nanotube tips: chemical vapour deposition, Imaging using nanotube AFM tips, Gas sensors, Biosensors, Physical sensors.
   [6]

Text Books

1. Applied Physics of Carbon Nanotubes: Fundamentals of Theory, Optics and Transport Devices, Rotkin Slava V. , Subramoney Shekhar, Springer (2005)
2. Aligned Carbon Nanotubes: Physics, Concepts, Fabrication and Devices, Zhifeng Ren, Yucheng Lan, Yang Wang, Springer-Verlag Berlin Heidelberg (2013)

3. Carbon Nanotube and Graphene Device Physics, H.-S. Philip Wong, Deji Akinwande , Cambridge University Press (2011)

Reference Books

1. Carbon Nanotubes – Growth and Applications Edited by Mohammad Naraghi Published by InTech Janeza Trdine 9, 51000 Rijeka, Croatia (2011)
2. Carbon nanotubes : properties and applications Edited by Michael J O'Connell, CRC Press (2006)
3. Carbon Meta-Nanotubes: Synthesis, Properties and Applications, Edited by Mark Monthioux, Willey (2011)

PH 642 Nanophotonics 3 - 1 - 0 - 4

1. **Photons and electrons:** Isomorphism of Schrodinger and Helmholtz equations, free space propagation. Confinement of photons and electrons. Bloch waves, reciprocal space, and Brrilouin zones Propagation through well and barriers, Cooperative effects for photons and electrons. [8]

2. **Quantum Confinement Effect:** Quantum confinement effects in solids, nanoscale interaction dynamics, quantum wells, quantum wired, quantum dots, quantum rings. Manifestation of quantum confinement: linear and nonlinear optical properties. [10]

3. **Photonic Crystals**: Basics Concepts, Light in periodic nanostructures, Features of Photonic Crystals, photonic bandgaps, Band gap and band structures in 1-D, 2-D and 3-D photonic lattices. Photonic Crystal Sensors, Microstructure Fibers: Photonic crystal fiber, photonic band gap fibers (PBG), band gap guiding, single mode and multi mode, dispersion and nonlinear effect of Photonic crystal devices using crystal fibers. [12]

4. **Plasmonics:** Optical response of metals, plasmons, shell nanoparticles, metal-dielectric shell nanoparticles, Nonlinear optics with surface plasmons, Plasmon waveguides, Applications of Metallic Nanostructures: nanolasers, nanowire lasers, resonant cavity LED, Metamaterials. [9]

Text Books:

1. Paras N Prasad: Nanophotonics, John Wiley & Sons, 1st edition, NJ, 2004.
2. S V. Gaponenko, Introduction to Nanophotonics, 1st ed., Cambridge University Press, NY, 2010.
3. J D Joannopoulos, R.D. Meade and J.N.Winn: Photonic Crystals: Modelling Flow of Light; 2nd ed. , Princeton University Press, NJ, 2008.

Reference Books:

1. Lukas Novotny and Bert Hecht: Principles of Nano Optic,2nd ed., Cambridge Univ. Press, 2012.
2. J MLourtioz, H Benisty; V Berger, Jean-Michel Gerard: Photonic Crystals: Towards Nanoscale Photonic Devices, 2nd ed., Springer, Berlin 2008.

PH 681 Advance Opto-Electronics 3 - 1 - 0 - 4

1. **Optical Properties of Semiconductors:** Basic of semi-conductors, PN junction, carrier recombination and diffusion, injection efficiency, heterojunction, internal quantum efficiency, External quantum efficiency, double hetero-junction, fabrication of hetero-junction, Solar cells, photo-resistors quantum wells and super lattices. [6]

2. **Optical Sources:** Current Densities and Injection Efficiency, Injection Luminescence and the Light-Emitting Diode, Spectrum of Injection Luminescence, Selection of Materials for LEDs, Internal/External Quantum Efficiency The Hetero-junction, Surface-Emitting LEDs, Edge-Emitting LEDs, Super-luminescent Diodes, LASER as an amplifier of light and necessary conditions for amplification, special properties of LASER- monochromatic, coherent and light power nature, directionality, divergence and attenuation of LASER beam. Study of three level Laser (Ruby LASER), Study of four level laser (He-Ne laser), semiconductor laser and applications of high power, low power continuous wave and pulse lasers [14]

3. **Light Detectors:** Idea of light detectors and their basic types, Optical Absorption Coefficient and Photocurrent, Quantum Efficiency, Responsivity, Long-Wavelength Cut-off, p-i-n-Photodiode, Avalanche photodiodes (APDs) [4]

4. **Opto-electronic Modulator and Display Devices:** Optical polarization, Electro-optic effect, Longitudinal and Transverse Electro-optic modulator, Acousto-optic effect, Raman-Nath Modulator, Bragg Modulator. Display devices, Photoluminescence, cathodo luminescence, EL display, LED display, drive circuitary, plasma panel display, liquid crystals, properties, LCD displays, numeric displays. [9]

5. **Organic Optoelectronic Devices:** Organic Light-Emitting Diodes (OLEDs), Multilayer OLEDs. Structure, Fundamental processes Efficiency, Characterization of OLEDs Organic photovoltaic diodes (OPVDs), Exciton absorption, Exciton dissociation ,Charge collection Characterization of OPVDs [6]

Text Books:

1. A. YarivOptical Electronics,4thed, Saunders Collage Press, 1991.
2. A. Ghatak&K.Thyagarajan; Optical Electronics, Cambridge University Press, 1989.
3. R. P. Khare; Fiber Optics and Optoelectronics, Oxford University Press, 2004.
4. Wolfgang Brutting;Physics of Organic Semiconductors, Wiley, 2006.

Reference Books:

2. A. Roger, Essentials of Optoelectronics, Chapman Hall, 1997.
3. Jasprit Singh, Electronic & Optoelectronic properties of Semiconductor, Cambridge University Press, 2007.

PH 691 **Fiber and Non-linear Optics** **3 - 1 - 0 - 4**

1. **Basic Optics :** Basic optical laws, reflection at plane interface, Brewster angel and total internal reflection, Linear and nonlinear medium, Maxwell's equations, Electromagnetic waves phase and group velocity, modes in a planar and cylindrical wave guides, polarization, dielectric susceptibility, first and higher order susceptibilities. [6]

2. **Optical Fiber Waveguides and Sources:** Ray theory transmission: Total internal reflection, acceptance angle, numerical aperture and skew rays, evanescent field and Goos-Haechen shift, step index and graded index fibers, single and multi-mode fibers. [5]

3. **Transmission Characteristics of Optical Fibers:** Attenuation , material absorption losses in silica fibers, linear and nonlinear scattering losses, fiber bend loss, mid-infrared and far-infrared transmission, intra-modal and inter-modal dispersion, overall fiber dispersion in multimode and single-mode fibers, modal birefringence. [8]

4. **Fabrication Techniques and Connection of Optical Fibers:** Glass fibers, Preparation of optical fibers, Liquid-phase (melting) and Vapour-phase deposition techniques, characteristics of single-mode, multimode, plastic-clad and all-plastic fibers, Stability of the Fiber Transmission Characteristics: Micro bending and hydrogen absorption, fiber alignment and joint loss, fiber splices, Fiber connectors, Fiber couplers, Sources to Fiber Power launching. [8]

5. **Nonlinear Optical Effects in Fiber and Solitons in Optical Fiber Communication:** Refractive index, frequency and intensity dependent refractive index, group velocity dispersion, self-phase modulation, Kerr effect, chirping, stimulated Raman scattering , stimulated Brillouin scattering, self-steepening, self-focusing, self-defocusing, concept of solitons, formation of solitons, Nonlinear Schrödinger equation for solitons, soliton switching, soliton laser, advantages of soliton based communication. [12]

Text Books:

1. AGhatak and K. Thyagarajan; Introduction to fiber optics, Cambridge University press, 6th ed., 2006.
2. K. Thyagarajan and A Ghatak; Fiber Optic Essentials, , Wiley-IEEE Press, 2007.
3. G. Keiser, Optical Fiber Communications, Mc Graw-Hill, 5th ed., 2013.
4. Govind P. Agrawal, Nonlinear Fiber Optics, Academic Press, 2001

Reference Books:

1. John M. Senior; Optical fiber communications: Principles and practice, PHI, 3rded, 2009.
2. B.B. Laud; Lasers and Non-Linear optics, John Wiley & Sons, 1985.
3. Robert W Boyd; Nonlinear fiber optics, Elsevier, 2nd ed., 2006.

PH 652 **Quantum Optics** **3 - 1 - 0 - 4**

1. **Quantized States of Radiation**: Quantization of the radiation field, quantum harmonic oscillator, the zero-point energy. the connection between the positive and negative frequency parts of the electric field operator; states of the quantized radiation field - single mode number states, thermal states, phase states, the minimal uncertainty states; the coherent and squeezed coherent states. [6]

2. **Semi-classical and Quantum Descriptions of a Radiation Field**: Various definitions of a coherent state: the minimal uncertainty states, the states with classical motion, the displacement operator eigen states etc; the Glauber-Sudarshan P-function, the Q-function and other quasi-probability distribution functions and their use in the semi-classical description of a radiation field; Nonclassical aspects like squeeezing and antibunching and examples of nonclassical states and experimental status. Important experiments in Quantum Optics: Photon counting experiments, Intentsity-intensity correlation - Hanbury-Brown and Twiss experiment. [8]

3. **Classical and Quantum Theories of Optical Coherence**: The concept of an analytic signal, elementary description of stochastic processes, correlation functions and coherence functions; Stationary and ergodic processes, Wiener-Khinchin relations etc. Young's double slit experiment to discuss the conditions on the classical coherence functions and quantum coherence functions for various orders of coherence; higher-order correlations functions etc**.** [8]

4. **Interaction Between Light and a Two-level Atom**: The Jaynes-Cummings model interaction and the corresponding Hamiltonian - its solution and the expression for the population inversion; the experimental developments; the classical and quantum signatures -collapses and revivals. [6]

5. **Quantum Theory of Laser**: Photon rate equations, threshold conditions, laser photon distribution, fluctuations in laser light and laser phase diffusion. [12]

   Special topics: Spontaneous emission, laser cooling, collective and cooperative effects in the light-atom(s) interaction, quantum beats, the role of quantum optics in the problem of quantum entanglement and quantum information**.**

Text Books:

1. L. Mandel and E. Wolf; Optical coherence and quantum optics, Cambridge, 1995.
2. M Fox; Quantum Optics, An Introduction, Oxford University Press, 2006.

Reference Books:

1. P. Meystre and M. Sargent; Elements Of Quantum Optics 3Ed, Springer (India) Pvt. Ltd., 2006.

PH 613 Advance Condensed Matter Physics 3 - 1 - 0 - 4

1. **Plasmons, Polaritons and Polarons:** Dielectric function of the electron gas, Plasma optics, Dispersion relation for electromagnetic waves, Transverse optical modes in plasma, Longitudinal plasma oscillations, Plasmons, electrostatic screening, Mott metal-insulator transition, Screening and phonons in metals; Polaritons and LST relation, Electron-electron interaction; Electron –phonon interaction (Polarons). [9]

2. **Optical Properties and Raman Effect in Crystals:** Optical reflectance, Kramers-Kronig relations, Excitons, Frenkelexcitons, weakly bound excitons, Raman Effect in crystals, Electron spectroscopy with X-rays, Energy loss of particles in a solid. [8]

3. **Superconductivity:** Superconductors, Meissner effect, heat capacity, energy gap, isotope effect, London penetration depth, coherence length, BCS theory, Flux quantization in a superconducting ring, Josephson tunnelling. [5]

4. **Magnetic Properties of Solids and Magnetic Resonance:** Langevin diamagnetism, quantum theory of paramagnetism, paramagnetic susceptibility of conduction electrons, ferromagnetic, Curie point, temperature dependence and saturation magnetization at absolute zero, Magnons, Curie temperature and susceptibility of Ferrimagnets, Antiferromagnetics and susceptibility below Neel temperature, Ferromagnetic domains, Nuclear magnetic resonance, line width, hyperfine splitting, electron paramagnetic resonance [12]

5. **Imperfections in crystals and diffusion in solids:** Point, line and surface imperfections, Dislocations; Fick's law of diffusion, Fick's second law, Kirkendall effect, Temperature dependence of diffusion coefficient, determination of diffusion coefficient and activation energy [5]

Text Books:

1. Kittel C, Introduction to Solid State Physics, Willey 7th ed. 2005
2. Hayden W., Moffatt W. G. And Wulff J., Structure and properties of materials, Willey Vol. 3rd.
3. Dekker A., Solid State Physics, Prentice-Hall, 1967

Reference Books:

1. Azaroff L. V., Introduction to Solids, Mc-Graw Hills, 2010
2. Vijaya M. S. And Rangrajan G., Material Science, Tata McGraw Hills, 2006
3. J. R. Hook, H. E. Hall., Solid State Physics, Wiley; 2 edition, 1995.
4. Narula and Gupta, Material Science, Tata McGraw Hills, 2007

PH 623 **Soft Condensed Matter Physics** **3 - 1 - 0 - 4**

1. **Introduction and Review of Statistical Mechanics:** Examples of soft materials in industry and biology, Foams as a lead-off example of macro properties derived from micro, Atomic- and molecular-scale forces and bonds, Repulsion, entropy, hydrophobicity. Probabilities; Boltzmann distribution, Helmholtz energy, Equipartition theorem, Example of pulling RNA and measuring stiffness of a network (experiments). [8]

2. **Van der Waals Forces and Fluctuation-induced forces:** Keesom, Debye, and London contributions, Mean-field models of media, Measurements; list of Hamaker constants, relationship to surface tension, Derjaguin approximation; interaction between spherical particles. Osmotic pressure, Depletion attraction, Repulsion between membranes, Tension in a polymer. [7]

3. **Polymer :** Part A: Survey of types of polymers. Ideal-chain and Freely-jointed chain models.

   Part B: Worm-like chain (Kratky-Porod) model. The spectrum of fluctuations and the stiffness of a single polymer. [4]

4. **Friction in Fluids and The Diffusion Equation:** The Langevin Equation of motion of a particle in fluid. Viscosity and a simple model for its value; terminal velocity; sedimentation. The mean-square displacement, Fluctuation-dissipation theorem. A free particle; an ink spot; diffusion to capture, etc. Particle-hopping model; Fick's law; diffusion with drift. Experimental methods: Dynamic light scattering and the correlation function. Measuring interactions: terminal velocity; g(r); Boltzmann method. [10]

5. **Fluid Interfaces**, **Fluid Dynamics and Electrostatics in Solution (3D):** Surface tension, surfactants and Pickering emulsions. Consequences of a surface tension: LaPlace pressure, Jurin's Law, the Rayleigh instability, the Young-Dupre law and wetting, the shape of a meniscus: the equation of capillarity. Forces among interfacial inclusions (the 'Cheerios Effect'). Assembly of particles at liquid interfaces. [10]

   The Navier-Stokes equation for an isotropic fluid. Reynolds Number, laminar flow, Poiseuille flow, lubrication. Poisson-Boltzmann theory and Debye length Inter-particle forces,

Text Books:

1. Richard A.L Jones., Soft Condensed Matter, Oxford University Press, 1st Edition, 2002.
2. Chaikin P. M. and Lubensky T.C. , Principles of Condensed Matter Physics, Cambridge University Press, 1st Edition 2000

Reference Books:

1. Poon W.C.K. , David Andelman, Soft Condensed Matter Physics in Molecular and Cell Biology, CRC Press, Taylor and Francis Group, 2006

PH 662 **Material Science**

3-1-0-4

1. **Introduction**
   Historical perspective of Materials Science. Why study properties of materials? Classification of materials. Advanced Materials, Future materials and modern Materials.
   [2]

2. **Phase Diagrams and Phase Transition in materials**
   Equilibrium phase diagrams. Particle strengthening by precipitation. Precipitation reactions. Kinetics of nucleation and growth. The iron-carbon system. Phase transformations. Transformation rate effects and TTT diagrams. Microstructure and property changes in iron-carbon system.

   Solid solutions, Phases, Thermodynamics of solutions, Phase rule, Binary phase diagrams, Binary isomorphous systems, Binary eutectic systems, ternary phase diagrams, kinetics of solid reactions. Order disorder phenomenon in binary alloys, long range order, super lattice, short range order.

   [14]

3. **Elastic,Anelastic and viscoelastic behaviour**: Atomic model of elastic behavior- Rubber like elasticity- Anelastic behavior- Viscoelastic behavior, Spring-Dashpot model.
   [5]

4. **Plastic deformation, Creep and Fracture**
   Plastic deformation - Slip - twinning - Critical resolved shear stress - theoretical shear strength of perfect crystal - role of dislocation in plastic deformation - methods of strengthening crystalline materials - strain hardening - grain size - solid solution strengthening - precipitation strengthening - fibre reinforced materials - whiskers - creep - creep curves - mechanism of creep - creep resistant materials, Ductile, Brittle fracture, Fracture toughness, Ductile-Brittle transition, fatigue fracture, Method of protection against fracture.
   [14]

5. **Oxidation and Corrosion**
   Mechanisms of oxidation, Oxidation resistant materials, Principles of corrosion, Protection against corrosion
   [4]

Text Books:

1. Dekker A J, "Solid State Physics", Macmillan and Co., (2000).
2. Raghavan V, “Materials Science and Engineering: A First Course", 5th Edition, Prentice Hall of India Pvt. Ltd., (2004).

3. Van Vlack L H, "Elements of Materials Science and Engineering", 5th Edition, Addison Wesley, New York, (1989).

PH 672 Smart Materials 3 - 1 - 0 - 4

1. **Smart Materials: An Introduction:** States of matter, atomic structure, chemical bond, oxidation and reduction, aldehydesand ketones, amines and amino acids, lipids, carbohydrates, proteins and Enzymes, Biological Cell structure, Bacteria, Viruses, DNA and heredity , chromosomes, Genes, Study of Smart Materials and their integration into novel designs. Classifies according to their Response and Stimuli ability. Describes the effect of crystalline structures in the properties of piezoelectric materials, magnetostrictive materials, shape memory alloys. [10]

2. **Sensing Elements And Transducers:** Mechanical spring devices, Cantilever, Helical spring, Torsion bars or Shaft; Pressure Sensitive Devices, Bourdon tubes, bellows; Passive and active transducers, Theory of strain gauges, measurement of temperature, Thermocouples, RTDs, Thermistors, LVDT, Capacitive transducers, Hall effect transducers. [12]

3. **Chemical, Gas and optical Sensors:** pH, pH electrode, pH measurement, Humidity, Absolute and relative humidity, measurement of humidity, P-i-n and APD photodetectors, Fiber optic sensor, sensors using CNTs [6]

4. **MEMS and NEMS:** An elementary idea of MEMS, NEMSs, molecular and super molecular switches. [7]

5. **Biosensors:** Insulin therapy, Enzyme electrode, bio receptor molusles, Transduction mechanisms in biosensors. [4]

Text Books:

1. Jasprit Singh, Smart Electronic Materials, Cambridge University Press,2005.

B A Pass 2019-2020
B. A. Pass Course

EL 101 Foundation Course in English 2-0-0-2

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

EL 111 English Poetry-I 3-0-0-3

William Shakespeare: Shall I Compare thee to a Summer's Day, Not Marble, nor the Gilded Monuments, Under the Greenwood Tree. [6]

John Donne: The Sunne Rising, Batter My Heart, Death Be Not Proud. [6]

Christopher Marlowe: The Passionate Shepherd to His Love [2]

Walter Raleigh: The Nymph's Reply [2]

Andrew Marvell: To His Coy Mistress [3]

George Herbert: Virtue [2]

Ben Jonson: To Celia [2]

John Milton: On His Twenty Third Birthday, On His Blindness. [6]

Robert Herrick: To the Virgins to Make Much of Time [2]

Literary Terms: Simile, Metaphor, Alliteration, Ode, Sonnet, Pun, Heroic Couplet. [8]

EL 121 English Prose-I 3-0-0-3

Francis Bacon: Of Studies, Of Revenge [4]

Richard Steele: The Spectator Club [4]

Joseph Addison: Meditation in Westminster Abbey [4]

Oliver Goldsmith: Beau Tibbs at Home [4]

Charles Lamb: Dream Children: A Reverie [4]

William Hazlitt: Indian Juggler [4]

Robert Lynd: The Student [5]

Huxley: Pleasures [3]

Maxim Gorky: The Mother of a Traitor [3]

W S Maugham: The Verger [4]

PS 141 Political Theory-I 3-0-0-3

Nature and Scope of Political Science: Definition, Traditional and Contemporary Approaches- Institutional, Behavioural, post-Behavioural and Systems Analysis. [14]

Political Concepts: State, Sovereignty, Liberty, Equality, Revolution and Human Rights [11]

Power, Authority and Legitimacy: Definition, Type, Inter-relationship. [7]

Theories of Justice: Utilitarian, Egalitarian, Entitlement and Socialist [7]

PS 121 Indian Political Thought-I 3-0-0-3

Manu, Kautilya [12]

Bal Gangadhar Tilak, Gopal Krishna Gokhale [15]

Raja Ram Mohan Roy, Dayanand Saraswati [12]

SO 111 Introduction to Sociology-I 3-0-0-3

Sociology: The Meaning of Sociology, Nature of Sociology, Scope of Sociology- Formalistic and Synthetic School, Sociology and other Social Sciences. [10]

Basic Concepts: Society, Community, Social Group, Status and Role. [10]

Socialisation: Meaning of Socialisation, Agencies of Socialisation, Theories of Socialisation. [9]

Culture: Meaning and Characteristics of Culture, Theory of Cultural Lag, Civilisation, Interrelationship and distinction between Culture and Civilisation. [10]

SO 121 Social Thinkers-I 3-0-0-3

Auguste Comte: Positivism, Law of Three Stages, Social Statics and Social Dynamics. [14]

Herbert Spencer: The Evolutionary Doctrine, The Organic Theory. [10]

Talcott Parsons: Social Action, AGIL, Pattern Variables. [15]

PL 111 Basic Psychological Processes-I 3-0-0-3

Introduction: Meaning and Definition of Psychology, Historical Background, Psychology as a Scientific Study of Behaviour, Scope of Psychology. 9

Methods of Psychology: Experimental Method, Observational Method, Case Study, Survey Method, Field Study and Field Experiment. 7

Motivation: Meaning and Nature, Types of Motives: Primary and Secondary, Conflicts in Motives: Approach-Approach, Avoidance-Avoidance and Approach-Avoidance. 6

Learning: Meaning and Nature, Theories of Learning: Trial and Error, Learning by Insight, Classical and Instrumental Conditioning. Schedules of Positive Reinforcements. 9

Personality: Meaning and Nature, Determinants of Personality, Personality Traits, Development of Personality: Freudian's Psycho-Sexual Theory and Erikson's Psycho-Social Theory. 8

Suggested Books:

FR 121 Written Expression-I 3-0-0-3

Greeting someone in formal and informal situation, Knowledge of etiquettes through telephonic conversation. [4]

Introducing oneself / speaking of oneself, Giving the time/ giving one's telephone number. [4]

Introducing someone/ describing a person (indicating one's nationality, saying where one lives, revealing one's profession, saying what one likes or does not like). [4]

Fixing an appointment over the phone, Expressing one's agreement and [4]

disagreement.

Describing about one's daily activities, Seeking clarification on something. [3]

Asking and giving information, Describing an action. [4]

Making hypotheses**,** Solution to problem. [2]

Study of monuments and different public places [6]

Study of different geographical/historical/political regions of France. [8]

Audio Visual Programme

MD 003 Environmental Studies 3-1-0-4

Environmental Science: Definition, scope and importance, Multidisciplinary nature [2]

Ecology and Life Sustaining Process: Origin, evolution and diversification of life; natural selection; levels of selection. Ecosystem structure, functions; nutrient cycles; biomes; habitat ecology; primary and secondary productivity; Population ecology; metapopulation dynamics; growth rates; density growth; niche concept; Species interactions:. Biodiversity and bio conservation; genetic drift; biogeography and evolutionary ecology (Indian context only); geneenvironment interaction; Endangered and endemic species of India [6]

Present civilization and its engine: Empowerment through Science and Technology: Its power and its consequences. The strongest contemporary ideas of science and their consequences on society. Industrial Civilization and its engine. Economics and its limitations: meta economics Psychology: The Anatomy of Greed, Envy and Vanity (Freud's Psychoanalytic perspective, Hans Selye Stress Model; Self-regulation techniques) Unsustainable development. Traditional methods of protecting nature Suggested Case studies: i) Cultural Basics of our Environmental Crisis: ii) Ecofeminism [6]

Natural Resources (Renewable and Non-renewable Resources): Natural resources and associated problems. Forest resources – Use and over-exploitation, Mining, Dams and their effects on forest and tribal people. Water resources – Use and over-utilization of surface and Ground Water, Mineral resources – Use and exploitation, Role of an individual in conservation of natural resources Suggested Case Studies: i) What has posterity ever done for me? ii) Energy policy and further future: The identity problem [6]

The story of Commons: Definition, Causes, Effects and Control measures of Air Pollution, Water Pollution, Soil Pollution, Marine Pollution, Noise Pollution and Thermal Pollution, Nuclear hazards. Disaster management – Floods, water logging, salinity, Drought, Earthquakes, Cyclones and Landslides. Suggested Case Studies i) The tragedy of the commons: ii) We all live in Bhopal iii) The Silent Spring; [6]

Social Issues and the Environment: Urban problems related to Energy, Water conservation, Rainwater Harvesting, Watershed management, Environmental ethics – Issues and possible solutions, Climate change, Global Warming, Acid Rain, Ozone layer depletion, Nuclear accidents and holocaust. Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. Role of Information Technology in environment and human health. Suggested Case Studies: i) Earth the Crowded Planet ii) Famine Affluence and morality iii) The world food supply [6] Protection and Prevention of Environment [6]

EL 112 English Poetry-II 3-0-0-3

BA Honours Psychology 2019-20
COURSE DESCRIPTION
B. A. (Hons.) in Psychology

PL 111 Basic Psychological Processes-I 3-0-0-3

Introduction: Meaning and Definition of Psychology, Historical Background, Psychology as a Scientific Study of Behaviour, Scope of Psychology. [9]

Methods of Psychology: Experimental Method, Observational Method, Case Study, Survey Method, Field Study and Field Experiment. [7]

Motivation: Meaningand Nature, Types of Motives: Primary and Secondary, Conflicts in Motives: Approach-Approach, Avoidance-Avoidance and Approach-Avoidance. [6]

Learning: Meaning and Nature, Theories of Learning: Trial and Error, Learning by Insight, Classical and Instrumental Conditioning. Schedules of Positive Reinforcements. [9]

Personality: Meaning and Nature, Determinants of Personality, Personality Traits, Development of Personality: Freudian's Psycho-Sexual Theory and Erikson's Psycho-Social Theory. [8]

PL 121 Experimental Methodology & Elementary Statistics-I 3-0-0-3

Scientific Foundations of Research: Nature of Science and Scientific Method, Steps Involved in Experimentation. [5]

Problems and Hypothesis: Nature, Type and Sources. [5]

Variables: Nature and Types; Control of Variables. [7]

Meaning and Purpose of Statistics in Psychology: Discrete and Continuous Scores. Nature and Levels of Measurement. [5]

Frequency Distribution and Their Graphical Presentation: Frequency Polygons, Histograms and Ogive. Percentile Point and Percentile Ranks. [6]

Measures of Central Tendency: Mean, Median and Mode. [8]

Reliability of Statistics: Significance of Difference Between Two Means [3]

PL 112 Basic Psychological Processes-II 3-0-0-3

Sensory and Perceptual Processes: Visual and Auditory Senses: Structure and Functions, Attention: Nature and Types, Perception: Nature and Determinants, Perceptual Organization, Form, Space and Depth Perception. [8]

Memory and Forgetting: Sensory,Short-Term and Long-Term Memories; Theories of Memory: Information-Processing and the Levels-of-Processing Theories; Causes and Theories of Forgetting, Forgetting Curve, Reconstructive Memory. [7]

Emotion: Nature of Emotions, Physiological Correlates, Theories of Emotion: James-Lange, Cannon-Bard and Schachter-Singer. [6]

Thinking: The Thinking Process, Problem Solving and Creative Thinking, Role of Set and Insight, Concept Formation. [9]

Intelligence: Nature, Theories of Intelligence: Factor and Process Theories of Intelligence; Assessing Intelligence: Stanford-Binet Intelligence Scale and Wechsler Tests. [9]

PL 122 Experimental Methodology & Elementary Statistics-II 3-0-0-3

The Measurement of Variables: Types of Scales: Nominal, Ordinal, Interval and Ratio Scales. [4]

Sampling Methods: Probability and Non-Probability Sampling Methods. [7]

Experimental Design: Single Group Design, Between Subject Design, Randomized, Matched Groups and Factorial Designs. [8]

Measures of Variability: Range, Quartile Deviation and Standard Deviation. [5]

Normal Probability Curve: Properties and Applications. Skewness and Kurtosis. [4]

Reliability of Statistics: Chi-Square. [6]

Correlations: Product-Moment and Rank Order. [5]

PL 221 Psychology of Human Development-I 3-0-0-3

Concept of Development: Principles of Growth. Maturation and Development, Developmental Stages. [8]

Determinants of Development: Biological and Socio- Cultural. [6]

Methodological Approaches: Longitudinal and Cross-Sectional; Sequential Strategies and Cohorts. Methods of Study: Observational, Experimental, Field Study, Interview and Testing. [9]

Prenatal Development: Stages and Factors Affecting Prenatal Development. [8]

The Neonate: Physical Characteristics, Reflexes, Sensory and Motor Capacities. [8]

PL 231 Applied Psychology-I 3-0-0-3

Introduction: Nature and Fields of Applied Psychology. [8]

Guidance: Definition and Objectives, Type of Guidance: Personal Guidance, Educational Guidance and Vocational Guidance, Role of Family and School in Guidance Services. [7]

Counseling: Meaning and Definition, Objectives and Functions of Counselor, Phases of Counseling: Initial, Middle and Follow-Up, Modern Trends in Counseling, Ethical Issues in Counseling. [6]

Psychology in Education: School as an Agent of Socialization, Factors Influencing School Achievement, Learning and Motivational Problems, Exceptional Children: Problems and Remedial Measures. [9]

Psychology and Anti – Social Behaviour: Crime and Delinquency, Techniques of Crime Detection, Treatment of Offenders, Drug Addiction and Remedial Measures. [9]

PL 212 Psychology of Human Development-II 3-0-0-3

Development during Infancy: Physical Growth and Motor Development; Sensory and Perceptual Development; Language, Emotional and Social Development. [8]

Development during Childhood: Cognitive, Social, Emotional and Moral Developments. Development of Self-Identity. [6]

Puberty and Adolescence: Developmental Tasks; Physical and Psychological Changes; Development of Identity. [9]

Adulthood: Developmental Tasks; Choice of Vocation; Adjustment to Careers, Marriage and Family. [8]

Old Age: Physical, Physiological, Psychological and Social Changes. Adjustment Problems and Specific Issues. [8]

PL 222 Applied Psychology-II 3-0-0-3

Psychology in Organization: Personnel Selection, Job Analysis and Performance Appraisal, Fatigue and Accidents, Advertising and Consumer Behaviour. [7]

Psychology and Health: Mental Health and General Health, Dimensionsof Health and Health Behaviour, Mental Retardation. Major Therapies: Psychoanalytic, Behaviour and Person- Centered. [10]

Stress Management: Meaning and Definition of Stress, Causes and Effects of Stress, Techniques of Stress Management. [9]

Psychology and Social Behaviour: Social Cognition: Prejudice and Stereotype. Conflicts and Resolution. [8]

Psychology and Sports: Personality Traits of Efficient Sportsmen, Team Feeling, Motivational Problems. [5]

PL 311 Social Psychology – I 3-0-0-3

Social Psychology: Nature and Subject Matter; Relationship with other social sciences. [3]

Methods: Experimental, Observation, and Sociometry. [5]

Socialization: Nature, Process and Agents of Socialization. [4]

Group: Nature, Types and Functions; Psychology of Crowd, Mob and Audience. [8]

Social Norms: Meaning, Characteristics and Formation [5]

Prosocial Behavior: Co-operation and Helping Behavior -Nature and Determinants [6]

Leadership: Nature, Types and Functions. Theories- Trait , Situational and Interactional [8]

PL 321 Biological Basis of Behaviour 3-0-0-3

Biological basis of Behaviour: Evolutionary and genetic foundations. Research Methods – Neuroanatomical, Neurophysiologic, Neurochemical and Neuroelectrical. [6]

Cell and Neurons: Structure and types and functions of neurons; Neural impulse: Origin, Conduction and Measurement. Neurotransmitters. [7]

Nervous System: Central nervous system and Peripheral nervous system –Structure and Functions. Endocrine system and its behavioral implications. [9]

Sleep, arousal, and dreaming: Nature, stages of sleep, sleep deprivation, brain mechanisms of sleep and dreaming. Neural basis of arousal and attention. [6]

Motivation: Neural mechanism of Hunger, Thirst and Sex [5]

Biological basis of learning and memory: Neurophysiology of learning. Biological basis of memory: the search for the engram, PET scan and Biochemical factors in memory. [6]

PL 331 Systems of Psychology 3-0-0-3

Nature and scope of Psychology: Psychology as science; Historical Origins: Preexperimental period- Science Among Greeks, British Empiricism, German Nativism. [4]

Schools of psychology: Structuralism, Functionalism, Behaviourism, Psycho analysis, Gestalt psychology. Psychology in the post school era: cognitive revolution. Contemporary status [5]

Learning: Concept and Theories: Hull, Tolman Spence, Miller and Dollard and Skinner. [7]

Intelligence: Nature, Determinants Theories: Spearman, Thurstone, Cattell, Guilford, Sternberg, Gardner. [6]

Memory: Concepts and Models. Level of Processing (Craik and Lockhart), working memory (Buddelay and Hitch), Monohierarichal (Tulving), PDP (McClelland). [6]

Personality: Nature, Determinants,Theories- Psychoanalytic, Neo-Freudian, Rogress, Allport, Cattell, Eysenck. [5]

Language Behaviour: Nature, Development of Language, Theories of Language Development: Mowrer, Skinner and Chomsky Language and thought: Whorfian Hypothesis. [6]

PL 341 Psychopathology-I 3-0-0-3

Psychopathology: Meaning, Concept and Criteria of Normality and Abnormality. [3]

Models of Psychopathology: Biological, Psychodynamic, Behavioral, Cognitive and Humanistic- Existential. [7]

Classification System: Classification of Disorders, Need for Classification, DSM system of Classification. [3]

Diagnostic Assessment: Case History, Interview, Projective Techniques [5]

Anxiety Based Disorders: Nature, Symptoms and Etiology- Generalized Anxiety Disorders, Phobia, O.C.D, Somatoform and Dissociative Disorders [12]

Psycho physiological Disorders: Nature, Symptoms and Etiology –Asthma, Peptic Ulcer, CHD, Hypertension [5]

Mental Retardation: Nature, Types, Causes and its Management [4]

PL 351 Industrial and Organizational Psychology-I- 3-0-0-3

Industrial/Organizational Psychology: Nature, historical development and scope. [5]

Personnel selection and development: Procedures and Assessment method for selection. Measurement of individual differences. Basic selection model. Techniques of selection. Application blank, interview and testing. [9]

Training of Personnel: Nature, Principles and Methods.On the job and of the job training methods. Evaluation of training programme [9]

Performance Appraisal: Necessity. Performance criteria, Techniques of performance appraisal [10]

Work environment: Noise, atmospheric conditions. Illumination and performance [6]

PL 361 Psychological Testing-I 3-0-0-3

Psychological Tests: Historical antecedents. Characteristics, types and applications. Sources of bias in Psychological Testing. Ethics of Psychological Testing. [9]

Psychometric properties of tests: Reliability: Meaning, sources of error, methods of estimate, and special problems. [9]

Validity: meaning, validation procedures, and special problems. [9]

Construction and Standardization of Psychological Tests [12]
General steps of test construction: Preparation for Item writing, item analysis, reliability, validity. Development of norms, Item analysis for speed test; cross validation.

PL 312 Social Psychology-II 3-0-0-3

Attitudes: Meaning, Characteristics, Measurement; Development of Attitudes and Attitude Change. [6]

Social perception: Forming impressions: Role of non-verbal cues. Group stereotypes and central traits. Models of information integration. Primacy and recency effects. .	[6]
Attribution process Nature and theories: Kelly and Weiner.	[6]
Prejudice and Discrimination : Components of Group Antagonism, Origins of Prejudice and Remedies	[5]
Propaganda: Nature, Tools and Techniques	[5]
Aggression and Violence: Nature, Determinants and Management**.**	[5]
Social Change: Nature, Factors and Theories.	[6]

PL 322 Guidance and Counseling 3-0-0-3

Guidance: Historical Perspective, Objectives and Principles of guidance. Types of Guidance: Personal, Educational and Vocational.	[5]
Counseling: Defining features, Goals. Necessary personal characteristics/qualities of effective counselors.	[5]
Counseling approaches: Affectively oriented approaches: psychoanalytic, person-centered and existential; Cognitively oriented approaches: Eclectic and behavioral.	[9]
Counseling process: External conditions and preparation; Structuring the counseling relationship; Counseling interview and degrees of lead by the counselor, nonverbal behavior; Group counseling approaches.	[9]
Areas of counseling: Educational, career, family and marital gerontological and weaker sections; Stress management oriented counseling.	[7]
Evaluation of counseling: Nature and purpose, steps in evaluation, and outcome research.	[4]

PL 332 Experimental Psychology 3-0-0-3

Experimental Psychology: Nature and History, Experimental Method	[4]
Sensory Processes: Visual, Auditory – Structure and Functions of Eye and Ear. **Perception:** Nature, Perception of form – Figure and Ground, Perceptual Organization, Depth Perception–Cues.	[9]
Psychophysics: Problems and Methods of Classical Psychophysics.	[8]
Selective and sustained attention: Concepts and theories. Filter theory, response selection theory.	[6]
Learning: Nature, Classical Conditioning- Phenomena and Procedure: Instrumental Conditioning- Appetitive and Aversive; Operant Conditioning	[5]
Verbal Learning: Methods, Materials, Organizational Processes.	[3]
Discrimination Learning: Phenomena, Procedures and paradigms	[4]

PL 342 Psychopathology-II 3-0-0-3

Substance Abuse Disorder: Alcoholism and Drug Dependence; Causes Consequences and Rehabilitation.	[6]
Mood Disorders: Unipolar and Bipolar Symptoms and Etiology	[10]
Schizophrenia: Nature , Symptoms , Types and Etiology	[11]
Psychotherapy: Nature and Goals – Psychoanalysis, Behavior Therapy, Cognitive-Behavior Therapy, Client Centered Therapy, Chemotherapy and ECT	[12]

PL 352 Industrial and Organizational Psychology-II 3-0-0-3

Work motivation: Nature, Theories: Need theories, Expectancy theory, equity, goal setting, reinforcement and self- efficacy theory.	[7]
Job Satisfaction: Concept, determinants and measurement.	[5]
Supervision and leadership: Functions and approaches. Trait, behavioral and contingency models.	[6]
Accident and safety: Risk taking behavior and accidents. Accident proneness. Causes. Preventive and safety measures of accidents.	[6]
Human engineering: Man-machine system. Designs, displays, controls and action.	[6]
Occupational stress: counter productive behavior, role conflicts, absenteeism and burnouts, their causes and interventions.	[9]

PL 362 Psychological Testing-II 3-0-0-3

Personality Tests: Purpose and Types, **Inventories**-Cattell's 16 PF, MMPI and Neo-five factors.	[9]
Projective- Rorschach and TAT.	[9]
Intelligence Tests: WAIS, WISC, Raven's Standard and Color progressive Matrices, Bhatia battery.	[8]
Measurement of aptitude and Interest	[6]
Measurement of Creativity- Torrance Test	[7]
Anxiety and Depression,	

M.A Psychology 2019-2020

M. A. in Psychology

PL 511 Advanced General Psychology-I **4-0-0-4**

Introduction to Psychology: Definition, Nature, Scope, Purpose of psychology, Methods of Psychology: Observation, Experimental, Case Study. [6]

Biological Basis of Behaviour : Neuron and its structure, Nervous System; Peripheral & Central Nervous system, Endocrine gland and Personaliy. [12]

Sensory-Perceptual Processes: Visual, Auditory- Structure and function of eye and ear. Attention: Nature of Attention and its determinants, Perceptual organization: Perceptual Constancy, Determinants of perception, Types of perception: Form, Space, Depth. Methods of Psychophysics, Signal Detection theory and Subliminal Perception. [12]

Learning: Classical Conditioning: Procedure, phenomena & related issues **,** Operant Conditioning; Procedure, phenomena & related issues, Cognitive theories of learning: Latent, Insight, Observational, Neurophysiology of Learning. [10]

Memory & Forgetting: Models of memory; Atkinson & Shiffrin, Craik & Lockhart, Tulving**,** Sensory, Short term & Long term Memory; Flashbulb memory, Reconstruction and distortion of memory, Biological Basis of Memory, Improving memory strategies**,** Forgetting; Theories of forgetting [12]

Suggested Books:

1. Morgan, C. T., King, R. A., Weisz, J. R., & Schopler, J. *Introduction to Psychology*. Tata McGraw-Hill, New Delhi.
2. Atkinson, R. L., Atkinson, R. C., & Hilgard, E. R. *Introduction to Psychology*. Harcourt Brace Jovanovich, New York.
3. Baron, R. A. *Psychology: The Essential Science*. Allyn & Bacon, New York.
4. Sdorow, M. Laster. *Psychology.* Mc Graw Hill, New York.
5. Ciccarelli, K. Saundra: *Psychology* Pearson, south asian edition.
6. Singh, A. K. *Uchchtar Samanya Manovigyan.* Motilal Banarasi Das, Varanasi.

PL 521 Applied Psychology-I 4-0-0-4

Introduction: Nature, scope, history, fields, methods and importance of applied psychology. [8]

School Psychology: Role of psychologist in school system, measurement and evaluation, education technology, behavior modifications in classroom. [10]

Guidance & Counselling: Types of guidance and counselling, counselling process, characteristics of a effective counsellor, ethics of counselling, uses of psychological tests in counselling, counselling effectiveness in solving personal, social, educational and career, developmental, preventive and curative aspect of counselling. [12]

Mental Health and Hygiene: Factors affecting mental health, indicators of mental health, role of psychologists in promoting mental health, alternative therapies for promoting mental health. [12]

Neuropsychology: what is neuropsychology, scope, functions of neuropsychologists, techniques of neuropsychology. [10]

Suggested Books:

1. Anastasi, A. *Fields of Applied Psychology*. Tata McGraw-Hill, New Delhi.
2. Singh, A. P. Vyavaharik Manovigyan. Abhishek Publication, Varanasi.
3. Goldstein, A. P., & Krasner, B. *Modern Applied Psychology*. Pergmon Press, New York.

EL 623 Dissertation 0-0-0-4

The length of the dissertation to be submitted at the end of Autumn Semester of Second year shall be between 5,000 words and 8,000 words. It should be the outcome of a systematic study written in a lucid language. The Bibliography of the dissertation should reflect the current status of scholarship in the area. The dissertation could be on a topic related to either the core or elective courses. The dissertation should conform to the seventh edition of MLA Handbook.

EL624 Dissertation 0-0-0-4

The length of the dissertation to be submitted at the end of Spring Semester of Second year shall be between 8,000 words and 10,000 words. It should be the outcome of a systematic study written in a lucid language. The Bibliography of the dissertation should reflect the current status of scholarship in the area. The Dissertation could be on a topic related to either the core or elective courses. The dissertation should conform to the seventh edition of MLA Handbook.

Mody University of Science & Technology

Ph.D.

(Effective from Academic Year 2016-17)

MODY UNIVERSITY
OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

RM20.711 **Research Methodology** **3-0-2-4**

Course Objectives:

1. To equip students with knowledge, abilities and insight in research methodology and related interdisciplinary fields.
2. To plan and design research using scientific and statistical methods.

1. **Introduction to Research:** Meaning, nature, purpose and motivation; Types of research – exploratory, descriptive, causal, and analytical; Research process; Definition of construct and variables and types of variables; Bases for choosing a topic; Problem definition; Literature review, Identification of research gap; Formulation of objectives; Signification and relevance of research objectives. **[06]**

2. **Research Design and Sampling:** Research Design - Meaning, need, features, types, important concepts, developing a research plan. **[06]**
   Sampling: Census and Sample Survey, implications and types of sampling, process of sample selection, criteria and characteristics of selecting a good sample.

3. **Scaling and Methods of Data Collection:** Definition and types of scales, construction of measurement scale, errors, test of sound measurement scale. **[06]**
   Methods of data collection: Types, sources and methods (Qualitative and Quantitative).

4. **Statistical Tools for Data Analysis*:** Measures of central tendency – Mean, Median, Mode, Quartiles, Deciles and Percentiles , Measures of Dispersion: Standard Deviation – Variance – Coefficient of Variance, Skewness, Correlation – Karl Pearson's coefficient of Correlation, Rank Correlation, Regression: Method of Least Squares. Formulation of hypothesis-Testing of hypothesis, Type I and Type II Errors. Parametric tests: Z-test, t-test, F-test, Analysis of Variance; One-Way and Two- way classification. Non parametric tests – Chi-Square test. **[09]**

5. **Application of Computer in Research*:** MS office and its application in Research, Use of Internet in Research – Websites, Search Engines, E-journal and E-Library – INFLIBNET. **[06]**
   MS-Excel: Data representation, application of inbuilt formulas, formulation of equation using BODMAS rule in MS-Excel.

6. **Foundation of Research and Report Writing*:** Significance and technique of interpretation, importance of report writing, types of reports, structure and components, writing research proposal and synopsis, planning phase of report writing (cauterization), Bibliography, Appendices, referencing, Style Manuals – APA style, MLA style, ASA style, Harvard/IEEE etc), plagiarism, journals, citations and indexing, funding agencies, ethics in research, characteristics of a good research report. **[06]**

Remark: 39 Hours for Lecture and 26 Hours for Practical*.

Course Outcome:

1. Develop the ability to understand and analyse the problems and able to connect the problem with practical and present scenario.
2. Develop the ability to think independently as well as scientifically towards for continuous lifelong learning process.
3. Analyse the situation, convert into problem and find its solution.

Suggested Readings

BT 761	**Forensic Biotechnology**	3	-	-	3	3	100		

Annexure-VIII

Ph.D. Syllabus

BT 711	**Animal Toxicology**	3-0-0-3
	Introduction to the subject, History, Terminology, Disciplines. Basic Principles, Dose, Dose Response, Toxic Effects and Testing methods, Risk Assessment, Exposure Standards and Guidelines. Toxicokinetics: Absorption, Distribution, Biotransformation and elimination of toxic agents Environmental Toxicology, Classification of toxicants, Routes of Exposure, Duration and frequency, category of toxic effects, bio-magnification Cellular Toxicology, Introduction, Effects of toxicant on cell structures, DNA damage Cellular Toxicology, Biochemical disturbance, cellular response and repair Mechanism of Toxicity: Introduction, Dose-response Relationship, Receptor Concept Natural Protection Mechanism: Role of cell organelles, Glutathione Metabolism, Antioxidants Antidotal Therapy: Types and Procedures, free radicals Nanotoxicology: Introduction and Interdisciplinary aspects **Suggested Readings:** 1. Landis WG, Sofield RM, Yu MH. Introduction to Environmental Toxicology, Molecular Substructures to Ecological Landscapes, CRC Press 2. Reviews of Environmental Contamination and Toxicology Springer 3. Worth DJH, Howard G J. Fundamental Toxicology Springer	
Course instructor : Dr. R.S.Chundawat		
Evaluation pattern: End Term Examination of 100 marks		

BT 721	**Plant Microbe Interaction**	3-0-0-3
	Introduction: Plant and microbe interaction, Plants as a host environment, The effects of microbes on plant physiology such as effects on photosynthesis, respiration, and the translocation of water and nutrients. Plants defense including structural defenses, biochemical defenses, and the hypersensitive response, Biotechnological perspectives of plant-microbe interaction Plant-Bacteria Interaction: Introduction, Abundance and distribution of bacteria in plants, Epiphytic/Endophytic bacteria, Rhizobacteria, Plant growth-	

	promoting rhizobacteria/bacteria (PGPR/PGPB), Pseudomonads *Bacillus* and as PGPR, Bacteria and plant health, Root nodule formation on legumes by *Rhizobium*spp for nitrogen fixation; other nitrogen fixing systems such as in alder/ *Frankia* and *Azolla*/*Anabaena*, Molecular mechanism of plant growth-promotion and biocontrol by bacteria, Microbial response to plants under habitat-imposed stresses (abiotic and biotic), Pathogenic interactions of bacteria with plants Plant-fungal Interaction: Introduction to fungal biology, Abundance and distribution of fungus in plants (Epiphytic/Endophytic), Mycorrhiza: Ecto, endo and VAM, Survey of fungal diseases important in plant pathology, Diagnostics and preventive measures Plant-virus Interaction: Diversity of plant viruses, Plant diseases caused by virus, Life cycles of plant viruses, Diagnostics and preventive measures Plant-nematode Interaction: Root-knot nematode, role of *Meloidogyne*, Plant health and nematode, Diagnostics and preventive measures **Suggested Readings:** 1. Burns and Slater. Experimental Microbial Ecology, Blackwell Scientific Publications, Oxford 2. Alexander M. Microbial Ecology, John Wiley and Sons 3. Atlas RM and Bartha R. Microbial Ecology: Fundamentals and Principles, Benjamin Cummins, USA	
Course instructor : Dr. D.K.Choudhary		
Evaluation pattern: End Term Examination of 100 marks		

BT 731	**Plant Transgenic Biology**	**3-0-0-3**
	Agrobiology: *Agrobacterium*-plant interaction, T-DNA transfer mechanism, *Agrobacterium* based vectors, Binary and shuttle vectors. Genetic Transformation: *Agrobacterium*-mediated gene delivery, Co -integrate and binary vectors and their utility, Direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods, Screenable and selectable markers, Characterization of transgenics, Marker-free Methodologies, Gene silencing, Chloroplast transformation Application of Plant Transformation: Herbicide resistance, Bacterial resistance, Viral resistance, Fungal resistance, Insects and pathogens resistance, Drought, Salinity, Thermal stress, Flooding and submergence tolerance, Plants as Bio-factories, Metabolic engineering of plant secondary metabolites pathways of metabolism Molecular Marker-aided Breeding: Conventional plant breeding, Non PCR and PCR based molecular markers- RFLP, RAPD Markers, STS, microsatellites, SCAR, SSCP, AFLP, QTL, map based cloning, molecular marker assisted selection.	

	Transgenic animal production, Methods of transgene delivery, Integration of foreign genes and their validation, Gene targeting methods and strategies, Expression of mammalian genes into prokaryotic and eukaryotic cell **Suggested Readings:** 1. Henry RJ. Practical Application of Plant Molecular Biology, Chapman and Hall Publishers 2. Glick and Pasternak.Molecular Biotechnology: Principles and application of Recombinant DNA, ASM Press 3. P.K.Gupta: Elements of Biotechnology, Rastogi and Co. Publishers 4. Freshney I. Culture of Animal Cells, Wiley-Liss. 5. Hafez B, Hafez ESE. Reproduction in Farm Animals, Wiley-Blackwell. 6. Houdebine LM. Transgenic Animals: Generation and Use, CRC Press. 7. Decker J and Reischl U. Molecular Diagnosis of infectious diseases, 2nd Edition, Humana Press	
Course instructor: R.K. Gaur		
Evaluation pattern : End Term Examination of 100 marks		
BT 741	**Biocatalysis and Biotransformation**	**3-0-0-3**
	Introduction: Importance of catalyst, Catalyst vs Biocatalyst, Kinetics, Mechanisms of action, Mode of Regulation, Allosteric enzymes, Investigation of active sites and catalytic mechanism, Enzyme Engineering, Non protein enzymes Sources of a Biocatalyst, Isolation strategies, Assay Methods, Strain Improvement, Extracellular and Intracellular enzymes, Properties, Mechanisms of secretion, regulation of enzyme synthesis, Recovery and Purification of fermentation product, Enzymes in non-aqueous system Industrial Application of Enzymes: Immobilization Kinetics, Batch and Continuous Mode of Fermentation Application of enzymes in Diagnosis and Treatment, Research Sector, Biotransformation Industry and Biodegradation of Xenobiotic compounds Enzymes in soil nutrients recycling, Green House gases sequestration, Nitrogen Fixation etc. Stresses related defense enzymes in plants and animals Enzymes in energy production: Bioethanol, Biogas, Biohydrogen etc. **Suggested Readings:** 1. Comprehensive Biotechnology, 2004. Murray M Y (ed). Pergamon Press 2. Enzyme Technology, 1990. Chaplin M F and Bucke C. Cambridge University Press 3. Biotol- Technological Applications of Biocatalysts, 1993. Barker R D J (ed). Butterworth Heinemann Ltd. Oxford	

	4. Enzymes: Biochemistry, Biotechnology, Clinical Chemistry, 2007. Palmer T. and Bonner P L R. Harwood Publication, London.	
Course instructor: Dr. K.P.Sharma		
Evaluation pattern: End Term Examination of 100 marks		

BT 751	**Environmental Biotechnology**	**3-0-0-3**
	Sources, generation, classification & composition of pollutants;effect on living organism;Persistence and biomagnification of xenobiotic molecules. Biological and Chemical methods for detection ofWastes; Need for management of resources. Biodegradation. Acclimation, detoxification activation, bio-availability, effect of chemical structure on biodegradation, recalcitrance, predicting products of biodegradation, co-metabolism and biotransformation. Methods in determining biodegradability; Contaminant availability for biodegradation. Microbial degradation of aliphatic and aromatic compounds; Microbial degradation of halogenated and sulfonated compounds; Biodegradation of pesticides. Bioremediation, Constraints, advantages and applications; Types of bioremediation, Bioaugmentation and biostimulation; factors affecting	

	bioremediation, treatability studies for bioremediation- purpose, experimental design and example protocol. Advantages and disadvantages of specific bioremediation technologies- land farming, prepared beds, biopiles, composting, bioventing, biosparging, pump and treat method, constructed wet lands, bioreactors; Phytoremediation. Sources of heavy metal pollution; Microbial interactions with inorganic pollutants - Microbial metal resistance; Microbial transformation; Accumulation and concentration of metals; Biosorption - Biotechnology and heavy metal pollution; Oil field microbiology; Improved oil recovery; Biotechnology and oil spills. **Suggested Readings:** 1. MS 20.701	**Advances In Mathematics**	**4-0-0-4**

6. **Mathematical Modeling and Simulation:** System concepts and theories, attributes and types of systems, system dynamics- system flow, flow diagrams, notations and conventions, feedback systems and casual loops diagrams, Random number generation, properties of random numbers, generation of pseudo random numbers, techniques for generating random numbers test for randomness, random variates, inverse transform methods (exponential, uniform, weibull), convolution methods and acceptance-rejection methods. **[10]**

7. **Graph Theory (Modeling, Applications, and Algorithms):** Basics of graphs and directed graphs, degree vectors of simple graphs, basics of trees, cut–sets, planar and dual graphs, basics of coloring, matrix representation of graphs, signal-flow graphs, and graphs in Markov processes. **[10]**

8. **Numerical Solution of Equations and System of Linear Equations:** General iterative methods and their convergence (Bisection, Newton-Raphson and method of false position), Graffe's root squaring method, Muller's method, Bairstow iterative method; Existence of solution, ill-conditioned system, Jacobi iteration method, Gauss-Seidel method, convergence of iteration methods, Finite difference scheme for linear and nonlinear boundary value problems, shooting method, finite difference method. **[10]**

9. **Numerical Solution of ODE and PDE:** Picard's method, Taylor's series method, Modified Euler's method, Predictor-corrector method, Runge-Kutta method of order four, Numerical solution of partial differential equations, finite difference approximation to partial derivatives, solution of Laplace and Poisson equations, solutions of one and two dimensional heat and wave equations, Crank-Nicolson method for parabolic partial differential equations. **[10]**

10. Elements of MATLAB: Interactive sessions, menus and the toolbar, arrays, files, and plots, script files and the editor, numeric, cell and structure arrays. Elementary mathematical functions, user defined functions, additional functions, working with data files. Relational operators and logical variables, logical operators and functions, conditional statements, loops, the switch structure, debugging MATLAB programs.	**[12]**

	GE 302	Proficiency (Non-Credit) #	-	-	-	1				

The syllabus for already approved courses is not enclosed herein.

*The student has to take maximum two courses in each semester of Third year from the DCS. The minimum strength of student should be five (5) in the particular DCS course.

.

BT 171 Biotechnology and Human Welfare **2-0-0-2**

[8]

UNIT I

Industry Application: protein engineering; enzyme and polysaccharide synthesis, Metabolites: Alcohol and antibiotic production.

UNIT II [8]

Agriculture Application: N_2 fixation: transfer of pest resistance genes to plants; interaction between plants and microbes; qualitative improvement of livestock.

UNIT III [10]

Human Health: Diagnostics and Treatment: development of non-toxic therapeutic agents, recombinant live vaccines, gene therapy, Human genome project.

Text Book

1. Concepts in Biotechnology by Balasubrahmanian et. al.,University press, 2010

Reference Book

2. Recombinant DNA technology by Watson et. al., Scientific American Books, 2012.
3. Principles of Gene Manipulation by Old and Primrose. Blackwell, 2010
4. Biotechnology: Applications In Human Healthcare Hardcover, Sampat Nehra, Pointer Publishers (2009)

BT 181 Bioethics and IPR **2-0-0-2**

UNIT I [11]

Bioethics – Meaning and Necessity of Bioethics, different paradigms of Bioethics – National & International, Ethical issues against the molecular technologies

UNIT II [8]

IPR- Introduction to Indian Patent Law. World Trade Organization and its related intellectual property provisions.

UNIT III [7]

Intellectual/Industrial property and its legal protection in research, design and development. Patenting in Biotechnology, economic, ethical and depository considerations.

Text Book:

1. Patterns of Entrepreneurship 2005: Jack M. Kaplan. Wiley,
2. Sateesh MK. 2010 Bioethics and Biosafety, I. K. International Pvt Ltd.

References:

3. Entrepreneurship: New Venture Creation: David H. Holt Tata McGraw – Hill 2002
4. Entrepreneurship and Small Business Management: C.B. Gupta, S.S. Khanka, Sultan Chand & Sons.
5. Sree Krishna V (2007) Bioethics and Biosafety in Biotechnology, New age international publishers

BT 172 Basics of Drug Designing 2-0-0-2

UNIT I [5]
Drug designing-Meaning and Introduction, Disease and drug target identification

UNIT II [5]
Identification of Lead compound, SAR, optimising target interactions

UNIT III [8]
Toxicology and safety issues, Development and Production, Clinical trials, Patenting issues

UNIT IV [8]
Newer drugs, Drug discovery in cancer research/new target based drugs in clinical trials. Microbial genomics for new antibiotics, immunotoxin drug

Text Book

1. A.R Leach, Molecular Modeling Principles and Applications, Longman, 1996
2. J.M. Haile , Molecular Dynamics Simulation Elementary methods, , John Wiley and Sons ,1997

References:

3. Leon Lachman et al Theory and Practice of Industrial Pharmacy, 3 Edition, Lea and Febiger, 1986
4. Remington's Pharmaceutical Science, Mark Publishing and Co.
5. The Organic Chemistry of Drug Design and Drug Action, by R. B. Silverman
6. An Introduction to Medicinal Chemistry by G. L. Patrick

BT 182 Basics of Forensic Science 2-0-0-2

UNIT I [8]
Introduction and principles of forensic science, tools and techniques in forensic science, Classification of injuries and their medico-legal aspects, method of assessing various types of deaths

UNIT II [6]
Fire arms and explosives, Handwriting analysis, Significance of toxicological findings

UNIT III [6]
Fundamental principles of fingerprinting, classification of fingerprints, development of finger print as science for personal identification

UNIT IV [6]
Principle of DNA fingerprinting, application of DNA profiling in forensic medicine, Introduction to Cyber security.

Text Book:

1. Molecular Biotechnology- Principles and Applications of recombinant DNA. ASM Press, Washington.

5. W.G. Eckert and R.K. Wright in Introduction to Forensic Sciences, 2nd Edition, W.G. Eckert (ED.), CRC Press, Boca Raton (1997).
6. R. Saferstein, Criminalistics, 8th Edition, Prentice Hall, New Jersey (2004).
7. W.J. Tilstone, M.L. Hastrup and C. Hald, Fisher's Techniques of Crime Scene Investigation, CRC Press, Boca Raton (2013).

BT 291 Introductory Biomedical Science **2-0-0-2**

UNIT I [8]

Introduction to human biology, Clinical biochemistry of human diseases, microbiology, epidemiology, and biomedical engineering

UNIT II [6]

Screening for disease, Application of biochemical techniques to inborn errors of metabolism, tumor markers, liver function, iron and porphyrins

UNIT III [7]

Enzymes and their use in laboratory medicine, clinical applications of protein biochemistry, nutrition in health and disease, lipids and atherosclerosis

UNIT IV [5]

Electronic devices used as sensors

Text Book

1. Raven, P.H et al (2006) Biology 7th edition Tata McGrawHill Publications, New Delhi

Reference

2. Campbell, N.A. and Reece, J.B. (2008) Biology 8th edition, Pearson Benjamin Cummings, San Francisco.
3. Griffiths, A.J.F et al (2008) Introduction to Genetic Analysis, 9th edition, W.H. Freeman & Co. NY

BO 212 Plant Developmental Biology **2-0-0-2**

UNIT I

Development and morphology of gametophyte – formation of vegetative and generative cells, microsporogenesis, organization of mature pollen grain, types of ovules, integument, nucellus, megasporogenesis, types of embryo sacs. [6]

UNIT II [4]

Pollination and fertilization – Pollen transfer, artificial pollination, pollen germination, double fertilization, self-incompatibility.

UNIT III [5]

Endosperm – development, cytology and functions of endosperm
Endosperm types - nuclear, cellular - helobial - Ruminate endosperms, function of endosperms.

UNIT IV [5]

Embryo – Development of embryo in Dicot (Capsella) and Monocot (Najas). A brief account on Polyembryony, parthenocarpy.

UNIT V [6]

Seed – Development, classification, dispersal and dormancy

Text Book

1. Plant Physiology by Taiz and Zeiger, Sinauer Associate Inc. Publishers

Reference

3. Biochemistry and Molecular Biology of plants Ed. Buchanan, Grussem and Jones, ASPB publication.
4. Bhojwani. S.S. and Bhatnagar. S.P. 1978. The embryology of Angiosperms. Vikes Publishing Pvt. Ltd., Delhi.
5. Maheswari P.1971. An introduction to embryology of Angiosperms Tata Mc Graw Hill, Delhi.
6. Swamy B.G.L. and Krishnamurthy K.V. 1950. From flower to fruit. Tata Mc Graw Hill, Hew Delhi.

BO 222 Plant Developmental Biology Laboratory 0-0-2-1

Assignments are based on the course BO 212 Plant Developmental Biology containing exercises on plant developmental studies using permanent slides and embryo development related experiments.

BT 333 Introduction to Research Methodology 2-0-0-2

UNIT I [5]

Introduction to Research Methodology: Objectives and motivation in research

UNIT II

Defining the Research Problem, Selecting and defining a research problem, Reviewing and conducting literature search, developing a research plan [7]

UNIT III

Designing of Experiment, Number of Different experimental designs – single and multifactorial design [6]

UNIT IV

Making measurements and sources of error in measurements, Methods of data collection and record keeping. Report writing, Writing a research paper - abstract, introduction, methodology, results and discussion. [8]

Text Book

1. Kothari C.K. (2004) 2/e, Research Methodoloy – Methods and Techniques (New Age International, New Delhi)

Reference

4. Krishnswamy, K.N., Shivkumar, AppaIyer and Mathiranjan M. (2006) Management Research Methodology; Integration of Principles, Methods and Techniques (Pearson Education, New Delhi)

BT 324 Entrepreneurship Development **2-0-0-2**

UNIT I [10]

Introduction: Meaning, Needs and Importance of Entrepreneurship, Promotion of entrepreneurship, Factors influencing entrepreneurship, Features of a successful Entrepreneurship

UNIT II [8]

Establishing an Enterprise Forms of Business Organization, Project Identification, Selection of the product, Project formulation, Assessment of project feasibility, Financing the Enterprises, Fixed and Working Capital

UNIT III [8]

Entrepreneurship and International Business, Marketing of Product Meaning of International business, Selection of a product, Selection of a market for international business, Export financing, Institutional support for exports

Text Book

Mody University of Science & Technology

M.Sc. Food and Nutrition
Session 2017-2018

Curriculum Structure

MODY UNIVERSITY
OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

M.Sc-Food & Nutrition
Two Year Programme
Academic Year (2016-17) and onwards

Intake: 10

The specialists in F& N play a vital role in promoting the quality of life of individuals and communities, which contributes significantly to the economic and overall development of the nation. This achieved through a blend of academics, research training and extension as well as industrial applications. The post graduate programme in this discipline has been designed to provide the students intensive and extensive theoretical and experimental learning. The programme allows flexibility in the choice of thrust areas, which students can select, based on their career goals. It is envisaged that the current scenario at the regional and national level require trained professional in areas such as Public Nutrition, Dietetics and clinical Nutrition, Institutional Food administration as well as food science and quality control. Alternatively a broad-based programme covering several varied aspects in this discipline is also possible.

Objectives

The curriculum integrating several courses to provide professionally competent manpower for:

1. Academic and research institutions.
2. Hospital, food service intuitions and industry
3. Managerial roles in agencies and intuitions-both government and NGO sector
4. Planning & monitoring health programme
5. Ensuring food safety and quality for consumers
6. Entrepreneurial ventures
7. Advocacy and consultancy.

Careers

Nutritionists and dieticians could find employment in hospitals, health and recreation clubs, canteens, nursing care facilities; teach the science of nutrition and dietetics in colleges and universities, catering departments of star hotels, research labs of food manufacturers, in health departments of government etc. Moreover they could find openings in the mass media where top priority is given to disseminating vital information on healthy living. The main fields in which a dietician or nutritionists can work is in Food service field, Institutional Catering, Health Care field, Research & Development and Social Welfare. Food service field include food Catering service, Restaurants etc where professionals can do menu planning, monitoring the food preparation etc. Institutional Catering is another field where Nutrition and dietetics professionals are needed to plan, supervise and prepare nutritious and well-balanced meals for schools, colleges, factories or office cafeterias etc. Their work may also include the estimation and purchase of food supplies and equipment; receiving, checking and taking inventories of provisions etc. In Health Care field, people suffering from certain diseases such as diabetics, heart diseases, obesity etc, need to take extra care of their eating habits and the kind of food they eat. Research and Development involves conducting research on various food items to ensure their quality as well as studying the effects of various types of diet on the body chemistry in labs.

Eligibility

Pass with 50% aggregate marks in Bachelor's degree (Sciences, Medical and Applied Medical Sciences, Health and Allied health/Agriculture/ Food Sciences/ Bio-Sciences) or equivalent.

Evaluation Procedure:

All the Rules and Regulations as provided in the Ordinances and Regulations of the Post graduate Programmes of MITS shall be followed.

Resource Requirement:

One or two faculty of F&N specialist (depends on intake)
Consumables: Rs. 5 Lakhs per year

M.Sc.-Food & Nutrition

$Evaluation of proficiency will be based on the participation in co-curricular/extra-curricular activities.

#Student will perform dissertation work in a recognized Organization for a period of 4 months and submit two copies of dissertation to the department latest by first week of May. Dissertation and presentation will carry 50% weightage each.

(II year curricular and structure and syllabus got passed in AC 30, Syllabus in AC30 minutes)

FN 511 BASIC PRINCIPLES OF AYURVEDIC DIET 1-0-0-1

History of Ahara Nutrition, Vedic and Madhyayugin diet and its processing, Basic Principle: Ayurveda and Aharashastra, Ayurvedic components, Ritucharya (Seasonal regimen) [4]

Ayurvedic Principles: Lokpurushasamya (Doctrine of Macrocosm and Microcosm), Karyakarana Siddhanta (Principles of Caouse and Effect), Samanya-Vishesh Siddhanta (Principles of Similarity and Dissimilarity), **Panchamahabhoota Siddhanta** (Theory of Five Elements), Swabhavoparmvada Siddhanta (Theory of Healing)- in relation with diet and its importance [5]

Fundamentals of Dosha-Dhatu-Mala: Doshavigyana Dhatuvigyana - Tissue/ Cell metabolism, Malavigyana – Excretary, Vigyana Strotovidyana – Systematic circulation, Dhatusharta - Cell replenishing, Prakriti – Constitution, Dosha-Dhatu-Mala vigyana – The importance of diet in physiological process. [4]

FN 521 BASICS OF HUMAN PHYSIOLOGY 3-0-0-3

Cell structure and function

Levels of cellular organisation and fucntion-organelles, tissues, organs and systems-Brief review. Cell membrane, transport across cell membrane and intercellular communication. Regulation of cell multiplication. [4]

Nervous system [4]

Review of structure and function of neuron, conduction of nerve impulse, synapses, role of neurotransmitters.

Organisation of central nervous system, structure and function of brain

and spinal cord, afferent and efferent nerves, Blood brain barrier, CSF. Hypothalamus and its role in various body function-obesity, sleep, memory.

Endocrine system [4]

Endocrine glands-structure, function, role of hormones, regulation of hormonal secertion. The neuroendcrime axis.Disorders of endocrine glands. Emphasis on physiology of diabetes and stress hormones.

Sense organs [3]

Review of structure and function. Role of skin, eye, ear, nose and tongue in preception of stimuli.

Digestive System [4]

Review of structure and function. Secretory, Digestive and absorptive functions. Role of liver, pancreas and gall bladder and their dysfunction. Motility and hormones of GIT

Respiratory system [4]

Review of structure and function. Role of lings in the exchange of gases. Trasport of oxygen and CO_2. Role of haemoglobin and buffer sstems. Cardio-respiratory response to excercise and physiological effects of training.

The circulatroy system [3]

Structure and function of heat and blood vessel. Regulation of cardic output and blood pressure, heart failure, hypertension.

Blood formation, compsotion, blood clotting and haemostasis [3]

Formation and function of plasma proteins. Erythropoesis. Blood groups and histocompatibility. Blood indices. Use of blood for investigation and diagnosis of specific disorders. Anemia.

The excretory system [2]

Structure and function of nephron. Urine formation. Role of kidney in maintaining ph of blood. Water, electrolytes and acid base balance, diuretics

The Musculo-skeletal system [2]

Structure and function of bone, cartilage and connective tissue. Disorders of the skeletal system. Types of muscles, structure and function.

Immune System [3]

Cell mediated and humoral immunity. Activation of WBC and production of anitbodies. Role in inflammation and defence.

Reproduction [3]

Menstrual cycle, spermatogenesis, physiological changes in pregnancy

Text Book:

FN 531 HUMAN NUTRITION 3-0-0-3

Energy: Energy content of foods. Physiological fuel value-review. Measurment of energy expenditure: BMR, RMR, Thermic effects of feeding and physical activity, methods of mesaurment. Estimating energy requirments of individuals and groups. Regulation of energy metabolism: control of food intake, digetio, absorption and body weight. [4]

Carbohydrates: Types, calssification, digestion and transprt-review, dietry fibre, fructo-oligosaccharides, resistant strach-chemical copmposition and physilogical effects. Glycemic index of food. Sweeteners-nutritive and non-nutritive. [5]

Proteins: Classification, digestion, absorption and transport – review. Metabolism of proteins: Role of muscle, liver, and gastro intestinal tract. Protein quality, metods of evaluating protein quality. Protein and amino acid requirements. Therapeutic applications of specific amino acids: Branched chain, glutamine arginine, homocysteine, cysteine, taurine. [4]

Lipids: Classification, digetion, absorption, transport-review. Functions of EFA. Role of n-3, n-6 fatty acids in health and disease. Requirements of total fat and fatty acids. Trans fatty acids. Prostaglandins. [6]

Water: Regulation of intra and extra cellular volume. Osmolality, water balance and its regulation. [7]

Minerals: (Note: For each nutrient sources, bioavailability, metabolism, function, requirements, RDI/ESDDI, deficiency and toxicity, interactions with other nutrients are to be discussed).

Macro minerals: calcium, phosphorus, magnesium, sodium, potassium and chloride.

Micro minerals: Iron, copper, zinc, manganese, iodine, fluoride.

Trace minerals: selenium, cobalt, chromium, vanadium, silicon, boron, nickel.

Vitamins: Historical background, structure, food sources, absorption and transport, metabolism, biochemical function, assrssment of status. Interactions with other nutrients. Physiological, pharmacological and therapeutic effects, toxicity and deficiency with respect to the following: [7]

a) *Fat soluble:* Vitamins A,D, E & K.
b) *Water soluble:* Thiamine, riboflavin, niacin, biotin, pyridoxine, folic acid, pantothenic acid, ascorbic acid, cyanocobalamin, choline, inositol.

Non-nutritive food components with potential health effects: Polyphenols, tannins, phytate, phytoestrogens, cyanogenic compounds, lectins and saponins. [6]

Nutritional regulation of gene expression.

Nutrition management in special conditions: Space travel, high altitudes, low temperatures, submarines.

FN 541 BASIC RESEARCH METHODOLOGY 2-0-0-2

Research Methodology- Meaning, objectives and Significance of research. Types of research, research approaches and scientific methods. Research process and criteria of good research [2]

Definition and identification of a research problem- Selection of research problem, Justification, development of hypothesis, basic assumptions. Limitations and delimitations of the problem, Methods of data collection [4]

Research design- Meaning and needs, Different research designs- exploratory, descriptive and diagnostic (epidemiology and clinical trials). Pilot studies. Qualitative vs quantitative research [5]

Sampling design- Steps in sampling design, Criteria for selecting a sampling procedure, Different types of sampling techniques- Merits and demerits of sampling [5]

Basic principles and regulations in humans and animal research. [3]

Report writing – Significance of report writing, Different steps in writing report, Types of reports, Mechanics of writing reports and precautions to be taken while writing research reports [7]

BC 522 NUTRITIONAL BIOCHEMISTRY 3-0-0-3

Basic concepts – Function of nutrients. Measurement of the fuel values of foods. Direct and indirect calorimetry. Basal metabolic rate: factors affecting BMR, measurement and calculation of BMR. Measurement of energy requirements. Specific dynamic action of proteins. [5]

Elements of nutrition – Dietary requirement of carbohydrates, lipids and proteins. Biological value of proteins. Concept of protein quality. Protein sparing action of carbohydrates and fats. Essential amino acids, essential fatty acids and their physiological functions. [10]

Minerals – Nutritional significance of dietary calcium, phosphorus, magnesium, iron, iodine, zinc and copper. [5]

Vitamins – Dietary sources, biochemical functions, requirements and deficiency diseases associated with vitamin B complex, C and A, D, E & K vitamins. [5]

Malnutrition – Prevention of malnutrition, improvement of diets. Recommended dietary allowances, nutritive value of common foods. Protein-calorie malnutrition. Requirement of proteins and calories under different physiological states- infancy, childhood, adolescence, pregnancy, lactation and ageing. [10]

Starvation – Techniques for the study of starvation. Protein metabolism in prolonged fasting. [2]

Obesity – Definition, Genetic and environmental factors leading to obesity [2]

FN 512 FOOD PACKAGING AND QUALITY CONTROL 3-0-0-3

[6]

Packaging- Concepts, Definition, Significance, Classification.
Packaging-development, Unit/Retail.
Packaging of food(s)- fresh and processed, general characteristics & food preservation.
Primary Packaging Media- Properties and applications

a) Paper boards, metals, plastics, wood & plywood, glass, flexible etc.
b) Labels, caps & closures & wads, adhesives, inks & lacquers, cushioning materials, reinforcements etc.

Testing & evaluation of packing media – retail packs (including shelf life evaluation) and transport packages. [9]
Packaging systems and methods for food products- vacuum packaging, gas flush. Packaging, CAP & MAP, Aseptic & retort packing, Bag-in Box etc.
Food products- General classification and packing types, varieties and trends.
Storage, handling and distribution of packages (foods) – including palletisation & Containerizetion.
Food marketing and role of packaging.
Packaging Aesthetic & graphic design.
.
Packaging – Laws & Regulations - FDA, PFA, Packaging commodity Rules, Weight & Measures Act etc [3]
Introduction to quality assurance and food safety assurance. Current concepts of quality control.
Quality assurance programme: Quality plan, documentation of records, product standards Product and purchase specifications, process control and HACCP hygiene and housekeeping, corrective action, quality and programme and total quality process.
Quality costs: Measurement and analysis.

[10]

Product Evaluation: [11]

- Sampling for product evaluation and line control.

- Statistical quality and process control.
- Specifications and food standards. International, national-Mandatory, Voluntary.
- Sample Preparation.
- Reporting results and reliability of analysis.
- Tests for specific raw food ingeredients and processed. Foods including additives:
  a) Proximate principles
  b) Nurient analysis
  c) Quality parameters and test of adulterants.

Consumer protection.

FN 522 WOMEN NUTRITION AND HEALTH 3-0-0-3

Role of women in National Development.

Women in Family and Community

- Demographic Changes, menarche, marrige, fertility, morbidity, mortality, life-expactancy, sec ratio, aging and wodowhood, female-headed families.

Women and Work

- Environmental stress, production activities, nutrition, health and gender, living conditions, occupational health, health facilities.

Women's nutritional requirements and food needs.

Women and Society

- Women's role, their resoures and contribution to family and community and effect on nutritional status.
- Effect of urbanisation on women.
- Impact of economic policies, industrializzation, and globlization on women.

Women and Health

- Health facilities
- Disease patterns and Reproductive health
- Gender and health
- Health seeking behaviour
- Women- pregnancy and lactation

Safe motherhood
Care of at-risk mothers
Family planning
Women and aging- Special concerns in developed and developing societies: Menopause, osteoporosis, chronic degenerative diseases, neurological problems.
Women and AIDS
Women and Nutrition

- Situation of women in global, national and local context. Improving the nutritional and health status. Intervantions throughout the life cycle.

Policies and Legislations

- CEDAW (Convention on elimination of all forms of Discrimination Against Women), Women's Right to Life and Health (WRLH).

Empowerment of Women-Role of Education and various national schemes

MB 514 FOOD TECHNOLOGY 3-0-0-3

Food and Fermentation Technology: Origin, Scope and development of fermented food products, [10]
Microbial starters for food fermentations.
Fermented Foods- Bread, Vinegar, Beer, Wine, polysaccharides, low calorie sweeteners, Vitamins, Fermented vegetables, Nutraceuticals, Prebiotic and Probiotic foods, Genetically modified foods, Nano foods.
Fermented dairy products- Milk and Curd, Yoghurt, Buttermilk, Cheese, Oriental fermented foods,
Single cell protein, Mushroom cultivation

Spoilage and Preservation: [10]
Factors affecting microbial growth in foods- extrinsic and intrinsic,
Contamination of foods (cereals, Vegetables and Fruits, Meat and Meat products and Fish, Milk and milk products, canned foods) and their involvement in disease outbreaks,
Spoilage detection and characterization.
Methods of food preservation (thermal processing, refrigeration, dehydration, irradiation, microfiltration, chemical preservatives).

Food Borne Infections and Intoxications: Microbial toxins in food- Chemical Structure and Types, Food borne illnesses caused by- *Brucella, Clostridium, Escherichia, Salmonella, Shigella, Staphylococcus, Vibrio and Yersinia*, Diseases caused by Fungi, Emerging pathogens, *E.coli* O157:H7, *Listeria monocytogens*, *Campylobacter jejuni, Helicobacter pylori* [10]

Packaging and Quality Control: [9]
Need and method of packaging (glass, metal, plastics, moulded pulp and aluminium foil), Controlled atmosphere packaging, Tetra pack, Nano capsule, Nano membrane.
Detection of food pathogens- Culture methods, Rapid detection using PCR
Food standards- Standards for Milk, Poultry, Food control agencies- BIS, Codex commission,
Food laws and current concepts in food safety (HACCP, quantitative risk assessment and prediction based systems)
Disposal and treatment of food industry waste

FN 532 NUTRITION FOR HEALTH AND FITNESS 3-0-0-3

Definition, components and assessment criteria of age: Specific fitness and health status. [8]

Holisitic approache to the management of fitness and health: Enrgy input and output. Diet and exercise. Effect of specific nutrient on work eperformance and physical fitness. Nutrition, exercise, physical fitness and health inter-relationship

Review of fifferent energy system for endurance and power activity: Fuel and nutrients to support physical activity. Shifts in carbohydrates and fat metabolism. Mobilization of fat stores during exercise. [6]

Nutrition in sports: Sports specific requirments. Dient manipulation. Pre-game and post game meals. Assessment of different nutragenic aids and commercial supplements. Diets for persons with high enrgy requirments, stress, fractures and injury.

Water and electrolytesbalances: Losses and their replenishment during excerse and sports events, effects of dehydration, sports drinks. [7]

Significance of physical fitness and nutrition in the prevention and management of weight control, obesity, diabetes mellitus, CV disorders, bone health and cancer**.**

Nutrition and exercise regimes for management of obesity: Critical review of various dietary regimes for weight and fat reduction. Prevention of weight cycling. [8]

Definign nutriitonal goals.guidelines approporiate to health, fitness and prevention and management of the above chronic degenerative disorders.

Nutrition and exercise regimes for pre-post-natal fitness: Alternative systmes for health and fitness lile ayurveda, yoga, meditation, vegetarianism and traditional diets. [10]

FN 542 NEUTRACEUTICALS AND FUNCTIONAL FOODS 3-0-0-3

Nutraceuticals: Use of neutraceuticals in traditional health sciences. Their role in preventing /controlling diseases. [4]

Definition, Classification, food and non food sources, mechanism of action. Role of omega-3,fatty acids, carotenoids, dietary fiber, phytoestrogens; glucosinates; organosulphur compounds as neutraceuticals. [8]

Prebiotics and probiotics: Usefulness of probiotics and prebiotics in gastro intestinal health and other benefits. Beneficiary microbes; prebiotic ingredients in foods; types of prebiotics and their effects on gut microbes. [9]

Functional foods Definition, development of functional foods, benefits and sources of functional foods in Indian diet. Effects of processing conditions and storage; Development of biomarkers to indicate efficacy of functional ingredients; Research frontiers in functional foods. [8]

Development of nutraceutical and functional foods – Standards for health claims. Process of developing - preclinical & clinical studies, Marketing and Regulatory issues, Regulatory bodies in India. [10]

FN 562 FOOD AND NUTRITION LABORATORY -I 0-0-4-2

Practical exercises related to BC 522, MB 514 and FN 542

FN 641 FOOD SERVICE MANAGEMENT 3-0-0-3

UNIT-I [9]

Food service Institutions- Definition and importance, various types of food service institutions like hospitals, school meals, hostels, industrial canteens, commercial hotel/ canteens etc. Institutions catering to different types of handicapped personnel.

UNIT-II [5]

Theories about approaches to food service management -
Developing objectives and goals- Definition and importance, types of goals Policies, procedures and rules.

UNIT-III [5]

Principles and procedures of management- Managerial roles and responsibilities, the manager and leadership quality. Tools of management – organization chart, types, structure, function; work improvement techniques

UNIT-IV [6]

Personnel management – recruitment, training, placement, promotion, personnel records, work appraisals

UNIT-V [5]

Material management – Principles of quantity food purchase- selection, buying and accounting of different foods. Inventory management- assessing requirements, receiving and release of stocks. Record maintenance.
Quantity food preparation and service- Factors in menu planning for large groups, systems for maintaining quality in food preparation and service. Kitchen control and maintenance of kitchen records

UNIT-VI [4]

Financial management – Budgeting, costing and cost control, accounting

UNIT-VII [5]

Marketing and advertising, Changing food trends and marketing-influencing factors: Life style changes: economic, socio-cultural, psychological influences and marketing influences, Compatibilities/Challenges in Food Storage and its commercialization, Means of Marketing, National and International measurements

Text Book

FN 611 PUBLIC HEALTH AND NUTRITION **3-1-0-4**

UNIT-I [9]

Concept of public nutrition - Relationship between health and nutrition, role of public nutritionists in the health care delivery system. Population dynamics- Demographic transition, population structure, population policy, fertility behaviour, nutrition and quality of life interrelationship. Nutritional status -methods for assessing nutritional status – Indirect methods – demography, population dynamics and vital events and their health implications, indicators of health and nutrition (IMR, TMR, MMR) - Direct – anthropometry, biochemical, clinical, dietary and functional methods of assessments.

UNIT-II [4]

Nutrition during life span – pregnancy, lactation, infancy, preschool age, school going and adolescents, adults and old age.

UNIT-III [9]

Assessment and surveillance of nutritional status in emergency affected populations- Scope for malnutrition assessment, indicators and simple screening methods. Organization for nutritional surveillance. Nutritional relief and rehabilitation- Assessment of food needs, food distribution strategy, targeting food aid, mass and supplementary feeding, special foods/rations for nutritional relief, organization for mass feeding/food distribution, transportation and storage, feeding centers, sanitation and hygiene and public nutrition approach to tackle nutritional and health problems in emergencies, ethical considerations.

UNIT-IV [8]

Approaches and strategies for improving nutritional status and health - Programmatic options – their advantages and demerits. Intervention Programmes – Health based interventions, Food – based interventions including fortification and genetic improvement of foods, supplementary feeding. Malnutrition and Health economics - Its impact on productivity and national development. Cost management.

UNIT-V [9]

Information Education Communication approaches to improve health and nutrition: Concepts – Scope- Elements- Models of communication - Communication Process - Approaches and Barriers to communication, Communication for Extension Education and Development - Introduction to IEC Aims and Objectives, Importance of IEC, relevance to programmes - Nutrition education for behaviour change – Rationale, Planning Execution and evaluation of Department of Food Science and Technology.

FN 621 INSTITUTIONAL FOOD ADMINISTRATION 3-1-0-4

UNIT-I [3]

Review of different types of institutional food service operations, canteens, hotels, restaurants and hospitals.

UNIT-II [7]

Meal planning, Food preparation and Service: Basic factors in successful institutional meal planning, considerations with regard to religion, region, availability of food and season, food habits, personnel, equipment, physical plant and financial resources. Procedures involved in constructions of recipes in large scale cooking. Processes of food preparation in large quantities. Type of food service in different institutions: Formal and informal food service.

UNIT-III [4]

Management: Definition, functions, tools of management-organization chart, job description, job specification, work sheet. Work improvement and work simplification.

UNIT-IV [8]

Personnel Management: Personnel and leadership qualifications for food service administrator, responsibilities and importance of good human relationship in organization. Criteria for selection of staff personnel, employment conditions, employee-training, role of employee unions, welfare provisions for labour.

UNIT-V [9]

Management of Resources: Budget, records and book keeping. Food cost control and Labour cost control: Factors affecting cost-menu, types of service, methods of purchasing, serving and pricing, maintenance of standard portions, waste, and meals for employee, wages. Physical plant: Its location, floor plans, space allowances for food preparation activities, storage units, service units and washing units.

UNIT-VI [8]

Importance of food standards, criteria for good quality products, hazards of adulteration and poor quality, quality control, specifications for quality in food products, food laws regarding quality and adulteration.

Labour laws regarding health and safety of employees, health examination, sanitary working conditions, labour regulations, welfare policies.

FN 631 CLINICAL AND THERAPEUTIC NUTRITION **3-1-0-4**

UNIT-I [6]

Nutritional screening and assessment of nutritional satus of hospitalized and outdoor patients.identification of high risk patiets. Assessment of patient needs based interpretation of patient data-clinical, biochmecial, biophysical, personal etc. Newer trends in delivery of nutritional care and dietary counselling

UNIT-I [10]

Diet nutrient and drug interaction. Effect of drugs on ingestion, digestion, absorption and metabolism of nutrients, effect of foods, nutrients and nutritional status on drug dosage and efficacy.

Nutritional support-recent advances in techniques and feeding substrates

UNIT-I [18]

Etiopathophysiology, metabolic and clinical aberrations, complications, prevention and recent advances in the medical nutritional management of:

Weight imbalances
Cardio vascular disorders
Diabetes mellitus and other metabolic disorders
GI tract disorders
Liver and gall bladder, pancreatic disorders
Renal disorder
Stress and trauma
Cancer
Neurological disorders
Musculo-skeletal disorders
Immuno-deficiency disorder
Genetic disorders
Infection and AIDS
Respiratory problems

UNIT-I [5]

Childhood problems/disorders including inborn errors of metabolism and their nutritional management.

MB 641 INDUSTRIAL MICROBIOLOGY AND FERMENTATION TECHNOLOGY 3-0-0-3

UNIT-I

General Concepts: Isolation, Preservation and Improvement of Industrially important organisms, Enrichment culture technique, Storage at low temperature, Liquid nitrogen, Lyophilization, Strain improvement by mutation, Feedback repression and inhibition, Modification in characteristics of inhibitors, Isolation of auxotrophic mutants, Use of recombinant methods. [9]

UNIT-I

Growth Kinetics: Microbial growth kinetics and product kinetics, Microbial biomass, Enzymes, metabolites, Batch and continuous culture- comparison, external and internal, Fed batch and its applications. [6]

UNIT-I

Basic Concepts in Fermentation: Fermentation media, Sterilization, Batch and Continuous Sterilization, Filter sterilization, Fermenter design, Control of Fermenter, Mass and gas transfer, Product recovery and Effluent treatment. [7]

UNIT-I

Industrial Production: Industrial production of Ethanol, Acetone, Butanol, Citric acid, Gluconic acid, Acetic acid, Lactic acid and Kojic acid, Glutamic acid, Lysine and Tryptophan, Amylases, Proteases and Lipases, Antibiotics (β-lactam, aminoglycosides). [12]

UNIT-I [5]

Production of other Metabolites: Production of single cell proteins, Recombinant vaccines, Interferon and Steroids.

Text Book

1. Crueger and Crueger (2003): Biotechnology: a textbook of industrial microbiology, 2nd Edition. Panima publications.
2. Stanbury, P.F. and Whitaker, A. (2016): Principles of fermentation technology. Pergamon press.

Total Credits (all Semester)- 139/139

$ CW (Course work): It would include attendance, assignments, class /quiz test.

MS 331 **Combinatorics** **3-0-0-3**

1. Relation: Definition, different forms, properties and operations on sets, principle of inclusion and exclusion, partition of a set, definition of relation, types of relation, composition, properties and graphical representation of relation, equivalence classes, closure of a relation, Warshall's algorithm, Hasse diagrams, definition of lattice and different forms. **[10]**

2. Function: Properties, definition of function and different forms, composition and properties of functions, recursively defined functions, applications of functions. **[10]**

3. Induction: Mathematical induction, strong induction and well-ordering, definition of recursive, structural induction. **[10]**

4. Counting: Basics of counting, pigeonhole principle, permutations and combinations, binomial coefficients, generalized permutations and combinations, generating permutations and combinations. **[09]**

Text Books:

1. Kenneth H. Rosen (2008), Discrete Mathematics and Its Applications with Combinatorics and Graph Theory, 7th ed., TMH Education.
2. Kolman, Busby and Ross (2009), Discrete Mathematical Structure, 6th ed., Pearson.

Reference Books:

1. Liu and Mohapatra (2000) , Elements of Discrete Mathematics , 2nd edt., Mc Graw Hill Education, New Delhi.
2. Narsingh Deo (2004), Graph Theory with Applications to Engineering and Computer Science, reprint ed.,PHI.
3. K.D. Joshi (1989), Foundations of Discrete Mathematics, 2003 reprint, New Age International

MS 341 **Vector Calculus** **3-0-0-3**

1. Vector Differentiation I: Vector algebra, operations with vectors, scalar and vector product of three vectors, product of four vectors, reciprocal vectors, scalar-valued functions over the plane and the space, vector function of a scalar variable, curves and paths, vector differentiation. **[10]**

2. Vector Differentiation II: Directional derivative, gradient of a scalar function, conservative field, divergence, curl, related properties of gradient, divergence and curl of sums, second order differential operator, cylindrical and spherical coordinates. **[10]**

3. Vector Integration I: Integration of a vector function of a scalar argument, line integral, work done , potential, conservative field and area, surface integrals, surface area and flux, volume integrals. **[10]**

4. Vector Integration II: Green's theorem in plane, transformation between line integral and double integral, area in Cartesian and polar coordinate, Stoke's theorem, Gauss divergence theorem. **[09]**

Text Books:

1. Shanti Narayna, A Text Book of Vector Calculus by, S. Chand & Co., New Delhi.
2. R.Murrary, Theory and Problems of Advanced Calculus by Spiegal, Schaum's Publishing Company, New York.

Reference Books:

1. N. Saran and S.N. Nigam, Introduction to Vector Analysis by Pothishala Pvt. Ltd., Allahabad.
2. Thomas, Calculus by Thomas, 11 Editions, Pearson.
3. G. Paria, A Text Book on Vector Calculus by Scholar's Publishing House, Indore.
4. B.V. Ramana(2006), Higher Engineering Mathematics by TMH.

MS 351 **Probability and Statistics Theory** **3-1-0-4**

1. Basic Statistics: Mean, mode, median for grouped and ungrouped data, variance, standard deviation, dispersion and measures of dispersion, skewness and measures of skewness, moments. **[10]**

2. Probability Theory: Recapitulation of basic probability theory, law of addition and law of multiplication, conditional probability, total probability, Bayes' theorem and its applications. **[10]**

3. Random Variables and Distribution: Discrete and continuous random variables, types of distribution, probability mass and density functions, mean variance and standard deviation of distribution, discrete distributions (binomial and Poisson), continuous distributions (normal and uniform). **[10]**

4. Hypothesis and Correlation-Regression: Simple and composite hypothesis, type I and type II errors, tests of significance, simple correlations, linear regression. **[09]**

Text Books:

1. Baisnab A.P. and Manoranjan Jas (2003), Elements of Probability and Statistics, 2nd ed., TMH .
2. Pugalararasu(2011) , Probability and Queuing Theory , 1st ed., TMH.

Reference Books:

1. Papoulis(2002), Probability, Random Variables and Stochastic Processes,4th ed., TMH.
2. Palaniammal(2012), Probability and Random Processes , 3rd ed., PHI.
3. Gupta and Kapoor (2002), Fundamental of Mathematical Statistics, 3rd ed., SCS Publisher.

MS 361 **Analytical Solid Geometry** **3-1-0-4**

1. Plane and Straight Line: Different form of plane, angle between two planes, perpendicular distance of a point from a plane, plane through intersection of two planes, bisectors of two intersecting planes, locus of a plane, different form of straight line, angle between two lines, distance of a point from a straight line, coplanarity of straight lines, shortest distance between two lines, intersection of three planes. **[10]**

2. Sphere: Different form of sphere, plane section of a sphere, intersection of two spheres, sphere through a given circle, intersection of a straight line and sphere, tangent planes and normal, touching spheres and condition of orthogonality. **[10]**

3. Conicoids I: Different form of cone, equation of the cone with given vertex and a given conic for its base, angle between the lines in which a plane cuts a con, tangent lines and tangent plane, reciprocal con, right circular con, different form of cylinder, equation of tangent plane, enveloping cylinder, right circular cylinder. **[10]**

4. Conicoids II: Ellipsoid, hyperboloid of one and two sheets, elliptic paraboloid , hyperbolic paraboloid, tangent plane , equation of normal, director sphere, polar plane and pole of the plane. **[09]**

Text Books:

1. R.J.T. Bell (1994), Elementary Treatise on Co-Ordinate Geometry of Three Dimensions by, Macmillan India Ltd.
2. Shanti Narayan, Analytical Solid Geometry by S. Chand & Company, New Delhi.

Reference Books:

1. Deepak Chatterjee, Analytic Solid Geometry by PHI Learning Private Ltd., New Delhi.
2. H.M. Vasavada (1992), Analytical Geometry of Two and Three Dimensions.

MS 332 **Advanced Calculus** **3-0-0-3**

1. Preliminary: Functions, continuity, the derivative, composite functions Rolle's theorem, theorem of the mean, Taylors's series with remainder indeterminate forms, fundamental theorems on infinitesimals. **[10]**

2. Power Series: Definition, tests for convergence, region of convergence, uniform convergence, integral and derivative of power series, operations with two power series, exponential, trigonometric, hyperbolic and dominant functions, conditionally convergent series. **[10]**

3. Partial Differentiation: Functions of two variables, partial derivatives of composite function, Euler's theorem on homogeneous functions, directional derivative, higher differential, implicit functions, one equation of two or more variables, two equations of four variables, four equations of six variables, Jacobians. **[10]**

4. Definite Integral: Definition and properties, existence proof, Simpson's rule, change of variables, differentiation of a definite integral, differentiation under the integral sign, differentiation and integration of integral with infinite limit, infinite integrand, multiple integrals, beta and gamma functions, Dirichlet's integral. **[09]**

Text Books:

1. Frederick S Woods (1934), Advanced Calculus by Ginn and Company.
2. George B. Thomas, Jr., Maurice D. Weir, Joel R. Hass, Thomas Calculus by Pearson.

Reference Books:

1. R.C Buck , Advanced Calculus by Waveland Press, Inc.
2. Walter Rudin, Principles of Mathematical Analysis by McGraw-Hill.
3. Gerald B. Folland, Advanced Calculus by Pearson.

MA 342 **Graph Theory** **3-0-0-3**

1. Graphs: Introduction, definition and applications of graphs, finite and infinite graphs, null graph, sub graphs, incidence and degree, isolated vertex, pendant vertex, walk, path and circuits, connected graphs, disconnected graphs and components, isomorphism, Euler graphs, operations on graphs, Hamiltonian paths and circuits, the travelling sales man problem, matrix representation of graphs, properties and some standard theorems on graphs. **[10]**

2. Directed Graphs: Definition, in-degree, out-degree, isomorphic digraphs, types of digraphs, digraph and binary relations, relation matrices, directed paths and connectedness, Euler digraphs, fundamental circuits in digraphs, properties and some standard theorems on digraphs. **[10]**

3. Trees: Definition and properties of trees, distance and centers in a tree, rooted and binary trees, on counting trees, spanning trees, rank, nullity and cyclomatic number, Kruskal's algorithm and Prim's algorithm. **[10]**

4. Cut-Sets and Cut-Vertices: Cut sets and their properties, all cut sets, connectivity and separability, 1-Isomorphism and 2-Isomorphism, some standard theorems. **[09]**

Text Books:

1. Deo N.(2001)Graph Theory with Applications to Engineering and Computer Science, PHI.
2. Chartland G., Zhang P. (2006) Introduction to Graph Theory, Fourth reprint, Mc Graw Hill Education.

Reference Books:

1. Wilson R. J. (2010) Introduction to Graph Theory, 4th Edition, Pearson.
2. Jonathan L.G. Yellen J. (2004) Handbook of Graph Theory, CRC Press.
3. West D. B. (2001) Introduction to Graph theory, 2nd Edition, PHI Learning.

MS 352 **Basic Differential Geometry** **3-0-0-3**

1. Preliminaries: Graphs and level sets, vector fields, the tangent space, surfaces, vector fields on surfaces orientation, the gauss map. **[10]**

2. Tensors: Definition of tensors and basic properties, Christoffel symbols, uses of tensors in differential geometry. **[10]**

3. Geodesics I: Parallel transport, Weingarten map, curvature of plane curves, arc length and the line integrals, curvature of surfaces. **[10]**

4. Geodesics II: Envelops and evolutes, first fundamental form, metric potentials, direction coefficient and angle between two curves on a surface. **[09]**

Text Books:

1. Chuan-Chih Hsiung (1997), A First Course in Differential Geometry by International Press, Cambridge.
2. T.J. Willmore(1964), An Introduction to Differential Geometry by Oxford University Press.

Reference Books:

1. M. Abate and F. Tovena, Curves and Surfaces by Springer.
2. A. K. Peters (2010), Differential Geometry of Curves and Surfaces by Ltd., Natick.
3. D.J. Struik(1988) , Lectures on Classical Differential Geometry by 2nd Edition, Addison-Wesley.

Course Description

Compulsory Courses

EL 101 Foundation Course in English 2-0-0-2

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand& Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

EV 111 Environmental Science 1-0-0-1

Introduction to Environment and Environmental Studies, its scope and importance [2]

Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem [2]

Natural Resources: Renewable and Nonrenewable resources. [2]

Human Population and Environment: Population Growth, World and Indian scenario [2]

Environmental pollution: Types of Environmental Pollution and cause , prevention of pollution [2]

Global Environmental Issues: Climate Change, Global Warming and Green House Effect [3]

Visit to a local area to document environmental assets

Suggested Readings:

Text Books:

1. Bharucha, E;.Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH,Beiswenger RE, Purdom; Environmental Sciences, Paperback.

Reference Books:

5. Rastogi V.B. &Jayraj M.S.; Animal Ecology and Distribution of Animals, KedarNath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

3-0-0-3

CA 111 Fundamentals of Computers and Information Technology

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets [6]

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

Physics

PH 111 Mechanics, Properties of Matter and Relativity 3-0-0-3

Mechanics: Laws of motions, Inertial and non-inertial frames of reference, Rotating frame, Effect of centrifugal and Coriolis forces due to earth's rotation, Center of mass (C.M), Lab and C.M frame of reference, Conservation of linear and angular momenta. [8]

Properties of Matter: Elasticity, Young's modulus, Modulus of rigidity, Poisson's ratio, relation connecting different elastic-constants, twisting couple of a cylinder(solid and hallow), Dynamical method (Maxwell's needle) for determining the modulus of rigidity, Bending moment, Cantilever, Determination of Young's modulus by bending of beam. [10]

Fluid Mechanics: Kinematics of moving fluids, equations of continuity, Euler's equation, Bernaulli's theorem, viscous fluids, streamline and turbulent flow, Poiseulle's law, Capillary tube flow, Reynold's number, Stokes law. [7]

Relativity: Postulates of special theory of relativity, Derivation of Lorentz transformation and physical significance of Lorentz invariance, Length contraction and time dilation, Concept of simultaneity, Relativistic velocity transformation relations, mass energy relation, Concept of zero rest mass of photon, Relativistic relation between energy and momentum. [14]

Text Books:

1. D.S.Mathur. Mechanics, S. Chand Publications, New Delhi
2. Resanick and Halliday: Physics Part –1

Reference Books:

1. H.C.Verma : Concept in Physics Vol. I
2. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol I.

PH 121 Electromagnetism 2-0-0-2

Vector Calculus: Gradient, divergence and curl operators, Physical significance [7]

Electromagnetism: Laws of Electromagnetism using vector calculus; electrostatics and magnetostatics in matter, Biot and Savart's law, calculation of H order in simple geometrical situations, Ampere's Law $\nabla.B=0$, $\nabla xB=\mu_0\mathbf{J}$, field due to magnetic dipole, magnetization current, magnetization vector, Half order field, magnetic permeability (linear cases), interpretation of a bar magnet as surface distribution of Solenoidal current. [10]

Time Varying Fields: Electromagnetic induction, Faraday's law, electromotive force, $\varepsilon = \int$ E.dr. integral and differential forms of Faraday's Law. Mutual and self inductance, transformers, energy in a static magnetic field, Maxwell's displacement current, Maxwell's equations, Electromagnetic field density. [10]

EM wave propagation: The wave equation satisfied by E and B, Plane electromagnetic waves in vacuum, Poynting's vector, Reflection at plane boundary of dielectrics, Polarization by reflection and total internal reflection, Faraday effect, Waves in a conducting medium [12]

Text Books:

1.David J. Griffiths: Introduction to Electrodynamics (3rd Edition)
2. Gupta and Kumar: Electromagnetics

Reference Books:

1.P. Lorrain and O. Corson: EM Waves and Fields
2.A. S. Mahajan and AA Rangwal: Electricity and Magnetism

PH 131 *Physics Laboratory-I* 0-0-4-2

Assignments are based on the course PH 111 and PH 141

PH 122 Thermodynamics and Statistical Physics 3-0-0-3

Thermodynamics: Reversible and irreversible processes, Carnot's cycle and Carnot's theorem, Second law of thermodynamics, Thermodynamic scale of temperature. [7]

Concept of entropy: Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram [8]

Thermodynamic functions, Internal energy, Enthalpy, Helmholtz function and Gibb's free energy, Maxwell's thermodynamical equations and their applications, TdS equations, Energy and heat capacity equations, Clapeyron equations, Adiabatic demagnetization, Third law of thermodynamics, Nernst heat theorem. [10]

Joule-Thomson effect, Thermodynamic analysis, Inversion temperature, Thermodynamic equations for a Vander Waals gas. Liquefaction of gases. Regenerative principle, Properties of liquid helium, Introduction to super fluidity [6]

Statistical Mechanics: State of a system (Microscopic and Macroscopic); Phase space, density of states and Liouville's theorem; Postulates of statistical mechanics; Relation between statistical and thermodynamic parameters. [8]

Text Books:

1. K.W. Zeemansky: Heat and Thermodynamics
2. BrijLal and N. Subramanyam.:Heat and Thermodynamics

Reference Books:

1. B.K. Agarwal: Thermal Physics
2. Frederick Reif : Fundamentals of Statistical and Thermal Physics
3. R.K. Pathria: Statistical Mechanics (2nd Edition):

PH 132 Oscillations and Waves 2-0-0-2

Oscillations: Simple harmonic oscillations, Differential equation of SHM and its solution, Amplitude, Frequency, Time Period and Phase, Velocity and acceleration. Kinetic, Potential and total energy and their time average values. Free oscillations of systems with one degree of freedom : (i) Mass-Spring system, (ii) Simple Pendulum, (iii) Torsional Pendulum, (iv) Compound pendulum (v) Bar Pendulum. [6]

Superposition of Two Collinear Harmonic Oscillations: Linearity and superposition principle. (i) Oscillations having equal frequencies and (ii) Oscillations having different frequencies (Beats). Superposition of N Collinear Harmonic oscillations [6]

Free Oscillations; Damped oscillations; Damping coefficient, Log decrement; Forced oscillations : Transient and steady states, Amplitude, Phase, Resonance, Sharpness of resonance, Power, Dissipation and Quality Factor. [7]

Waves: Plane and spherical Waves, Longitudinal and transverse waves, Plane progressive (Traveling) waves. Wave equation. Particle and wave velocities. Differential Equation. Pressure of a longitudinal wave. Velocity of waves : Velocity of transverse vibrations of stretched strings, Newton's formula for [7]

velocity of sound; Laplace's correction

Text Books:

1. N.K. Bajaj: The Physics of Waves and Oscillations, Tata cGraw-Hill, 1988.
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Oscillations and Waves, CBC, Jaipur
3. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.

Reference Books:

1. A. P. French : Vibrations and Waves ,CBS Publications, 1987
2. BrijLal and N. Subramanyam: Waves and Oscillations

PH 132 Physics laboratory-II 0-0-4-2

Assignments are based on the course PH 122 and PH 132, etc.

PH 211 Semiconductor Physics and Electronics 3-0-0-3

Semiconductor Physics: Intrinsic and extrinsic semiconductors, P-N junction diode, Diode equation, depletion width and potential barrier, junction capacitance, I-V characteristics, Rectifier, ripple factors, filter circuits, efficiency and percentage regulation, LED, photodiode. [9]

Electronics : Transistor circuits, Input, Output characteristics and CB and CE modes, DC load line, operating point, biasing and bias-stabilization circuits: Transistor as an amplifier (CE mode) and frequency response. [6]

Hybrid parameter: Analysis of transistor amplifier (with and without load) using h- parameters, simplified hybrid model, brief idea about hybrid model Single stage amplifier in CE,CB and CC modes. RC coupled CE amplifier and its frequency response, tuned voltage amplifier. Power amplifier classification, distortion and efficiency, push pull amplifier [10]

Feedback in amplifiers: Positive and negative feedback, effect of negative feedback on the characteristics of different types of amplifiers, voltage and current series feedback circuits. Field effect transistors, I-V Characteristics of JFET and MOSFET, FET biasing, FET as an amplifier. [8]

Digital Electronics: Diode and transistor equivalent circuits of basic and derived gates, Universal gates, X-OR and equivalence. Simplification of Boolean expressions using K- maps. Sequential circuits, Flip flops. [6]

Text Books:

1. Millman and Halkias: Integrated Electronics:
2. Chattopadhyay and Rakshit: Electronics Fundamental and Application

Reference Books:

1. Malvino and Leach: Principle of Digital Electronics:
2. Gupta and Kumar: Hand book of Electronics

PH 221 Optics and Lasers 3-0-0-3

Interference: Young's experiment, Conditions for sustained interference, Theory of interference, Fresnel's biprism, Determination of wavelength of light, Interference in parallel and edge shaped films, Colour of thin films. Newton's rings determination of wavelength of light, Michelson interferometer and their applications. [10]

Diffraction: Definition, Frenel's diffraction, Zone plate, diffraction due to straight edge. Fraunhoffer diffraction due to single and double slits, Plane transmission grating and its resolving power. [10]

Polarization: Polarized light and its mathematical representation, Polarization [9]

by double refraction and Huygen's theory, Nicol prism, Retardation plates, Production and analysis of circularly and elliptically polarized light, Optical activity.

Lasers: Einstein's A and B coefficients, Spontaneous and Stimulated conditions for laser action population inversion, optical pumping, Working of different types of lasers: semiconductor, rubey and He-Ne Lasers. [10]

Fiber optics: Working, Numerical aperture

Text Books:

1. N. Subrahmanyam, Brijlal and M. N. Avadhanulu: A textbook of Optics
2. A.Ghatak: Optics, Tata McGraw-Hill

Reference Books:

1. B. K. Mathur and T. P. Pandya: Physical Optics

PH 231 Physics laboratory-III 0-0-4-2

Assignments are based on the course PH 211 and PH 221

PH 212 Mathematical Physics and Special Theory of Relativity 3-1-0-4

Curvilinear Coordinates: Orthogonal curvilinear coordinate systems, scale factors, expression for grade, divergence, curl and their application to Cartesian, circular cylindrical and spherical polar coordinate systems. [9]

Coordinate transformation and Jacobean, Transformation of covariant, contra variant and mixed tensor. Addition, multiplication and contraction of tensors. Metric tensor and its use in transformation of tensors [7]

Dirac-delta function and its properties. Lorentz transformation and rotation in space-time, time like and space like vectors, world line, and macro-causality [6]

Four vector formulation: energy- momentum Four vector, relativistic equation of motion invariance of rest mass, orthogonality, four force and four velocity, Lorentz force as an example of four force transformation of four frequency vector, longitudinal and transverse Doppler's effect. [12]

Transformation of electric and magnetic fields between two inertial frame

Differential Equations: The second order liner differential equation with variable coefficient and singular points, series solution method and it application to the Hermite's Legendre's and Laguerre's differential equation. Basic properties (without proof) like orthogonality, recurrence relation, Graphical representation and generating functions of Hermite, Lagendre, Leguerre and Associated Legendre functions (very simple application) [13]

Fourier Analysis: Fourier theorem, Fourier analysis of square wave, saw-tooth wave, plucked strings, half wave/full wave rectifier wave forms [5]

Text Books:

1. George Arfken: Mathematical Method for Physicists (Academic Press).
2. S.L.Kakani, C. Hemrajani, T.C. Bansal: Mathematical Physics and Special Theory of Relativity, CBC, Jaipur
3. D. E. Bourne, P C Kendall: Vector Analysis and Cartesian Tensors, 3ed (Chapman & Hall, 1992)

Reference Books:

1. A.P. French: Special Relativity
2. P. K. Chattopadhyay: Mathematical Physics.
3. Gupta and Kumar: Mathematical physics

PH 222 Physics Laboratory IV 0-0-4-2

Assignments are based on Course PH 211 etc.

PH 311 Quantum Mechanics and Spectroscopy 3-1-0-4

Failure of Classical Physics: Black body radiation (without derivation), Photoelectric effect, Compton effect Wave Packets and Uncertainty Relation: de-Broglie hypothesis, Wave-particle duality, Wave packets, Group velocity and phase velocity, Uncertainty principle. [10]

Wave Mechanics: Schrödinger equation, Physical interpretation of wave function, Probability current density and conservation of probability, Free particle wave function, Schroedinger equation in the presence of a potential, Linear operators, Hermitian operators, Observables, Eigenvalues and Eigenfunctions, Expectation values, Ehrenfest's theorem, Commutation relations [15]

Schrödinger Wave Equation and Applications: Particle in one dimensional Box, Square well, Rectangular potential barrier and tunneling, Linear harmonic oscillator, Spherically symmetric potential, Angular momentum operators and their eigen functions, Concept of spin, Hydrogen atom. [12]

Spectroscopy: Quantum futures for spectra of single valence electron atom: Orbital magnetic dipole moment, Orbital, spin and total angular momentum, Larmor precession, Vector model of atom, Electronic configuration and atomic states, Spin-orbit interaction and fine structure, Intensity of spectral lines, General selection rules. Zeeman Effect, Two valence electron atoms: LS and JJ coupling schemes and resulting spectra, Idea of normal and inverted doublets. [15]

Text Books:

1. V. Devanathan:Quantum Mechanics
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Elementary Quantum Mechanics and Spectroscopy, CBC, Jaipur

Reference Books:

1. Loknathan and Ghatak:Quantum Mechanics
2. S. Gasiorowicz: Quantum Physics
3. B. H. Bransden and C. J. Joachain: Quantum Mechanics:
4. H.E. White, Introduction to Atomic Physics
5. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol VIII.

PH 331 Electromagnetic Theory 4-0-0-4

1. **Maxwell's Equations:** Concept of Displacement Current, Vector and Scalar Potentials, Boundary Conditions at boundary of different media, Wave equations and plane waves in Dielectric media, Poynting Theorem, Physical concept of Electromagnetic field, Energy density, Momentum density. [8]

2. **Reflection and Refraction of EM Waves:** Reflection and refraction of a plane wave by interface between dielectrics, Fresnel Formulae, Total internal reflection, Brewster's angle, Waves in conducting media, Metallic reflection for normal incidence. [10]

3. **Plasma and Ionosphere:** Concept of skin depth, Microscopic media (Plasma) and Maxwell's equations, Plasma frequency, Refractive index, Conductivity of an ionized Gas, Propagation of e.m. waves through Ionosphere. [12]

4. **Polarization of EM Waves:** Different types of polarizations (Linear, Circular and Elliptical), e.m. Fresnel's formula, Uniaxial and biaxial crystals, Polarization by double refraction, Nicol Prism, Ordinary and Extraordinary Refractive indices, Phase retardation plates: Quarter-Wave and Half-Wave Plates, Analysis of Polarized Light, Polarimeter. [10] [8]

5. **Rotatory Polarization:** Optical rotation, Biot's Laws for Rotatory Polarization, Fresnel's Theory of Optical Rotation, Experimental verification of Fresnel's Theory, Specific Rotation, Laurent's Half-Shade Polarimeter.

6. **Fiber Optics:** Planar Optical Wave Guides, Propagation through optical fiber, Types, Numerical aperture, Modes of Propagation (Basic Concepts only). [4]

Text Books:

1. A.Z. Capri and P.V. Panat: Introduction to Electrodynamics, Narosa Pub. House, New Delhi, 2002
2. David J. Griffiths: Introduction to Electrodynamics, 3rd Edition, Benjamin Cummings 1998
3. J. D. Jackson: Classical Electrodynamics, 3rd Edition, Wiley, New York, 1998

4. M. Lifshitz and L. D. Landau: Classical Theory of Fields (Course of Theoretical Physics), 2nd Edition, Pergamon Pr., 1981.

Reference Books:

1. Joseph A. Edminister: Electromagnetics, 2nd Edition, Tata McGraw Hill, New Delhi, 2006.
2. M.A.W. Miah: Fundamentals of Electromagnetic, Tata McGraw Hill,1992
3. Liang Chi Shen, Jin Au Kong: Applied electromagnetism, PWS Pub. Co., 1995.

PH 341 Atomic and Molecular Physics 4-0-0-4

1. **Atomic Physics:** Spectra of Hydrogen, Deuteron and alkali atoms spectral terms, doublet fine structure, screening constants for alkali spectra for s, p, d and f states, selection rules. [7]

2. **Earth Spectra:** Singlet and triplet fine structure in alkaline earth spectra [5]

3. **Week spectra:** continuous X-ray spectrum and its dependence on voltage, Duane and Hunt's law. Characteristic X rays, Moseley's law, doublet structure of X-ray spectra, X-ray absorption spectra. [8]

4. **Molecular Physics:** Discrete set of electronic energies of molecules, quantization of vibrational and rotational energies, determination of internuclear distance, pure rotational and vibrational spectra. [10]

5. **Vibration Spectra**: Dissociation limit for the ground and other electronic states, transition rules for pure vibration and electronic vibration spectra. [6]

6. **Raman Effect:** raman Effect, Stokes and anti-Stokes lines, complimentary character of Raman and infrared spectra, experimental arrangements for Raman spectroscopy. [8]

7. **Spectroscopic Techniques**: Sources of excitation, prism and grating spectrographs for visible, UV and IR, absorption spectroscopy, double beam instruments. [8]

Text Books:

1. Robert Eisberg and Robert Resnick: Quantum Physics of Atoms, Molecules, Solids, Nuclei, and Particles, John Wiley & Sons Inc, 1985
2. H.E. White: Introduction to Atomic Spectra, McGraw-Hill book company, Inc.
3. C.N. Banwell: Molecular Spectroscopy, Tata-McGraw Hill Publishers, New Delhi, 1993

Reference Books:

1. R.C. Johnson: Introduction to Molecular Spectra, Pitman Publishing Corp., New York, 1949
2. D. P Khandelwal : Optics and Atomic Physics, Shiva Lai Agarwala & Company, Educational Publisher, 1973
3. Arthur Beiser: Concepts of Modern Physics, McGraw-Hill Book Company, 1987.

PH 351 Elements of Classical Mechanics 2-0-0-2

1. System of particles, Constraints, Generalized coordinates, D'Alemberts principle and Lagrange's equation, Velocity dependent potential of electro-magnetic field. [10]

2. Calculus of Variation, Hamilton's principle, Lagrange's equation, Lagrangian for simple systems, Cyclic coordinates, symmetries and conservation laws. [6]

3. Advantages of Lagrangian: electro-mechanical analogies, Lagrange's undetermined multipliers, Lagrange's equation for nonholonomic systems, Virial theorem, Principle of mechanical similarity. [10]

Text Books

1.H. Goldstein: Classical Mechanics: 3rd Edition, Addison-Wesley Pub, 2001
2. L . D. Landau and E. M. Lifshitz: Classical Mechanics: A Course of Theoretical Physics, Vol.1, 3rd Edition , Pergamon Press, 1976.
3. K. C. Gupta: Classical Mechanics of Particles and Rigid Bodies, Wiley Eastern, New Delhi, 1988

Reference Books:

1. R. G. Takwale and Puranik: . Introduction to Classical Mechanics, 24th Edition, Tata-McGraw Hill, New Delhi, 1991
2. N. C. Rana and P. Joag: Introduction to Classical Mechanics, Tata McGraw Hill, 1992.

PH 361 General and Optics Based Laboratory 0-0-4-2

Assignments are based on the course PH 341,etc

PH 371 Electronics Laboratory 0-0-4-2

Assignments are based on the course PH 331,etc

PH 342 Solid State Physics 3-0-0-3

1. **Structure**: Crystal structure, periodicity, lattices and bases, fundamental translational vectors, unit cell, lattice types, Bravais lattices, Miller indices for direction and planes, Common crystal structures like NaCl, ZnS and Diamond; Close packed structures, Lau theory of X-ray diffraction, X-ray diffraction, Bragg's law. [9]
2. **Bonding**: Potential between a pair of atoms, concept of [6]

cohesive energy, covalent, Vander Waals, ionic and metallic Crystals, reciprocal lattice, Brillouin Zones

3. **Thermal Properties**: Lattice vibrations, Vibrational modes of continuous medium, Debye's model: lattice specific heat, Phonons, Density of states. [7]
4. **Electronic Properties**: Free electron gas, Electrons in periodic potential, Kronig-Penny model, Bloch theorem, energy bands, metals, insulators and semiconductors; Hall Effect, Fermi surface [10]
5. **Magnetic Properties**: Magnetic moment, magnetic susceptibility, Dia-, Para and Ferromagnetism, Ferromagnetic domains. [7]

Text Books:

1. C. Kittel: Solids State Physics, 6th edition, John Wiley & Sons, NY, 1986
2. R. L. Singhal, Solid state Physics, KNRN Pub., Meerut, 1998

Reference Books:

1. Decker: Solids State Physics, Prentice-Hall, New York, 1962
2. Azarof: .Introduction to Solids, Mc-Graw-Hill Book Co., Inc.
3. S.O. Pillai, Solid State Physics, 6th Edition, New Age International Pub, 2005.

PH 352 Nuclear and Particle Physics 4-0-0-4

1. **Nuclear Structure**: Properties of Nuclei and Models, Introduction to the nucleus, Fermi gas model, Deutron Binding energy, Semiemperical mass formula, Mass diffect, Packing fraction and its application to explain most stable isobars and nuclear fission, Magnetic dipole moment, quadrapole moment, angular momentum, Effect of mass number on size of nucleus Condition of stability for isobars. [9]

2. **Nuclear Models**: Liquid drop model, fission and potential barrier, N-N and P-P chains, Nuclear reactors, Nuclear fission and fusion. [6]

3. **Nuclear Force and Two-Nucleon System:** Properties of nucleon-nucleon interaction, General forms of nucleon-nucleonpotential, Neutron-proton scattering for low energies: scattering length, Ground state properties of deuteron, Simple consideration of deuteron using central potential (square well). [10]

4. **Nuclear Stability:** Nucleon emission, separation energy, Alpha decay and its energy spectrum, WKB Approximation, Beta decay and its energy spectrum (for example,137Cs), Need for neutrinos, Q-values, Gamma decay, Parity and Selection rules for gamma transitions (no derivation). [10]

5. **Accelerators and Detectors**: Cyclotron, Betatron, Van de Graaff and Linear accelerators, Synchrotrons, Geiger-Mueller detector, Scintillation detector. [5]

6. **Elementary Particles**: Properties of particles, classification in to leptons mesons and baryons, matter and antimatter, conservation laws (qualitative discussion), energy, momentum, angular momentum, charge, lepton number, Baryon number, Isospin, strangeness. [5]

7. **Classification of Particles:** Interactions, Quantum numbers, Quarks as the building blocks of hadrons, Colour degree of freedom. [7]

Text Books:

1. S. S. M. Wong: Introductory Nuclear Physics, 2nd Edition, John Wiley & Sons, New York, 1998
2. D.C. Tayal, Nuclear Physics, Himlaya Publishing House, 5th Ed, 1992
3. S.L.Kakani, C. Hemrajani, T.C. Bansal, Nuclear Physics, CBC, Jaipur, 2005
4. S. N. Ghosal: Nuclear Physics, S. Chand Limited, 1997

1. B. L. Cohen: Concepts of Nuclear Physics, Tata McGraw-Hill New Delhi, 1971
2. H.A. Enge, Introduction to Nuclear physics, Addison Wesley, Publishing company, Inc. New York, 1 974
3. A. Bieser, prospective of Modern Physics, 22nd Reprint, Tata McGraw-

Hill, New Delhi, 2008

PH 362 Statistical Mechanics 4-0-0-4

1. **Random Walk Problem:** Probability distribution, Mean and Dispersion and Simple Numerical Problems. [8]

2. **Basic Concepts of Statistical Physics**: Entropy and thermodynamic probability, Ensemble theory, partition function, applications to classical ideal gas, Gibbs paradox; Statistical equivalence of three ensembles. [7]

3. **Classical Theory of Radiation:** Properties of Thermal Radiation, Blackbody Radiation, Stefan-Boltzmann Law and Wien's Displacement law. [6]

4. **Quantum Nature of Radiation:** Planck's Postulates. Planck's Law and Blackbody Radiation, Experimental Verification. Derivations of Wien's Distribution Law, Rayleigh-Jeans Law from Planck's Law. [8]

5. **Bose-Einstein's Condensation:** B-E Distribution law, Completely Degenerate Bose Gas, Bose-Einstein condensation, Properties of liquid He, Radiation as photon gas. [10]

6. **Fermi-Dirac Statistics:** F-D Distribution Law, ideal completely Degenerate Fermi Gas and Thermodynamic functions, Fermi Energy, Electron gas in a metal, Specific Heat of Metals. Maxwell-Boltzmann statistics as a classical limit, Comparison of the three statistics, White Dwarf Stars, Chandrasekhar Mass Limit. [13]

Text Books:

1. Frederick Reif: Fundamentals of Statistical and Thermal Physics, Waveland Press 2009
2. R. K. Patharia: Statistical Mechanics, Oxford: Butterworth, 1996
3. K. Huang: Statistical Mechanics, Wiley, 1987 .

Reference Books:

1. S. Lokanathan and R.S. Gambhir: Statistical and Thermal Physics: an introduction, P.H.I., 1991
2. F. Reif: Statistical Physics, Berkeley Physics Course Volume 5, Tata McGraw-Hill Company Ltd, 2008

PH 372 Basics of Nano-Science and Exotic Materials 3-0-0-3

1. **Physics for Nano-Science:** Electron Band Structure and [6]

Its Modification due to change in dimensionality. Phonon absorption in Nanomaterials.

2. **Basic Concepts of Nanomaterials:**Physical, Chemical and Bio-routes for Synthesis of Nanomaterials (basic idea), Metal Nanoparticles, Carbon Nanostructures, Electronic Properties of Nanomaterials, Nano photonics, Some applications of Nano Materials. [15]

3. **Introduction to Exotic Materials:** High Temperature Superconductors and Colossal Magnetoresistance Materials. Meissner Effect, Discovery of HTSC Materials, Structure and Properties, Elements of Proposed Mechanisms of high temperature superconductivity, Elementary Concepts of CMR Materials, Some Application of CMR materials. [14]

4. **Quasicrystals:** Basic definition of quasicrystal and Structure of Quasicrystals. [4]

Text Books:

1. C.P. Poole and F.J. Owens: Introduction to Nanotechnology, John Wiely & Sons, NJ, 2003

2 .C.M. Niemeyer and C.A. Mikin: Nanobiotechnology : Concepts, Applications and Perspectives, John Wiley & Sons, NJ, 2004

Reference Books:

1. Charles Kittel: Introduction to Solid State Physics, 5thEdition, John Wiley & Sons, NY, 1986.

PH 382 Solid State and Nuclear Laboratory 0-0-4-2

Assignments are based on the course PH 342, PH 352, etc

PH 392 Optoelectronics Laboratory 0-0-4-2

Combined Assignments are based on Lasers, Optical Fibers, PH 341, etc.

Mathematics

MS 111 Calculus 3-0-0-3

Curvature: Curvature, Radius of curvature for Cartesian curves, parametric curves, Polar curves and Pedal curves, Centre of curvature. Circle of curvature, Chord of curvature, Tests for concavity and convexity, Points of inflexion, Multiple points. [8]

Asymptotes and Curve Tracing:: Asymptotes in Cartesian and polar coordinates, Intersection of a curve with its asymptotes**, a**pplication of differential calculus in curve sketching in Cartesian and polar co-ordinates. [8]

Differentiation: Partial differentiation, Euler's theorem for homogeneous functions,Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers. [8]

Integral Calculus:*:* Double integrals in Cartesian and polar coordinates, Change of order of integration, Triple integral, Applications of double and triple integrals in finding areas and volumes. [8]

Vector Calculus: Gradient, Divergence and Curl. Greens, Stokes and Gauss Theorems (without proof) and problems based on these theorems. [7]

Text Books:

1. Thomas and Finney: Calculus and Analytic Geometry, Ninth Edition.
2. Shanti Narayna : A Text Book of Vector Calculus. S. Chand & Co., New Delhi.

Reference Books:

1. N. Saran and S.N. Nigam: Introduction to Vector Analysis, Pothishala Pvt. Ltd., Allahabad.
2. Differential and Integral Calculus: Shanti Narayan.
3. D. C. Gokhroo, Differential Calculus, Navkar Prakashan.
4. N. Piskunov: Differential and integral Calculus. Peace Publishers, Moscow.
5. Gorakh Prasad: Differential Calculus. Pothishasla Pvt. Ltd., Allahabad.
6. Gorakh Prasad: Integral Calculus. Pothishala Pvt. Ltd., Allahabad.

MS 121 Matrices and Theory of Equations 3-0-0-3

Matrix: Matrices, Symmetric, Skew symmetric, Hermitian and skew Hermitian matrices. Elementary Operations on matrices Rank of a matrices, Inverse of a matrix. Linear dependence and independence of rows and columns of matrices, Row rank and column rank of a matrix, Eigenvalues, eigenvectors and the characteristic equation of a matrix, Cayley Hamilton theorem and its use in finding the inverse of a matrix [13]

Applications of Matrices: Applications of matrices to a system of linear [9]

(both homogeneous and non–homogeneous) equations. Theorems on consistency of a system of linear equations. Unitary and Orthogonal Matrices, Bilinear and Quadratic forms

Theory of Equations: Relations between the roots and coefficients of general polynomial equation in one variable, Solutions of polynomial equations having conditions on roots. Common roots and multiple roots. Transformation of equations. [9]

Solution of equations: Nature of the roots of an equation, Descarte's rule of signs. Solutions of cubic equations (Cardon's method). Biquadratic equations and their solutions . [8]

Text Books:

1. Higher Algebra: A. Kurosh (Moscow Mir Publisher 1972).
2. Theory of Equations: (Lecture notes for inter University Leadership project in Mathematics by R.N. Gupta, Surjeet Singh and R.J. Hans.

Reference Books:

1. H.S. Hall and S.R. Knight: Higher Algebra, H.M. Publications 1994.
2. Shanti Narayan: A Text Books of Matrices.
   Chandrika Prasad: Text Book on Algebra and Theory of Equations. Pothishala Private Ltd., Allahabad.

MS 112 Abstract Algebra 3-0-0-3

Group: Algebraic structure**,** Definition of a group with examples and simple properties, Abelian group, semi group, Order of an element of a group, Cyclic groups, Coset decomposition. [11]

Subgroup and quotient Groups: Subgroups, Normal subgroups, Normalizer of an element, Quotient group [10]

Group Morphism: Homomorphism, kernel of homomorphism, Isomorphism and automorphism, Fundamental theorem of Homomorphism, Cayley's theorem. [10]

Permutations: Definition and examples of Permutation, group of permutations, Cyclic Permutation, Even and odd permutation. [8]

Text Books:

1. I.N.Herstein: Topics in Algebra, 2nd edition, Wiley Eastern Ltd. 1988.
2. P.B.Bhattacharya, S.K.Jain and S.R.Nagpaul: Basic Abstract Algebra, 2nd Edition, Cambridge University Press 1995.

Reference Books:

1. J.B.Fraleigh : A first course in Abstract Algebra, 3rd Edition Addison-Wesely/Narosa 1998..
2. Surjeet Singh and QuaziZameeruddin : Modern Algebra, Revised Edition,Vikas Publishing House, 1992.
   D. C. Gokhroo: Algebra, Navkar publication, Ajmer, Revised Edition , 2005.

MS 122 Differential Equations-I 3-0-0-3

Basic Concepts: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines. [4]

First Order Differential Equations: Differential equation of first order and first degree, Homogeneous form and reducible to homogeneous form, Linear equations and equations reducible to linear form, Exact differential equations, Equations reducible to exact forms, First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations, Equation reducible to Clairaut's form. [14]

Second order differential equations: Second order differential equations with variables coefficients, Homogeneous and exact forms, Change of dependent equations, change of independent variables, normal form, Method of variation of Parameters [12]

Series Solution: Regular singular points, ordinary points, , series solution of second order linear differential equations with variable coefficients(Complementary Functions only) [9]

Text Books:

1. D.A. Murray : Introductory Course in Differential Equations. Orient Longaman (India) . 1967
2. A.R.Forsyth : A Treatise on Differential Equations, Machmillan and Co. Ltd. London

Reference Books:

1. D. C. Gokhroo : Ordinary Differential equations, NavkarPrakashan.
2. S.L.Ross: Differential Equations, John Wiley & Sons
   B.Rai& D.P. Chaudhary : Ordinary Differential Equations; Narosa, Publishing House, Pvt. Ltd.

MS 211 Linear Algebra 3-0-0-3

Vector Space: Vector spaces, subspaces, Sum and Direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space. Finitely generated vector space, Existence theorem for basis of a finitely generated vactor space, Finite dimensional vector spaces, Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension [12]

Linear transformations: Linear transformations and linear forms on vactor spaces, Vactor space of all the linear transformations, Kernal and range of a linear transformation, Rank and Nullity, Matrix of a Linear Transformation, Change of basis. [10]

Dual Spaces: Dual Spaces, Dual Basis, Bidual Spaces, annihilator of subspaces of finite dimentionalvactor spaces. [9]

Inner Product Space: Inner produt space, norm of a vector, Orthogality. [8]

Text Books:

1. I.N. Herstein : Topics in Algebra, Wiley Eastern Ltd., New Delhi, 1975
2. P.B. Bhattacharya, S.K. Jain and S.R. Nagpal : Basic Abstract Algebra (2^{nd} edition).

Reference Books:

1. VivekSahai and VikasBist : Algebra, Narosa Publishing House.
2. I.S. Luther and I.B.S. Passi : Algebra, Vol.-II, Narosa Publishing House.
   D. C. Gokhroo : Linear Algebra, NavkarPrakashan.

MS 221 Differential Equations-II 3-1-0-4

Partial Differential equations: Formation, order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, singular solution, General solution, Solution of Lagrange's linear equations, Charpit's general method of solution. [13]

Second and higher Order PDE: Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant co-efficients, Partial differential equation with variable co-efficients reducible to equations with constant coefficients, their complimentary functions and particular Integrals, Equations reducible to linear equations with constant co-efficients. [14]

Solution of Second order PDE: Classification of linear partial differential equations of second order, Hyperbolic, parabolic and elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method. [12]

Text Books:

1. Ian N. Sneddon : Elements of Partial Differential Equations, McGraw-Hill Book Company, 1988.

   J.N. Sharma &Kehar Singh : Partial Differential Equations

MS 212 Numeric Analysis 3-1-0-4

Interpolation: Interpolation with equal intervals: Newton's forward and Newton's backward interpolation formulae. Newton's divided difference, Lagrange's Interpolation formulae. [10]

Central Differences: Gauss forward and Gauss's backward interpolation formulae, Sterling, Bessel Formula. [8]

Iterative Methods: Newton Raphson Method, Successive Bi-Section, RegulaFalsi, Successive Approximation Method. [11]

Numerical Methods: Newton-Cote's Quadrature formula, Trapezoidal rule, Simpson's one-third and three-eighth rule, Picard method, Euler method, Runge-Kutta Methods. [10]

Text Books:

1. Babu Ram: Numerical Methods, Pearson Publication.

2. R.S. Gupta, Elements of Numerical Analysis, Macmillan's India 2010.

Reference Books:

1. M.K. Jain, S.R.K.Iyengar, R.K. Jain : Numerical Method, Problems and Solutions, NewAge International (P) Ltd., 1996
2. S.S.Sastry: Introductory Methods of Numerical Analysis, 3rd edition(2000), Prentice Hall of India Pvt. Ltd., New Delhi.5. C.E. Froberg : Introduction to Numerical Analysis (2nd Edition).
   S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

MS 222 Real Analysis 3-0-0-3

Neighborhood and Limit Points: Boundedness of the set of real numbers, least upper bound, greatest lower bound of a set, neighborhoods, interior points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weierstrass theorem. [10]

Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence. [9]

Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, D-Alembert's ratio test, Cauchy's general principle of Convergence of series, Leibnitz test, Absolute and conditional convergence. [12]

Riemann integral: Lower and upper Riemann integrals, Riemann Integrability, Mean value theorem of integral Calculus, Fundamental theorem of Integral Calculus. [8]

Text Books:

1. R.R. Goldberg : Real Analysis, Oxford & I.B.H. Publishing Co., New Delhi, 1970
2. S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd.,

Allahabad.

Reference Books:

1. Shanti Narayan : A Course in Mathematical Analysis, S.Chand and company, New Delhi.
2. D. C. Gokhroo, Real analysis, NavkarPrakashan.
3. T.M. Apostol: Mathematical Analysis, Narosa Publishing House, New Delhi, 1985
   Earl D. Rainville : Infinite Series, The Macmillan Co., New York

Chemistry

CH 181 Physical and Inorganic Chemistry-I 2-0-0-2

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective nuclear charge. **[5]**

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule-Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 4thEdition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I 2-0-0-2

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer compounds and field effects. **[5]**

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogeniccentre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogeniccentresdiastereomers, threo and erythrodiastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation,Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivityin alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes- mechanisms involved in hydrogenation, electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration- reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I 3-0-0-1.5

Experiments based on the contents of CH 181 and CH 191.

CH 182 Physical and Inorganic Chemistry-II 2-0-0-2

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphurtetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D.

Tuli&ArunBahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand &Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand& Co .Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 192 Organic Chemistry-II 2-0-0-2

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed. 2007, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II 3-0-0-1.5

Experiments based on the contents of CH 182 and CH 192.

CH 291 Physical Chemistry-I 2-0-0-2

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU&dHfor the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A &G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it.

Concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. Expression for the rate constant based on equilibrium constant and thermodynamic aspects. **[11]**

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I 2-0-0-2

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series: General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond **[7]**

theory of transition metal complexes.

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 18th Ed. 2009, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand &Co.Ltd.

CH 223 Organic Chemistry-III 2-0-0-2

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and hypochromic shifts, UV spectra of conjugated enes and enones. **[6]**

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, LedererManasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel'smethod. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 20th Ed. 2008, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III 3-0-0-1.5

Experiments based on the contents of CH 291, CH 213 and CH 223.

CH 272 Physical Chemistry-II 2-0-0-2

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibriaof one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point ($NaCl-H_2O$), ($FeCl_3-H_2O$) and ($CuSO_4-H_2O$) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-$HCl-H_2O$ and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications. **[10]**

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorfand moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometrictitrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using hydrogen quinhydrone and glass electrodes. **[12]**

Chemical Equilibrium: Equilibrium constant and free energy. Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, Clausius-Clapeyron equation and their applications. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 5th Ed. 2004, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II 2-0-0-2

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik,

G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand &Co.Ltd.

CH 292 Organic Chemistry-IV 2-0-0-2

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagelcondensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic). **[6]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV 3-0-0-1.5

Experiment based on the contents of CH 272, CH 282 and CH 292.

Computer Science

CA 121 Programming Concepts using C Language 3-0-0-3

Development of Algorithms and Flowcharts: Importance, Symbols and Structure. [5]

Structure: Basic Structure of C Program, Constant, Variable, Data Types, Data Declaration, Operations (Arithmetic, Relational, Logical), Increment and Decrement Operators, Assignment Operator, Precedence of Arithmetic Operators, Operator Expression, Type Conversions in Expressions, Assignment Statements. [8]

Control Structure: Input and Output using getchar and putchar, Printf, Scanf Functions, Condition Statements, Simple if- else, Switch, Concept of Loop (While, For, Do-While), Break and Continue. [8]

Array: One Dimensional Array, Iterative Programs, 2-D Arrays, Matrix Operations. [5]

Concept of Sub Programming: Functions, External Variable Scope Rules, Header Files, Static Variables, Parameter Passing (Call By Values And Call By Reference), Recursion, C Preprocessor, Pointers. [7]

Advanced C concepts: Structure, Union, Argument Passing Using Pointer, Array of Pointers. [6]

CA 151 *C Language Laboratory* 0-0-4-2

Assignments are based on the Course CA 121 Programming Concepts Using C Language.

CA 122 Data Structure Through C 3-0-0-3

Introduction: Concept of Data Structure, Types of Data Structure. [3]

Array: Representation of Single and Multidimensional Array. [2]

Stack and Queue: Introduction and Primitive Operations on Stack: Stack Application; Infix, Postfix, Prefix Expressions, Evaluation of Postfix Expression, Conversion from Infix to Postfix (Algorithms only), Introduction and Primitive Operations on Queues. [9]

Sorting Techniques: Insertion Sort, Selection Sort, Merge Sort and Quick Sort. [7]

Searching Techniques: Linear Search, Binary Search. [6]

List: Introduction to Linked List, Sequential and Link Lists Operation such as Traversal, Insertion, Deletion, Searching. [8]

Tree: Introduction and Terminology, Traversal of Binary Trees, Recursive Algorithms for Tree Operation (Concept). [4]

Text Books:

1. Schaum Series, "Data Structures",TMH, New Delhi
2. Langsam , Augenstein, Tannenbaum, "Data Structure Using C and C++", PHI,

Reference Books:

1. Horowithz and Sahani, "Fundamentals of Data Structure", Galgotia Book Source Pvt. Ltd.
2. Kanitker Y., "Let us C", BPB Publication New Delhi
3. Balagurusamy E , "Programming in C", TMH, New Delhi
4. Schaum Series, "Programming in C", TMH, New Delhi

CA 112 Operating System 3-0-0-3

Introduction: Various Categories of Software, Operating System and its functions, Types of Operating Systems, Structure of Operating System. (Case study of Unix, DOS). [4]

Process Management: Process Concept, ProcessStates, Process Control Block, Interprocess Communication, and Scheduling Algorithms, Performance Evaluation. [7]

DeadLock: Deadlock Characterization, Prevention, Avoidance, Detection of Deadlock, SafeState, Banker's Algorithm. [7]

Memory Management: Swapping, Memory Allocation Schemes, Paging, Segmentation, Virtual Memory Concept, Page Replacement Algorithms. [6]

File Management: Directories, File System Implementation, Allocation Methods, Free Space Management. [6]

Device Management: Disk Structure, Disk Scheduling, Disk Management Control of Various Devices, Device Drivers, Interrupt Driven and Poll Driven Data Transfer. [5]

Security and Protection Mechanism: Computer Security classification, Authentication, System threats, Goals of Protection, Access Matrix. [4]

Text Books:

1. Silbersachatz and Galvin, "Operating System Concepts", Pearson Education.
2. Tannenbaum, "Operating Systems", PHI, New Delhi

Reference Books:

1. William Stalings, “Operating Systems”, New Delhi
2. Ritchie, “Operating System”, BPB Publication , New Delhi
3. Dhamdhere D. M. “System Programming and Operating System”, TMH New Delhi
4. Achyut S Godbole, “Operating Systems”, TMH, New Delh

CA 162 Data Structure Laboratory 0-0-4-2

Assignments are based on the Course CA 122 Data Structure through C.

CA 241 Object Oriented Programming through C++ 3-0-0-3

Introduction: Structured Programming vs. Object Oriented Programming, Basic Concepts (Encapsulation, Information Hiding, Inheritance, Polymorphism), Difference Between C and C++. [4]

Basics of C++: Token, Keyword, Identifiers, Basic Data Type, User Define Data Type, Type Compatibility, Declaration of Variables, Dynamic Initialization of Variables, Reference Variables, Scope Resolution Operators, Member Referencing Operators, Operator Precedence, Control Structures. [8]

Function: Definition, Function Prototype, Call By Reference, inline Function, Function Overloading. [8]

Classes and Objects: Classes, Defining Member Function, Private, Public and Protected Member Elements and Function, Static Data Member, Static Member Function, Array Object, Constructors, Destructors, this Pointer, Operator Overloading, Comparison Between Structures and Classes, Copy Constructor, Dynamic Constructor, Friend Function, Friend Classes. [8]

Inheritance: Introduction, Derived Classes, Types of Inheritance (Single Inheritance, Multiple, Hierarchical, Hybrid), Virtual Base Classes, Abstract Classes. [6]

Virtual Functions: Introduction to Virtual Function, Virtual Function in Derived Classes, Overview of Exception Handling. [5]

Text Books:

1. KanitkerYashwant, “Let Us C++”, BPB Publication, New Delhi
2. GopalVenu, Rajkumar , Ravishanker, “Mastering C++” , TMH, New Delhi

Reference Books:

1. HerbertsSchildt, “C++ The Complete Refernce”, TMH, New Delhi.
2. Lafore R, “Object Oriented Programming Using C++”, GalgotiaPulications, New Delhi
3. Parasons D., “Object Oriented Programming With C++”,BPB, New Delhi
4. LaelorSteaven C., “The Art of Programming Computer With C++”, Vikas Publication.
5. Dietel&Dietal, “Introduction to C++”.

CA 231 Management Information System 3-0-0-3

MIS and Concept of Management: Elements, Characteristics, Need, Objectives, Importance, and Limitations, Relationship between MIS and Computer and Role of MIS in the Functions of Management. [9]

Information Concept: Classification of Information, Levels of Information, Techniques of Data Collection, Quality aspect of Information, Value of Information, Relation between MIS and Information. [6]

Decision Making: Decision Making Concepts, Rationality in Decision Making, Decision Support System, MIS as a Technique for Programmed Decisions, Model of Decision Making, Methods, MIS and Role of Decision Making. [6]

Manager and Computers: Database Concept, Database Models, Database Design, RDBMS, MIS and RDBMS, Introduction, Topology, LAN, MAN, WAN and Data Communication, Introduction to ERP. [5]

Typical Information Systems: MIS for Marketing, Financial, Production Management, Human Resource Management Information System. [6]

Development of MIS: Strategic and Project Planning for MIS, Conceptual System Design, Detailed Design, Implementation, Evaluation and Maintenance of the MIS. [7]

Text Books:

1. Murdick R G, Ross J E, Clagget J R, “Information Systems for Modern Management”, PHI, New Delhi
2. Jawadkar, “Management Information System”, TMH, New Delhi

Reference Books:

1. Sadagopan, “Management Information System”PHI, New Delhi
2. Parker, Case, Thomas, “Management Information System: Strategies and Action”, TMH, New Delhi.

CA 271 Object Oriented Programming Laboratory 0-0-4-2

Assignments are based on the Course CA 241 Object Oriented Programming through C++.

CA 132 System Analysis and Design 3-0-0-3

System: Concept, Types and Characteristics, Elements, Computer based Information Systems, Candidate System, Role of System Analyst. [5]

System Development Life Cycle: Recognition of Need, Feasibility Study, Design, Implementation and Maintenance, System Planning and Alternatives. [7]

Feasibility and Proposal: User and Management Involvement, Alternative Design Consideration, System Feasibility, The System Proposal. [5]

System Analysis: Effective Communication in System Analysis, Tools of System Analysis, Problem Definition, Classification of Data Collection and Analysis. [9]

System Cost Determination: Types of Costs/Benefits, System Cost and System Benefits and Data Processing Costs. [8]

Implementation: System Testing, Quality Assurance, Implementation and Software Maintenance. [5]

Text Books:

1. Awad Elias M, "System Analysis and Design", TMH, New Delhi
2. Hawayszkiewyez Igor, "Introduction To System Analysis and Design" PHI, New Delhi

Reference Books:

1. Mark Lejk& David Deeks "An Introduction To System Analysis Techniques" PHI, New Delhi
2. Jeffrey L Whitten & Lonnie, D Bentey, "System Analysis and Design Methods", TMH. New Delhi
3. Manish soni&SanjeevPatwa "System Analysis and Design" UBH Jaipur

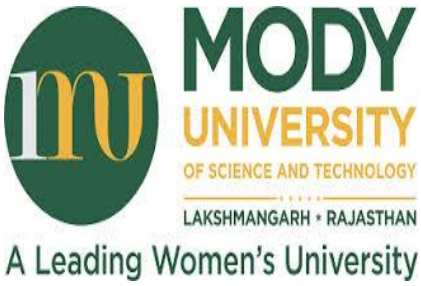
CA 272 *Computational Numerical Analysis Laboratory* 0-0-4-2

Assignments are based on the Course Numerical Analysis.

Mody University of Science & Technology

B.Sc. (Hons) Psychology
Session 2017-2018

Curriculum Structure



B.Sc. (Hons.) Psychology
Three-Year Programme
Academic Curriculum
(Batch 2017 – 18 only)
First Year

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)

SYLLABUS FOR NEW PAPERS OF BIOTECHNOLOGY

BT 271 Food Technology 2-0-0-2

1. **Food & Fermentation Technology**: Origin, scope and development of fermented food products. **[2]**

2. **Development of novel food and food ingredients**: Single cell protein, Mushroom cultivation, Nutraceuticals, Probiotic foods, genetically modified foods. **[5]**

3. **General principles:** Food spoilage and preservation, contamination of foods and their involvement in disease outbreaks. Methods of food preservation. **[9]**

4. **Packaging of foods:** Packaging Materials, Controlled atmosphere packaging. **[4]**

5. **Food plant Sanitation:** Disposal and treatment of food industry waste, food laws and current concepts in food safety **[6]**

Suggested Readings

Text Book

1. Frazier and Westhoff, Food Microbiology, Tata McGraw Hill Publishing Company Ltd, New Delhi
2. Banwart,GJ: Basis of Food Microbiology, CBS Publishers and Distributors, New Delhi

References

3. Adams and Moss, Food Microbiology, Royal Society of Chemistry Publication, Cambridge

BT 261 Food Technology Laboratory 0-0-2-1

Assignments are based on the course BT 251 Food Technology containing exercises on manufacturing and preservations of food products

BT 242 Plant and Animal Biotechnology 2-0-0-2

1. Introduction to animal tissue culture, Disaggregation techniques, Sterilization, Normal and transformed cell lines, primary culture, secondary culture, Media formulation, Growth characteristics, preservation of cell lines, Embryo culture and IVF **[12]**

2. Plant Tissue culture Introduction: Terms and Definition, Historical aspects and scope, Classical vs modern approach, Totipotency and cell theory; Growth and Differentiation; Culture media and its **[9]**

constituents; Sterilization

3. Micropropagation Technique, Genetic Variability, Protoplast fusion Technique and somatic hybridization **[5]**

Suggested Readings

Text Book

1. Freshney Y; Culture of Animal Cells; John Wiley and Sons Publication, New York
2. Spler R.E. & Grifith J.B.; Anianl Cell Biotechnology
3. Bhojwani S.S.; Plant Tissue Culture: Applications and Limitations; Elsevier, Amsterdam.

References

4. Razdan M.K; An Introduction to Plant Tissue Culture; Rastogi Publication, Meerut.
5. Chawla H.S; Introduction to Plant Biotechnology; Oxford and IBH Publishers, New Delhi.

BT 252 Tissue Culture Laboratory **0-0-2-1**

Assignments are based on the course BT 242 Plant and Animal Biotechnology containing exercises on media preparation and different culturing methods of plant and animal cells.

BT 391 Medical Biotechnology **2-0-0-2**

1. **Gene therapy** – background, types of gene therapy, vectors in gene therapy, epigenetic inheritance, problems & ethics. **[3]**
2. **Gene Delivery methods** – Viral delivery, Non-viral delivery, Antibody engineering. **[3]**
3. **Gene therapy Models** – Liver diseases, Lung diseases, Hematopoietic diseases, Circulated gene products, Cancer & Auto-immune diseases. **[4]**
4. **Vaccines** – Vaccine vectors, nucleic acid vaccines, immuno-enhancing technology. **[3]**
5. **Synthetic therapy** – synthetic DNAs, therapeutic Ribozymes, synthetic drugs. **[4]**
6. **Tissue Engineering** – Skin, Liver, Pancreas. **[3]**
7. **Xenotransplantation** – terminology, technology behind it, organ donors, social & ethical issues. **[3]**
8. **Drug delivery** – conventional & new approaches to drug delivery. **[3]**

Suggested Readings

Text Book

1. King R.J.B., Cancer Biology, Addision Wesley Longmann Ltd, U.K., 1996.
2. Ruddon.R.W. Cancer Biology, Oxford University Press, Oxford, 1995.
3. Maly B.W.J., Virology a practical approach, IRL press, Oxford, 1987.
4. Dunmock.N.J and Primrose S.B., Introduction to modern Virology, Blackwell Scientific Publications,Oxford, 1988.

References

5. Leon Lachman et al Theory and Practice of Industrial Pharmacy, 3 Edition, Lea and Febiger, 1986
6. Remington's Pharmaceutical Science, Mark Publishing and Co.
7. A.R Leach, Molecular Modeling Principles and Applications, Longman, 1996
8. J.M. Haile, Molecular Dynamics Simulation Elementary methods, John Wiley and Sons ,1997

BC 312 Enzyme and Industrial Biochemistry 3-0-0-3

1. **Extraction & Purification of Enzymes:** Different sources of enzymes, Extraction of soluble enzymes and membrane bound enzymes. Preliminary purification of enzymes by various fractionation methods – advanced purification methods **[5]**

2. **Enzyme Kinetics:** Factors affecting the enzyme rates. Kinetics of single substrate enzyme catalyzed reactions. Transformation of MM plots into Lineweaver Burk plot and Eddle Hofstee plots. Enzyme inhibitors, Introduction to irreversible and reversible. Allosteric enzymes, feedback inhibition and its significance in metabolic regulation. (Sequential and concerted). **[12]**

3. **Applications of Enzymes:** Importance of enzyme immobilization, Uses of enzymes in food and beverages, textile industries, leather industries and detergents. **[4]**

4. **Introduction to fermentation technology**: Isolation and screening of industrially important microbes, Inoculum preparation, strain improvement for better yield. Primary and secondary detection and assay of fermentation products. Microbial products: production of microbial enzymes-Amylase, cellulose, Pectinase and protease, Industrial production of alcohol, alcoholic beverages – Wine and Beer. **[10]**

5. **Microbes and Environment**: Microbes in mineral recovery-Bioleaching and Biosorption, microbial recovery of petroleum. Microbial degradation of xenobiotics. Sewage biodegradation. **[8]**

Suggested Readings

Text Book

1. Trevor Palmer; Enzymes – Biochemistry, Biotechnology, Clinical chemistry, 2004 East – West Press Edition.
2. Patel A.H.; Industrial microbiology, 2nd edition, 2012, Macmillan India Limited
3. Prescott, Harley and Klein Microbiology, 2nd edition, 1993, W.C.

Brown Publishing Co
4. Engal Paul; Enzyme 1977, John Willey and Sons Inc.
5. Pelczar. and Chan Microbiology, , McGraw – Hill Inc. NY
6. Ananthanarayanan. R. and Jayaram Panicker; Textbook of microbiology, C.K. Orient

References

7. Price Nicholas C. and Stevens Lewis; Fundamentals of Enzymology 2003 Oxford University Press.
8. Dixon; Enzymes, Web. Acad. Press.

BC 322 Enzyme and Industrial Biochemistry Laboratory 0-0-2-1

Assignments are based on the course BC 312 Enzyme and Industrial Biochemistry containing exercises on enzymes and their application in industries.

SYLLABUS FOR NEW PAPERS OF BIOCHEMISTRY

BC 231 Metabolism 2-0-0-2

1. **Bioenergetics:** Role of high energy compounds as energy currency of the cell; free energy of hydrolysis of ATP and other organophosphates. Biological oxidation, redox potential, phosphate potential. **[4]**

2. **The basic metabolic pathways:** anabolic, catabolic and amphibolic pathways. Interrelation between carbohydrates, fat and protein metabolism. **[3]**

3. **Carbohydrate metabolism:** oxidation of pyruvate, metabolism of glycogen, pentose phosphate pathway, C3, C4 and CAM pathway, oxidative phosphorylation, Regulation of committed step in each pathway. **[5]**

4. **Oxidation of fatty acids:** Carnitine cycle; beta oxidation. Alpha oxidation and omega oxidation. Biosynthesis of saturated fatty acids, Biosynthesis of unsaturated fatty acids. **[5]**

5. **Metabolism of amino acid:** Oxidative deamination, transamination, catabolism of carbon skeleton of amino acids. **[5]**

6. **Metabolism of purines:** de novo synthesis, salvage pathways; catabolism. Metabolism of pyramidines: - de novo synthesis, salvage pathways; catabolism. **[4]**

Suggested Readings

Text Book

1. Lehninger, L.S., et al., - Principles of Biochemistry. 4nd edition. CBS Publishers,
2. Murray, K. Robert, et al., - Harper's Biochemistry. 21st edition, 1998.

References

3. Voet and Voet - Biochemistry. 2nd edition. John Wiley and Sons, 1995.
4. Mathews, Freeland and Miesfeld - Biochemistry – a short course.Wiley & sons. 1996.

BC 212 Plant Biochemistry 2-0-0-2

1. **Photosynthesis:** Ultra structure and organization of chloroplast membranes, Biochemistry of RuBP carboxylase/oxygenase, Hatch and slack pathway, productivity of C4 plants, photorespiration and compensation point. **[7]**

2. **Nitrogen fixation**: nitrogenase and mechanism action of nitrogenase. Enzymes of nitrate metabolism, regulation of their synthesis and activity. **[4]**

3. **Plant growth regulators:** Plant growth regulators and their metabolic functions, synthetic growth hormones. **[7]**

4. **Secondary metabolites:** A brief account of secondary metabolites Importance of secondary metabolites: Protection of the producer plant from predators and insects. General biosynthetic pathways and functions of the secondary metabolites **[8]**

Suggested Readings

Text Book

1. H.D. Kumar and H.N. Singh; Plant Metabolism (1980) Publisher: Macmillan
2. Ramawat KG; Biotechnology: Secondary Metabolites (2000) Publisher: Science Publishers,U.S.
3. Dey PM and Harborne JB(Editors); Plant Biochemistry (1997) Publisher: Academic Press

References

4. Dennis, Turpin, Lefebvre and Layzell (Editors) Plant Metabolism (1997) Publisher: Longman.
5. Hans-Walter Heldt; Plant Biochemistry (3ed 2004) Publisher: Academic

BC 311 Nutritional and Clinical Biochemistry 2-1-0-3

Nutritional Biochemistry

1. **Basic Concepts Of Nutritional Biochemistry:** Introduction and definition of food and nutrition, functions of food, factors altering nutritional requirements, Macronutrients and Micronutrients and their functions. **[6]**

2. **Nutritive And Calorific Value Of Foods:** Basic concepts of energy expenditure, units of energy, measurement of energy expenditure by calorimetry, determination of amount of protein metabolized and **[7]**

calculation of total heat production; basal metabolic rate (BMR), energy requirements under physical activities, calculation of energy expenditure

Clinical Biochemistry

3. **Basic Concepts Of Clinical Biochemistry**

(a) Definition and scope of clinical biochemistry in diagnosis; setting up and solving problems related to operation of clinical biochemistry; internal and external quality assurance producers **[7]**

(b) Collection and preservation of biological fluids; physical and chemical analysis of urine and CSF; physiological factors affecting the composition of body fluids.

4. **Diagnostic Enzymology**

Principles of diagnostic enzymology; definition of functional and non-functional plasma enzymes, enzyme and enzymes pattern in health and diseases with special mention of plasma lipase, amylase, cholinesterase, alkaline and acid phosphates, SGOT, SGPT, LDH & CPK. Disorders of carbohydrate and lipid metabolism **[6]**

Suggested Readings

Text Book

1. Chatterjee M.N and Sinde R; Text book of Medical Biochemistry,
2. Thomas M. Devlin; Text book of Biochemistry with clinical correlation, , 3rd edition, A. John Wiley-Liss Inc. Publication.
3. Harold Varley; Practical Clinical Biochemistry, 4th edition, CBS Publication and Distributors, New Delhi.

BC 322 Enzyme and Industrial Biochemistry Laboratory 0-0-2-1

Assignments are based on the course BC 312 Enzyme and Industrial Biochemistry containing exercises on enzymes and their application in industries.

SYLLABUS FOR NEW PAPERS OF MICROBIOLOGY

MB 211 Microbial Physiology and Genetics 2-0-0-2

1. **Nutritional classification and metabolite transport:** carbon, energy and electron sources. Diffusion and active transport. **[3]**

2. **Chemolitho- and photo-trophic metabolism:** Physiological groups of aerobic and anaerobic chemolithotrophs. physiology of bacterial photosynthesis: light reactions, cyclic and non-cyclic photophosphorylation. **[5]**

3. **Microbial Energetics:** Concept of aerobic respiration, anaerobic respiration and fermentation. Central metabolic pathways: EMP pathway, ED pathway, PP pathway, Calvin and TCA cycle. bacterial electron transport, oxidation-reduction potential and energetic of electron transport. Oxidative phosphorylation. **[8]**

4. **Microbial Gene Transfer:** Transformation, Transduction, Conjugation, Plasmids, Transposons Life cycle and uses of following phages in microbial genetics- Lytic and Lysogenic phages. **[7]**

5. **Mutations**: Basic concepts of mutation, Molecular nature of mutations. [**3**]

Suggested Readings

Text Books

1. Moat AG and Foster JW. (2002). Microbial Physiology. John Wiley and Sons.

2. Madigan MT, and Martinko JM. (2006). Brock Biology of Micro-organisms. 8th edition. Parker J. Prentice Hall International, Inc.

3. Pelczar Jr MJ, Chan ECS, and Krieg NR. (2004). Microbiology. 5th edition Tata McGraw Hill.

References

4. Srivastava S and Srivastava PS. (2003). Understanding Bacteria. Kluwer Academic Publishers, Dordrecht

5. Stanier RY, Ingraham JL, Wheelis ML and Painter PR. (2005). General Microbiology. 5th edition McMillan.

MB 221 Microbial Physiology and Genetics Laboratory 0-0-2-1

Assignments are based on the course MB 211 Microbial Physiology and Genetics containing exercises on physiological and genetics aspects of microbes.

MB 212 Food and Industrial Microbiology 2-0-0-2

1. **Foods as a substrate for microorganisms:** Intrinsic and extrinsic factors that affect growth and survival of microbes in foods. **[3]**

2. **Food preservation and Fermented foods:** Principles, physical methods of food preservation, chemical methods of food preservation, fermented dairy products: yogurt, kumiss, kefir, and cheese, other fermented foods: dosa, sauerkraut, soy sauce and tampeh and probiotics. **[7]**

3. **Food borne diseases and control:** Food intoxications: *Staphylococcus aureus*, *Clostridium botulinum* and mycotoxins; Indices of food sanitary quality and sanitizers. **[5]**

4. **Introduction to industrial microbiology:** Brief history and developments in industrial microbiology, Batch, fed batch and continuous fermentations, strain development, preservation and maintenance of industrial strains. Crude and synthetic media; molasses, corn-steep liquor, sulphite waste liquor, whey and yeast extract. **[6]**

5. **Down-stream Processing and industrial application:** Filtration, centrifugation, cell disruption, solvent extraction, precipitation and ultrafiltration, lyophilization, spray drying. Citric acid, ethanol, and enzymes **[5]**

Suggested Readings

Text Books

1. Adams MR and Moss MO. (1995). Food Microbiology. 4th edition, New Age International (P) Limited Publishers, New Delhi, India.

2. Banwart JM. (1987). Basic Food Microbiology. 1st edition. CBS Publishers and Distributors, Delhi, India.

3. Davidson PM and Brannen AL. (1993). Antimicrobials in Foods. Marcel Dekker, New York.

4. Dillion VM and Board RG. (1996). Natural Antimicrobial Systems and Food Preservation. CAB International, Wallingford, Oxon.

References

5. Frazier WC and Westhoff DC. (1992). Food Microbiology. 3rd edition. Tata McGraw-Hill Publishing Company Ltd, New Delhi, India.

6. Crueger W and Crueger A. (2000). Biotechnology: A textbook of Industrial Microbiology. 2nd edition. Panima Publishing Co. New Delhi.

7. Patel AH. (1996). Industrial Microbiology. 1st edition, Macmillan India Limited.

MB 222 Food and Industrial Microbiology 0-0-2-1

Assignments are based on the course MB 212 Food and Industrial Microbiology containing exercises on the role of microbes in foods and industries.

MB 351 Medical Microbiology 2-0-0-2

1. **Normal microflora and Host-pathogen interaction:** Skin, throat, gastrointestinal tract, urogenital tract Definitions of invasion, pathogen, parasite, pathogenicity, toxigenicity, virulence, carriers and their types, nosocomial infections, opportunistic infections, septicemia, septic shock, transmission and spread of infection. **[6]**

2. **Sample collection, transport and diagnosis:** Collection, transport and culturing of clinical samples, principles of different diagnostic tests. **[4]**

3. **Bacterial diseases:** *Bacillus anthracis, Streptococcus pyogenes, Escherichia coli, Salmonella typhi Neisseria gonorrhoeae, Mycobacterium tuberculosis.* **[7]**

4. **Viral, protozoan and fungal diseases:** Polio, Influenza AIDS, Malaria, Different types of mycoses. **[6]**

5. **Antimicrobial agents and drug resistance** Mechanism of action of important chemotherapeutic agents. Principles of drug resistance in bacteria. **[3]**

Suggested Readings

Text Book

1. Ananthanarayan R and Paniker CKJ. (2005). Textbook of Microbiology. 7th edition (edited by Paniker CKJ). University Press Publication.

2. Brooks GF, Carroll KC, Butel JS and Morse SA. (2007). Jawetz, Melnick and Adelberg's Medical Microbiology. 24th edition. McGraw Hill Publication.

References

4. Joklik WK, Willett HP and Amos DB (1995). Zinsser Microbiology. 19th edition. Appleton-Centuary-Crofts publication.

5. Willey JM, Sherwood LM, and Woolverton CJ. (2008). Prescott, Harley and Klein's Microbiology. 7th edition. McGraw Hill Higher Education.

MB 361 Medical Microbiology Laboratory 0-0-2-1

Assignments are based on the course MB 351 Medical Microbiology containing exercises on the prevention and diagnosis of pathogenic microbes.

MB 312 Microbial Ecology 2-0-0-2

1. **Microorganisms & their natural habitats:** Terrestrial Environment, Aquatic Environment: Atmosphere: Aeromicroflora, Animal Environment, Extreme Habitats. **[6]**

2. **Biological Interactions:** Microbe–Microbe Interaction, Microbe–Plant Interactions, Microbe–Animal Interactions. **[6]**

3. **Biogeochemical cycles:** Carbon cycle, Nitrogen cycle, Phosphorous cycle, Iron cycle and Sulphur Cycle. **[6]**

4. **Solid/liquid Waste Management:** Sources and types of solid waste, methods of disposal of solid waste, primary, secondary and **[5]**

tertiary sewage treatment.

5. **Bioleaching/Biodeterioration:** Microbial deterioration of metals (corrosion), textile and paper. **[3]**

Suggested Readings

Text Book

1. Madigan MT, Martinko JM and Parker J. (2009). Brock Biology of Microorganisms. 12th edition. Pearson/ Benjamin Cummings.
2. Maier RM, Pepper IL and Gerba CP. (2009). Environmental Microbiology. 2nd edition, Academic Press.

References

3. Atlas RM and Bartha R. (2000). Microbial Ecology: Fundamentals & Applications. 4th edition. Benjamin/Cummings Science Publishing, USA.
4. Atlas RM. (1989). Microbiology: Fundamentals and Applications. 2nd Edition, MacMillan Publishing Company, New York.

MB 322 Microbial Ecology Laboratory 0-0-2-1

Assignments are based on the course MB 312 Microbial Ecology containing exercises on the relationship of microbes with one another and with their environment.

NEW SYLLABUS FOR ENVIRONMENTAL STUDIES

EV 111 Environmental Science 1-0-0-1

1. Introduction to Environment and Environmental Studies, its scope and importance **[2]**
2. Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem **[2]**
3. Natural Resources: Renewable and Nonrenewable resources. **[2]**
4. Human Population and Environment: Population Growth, World and Indian scenario. **[2]**
5. Environmental pollution: Types of Environmental Pollution and cause, prevention of pollution. **[2]**
6. Global Environmental Issues: Climate Change, Global Warming and Green House Effect. **[3]**
   Visit to a local area to document environmental assets

Suggested Readings:

Text Book

1. Bharucha, E;. Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH, Beiswenger RE, Purdom; Environmental Sciences, Paperback.

References

5. Rastogi V.B. & Jayraj M.S.; Animal Ecology and Distribution of Animals, Kedar Nath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

COURSE DESCRIPTION
B.Sc.CBZ/B.Sc(H)-Biotech/Chemistry

EL 101 Foundation Course in English **2-0-0-2**

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand & Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

BT 151 Cell Biology **3-1-0-4**

Diversity of Cell: Size and shape, cell theory, structure of prokaryotic and eukaryotic cells [2]

Cell membrane: Molecular structure and models of cell membrane, Membrane transport – Passive (diffusion, osmosis and facilitated) and active transport, Cell junctions. [8]

Cell organelles 1: Structure, function and biogenesis of Mitochondria, Plastid, Endoplasmic reticulum, Golgi complex, Lysosome. [8]

Cell organelles 2: Ribosome, Centrioles, Cilia, Flagella and Cytoskeletal system. Introduction to extra cellular matrix [7]

Nucleus: Interphase nucleus, Nuclear envelope, nucleoplasm, Nucleolus and Chromatin (nucleosome model, Structure of

eukaryotic chromosome, Giant chromosome) [6]

Cell Division: Cell cycle, mitosis and meiosis, structure and function of spindle apparatus, synapses and synaptonemal complex and crossing over [8]

Suggested Books:

1. De Robertis and De Robertis: Cell and Molecular Biology B.I. Publications, US.
2. Gardner, Principle of Genetics; John Willey and Sons, US.
3. Becker *et al*; The World of Cell; Pearson Publications, Singapore.
4. Strickberger; Genetics; MacMillan Publications, US.
5. Sarin; Genetics; Tata McGraw Hill Publications, New Delhi.
6. Rastogi V.B.; Genetics; Kedar Nath and Ram Nath, Meerut.

ZO 111 Animal Diversity-I **3-0-0-3**

Taxonomy: General principles of taxonomy, Five-kingdom concept. Protozoa, Metazoa and Levels of organization, Origin of metazoa, Coelom, metamerism and symmetry. [4]

Principles of Classification: Salient features and classification upto class level in non-chordates. [5]

Protozoa – Locomotion, nutrition, reproduction, Life cycle of parasite (plasmodium). [4]

Porifera: Canal system; Endoskeleton, Reproduction. [3]

Coelenterata: Nematocysts, polymorphism. [3]

Ctenophora: Affinities. [1]

Platyhelminthes and Aschelminthes: Reproduction and larval forms (Fasciola and Ascaris). [4]

Annelida: Excretion in annelids. Type study – Earthworm. [6]

Mollusca: Respiration. [1]

Arthropoda: Larval forms of crustacea, Mouthparts of insects, Social life in insects. [3]

Ecinodermata: Water vascular system, larval forms and their significance; Origin and phylogeny of echinoderms. [4]

Lower chordates: Taxonomic position and affinities. [1]

Suggested Books:

1. Kotpal R.L; Modern Textbook of Zoology - Invertebrate; Rastogi Publication, Meerut
2. Bhamrah H.S. and Juneja A. K; Textbook of Invertebrates; Anmol Publications Pvt. Ltd., New Delhi
3. Kapoor V.C; Theory and Practice of Animal Taxonomy; Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi
4. Hickman C.P., Roberts, L.S. and Larson A; Integrated Principles of Zoology; WCB Mc Graw-Hill, New Delhi
5. Grove A.J; and Newell G. E; Animal Biology. University Book Stall, New Delhi

CH 181 Physical and Inorganic Chemistry-I **2-0-0-2**

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave

equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective nuclear charge. **[5]**

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule- Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.

2. The elements of Physical Chemistry, P.W. Atkins, 4th Edition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.

Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I **2-0-0-2**

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer compounds and field effects. **[5]**

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogenic centre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centres diastereomers, threo and erythro diastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation, Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivity in alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes- mechanisms involved in hydrogenation,

electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration- reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.

Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I **3-0-0-1.5**

Experiments based on the contents of CH 181 and CH 191.

BC 111 General Biochemistry **3-0-0-3**

Basic Concepts: Law of mass action, pH and buffers, calculation of pH, biological importance of pH and buffers, law of thermodynamics, concept of free energy **[5]**

Carbohydrates: Structure, classification and function, properties of monosaccharide and its derivatives, structural and storage carbohydrates **[5]**

Proteins: Classification of amino acids, different reactions of –NH2 and –COOH group, Structure and classification of proteins, Bohr's effect, hemoglobin, myoglobin, antibodies **[5]**

Lipids: Basic structure of lipids, classification, importance of triacyglycerols, glycerolipids, sphingolipids, steroids, lipid bilayers **[6]**

Nucleic Acids: Nucleic acid as a genetic material, composition of DNA and RNA, linkage between purines and pyrimidines, types of DNA **6]**

Vitamin: Role of vitamin in the growth and differentiation of body, chemistry of fat and water-soluble vitamins, vitamins as coenzymes. Hormones as signal molecules **[6]**

Cellular Metabolism: Glycolysis, Gluconeogenesis, Krebs [6]

cycle, Electron transport chain, β-oxidation, Overview of amino acid metabolism

Suggested Books:

1.Jain J.L.; Biochemistry; S. Chand Publication, New Delhi.

2. Cohn and Stump; Outline of Biochemistry; Cambridge,UK.

3. Nelson and Cox; Principles of Biochemistry; Panima, New Delhi.

4.Mathew *et al.;*Biochemistry; Pearson, New York.

5.Sadasivam and Manickam; Biochemical Methods; New Age International, New Delhi.

BT 161 **Cell Biology Laboratory** **0-0-2-1**

Assignments are based on the course BT 151 Cell Biology meiosis, mitosis etc.

ZO 121 **Animal Diversity Laboratory-I** **0-0-2-1**

Assignments are based on the course ZO 111 Animal Diversity-I containing exercises on taxonomy and organization of non-chordates

BC 121 **Biochemistry Laboratory** **0-0-2-1**

Assignments are based on the course BT 121 Biochemistry containing exercises on qualitative and quantitative analysis of biomolecules

CA 111 Fundamentals of Computers and Information Technology 3-0-0-3

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets [6]

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

ZO 132 Animal Diversity-II 3-0-0-3

Chordata: General organization, classification upto class level. [9]

Comparative Anatomy of Chordates 1: Integument, Endoskeleton and Digestive system and Brain. [11]

Comparative Anatomy of Chordates 2: Heart, Aortic arches and Venous system, Respiratory system, Urogenital system. [10]

Fishes: Accessory respiratory organs. [2]

Amphibia: Parental Care in Amphibia. [1]

Reptilia: Poison apparatus, snake venom, antivenin, biting mechanism and first aid. [2]

Aves: Flight adaptations. [2]

Mammals: Origin of mammals. [2]

Suggested Books:

1. Kotpal R. L; Modern Textbook of Zoology - Vertebrate; Rastogi Publication, Meerut.
2. Bhamrah H. S. and Juneja A. K; Textbook of Vertebrates; Anmol Publications Pvt. Ltd., New Delhi.
3. Young J.W; The Life of Vertebrates; Oxford University Press, New York.
4. Pough F. H., Jains C. M. and Heiser J. B; Vertebrate Life; Pearson Education Pvt. Ltd., Singapore.
5. Colbert E. H; Evolution of Vertebrates; Wiley Eastern Ltd, New Delhi.
6. Rastogi V. B; Organic evolution; Kedar Nath Ram Nath Publication, Meerut.

CH 182 Physical and Inorganic Chemistry-II **2-0-0-2**

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphur tetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon

compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:
Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D. Tuli & Arun Bahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand & Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand & Co .Ltd.

Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd

CH 192 Organic Chemistry-II **2-0-0-2**

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond

lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed. 2007, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II **3-0-0-1.5**

Experiments based on the contents of CH 182 and CH 192.

BT 152 Genetics **3-1-0-4**

Mendelian inheritance and gene interaction: Mendel's Law of Inheritance, Allelic and non-allelic, complementary, supplementary, epistasis, hypostasis and lethal genes. Multiple alleles and pleiotrophism. [10]

Theory of sex determination: A brief account, linkage and crossing over, linkage maps. Sex linked traits: Eye color and lethals in drosophila, Hemophilia and color blindness in humans. Primary and secondary non-disjunction of sex chromosomes. Sex influenced traits: horn character in sheep, sex limited traits: Cock feathering in poultry and baldness in man [10]

Extranuclear inheritance: Plastid, mitochondria and cytoplasm. [5]

Mutations: Chromosomal aberrations and meiotic consequences. [4]

Human genetics: Chromosomal and genetic disorders; genetic counseling, somatic cell genetics. [5]

Population genetics: Gene pool and gene frequencies, Hardy [5]

Weinberg Law, change in gene frequencies (mutation, selection and migration), random drift. Heterosis.

Suggested Books:

1. Gardner, Principle of Genetics; John Willey and Sons, New York,US.
2. Strickberger; Genetics; MacMillan, UK.
3. Sarin; Genetics; Tata McGraw Hill, New Delhi
4. Rastogi V.B.; Genetics; Kedar Nath and Ram Nath, Meerut**.**
5. Gupta, P.K., Genetics, Rastogi publications, Meerut.

PH 112 Basic Physics **2-0-0-2**

Optics: Ray optics (Reflection and Refraction), Interference, Fresnel's biprism, Optical filters, Diffraction, Plane diffraction grating, Grating and prism spectra, Polarization, Brewsters's law, Light as electromagnetic wave [9]

Modern Physics: Corpuscular nature of light, Photoelectric effect, de Broglie wavelength, X-rays, Radioactivity, Half-life and mean life [6]

Semiconductor Physics: Intrinsic and extrinsic semiconductors, Diodes, Semiconductor Devices [3]

Lasers and Fibre Optics: Basic principles of Lasers, He-Ne laser, Optical fibre communication, Applications in Biosciences [5]

Physics in Biosciences: Application of Physics in Biological science, Introduction to Biophysics [3]

Suggested Books:

1. Ghatak A. Optics Tata McGraw-Hill Publishing Comp Ltd, New Delhi.
2. Subrahmanyam N., Lal B and Avadhanulu M N. A Text Book of Optic S Chand & Co Ltd, New Delhi.
3. Sears, Zemansky and Young, University Physics Narosa Publishing House, New Delhi.
4. Pattabhi V and Gautham N. Biophysics Narosa Publishing House, New Delhi.
5. Beiser A. Concept of Modern Physics Tata McGraw-Hill Publishing Comp Ltd, New Delhi.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

ZO142 Animal Diversity-II Laboratory **0-0-2-1**

Assignments are based on the course ZO 132 Animal Diversity-II containing exercises on taxonomy and organization of chordates.

BT 162 Genetics Laboratory **0-0-2-1**

Assignments are based on the course BT 152 Genetics, Basic Mendelian concepts etc.

EV 101 Environmental Studies **3-0-0-3**

The Multidisciplinary Nature of Environmental Studies: Definition, scope and importance, Need for public awareness. [2]

Natural Resources (Renewable and Non-renewable Resources): Natural resources and associated problems. Forest resources – Use and over-exploitation, Mining, Dams and their effects on forest and tribal people. Water resources – Use and over-utilization of surface and Ground Water, Floods, Water Logging, Salinity, Drought, Dams – Benefits and problems. Mineral resources – Use and exploitation, Role of an individual in conservation of natural resources [6]

Ecosystems: Ecosystem, Structure and function of an ecosystem, Energy flow in ecosystem, Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structures and functions of Forest, Grassland and Desert ecosystems [7]

Biodiversity and its Conservation: Introduction to Genetics, Species and Ecosystem Diversity, Population Growth, Variation among Nations, Biogeographical classification of India. Value of Biodiversity, consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, national and local level, India as a mega-diversity nation. Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity – *In-situ* and *Ex-situ* conservation of biodiversity. [7]

Environmental Pollution: Definition, Causes, Effects and Control measures of Air Pollution, Water Pollution, Soil Pollution, Marine Pollution, Noise Pollution and Thermal Pollution, Nuclear hazards. Disaster management – Floods, Earthquakes, Cyclones and Landslides. [6]

Social Issues and the Environment: Urban problems related to Energy, Water conservation, Rainwater Harvesting, Watershed management, Environmental ethics – Issues and possible solutions, Climate change, Global Warming, Acid Rain, Ozone layer depletion, Nuclear accidents and holocaust, Environmental Protection Laws in India. [6]

Human Population and the Environment: Population growth, variation among nations. Population explosion—Family Welfare Programme. Environment and human health. Human rights. Value education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in environment and human health. [5]

Visit to a local area to document environmental assets: River/forest/grassland/hill/ mountain. Visit to a local polluted site – Urban/Rural/Industrial/Agricultural. Study of common plants, insects, birds. Study of simple ecosystems—pond, river, hill slopes, etc.

Suggested Books:

1. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
2. Rastogi V.B. & Jayraj M.S.; Animal Ecology and Distribution of Animals, Kedar Nath Ram Nath Publication, Meerut
3. Kumar H.D; General Ecology; Vikas Publishing House Pvt.

Ltd, India

BC 211 Bio-Instrumentation **3-1-0-4**

Principle of pH meter. [1]

Sterilization Techniques: Heat sterilization (Autoclave and Hot Air Oven), Filter sterilization, Incubator and Laminar Air Flow. [6]

Centrifugation: Principles of centrifugation, Design and care of rotor, Analytical and Preparative centrifugation, Safety aspects and applications. [8]

Spectroscopy: Principles of spectrophotometry, Ultra-violet and Visible Spectroscopy, Atomic spectroscopy. [8]

Electrophoresis: Principles of Gel electrophoresis, Agarose and SDS gel electrophoresis, IEF, 2-D PAGE. [8]

Chromatography: Principles of chromatography, Paper, Thin layer, Column chromatography, Permeation, Ion exchange and Affinity chromatography. [8]

Suggested Readings:

Text Book:

1. Wilson and Walker-Principles of Molecular Biology and Biochemistry, Cambridge University Press, 3rd Edition, New Delhi.
2. Upadhayay, Upadhayay and Nath-Biophysical Chemistry, Himalayan Publishers,4th Edition, New Delhi.
3. David T Plummer- An Introduction to Practical Biochemistry, Tata McGraw Hill, 2nd Edition, New Delhi.

Reference Book:

4. Lehninger: Principles of Biochemistry 4th edition - David L. Nelson and M.M. Cox (2005) Maxmillan/ Worth publishers/ W. H. Freeman & Company.
5. Fundamentals of Biochemistry 3rd edition- Donald Voet and Judith G Voet (2004), John Wiley & Sons, NY
6. J G Webster- Bioinstrumentation, John Wiley & Sons Inc, New York

ZO 212 Animal Physiology **3-0-0-3**

Physiology of Digestion: Digestion of food material, control of digestive juice secretion, Absorption of digested food material. [4]

Physiology of Respiration: External and internal respiration, control mechanism, transport of gases, respiratory pigments. [4]

Physiology of Circulation: Concept of haematopoesis and haemolysis, blood coagulation, heartbeat and cardiac cycle, mechanism of controlling heartbeat, electrocardiogram, blood pressure. [4]

Physiology of Excretion: Excretory products, Ornithine cycle, structure and function of kidney, mechanism of urine formation. [4]

Physiology of Muscle Contraction: Chemical composition, mechanism of muscle contraction. [4]

Nervous System: Basic concept of CNS, PNS, ANS, Propagation of nerve impulses, Synaptic transmission, Reflex action. [4]

Endocrine Glands: Structure and functions: Pituitary, adrenal, thyroid, parathyroid, pancreas, testis and ovary, Mechanism of hormone action, pheromones. [3]

Reproduction: Structure of male and female reproductive organs, hormonal control, menstrual cycle, implantation parturition and lactation in mammals. [4]

Homeostasis: Basic concept, osmotic conformers, osmoregulation, thermoregulation. [4]

Physiological Disorders: Disorders related to Brain, Blood, Heart, Kidney and Bone. [4]

Suggested Books:

1. Chatterjee C.C.; Human Physiology; Medical Book Depot.India.
2. Guyton et al.; Medical Physiology, W.B Sauders Co., Philadelphia Toronto.
3. Berry A.K.; Physiology, Rastogi Publication, Meerut
4. Tatora et al.; Human Physiology, Wiley International, New York.

BT 241 Mathematics and Statistics for Biology **2-1-0-3**

Algebra: Number system, Logarithms, Permutations and Combinations. [3]

Calculus: Functions, Derivative of standard function, Successive Differentiation. [5]

Integration: Indefinite Integrals, Methods Of Integration By Substitution. Definite Integrals, Properties of Definite Integration. [5]

Statistics: Measure of Central Tendency-Mean, Median & Mode, Measures of Dispersion-Range, Quartile Deviation, Mean Deviation, Standard Deviation, Variance [6]

Correlation and Regression: Correlation-Meaning and Significance, Karl Pearson's coefficient of linear correlation between two variables, Coefficient of correlation by Spearman's Rank Differences method, Lines of Regression, Relationship between Correlation and Regression. [7]

Suggested Books:

1. Kapoor and Gupta; Fundamental of Mathematical Statistics; S. Chand and Company, New Delhi.
2. Gupta, S.P., Statistical methods; S.Chand and Company, New

Delhi.
3. Prasad S.; Elements of Biostatistics; Rastogi Publication, Meerut.
4. Bailey; Statistical Methods in Biology; Cambridge Publications, UK.

CH 291 Physical Chemistry-I **2-0-0-2**

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU & dH for the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A & G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it. Concentration dependence of rates, mathematical characteristics of simple chemical reactions-zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. **[11]**

Expression for the rate constant based on equilibrium constant and thermodynamic aspects.

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I **2-0-0-2**

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series:

General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. **[7]**

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 18th Ed. 2009, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand & Co.Ltd.

CH 223 Organic Chemistry-III **2-0-0-2**

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and hypochromic shifts, UV spectra of conjugated enes and enones. **[6]**

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization .

of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, Lederer Manasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel's method. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl, 20th Ed. 2008, S. Chand & Co. Ltd.

Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III **3-0-0-1.5**

Experiments based on the contents of CH 291, CH 213 and CH 223.

BC 221 Bio-instrumentation Laboratory **0-0-2-1**

Assignments are based on the course BC 211 Instrumentation containing exercises on principle and working of instruments and performance of important techniques.

ZO 222 Animal Physiology Laboratory **0-0-2-1**

Assignments are based on the course ZO 212 Animal Physiology containing exercises on structural and physiological different in animals.

BT 212 Molecular Biology **3-1-0-4**

Introduction: Molecular basis of life, genetic material and its properties, structure of DNA, central dogma, organization of DNA in chromosome. [5]

DNA Replication: Nature of DNA replication, prokaryotic and eukaryotic DNA replication, fidelity of replication in prokaryotes and eukaryotes. [5]

DNA Damage and DNA Repair: Mutations, Causes of mutation and their mechanisms, effect of mutation on DNA, Mutation detection – Ames test to detect mutagenicity and carcinogenicity. DNA repair – Excision repair, Mismatch repair. [5]

Transcription: Enzymatic synthesis of RNA, classes of RNA molecule, transcription in prokaryotes and eukaryotes, splicing mechanism [8]

Translation: Outline of translation, genetic code, ribosome as protein synthesis machinery, protein synthesis in pro- and eukaryotes – initiation, elongation and termination [8]

Gene Regulation: Regulation of gene activity and gene products in prokaryotes and eukaryotes. [8]

Suggested Books:

1. Chunnarayappa; Molecular Biotechnology; Universities Press, London.
2. Gupta P.K.; Elements of Biotechnology; Rastogi Publication, Meerut.
3. Singh B.D.; Biotechnology; Kalyani Publication, New Delhi.

ZO 232 Developmental Biology **3-0-0-3**

Introduction: History and scope of animal developmental biology [1]

Male Gonads and Spermatogenesis: Structure of seminiferous tubule, interstitial cells, morphology of sperm, process and control mechanism of spermatogenesis. [4]

Female Gonads and Oogenesis: Ovarian Structure, Oogenesis: pre- vitellogenesis and vitellogenesis, types of eggs. Control mechanism of ovulation [5]

Reproductive Cycles: Breading and non-breading seasons**,** Estrous and Menstrual cycles – regulation. [4]

Fertilization: Types and Mechanism of fertilization, post fertilization changes in the egg cytoplasm, monospermic and polyspermic fertilization, significance of fertilization. [5]

Parthenogenesis: Types and significance [1]

Cleavage: Planes, patterns and rate of cleavage, mitotic peculiarity, physiology and significance of cleavage. [3]

Embryonic Development: Morulation, Blastulation (types and significance), Gastrulation (Characteristics, morphogenetic movements, physiology and significance), Tubulation, Concept of fate maps (Frog and Chick). [5]

General Concepts of Differentiation: Regeneration, and Metamorphosis, extra embryonic membrane, organizer concept and embryonic induction. Embryo sexing and ageing. [8]

Brief Introduction: Birth control, impotency, Artificial insemination, test tube baby and GIFT. [3]

Suggested Books:

1. Sastry & Shukla; Development Biology; Rastogi Publication, Meerut.
2. Bhojwani & Bhatnagar; The Embryology of Angiosperms; Vikas Publishing House, New Delhi.
3. Balinsky B. I; An Introduction to Embryology; W. B. Saunders, New Delhi.
4. Verma P.S., Agarwal V.K. and Tyagi B.S; Chordate Embryology. S. Chand and Co., New Delhi.
5. Berrill N. J; Developmental Biology; Mc Graw Hill, New York

MB 311 Immunology **3-1-0-4**

Historical Background: Innate immunity, adaptive immunity, natural and artificial immunity, active and passive immunity, humoral and cell-mediated immune response. [4]

Cells and Organs of Immune System: Lymphoid organs – Mast cells, basophils, eosinophils, monocytes, macrophages, neutrophils, NK cells, B and T lymphocytes. [5]

Antigens: Characteristics of antigens, characteristics of B-cell and T-cell epitopes, haptens and adjuvants. [5]

Immunoglobulins: Structure and functions, Classes and subclasses, Antigenic determinants of antibody molecules. [5]

Antigen-Antibody Interactions: Forces involved in Ag-Ab interactions, antibody affinity and avidity, primary and secondary interactions and agglutination and precipitation reactions. [5]

Humoral Immune System: Development and activation of B-lymphocytes, Primary and secondary response, Complement system – components, activation pathways and biological consequences [5]

Cell Mediated Immune Response: Development and activation of T-lymphocytes, Antigen processing and presentation, Major histocompatibility complex – structure and cellular distribution, Leukocyte trafficking, Cytokines, Tc-cell mediated target cell killing [5]

Immune System in Health and Disease: Immunodeficiency diseases, autoimmune diseases, hypersensitivity and allergies, transplantation immunology, tumor immunology, concept of vaccines development. [5]

Suggested Books:

1. Rao C.V.; An Introduction to Immunology; Narosa Publication, New Delhi.
2. Goldsby *et al;* Kuby Immunology; Freeman and Company, New York
3. Tizzard, I; Principle of Immunology, Thomson Publication, Singapore.
4. Ananthanarayn and Panicker; Textbook of Microbiology; Orient Longman Publishers, Hyderabad.

CH 272 Physical Chemistry-II **2-0-0-2**

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibria of one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point (NaCl-H_2O), ($FeCl_3$-H_2O) and ($CuSO_4$-H_2O) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-HCl-H_2O and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications. **[10]**

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorf and moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometric titrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using hydrogen quinhydrone and glass electrodes. **[12]**

Chemical Equilibrium: Equilibrium constant and free

energy. Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, Clausius-Clapeyron equation and their applications. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 5th Ed. 2004, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II **2-0-0-2**

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare,

Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co.Ltd.

CH 292 Organic Chemistry-IV **2-0-0-2**

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagel condensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic **[6]**

acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic).

Suggested Readings:
Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl , 19th Ed. 2005, S. Chand & Co. Ltd.

Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV **3-0-0-1.5**

Experiment based on the contents of CH 272, CH 282 and CH 292.

BT 232 Molecular Biology Laboratory **0-0-2-1**

Assignments are based on the course BT 212 Molecular Biology containing exercises on techniques involved in study of Nucleic acids.

ZO 242 Developmental Biology Laboratory **0-0-2-1**

Assignments are based on the course ZO 232 Developmental Biology containing exercises on reproductive cycle and embryonic development.

MB 321 Immunology Laboratory **0-0-2-1**

Assignments are based on the course MB 311 Immunology containing exercises on antigen-antibody interaction techniques.

BT 381 Modern Biology **3-0-0-3**

Nanoscience and Nanotechnology: Overview of different nanomaterials available, Brief idea of their synthetic methods; Risk and hazard associated with their use; Potential uses and applications of Nanotechnology in Agriculture, Energy and Environment, Food Science, Medical science etc. [12]

Biosensors: Introduction; Generation of an electronic signal; Amperometirc, Potentiometric, Conductimetric, Optical, Thernal and Microbial Biosensors. [9]

Intellectual Property Rights: Types of protection: Patent, Copyright, Trade secrets and Breeders right for variety protection; Moral issues in patenting Biotechnological inventions; Significance of IPR in the protection of Biodiversity, Traditional knowledge and geographical indications; Brief idea of IPR protection for Bio-informatics' components. [9]

Scientific communication: Scientific literature: Structure of Research article, Review article, Short communication, Book review etc. Literature database- NCBI, EMBL; Use of library and internet for scientific literature search; Abstracting methodology; Scientific Literature Standardization; Concept of Impact factor; Citation Index; Preparation of a scientific article [9]

Suggested Books:

1. Poole Jr., C.P., Owens, F.J. Introduction to Nanotechnology, Wiley, New York.
2. Bhushan, Bharat. Handbook of Nanotechnology. Springer, US.
3. CNR Rao et. al., Chemistry of nanomaterials : Synthesis, properties and applications. Springer, US.
4. Donnell et al., Intellectual Property in Food Technology Industry. Springer, US.
5. Satarkar S V, Intellectual Property Rights and Copyrights. Ess Ess Publications. India.
6. Ganguly P., Intellectual Property Rights. Tata McGraw Hill. New Delhi, India.
7. Barker RDJ et al., Technological applications of Biocatalysts. Butterworth-Heinemann Ltd. Oxford, UK.

BT 322 Plant Biotechnology **3-0-0-3**

General Principles: Terms and Definition, Historical aspects and scope Classical vs. modern approach, totipotency and cell theory, Principles underlying in vitro culture, Growth and differentiation, Culture media and its constituents, Media preparation, Sterilization and Organization of plant tissue culture laboratory. [7]

Micropropagation: Basic technique, Automation in the area scope as a commercial venture, Production of disease free plants, shoot tip culture, anther culture and ovule culture. [8]

Genetic Variability in Tissue Culture: Somaclonal and gametoclonal variation, Selection, Sources and causes of variation, Application in crop improvement. [8]

Protoplast Related Techniques: Protoplast isolation, Protoplast culture and fusion, Selection of hybrid cells, regeneration of hybrid plants, somatic hybridization and cybridization, Applications in crop improvement. [8]

Gene Transfer in Plants: Agrobactrium tumefaciens and

Agrobacterium rhizogenes, structure of T-DNA, virulence and other gene organization, application in genetic transformation, Gene transfer methods in plants – Direct and Indirect methods. [8]

MB 331 General Microbiology **3-0-0-3**

Definition and scope of Microbiology: History and recent developments – Spontaneous generation versus biogenesis, Germ theory of diseases, pure-culture concept.-contributions of Louis Pasteur – Leuwenhoek, Lazaro Spallanzani, John Tyndall, Joseph Lister, Robert Koch. Microscopy: simple, compound light microscopy – Dark Field, Bright Field, Phase contrast, Fluorescence and Electron Microscopy. Classification of Microbes – Systems of classification, General properties, principles and types of classification of microorganisms, Bergey's manual, Nutritional types, Classification on the basis of physical parameters. [12]

General characteristics and functions of Bacteria: structure and function of cell wall, cilia, flagella, slime layer, capsule, pilli, Cytoplasmic membrane and Cytoplasmic inclusions, sporulation. Kingdom prokaryotes - classical techniques of microbial identification - morphological, physiological and biochemical properties. [8]

Kinetics of Bacterial growth: Different types of bacterial culture (Batch, Synchronous, Arithmetic) – Definition and brief description. Growth Phases, Growth Kinetcs, Calculation of duration of Phases and generation time, Growth yields, Methods of growth determination, Environmental factors affecting growth - temperature, pH, osmotic pressure, partial pressure of oxygen and nutrient concentration. Concept of Sterilization - Definition of sterilization, Physical and Chemical methods of sterilization. [7]

Basic concepts of Virology: General characteristics of viruses, differences between bacteria and viruses. Classification of viruses Physical and chemical Structures of different Viruses on the basis of capsid symmetry - enveloped (Herpes virus), helical (TMV) and icosahedral (Polyoma viruses), Complex (Bacteriophage), Bacteriophages: Stages in the Lytic and Lysogenic Life Cycle of a typical phage, Properties of a phage infected bacterial culture. Viroids and prions. [6]

Brief description of Algae, Fungi and protozoa: General characteristics of Algae, Fungi and Protozoa. [6]

Suggested Books:

1. Pelczar *et. al*.; Microbiology; Tata McGraw Hill; New Delhi.
2. Powar & Daginawala; General Microbiology I & II; Himalaya Publishing House, Mumbai.
3. Stanier *et al.;* General Microbiology; Prentice Hall of India, New Delhi.
4. Prescott, Harley, Klein; Microbiology; Mc Graw Hill Publication, New York.

BT 342 Environmental Biotechnology **3-0-0-3**

Introduction to Biodiversity: Applications of biotechnology in biodiversity conservation. [4]

Bioleaching: Use of microbial source for enhanced oil recovery, metal leaching (Copper and Uranium). [5]

Biofuels: Bioethanol, Biodiesel, Methanogenesis. [4]

Biopesticides: Bacterial, Fungal and Viral pesticides. [4]
Biofertilizers: Nitrogen fixing microbes and their application in crop productions. [5]

Biodegradation: General characteristics of xenobiotics, Technology development of bioremediation, Case study of hydrocarbon and pesticide biodegradation, Biobleaching of industrial effluents. [6]

Biogeochemical Cycling: Sulphur, Nitrogen and Phosphorus cycles, Role of microbes in biogeochemical cycling. [6]

Waste Treatment and Disposal: Waste water treatment, industrial and municipal waste, BOD removal, activated sludge process, trickling filters, lagoons, land farming, contact stabilization and anaerobic digestion, nitrification and denitrification in the activated sludge process. [5]

BT 313 Animal Tissue Culture **3-0-0-3**

Introduction to animal cell sciences: Structure, organization and biology of animal cell. General concepts of animal cell culture. General concept of differentiation and dedifferentiation. Expression of proteins in animal cells. [8]

Growth requirements and kinetics: Media -Development of simple growth media, BSS. Chemical, physical and metabolic functions of different constituents of culture medium. Role of CO2 and serum. Serum and protein free defined media and their applications. Growth kinetics of cultured cells. [8]

Animal cell culture and its types: Primary and established cell line cultures, Cell lines: A general concept. Disaggregation of tissue and primary culture. Cell separation, Organ and histotypic cultures. [8]

Techniques used in Animal Cell Culture : Cell cloning and micromanipulation, Transfection techniques, Cell transformation, Scaling-up of animal cells [8]

Application of animal cell culture: Cell culture based vaccines, Stem cell culture, Embryonic stem cells and their applications, Cell hybridization, Hybridomas and their selection, application of cell hybridization. [7]

Suggested Readings:

1. R. Ian Freshney, (3rd ed., 2007), Culture of Animal Cells, Wiley,New York..
2. John R.W., (2nd ed., 2004), Animal Cell Culture-Practical Approach Masters, Oxford Press, UK.
3. J.M. Davis, (2nd ed., 2007), Basic Cell Culture, Oxford, UK.
4. Jennie P. Mather and David Barnes, (2nd ed., 2008), Animal Cell Culture Methods, Academic Press,US.
5. S.J. Higgins and B.D. Hames, (3rd ed., 2008), Protein Expression: A Practical Approach, Oxford University Press, UK.
6. S.B. Primrose, R.M. Twyman and R.W. Old, (3rd ed., 2007), Principles of Gene Manipulation, Blackwell Science, US.

MB 341 General Microbiology Laboratory **0-0-2-1**

Assignments are based on the course MB 331 General Microbiology containing exercises on microscopic and cultural study of microorganisms and their isolation from natural sources.

BT 392 Environmental Biotechnology Laboratory **0-0-2-1**

Assignments are based on the course BT 342 Environmental Biotechnology containing exercises on analysis of environmental samples.

BT 323 Tissue Culture Laboratory

Assignments are based on the courses BT 322 Plant Biotechnology and BT 313 Animal Tissue Culture containing exercises on media preparation and different culturing methods of plant and animal cells.

BT 371 Internship **0-0-0-6**

Each student shall undergo project work of six to eight weeks during the Summer after Spring Semester of second year in an approved Organization and submit a Project Report.

BT 311 Genetic Engineering **3-1-0-4**

Introduction: Nucleic acid structure, properties and isolation. [5]

Enzymes in Molecular Cloning: Principal enzymes used to manipulate DNA in vitro with their activities and major applications – Restriction endonucleases, Nucleases, DNA ligases, Topoisomerase. [6]

Cloning and Expression Vectors: Brief outline of plasmids, phagemids, bacteriophage lambda vectors, cosmids, and high capacity cloning vectors like BACs, PACs and YACs. Binary and shuttle vectors, brief outline of expression vectors. [6]

DNA Cloning Strategies: Criteria for the choice of suitable vectors and host, methods of gene transfer to bacterial cells, cDNA and genomic library, and screening methods for [6]

selection of recombinant DNA molecules.

Tools of Recombinant DNA Technology: Fragmentation and separation of DNA fragments, PCR, Northern, Southern and Western hybridization, sequencing. [7]

Applications of Recombinant DNA Technology: Role of genetic fingerprinting in diagnostics, novel drug and therapies for genetic diseases, combating infectious diseases, protein engineering, medicinal and plant breeding applications, production of commercially important proteins like insulin, growth hormone and tissue plasminogen. [6]

BT 352 Bioinformatics 3-0-0-3

Introduction to Networking: Definition and scope of networking, Basic network topology, Concept of LAN, MAN and WAN, Introduction to Internet and data transfer protocol (TCPI/P, FTP) [5]

Biological Information Resources: Introduction to biological data and database management, Biological databases – Protein databanks (Primary and Secondary databank; Sequence and structure databank), Genomic databanks (Sequence and specialized databanks). [7]

Sequence Alignment: Introduction to biological sequence alignment, Database searching, Algorithm for sequence alignment, Pairwise alignment (Needleman and Wunsch algorithm, Smith-Waterman algorithm), Multiple Sequence Alignment, Concept of Gaps, Gap penalties and scoring matrices. [7]

Tools for Sequence Alignment: FASTA, BLAST, Variations of BLAST, Alignment scores and statistical significance of database searches. [5]

Genomics: Genome, Gene structure of prokayotes and eukaryotes, Concept of ORFs, GC-content, Codon Usage, cDNAs and ESTs, Serial analysis of gene expression (Microarrays). [5]

Proteomics: Introduction to proteome and proteome analysis (2D electrophoresis, Mass spectrophotometry, Protein microarray and X-ray crystallography), Algorithm for modeling protein folding. [5]

Phylogenetics: Introduction to phylogenetics, Parsimony, Molecular phylogenetics, Methods of phylogenetic tree construction [5]

Suggested Books:

1. Peruski and Peruski: The Internet and the new Biology: tools for Genomic and Molecular Research, ASM Publishing House, India.
2. Higgins and Taylor, Bioinformatics, Oxford University Press, US.

BT 324 Bioprocess Engineering 3-0-0-3

Introduction: History and role of bioprocess engineering in biotechnology industries, Concept of unit operation unit processes. Introduction to Engineering calculation: Variables, their dimensions and units, dimensionally homogeneous and non- homogeneous equations, standard conditions and ideal gases, physical and chemical property data, basics of materials and energy balances in a macroscopic view point. [10]

Fluid Mechanics: Principle of microbial nutrition, formulation of culture media, selective media, factors influencing the choice of various carbon and nitrogen sources, vitamins, minerals, precursors and antifoam agents, importance of pH, fluid vs. solids, fluid static's mass and energy balance in fluid flow, Bernoulli's equation, flow past immersed bodies and drag coefficient. Sterilization of process fluids, recovering and purifying products, integration of reaction and separation. [10]

Heat Transfer: Principles and design of processes involving biochemical reactions, including aerobic and anaerobic respiration and fermentation (involving pure and mixed cultures). Shake flask, batch and continuous operations. Solid state fermentations. Primary and secondary metabolites Energy balances and biochemical kinetics. [10]

Diffusion and Mass Transfer: Biological production consideration, large scale production, Enzyme kinetics, cell growth, energetics and mass transfer. Production of Penicillin, Streptomycin, Tetracycline and other Antibiotics. [9]

Suggested Readings:

1. Shuler ML; Kargi F (2nd ed.,), Bioprocess Engineering, Prentice Hall PTR, New Jersey.
2. Ward, O.P. Bioprocessing, John Wiley and Sons, New York.*
3. Reinhold Van Nostrand, Belter P.A, Cussler E.L, Hu W.S. (2nd ed.), Bioseparations- Downstream processing for biotechnology. New York.

***latest edition**

BT 334 Enzyme Technology 3-0-0-3

Introduction: General properties of enzyme; Classification; Nomenclature; Cofactor & Coenzyme; Activation Energy; Fisher's Lock and Key hypothesis; Khosland Induced-Fit Model; Entropy reduction; Factors affecting the enzyme activity: Reversible and irreversible covalent modifications; Uni substrate and bi substrate reactions. [5]

Enzyme Kinetics: Mechanism of enzyme substrate reaction; Michaelis- Menten Knetics; Double reciprocal plot ; Enzyme inhibition & regulation. [6]

Enzymes in metabolic regulation: Structure and properties; Allosteric behavior; Deviation from Michaelis-Menten Kinetics; Role of allostric enzymes in metabolic pathway; Sigmoidal kinetics and their physiological significance. [8]

Methods in Enzymology: Isolations and activity [12]

measurements; Extraction and purification; Structure determination; Investigation of active sites and catalytic mechanism; enzyme engineering, ribozyme and abzymes.

Enzymes in Industry: Immobilization methods; Effect of partition on kinetics and performance of enzyme system with particular emphasis on change in pH and hydrophobicty [8]

Suggested Readings:

1. Nelson D L and Cox M M, (3rd ed.), Lehninger Principles of Biochemistry , MacMillian Worth Publishers, US.
2. Palmer T and Bonner P, (5th Ed.), Enzymes: Biochemistry, Biotechnology and Clinical Chemistry, East West Press Pvt. Ltd. New Delhi.
3. Wilson, (5th Ed.), Bimolecular Interactions: I Enzymes in Wilson K and Walker J Practical Biochemistry: Principles and techniques Cambridge University Press UK.
4. Barker RDJ et al., (2005), Technological applications of Biocatalysts. Butterworth-Heinemann Ltd. Oxford,US.
5. Voet D, Voet J D and Pratt C W, (2007), Fundamentals of Biochemistry, John Wiley and Sons, Inc.US.
6. Berg J M, Tymoczko J L and Stryer L , (2003), Biochemistry, W H Freeman and Company New York.

BT 341 Genetic Engineering Laboratory **0-0-2-1**

Assignments are based on the course BT 311 Genetic Engineering containing exercises on nucleic acid isolation from different biological sources and amplification techniques.

BT 314 Bio-informatics Laboratory **0-0-2-1**

Assignments are based on the course BT 352 Bioinformatics containing excercises on internetworking, sequence homology search (BLAST) and phylogenetic tree construction and analysis

BT 344 Bioprocess Engineering Laboratory **0-0-2-1**

Assignments are based on the course BT 324 Bioprocess Engineering containing exercises on fermentation, primary and secondary metabolites.

BT 354 Enzyme Technology Laboratory **0-0-2-1**

Assignments are based on the course BT 334 Enzyme Technology containing exercises on enzymes kinetics.

Mody University of Science & Technology

B.Sc. (Hons) Chemistry

Session 2017-2018

Curriculum Structure

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

B. Sc. (Hons.) Chemistry
(With Physics and Mathematics or Biotechnology and Zoology) Three-Year Programme
Academic Curriculum (2014 – 15 onwards)
First Year-Autumn Semester

	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration Hours	Weightage (%)		
			L	T	P			CW*	MTE	ETE
Autumn Semester	Compulsory Courses

▲CW: Course Work; MTE: Mid Term Examination; ETE: End Term Examination
* Course work (CW) would include regularity, evaluation of assignments, surprise tests, etc.
# Evaluation of proficiency will be based on the participation in extra-curricular/co-curricular activities.

Detailed Syllabus
PTO.

COURSE DESCRIPTION
B. Sc. Honors Chemistry
Compulsory Courses

EL 101 Foundation Course in English **2-0-0-2 26**

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand & Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

EV 111 Environmental Science **1-0-0-1 13**

1. Introduction to Environment and Environmental Studies, its scope and importance [**2**]

2. Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem [**2**]

3. Natural Resources: Renewable and Nonrenewable resources. [**2**]

4. Human Population and Environment: Population Growth, World and Indian scenario. [**2**]

5. Environmental pollution: Types of Environmental Pollution and cause, prevention of pollution. [**2**]

6. Global Environmental Issues: Climate Change, Global Warming and Green House Effect. [**3**]

Visit to a local area to document environmental assets

Suggested Reading

Text Book

1. Bharucha, E;. Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH, Beiswenger RE, Purdom; Environmental Sciences, Paperback.

References

5. Rastogi V.B. & Jayraj M.S.; Animal Ecology and Distribution of Animals, Kedar Nath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

3-0-0-3

CA 111 Fundamentals of Computers and Information Technology

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, [6]

Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

Course Description
Chemistry

CH 181 Physical and Inorganic Chemistry-I **2-0-0-2**

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective nuclear charge. **[5]**

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule-Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 4th Edition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I **2-0-0-2**

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer **[5]** compounds and field effects.

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogenic centre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centres diastereomers, threo and erythro diastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation, Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivity in alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes-mechanisms involved in hydrogenation, electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration-reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I 3-0-0-1.5

Experiments based on the contents of CH 181 and CH 191.

CH 182 Physical and Inorganic Chemistry-II **2-0-0-2**

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphur tetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D. Tuli & Arun Bahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand & Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand & Co .Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 192 Organic Chemistry-II 2-0-0-2

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed. 2007, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II 3-0-0-1.5

Experiments based on the contents of CH 182 and CH 192.

CH 291 Physical Chemistry-I 2-0-0-2

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU & dH for the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual

entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A & G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it. Concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. Expression for the rate constant based on equilibrium constant and thermodynamic aspects. **[11]**

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I 2-0-0-2

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series: General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. **[7]**

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 18th Ed. 2009, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand & Co.Ltd.

CH 223 Organic Chemistry-III 2-0-0-2

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and

hypochromic shifts, UV spectra of conjugated enes and enones. **[6]**

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, Lederer Manasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel's method. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl, 20th Ed. 2008, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III 3-0-0-1.5

Experiments based on the contents of CH 291, CH 213 and CH 223.

CH 272 Physical Chemistry-II 2-0-0-2

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibria of one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point (NaCl-H_2O), ($FeCl_3$-H_2O) and ($CuSO_4$-H_2O) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-HCl-H_2O and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications. **[10]**

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorf and moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometric titrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using **[12]**

hydrogen quinhydrone and glass electrodes.

Chemical Equilibrium: Equilibrium constant and free energy. Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, **[4]** Clausius-Clapeyron equation and their applications.

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 5^{th} Ed. 2004, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5^{th} Ed. 2003, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2^{nd} revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II 2-0-0-2

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co.Ltd.

CH 292 Organic Chemistry-IV 2-0-0-2

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagel condensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic). **[6]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV 3-0-0-1.5

Experiment based on the contents of CH 272, CH 282 and CH 292.

CH 371 Physical Chemistry-III 2-0-0-2

Elementary Quantum Mechanics: Black-body radiation, Planck's radiation law, photoelectric effect, heat capacity of solids, Bohr's model of hydrogen atom (no derivation) and its defects. Compton effect. De Broglie hypothesis, Heisenberg's uncertainty principle, Sinusoidal wave equation, Hamiltonian operator, Schrodinger wave equation and its importance, physical interpretation of the wave function, postulates of quantum mechanics, particle in a one dimensional box. Schrodinger wave equation for H-atom, separation into three equations (without derivation), quantum numbers and their importance, hydrogen

like wave functions, radial wave functions, angular wave functions, Molecular orbital theory, basic ideas-criteria for forming M.O. from A.O., construction of M.O.'s by LCAO-H_2^+ ion, calculation of energy levels from wave functions, physical picture of bonding and antibonding wave functions, concept of σ, σ*, π, π* orbitals and their characteristics. Hybrid orbitals-sp, sp^2, sp^3, calculation of coefficients of A.O.'s used in these hybrid orbitals. Introduction to valence bond model of H_2, comparison of M.O. and V.B. models. **[12]**

Spectroscopy: Electromagnetic radiation of the spectrum, basic features of different spectrometers, statement of the Born-Oppenheimer approximation, degrees of freedom. Rotational Spectrum -Diatomic molecules, Energy levels of a rigid rotor (semi-classical principles), selection rules, spectral intensity, distribution using population distribution (Maxwell-Boltzmann distribution), determination of bond length, qualitative description of non-rigid rotor, isotope effect. **[6]**

Vibrational spectrum: Infrared spectrum: Energy levels of simple harmonic oscillator, selection rules, pure vibrational spectrum, intensity, determination of force constant and qualitative relation of force constant and bond energies, effect of harmonic motion and isotope on the spectrum, idea of vibrational frequencies of different functional groups. Raman Spectrum concept of polarizability, pure rotational and pure vibrational Raman spectra of diatomic molecules, selection rules. Electronic Spectrum: Concept of potential energy curves for bonding and antibonding molecular orbitals, qualitative description of selection rules and Frank-Condon principle. Qualitative description of σ, π and n M.O. their energy levels and the respective transitions. **[8]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P.D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 7th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Edition 2005, S. Chand & Co. Ltd.
4. Practical Chemistry, A.O. Thomas, 8th Ed. Geethanjali

Offset Prints, Calicut.

CH 381 Inorganic Chemistry-III 2-0-0-2

Hard and Soft Acids and Bases (HSAB): Classification of acids and bases as hard and soft. Pearson's HSAB concept, acid-base strength and hardness and softness. Symbiosis, theoretical basis of hardness and softness, electronegativity and hardness and softness. **[7]**

Metal-ligand Bonding in Transition Metal complexes: Limitations of valence bond theory, an elementary idea of crystal-field theory, crystal-field splitting in octahedral, tetrahedral and square planar complexes, factors affecting the crystal-field parameters. Magnetic Properties of Transition Metal Complexes, Types of magnetic behavior, methods of determining magnetic susceptibility, spin-only formula, L-S coupling, correlation of μ_S and μ_{eff} values, orbital contribution to magnetic moments, application of magnetic moment data for 3d metal complexes. **[9]**

Electron Spectra of Transition Metal Complexes: Types of electronic transitions, selection rules for d-d transitions, spectroscopic ground states, spectrochemical series. Orgel-energy level diagram for d^1 and d^9 states, discussion of the electronic spectrum of $[Ti(H_2O)_6]^{3+}$ complex ion. **[7]**

Volumetric Estimation: Theory of oxidation-reduction titrations and complexometric titrations. **[3]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 2008, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2009, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Ed. 1995, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2009, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 391 Organic Chemistry-V 2-0-0-2

Nuclear magnetic resonance (NMR) spectroscopy: Proton magnetic resonance (^{1}H-NMR) spectroscopy, nuclear shielding and deshielding, chemical shift and molecular structure, spin-spin splitting and coupling constants, areas of signals, interpretation of PMR spectra of simple organic molecules such as ethyl bromide, ethanol, acetaldehyde, 1,1, 2-tribromoethane, ethyl acetate, toluene and acetophenone. Problems pertaining to the structure elucidation of simple organic compounds using UV, IR and PMR spectroscopic techniques. **[9]**

Organometallic Compounds: Organomagnesium Compounds: the Grignard reagents-formation, structure and chemical reactions. Organozinc compounds: formation and chemical reactions. Organolithium compounds: formation and chemical reactions. **[3]**

Organosulphur Compounds: Nomenclature, structural features. Methods of formation and chemical reactions of thiols, thioethers, sulphonic acids, sulphonamides and sulphaguanidine. **[3]**

Heterocyclic Compounds: Introduction: Molecular orbital picture and aromatic characteristics of pyrrole, furan, thiophene and pyridine. Methods of synthesis and chemical reactions with particular emphasis on the mechanism of electrophilic substitution. Mechanism of nucleophilic substitution reactions in pyridine derivatives. Comparison in basicity of pyridine, piperidine and pyrrole. Introduction to condensed five and six-membered heterocycles.

Preparation and reactions of indole, quinoline and isoquinoline with special reference to Fisher indole synthesis, Skraup synthesis and Bischler-Napieralski synthesis, Mechanism of electrophilic substitution reactions of indole, quinoline and isoquinoline. **[7]**

Organic Synthesis via Enolates: Acidity of α-hydrogens, alkylation of diethyl malonate and ethyl acetoacetate. Synthesis of ethyl acetoacetate; the Claisen condensation. Keto-enol tautomerism of ethyl acetoacetate. Alkylation of 1, 3-dithianes. Alkylation and acylation of enamines. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand & Co. Ltd.

CH 313 Instrumental Methods of Analysis **2-0-0-2**

Spectroscopic techniques: Mass Spectrometry: Introduction, Ion production (EI and CI techniques), molecular ion peak, base peak, ion analysis, ion abundance, modes of fragmentation, metastable peak, retro-Diels Alder reaction, Mc-Lafferty rearrangement, double charged ion, nitrogen rule, double bond equivalent, mass spectral fragmentation of organic compounds (alkanes, alkenes, arenes, alcohols, aldehydes, ketones, acids and phenols). Basic Principles, instrumentation and applications of Atomic absorption, Photoelectron and Mossbauer spectroscopy. **[11]**

Chromatography: Theory, Behavior of solutes, Column efficiency and band broadening, Resolution,Column process, Reduced variable, Time of analysis, Qualitative & quantitative analysis, Problems. Gas Chromatography: Optimization of experimental condition, Retention time and Retention volume, Detectors: Thermionic, Flame photometric, Helium and Coulson conductivity detectors, Supercritical fluid chromatography, Qualitative and Quantitative analysis, Problems. Liquid Column Chromatography: Introduction, Solvent delivery system, Sample injection, Separation, columns detectors, Optimization of column performance, Problems. High Performance Liquid Chromatography: Adsorption HPLC, Partition HPLC, Ion Exchange HPLC, Exclusion HPLC, Problems**.** Ion Chromatography: Introduction, Technique and Applications **[11]**

Other Separation Methods:-Ultracentrifugation-Principle, sedimentation constant, sedimentation equilibrium, sedimentation velocity, methodology and applications. **[4]**

Suggested Readings:

Text Books:

1. Instrumental methods of chemical analysis, B. K. Sharma, 2008, Goel Publishing House.
2. Instrumental methods of analysis, B. Sivasankar, 2012, Oxford higher education.

Reference Books:

3. Vogel's: Textbook of quantitative Chemical Analysis; Mendham, Denney, Barnes, Thomas and Sivasankar, 2009, Pearson.
4. Instrumental methods of Chemical analysis, G. W. Ewing, 2003, Mc-Graw Hill.

CH 323 Chemistry of Polymers and Petrochemicals 2-0-0-2

Origin, formation & composition of petroleum:
Introduction, Occurrence of Petroleum by Biological method - Composition of Petroleum, Properties of Paraffins, Olefins, Naphthalene, Aromatics and Inorganic impurities (sulphur, nitrogen, chlorine) Exploration of Petroleum by gravity, Magnetic and Seismic Method -Refineries & its capacity in India **[6]**

Evaluation of petroleum properties: Evaluation of Petroleum, U.O.P Characterization factor, Correlation Index - TBP Apparatus and its necessity in Refinery - Testing methods and its importance – ASTM Distillation, Reid vapor pressure, Oxidation stability, Smoke Point, Aniline Point - Carbon residue by Rams bottom method, Copper Corrosion test and Softening point Test - Refinery Products and its uses - Definition of- Heat of Combustion, Specific heat, Latent Heat of fusion, Latent heat of Vaporization, Viscosity index. **[10]**

Polymers: Monomers, classification, polymerization methods: addition and condensation; mechanism and their kinetics, metallocene polymers and other newer techniques of polymerization, copolymerization, fire retarding polymers, electrically conducting polymers, biopolymers, contact lens, dental polymers, artificial heart. Inorganic Polymers: Silicones and Phosphazenes as inorganic polymers. Nature of bonding in triphosphazenes. Organic Polymers: Condensation polymers- Polyesters, Polyamides, Phenol-formaldehyde resin, Urea-formaldehyde resin, Epoxy resins, Polyurathanes. **[10]**

Suggested Readings:

Text Books:

1. The Chemistry and technology of petroleum, J. G. Speight, 2007, CRC Press.
2. Introductory polymer Chemistry, G. S. Mishra, 2005, New Age International.

Reference Books:

3. Handbook of petroleum processing, D. S. G. Jones, 2006, Springer.
4. The Chemistry of polymers, J. W. Nicholson, 4th Edition, RSC Publications.

CH 361 Laboratory Course in Chemistry-V 3-0-0-1.5

Experiments based on the contents of CH 371, CH 381 and CH 391.

CH 333 Laboratory Course for Instrumental Methods of Analysis 3-0-0-1.5

Experiments based on the contents of CH 313. .

CH 343 Project 3-0-0-1.5

Problems will be based on the application part of the curriculum. . .

CH 392 Physical Chemistry-IV 2-0-0-2

Colloidal State: Definition, classification of colloids. Solids in liquids (sols): properties-kinetic, optical and electrical; stability of colloids, protective action. Hardy-Schulze law, gold number. Liquids in solids (gels): classification, preparation and properties, inhibition, general application of colloids. Liquids in **[6]**

liquids (emulsions): types of emulsions, preparation, emulsifier.

Photochemistry: Interaction of radiation with matter, difference between thermal and photochemical processes. Laws of photochemistry: Grothus- Drapper law, Stark-Einstein law, Jablonski diagram depicting various processes occurring in the excited state, qualitative description of fluorescence, phosphorescence, non-radiative processes (internal conversion, intersystem crossing), quantum yield, photosensitized reactions-energy transfer processes (simple examples). **[6]**

Physical Properties and Molecular Structure: Optical activity, polarization-(Clausius-Mossotti equation), orientation of dipoles in an electric field, dipole moment, induced dipole moment, measurement of dipole moment-temperature method and refractivity method, dipole moment and structure of molecules, magnetic properties-paramagnetism, diamagnetism and ferromagnetism. **[6]**

Solutions: Dilute Solutions and Colligative Properties: Ideal and non-ideal solutions, methods of expressing concentrations of solutions, activity and activity coefficient. Dilute solution, colligative properties, Raoult's law, relative lowering of vapour pressure, molecular weight determination. Osmosis, law of osmotic pressure and its measurement, determination of molecular weight from osmotic pressure, elevation of boiling point and depression in freezing point. Thermodynamic derivation of relation between molecular weight and elevation of boiling point and depression in freezing point. Experimental methods for determining various colligative properties. Abnormal molar mass, degree of dissociation and association of solutes. **[8]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 7th Ed. 2003, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 7th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.

4. Practical Chemistry, A.O. Thomas, 8th Ed. Geethanjali Offset Prints, Calicut.

CH 314 Inorganic Chemistry-IV 2-0-0-2

Thermodynamic and Kinetic Aspects of Metal Complexes: A brief outline of thermodynamic stability of metal complexes and factors affecting the stability, substitution reactions of square planar complexes. **[6]**

Organometallic Chemistry: Definition, nomenclature and classification of organometallic compounds. Preparation, properties, bonding and applications of alkyls and aryls of Li, Al, Hg, Sn and Ti, a brief account of metalethylenic complexes and homogeneous hydrogenation, mononuclear carbonyls and the nature of bonding in metal carbonyls **[8]**

Bioinorganic Chemistry: Essential and trace elements to Biological processes, metalloporphyrins with special reference to haemoglobin and myoglobin. Biological role of alkali and alkaline eath metal ions with special reference to Ca^{2+}. Nitrogen fixation. **[6]**

Silicones and Phosphazenes: Silicones and phosphazenes as examples of inorganic polymers, nature of bonding in triphosphazenes. **[6]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, S. Chand & Co. Ltd., 1999.
2. Inorganic Chemistry B.Sc. Part III, Shivahare and Lavania, Ed. 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Ed. 1995, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R. L. Madan, G. D. Tuli, reprint 2007, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.
5. Practical Chemistry, A.O. Thomas, 8th Ed. Geethanjali Offset

Prints, Calicut.

CH 324 Organic Chemistry-VI 2-0-0-2

Carbohydrates: Classification and nomenclature, Monosaccharides, mechanism of osazone formation, interconversion of glucose and fructose, chain lengthening and chain shortening of aldoses. Configuration of monosaccharide. Erythro and threo diastereomers. Conversion of glucose into mannose. Formation of glycosides, ethers and esters. Determination of ring size of monosaccharides. Cyclic structure of D (+)- glucose. Mechanism of mutarotation. Structures of ribose and deoxyribose. An introduction to disaccharides (maltose, sucrose and lactose) and polysaccharides (starch and cellulose) without involving structure determination. **[7]**

Amino Acids, Peptides, Proteins and Nucleic Acids: Classification, structure and stereochemistry of amino acids. Acid-base behavior, isoelectric point and electrophoresis. Preparation and reactions of α-amino acids. Structure and nomenclature of peptides and proteins. Classification of proteins. Peptide structure determination, end group analysis, selective hydrolysis of peptides. Classical peptide synthesis, solid-phase peptide synthesis. Structures of peptides and proteins. Levels of protein structure. Protein denaturation/renaturation. Nucleic acids: Introduction. Constituents of nucleic acids. Ribonucleosides and ribonucleotides. The double helical structure of DNA. **[7]**

Fats, Oils and Detergents: Natural fats, edible and industrial oils of vegetable origin, common fatty acids, glycerides, hydrogenation of unsaturated oils. Saponification value, iodine value, acid value, soaps, synthetic detergents, alkyl and aryl sulphonates. **[4]**

Synthetic Polymers: Addition or chain-growth polymerization. Free radical vinyl polymerization, ionic vinyl polymerization, Ziegler-Natta polymerization and vinyl polymers. Condensation or step growth polymerization. Polyesters, polyamides, phenol-formaldehyde resins, urea-formaldehyde resins, epoxy resins and polyurethanes. Natural and synthetic rubbers. **[4]**

Synthetic Dyes: Colour and constitution (electronic concept). Classification of dyes. Chemistry and synthesis of Methyl orange, Congo red, Malachite green, Crystal violet, Phenolphthalein, Fluorescein, Alizarin and Indigo. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla, 28th Ed.1999, S. Chand & Co Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Arun Bahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2000, S. Chand & Co. Ltd.
4. Practical Chemistry, A.O. Thomas, 8th Ed. Geethanjali Offset Prints Calicut.

CH 334 Green and Environmental Chemistry **2-0-0-2**

Atmospheric Chemistry: Atmosphere, reactions in atmosphere, earth's radiation balance, particles, ion and radicals in the atmosphere, stratospheric chemistry: ozone layer, The role of chemicals in ozone destruction, The green-house effect and Global warming, El-Nino phenomenon. Hydrosphere : Complex formation in natural water and waste-water, micro-organism in aquatic chemical reactions, eutrophication, re-cycle of waste-water in process industry, treatment of sewage and reuse of water in industry and agriculture, nitrogen transformation by bacteria. Lithosphere : The terrestrial environment, soil formations, soil properties (physical/chemical), inorganic and organic components in soil, acid-base and ion-exchange reactions in soil, micro and macro nutrients, nitrogen pathways and NPK in soil, waste and pollutants in soil, classification of waste and disposal. **[15]**

Green Chemistry: Green reagent-dimethyl carbonate and other polymer supported reagents, green catalysts-acid catalyst, basic catalysts, oxidation catalysts, polymer supported catalysts, photocatalyst, green synthesis-phase transfer catalyst. microwave and ultrasound assisted synthesis, green solvents- reactions in acidic and neutral ionic liquids, green synthesis of polycarbonates, paracetamol, ibuprofen, citral, urethane, adipic acid and styrene. **[11]**

Suggested Readings:

Text Books:

1. Environmental Chemistry; Sharma and Kaur, 2009, Krishna Publications.
2. Fundamentals of Environmental Chemistry; Manahan, 2001, Lewis publishers.

Reference Books:

3. Environmental Chemistry, A. K. Dey, 2003, APH Publishing Corporation.
4. Environmental Chemistry C. Baird, W. H. Freem, 1998, Wiley Interscience.

CH 344 Organic Reaction Dynamics, Reactive Intermediates and Photochemistry **2-0-0-2**

Organic Reaction Dynamics: General methods for the determination of reaction mechanism including energetics, energy profile diagrams, detection of intermediates, reaction kinetics and thermodynamics, substituent, solvent and isotope effects and stereochemical evidences. **[8]**

Reactive Intermediates: Classical and non-classical carbocations, carbanions, free radicals, arenes, carbenes and nitrenes, general methods of generation, structure, stability and reactivity of these reactive intermediates. **[8]**

Photochemistry: Basic principle, electron excitation, modes of dissipation of energy, jablownski diagram, photochemistry of olefins, dienes, carbonyl compounds, Norrish type-I and Norrish type II cleavage, Paterno-Buchi reaction, photo reduction. Photo-Fries rearrangement, ethers, nitriles, pyridinium ylides, quantum efficiency and quantum yield. **[10]**

Suggested Readings:

Text Books:

1. Advanced organic chemistry; B. S. Bahal and Arun Bahl, 2002, S. Chand and Co.Ltd.

Reference Books:

2. Organic chemistry, A. C. Francis, 2000, Mc-Gra Hill.
3. Advanced organic Chemistry, Jerry March, 2000, Wiley Interscience.
4. Organic chemistry; Morrison and Boyd, 6th Edition, Pearson.
5. Photochemistry and Pericyclic reactions, J. Singh, 2008, New Age International.

CH 354 Pharmaceutical Chemistry **2-0-0-2**

Introduction: Concept of drug, Structure activity relationship (SAR), quantitative structure-activity relationship (QSAR); Factors affecting bioactivity – resonance, inductive effect, isosterism, bio-isosterism, spatial considerations; Theories of drug activity – occupancy theory, rate theory, induced fit theory Concept of drug receptors-elementary treatment of drug-receptor interactions; Factors affecting modes of drug administration, absorption, metabolism and elimination; Significance of drug meta-bolism in medicinal chemistry. **[15]**

Antibiotics: Isolation, structure elucidation, synthesis, SAR and mode of action of following antibiotics: Penicillins, amoxicillins, streptomycin, tetracyclines and chloroamphanicol. **[12]**

Chemotherapeutic agents: Structure and applications of cardiovascular agents: cardiotonic, antiarrthymic drugs, antihypertensive agents, diuretics anti histamines, analgesics, antiviral, anti inflammatory, antipyretic antimalarial, CNS drugs: hypnotics and sedatives, anticonvulsant drugs, CNS stimulants, anti-anxiety and tranquilizers. **[12]**

Suggested readings:

Text Books:

1. An introduction to medicinal chemistry; Patrick, G. L. Oxford press, 4th Ed.

Reference Books:

2. Burger's Medicinal Chemistry; Drug discovery and development, Alfred, Burger. 7th Ed. Wiley Interscience Publications.
3. The Organic Chemistry of Drug Synthesis; Vol. I st, D. Lednicer and L. A. Mitscher, 2008, Wiley Interscience.
4. Medicinal Chemistry, Ashutosh Kar, 2005, New Age International.

CH 382 Laboratory Course in Chemistry-VI 3-0-0-1.5

Experiments based on the contents of CH 392, CH 314 and CH 324.

CH 364 Photochemistry and Green Chemistry Laboratory 3-0-0-1.5

Experiments based on the contents of CH 344. .

CH 374 Pharmaceutical Chemistry Laboratory 3-0-0-1.5

Experiments based on the contents of CH 354. .

Course Description
Physics

PH 111 Mechanics, Properties of Matter and Relativity 3-0-0-3

Mechanics: Laws of motions, Inertial and non-inertial frames of reference, Rotating frame, Effect of centrifugal and Coriolis forces due to earth's rotation, Center of mass (C.M), Lab and C.M frame of reference, Conservation of linear and angular momenta. [8]

Properties of Matter: Elasticity, Young's modulus, Modulus of rigidity, Poisson's ratio, relation connecting different elastic-constants, twisting couple of a cylinder(solid and hallow), Dynamical method (Maxwell's needle) for determining the modulus of rigidity, Bending moment, Cantilever, Determination of Young's modulus by bending of beam. [10]

Fluid Mechanics: Kinematics of moving fluids, equations of continuity, Euler's equation, Bernaulli's theorem, viscous fluids, streamline and turbulent flow, Poiseulle's law, Capillary tube flow, Reynold's number, Stokes law. [7]

Relativity: Postulates of special theory of relativity, Derivation of Lorentz transformation and physical significance of Lorentz invariance, Length contraction and time dilation, Concept of simultaneity, Relativistic velocity transformation relations, mass energy relation, Concept of zero rest mass of photon, Relativistic relation between energy and momentum. [14]

Text Books:

1. D.S.Mathur. Mechanics, S. Chand Publications, New Delhi
2. Resanick and Halliday: Physics Part –1

Reference Books:

1. H.C.Verma : Concept in Physics Vol. I
2. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol I.

PH 121 Electromagnetism 3-0-0-3

Vector Calculus: Gradient, divergence and curl operators, Physical significance

Electromagnetism: Laws of Electromagnetism using vector calculus; electrostatics and magnetostatics in matter, Biot and Savart's law, calculation of H order in simple geometrical situations, Ampere's Law .B=0, ΔxB=μ0 J, field due to magnetic dipole, magnetization current, magnetization vector, Half order field, magnetic permeability (linear cases), interpretation of a bar magnet as surface distribution of Solenoidal current. [7]

Time Varying Fields: Electromagnetic induction, Faraday's law, electromotive force, $\varepsilon = \int$ E.dr. integral and differential forms of Faraday's Law. Mutual and self inductance, transformers, energy in a static magnetic field, Maxwell's displacement current, Maxwell's equations, Electromagnetic field density. [10] [10]

EM wave propagation: The wave equation satisfied by E and B, Plane electromagnetic waves in vacuum, Poynting's vector, Reflection at plane boundary of dielectrics, Polarization by reflection and total internal reflection, Faraday effect, Waves in a conducting medium [12]

Text Books:

1.David J. Griffiths: Introduction to Electrodynamics (3rd Edition)
2. Gupta and Kumar: Electromagnetics

Reference Books:

1. P. Lorrain and O. Corson: EM Waves and Fields
2. A. S. Mahajan and AA Rangwal: Electricity and Magnetism

PH 131 Physics Laboratory-I 0-0-4-2

Assignments are based on the course PH 111 and PH 121

PH 122 Thermodynamics and Statistical Physics 3-0-0-3

Thermodynamics: Reversible and irreversible processes, Carnot's cycle and Carnot's theorem, Second law of thermodynamics, Thermodynamic scale of temperature. [7]

Concept of entropy: Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram [8]

Thermodynamic functions, Internal energy, Enthalpy, Helmholtz function and Gibb's free energy, Maxwell's thermodynamical equations and their applications, TdS equations, Energy and heat capacity equations, Clapeyron equations, Adiabatic demagnetization, Third law of thermodynamics, Nernst heat theorem. [10]

Joule-Thomson effect, Thermodynamic analysis, Inversion temperature, [6]

Thermodynamic equations for a Van der Waals gas. Liquefaction of gases. Regenerative principle, Properties of liquid helium, Introduction to super fluidity

Statistical Mechanics: State of a system (Microscopic and Macroscopic); Phase space, density of states and Liouville's theorem; Postulates of statistical mechanics; Relation between statistical and thermodynamic parameters. [8]

Text Books:

1. K.W. Zeemansky: Heat and Thermodynamics
2. Brij Lal and N. Subramanyam.:Heat and Thermodynamics

Reference Books:

1. B.K. Agarwal: Thermal Physics
2. Frederick Reif : Fundamentals of Statistical and Thermal Physics
3. R.K. Pathria: Statistical Mechanics (2nd Edition):

PH 132 Oscillations and Waves 2-0-0-2

Oscillations: Simple harmonic oscillations, Differential equation of SHM and its solution, Amplitude, Frequency, Time Period and Phase, Velocity and acceleration. Kinetic, Potential and total energy and their time average values. Free oscillations of systems with one degree of freedom : (i) Mass-Spring system, (ii) Simple Pendulum, (iii) Torsional Pendulum, (iv) Compound pendulum (v) Bar Pendulum. [6]

Superposition of Two Collinear Harmonic Oscillations: Linearity and superposition principle. (i) Oscillations having equal frequencies and (ii) Oscillations having different frequencies (Beats). Superposition of N Collinear Harmonic oscillations [6]

Free Oscillations; Damped oscillations; Damping coefficient, Log decrement; Forced oscillations : Transient and steady states, Amplitude, Phase, Resonance, Sharpness of resonance, Power, Dissipation and Quality Factor. [7]

Waves: Plane and spherical Waves, Longitudinal and transverse waves, Plane progressive (Traveling) waves. Wave equation. Particle and wave velocities. Differential Equation. Pressure of a longitudinal wave. Velocity of waves : Velocity of transverse vibrations of stretched strings, Newton's formula for velocity of sound; Laplace's correction [7]

Text Books:

1. N.K. Bajaj: The Physics of Waves and Oscillations, Tata cGraw-Hill, 1988.
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Oscillations and Waves, CBC, Jaipur
3. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.

Reference Books:

1. A. P. French : Vibrations and Waves ,CBS Publications, 1987 2. Brij Lal and N. Subramanyam: Waves and Oscillations

PH 142 Physics laboratory-II 0-0-4-2

Assignments are based on the course PH 122 and PH 132, etc.

PH 211 Semiconductor Physics and Electronics 3-0-0-3

Semiconductor Physics: Intrinsic and extrinsic semiconductors, P-N junction diode, Diode equation, depletion width and potential barrier, junction capacitance, I-V characteristics, Rectifier, ripple factors, filter circuits, efficiency and percentage regulation, LED, photodiode. [9]

Electronics : Transistor circuits, Input, Output characteristics and CB and CE modes, DC load line, operating point, biasing and bias-stabilization circuits: Transistor as an amplifier (CE mode) and frequency response. [6]

Hybrid parameter: Analysis of transistor amplifier (with and without load) using h- parameters, simplified hybrid model, brief idea about hybrid model Single stage amplifier in CE,CB and CC modes. RC coupled CE amplifier and its frequency response, tuned voltage amplifier. Power amplifier classification, distortion and efficiency, push pull amplifier [10]

Feedback in amplifiers: Positive and negative feedback, effect of negative feedback on the characteristics of different types of amplifiers, voltage and current series feedback circuits. Field effect transistors, I-V Characteristics of JFET and MOSFET, FET biasing, FET as an amplifier. [8]

Digital Electronics: Diode and transistor equivalent circuits of basic and derived gates, Universal gates, X-OR and equivalence. Simplification of Boolean expressions using K- maps. Sequential circuits, Flip flops. [6]

Text Books:

1. Millman and Halkias: Integrated Electronics:
2. Chattopadhyay and Rakshit: Electronics Fundamental and Application

Reference Books:

1. Malvino and Leach: Principle of Digital Electronics:
2. Gupta and Kumar: Hand book of Electronics

PH 221 Optics and Lasers 3-0-0-3

Interference: Young's experiment, Conditions for sustained interference, Theory of interference, Fresnel's biprism, Determination of wavelength of light, Interference in parallel and edge shaped films, Colour of thin films. Newton's rings determination of wavelength of light, Michelson interferometer and their applications. [10]

Diffraction: Definition, Frenel's diffraction, Zone plate, diffraction due to straight edge. Fraunhoffer diffraction due to single and double slits, plane transmission grating and its resolving power. [10]

Polarization: Polarized light and its mathematical representation, Polarization by double refraction and Huygen's theory, Nicol prism, [9]

Retardation plates, Production and analysis of circularly and elliptically polarized light, Optical activity.
Lasers: Einstein's A and B coefficients, Spontaneous and Stimulated conditions for laser action population inversion, optical pumping, Working of different types of lasers: semiconductor, rubey and He-Ne Lasers. [10]
Fiber optics: Working, Numerical aperture

Text Books:

1. N. Subrahmanyam, Brijlal and M. N. Avadhanulu: A textbook of Optics
2. A.Ghatak: Optics, Tata Mc Graw-Hill

Reference Books:

1. B. K. Mathur and T. P. Pandya: Physical Optics

PH 231 Physics laboratory-III 0-0-4-2

Assignments are based on the course PH 211 and PH 221

PH 212 Mathematical Physics and Special theory of Relativity 3-1-0-4

Curvilinear Coordinates: Orthogonal curvilinear coordinate systems, scale factors, expression for grade, divergence, curl and their application to Cartesian, circular cylindrical and spherical polar coordinate systems. [9]

Coordinate transformation and Jacobean, Transformation of covariant, contra variant and mixed tensor. Addition, multiplication and contraction of tensors. Metric tensor and its use in transformation of tensors [7]

Dirac-delta function and its properties. Lorentz transformation and rotation in space-time, time like and space like vectors, world line, and macro-causality [6]

Four vector formulation: energy- momentum Four vector, relativistic equation of motion invariance of rest mass, orthogonality, four force and four velocity, Lorentz force as an example of four force transformation of four frequency vector, longitudinal and transverse Doppler's effect. Transformation of electric and magnetic fields between two inertial frame [12]

Differential Equations: The second order liner differential equation with variable coefficient and singular points, series solution method and it application to the Hermite's Legendre's and Laguerre's differential equation. Basic properties (without proof) like orthogonality, recurrence relation, Graphical representation and generating functions of Hermite, Lagendre, Leguerre and Associated Legendre functions (very simple application) [13]

Fourier Analysis: Fourier theorem, Fourier analysis of square wave, saw-tooth wave, plucked strings, half wave/full wave rectifier wave forms [5]

Text Books:

1. George Arfken: Mathematical Method for Physicists (Academic Press).

2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Mathematical Physics and Special Theory of Relativity, CBC, Jaipur
3. D. E. Bourne, P C Kendall:Vector Analysis and Cartesian Tensors, 3ed (Chapman & Hall, 1992)

Reference Books:

1. A.P. French:Special Relativity
2. P. K. Chattopadhyay: Mathematical Physics.
3. Gupta and Kumar: Mathematical physics

PH 222 Physics Laboratory IV 0-0-4-2

Assignments are based on Course PH 211 etc.

Course Description
Mathematics

MS 111 Calculus **3-0-0-3**

Curvature: Curvature, Radius of curvature for Cartesian curves, parametric curves, Polar curves and Pedal curves, Centre of curvature. Circle of curvature, Chord of curvature, Tests for concavity and convexity, Points of inflexion, Multiple points. [8]

Asymptotes and Curve Tracing: : Asymptotes in Cartesian and polar coordinates, Intersection of a curve with its asymptotes**,** **a**pplication of differential calculus in curve sketching in Cartesian and polar co-ordinates. [8]

Differentiation: Partial differentiation, Euler's theorem for homogeneous functions, Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers. [8]

Integral Calculus: *:* Double integrals in Cartesian and polar coordinates, Change of order of integration, Triple integral, Applications of double and triple integrals in finding areas and volumes. [8]

Vector Calculus: Gradient, Divergence and Curl. Greens, Stokes and Gauss Theorems (without proof) and problems based on these theorems. [7]

Text Books:

1. Thomas and Finney: Calculus and Analytic Geometry, Ninth Edition.
2. Shanti Narayna : A Text Book of Vector Calculus. S. Chand & Co., New Delhi.

Reference Books:

1. N. Saran and S.N. Nigam : Introduction to Vector Analysis, Pothishala Pvt. Ltd., Allahabad.
2. Differential and Integral Calculus : Shanti Narayan.
3. D. C. Gokhroo, Differential CAlculus, Navkar Prakashan.
4. N. Piskunov : Differential and integral Calculus. Peace Publishers, Moscow.
5. Gorakh Prasad : Differential Calculus. Pothishasla Pvt. Ltd., Allahabad.
6. Gorakh Prasad : Integral Calculus. Pothishala Pvt. Ltd., Allahabad.

MS 121 Matrices and Theory of Equations 3-0-0-3

Matrix: Matrices, Symmetric, Skew symmetric, Hermitian and skew Hermitian matrices. Elementary Operations on matrices Rank of a matrices, Inverse of a matrix. Linear dependence and independence of rows and columns of matrices, Row rank and column rank of a matrix, Eigenvalues, eigenvectors and the characteristic equation of a matrix, Cayley Hamilton theorem and its use in finding the inverse of a matrix [13]

Applications of Matrices: Applications of matrices to a system of linear (both homogeneous and non–homogeneous) equations. Theorems on consistency of a system of linear equations. Unitary and Orthogonal Matrices, Bilinear and Quadratic forms [9]

Theory of Equations: Relations between the roots and coefficients of general polynomial equation in one variable, Solutions of polynomial equations having conditions on roots. Common roots and multiple roots. Transformation of equations. [9]

Solution of equations: Nature of the roots of an equation, Descarte's rule of signs. Solutions of cubic equations (Cardon's method). Biquadratic equations and their solutions . [8]

Text Books:

1. Higher Algebra: A. Kurosh (Moscow Mir Publisher 1972).
2. Theory of Equations: (Lecture notes for inter University Leadership project in Mathematics by R.N. Gupta, Surjeet Singh and R.J. Hans.

Reference Books:

MS 112 Abstract Algebra 3-0-0-3

1. H.S. Hall and S.R. Knight: Higher Algebra, H.M. Publications 1994.
2. Shanti Narayan: A Text Books of Matrices.
   Chandrika Prasad: Text Book on Algebra and Theory of Equations. Pothishala Private Ltd., Allahabad.

Group: Algebraic structure**,** Definition of a group with examples and simple properties, Abelian group, semi group, Order of an element of a group, Cyclic groups, Coset decomposition. [11]

Subgroup and quotient Groups: Subgroups, Normal subgroups, Normalizer of an element, Quotient group [10]

Group Morphism: Homomorphism, kernel of homomorphism, Isomorphism and automorphism, Fundamental theorem of Homomorphism, Cayley's theorem. [10]

Permutations: Definition and examples of Permutation, group of permutations, Cyclic Permutation, Even and odd permutation. [8]

Text Books:

1. I.N.Herstein: Topics in Algebra, 2nd edition, Wiley Eastern Ltd. 1988.
2. P.B.Bhattacharya, S.K.Jain and S.R.Nagpaul: Basic Abstract Algebra, 2nd Edition, Cambridge University Press 1995.

Reference Books:

1. J.B.Fraleigh : A first course in Abstract Algebra, 3rd Edition Addison-Wesely/Narosa 1998..
2. Surjeet Singh and Quazi Zameeruddin : Modern Algebra, Revised Edition,Vikas Publishing House, 1992.
   D. C. Gokhroo: Algebra, Navkar publication, Ajmer, Revised Edition , 2005.

MS 122 Differential Equations-I 3-0-0-3

Basic Concepts: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines. [4]

First Order Differential Equations: Differential equation of first order and first degree, Homogeneous form and reducible to homogeneous form, Linear equations and equations reducible to linear form, Exact differential equations, Equations reducible to exact forms, First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations, Equation reducible to Clairaut's form. [14]

Second order differential equations: Second order differential equations with variables coefficients, Homogeneous and exact forms, Change of dependent equations, change of independent variables, normal form, Method of variation of Parameters [12]

Series Solution: Regular singular points, ordinary points, , series solution of second order linear differential equations with variable coefficients(Complementary Functions only) [9]

Text Books:

1. D.A. Murray : Introductory Course in Differential Equations. Orient Longaman (India) . 1967
2. A.R.Forsyth : A Treatise on Differential Equations, Machmillan and Co. Ltd. London

Reference Books:

1. D. C. Gokhroo : Ordinary Differential equations, Navkar Prakashan.
2. S.L.Ross : Differential Equations, John Wiley & Sons
   B.Rai & D.P. Chaudhary : Ordinary Differential Equations; Narosa, Publishing House, Pvt. Ltd.

MS 211 Linear Algebra **3-0-0-3**

Vector Space: Vector spaces, subspaces, Sum and Direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space. Finitely generated vector space, Existence theorem for basis of a finitely generated vactor space, Finite dimensional vector spaces, Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension [12]

Linear transformations: Linear transformations and linear forms on vactor spaces, Vactor space of all the linear transformations, Kernal and range of a linear transformation, Rank and Nullity, Matrix of a Linear Transformation, Change of basis. [10]

Dual Spaces: Dual Spaces, Dual Basis, Bidual Spaces, annihilator of subspaces of finite dimentional vactor spaces. [9]

Inner Product Space: Inner produt space, norm of a vector, Orthogality. [8]

Text Books:

1. I.N. Herstein : Topics in Algebra, Wiley Eastern Ltd., New Delhi, 1975
1. P.B. Bhattacharya, S.K. Jain and S.R. Nagpal : Basic Abstract Algebra (2^{nd} edition).

Reference Books:

1. Vivek Sahai and Vikas Bist : Algebra, Narosa Publishing House.
2. I.S. Luther and I.B.S. Passi : Algebra, Vol.-II, Narosa Publishing House.

D. C. Gokhroo : Linear Algebra, Navkar Prakashan.

MS 221 Differential Equations-II **3-1-0-4**

Partial Differential equations: Formation, order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, singular solution, General solution, Solution of Lagrange's linear equations, Charpit's general method of solution. [13]

Second and higher Order PDE: Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant co-efficients, Partial differential equation with variable co-efficients reducible to equations with constant coefficients, their complimentary functions and particular Integrals, Equations reducible to linear equations with constant co-efficients. [14]

Solution of Second order PDE: Classification of linear partial differential equations of second order, Hyperbolic, parabolic and elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method. [12]

Text Books:

1. Ian N. Sneddon : Elements of Partial Differential Equations, McGraw-Hill Book Company, 1988.
2. S.B. Rao and H.R. Anuradha : Differential Equations, University Press, 1996.

Reference Books:

1. W.T.H. Piaggio : Elementary Treatise on Differential Equations and their applications, CBS Publishers N.Delhi,1985.
2. D.A.Murray: Introductory Course on Differential Equations, Orient Longman, (India), 1967
3. Erwin Kreyszing : Advanced Engineering Mathematics, John Wiley & Sons, Inc. New York, 1999
4. Frank Ayres : Theory and Problems of Differential Equations, McGraw Hill Book Company, 1972
   J.N. Sharma & Kehar Singh : Partial Differential Equations

MS 212 Numeric Analysis 3-1-0-4

Interpolation: Interpolation with equal intervals: Newton's forward and Newton's backward interpolation formulae. Newton's divided difference, Lagrange's Interpolation formulae.	[10]
Central Differences: Gauss forward and Gauss's backward interpolation formulae, Sterling, Bessel Formula.	[8]
Iterative Methods: Newton Raphson Method, Successive Bi-Section, Regula Falsi, Successive Approximation Method.	[11]
Numerical Methods: Newton-Cote's Quadrature formula, Trapezoidal rule, Simpson's one-third and three-eighth rule, Picard method, Euler method, Runge-Kutta Methods.	[10]

Text Books:

1. Babu Ram: Numerical Methods, Pearson Publication.
2. R.S. Gupta, Elements of Numerical Analysis, Macmillan's India 2010.

Reference Books:

1. M.K. Jain, S.R.K. Iyengar, R.K. Jain : Numerical Method, Problems and Solutions, NewAge International (P) Ltd., 1996
2. S. S. Sastry: Introductory Methods of Numerical Analysis, 3rd edition(2000), Prentice Hall of India Pvt. Ltd., New Delhi.5. C.E. Froberg : Introduction to Numerical Analysis (2nd Edition).
   S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

MS 222 Real Analysis 3-0-0-3

Neighborhood and Limit Points: Boundedness of the set of real numbers, least upper bound, greatest lower bound of a set, neighborhoods, interior points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weierstrass theorem. [10]

Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence. [9]

Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, D-Alembert's ratio test, Cauchy's general principle of Convergence of series, Leibnitz test, Absolute and conditional convergence. [12]

Riemann integral: Lower and upper Riemann integrals, Riemann Integrability, Mean value theorem of integral Calculus, Fundamental theorem of Integral Calculus. [8]

Text Books:

1. R.R. Goldberg : Real Analysis, Oxford & I.B.H. Publishing Co., New Delhi, 1970
2. S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

Reference Books:

1. Shanti Narayan : A Course in Mathematical Analysis, S.Chand and company, New Delhi.
2. D. C. Gokhroo, Real analysis, Navkar Prakashan.
3. T.M. Apostol: Mathematical Analysis, Narosa Publishing House, New Delhi, 1985
   Earl D. Rainville : Infinite Series, The Macmillan Co., New York

COURSE DESCRIPTION
Biotechnology

BT 151 Cell Biology **3-1-0-4**

Diversity of Cell: Size and shape, cell theory, structure of prokaryotic and eukaryotic cells [2]

Cell membrane: Molecular structure and models of cell membrane, Membrane transport – Passive (diffusion, osmosis and facilitated) and active transport, Cell junctions. [8]

Cell organelles 1: Structure, function and biogenesis of Mitochondria, Plastid, Endoplasmic reticulum, Golgi complex, Lysosome. [8]

Cell organelles 2: Ribosome, Centrioles, Cilia, Flagella and Cytoskeletal system. Introduction to extra cellular matrix [7]

Nucleus: Interphase nucleus, Nuclear envelope, nucleoplasm, Nucleolus and Chromatin (nucleosome model, Structure of eukaryotic chromosome, Giant chromosome) [6]

Cell Division: Cell cycle, mitosis and meiosis, structure and function of spindle apparatus, synapses and synaptonemal complex and crossing over [8]

Suggested Books:

1. De Robertis and De Robertis: Cell and Molecular Biology B.I. Publications, US.
2. Gardner, Principle of Genetics; John Willey and Sons, US.
3. Becker *et al*; The World of Cell; Pearson Publications, Singapore.
4. Strickberger; Genetics; MacMillan Publications, US.
5. Sarin; Genetics; Tata McGraw Hill Publications, New Delhi.
6. Rastogi V.B.; Genetics; Kedar Nath and Ram Nath, Meerut.

BC 111 General Biochemistry **3-0-0-3**

Basic Concepts: Law of mass action, pH and buffers, calculation of pH, biological importance of pH and buffers, law of thermodynamics, concept of free energy **[5]**

Carbohydrates: Structure, classification and function, properties of monosaccharide and its derivatives, structural and storage carbohydrates **[5]**

Proteins: Classification of amino acids, different reactions of –NH2 and –COOH group, Structure and classification of proteins, Bohr's effect, hemoglobin, myoglobin, antibodies **[5]**

Lipids: Basic structure of lipids, classification, importance of triacyglycerols, glycerolipids, sphingolipids, steroids, lipid bilayers **[6]**

Nucleic Acids: Nucleic acid as a genetic material, composition **6]**

of DNA and RNA, linkage between purines and pyrimidines, types of DNA

Vitamin: Role of vitamin in the growth and differentiation of body, chemistry of fat and water-soluble vitamins, vitamins as coenzymes. Hormones as signal molecules **[6]**

Cellular Metabolism: Glycolysis, Gluconeogenesis, Krebs cycle, Electron transport chain, β-oxidation, Overview of amino acid metabolism [6]

Suggested Books:

1.Jain J.L.; Biochemistry; S. Chand Publication, New Delhi.

2. Cohn and Stump; Outline of Biochemistry; Cambridge,UK.

3. Nelson and Cox; Principles of Biochemistry; Panima, New Delhi.

4.Mathew *et al.;*Biochemistry; Pearson, New York.

5.Sadasivam and Manickam; Biochemical Methods; New Age International, New Delhi.

BT 161 **Cell Biology Laboratory** **0-0-2-1**

Assignments are based on the course BT 151 Cell Biology meiosis, mitosis etc.

BC 121 **Biochemistry Laboratory** **0-0-2-1**

Assignments are based on the course BT 121 Biochemistry containing exercises on qualitative and quantitative analysis of biomolecules

BT 152 **Genetics** **3-1-0-4**

Mendelian inheritance and gene interaction: Mendel's Law of Inheritance, Allelic and non-allelic, complementary, supplementary, epistasis, hypostasis and lethal genes. Multiple alleles and pleiotrophism. [10]

Theory of sex determination: A brief account, linkage and crossing over, linkage maps. Sex linked traits: Eye color and lethals in drosophila, Hemophilia and color blindness in humans. Primary and secondary non-disjunction of sex chromosomes. Sex influenced traits: horn character in sheep, sex limited traits: Cock feathering in poultry and baldness in man [10]

Extranuclear inheritance: Plastid, mitochondria and

cytoplasm. [5]

Mutations: Chromosomal aberrations and meiotic consequences. [4]

Human genetics: Chromosomal and genetic disorders; genetic counseling, somatic cell genetics. [5]

Population genetics: Gene pool and gene frequencies, Hardy Weinberg Law, change in gene frequencies (mutation, selection and migration), random drift. Heterosis. [5]

Suggested Books:

1. Gardner, Principle of Genetics; John Willey and Sons, New York,US.
2. Strickberger; Genetics; MacMillan, UK.
3. Sarin; Genetics; Tata McGraw Hill, New Delhi
4. Rastogi V.B.; Genetics; Kedar Nath and Ram Nath, Meerut**.**
5. Gupta, P.K., Genetics, Rastogi publications, Meerut.

BC 211 Bio-Instrumentation **3-1-0-4**

Principle of pH meter. [1]

Sterilization Techniques: Heat sterilization (Autoclave and Hot Air Oven), Filter sterilization, Incubator and Laminar Air Flow. [6]

Centrifugation: Principles of centrifugation, Design and care of rotor, Analytical and Preparative centrifugation, Safety aspects and applications. [8]

Spectroscopy: Principles of spectrophotometry, Ultra-violet and Visible Spectroscopy, Atomic spectroscopy. [8]

Electrophoresis: Principles of Gel electrophoresis, Agarose and SDS gel electrophoresis, IEF, 2-D PAGE. [8]

Chromatography: Principles of chromatography, Paper, Thin layer, Column chromatography, Permeation, Ion exchange and Affinity chromatography. [8]

Suggested Readings:

Text Book:

1. Wilson and Walker-Principles of Molecular Biology and Biochemistry, Cambridge University Press, 3rd Edition, New Delhi.
2. Upadhayay, Upadhayay and Nath-Biophysical Chemistry, Himalayan Publishers,4th Edition, New Delhi.

3. David T Plummer- An Introduction to Practical Biochemistry, Tata McGraw Hill, 2nd Edition, New Delhi.

Reference Book:

4. Lehninger: Principles of Biochemistry 4th edition - David L. Nelson and M.M. Cox (2005) Maxmillan/ Worth publishers/ W. H. Freeman & Company.
5. Fundamentals of Biochemistry 3rd edition- Donald Voet and Judith G Voet (2004), John Wiley & Sons, NY
6. J G Webster- Bioinstrumentation, John Wiley & Sons Inc, New York

BC 221 Bio-instrumentation Laboratory **0-0-2-1**

Assignments are based on the course BC 211 Instrumentation containing exercises on principle and working of instruments and performance of important techniques.

BT 212 Molecular Biology **3-1-0-4**

Introduction: Molecular basis of life, genetic material and its properties, structure of DNA, central dogma, organization of DNA in chromosome. [5]

DNA Replication: Nature of DNA replication, prokaryotic and eukaryotic DNA replication, fidelity of replication in prokaryotes and eukaryotes. [5]

DNA Damage and DNA Repair: Mutations, Causes of mutation and their mechanisms, effect of mutation on DNA, Mutation detection – Ames test to detect mutagenicity and carcinogenicity. DNA repair – Excision repair, Mismatch repair. [5]

Transcription: Enzymatic synthesis of RNA, classes of RNA molecule, transcription in prokaryotes and eukaryotes, splicing mechanism [8]

Translation: Outline of translation, genetic code, ribosome as protein synthesis machinery, protein synthesis in pro- and eu-karyotes – initiation, elongation and termination [8]

Gene Regulation: Regulation of gene activity and gene products in prokaryotes and eukaryotes. [8]

Suggested Books:

1. Chunnarayappa; Molecular Biotechnology; Universities Press, London.
2. Gupta P.K.; Elements of Biotechnology; Rastogi Publication,

Meerut.
3. Singh B.D.; Biotechnology; Kalyani Publication, New Delhi.

BT 232 Molecular Biology Laboratory **0-0-2-1**

Assignments are based on the course BT 212 Molecular Biology containing exercises on techniques involved in study of Nucleic acids.

BT 251 Food Technology **2-0-0-2 26**

1. **Food & Fermentation Technology**: Origin, scope and development of fermented food products. **[2]**

2. **Development of novel food and food ingredients**: Single cell protein, Mushroom cultivation, Nutraceuticals, Probiotic foods, genetically modified foods. **[5]**

3. **General principles:** Food spoilage and preservation, contamination of foods and their involvement in disease outbreaks. Methods of food preservation. **[9]**

4. **Packaging of foods:** Packaging Materials, Controlled atmosphere packaging. **[4]**

5. **Food plant Sanitation:** Disposal and treatment of food industry waste, food laws and current concepts in food safety **[6]**

Suggested Readings

Text Book

1. Frazier and Westhoff, Food Microbiology, Tata McGraw Hill Publishing Company Ltd, New Delhi
2. Banwart,GJ: Basis of Food Microbiology, CBS Publishers and Distributors, New Delhi

References

3. Adams and Moss, Food Microbiology, Royal Society of Chemistry Publication, Cambridge

BT 261 Food Technology Laboratory **0-0-2-1 13**

Assignments are based on the course BT 251 Food Technology containing exercises on manufacturing and preservations of food products

BT 242 Plant and Animal Biotechnology **2-0-0-2 26**

1. Introduction to animal tissue culture, Disaggregation techniques, Sterilization, Normal and transformed cell lines, primary culture, secondary culture, Media formulation, Growth characteristics, preservation of cell lines, Embryo culture and IVF **[12]**

2. Plant Tissue culture Introduction: Terms and Definition, Historical aspects and scope, Classical vs modern approach, Totipotency and cell theory; Growth and Differentiation; Culture media and its constituents; Sterilization **[9]**

3. Micropropagation Technique, Genetic Variability, Protoplast fusion Technique and somatic hybridization **[5]**

Suggested Readings

Text Book

1. Freshney Y; Culture of Animal Cells; John Wiley and Sons Publication, New York
2. Spler R.E. & Grifith J.B.; Aniaml Cell Biotechnology
3. Bhojwani S.S.; Plant Tissue Culture: Applications and Limitations; Elsevier, Amsterdam.

References

4. Razdan M.K; An Introduction to Plant Tissue Culture; Rastogi Publication, Meerut.
5. Chawla H.S; Introduction to Plant Biotechnology; Oxford and IBH Publishers, New Delhi.

BT 252 Tissue Culture Laboratory **0-0-2-1 13**

Assignments are based on the course BT 242 Plant and Animal Biotechnology containing exercises on media preparation and different culturing methods of plant and animal cells.

MB 331 General Microbiology **3-0-0-3 39**

Definition and scope of Microbiology: History and recent developments – Spontaneous generation versus biogenesis, [12] Germ theory of diseases, pure-culture concept.-contributions of Louis Pasteur – Leuwenhoek, Lazaro Spallanzani, John Tyndall, Joseph Lister, Robert Koch. Microscopy: simple, compound light microscopy – Dark Field, Bright Field, Phase contrast, Fluorescence and Electron Microscopy. Classification of Microbes – Systems of classification, General properties, principles and types of classification of microorganisms, Bergey's manual, Nutritional types, Classification on the basis

of physical parameters.

General characteristics and functions of Bacteria: structure and function of cell wall, cilia, flagella, slime layer, capsule, pilli, Cytoplasmic membrane and Cytoplasmic inclusions, sporulation. Kingdom prokaryotes - classical techniques of microbial identification - morphological, physiological and biochemical properties. [8]

Kinetics of Bacterial growth: Different types of bacterial culture (Batch, Synchronous, Arithmetic) – Definition and brief description. Growth Phases, Growth Kinetcs, Calculation of duration of Phases and generation time, Growth yields, Methods of growth determination, Environmental factors affecting growth - temperature, pH, osmotic pressure, partial pressure of oxygen and nutrient concentration. Concept of Sterilization - Definition of sterilization, Physical and Chemical methods of sterilization. [7]

Basic concepts of Virology: General characteristics of viruses, differences between bacteria and viruses. Classification of viruses Physical and chemical Structures of different Viruses on the basis of capsid symmetry - enveloped (Herpes virus), helical (TMV) and icosahedral (Polyoma viruses), Complex (Bacteriophage), Bacteriophages: Stages in the Lytic and Lysogenic Life Cycle of a typical phage, Properties of a phage infected bacterial culture. Viroids and prions. [6]

Brief description of Algae, Fungi and protozoa: General characteristics of Algae, Fungi and Protozoa. [6]

Suggested Books:

Pelczar *et. al*.; Microbiology; Tata McGraw Hill; New Delhi.
Powar & Daginawala; General Microbiology I & II; Himalaya Publishing House, Mumbai.
Stanier *et al.;* General Microbiology; Prentice Hall of India, New Delhi.
Prescott, Harley, Klein; Microbiology; Mc Graw Hill Publication, New York.

MB 341 General Microbiology Laboratory **0-0-2-1**

Assignments are based on the course MB 331 General Microbiology containing exercises on microscopic and cultural study of microorganisms and their isolation from natural sources.

COURSE DESCRIPTION
Zoology

ZO 111 Animal Diversity-I **3-0-0-3**

Taxonomy: General principles of taxonomy, Five-kingdom concept. Protozoa, Metazoa and Levels of organization, Origin of metazoa, Coelom, metamerism and symmetry. [4]

Principles of Classification: Salient features and classification upto class level in non-chordates. [5]

Protozoa – Locomotion, nutrition, reproduction, Life cycle of parasite (plasmodium). [4]

Porifera: Canal system; Endoskeleton, Reproduction. [3]

Coelenterata: Nematocysts, polymorphism. [3]

Ctenophora: Affinities. [1]

Platyhelminthes and Aschelminthes: Reproduction and larval forms (Fasciola and Ascaris). [4]

Annelida: Excretion in annelids. Type study – Earthworm. [6]

Mollusca: Respiration. [1]

Arthropoda: Larval forms of crustacea, Mouthparts of insects, Social life in insects. [3]

Ecinodermata: Water vascular system, larval forms and their significance; Origin and phylogeny of echinoderms. [4]

Lower chordates: Taxonomic position and affinities. [1]

Suggested Books:

1. Kotpal R.L; Modern Textbook of Zoology - Invertebrate; Rastogi Publication, Meerut
2. Bhamrah H.S. and Juneja A. K; Textbook of Invertebrates; Anmol Publications Pvt. Ltd., New Delhi
3. Kapoor V.C; Theory and Practice of Animal Taxonomy; Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi
4. Hickman C.P., Roberts, L.S. and Larson A; Integrated Principles of Zoology; WCB Mc Graw-Hill, New Delhi
5. Grove A.J; and Newell G. E; Animal Biology. University Book Stall, New Delhi

0-0-2-1

ZO 121 Animal Diversity Laboratory-I

Assignments are based on the course ZO 111 Animal Diversity-I containing exercises on taxonomy and organization of non-chordates

ZO 132 Animal Diversity-II **3-0-0-3**

Chordata: General organization, classification upto class level. [9]

Comparative Anatomy of Chordates 1: Integument, Endoskeleton and Digestive system and Brain. [11]

Comparative Anatomy of Chordates 2: Heart, Aortic arches and Venous system, Respiratory system, Urogenital system. [10]
Fishes: Accessory respiratory organs. [2]
Amphibia: Parental Care in Amphibia. [1]
Reptilia: Poison apparatus, snake venom, antivenin, biting mechanism and first aid. [2]
Aves: Flight adaptations. [2]
Mammals: Origin of mammals. [2]

Suggested Books:

1. Kotpal R. L; Modern Textbook of Zoology - Vertebrate; Rastogi Publication, Meerut.
2. Bhamrah H. S. and Juneja A. K; Textbook of Vertebrates; Anmol Publications Pvt. Ltd., New Delhi.
3. Young J.W; The Life of Vertebrates; Oxford University Press, New York.
4. Pough F. H., Jains C. M. and Heiser J. B; Vertebrate Life; Pearson Education Pvt. Ltd., Singapore.
5. Colbert E. H; Evolution of Vertebrates; Wiley Eastern Ltd, New Delhi.
6. Rastogi V. B; Organic evolution; Kedar Nath Ram Nath Publication, Meerut.

ZO142 **Animal Diversity-II Laboratory** **0-0-2-1**

Assignments are based on the course ZO 132 Animal Diversity-II containing exercises on taxonomy and organization of chordates.

ZO 212 **Animal Physiology** **3-0-0-3**

Physiology of Digestion: Digestion of food material, control of digestive juice secretion, Absorption of digested food material. [4]
Physiology of Respiration: External and internal respiration, control mechanism, transport of gases, respiratory pigments. [4]
Physiology of Circulation: Concept of haematopoesis and haemolysis, blood coagulation, heartbeat and cardiac cycle, mechanism of controlling heartbeat, electrocardiogram, blood pressure. [4]
Physiology of Excretion: Excretory products, Ornithine cycle, structure and function of kidney, mechanism of urine formation. [4]
Physiology of Muscle Contraction: Chemical composition, mechanism of muscle contraction. [4]
Nervous System: Basic concept of CNS, PNS, ANS, Propagation of nerve impulses, Synaptic transmission, Reflex action. [4]
Endocrine Glands: Structure and functions: Pituitary, adrenal, thyroid, parathyroid, pancreas, testis and ovary, Mechanism of [3]

hormone action, pheromones.

Reproduction: Structure of male and female reproductive organs, hormonal control, menstrual cycle, implantation parturition and lactation in mammals. [4]

Homeostasis: Basic concept, osmotic conformers, osmoregulation, thermoregulation. [4]

Physiological Disorders: Disorders related to Brain, Blood, Heart, Kidney and Bone. [4]

Suggested Books:

1. Chatterjee C.C.; Human Physiology; Medical Book Depot.India.
2. Guyton et al.; Medical Physiology, W.B Sauders Co., Philadelphia Toronto.
3. Berry A.K.; Physiology, Rastogi Publication, Meerut
4. Tatora et al.; Human Physiology, Wiley International, New York.

ZO 222 Animal Physiology Laboratory **0-0-2-1**

Assignments are based on the course ZO 212 Animal Physiology containing exercises on structural and physiological different in animals.

ZO 232 Developmental Biology **3-0-0-3**

Introduction: History and scope of animal developmental biology [1]

Male Gonads and Spermatogenesis: Structure of seminiferous tubule, interstitial cells, morphology of sperm, process and control mechanism of spermatogenesis. [4]

Female Gonads and Oogenesis: Ovarian Structure, Oogenesis: pre- vitellogenesis and vitellogenesis, types of eggs. Control mechanism of ovulation [5]

Reproductive Cycles: Breading and non-breading seasons**,** Estrous and Menstrual cycles – regulation. [4]

Fertilization: Types and Mechanism of fertilization, post fertilization changes in the egg cytoplasm, monospermic and polyspermic fertilization, significance of fertilization. [5]

Parthenogenesis: Types and significance [1]

Cleavage: Planes, patterns and rate of cleavage, mitotic peculiarity, physiology and significance of cleavage. [3]

Embryonic Development: Morulation, Blastulation (types and significance), Gastrulation (Characteristics, morphogenetic movements, physiology and significance), Tubulation, Concept of fate maps (Frog and Chick). [5]

General Concepts of Differentiation: Regeneration, and Metamorphosis, extra embryonic membrane, organizer concept [8]

and embryonic induction. Embryo sexing and ageing.

Brief Introduction: Birth control, impotency, Artificial insemination, test tube baby and GIFT. [3]

Suggested Books:

1. Sastry & Shukla; Development Biology; Rastogi Publication, Meerut.
2. Bhojwani & Bhatnagar; The Embryology of Angiosperms; Vikas Publishing House, New Delhi.
3. Balinsky B. I; An Introduction to Embryology; W. B. Saunders, New Delhi.
4. Verma P.S., Agarwal V.K. and Tyagi B.S; Chordate Embryology. S. Chand and Co., New Delhi.
5. Berrill N. J; Developmental Biology; Mc Graw Hill, New York

ZO 242 Developmental Biology Laboratory **0-0-2-1**

Assignments are based on the course ZO 232 Developmental Biology containing exercises on reproductive cycle and embryonic development.

Mody University of Science & Technology

B.Sc. (Hons) Food And Nutrition

Session 2017-2018

Curriculum Structure

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

B.Sc. (H) Food and Nutrition
Three-Year Programme
Academic Curriculum (2016 – 17 onwards)
First Year

FN 111 Principle of Nutrition 3-0-0-3

UNIT-I [7]

Indian foods - Food and culture, Traditional Indian Dietary patterns and Indian ethnic cuisines, Nutritional/medicinal quality of traditional foods - Traditional food beliefs, foods in Ayurveda. Food processing technologies

UNIT-II [6]

Nutrition and Food Science – Definition, history, RDA (Recent), factors affecting RDA – Methods used for deriving RDA, Basic four/five food groups and the functions of food, Food pyramid

UNIT-III [6]

Carbohydrates – classification, functions, digestion and absorption, Sources, deficiency diseases. Role fo fibre in human Nutrition

UNIT-IV [4]

Protein – classification – functions, sources digestion and absorption, sources and deficiency disorders.

UNIT-V [4]

Lipids – Classification, functions, digestion and absorption, sources, excess and deficiency disorder

UNIT-VI [6]

Vitamins – Fat soluble vitamins A, D, E & K, functions, sources, requirements deficiency diseases. Water soluble vitamins – B like thiamine, Riboflavin, Niacin, Phridoscin, Folic acid, B2 and Vitamin C and their functions sources requirements and deficiency diseases.

UNIT-VII [6]

Minerals – Calcium, phosphorus, Sodium, Potassium, Iron, Iodine, Flourine and their functions, sources requirements and deficiency diseases.

Text Book

1. Srilakshmi. B. (2010) Nutrition Science, V Edition, New Age International Publishers, New Delhi

References:

2. Chintapalli Vidya (2004) A Text book of Nutrition, New Delhi: Discovery Publishing House
3. Gopalan. C. Ramasastry, B.V. and Balasubramanian, S.C. (1976), Nutrition value of Indian Foods, Hyderabad: National Institute of Nutrition
4. 4. Swaminathan M. (1972), Essentials of Food and Nutrition, Philadelphia: Ganesh and Company

FN 121 Nutrition through life 3-0-0-3

UNIT-I [6]

Principles of meal planning: Balanced diet, Food groups, Food exchange list, Factors effecting meal planning and food related behavior, Dietary guidelines for Indians and food pyramid

UNIT-II [3]

Nutrient requirements: Dietary Concept, Overview of methods for assessment of

nutrient needs

UNIT-III [10]

Nutrition for adulthood and old age : Adult: Nutrient requirements for adult man and woman, RDA, nutritional guidelines, nutritional concerns, diet and lifestyle related diseases and their prevention, Elderly – Physiological changes in elderly, RDA, nutritional guidelines, nutritional and health concerns in old age and their management, factors contributing to longevity

UNIT-IV [10]

Nutrition during pregnancy and lactation: Pregnancy – Physiological changes in pregnancy, RDA, nutritional guidelines, nutritional needs, effect of nutritional status on pregnancy outcome, optimal weight gain and its components, nutrition related problems in pregnancy and ways to control them, Lactation – Physiology of lactation, RDA and nutritional needs of a nursing mother, nutritional guidelines

UNIT-V [10]

Nutrition during childhood: Growth and development, growth reference/ standards, RDA, nutritional guidelines, nutritional concerns and healthy food choices - Infants - Preschool children - School children – Adolescents

Text Book

FN 112 Food Science 3-0-0-3

UNIT-I [10]

Cereals and Cereal Products: Structure Nutritive value of rice, wheat, maize and locally available millets, Enrichment and fortification. Batters and Doughs; Milling and parboiling; Malting of cereals. b. Pulses and Nuts : Composition and Nutritive value, factors affecting cooking quality of pulses, germination of whole grams.

UNIT-II [5]

Vegetables and Fruits – classification, Nutritive value, changes during cooking of vegetables, changes during ripening of fruits. Storage

UNIT-III [12]

Milk & Milk Products: Composition and Nutritive value, Different types of milk products; pasteurization of milk. b. Egg: Structure, Composition and Nutritive

value. Measure of quality, factors affecting foam formation, uses of egg in cookery. Home preservation and storage. c. Fleshy Foods: Composition and Nutritive value of meat, fish and poultry selection and storage – Effect of cooking on colour, texture and flavour. Factors affect tenderness.

UNIT-IV [12]

Fats & Oils : Composition and Nutritive value of common fats and oils, and reuse of oils, smoking temperature, rensidity of fat, absorption. b. Beverages : Classification, Nutritive value – Coffee, Tea, Cocoa, milk based fruit juices, aerated and alcoholic beverages. c. Spices and Condiments : Types, uses in Indian cookery

Text Book

5. 5. Potler, N. 5^{th} Edition, Food Science. New York : Chapman & Hall

FN 122 Food Science laboratory 0-0-2-1

Experiments based on the contents of FN 112

CH 113 Chemistry - I 3-0-0-3

UNIT-I [6]

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, quantum numbers, shapes of s, p, d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Electronic configurations of the elements, effective nuclear charge.

UNIT-II [8]

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. *Critical Phenomena:* PV isotherms of real gases; continuity of states, the isotherms of Van der Waals equation, relationship between cirtical constants and Vander-Waals constants, reduced equation of state.

UNIT-III [10]

Mechanism of Organic Reactions: homolytic and heterolytic bond cleavage. Types of reagents, electrophiles and nucleophiles, inductive effect, resonance effect and hyperconjugation. Types of organic reactions. Mechanisms of nucleophilic substitution SN1 and SN2. Reactive intermediates - carbocations, carbanions, free radicals, carbenes, arynes and nitrenes (with examples). Methods of determination of reaction mechanism.

UNIT-IV [5]

Periodic Properties : Atomic and ionic radii, ionization energy, electron affinity

and electronegativity - definition, methods of determination of evaluation, trends in periodic table and applications in predicting and explaining the chemical behavior.

UNIT-V [10]

Stereochemistry of Organic Compounds : Optical Isomerism- Elements of symmetry, molecular chirality, enantiomers, stereogenic centre, optical activity, chiral and achiral molecules with two stereogenic centres, diastereomers, resolution of enantiomers, inversion, retention. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. Geometric Isomerism: cis-trans and E-Z nomenclature, geometric isomerism in oximes and alicylic compound. Conformational isomerism: Conformational analysis of ethane, propane and n-butane by the Newman projection.

Text Book:

4. Stanley H Pine, Organic Chemistry, 5th Edition, Tata McGraw-Hill.
5. Mukherjee, S.M. and Singh, S.P. 3rd Edition; Reaction Mechanism in Organic Chemistry, Macmillan India Limited.

CH 123 Chemistry Laboratory-I 0-0-2-1

The laboratory experiment will be based on the theory paper CH 113

CH 114 Chemistry - II 3-0-0-3

UNIT-I [9]

Chemical Bonding: Covalent Bond: Valence bond Theory, Valence shell electron pair repulsion theory. MO theory, homonuclear (B_2, C_2, N_2 and O_2) and heteronuclear (CO and NO) diatomic molecules, concept of multicentric bonding, percentage ionic character. Ionic Solids: Ionic structures, radius ratio effect and coordination number, lattice energy and Born haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule.

UNIT-II **[9]**

S and p Block Elements: S-Block elements- Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies. P-Block Elements -Comparative study of groups 13-18 elements, compounds like hydrides, oxides, oxyacids and halides of groups 13-16, hydrides of boron- diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, silicates (structural principle), tetrasulphur tetranitride. Structure of Xenon compounds.

UNIT-III **[7]**

Chemical Kinetics and Catalysis: Chemical kinetics and its scope, rate of reaction, factors influencing the rate of reaction. Mathematical characteristics of simple chemical reactions - zero order, first order, second order, pseudo order, half-life and Radioactive decay as a first order phenomenon. Theories of chemical kinetics: effect of temperature on rate of reaction, Arrhenius equation, collision theory, transition state theory. Catalysis & types of catalysis,

Mechanism of catalysis, Enzyme catalysis

UNIT-IV **[6]**

Alkanes and Cycloalkanes: Classification of carbon atoms in alkanes, isomerism, sources, methods of formation (with special reference of Wurtz reaction, Kolbe reaction, Corey house reaction and decarboxylation of carboxylic acids). Physical properties and chemical reaction of alkanes.

[8]

UNIT-V

Alkenes and Alkynes: Nomenclature, preparation and reactions of alkenes, Saytzeff and Hofmann elimination, Mechanisms of hydrogentation, electrophilic and free radical additions, Markownikoff's rule, hydroboration-oxidation, oxymercuration-reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, Polymerization. Chemical reaction of alkynes, mechanism of electrophilic and nucleophilic addition reaction, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization.

CH 124 Chemistry Laboratory-II **0-0-2-1**

The laboratory experiment will be based on the theory paper CH 114

FN 221 Family Nutrition **3-0-0-3**

UNIT-I [7]

Principles of Nutrition - Nutrients and their functions. Food groups, meal planning, RDA, Over nutrition, under nutrition, malnutrition.

UNIT-II

Nutrition during Pregnancy and Lactation. Importance of Nutrition during pregnancy. Complications in pregnancy, food and nutritional requirements for lactating women. [8]

UNIT-III

Nutrition for Infants and Preschoolers Importance of breast milk, food and nutritional requirements for infants, weaning and supplementary foods for infants, food habits of preschoolers, nutritional requirements for preschool children. [8]

UNIT-IV

Nutrition for School Age and Adolescents. Nutritional requirements for school going children and adolescents, factors influencing food intake, nutritional disorders. [8]

UNIT-V

Nutrition during Adulthood and Old age. Food and nutritional requirements for adults. Importance of nutrition during old age, factors influencing food intake, nutritional requirements, nutritional problems and management of old age [8]

Text Book:

1. Gopalan, C. and Balasubramanian, B.C.Diet Atlas of India, NIN, Hyderabad, 1971.

FN 211 Food Safety 3-0-0-3

UNIT-I [4]

Introduction to Food Safety

Definition, Types of hazards, biological, chemical, physical hazards Factors affecting Food Safety ,Importance of Safe Foods

UNIT-II [5]

Food Hazards of Physical and Chemical Origin

Introduction ,Physical Hazards with common examples ,Chemical Hazards(naturally occurring ,environmental and intentionally added , Packaging material as a threat ,Impact on health ,Control measures

UNIT-III [5]

Food Hazards of Biological Origin

Introduction ,Indicator Organisms, Food borne pathogens: bacteria, viruses and eukaryotes ,Seafood and Shell fish poisoning , Mycotoxins

UNIT-IV [4]

Management of hazards

Need ,Control of parameters ,Temperature control, Food storage

UNIT-V [5]

Hygiene and Sanitation in Food Service Establishments

Introduction, Sources of contamination, Control methods using physical and chemical agents, Waste Disposal ,Pest and Rodent, Control Personnel Hygiene

UNIT-VI [4]

Food Safety Management Tools

Basic concept Prerequisites- GHPs, GMPs, HACCP ISO series TQM - concept and need for quality, components of TQM, Kaizen. Risk Analysis Accreditation and Auditing

UNIT-VII [5]

Microbiological criteria

Microbiological standards and limits (for processed food, water) Sampling Basic steps in detection of food borne pathogens Water Analysis

UNIT-VIII [3]

Food laws and Standards

Indian Food Regulatory Regime Global Scenario Other laws and standards related to food

UNIT-IX [4]

Recent concerns

New and Emerging Pathogens Genetically modified foods \ Transgenics Organic foods Newer approaches to food safety

FN 212 Public Health Nutrition 3-0-0-3

UNIT-I [8]

Concept of public health nutrition- relationship between health and nutrition, role of public health nutritionists in the health care delivery. Public health and nutrition policies- plan of action and programs.

UNIT-II [6]

Food and nutrition security- food production, distribution, access, availability and consumption. Socio cultural aspects and dietary patterns: their implication for nutrition and health.

UNIT-III [4]

Health care facility- primary health care of the community, health care delivery system.

UNIT-IV [10]

Determinants of nutrition and health status- socio cultural, biologic, environmental and economic factor, indicators of health and malnutrition. Economics of malnutrition- impact on productivity and national development. Socio demographic, health and nutrition transitions

UNIT-V [11]

Approaches and strategies for improving nutritional status and health: national and international contributions, role of government and non-government organizations. Case studies of selected strategies and programs: their rationale and context- health based, intervention, food based interventions including fortification, genetic improvement of foods, supplementary feeding, and nutrition education for behavior change

FN 222 Food Chemistry 3-0-0-3

UNIT-I [9]

Water and Ice: Physical properties, structure of water and ice, water soluble interaction, water activity and relative vapor pressure. Dispersed systems: Surface phenomena, colloidal interactions, Liquid dispersions, gels, emulsions and Foam.

UNIT-II [8]

Carbohydrates:Monosaccharides,Oligosaccharides,Polysaccharides,Starch,Cellulose,Guar and Locust Bean Gum, Xanthan, Carrageenans, Algins, Pectins, Gum Arabica and Dietary fiber

UNIT-III [7]

Lipids: Classification, physical aspects, chemical aspects, chemistry of fats and oil processing, role of food lipids in flavor, physiological effects of Lipids.

UNIT-V [7]

Amino Acids, Peptides and Proteins: Physiochemical properties of amino acids, protein structure, protein denaturation, functional properties of proteins, nutritional properties of proteins, processing induced physical and chemical changes of protein.

UNIT-VI [8]

Food colorants: pigments in animal and plant tissues. Flavors: Taste and nonspecific saporous sensations, vegetable, fruit and spice flavor. Food additives: Acid, bases, buffer systems, chelating agent, antioxidant, antimicrobial agent, sweeteners, fat replacers and Mastigatory substances.

FN 232 Therapeutic Nutrition 3-0-0-3

UNIT-I

Diet in Cardiovascular diseases : Aetiology, Symptoms, Risk factors, pathophysiology, dietary management and prevention of Atherosclerosis, Coronary Artery Disease, Myocardial Infarction, Ischemic Heart Disease, Rheumatic Heart Disease(RHD), Congestive Cardiac Failure (CCF), Hypercholesterolemia, Hypertension – classification, sodium restricted diet, dangers of severe sodium restriction [16]

UNIT-II

Diet in Diseases of Liver and Gall Bladder: Aetiology, Symptoms, Dietary treatment in Jaundice, Hepatitis, Pancreatitis, Cirrhosis, Hepatic Coma. Role of food and alcohol in developing liver diseases. Biliary Tract Diseases- Cholecystitis Cholelithiasis and Choled ocholithiasis [8]

UNIT-III

Diet in Renal disease: Causes, Symptoms and dietary management in Nephritis, Nephrosis, Acute and chronic renal failure, Renal calculi, Acid and alkali producing foods, End Stage Renal Diseases (ESRD), Dialysis. [7]

UNIT-IV

Diet in Cancer: Tumor markers and their applications, Types of cancer, Risk factors, Symptoms, Metabolic alterations and Nutritional problems of cancer and cancer therapy, Medical Nutrition Therapy, Role of food in prevention of cancer. [8]

Text Book

FN 242 Nutritional Laboratory-I 0-0-4-2

Experiments based on the contents of FN 212, FN 222 and FN 232

FN 311 Maternal And Child Nutrition 3-1-0-4

UNIT-I [13]

Nutritional needs during pregnancy, common disorders of pregnancy (Anaemia, HIV infection, Pregnancy induced hypertension), relationship between maternal diet and birth outcome. Maternal health and nutritional status, maternal mortality and issues relating to maternal health.

UNIT-II [10]

Nutritional needs of nursing mothers and infants, determinants of birth weight and consequences of low birth weight, Breastfeeding biology, Breastfeeding support and counselling

UNIT-III [10]

Infant and young child feeding and care - Current feeding practices and nutritional concerns, guidelines for infant and young child feeding, Breast feeding, weaning and complementary feeding. Assessment and management of moderate and severe malnutrition among children, Micronutrient malnutrition among preschool children. Child health and morbidity, neonatal, infant and child mortality, IMR and U5MR; link between mortality and malnutrition;

UNIT-IV [6]

Overview of maternal and child nutrition policies and programmes.

Text Book

FN 321 Nutrigenomics & Personalised Nutrition 3-1-0-4

UNIT-I [6]

Introduction. Concept of functional genomics, systems biology, nutrigenomics, nutrigenetics, personalised nutrition

UNIT-II [13]

Molecular biology and genomics: Nutritional requirements and metabolic responses at cellular level, Impact of a changing nutrient environment, Introduction to molecular diagnostics: nutrients influences on genomes

UNIT-III [9]

Diet and gene expression: nutrients as regulators of activity and transcription factors. Nutrients as epigenetic exchange agents.

UNIT-IV [11]

Diet in early life and metabolic programming. V Diet as a possible risk or preventive factor in illnesses. Gene polymorphisms and responses to diet. Examples related to cardiovascular disease, cancer, osteoporosis. Risk/benefit biomarkers

Text Book

1. Principles and Applications by FransKok, Laura Bouwman, Frank Desiere, CRC press

R**eference**:

2. Nutrigenomics and Nutrigenetics in Functional Foods and Personalized Nutrition by Lynnette R. Ferguson, CRC press

FN 331 Nutritional Laboratory-II 0-0-4-2

Exercises based on Courses BC 311, FN 311 and FN 321

FN 312 Dietetics 3-1-0-3

UNIT-I [3]
Concept of Diet therapy: growth and source of dietetics, purpose and principles of therapeutic diets, modification of normal diet, classification of therapeutic diets.

UNIT-II [3]
Role of Dietician: Definition of nutritional care, interpersonal relationship with patient, planning and implementary dietary care, Team approach to nutritional care.

UNIT-III [6]
Diet in surgical conditions, burns and cancer.
Obesity and leanness- causes, complication and health effects, dietary treatment and other recommendation

UNIT-IV [3]
Diet in fever and infections- Types- metabolism in fever, general dietary consideration diet in influenza, typhoid fever, recurrent malaria and Tuberculosis.

UNIT-V [3]
Diet in gastritits, peptic ulcer- symptoms, clinical findings, treatment, dietary modification, adequate nutrition, amount of food, and intervals of feeding, Chemically and mechanically irrigating foods, four stage diet (Liquid, soft, convalescent, liberalized diet).

UNIT-VI [3]
Diet in disturbances of small intestine and color. Diarrhoea- (child and adult)- classification, modification of diet , fibre, residue. Fluids & nutritional adequacy. Constipation- flatulence - dietary considerations. Ulcerative colitis (adults) - symptoms, dietary treatment. Spruce, coeliac disease- disaccharide intolerance, dietary treatment.

UNIT-VII [6]
Diet in diseases of the liver, gall bladder and pancreas, a) Etiology, symptoms and dietary treatment in - Jaundice, hepatitis, cirrhosis and hepatic coma. b) Role of alcohol in liver diseases. c) Dietary treatment in cholecystitis, cholelithiasis and pancreatitis. Gout- Nature and occurrence of uric acid, causes, symptoms and diet.

UNIT-VIII [3]
Diet in allergy and skin disturbances: Definition, classification, manifestations, common food allergies and test and dieteric treatment.

UNIT-IX [3]
Diet in Diabetes mellitus: a) Incidence and predisposing factors. b) Symptoms-types and tests for detection. c) Metabolism in diabetes d) Dietary treatment & meal management e) Hypoglycemic agent, insulin and its types. f) Complication of diabetes.

UNIT-X [3]
Diet in Renal diseases: Basic renal function, symptoms and dietary treatment in acute and chronic glomerulonephritis, Nephrosis, renal failure, dialysis. Urinary calculi-causes & treatment, acid and alkali producing and neutral foods and dietary treatment.

UNIT-XI [3]
Diet in Cardiovascular diseases: Role of nutrition in cardiac efficiency, incidence of Atherosclerosis, dietary principles, Hyperlipidenmia, Hypertension- causes and dietary treatment, Sodium restricted diet, level of sodium restriction, sources of sodium, danger of severe sodium restriction.

3. Guthrie H. A, Picciano M. F (1995), Human Nutrition, Mosby, St. Louis Missorie.

FN 322 Food Service Management 3-0-0-3

UNIT-I [6]

Food service Institutions- Definition and importance, various types of food service institutions like hospitals, school meals, hostels, industrial canteens, commercial hotel/ canteens etc. Institutions catering to different types of handicapped personnel

UNIT-II [6]

Developing objectives and goals- Definition and importance, types of goals Policies, procedures and rules. Theories about approaches to food service management

UNIT-III [10]

Principles and procedures of management- Managerial roles and responsibilities, the manager and leadership quality. Tools of management – organization chart, types, structure, function; work improvement techniques
Personnel management – recruitment, training, placement, promotion, personnel records, work appraisals

UNIT-IV [9]

Material management – Principles of quantity food purchase- selection, buying and accounting of different foods. Inventory management- assessing requirements, receiving and release of stocks. Record maintenance. Quantity food preparation and service- Factors in menu planning for large groups, systems for maintaining quality in food preparation and service. Kitchen control and maintenance of Kitchen records.

UNIT-V [8]

Financial management – Budgeting, costing and cost control, accounting. 8. Hygiene and sanitation in preparation and serving area – Personal hygiene, types and sources of contamination, prevention and safety measures. Methods of controlling infestation. Methods of dish washing.

3. Meilgard (1999). Sensory Evaluation Techniques, 3rd ed. CRC Press LLC, 1999.

FN 332 Neutraceuticals and Health Foods 3-1-0-3

UNIT-I

Nutraceuticals: (a) Use of neutraceuticals in traditional health sciences. Their role in preventing /controlling diseases (b) Definition, Classification, food and non-food sources, mechanism of action. Role of omega-3,fatty acids, carotenoids, dietary fiber, phytoestrogens; glucosinates; organosulphur compounds as neutraceuticals. [13]

UNIT-II

Prebiotics and probiotics: Usefulness of probiotics and prebiotics in gastro intestinal health and other benefits. Beneficiary microbes; prebiotic ingredients in foods; types of prebiotics and their effects on gut microbes. [8]

UNIT-III

Functional foods Definition, development of functional foods, benefits and sources of functional foods in Indian diet. Effects of processing conditions and storage; Development of biomarkers to indicate efficacy of functional ingredients; Research frontiers in functional foods. [9]

UNIT-IV

Development of nutraceutical and functional foods – Standards for health claims. Process of developing - preclinical & clinical studies, Marketing and Regulatory issues, Regulatory bodies in India [9]

Text Book

FN 342 Food Quality And Sensory Evaluation 3-1-0-3

UNIT-I [4]

Introduction to quality attributes of food, Appearance, flavour, textural factors and additional quality factors

UNIT-II [10]

Gustation: introduction and importance of gustation, Structure and physiology of taste organs- tongue, papillae, taste buds, salivary glands. Mechanism of taste perception Chemical dimensions of basic tastes- sweet, salt, sour, bitter and umami, Factors affecting taste quality, reaction time, taste modification, absolute and recognition threshold, Taste measurement- Electronic Tongue, Taste abnormalities

UNIT-III [10]

Olfaction: Introduction, definition and importance of odour and flavor, Anatomy of nose, physiology of odour perception, Mechanism of odour perception, Theories of odour classification, chemical specificity of odour. Odour measurement techniques – historical perspective and emphasis on recent techniques- e- nose etc. Olfactory abnormalities

UNIT-IV [5]

Colour: Introduction and importance of colour, Dimensions of colour and attributes of colour; gloss etc. Perception of colour. Colour Measurement: Munsell colour system, CIE colour system, Hunter colour system, etc. Colour abnormalities

UNIT-V [10]

Texture: Introduction, definition and importance of texture, Phases of oral processing, Texture perception, receptors involved in texture perception, Rheology of foods Texture classification, Texture measurement – basic rheological models, forces involved in texture measurement and recent advances in texture evaluation. Application of texture measurement in cereals, fruits and vegetables, dairy, meat and meat products

FN 352 Nutritional Lab-III **0-0-4-2**

Exercises based on Courses FN 312,FN 322, FN 332 and FN 342

BT 324 Entrepreneurship Development **2-0-0-2**

UNIT-I [10]

Introduction: Meaning, Needs and Importance of Entrepreneurship, Promotion of entrepreneurship, Factors influencing entrepreneurship, Features of a successful Entrepreneurship

UNIT-II

Establishing an Enterprise Forms of Business Organization, Project Identification, Selection of the product, Project formulation, Assessment of project feasibility, Financing the Enterprises, Fixed and Working Capital [8]

UNIT-III

Entrepreneurship and International Business, Marketing of Product Meaning of International business, Selection of a product, Selection of a market for international business, Export financing, Institutional support for exports [8]

Academic Curriculum (2017 – 18 onwards)

FIRST SEMESTER

CELL BIOLOGY

BT 151 **3-1-0-4**

CELL BIOLOGY LAB

BT 161 **0-0-1-1**

PHYSICAL AND INORGANIC CHEMISTRY-1

CH 181 **2-0-0-2**

ORGANIC CHEMISTRY-I

CH 191 **2-0-0-2**

LABORATORY COURSE IN CHEMISTRY-I

CH 171 **0-0-3-1.5**

INTRODUCTION TO FORENSIC SCIENCE AND CRIMINOLOGY

FS 101 **2-1-0-3**

Course Contents:

Unit I: Types of Crime and Criminal Behavior [9]

Definition: Crime, Criminal and Criminology; Criminology as Science, The field and scope of Criminology; Methods and Techniques in Criminology; Concept of a criminal and classification of criminals. Organized crime; White – collar crimes/ Occupational crimes; Murders; Sexual offences; Terrorism; Serial Crimes; Crime against women and children.

Unit II: Juvenile Delinquency and Punishment [10]

Definition, Types of Juvenile Delinquents ; Classification of Juvenile Delinquents; Factors in Juvenile Delinquency, Custody of juvenile delinquents; Juvenile courts procedure; behavior modification techniques; Preventive Programmes. Concept of punishment, kinds of punishments, Humanitarian approach to concept of punishment, capital punishment in India, Introduction to criminal Laws: IEA, IPC and CRPC

Unit III: Police Administration [10]

Role of police in regard to criminals; Police role in the society; Custodial crimes: Complaints against police personnel; Interrogation of suspects and offenders; interviewing the criminals; improving the Police force. Evidence Applicability in Court**;** Definition, Various types of evidences, the law of evidence, Expert's testimony and admissibility of scientific evidence in court of Law.

Unit IV: Introduction to FS and History [10]

Definition, description, principles, concept, needs and scope. History of Forensic Science and Forensic Science Labs; Progressive development and transformation of Forensic Science Labs. Forensic Science Laboratories: Main Authority, Organizational structure of Forensic Science Laboratory – roles and responsibilities, Sections/ Divisions, Services

Provided. Mobile forensic science laboratory – their distribution in India, functions, need and utility.

FOUNDATION COURSE IN ENGLISH

EL101 **2-0-0-2**

CRIMINAL LAW-IPC/CrPC/IEA

FS 131 **2-1-0-3**

Unit I: Indian Penal Code [13]

Indian Penal Code- Offence against Persons such as Culpable Homicide and Murder (Ss.299-304, 304 A & B and 307.), Hurt- Simple and Grievous (Ss.319-325), Kidnapping and Abduction. (359-363) and Rape (Ss.375, 376.) (b) Offences against property-Theft and Extortion (Ss.378-384), Robbery and Dacoity, (Ss.390, 391-395.), Cheating, Criminal trespass and House Breaking. (Ss.415-420, 441- 447), Sections pertaining to poisons; General exceptions, Offences against person, Offences against property, Attempt to suicide, Sexual offences.

Unit II: Criminal Procedure Code [13]

Code of Criminal Procedure- Introduction, organization and powers of Criminal Law Courts in India, Police powers of arrest, search and seizure; Introduction and general idea of sections: 291-93, 154, 155, 156, 157, 158, 159, 160, 161, 162, 172, 173, 174, 175, And 176.

Unit III: Indian Evidence Act [13]

Indian Evidence Act-Admissions, Confessions, Dying Declarations. Of Experts, Oral and Documentary Evidence; Introduction and general idea of sections: 32, 45, 46, 47, 57, 58, 60, 73, 135, 136, 137, And 159.

TRACE EVIDENCE ANALYSIS

FS 141 **2-1-0-3**

Course Contents:
Unit I: Introduction of Physical Evidences [9] Definition, Collecting, packaging, preservation and forwarding of evidences: biological fluids, chemicals, poisons, firearms, fingerprints and tool marks; Linking a Crime Scene with the suspect through field notes, witnesses and interrogation, Reconstruction of crime scene and associative/ corroborative evidences.
Unit II: Crime and Suspect [10] Search and seizure, privilege against self – incrimination, subpoenas deposition, Miranda rights, condemned of court, FIR, types of cognizable and non-cognizable offences; Expert's Testimony: the role of the expert as witness; Acceptance of evidence in the Court of Law; Mcnaughton Rule; child witness in the court, admissibility of scientific evidence; Expert Testimony: The role of the expert as witness; Acceptance of evidence in the Court of Law; Mcnaughton Rule; child witness in the court, admissibility of scientific evidence; Examination in the Court: Direct examination, cross – examination and re-examination of Prosecution lawyer and Defense lawyer and Court presentation, Law of evidence: testimonial and real evidence.
Unit III: Glass and Soil Examination [10] Glass: Composition, Comparing glass fragments, glass fractures. Examination of soil, Color, density, size distribution of soil particles, mineral analysis and chemical analysis of soil, collection of preservations of soil. Analysis Techniques-Physical, Chemical, instrumental
Unit IV: Forensic Paint Examination [5] Introduction, paint chemistry, forensic examination of household paints and automobile paints. Analysis Techniques-Physical, Chemical, instrumental
Unit V: Forensic Examination of Hair and Fiber [5] Examination of Hair; Importance, nature, location, collection, evaluation; Classification of fibers, preliminary examination, properties of fiber, microscopic and chemical examination of fibers. Analysis Techniques-Physical, Chemical, Instrumental

TRACE EVIDENCE ANALYSIS IN LAB

FS 151 **0-0-2-1**

1. Physical Analysis of Glass-Density
2. Physical Analysis of Glass-RI
3. Physical Analysis of Soil-Density
4. Analysis of Microscopic Glass Chip
5. Microscopic Examination of Hair
6. Microscopic Examination of Fiber
7. Fabric Count
8. Instrumental analysis of Paint Chip
9. Instrumental analysis of Paint Smear
10. Microscopic Examination of Paint Chip

SECOND SEMESTER

GENETICS

BT 152 **3-1-0-4**

PHYSICAL AND INORGANIC CHEMISTRY-II

CH182 **2-0-0-2**

ORGANIC CHEMISTRY

CH 192 **2-0-0-2**

LABORATORY COURSE IN CHEMISTRY-II

CH 172 **0-0-3-1.5**

CONCEPTS OF PHYSICS IN FS

FS 102 **2-0-0-2**

Course Contents
Unit I: Motion & Force Definition of motion, position and displacement, average velocity, average speed, acceleration, acceleration of freely falling body, projectile motion, uniform circular motion, relative motion in one dimension and two dimension. Newtonian mechanics, Newton's Ist law, force, mass, Newton's II law, Newton's III law, friction, properties of friction, drag force and terminal speed.
Unit II: Kinetic Energy and Work Energy, kinetic energy, work, work done by gravitational force, work done by spring force, power, work and potential energy, work done on system by external force, conservation of energy.
Unit III: Rotation The rotational variable, rotation with constant angular acceleration, relating linear and angular variables, kinetic energy of rotation.
Unit IV: Gravitation and Waves Newton's law of gravitation, gravitation near earth's surface, gravitation inside the earth. Types of waves, transverse and longitudinal waves, wavelength and frequency, speed of traveling wave, the wave equation, sound waves, speed of sound, intensity and sound level, the Doppler effect, shock waves.

ENVIRONMENTAL STUDIES

MDC 003 **3-1-0-4**

CRIME SCENE INVESTIGATION

FS 132 **2-1-0-3**

Course Contents:
Unit I: Crime Scene [9] Defining a crime scene, Importance, problem, location and processing of Crime Scene and Crime scene Management.
Unit II: Types of Crime Scenes [8] Mobile, Indoor and outdoor crime scenes; various searching techniques used for locating physical evidences at scene of crime.
Unit III: Recording the Scene of Crime [5] Barricading of crime scene; Crime Scene Photography; Sketching; Notes making; Handling clues and evidences.
Unit IV: Crime scene reconstruction [5] Procedure and requirement for Crime Scene Reconstruction; Guidance from field notes; Modus operandii, role of Investigating Officer.
Unit V: Physical Evidences [12] Definition, types of physical evidences, Collection, packaging, preservation and forwarding of physical evidences, Chain of custody.

CRIME SCENE INVESTIGATION PRACTICAL

FS 142 **0-0-4-2**

1. Crime Scene Processing
2. Crime Scene Searching
3. Indoor Crime Scene-Baseline Method
4. Outdoor Crime Scene-Baseline Method
5. Indoor Crime Scene-Triangulation Method
6. Outdoor Crime Scene-Triangulation Method
7. Outdoor Crime Scene- Polar Coordinate Method
8. Packing and Packaging of Evidence

THIRD SEMESTER

BIO-INSTRUMENTATION

BC 211 **3-1-0-4**

INSTRUMENTATION LABORATORY

BC 221 **0-0-2-1**

FOREIGN LANGUAGE-I

ORGANIC CHEMISTRY-III

CH 223 **2-0-0-2**

PHYSICAL CHEMISTRY-I

CH 291 **2-0-0-2**

INORGANIC CHEMISTRY-I

CH 213 **2-0-0-2**

LABORATORY COURSE IN CHEMISTRY-III

CH 281 **0-0-3-1.5**

DNA PROFILING

FS 231 **2-1-0-3**

Course Contents:
Unit I: Introduction to DNA Fingerprinting [6] Definition, Importance of DNA Fingerprinting in Forensic Science., Structure of DNA, RNA, Chromosome, Nuclear DNA and Mitochondria DNA
Unit II: DNA Isolation Techniques [5] Collection and types of evidences for DNA fingerprinting, Different types of DNA Isolation techniques (Organic, Inorganic and Mechanical), FTA cards for isolation of DNA. DNA isolation from different evidences.
Unit III: Techniques for DNA Fingerprinting [10] Electrophoresis and Southern blotting, Polymerase Chain Reaction (Denaturation, annealing and extension, Detection of PCR products).
Unit IV: Types of DNA Fingerprinting Techniques [10] Mini satellites and Micro-satellites., VNTR and RFLP, STRs and Genotyping.
Unit V: Practical application of DNA Fingerprinting [8] Paternity testing and Personal identification. DNA databank, Limitations of DNA Fingerprinting; Legality of DNA Fingerprinting in India.

Text:

2. Norah Rudin and Keith Inman (2nd Edition) An Introduction to Forensic DNA Analysis, CRC Press, New York, 2002.

3. John M. Butler (1st Edition) Fundamentals of Forensic DNA Typing, Academic Press, 2005.

DNA PROFILING LAB

FS 241 **0-0-1-2**

1. Isolation of Plasmid and Genomic DNA
2. Restriction Digestion
3. DNA Fragment Size Détermination
4. PCR Demonstration and Principal
5. DNA Estimation through Spectroscopy
6. Isolation of Microbes through Soil, Air and Water Samples
7. Study of Bacterial Slides

FORENSIC ANTHROPOLOGY and PERSONAL IDENTIFICATION

FS 251 **2-1-0-3**

Unit I: Anthropology and Personal Identification [9] Definition, scope and application of Forensic Anthropology; and related sciences. Human and animal remains; Reconstruction Process: Superimposition, Facial reconstruction and its importance; Importance and need for personal identification, cases that will require personal identification. Documents proof, scars, professional marks, personal articles, Finger printings, dentures, sketches and photographs
Unit II: Victim Identification [10] Assessing and determining the time and cause of Death, Study of burned bones and bone fragments; Attribution of Sex, Estimation of Age and reconstruction of stature from long bones and their medico legal implication. Establishment of Partial and Complete identity of skeletal material and dead bodies; Craniometry: Identification of human skull, determining the age ,race and sex of the skull and its measurement;
Unit III: Odontology and Bite Marks [10] Odontology: Introduction to human dentition, structure of teeth, types and functions of different teeth, age and sex determination, identification in mass disasters; Bite Marks: Types of bite marks; collection and preservation of DNA samples, forensic importance of bite marks; identification - Case studies
Unit IV: Autopsy [10] Ante and Post – mortem examinations; external examination; internal examination; collection, preservation and packaging of viscera.

FORENSIC ANTHROPOLOGY PRACTICALS

FS 261 **0-0-2-1**

1. Estimation of height, weight using long bones
2. Determination of age, sex, using skull, pelvic bones, long bones, etc.

FOURTH SEMESTER

FORENSIC TOXICOLOGY

FS 232 **3-1-0-4**

Unit I: Toxicology and Drugs of Abuse [9] Definition, dosage, administration of poisons, Classification of poisons on analytical basis and medical basis; Sedatives, Narcotics, Stimulants and Hallucinogens, Drug Addiction and its signs and symptoms, Drugs and Crime; The role of drug recognition expert, Interpreting drug findings
Unit II: Toxicology of Alcohol [9] The fate of ethyl alcohol in the body, alcohol in the circulatory system, breath test instruments, field sobriety testing, analysis of blood for alcohol
Unit III: Metallic Poisons, Barbiturates and Corrosive Poisons [5] Arsenic, Mercury. Nature, administration, symptoms, postmortem findings, Detection and medicolegal aspects; Barbiturates: Classification, administration, symptoms, postmortem findings, detection and medico-legal aspects; Corrosives: HCl, H_2SO_4, HNO_3 Corrosive poisons-2: Alkalis; NaOH, KOH
Unit IV: Insecticides, Volatile Poisons [8] Organophosphorous compounds, Organochloro Compounds and Carbamates- Nature, administration, symptoms, post-mortem findings, isolation, detection, estimation and medico-legal findings; Volatile Poisons: Methyl alcohol, Chloroform. Nature, administration, symptoms, post-mortem findings, isolation, detection and estimation, medico-legal findings
Unit V: Miscellaneous Poisons [8] Animal poisons: Snake, Vegetable Poisons: Opium, Cannabis Dhatura, Oleander, Abrus precatrious, etc. Nature, administration, symptoms, post-mortem findings, isolation, detection and estimation, medico-legal findings.

5. Reject Paul. M.P, Forensic Toxicology, SSBT,New Delhi,2009

FORENSIC TOXICOLOGY PRACTICAL

FS 242 **0-0-2-1**

1. Analysis of metallic poison
2. Analysis of volatile and non-volatile poisons.
3. TLC of insecticides, Barbiturates and other drugs
4. Analysis of vegetable poisons
5. TLC of different kinds of inks
6. Lab Tests for Hallucinogens

PLANT AND ANIMAL BIOTECHNOLOGY

CH 262 **0-0-3-1.5**

FINGERPRINT SCIENCE

FS 252 **2-1-0-3**

Course Contents:
Unit I: History and Introduction [5] Origin & History of fingerprints, Principles of Fingerprints identification, Searching, location and significance of fingerprints in criminal investigation.
Unit II: Class and Individual Characteristics [10] Biological significance of skin pattern, Types of fingerprints, Fingerprint characteristics: class and individual, Collection, lifting and preservation of fingerprints.
Unit III: Classification of Fingerprints [10] Historical Systems, Vucetich Classification, Henry's system of classification, Batley's Single Digit classification, NCIC
Unit IV: Fingerprint Developmental techniques [7] Methods of lifting and developing latent fingerprints – Physical methods - Powder method (Black, silver, florescent, red, yellow), Iodine fuming etc.; Chemical methods - Ninhydrin, silver nitrate method, cyno-acrylate, Osmium tetra-oxide etc., Photography of latent fingerprints and presentation of fingerprint evidence in court.
Unit V: AFIS & Biometrics [7] AFIS, History and Development, French, UK, Japanese Initiatives, Biometric System Classification, Basic Biometric Systems, Introduction to Traits, FAR and FRR Applications

5. Sharma, B. R., Forensic Science in Criminal Investigation and Trials (3rd Edn) Universal Law Publishing Co. Ltd. New Delhi, 2001.

FINGERPRINT SCIENCE PRACTICALS

FS 262 **0-0-2-1**

1. Contact Prints
2. Rolled Prints
3. Analysis of Class and Individual Characteristics
4. Ridge Counting
5. Ridge Tracing
6. Identification based on Chance Prints
7. Fingerprint Lifting
8. Fingerprint Development: Iodine, Ninhydrin

FIFTH SEMESTER

FORENSIC SEROLOGY and BLOOD SPLATTER ANALYSIS

FS 371 **2-1-0-3**

Course Contents
Unit 1:Blood and its Properties [8] The nature of blood, collection, preservation and packing of blood evidence, procedures and precautions; Tests used in Blood Analysis: Identification of bloodstains by microscopic methods, Catalytic tests, crystal tests, Spectrophotometric method, chromatographic and immunological methods. Electrophoresis methods; Introduction to Body Fluids: Introduction to various body fluids, their nature and characteristics; Forensic analysis of Body Fluids: Forensic analysis of Semen, Saliva, Urine, Sweat etc.
Unit 2: Species of Origin& Grouping of Bloodstains [8] Determination of species of origin, Ring test, Immunoelectrophoresis, single diffusion, double diffusion, Crossed-Over electrophoresis, ABO system, Rh system and MN system; Techniques for the determination of blood groups.
Unit IV: Introduction to Bloodstain Pattern Analysis [10] Basic tenets of bloodstain pattern analysis, The purpose and function, history, application of basic scientific method, biohazards associated with bloodstain patterns, Characteristics of liquid blood and blood droplets under force, the effects of surface tension on individual droplets and pools of blood, the effects of terminal velocity on free falling droplets, characteristics of blood droplets on impact, effect of the volume, effect of target surface characteristics, limitations of determining distance fallen for individual droplets, relationship of angle of impact to stain shape.
Unit V: Recognition and Creation of Basic Stain Patterns [13] Passive Stains: a. Drip Patterns, Flow Patterns: Pools, saturation stains; Projected and Impact Spatter stains: Impact Patterns, splashes, cast-off patterns, arterial spurt and gush patterns, expired bloodstain patterns, transfer stains, wipe patterns, swipe patterns, transfer/contact patterns, void patterns, fly spot patterns, bubble rings, perimeter/skeletonized bloodstains. Point (Area) of Origin Determinations. Determine the impact angle, Determine directionality, determine point (area) of convergence, "stringing" and/or mathematical methods for point (area) of origin determinations, limitations

3. Kirk, P.L., Introduction in crime investigation (2nd), John Willey and, New York, 1974

SEROLOGY PRACTICALS

FS 381 **0-0-2-1**

1. Presumptive and Confirmatory tests for blood
2. Examination and Identification body fluids
3. Blood Splatter Analysis: Drop Direction, Force applied, Angle of Attack
4. Gel Immuno Diffusion tests for species origin
5. Blood Grouping

IMMUNOLOGY

MB 232 **3-1-0-4**

IMMUNOLOGY LABORATORY

MB 321 **0-0-2-1**

DIGITAL FORENSICS

FS 391 **2-1-0-3**

Course Content:

Unit 1: Cyber Crimes [8]

Introduction to Digital Forensics, Classification, Definition and types of cybercrimes, electronic evidence and handling, electronic media, collection, searching and storage of electronic media, introduction to internet crimes, hacking and cracking, credit card and ATM frauds, web technology, cryptography, emerging digital crimes and modules.

Unit 2: Basics of Computers [8]

Computer Classification, Hardware, Classification and Types, Memory, I/O Devices, Cloud Storage, Software, Programing and Algorithms, Flowcharts, Operating Systems, Networks: Architecture and Basic Configurations

Unit 3: Computer Forensics [10]

Definition and Cardinal Rules, Data Acquisition and Authentication Process, Windows Forensic Analysis of File Systems-FAT12, FAT16, FAT32 and NTFS, UNIX file Systems, mac file systems, Embedded System Analysis, Network Forensic Analysis Overview, Cloud Computing-an introduction.

Unit 4: Forensic Tools and Processing of Electronic Evidence [13]

Introduction to Forensic Tools, Usage of Slack space, tools for Disk Imaging, Data Recovery, Vulnerability Assessment Tools, Encase and FTK tools, Anti Forensics and probable counters, retrieving information, process of computer forensics and digital investigations, processing of digital evidence, digital images

DIGITAL FORENSIC PRACTICAL

FS 313 **0-0-2-1**

1. Open Source Forensic Tools-Linux and Windows
2. Disk Forensics and Data Recovery
3. Anti-forensic techniques: TrueCrypt, Shredder
4. Steganography
5. Key loggers
6. Network monitors
7. Flowchart management
8. Algorithm designs
9. Registry Forensics

PROGRAMMING IN C++

FS 323 **2-1-0-3**

Course Contents:

Unit I: Introduction [10]

Introduction, Advantage, C and C++, Exception Handling, Object Oriented Programming, Standard Template Library, Types and declarations, Types, Booleans, Integer Types, Floating-Point Types, Sizes, Void, Enumerations, Declarations

Unit II: Pointers, Arrays and Structures [10]

Pointers, Arrays, Pointers into Arrays, Constants, References, Pointers to void, Structures, Expressions and Statements, A Deck Calculator, Operator Summary, Statement Summary, Comments and Indentation

Unit III: Functions [10]

Function Declarations, Argument Passing, Value Return, Overloaded Function Names, Default Arguments, Pointer to Function, Macros, Namespaces and Exceptions, Namespaces, Exceptions Source Files and Programs, Separate Compilation, Linkage, Using Header Files, Programs

Unit IV: Classes [9]

Classes, Access Control, Constructors, Member functions, Static members, Destructors, Memory allocation, Member initialization, Operator overloading, Introduction, Operator Functions, A Complete Number Type, Conversion Operators, Friends, Large Objects, Essential Operators, Subscripting, Functions Calls, Dereferencing, Increment and Decrement, A String Class, Derived class, Introduction, Derived Classes, Abstract Classes, Design of Class, Hierarchies, Class Hierarchies and Abstract Classes

Text:

1. Sumita Arora, “Introduction to C++”

References:

1. “C++ programming language” 3 rd edition by Bjarne Stroustrup.

PROGRAMING LAB IN C++

FS 333 **0-0-4-2**

1. Types and Declaration
2. Pointers
3. Arrays
4. Structures
5. Expression
6. Statement
7. Function
8. Classes
9. Derived Classes

FORENSIC PHOTOGRAPHY, DIGITAL IMAGING AND PORTRAIT PARLEY

FS 343 **3-1-0-4**

Course Contents:

Unit 1: Photography [10]

Basic principles and techniques of photography, cameras and lenses, exposing, developments and printing, Different kinds of developers and fixtures, modern developments in photography, linkage of cameras and film negatives, digital photography, digital water marking and digital imaging, photogrammetry, videography/ high speed videogaphy, crime scene and laboratory photography

Unit II: Digital Image Processing [20]

Digital image fundamentals - Digital Image through scanner, digital camera. Concept of gray levels. Gray level to binary image conversion. Sampling and quantization. Relationship between pixels. Imaging Geometry; Image

Transform; Image enhancement Point processing. Histogram processing. Spatial filtering; Image Segmentation; Image Processing

Unit III: Portrait Parley [15]

Composite Imagery: Graphic images composed of individually described characteristics of the human face; Image Modification/Identification: Methods of manipulation, enhancement and comparison; Demonstrative Evidence: Visual information used for court purposes; Reconstructive/Postmortem Drawings: Methods of identifying human remains in various conditions of decomposition

Text

1. Gonzales & Woods "Digital Image Processing" (3rd Addition) 2011

4. Workinson, J; Art of Digital Video; Oxford Focal Press (1994)

DIGITAL IMAGING LAB

FS 353 **0-0-2-1**

1. Digitizing Image
2. Scaling Image
3. Filtering an Image
4. Image Normalization
5. Image Enhancement
6. Portrait Parley: Free Tools

SIXTH SEMESTER

INSTRUMENTATION IN FORENSIC SCIENCE

FS 372 **2-1-0-3**

Unit I: Spectroscopy [9]
Principal; Ultra violet and visible spectrophotometry: Types of sources and stability, wavelength selection, filters-cells and sampling devices, detectors, resolution, qualitative and quantitative methods for detection; Fluorescence and phosphorescence spectrophotometry: Atomic absorption spectrometry; Atomic emission spectrometry; X-ray spectroscopy, X-ray diffraction; Infrared spectrophotometry: Dispersive and Fourier Transform spectrophotometry, sample handling, quantitative analysis and interpretation of IR spectra;

Unit II: Centrifugation Techniques [10]
Centrifugation: Basic principles of sedimentation, Various types of centrifuges, Density gradient centrifugation, Preparative centrifugation, Analysis of sub-cellular fractions, Ultra-centrifuge- Refrigerated Centrifuges

Unit III: Microscopy [10]
Simple and Compound microscope, Comparison microscope, Phase contrast Microscope, Stereoscopic microscope, Polarizing microscope, Fluorescent Microscopy, Infrared Microscopy, Scanning Electron Microscope (SEM) & Transmission Electron Microscope (TEM)

Unit IV: Mass Spectrometry [10]
Sample flow, Ionization methods, Mass Analyzer, Vaccum Systems, Correlation of mass spectra and molecular structure, Fourier transform mass spectrometry, Tandem mass spectrometry, Inductively coupled plasma MS (ICP-MS),

Text:

1. H.H Willard etal; Instrumental Methods of Analysis CBS Pub. and Distributors, Delhi (1986).

4. Mendham et al., Vogel's Quantitative Chemical Analysis, Pearson Education Ltd., 2009.
5. N. Gray, Instrumental Methods of Analysis, 1st Edition, CBS Publisher, 2011.

INSTRUMENTATION PRACTICAL

FS 382 **0-0-2-1**

1. Experiments in Stoichiometry
2. Molarity of Solution
3. Molality of Solution
4. Beer-Lambert Law
5. Qualitative Analysis using UV-Visible Spectrometer
6. Quantitative Analysis using UV-Visible Spectrometer
7. Sample Preparation for IR Spectrometer
8. IR Spectrometer Demonstration

WILDLIFE FORENSICS

FS 392 **2-1-0-3**

Course Contents:

Unit I: Wildlife Forensics [10]

Definition, introduction, gravity of the crime, endangered wild flora and fauna, various types of the evidences encountered their location, collection and packing; Introduction to forensic medicine and microbiology.

Unit II: Forensic Entomology [9]

Forensic importance of various insects, importance of various insect growth stages, Entomological evidences, their location, collection and packing, Determination of time since death from entomological evidences.

Unit III: Forensic Botany [9]

Introduction to Forensic Botany, Plants as Evidence, Evidence Collection and analysis, Moss as evidence, forensic microscopy, Palynology, phytoforensics, algae in forensics investigations, DNA methods in plant identification, Plant physiology and growth in forensic botany (gravesite analysis, time of deposition, geomorphology, Forensic Wood Science, Forensic mycology - spores, fruiting bodies, botanical decomposition, site conditions, commercial concerns.

Unit IV Forensic Biology [11]

Introduction, importance of various biological evidences (hair, fiber, pollens, wood), collection and evaluation in general, bite marks, human skeletal remains, importance and examination.

MULTIMEDIA FORENSICS

FS 314 **2-1-0-3**

Unit I: Multimedia [13]

Various modalities of device fingerprints, Extraction and representation of device fingerprints, Enhancement of device fingerprints, Source device identification based on device fingerprints, Content/device linking based on device fingerprints, Content integrity verification based on device fingerprints, Source-oriented image/video clustering based on device fingerprints, Digital content hashing, Data hiding, Digital watermarking for copyright protection, Digital watermarking for content authentication, Steganography, Steganalysis

Unit II –Speech Recognition [13]

Introduction-Regular Expressions and automata-Words and transducers-N-grams Part of speech tagging-Hidden Markov and Entropy models, Speech-Phonetics-Speech synthesis-Automatic speech recognition-Speech Recognition advanced topics-Computational Phonology

Unit III – Speech Parsing and Semantics of Speech Recognition [13]

Formal grammar of English-Syntactic parsing-Statistical parsing-Features and Unification-Language and complexity, Semantics and Pragmatics-The representation of meaning-Computational Semantics-Lexical semantics- Computational lexical semantics-Computational discourse

QUESTIONED DOCUMENT EXAMINATION

FS 324 **2-1-0-3**

Course Contents:
Unit I: Introduction to Questioned Documents [8] Document and Questioned documents, Various types, Characteristic features of genuine handwriting/ signatures, Forgery and its types, characteristic components of forged documents and its examination, Disguise writings, features of disguised writings and its examination. Procedure adopted for collection of standards for comparison of documents, admitted signature/writing, specimen signature/writings.
Unit II: Principle of Handwriting Identification [8] Introduction of Handwriting, Principle of handwriting identification, Handwriting characteristics: Class and individual characteristics, Natural variations in handwriting, causes of variations, Tampered Documents: addition, alteration, obliteration, secret writing. Examination of the documents for the ink, paper, photocopies/ xerox, printouts and scanned documents.
Unit III: Various Questioned Documents Cases [10] Disputed documents - wills, deeds, cheques, suicide letters, anonymous letters, threatening letters, stamps fraud, fake currencies, fake paintings and printing, fake rubber stamps and seals, Tampered documents, charred documents, Computer generated/ electronic documents/ typed and photocopied documents.
Unit IV: Signature Verification [7] Handwriting characteristics, natural variations, principles of identifications, features encountered in forged handwriting/ signatures, characteristic features of disguised handwriting/ features, external and internal factors affecting handwriting.
Unit V: Instrumentation in Questioned Documents [6] Camera, Compound microscope, Stereo microscope, magnifying glasses, illuminated torch, Video Spectral Comparator, Docu-centre, color filters, Osborn's scale, geometrical requirements, Projectina, ESDA, Transmitted light apparatus, Oblique light, UV and IR radiations, TLC and Paper Chromatography.

QUESTIONED DOCUMENT EXAMINATION IN LAB

FS 334 **0-0-2-1**

1. Studying Individual Characteristics
2. Hiatus Calculation
3. Handwriting Comparison
4. Author Identification
5. Signature Verification
6. Free Hand Forgery
7. Transmitted Light Forgery
8. Auto-Forgery
9. Ink Identification

BIOINFOMATICS

BT 352 **2-1-0-3**

BIOINFOMATICS LAB

BT 314 **0-0-2-1**

FORENSIC BALLISTICS AND TOOL MARKS

FS 344 **2-1-0-3**

Course Contents:
Unit I: Arms and Ammunition [7] Definition, Indian Arms Act, Forensic Importance; Nature of firearms, parts of a firearm, classification of firearm; Ammunition: Types, Bullet comparisons, cartridge case examination, class and individual characteristics of identification.
Unit II: Analysis and Reconstruction [8] Muzzle pattern, scorching, blackening, tattooing, wad distribution, pellet patterns, GSR analysis, and primer residues; Reconstruction of the sequence of events in a shooting case. Presentation of evidence in the court. accidental firing
Unit III: Firearm injuries [7] Terminal Ballistics, Entrance wound, exit wound and internal wound, evaluation of firearm injuries.
Unit IV: Tool Marks [8] Definition, nature, types, significance, decipherment of tool marks and techniques; Examination of tool marks
Unit V: Tyre marks, Footprints, Shoeprints and other Impressions [9] Definition, nature, its types, skid marks, tread marks, significance and examination; Introduction to Footprints and Shoeprints: Definition, nature, its types, significance and Examination; Miscellaneous impressions: Lip print, Bite marks and their examination

SUMMER INTERNSHIP

FS 370 **Credits: 4**

Each student will be given a short term lab attachment during the summer vacation after completing two years of the course. They are supposed to submit a project report based on the lab visit they conduct. The same shall be evaluated out of a maximum marks of 100 and the student may be evaluated on Content, Presentation and Viva.

The presentation should preferably be performed in front of a panel.

Mody University of Science & Technology

B.Sc. (Hons) Physics
Session 2017-2018

Curriculum Structure

B. Sc. (Hons.) Physics

Programme Level: Undergraduate **Duration:** Three Years (Six Semesters)

No. of Seats: 20

Objectives:

.

The programme offers core skills in physics as well as maths, which instills in the knowledge about the fundamental aspects of physics. With this course, Mody University aims to open many doors for their students by offering Courses in Atomic and Molecular Physics, Electronics, Applied Electronics, Nuclear Physics, Nano sciences, etc. The student will be able to select various options for higher studies like M.Sc. in Physics, Applied Physics, and Electronics. In addition, the programme provides good combinations to create interest of undergraduate students towards M. Tech. in Allied Sciences including Electronics, Astrophysics, Material Science, Laser Technology, Nuclear Science, Opto- electronics and Nanoscience. Further, they have scope for absorption in research Labs.

The first batch of this programme in MUST/ Mody University proposed to be admitted in the session 2015-16.

Input Qualification:

A pass in 10+2 examination of CBSE, or its equivalent from any Board, in Science stream with Physics and Mathematics as subjects and adequate proficiency in English.

Evaluation Procedure:

All the Rules and Regulations as provided in the Ordinances and Regulations of the Undergraduate Programmes of MUST/ Mody University shall be followed.

B. Sc.(Hons.) Physics

Three-Year Programme

Academic Curriculum (2015 – 16 onwards)

First Year

First Semester

CW: *Course Work;* ***MTE:*** *Mid Term Examination;* ***ETE:*** *End Term Examination*
** Course work (CW) would include regularity, evaluation of assignments, surprise tests, etc.*
# Evaluation of proficiency will be based on the participation in extra-curricular/co-curricular activities.

Optional Courses

§ -*Chemistry courses*
¢ -Computer Science

Note:**1**. *The Programme includes two types of subsidiaries:*
(i) Chemistry and Maths
(ii) Maths and Computer Science

2. *In addition to the compulsory courses, either all courses of* ***Chemistry Or Computer Science*** *may only be opted in each semester of first two years.*

Credits: Physics:64, Maths:26, Chemistry:26, Comp Sc.:26

Total Credits (With Chemistry and Maths as Subsidiaries) 129
Total Credits (With Computer Science and Maths as Subsidiaries) 129

Course Description

Compulsory Courses

EL 101 Foundation Course in English 2-0-0-2

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand& Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

EV 111 Environmental Science 1-0-0-1

Introduction to Environment and Environmental Studies, its scope and importance [2]

Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem [2]

Natural Resources: Renewable and Nonrenewable resources. [2]

Human Population and Environment: Population Growth, World and Indian scenario [2]

Environmental pollution: Types of Environmental Pollution and cause , prevention of pollution [2]

Global Environmental Issues: Climate Change, Global Warming and Green House Effect [3]

Visit to a local area to document environmental assets

Suggested Readings:

Text Books:

1. Bharucha, E;.Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH,Beiswenger RE, Purdom; Environmental Sciences, Paperback.

Reference Books:

5. Rastogi V.B. &Jayraj M.S.; Animal Ecology and Distribution of Animals, KedarNath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

3-0-0-3

CA 111 Fundamentals of Computers and Information Technology

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets [6]

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

Physics

PH 111 Mechanics, Properties of Matter and Relativity 3-0-0-3

Mechanics: Laws of motions, Inertial and non-inertial frames of reference, Rotating frame, Effect of centrifugal and Coriolis forces due to earth's rotation, Center of mass (C.M), Lab and C.M frame of reference, Conservation of linear and angular momenta. [8]

Properties of Matter: Elasticity, Young's modulus, Modulus of rigidity, Poisson's ratio, relation connecting different elastic-constants, twisting couple of a cylinder(solid and hallow), Dynamical method (Maxwell's needle) for determining the modulus of rigidity, Bending moment, Cantilever, Determination of Young's modulus by bending of beam. [10]

Fluid Mechanics: Kinematics of moving fluids, equations of continuity, Euler's equation, Bernaulli's theorem, viscous fluids, streamline and turbulent flow, Poiseulle's law, Capillary tube flow, Reynold's number, Stokes law. [7]

Relativity: Postulates of special theory of relativity, Derivation of Lorentz transformation and physical significance of Lorentz invariance, Length contraction and time dilation, Concept of simultaneity, Relativistic velocity transformation relations, mass energy relation, Concept of zero rest mass of photon, Relativistic relation between energy and momentum. [14]

Text Books:

1. D.S.Mathur. Mechanics, S. Chand Publications, New Delhi
2. Resanick and Halliday: Physics Part –1

Reference Books:

1. H.C.Verma : Concept in Physics Vol. I
2. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol I.

PH 121 Electromagnetism 2-0-0-2

Vector Calculus: Gradient, divergence and curl operators, Physical significance [7]

Electromagnetism: Laws of Electromagnetism using vector calculus; electrostatics and magnetostatics in matter, Biot and Savart's law, calculation of H order in simple geometrical situations, Ampere's Law $\nabla.B=0$, $\nabla xB=\mu_0\mathbf{J}$, field due to magnetic dipole, magnetization current, magnetization vector, Half order field, magnetic permeability (linear cases), interpretation of a bar magnet as surface distribution of Solenoidal current. [10]

Time Varying Fields: Electromagnetic induction, Faraday's law, electromotive force, $\varepsilon = \int$ E.dr. integral and differential forms of Faraday's Law. Mutual and self inductance, transformers, energy in a static magnetic field, Maxwell's displacement current, Maxwell's equations, Electromagnetic field density. [10]

EM wave propagation: The wave equation satisfied by E and B, Plane electromagnetic waves in vacuum, Poynting's vector, Reflection at plane boundary of dielectrics, Polarization by reflection and total internal reflection, Faraday effect, Waves in a conducting medium [12]

Text Books:

1.David J. Griffiths: Introduction to Electrodynamics (3rd Edition)

2. Gupta and Kumar: Electromagnetics

Reference Books:

1.P. Lorrain and O. Corson: EM Waves and Fields

2.A. S. Mahajan and AA Rangwal: Electricity and Magnetism

PH 131 Physics Laboratory-I 0-0-4-2

Assignments are based on the course PH 111 and PH 141

PH 122 Thermodynamics and Statistical Physics 3-0-0-3

Thermodynamics: Reversible and irreversible processes, Carnot's cycle and Carnot's theorem, Second law of thermodynamics, Thermodynamic scale of temperature. [7]

Concept of entropy: Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram [8]

Thermodynamic functions, Internal energy, Enthalpy, Helmholtz function and Gibb's free energy, Maxwell's thermodynamical equations and their applications, TdS equations, Energy and heat capacity equations, Clapeyron equations, Adiabatic demagnetization, Third law of thermodynamics, Nernst heat theorem. [10]

Joule-Thomson effect, Thermodynamic analysis, Inversion temperature, Thermodynamic equations for a Vander Waals gas. Liquefaction of gases. Regenerative principle, Properties of liquid helium, Introduction to super fluidity [6]

Statistical Mechanics: State of a system (Microscopic and Macroscopic); Phase space, density of states and Liouville's theorem; Postulates of statistical mechanics; Relation between statistical and thermodynamic parameters. [8]

Text Books:

1. K.W. Zeemansky: Heat and Thermodynamics
2. BrijLal and N. Subramanyam.:Heat and Thermodynamics

Reference Books:

1. B.K. Agarwal: Thermal Physics
2. Frederick Reif : Fundamentals of Statistical and Thermal Physics
3. R.K. Pathria: Statistical Mechanics (2nd Edition):

PH 132 Oscillations and Waves 2-0-0-2

Oscillations: Simple harmonic oscillations, Differential equation of SHM and its solution, Amplitude, Frequency, Time Period and Phase, Velocity and acceleration. Kinetic, Potential and total energy and their time average values. Free oscillations of systems with one degree of freedom : (i) Mass-Spring system, (ii) Simple Pendulum, (iii) Torsional Pendulum, (iv) Compound pendulum (v) Bar Pendulum. [6]

Superposition of Two Collinear Harmonic Oscillations: Linearity and superposition principle. (i) Oscillations having equal frequencies and (ii) Oscillations having different frequencies (Beats). Superposition of N Collinear Harmonic oscillations [6]

Free Oscillations; Damped oscillations; Damping coefficient, Log decrement; Forced oscillations : Transient and steady states, Amplitude, Phase, Resonance, Sharpness of resonance, Power, Dissipation and Quality Factor. [7]

Waves: Plane and spherical Waves, Longitudinal and transverse waves, Plane progressive (Traveling) waves. Wave equation. Particle and wave velocities. Differential Equation. Pressure of a longitudinal wave. Velocity of waves : Velocity of transverse vibrations of stretched strings, Newton's formula for velocity of sound; Laplace's correction [7]

Text Books:

1. N.K. Bajaj: The Physics of Waves and Oscillations, Tata cGraw-Hill, 1988.
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Oscillations and Waves, CBC, Jaipur
3. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.

Reference Books:

1. A. P. French : Vibrations and Waves ,CBS Publications, 1987
2. BrijLal and N. Subramanyam: Waves and Oscillations

PH 132 Physics laboratory-II 0-0-4-2

Assignments are based on the course PH 122 and PH 132, etc.

PH 211 Semiconductor Physics and Electronics 3-0-0-3

Semiconductor Physics: Intrinsic and extrinsic semiconductors, P-N junction diode, Diode equation, depletion width and potential barrier, junction capacitance, I-V characteristics, Rectifier, ripple factors, filter circuits, efficiency and percentage regulation, LED, photodiode. [9]

Electronics : Transistor circuits, Input, Output characteristics and CB and CE modes, DC load line, operating point, biasing and bias-stabilization circuits: Transistor as an amplifier (CE mode) and frequency response. [6]

Hybrid parameter: Analysis of transistor amplifier (with and without load) using h- parameters, simplified hybrid model, brief idea about hybrid model Single stage amplifier in CE,CB and CC modes. RC coupled CE amplifier and its frequency response, tuned voltage amplifier. Power amplifier classification, distortion and efficiency, push pull amplifier [10]

Feedback in amplifiers: Positive and negative feedback, effect of negative feedback on the characteristics of different types of amplifiers, voltage and current series feedback circuits. Field effect transistors, I-V Characteristics of JFET and MOSFET, FET biasing, FET as an amplifier. [8]

Digital Electronics: Diode and transistor equivalent circuits of basic and derived gates, Universal gates, X-OR and equivalence. Simplification of Boolean expressions using K- maps. Sequential circuits, Flip flops. [6]

Text Books:

1. Millman and Halkias: Integrated Electronics:
2. Chattopadhyay and Rakshit: Electronics Fundamental and Application

Reference Books:

1. Malvino and Leach: Principle of Digital Electronics:
2. Gupta and Kumar: Hand book of Electronics

PH 221 Optics and Lasers 3-0-0-3

Interference: Young's experiment, Conditions for sustained interference, Theory of interference, Fresnel's biprism, Determination of wavelength of light, Interference in parallel and edge shaped films, Colour of thin films. Newton's rings determination of wavelength of light, Michelson interferometer and their applications. [10]

Diffraction: Definition, Frenel's diffraction, Zone plate, diffraction due to straight edge. Fraunhoffer diffraction due to single and double slits, Plane transmission grating and its resolving power. [10]

Polarization: Polarized light and its mathematical representation, Polarization by double refraction and Huygen's theory, Nicol prism, Retardation plates, Production and analysis of circularly and elliptically polarized light, Optical activity. [9]

Lasers: Einstein's A and B coefficients, Spontaneous and Stimulated conditions for laser action population inversion, optical pumping, Working of different types of lasers: semiconductor, rubey and He-Ne Lasers. [10]

Fiber optics: Working, Numerical aperture

Text Books:

1. N. Subrahmanyam, Brijlal and M. N. Avadhanulu: A textbook of Optics
2. A.Ghatak: Optics, Tata McGraw-Hill

Reference Books:

1. B. K. Mathur and T. P. Pandya: Physical Optics

PH 231 Physics laboratory-III 0-0-4-2

Assignments are based on the course PH 211 and PH 221

PH 212 Mathematical Physics and Special Theory of Relativity 3-1-0-4

Curvilinear Coordinates: Orthogonal curvilinear coordinate systems, scale factors, expression for grade, divergence, curl and their application to Cartesian, circular cylindrical and spherical polar coordinate systems. [9]

Coordinate transformation and Jacobean, Transformation of covariant, contra variant and mixed tensor. Addition, multiplication and contraction of tensors. Metric tensor and its use in transformation of tensors [7]

Dirac-delta function and its properties. Lorentz transformation and rotation in space-time, time like and space like vectors, world line, and macro-causality [6]

Four vector formulation: energy- momentum Four vector, relativistic equation of motion invariance of rest mass, orthogonality, four force and four velocity, Lorentz force as an example of four force transformation of four frequency vector, longitudinal and transverse Doppler's effect. [12]

Transformation of electric and magnetic fields between two inertial frame

Differential Equations: The second order liner differential equation with variable coefficient and singular points, series solution method and it application to the Hermite's Legendre's and Laguerre's differential equation. Basic properties (without proof) like orthogonality, recurrence relation, Graphical representation and generating functions of Hermite, Lagendre, Leguerre and Associated Legendre functions (very simple application) [13]

Fourier Analysis: Fourier theorem, Fourier analysis of square wave, saw-tooth wave, plucked strings, half wave/full wave rectifier wave forms [5]

Text Books:

1. George Arfken: Mathematical Method for Physicists (Academic Press).
2. S.L.Kakani, C. Hemrajani, T.C. Bansal: Mathematical Physics and Special Theory of Relativity, CBC, Jaipur
3. D. E. Bourne, P C Kendall: Vector Analysis and Cartesian Tensors, 3ed (Chapman & Hall, 1992)

Reference Books:

1. A.P. French: Special Relativity
2. P. K. Chattopadhyay: Mathematical Physics.

3. Gupta and Kumar: Mathematical physics

PH 222 Physics Laboratory IV 0-0-4-2

Assignments are based on Course PH 211 etc.

PH 311 Quantum Mechanics and Spectroscopy 3-1-0-4

Failure of Classical Physics: Black body radiation (without derivation), Photoelectric effect, Compton effect Wave Packets and Uncertainty Relation: de-Broglie hypothesis, Wave-particle duality, Wave packets, Group velocity and phase velocity, Uncertainty principle. [10]

Wave Mechanics: Schrödinger equation, Physical interpretation of wave function, Probability current density and conservation of probability, Free particle wave function, Schroedinger equation in the presence of a potential, Linear operators, Hermitian operators, Observables, Eigenvalues and Eigenfunctions, Expectation values, Ehrenfest's theorem, Commutation relations [15]

Schrödinger Wave Equation and Applications: Particle in one dimensional Box, Square well, Rectangular potential barrier and tunneling, Linear harmonic oscillator, Spherically symmetric potential, Angular momentum operators and their eigen functions, Concept of spin, Hydrogen atom. [12]

Spectroscopy: Quantum futures for spectra of single valence electron atom: Orbital magnetic dipole moment, Orbital, spin and total angular momentum, Larmor precession, Vector model of atom, Electronic configuration and atomic states, Spin-orbit interaction and fine structure, Intensity of spectral lines, General selection rules. Zeeman Effect, Two valence electron atoms: LS and JJ coupling schemes and resulting spectra, Idea of normal and inverted doublets. [15]

Text Books:

1. V. Devanathan:Quantum Mechanics
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Elementary Quantum Mechanics and Spectroscopy, CBC, Jaipur

Reference Books:

1. Loknathan and Ghatak:Quantum Mechanics
2. S. Gasiorowicz: Quantum Physics
3. B. H. Bransden and C. J. Joachain: Quantum Mechanics:
4. H.E. White, Introduction to Atomic Physics
5. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol VIII.

PH 331 Electromagnetic Theory 4-0-0-4

1. **Maxwell's Equations:** Concept of Displacement Current, Vector and Scalar Potentials, Boundary Conditions at boundary of different media, Wave equations and plane waves in Dielectric media, Poynting Theorem, Physical concept of Electromagnetic field, Energy density, Momentum density. [8]

2. **Reflection and Refraction of EM Waves:** Reflection and refraction of a plane wave by interface between dielectrics, Fresnel Formulae, Total internal reflection, Brewster's angle, Waves in conducting media, Metallic reflection for normal incidence. [10]

3. **Plasma and Ionosphere:** Concept of skin depth, Microscopic media (Plasma) and Maxwell's equations, Plasma frequency, Refractive index, Conductivity of an ionized Gas, Propagation of e.m. waves through Ionosphere. [12]

4. **Polarization of EM Waves:** Different types of polarizations (Linear, Circular and Elliptical), e.m. Fresnel's formula, Uniaxial and biaxial crystals, Polarization by double refraction, Nicol Prism, Ordinary and Extraordinary Refractive indices, Phase retardation plates: Quarter-Wave and Half-Wave Plates, Analysis of Polarized Light, Polarimeter. [10]

5. **Rotatory Polarization:** Optical rotation, Biot's Laws for Rotatory Polarization, Fresnel's Theory of Optical Rotation, Experimental verification of Fresnel's Theory, Specific Rotation, Laurent's Half-Shade Polarimeter. [8]

6. **Fiber Optics:** Planar Optical Wave Guides, Propagation through optical fiber, Types, Numerical aperture, Modes of Propagation (Basic Concepts only). [4]

Text Books:

1. A.Z. Capri and P.V. Panat: Introduction to Electrodynamics, Narosa Pub. House, New Delhi, 2002
2. David J. Griffiths: Introduction to Electrodynamics, 3rd Edition, Benjamin Cummings 1998
3. J. D. Jackson: Classical Electrodynamics, 3rd Edition, Wiley, New York, 1998
4. M. Lifshitz and L. D. Landau: Classical Theory of Fields (Course of Theoretical Physics), 2nd Edition, Pergamon Pr., 1981.

Reference Books:

1. Joseph A. Edminister: Electromagnetics, 2nd Edition, Tata

McGraw Hill, New Delhi, 2006.
2. M.A.W. Miah: Fundamentals of Electromagnetic, Tata McGraw Hill,1992
3. Liang Chi Shen, Jin Au Kong: Applied electromagnetism, PWS Pub. Co., 1995.

PH 341 Atomic and Molecular Physics 4-0-0-4

1. **Atomic Physics:** Spectra of Hydrogen, Deuteron and alkali atoms spectral terms, doublet fine structure, screening constants for alkali spectra for s, p, d and f states, selection rules. [7]

2. **Earth Spectra:** Singlet and triplet fine structure in alkaline earth spectra [5]

3. **Week spectra:** continuous X-ray spectrum and its dependence on voltage, Duane and Hunt's law. Characteristic X rays, Moseley's law, doublet structure of X-ray spectra, X-ray absorption spectra. [8]

4. **Molecular Physics:** Discrete set of electronic energies of molecules, quantization of vibrational and rotational energies, determination of internuclear distance, pure rotational and vibrational spectra. [10]

5. **Vibration Spectra**: Dissociation limit for the ground and other electronic states, transition rules for pure vibration and electronic vibration spectra. [6]

6. **Raman Effect:** raman Effect, Stokes and anti-Stokes lines, complimentary character of Raman and infrared spectra, experimental arrangements for Raman spectroscopy. [8]

7. **Spectroscopic Techniques**: Sources of excitation, prism and grating spectrographs for visible, UV and IR, absorption spectroscopy, double beam instruments. [8]

Text Books:

1. Robert Eisberg and Robert Resnick: Quantum Physics of Atoms, Molecules, Solids, Nuclei, and Particles, John Wiley & Sons Inc, 1985

2. H.E. White: Introduction to Atomic Spectra, McGraw-Hill book company, Inc.

3. C.N. Banwell: Molecular Spectroscopy, Tata-McGraw Hill Publishers, New Delhi, 1993

Reference Books:

1. R.C. Johnson: Introduction to Molecular Spectra, Pitman Publishing Corp., New York, 1949
2. D. P Khandelwal : Optics and Atomic Physics, Shiva Lai Agarwala & Company, Educational Publisher, 1973
3. Arthur Beiser: Concepts of Modern Physics, McGraw-Hill Book Company, 1987.

PH 351 Elements of Classical Mechanics 2-0-0-2

1. System of particles, Constraints, Generalized coordinates, D'Alemberts principle and Lagrange's equation, Velocity dependent potential of electro-magnetic field. [10]

2. Calculus of Variation, Hamilton's principle, Lagrange's equation, Lagrangian for simple systems, Cyclic coordinates, symmetries and conservation laws. [6]

3. Advantages of Lagrangian: electro-mechanical analogies, Lagrange's undetermined multipliers, Lagrange's equation for nonholonomic systems, Virial theorem, Principle of mechanical similarity. [10]

Text Books

1.H. Goldstein: Classical Mechanics: 3rd Edition, Addison-Wesley Pub, 2001

2. L . D. Landau and E. M. Lifshitz: Classical Mechanics: A Course of Theoretical Physics, Vol.1, 3rd Edition , Pergamon Press, 1976.

3. K. C. Gupta: Classical Mechanics of Particles and Rigid Bodies, Wiley Eastern, New Delhi, 1988

Reference Books:

1. R. G. Takwale and Puranik: . Introduction to Classical Mechanics, 24th Edition, Tata-McGraw Hill, New Delhi, 1991

2. N. C. Rana and P. Joag: Introduction to Classical Mechanics, Tata McGraw Hill, 1992.

PH 361 General and Optics Based Laboratory 0-0-4-2

Assignments are based on the course PH 341,etc

PH 371 Electronics Laboratory 0-0-4-2

Assignments are based on the course PH 331,etc

PH 342 Solid State Physics 3-0-0-3

1. **Structure**: Crystal structure, periodicity, lattices and bases, fundamental translational vectors, unit cell, lattice types, Bravais lattices, Miller indices for direction and planes, Common crystal structures like NaCl, ZnS and Diamond; Close packed structures, Lau theory of X-ray diffraction, X-ray diffraction, Bragg's law. [9]
2. **Bonding**: Potential between a pair of atoms, concept of cohesive energy, covalent, Vander Waals, ionic and metallic Crystals, reciprocal lattice, Brillouin Zones [6]
3. **Thermal Properties**: Lattice vibrations, Vibrational modes of continuous medium, Debye's model: lattice specific heat, Phonons, Density of states. [7]
4. **Electronic Properties**: Free electron gas, Electrons in periodic potential, Kronig-Penny model, Bloch theorem, energy bands, metals, insulators and semiconductors; Hall Effect, Fermi surface [10]
5. **Magnetic Properties**: Magnetic moment, magnetic susceptibility, Dia-, Para and Ferromagnetism, Ferromagnetic domains. [7]

Text Books:

1. C. Kittel: Solids State Physics, 6th edition, John Wiley & Sons, NY, 1986
2. R. L. Singhal, Solid state Physics, KNRN Pub., Meerut, 1998

Reference Books:

1. Decker: Solids State Physics, Prentice-Hall, New York, 1962
2. Azarof: .Introduction to Solids, Mc-Graw-Hill Book Co., Inc.
3. S.O. Pillai, Solid State Physics, 6th Edition, New Age International Pub, 2005.

PH 352 Nuclear and Particle Physics 4-0-0-4

1. **Nuclear Structure**: Properties of Nuclei and Models, Introduction to the nucleus, Fermi gas model, Deutron Binding energy, Semiemperical mass formula, Mass diffect, Packing fraction and its application to explain most stable isobars and nuclear fission, Magnetic dipole moment, quadrapole moment, angular momentum, Effect of mass number on size of nucleus Condition of stability for isobars. [9]

2. **Nuclear Models**: Liquid drop model, fission and potential barrier, N-N and P-P chains, Nuclear reactors, Nuclear fission and fusion. [6]

3. **Nuclear Force and Two-Nucleon System:** Properties of nucleon-nucleon interaction, General forms of nucleon- nucleonpotential, Neutron-proton scattering for low energies: scattering length, Ground state properties of deuteron, Simple consideration of deuteron using central potential (square well). [10]

4. **Nuclear Stability:** Nucleon emission, separation energy, Alpha decay and its energy spectrum, WKB Approximation, Beta decay and its energy spectrum (for example,137Cs), Need for neutrinos, Q-values, Gamma decay, Parity and Selection rules for gamma transitions (no derivation). [10]

5. **Accelerators and Detectors**: Cyclotron, Betatron, Van de Graaff and Linear accelerators, Synchrotrons, Geiger-Mueller detector, Scintillation detector. [5]

6. **Elementary Particles**: Properties of particles, classification in to leptons mesons and baryons, matter and antimatter, conservation laws (qualitative discussion), energy, momentum, angular momentum, charge, lepton number, Baryon number, Isospin, strangeness. [5]

7. **Classification of Particles:** Interactions, Quantum numbers, Quarks as the building blocks of hadrons, Colour degree of freedom. [7]

Text Books:

1. S. S. M. Wong: Introductory Nuclear Physics, 2nd Edition, John Wiley & Sons, New York, 1998
2. D.C. Tayal, Nuclear Physics, Himlaya Publishing House, 5th Ed, 1992
3. S.L.Kakani, C. Hemrajani, T.C. Bansal, Nuclear Physics, CBC, Jaipur, 2005
4. S. N. Ghosal: Nuclear Physics, S. Chand Limited, 1997

Reference Books:

1. B. L. Cohen: Concepts of Nuclear Physics, Tata McGraw-Hill New Delhi, 1971
2. H.A. Enge, Introduction to Nuclear physics, Addison Wesley, Publishing company, Inc. New York, 1 974
3. A. Bieser, prospective of Modern Physics, 22nd Reprint, Tata McGraw-Hill, New Delhi, 2008

PH 362 Statistical Mechanics 4-0-0-4

1. **Random Walk Problem:** Probability distribution, Mean and Dispersion and Simple Numerical Problems. [8]

2. **Basic Concepts of Statistical Physics**: Entropy and thermodynamic probability, Ensemble theory, partition function, applications to classical ideal gas, Gibbs paradox; Statistical equivalence of three ensembles. [7]

3. **Classical Theory of Radiation:** Properties of Thermal Radiation, Blackbody Radiation, Stefan-Boltzmann Law and Wien's Displacement law. [6]

4. **Quantum Nature of Radiation:** Planck's Postulates. Planck's Law and Blackbody Radiation, Experimental Verification. Derivations of Wien's Distribution Law, Rayleigh-Jeans Law from Planck's Law. [8]

5. **Bose-Einstein's Condensation:** B-E Distribution law, Completely Degenerate Bose Gas, Bose-Einstein condensation, Properties of liquid He, Radiation as photon gas. [10]

6. **Fermi-Dirac Statistics:** F-D Distribution Law, ideal completely Degenerate Fermi Gas and Thermodynamic functions, Fermi Energy, Electron gas in a metal, Specific Heat of Metals. Maxwell-Boltzmann statistics as a classical limit, Comparison of the three statistics, White Dwarf Stars, Chandrasekhar Mass Limit. [13]

Text Books:

1. Frederick Reif: Fundamentals of Statistical and Thermal Physics, Waveland Press 2009
2. R. K. Patharia: Statistical Mechanics, Oxford: Butterworth, 1996
3. K. Huang: Statistical Mechanics, Wiley, 1987 .

Reference Books:

1. S. Lokanathan and R.S. Gambhir: Statistical and Thermal Physics: an introduction, P.H.I., 1991
2. F. Reif: Statistical Physics, Berkeley Physics Course Volume 5, Tata McGraw-Hill Company Ltd, 2008

PH 372 Basics of Nano-Science and Exotic Materials 3-0-0-3

1. **Physics for Nano-Science:** Electron Band Structure and Its Modification due to change in dimensionality. Phonon absorption in Nanomaterials. [6]

2. **Basic Concepts of Nanomaterials:**Physical, Chemical and Bio-routes for Synthesis of Nanomaterials (basic idea), Metal Nanoparticles, Carbon Nanostructures, Electronic Properties of Nanomaterials, Nano photonics, Some applications of Nano Materials. [15]

3. **Introduction to Exotic Materials:** High Temperature Superconductors and Colossal Magnetoresistance Materials. Meissner Effect, Discovery of HTSC Materials, Structure and Properties, Elements of Proposed Mechanisms of high temperature superconductivity, Elementary Concepts of CMR Materials, Some Application of CMR materials. [14]

4. **Quasicrystals:** Basic definition of quasicrystal and Structure of Quasicrystals. [4]

Text Books:

1. C.P. Poole and F.J. Owens: Introduction to Nanotechnology, John Wiely & Sons, NJ, 2003

2 .C.M. Niemeyer and C.A. Mikin: Nanobiotechnology : Concepts, Applications and Perspectives, John Wiley & Sons, NJ, 2004

Reference Books:

1. Charles Kittel: Introduction to Solid State Physics, 5thEdition, John Wiley & Sons, NY, 1986.

PH 382 Solid State and Nuclear Laboratory 0-0-4-2

Assignments are based on the course PH 342, PH 352, etc

PH 392 Optoelectronics Laboratory 0-0-4-2

Combined Assignments are based on Lasers, Optical Fibers, PH 341, etc.

Mathematics

MS 111 Calculus 3-0-0-3

Curvature: Curvature, Radius of curvature for Cartesian curves, parametric curves, Polar curves and Pedal curves, Centre of curvature. Circle of curvature, Chord of curvature, Tests for concavity and convexity, Points of inflexion, Multiple points. [8]

Asymptotes and Curve Tracing:: Asymptotes in Cartesian and polar coordinates, Intersection of a curve with its asymptotes**, a**pplication of differential calculus in curve sketching in Cartesian and polar co-ordinates. [8]

Differentiation: Partial differentiation, Euler's theorem for homogeneous functions,Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers. [8]

Integral Calculus:*:* Double integrals in Cartesian and polar coordinates, Change of order of integration, Triple integral, Applications of double and triple integrals in finding areas and volumes. [8]

Vector Calculus: Gradient, Divergence and Curl. Greens, Stokes and Gauss Theorems (without proof) and problems based on these theorems. [7]

Text Books:

1. Thomas and Finney: Calculus and Analytic Geometry, Ninth Edition.
2. Shanti Narayna : A Text Book of Vector Calculus. S. Chand & Co., New Delhi.

Reference Books:

1. N. Saran and S.N. Nigam: Introduction to Vector Analysis, Pothishala Pvt. Ltd., Allahabad.
2. Differential and Integral Calculus: Shanti Narayan.
3. D. C. Gokhroo, Differential Calculus, Navkar Prakashan.
4. N. Piskunov: Differential and integral Calculus. Peace Publishers, Moscow.
5. Gorakh Prasad: Differential Calculus. Pothishasla Pvt. Ltd., Allahabad.
6. Gorakh Prasad: Integral Calculus. Pothishala Pvt. Ltd., Allahabad.

MS 121 Matrices and Theory of Equations 3-0-0-3

Matrix: Matrices, Symmetric, Skew symmetric, Hermitian and skew Hermitian matrices. Elementary Operations on matrices Rank of a matrices, Inverse of a matrix. Linear dependence and independence of rows and columns of matrices, Row rank and column rank of a matrix, Eigenvalues, eigenvectors and the characteristic equation of a matrix, Cayley Hamilton theorem and its use in finding the inverse of a matrix [13]

Applications of Matrices: Applications of matrices to a system of linear (both homogeneous and non–homogeneous) equations. Theorems on consistency of a system of linear equations. Unitary and Orthogonal Matrices, Bilinear and Quadratic forms [9]

Theory of Equations: Relations between the roots and coefficients of general polynomial equation in one variable, Solutions of polynomial equations having conditions on roots. Common roots and multiple roots. Transformation of equations. [9]

Solution of equations: Nature of the roots of an equation, Descarte's rule of signs. Solutions of cubic equations (Cardon's method). Biquadratic equations and their solutions . [8]

Text Books:

1. Higher Algebra: A. Kurosh (Moscow Mir Publisher 1972).
2. Theory of Equations: (Lecture notes for inter University Leadership project in Mathematics by R.N. Gupta, Surjeet Singh and R.J. Hans.

Reference Books:

1. H.S. Hall and S.R. Knight: Higher Algebra, H.M. Publications 1994.
2. Shanti Narayan: A Text Books of Matrices.
   Chandrika Prasad: Text Book on Algebra and Theory of Equations.
   Pothishala Private Ltd., Allahabad.

MS 112 Abstract Algebra 3-0-0-3

Group: Algebraic structure**,** Definition of a group with examples and simple properties, Abelian group, semi group, Order of an element of a group, Cyclic groups, Coset decomposition. [11]

Subgroup and quotient Groups: Subgroups, Normal subgroups, Normalizer of an element, Quotient group [10]

Group Morphism: Homomorphism, kernel of homomorphism, Isomorphism and automorphism, Fundamental theorem of Homomorphism, Cayley's theorem. [10]

Permutations: Definition and examples of Permutation, group of permutations, Cyclic Permutation, Even and odd permutation. [8]

Text Books:

1. I.N.Herstein: Topics in Algebra, 2nd edition, Wiley Eastern Ltd. 1988.
2. P.B.Bhattacharya, S.K.Jain and S.R.Nagpaul: Basic Abstract Algebra, 2nd Edition, Cambridge University Press 1995.

Reference Books:

1. J.B.Fraleigh : A first course in Abstract Algebra, 3rd Edition Addison-Wesely/Narosa 1998..
2. Surjeet Singh and QuaziZameeruddin : Modern Algebra, Revised Edition,Vikas Publishing House, 1992.
   D. C. Gokhroo: Algebra, Navkar publication, Ajmer, Revised Edition , 2005.

MS 122 Differential Equations-I 3-0-0-3

Basic Concepts: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines. [4]

First Order Differential Equations: Differential equation of first order and first degree, Homogeneous form and reducible to homogeneous form, Linear equations and equations reducible to linear form, Exact differential equations, Equations reducible to exact forms, First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations, Equation reducible to Clairaut's form. [14]

Second order differential equations: Second order differential equations with variables coefficients, Homogeneous and exact forms, Change of dependent equations, change of independent variables, normal form, Method of variation of Parameters [12]

Series Solution: Regular singular points, ordinary points, , series solution of second order linear differential equations with variable coefficients(Complementary Functions only) [9]

Text Books:

1. D.A. Murray : Introductory Course in Differential Equations. Orient Longaman (India) . 1967
2. A.R.Forsyth : A Treatise on Differential Equations, Machmillan and Co. Ltd. London

Reference Books:

1. D. C. Gokhroo : Ordinary Differential equations, NavkarPrakashan.

2. S.L.Ross: Differential Equations, John Wiley & Sons
   B.Rai& D.P. Chaudhary : Ordinary Differential Equations; Narosa, Publishing House, Pvt. Ltd.

MS 211 Linear Algebra 3-0-0-3

Vector Space: Vector spaces, subspaces, Sum and Direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space. Finitely generated vector space, Existence theorem for basis of a finitely generated vactor space, Finite dimensional vector spaces, Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension [12]

Linear transformations: Linear transformations and linear forms on vactor spaces, Vactor space of all the linear transformations, Kernal and range of a linear transformation, Rank and Nullity, Matrix of a Linear Transformation, Change of basis. [10]

Dual Spaces: Dual Spaces, Dual Basis, Bidual Spaces, annihilator of subspaces of finite dimentionalvactor spaces. [9]

Inner Product Space: Inner produt space, norm of a vector, Orthogality. [8]

Text Books:

1. I.N. Herstein : Topics in Algebra, Wiley Eastern Ltd., New Delhi, 1975
2. P.B. Bhattacharya, S.K. Jain and S.R. Nagpal : Basic Abstract Algebra (2^{nd} edition).

Reference Books:

1. VivekSahai and VikasBist : Algebra, Narosa Publishing House.
2. I.S. Luther and I.B.S. Passi : Algebra, Vol.-II, Narosa Publishing House.
   D. C. Gokhroo : Linear Algebra, NavkarPrakashan.

MS 221 Differential Equations-II 3-1-0-4

Partial Differential equations: Formation, order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, singular solution, General solution, Solution of Lagrange's linear equations, Charpit's general method of solution. [13]

Second and higher Order PDE: Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant co-efficients, Partial differential equation with variable co-efficients reducible to equations with constant [14]

coefficients, their complimentary functions and particular Integrals, Equations reducible to linear equations with constant co-efficients.

Solution of Second order PDE: Classification of linear partial differential equations of second order, Hyperbolic, parabolic and elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method. [12]

Text Books:

1. Ian N. Sneddon : Elements of Partial Differential Equations, McGraw-Hill Book Company, 1988.
2. S.B. Rao and H.R. Anuradha : Differential Equations, University Press, 1996.

Reference Books:

1. W.T.H. Piaggio : Elementary Treatise on Differential Equations and their applications, CBS Publishers N.Delhi,1985.
2. D.A.Murray: Introductory Course on Differential Equations, Orient Longman, (India), 1967
3. Erwin Kreyszing : Advanced Engineering Mathematics, John Wiley & Sons, Inc. New York, 1999
4. Frank Ayres : Theory and Problems of Differential Equations, McGraw Hill Book Company, 1972
   J.N. Sharma &Kehar Singh : Partial Differential Equations

MS 212 Numeric Analysis 3-1-0-4

Interpolation: Interpolation with equal intervals: Newton's forward and Newton's backward interpolation formulae. Newton's divided difference, Lagrange's Interpolation formulae. [10]

Central Differences: Gauss forward and Gauss's backward interpolation formulae, Sterling, Bessel Formula. [8]

Iterative Methods: Newton Raphson Method, Successive Bi-Section, RegulaFalsi, Successive Approximation Method. [11]

Numerical Methods: Newton-Cote's Quadrature formula, Trapezoidal rule, Simpson's one-third and three-eighth rule, Picard method, Euler method, Runge-Kutta Methods. [10]

Text Books:

1. Babu Ram: Numerical Methods, Pearson Publication.
2. R.S. Gupta, Elements of Numerical Analysis, Macmillan's India 2010.

Reference Books:

1. M.K. Jain, S.R.K.Iyengar, R.K. Jain : Numerical Method, Problems

and Solutions, NewAge International (P) Ltd., 1996

Chemistry

CH 181 Physical and Inorganic Chemistry-I 2-0-0-2

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective nuclear charge. **[5]**

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule-Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

2. The elements of Physical Chemistry, P.W. Atkins, 4thEdition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I 2-0-0-2

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer compounds and field effects. **[5]**

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogeniccentre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogeniccentresdiastereomers, threo and erythrodiastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation,Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivityin alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes- mechanisms involved in hydrogenation, electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration- reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I 3-0-0-1.5

Experiments based on the contents of CH 181 and CH 191.

CH 182 Physical and Inorganic Chemistry-II 2-0-0-2

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphurtetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D. Tuli&ArunBahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand &Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.

6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand& Co .Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 192 Organic Chemistry-II 2-0-0-2

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed.

2007, S. Chand & Co. Ltd.

3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II 3-0-0-1.5

Experiments based on the contents of CH 182 and CH 192.

CH 291 Physical Chemistry-I 2-0-0-2

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU&dHfor the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A &G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it. Concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. Expression for the rate constant based on equilibrium constant and thermodynamic aspects. **[11]**

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I 2-0-0-2

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series: General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. **[7]**

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 18th Ed. 2009, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand &Co.Ltd.

CH 223 Organic Chemistry-III 2-0-0-2

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and hypochromic shifts, UV spectra of conjugated enes and enones. **[6]**

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-

.

Hoesch reaction, LedererManasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel'smethod. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 20th Ed. 2008, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III 3-0-0-1.5

Experiments based on the contents of CH 291, CH 213 and CH 223.

CH 272 Physical Chemistry-II 2-0-0-2

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibriaof one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point (NaCl-H_2O), ($FeCl_3$-H_2O) and ($CuSO_4$-H_2O) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-HCl-H_2O and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications.

[10]

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorfand moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometrictitrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using hydrogen quinhydrone and glass electrodes. **[12]**

Chemical Equilibrium: Equilibrium constant and free energy. Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, Clausius-Clapeyron equation and their applications. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 5th Ed. 2004, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S.

Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II 2-0-0-2

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand &Co.Ltd.

CH 292 Organic Chemistry-IV 2-0-0-2

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagelcondensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic). **[6]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV 3-0-0-1.5

Experiment based on the contents of CH 272, CH 282 and CH 292.

Computer Science

CA 121 Programming Concepts using C Language 3-0-0-3

Development of Algorithms and Flowcharts: Importance, Symbols and Structure. [5]

Structure: Basic Structure of C Program, Constant, Variable, Data Types, Data Declaration, Operations (Arithmetic, Relational, Logical), Increment and Decrement Operators, Assignment Operator, Precedence of Arithmetic Operators, Operator Expression, Type Conversions in Expressions, Assignment Statements. [8]

Control Structure: Input and Output using getchar and putchar, Printf, Scanf Functions, Condition Statements, Simple if- else, Switch, Concept of Loop (While, For, Do-While), Break and Continue. [8]

Array: One Dimensional Array, Iterative Programs, 2-D Arrays, Matrix Operations. [5]

Concept of Sub Programming: Functions, External Variable Scope Rules, Header Files, Static Variables, Parameter Passing (Call By Values And Call By Reference), Recursion, C Preprocessor, Pointers. [7]

Advanced C concepts: Structure, Union, Argument Passing Using Pointer, Array of Pointers. [6]

CA 151 C Language Laboratory 0-0-4-2

Assignments are based on the Course CA 121 Programming Concepts Using C Language.

CA 122 Data Structure Through C 3-0-0-3

Introduction: Concept of Data Structure, Types of Data Structure. [3]

Array: Representation of Single and Multidimensional Array. [2]

Stack and Queue: Introduction and Primitive Operations on Stack: Stack Application; Infix, Postfix, Prefix Expressions, Evaluation of Postfix Expression, Conversion from Infix to Postfix (Algorithms only), Introduction and Primitive Operations on Queues. [9]

Sorting Techniques: Insertion Sort, Selection Sort, Merge Sort and Quick Sort. [7]

Searching Techniques: Linear Search, Binary Search. [6]

List: Introduction to Linked List, Sequential and Link Lists Operation such as Traversal, Insertion, Deletion, Searching. [8]

Tree: Introduction and Terminology, Traversal of Binary Trees, Recursive Algorithms for Tree Operation (Concept). [4]

Text Books:

1. Schaum Series, “Data Structures”,TMH, New Delhi
2. Langsam , Augenstein, Tannenbaum, “Data Structure Using C and C++”, PHI,

Reference Books:

1. Horowithz and Sahani, “Fundamentals of Data Structure”, Galgotia Book Source Pvt. Ltd.
2. Kanitker Y., “Let us C”, BPB Publication New Delhi
3. Balagurusamy E , “Programming in C”, TMH, New Delhi
4. Schaum Series, “Programming in C”, TMH, New Delhi

CA 112 Operating System 3-0-0-3

Introduction: Various Categories of Software, Operating System and its functions, Types of Operating Systems, Structure of Operating System. (Case study of Unix, DOS). [4]

Process Management: Process Concept, ProcessStates, Process Control Block, Interprocess Communication, and Scheduling Algorithms, Performance Evaluation. [7]

DeadLock: Deadlock Characterization, Prevention, Avoidance, Detection of Deadlock, SafeState, Banker’s Algorithm. [7]

Memory Management: Swapping, Memory Allocation Schemes, Paging, Segmentation, Virtual Memory Concept, Page Replacement Algorithms. [6]

File Management: Directories, File System Implementation, Allocation Methods, Free Space Management. [6]

Device Management: Disk Structure, Disk Scheduling, Disk Management Control of Various Devices, Device Drivers, Interrupt Driven and Poll Driven Data Transfer. [5]

Security and Protection Mechanism: Computer Security classification, Authentication, System threats, Goals of Protection, Access Matrix. [4]

Text Books:

1. Silbersachatz and Galvin, “Operating System Concepts”, Pearson Education.
2. Tannenbaum, “Operating Systems”, PHI, New Delhi

Reference Books:

1. William Stalings, “Operating Systems”, New Delhi
2. Ritchie, “Operating System”, BPB Publication , New Delhi
3. Dhamdhere D. M. “System Programming and Operating System”, TMH New Delhi
4. Achyut S Godbole, “Operating Systems”, TMH, New Delh

CA 162 Data Structure Laboratory 0-0-4-2

Assignments are based on the Course CA 122 Data Structure through C.

CA 241 Object Oriented Programming through C++ 3-0-0-3

Introduction: Structured Programming vs. Object Oriented Programming, Basic Concepts (Encapsulation, Information Hiding, Inheritance, Polymorphism), Difference Between C and C++. [4]

Basics of C++: Token, Keyword, Identifiers, Basic Data Type, User Define Data Type, Type Compatibility, Declaration of Variables, Dynamic Initialization of Variables, Reference Variables, Scope Resolution Operators, Member Referencing Operators, Operator Precedence, Control Structures. [8]

Function: Definition, Function Prototype, Call By Reference, inline Function, Function Overloading. [8]

Classes and Objects: Classes, Defining Member Function, Private, Public and Protected Member Elements and Function, Static Data Member, Static Member Function, Array Object, Constructors, Destructors, this Pointer, Operator Overloading, Comparison Between Structures and Classes, Copy Constructor, Dynamic Constructor, Friend Function, Friend Classes. [8]

Inheritance: Introduction, Derived Classes, Types of Inheritance (Single Inheritance, Multiple, Hierarchical, Hybrid), Virtual Base Classes, Abstract Classes. [6]

Virtual Functions: Introduction to Virtual Function, Virtual Function in Derived Classes, Overview of Exception Handling. [5]

Text Books:

1. KanitkerYashwant, “Let Us C++”, BPB Publication, New Delhi
2. GopalVenu, Rajkumar , Ravishanker, “Mastering C++” , TMH, New Delhi

Reference Books:

1. HerbertsSchildt, “C++ The Complete Refernce”, TMH, New Delhi.
2. Lafore R, “Object Oriented Programming Using C++”, GalgotiaPulications, New Delhi
3. Parasons D., “Object Oriented Programming With C++”,BPB, New Delhi
4. LaelorSteaven C., “The Art of Programming Computer With C++”, Vikas Publication.
5. Dietel&Dietal, “Introduction to C++”.

CA 231 Management Information System 3-0-0-3

MIS and Concept of Management: Elements, Characteristics, Need, Objectives, Importance, and Limitations, Relationship between MIS and Computer and Role of MIS in the Functions of Management. [9]

Information Concept: Classification of Information, Levels of Information, Techniques of Data Collection, Quality aspect of Information, Value of Information, Relation between MIS and Information. [6]

Decision Making: Decision Making Concepts, Rationality in Decision Making, Decision Support System, MIS as a Technique for Programmed Decisions, Model of Decision Making, Methods, MIS and Role of Decision Making. [6]

Manager and Computers: Database Concept, Database Models, Database Design, RDBMS, MIS and RDBMS, Introduction, Topology, LAN, MAN, WAN and Data Communication, Introduction to ERP. [5]

Typical Information Systems: MIS for Marketing, Financial, Production Management, Human Resource Management Information System. [6]

Development of MIS: Strategic and Project Planning for MIS, Conceptual System Design, Detailed Design, Implementation, Evaluation and Maintenance of the MIS. [7]

Text Books:

1. Murdick R G, Ross J E, Clagget J R, "Information Systems for Modern Management", PHI, New Delhi
2. Jawadkar, "Management Information System", TMH, New Delhi

Reference Books:

1. Sadagopan, "Management Information System"PHI, New Delhi
2. Parker, Case, Thomas, "Management Information System: Strategies and Action", TMH, New Delhi.

CA 271 Object Oriented Programming Laboratory 0-0-4-2

Assignments are based on the Course CA 241 Object Oriented Programming through C++.

CA 132 System Analysis and Design 3-0-0-3

System: Concept, Types and Characteristics, Elements, Computer based Information [5]

Systems, Candidate System, Role of System Analyst.

System Development Life Cycle: Recognition of Need, Feasibility Study, Design, Implementation and Maintenance, System Planning and Alternatives. [7]

Feasibility and Proposal: User and Management Involvement, Alternative Design Consideration, System Feasibility, The System Proposal. [5]

System Analysis: Effective Communication in System Analysis, Tools of System Analysis, Problem Definition, Classification of Data Collection and Analysis. [9]

System Cost Determination: Types of Costs/Benefits, System Cost and System Benefits and Data Processing Costs. [8]

Implementation: System Testing, Quality Assurance, Implementation and Software Maintenance. [5]

Text Books:

1. Awad Elias M, "System Analysis and Design", TMH, New Delhi
2. Hawayszkiewyez Igor, "Introduction To System Analysis and Design" PHI, New Delhi

Reference Books:

1. Mark Lejk& David Deeks "An Introduction To System Analysis Techniques" PHI, New Delhi
2. Jeffrey L Whitten & Lonnie, D Bentey, "System Analysis and Design Methods", TMH. New Delhi
3. Manish soni&SanjeevPatwa "System Analysis and Design" UBH Jaipur

CA 272 Computational Numerical Analysis Laboratory 0-0-4-2

Assignments are based on the Course Numerical Analysis.

Mody University of Science and Technology

College of Arts, Science and Humanities

BSc PCM
2017-18

Department of Science

B. Sc. (PCM/PMC)
Physics, Mathematics, Computer Science/ Chemistry
Three-Year Programme
Academic Curriculum (2012 – 13 onwards)
First Year

CW: *Course Work;* ***MTE:*** *Mid Term Examination;* ***ETE:*** *End Term Examination*

* *Course work (CW) would include regularity, evaluation of assignments, surprise tests, etc.*

Evaluation of proficiency will be based on the participation in extra-curricular/co-curricular activities.

$ *Evaluation of internship would comprise project report and viva-voce.*

Optional Courses

§ -***Chemistry courses***

¢ -**Computer Science**

Note: **1**.*The Programme includes two different combinations:*

(i) PCM (Physics, Chemistry and Maths) &

(ii) PMC (Physics, Maths and Computer Science)

2. *In addition to the compulsory courses, either all courses of* ***Chemistry Or Computer Science*** *may only be opted in each semester*

Overall Credits: Physics: 41; Mathematics:40; Chemistry: 41: Computer Science: 36 (+5)

Total Credits (With Chemistry as optional) 135
Total Credits (With Computer Science as optional) 130

Course Description

Compulsory Courses

EL 101 Foundation Course in English 2-0-0-2

Sentence Structure: Elements of a sentence (Subject, verb, object, complement and adjunct). [4]

Transformation of Sentence Structure: Degrees of adjectives, Active and Passive Voice (statement, negative, interrogative and imperative), Direct and indirect narration (statement, negative, interrogative and imperative). [4]

Correct Usage of Language: Tenses (Present, Past and Future), Modals (can, could, will, would, shall, should, may, might, must, ought to, need) Phrasal verbs, Determiners (a, an, the, little, a little, few, a few, much, more, most). [6]

Writing Skills: Theme (Paragraph) writing, Letter (formal, informal, business letters) and application writing, report writing, résumé writing. [4]

Common Errors in Effective Communication: How to avoid common sentence – structural errors, vocabulary and pronunciation. [4]

Reading Comprehension: Efficient reading and note taking. [4]

Suggested Books:

1. Hornby A.S.: A Guide to patterns and usage, Oxford University Press, UK.
2. Leech Geoffery: English Grammar for Today, Longman Publications, US.
3. Murphy and Reynold: Essentials of English grammar, Cambridge University Press, UK.
4. Wren and Martin: English Grammar & Composition, S.Chand& Co., NewDelhi.
5. Quirk and Greenbaum: University English Grammar, Longman Publications, US.
6. Sharma R.C. and Krishna Mohan: Business Correspondence and Report writing; Tata McGraw Hill Publications, New Delhi.

EV 111 Environmental Science 1-0-0-1

Introduction to Environment and Environmental Studies, its scope and importance [2]

Ecology and Ecosystems: Ecology- Objectives and Classification Components of ecosystem [2]

Natural Resources: Renewable and Nonrenewable resources. [2]

Human Population and Environment: Population Growth, World and Indian scenario [2]

Environmental pollution: Types of Environmental Pollution and cause , prevention of pollution [2]

Global Environmental Issues: Climate Change, Global Warming and Green House Effect [3]

Visit to a local area to document environmental assets

Suggested Readings:

Text Books:

1. Bharucha, E;.Environmental Studies; University Press, New Delhi
2. Sharma P.D; Ecology and Environment; Rastogi Publication, Meerut
3. Odum, EP; Fundamentals of Ecology, 5 ed., Cengage Learning.
4. Anderson, SH,Beiswenger RE, Purdom; Environmental Sciences, Paperback.

Reference Books:

5. Rastogi V.B. &Jayraj M.S.; Animal Ecology and Distribution of Animals, KedarNath Ram Nath Publication, Meerut
6. Kumar H.D; General Ecology; Vikas Publishing House Pvt. Ltd.,

3-0-0-3

CA 111 Fundamentals of Computers and Information Technology

Computer Concepts: Definition, Block Diagram and Applications in Modern Society, History, Types and Generations [3]

Functional Units of Computer Processing System: Hardware, CPU, Storage Devices and Media, VDU, Input/Output Devices, Data Communication Equipments, Information Concept and Processing-Data, Information, Knowledge and Wisdom [8]

Data Representation: Representation of Data, Bits and Bytes, Number System, Binary, Octal, Hexadecimal, Conversions, Arithmetic Operations in Binary Numbers, ASCII and EBCDIC, BCD Character Sets [6]

Software Concepts: Types of Software, Programming Language, Machine Language, Assembly Language, High Level Language, Generations of Language, Assembler, Interpreter, Compiler [6]

Operating System: Functions, System Call, Interrupts, Concept of Resource Manager, Batch Processing, Multiprogramming, Multiprocessing, Time Sharing and Real Time System, MS-DOS, MS-Windows [10]

Data Communication: The Basic Communication System, Data Transmission Modes-Simplex, Half Duplex, Full Duplex, LAN, MAN, WAN, Network Topologies [6]

Suggested Books:

1. Sinha P.K.; Fundamental of Computers; BPB Publication, Meerut.
2. Norton P; Introduction to Computers; Tata MacGraw Hill, New Delhi
3. Taxali R.K; PC Software for Windows; Tata MacGraw Hill, New Delhi.
4. Coutrer; Mastering Office 2000; BPB Publication,Meerut.
5. Introduction to Computer Science; Pearson Education, Singapore.
6. Rajaraman V.; Introduction to Computer; PHI,India.

CA 141 Application Software Laboratory **0-0-4-2**

Assignments are based on the course CA 111 Fundamentals of Computers and Information Technology containing exercises on computer applications

Physics

PH 111 Mechanics, Properties of Matter and Relativity 3-0-0-3

Mechanics: Laws of motions, Inertial and non-inertial frames of reference, Rotating frame, Effect of centrifugal and Coriolis forces due to earth's rotation, Center of mass (C.M), Lab and C.M frame of reference, Conservation of linear and angular momenta. [8]

Properties of Matter: Elasticity, Young's modulus, Modulus of rigidity, Poisson's ratio, relation connecting different elastic-constants, twisting couple of a cylinder(solid and hallow), Dynamical method (Maxwell's needle) for determining the modulus of rigidity, Bending moment, Cantilever, Determination of Young's modulus by bending of beam. [10]

Fluid Mechanics: Kinematics of moving fluids, equations of continuity, Euler's equation, Bernaulli's theorem, viscous fluids, streamline and turbulent flow, Poiseulle's law, Capillary tube flow, Reynold's number, Stokes law. [7]

Relativity: Postulates of special theory of relativity, Derivation of Lorentz transformation and physical significance of Lorentz invariance, Length contraction and time dilation, Concept of simultaneity, Relativistic velocity transformation relations, mass energy relation, Concept of zero rest mass of photon, Relativistic relation between energy and momentum. [14]

Text Books:

1. D.S.Mathur. Mechanics, S. Chand Publications, New Delhi
2. Resanick and Halliday: Physics Part –1

Reference Books:

1. H.C.Verma : Concept in Physics Vol. I
2. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol I.

PH 121 Electromagnetism 2-0-0-2

Vector Calculus: Gradient, divergence and curl operators, Physical significance [7]

Electromagnetism: Laws of Electromagnetism using vector calculus; electrostatics and magnetostatics in matter, Biot and Savart's law, calculation of H order in simple geometrical situations, Ampere's Law $\nabla.B=0$, $\nabla xB=\mu_0\mathbf{J}$, field due to magnetic dipole, magnetization current, magnetization vector, Half order field, magnetic permeability (linear cases), interpretation of a bar magnet as surface distribution of Solenoidal current. [10]

Time Varying Fields: Electromagnetic induction, Faraday's law, electromotive force, $\varepsilon = \int$ E.dr. integral and differential forms of Faraday's Law. Mutual and self inductance, transformers, energy in a static magnetic field, Maxwell's displacement current, Maxwell's equations, Electromagnetic field density. [10]

EM wave propagation: The wave equation satisfied by E and B, Plane electromagnetic waves in vacuum, Poynting's vector, Reflection at plane boundary of dielectrics, Polarization by reflection and total internal reflection, Faraday effect, Waves in a conducting medium [12]

Text Books:

1.David J. Griffiths: Introduction to Electrodynamics (3rd Edition)

2. Gupta and Kumar: Electromagnetics

Reference Books:

1.P. Lorrain and O. Corson: EM Waves and Fields

2.A. S. Mahajan and AA Rangwal: Electricity and Magnetism

PH 131 Physics Laboratory-I 0-0-4-2

Assignments are based on the course PH 111 and PH 141

PH 122 Thermodynamics and Statistical Physics 3-0-0-3

Thermodynamics: Reversible and irreversible processes, Carnot's cycle and Carnot's theorem, Second law of thermodynamics, Thermodynamic scale of temperature. [7]

Concept of entropy: Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram [8]

Thermodynamic functions, Internal energy, Enthalpy, Helmholtz function and Gibb's free energy, Maxwell's thermodynamical equations and their applications, TdS equations, Energy and heat capacity equations, Clapeyron equations, Adiabatic demagnetization, Third law of thermodynamics, Nernst heat theorem. [10]

Joule-Thomson effect, Thermodynamic analysis, Inversion temperature, Thermodynamic equations for a Vander Waals gas. Liquefaction of gases. Regenerative principle, Properties of liquid helium, Introduction to super fluidity [6]

Statistical Mechanics: State of a system (Microscopic and Macroscopic); Phase space, density of states and Liouville's theorem; Postulates of statistical mechanics; Relation between statistical and thermodynamic parameters. [8]

Text Books:

1. K.W. Zeemansky: Heat and Thermodynamics
2. BrijLal and N. Subramanyam.:Heat and Thermodynamics

Reference Books:

1. B.K. Agarwal: Thermal Physics
2. Frederick Reif : Fundamentals of Statistical and Thermal Physics
3. R.K. Pathria: Statistical Mechanics (2nd Edition):

PH 132 Oscillations and Waves 2-0-0-2

Oscillations: Simple harmonic oscillations, Differential equation of SHM and its solution, Amplitude, Frequency, Time Period and Phase, Velocity and acceleration. Kinetic, Potential and total energy and their time average values. Free oscillations of systems with one degree of freedom : (i) Mass-Spring system, (ii) Simple Pendulum, (iii) Torsional Pendulum, (iv) Compound pendulum (v) Bar Pendulum. [6]

Superposition of Two Collinear Harmonic Oscillations: Linearity and superposition principle. (i) Oscillations having equal frequencies and (ii) Oscillations having different frequencies (Beats). Superposition of N Collinear Harmonic oscillations [6]

Free Oscillations; Damped oscillations; Damping coefficient, Log decrement; Forced oscillations : Transient and steady states, Amplitude, Phase, Resonance, Sharpness of resonance, Power, Dissipation and Quality Factor. [7]

Waves: Plane and spherical Waves, Longitudinal and transverse waves, Plane progressive (Traveling) waves. Wave equation. Particle and wave velocities. Differential Equation. Pressure of a longitudinal wave. Velocity of waves : Velocity of transverse vibrations of stretched strings, Newton's formula for velocity of sound; Laplace's correction [7]

Text Books:

1. N.K. Bajaj: The Physics of Waves and Oscillations, Tata cGraw-Hill, 1988.
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Oscillations and Waves, CBC, Jaipur
3. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.

Reference Books:

1. A. P. French : Vibrations and Waves ,CBS Publications, 1987
2. BrijLal and N. Subramanyam: Waves and Oscillations

PH 132 Physics laboratory-II 0-0-4-2

Assignments are based on the course PH 122 and PH 132, etc.

PH 211 Semiconductor Physics and Electronics 3-0-0-3

Semiconductor Physics: Intrinsic and extrinsic semiconductors, P-N junction diode, Diode equation, depletion width and potential barrier, junction capacitance, I-V characteristics, Rectifier, ripple factors, filter circuits, efficiency and percentage regulation, LED, photodiode. [9]

Electronics : Transistor circuits, Input, Output characteristics and CB and CE modes, DC load line, operating point, biasing and bias-stabilization circuits: Transistor as an amplifier (CE mode) and frequency response. [6]

Hybrid parameter: Analysis of transistor amplifier (with and without load) using h- parameters, simplified hybrid model, brief idea about hybrid model Single stage amplifier in CE,CB and CC modes. RC coupled CE amplifier and its frequency response, tuned voltage amplifier. Power amplifier classification, distortion and efficiency, push pull amplifier [10]

Feedback in amplifiers: Positive and negative feedback, effect of negative feedback on the characteristics of different types of amplifiers, voltage and current series feedback circuits. Field effect transistors, I-V Characteristics of JFET and MOSFET, FET biasing, FET as an amplifier. [8]

Digital Electronics: Diode and transistor equivalent circuits of basic and derived gates, Universal gates, X-OR and equivalence. Simplification of Boolean expressions using K- maps. Sequential circuits, Flip flops. [6]

Text Books:

1. Millman and Halkias: Integrated Electronics:
2. Chattopadhyay and Rakshit: Electronics Fundamental and Application

Reference Books:

1. Malvino and Leach: Principle of Digital Electronics:
2. Gupta and Kumar: Hand book of Electronics

PH 221 Optics and Lasers 3-0-0-3

Interference: Young's experiment, Conditions for sustained interference, Theory of interference, Fresnel's biprism, Determination of wavelength of light, Interference in parallel and edge shaped films, Colour of thin films. Newton's rings [10]

determination of wavelength of light, Michelson interferometer and their applications.

Diffraction: Definition, Frenel's diffraction, Zone plate, diffraction due to straight edge. Fraunhoffer diffraction due to single and double slits, Plane transmission grating and its resolving power. [10]

Polarization: Polarized light and its mathematical representation, Polarization by double refraction and Huygen's theory, Nicol prism, Retardation plates, Production and analysis of circularly and elliptically polarized light, Optical activity. [9]

Lasers: Einstein's A and B coefficients, Spontaneous and Stimulated conditions for laser action population inversion, optical pumping, Working of different types of lasers: semiconductor, rubey and He-Ne Lasers. [10]

Fiber optics: Working, Numerical aperture

Text Books:

1. N. Subrahmanyam, Brijlal and M. N. Avadhanulu: A textbook of Optics
2. A.Ghatak: Optics, Tata McGraw-Hill

Reference Books:

1. B. K. Mathur and T. P. Pandya: Physical Optics

PH 231 Physics laboratory-III 0-0-4-2

Assignments are based on the course PH 211 and PH 221

PH 212 Mathematical Physics and Special Theory of Relativity 3-1-0-4

Curvilinear Coordinates: Orthogonal curvilinear coordinate systems, scale factors, expression for grade, divergence, curl and their application to Cartesian, circular cylindrical and spherical polar coordinate systems. [9]

Coordinate transformation and Jacobean, Transformation of covariant, contra variant and mixed tensor. Addition, multiplication and contraction of tensors. Metric tensor and its use in transformation of tensors [7]

Dirac-delta function and its properties. Lorentz transformation and rotation in space-time, time like and space like vectors, world line, and macro-causality [6]

Four vector formulation: energy- momentum Four vector, relativistic equation of motion invariance of rest mass, orthogonality, four force and four velocity, Lorentz force as an example of four force transformation of four frequency vector, longitudinal and transverse Doppler's effect. [12]

Transformation of electric and magnetic fields between two inertial frame

Differential Equations: The second order liner differential equation with variable coefficient and singular points, series solution method and it application to the Hermite's Legendre's and Laguerre's differential equation. Basic properties (without proof) like orthogonality, recurrence relation, Graphical representation and generating functions of Hermite, Lagendre, Leguerre and Associated Legendre functions (very simple application) [13]

Fourier Analysis: Fourier theorem, Fourier analysis of square wave, saw-tooth wave, plucked strings, half wave/full wave rectifier wave forms [5]

Text Books:

1. George Arfken: Mathematical Method for Physicists (Academic Press).
2. S.L.Kakani, C. Hemrajani, T.C. Bansal: Mathematical Physics and Special Theory of Relativity, CBC, Jaipur
3. D. E. Bourne, P C Kendall: Vector Analysis and Cartesian Tensors, 3ed (Chapman & Hall, 1992)

Reference Books:

1. A.P. French: Special Relativity
2. P. K. Chattopadhyay: Mathematical Physics.
3. Gupta and Kumar: Mathematical physics

PH 222 Physics Laboratory IV 0-0-4-2

Assignments are based on Course PH 211 etc.

PH 311 Quantum Mechanics and Spectroscopy 3-1-0-4

Failure of Classical Physics: Black body radiation (without derivation), Photoelectric effect, Compton effect Wave Packets and Uncertainty Relation: de-Broglie hypothesis, Wave-particle duality, Wave packets, Group velocity and phase velocity, Uncertainty principle. [10]

Wave Mechanics: Schrödinger equation, Physical interpretation of wave function, Probability current density and conservation of probability, Free particle wave function, Schroedinger equation in the presence of a potential, Linear operators, Hermitian operators, Observables, Eigenvalues and Eigenfunctions, Expectation values, Ehrenfest's theorem, Commutation relations [15]

Schrödinger Wave Equation and Applications: Particle in one dimensional Box, Square well, Rectangular potential barrier and tunneling, Linear harmonic oscillator, Spherically symmetric potential, Angular momentum operators and their eigen functions, Concept of spin, Hydrogen atom. [12]

Spectroscopy: Quantum futures for spectra of single valence electron atom: Orbital magnetic dipole moment, Orbital, spin and total angular momentum, Larmor precession, Vector model of atom, Electronic configuration and atomic states, Spin-orbit interaction and fine structure, Intensity of spectral lines, General selection rules. Zeeman Effect, Two valence electron atoms: LS and JJ coupling schemes and resulting spectra, Idea of normal and inverted doublets. [15]

Text Books:

1. V. Devanathan:Quantum Mechanics
2. S.L.Kakani, C. Hemrajani, T.C. Bansal, Elementary Quantum Mechanics and Spectroscopy, CBC, Jaipur

Reference Books:

1. Loknathan and Ghatak:Quantum Mechanics
2. S. Gasiorowicz: Quantum Physics
3. B. H. Bransden and C. J. Joachain: Quantum Mechanics:
4. H.E. White, Introduction to Atomic Physics
5. R.P. Feynimann, R.B. Leigton and M Sands, The Feymann Lectures on Physics, Vol VIII.

PH 331 Electromagnetic Theory 4-0-0-4

1. **Maxwell's Equations:** Concept of Displacement Current, Vector and Scalar Potentials, Boundary Conditions at boundary of different media, Wave equations and plane waves in Dielectric media, Poynting Theorem, Physical concept of Electromagnetic field, Energy density, Momentum density. [8]

2. **Reflection and Refraction of EM Waves:** Reflection and refraction of a plane wave by interface between dielectrics, Fresnel Formulae, Total internal reflection, Brewster's angle, Waves in conducting media, Metallic reflection for normal incidence. [10]

3. **Plasma and Ionosphere:** Concept of skin depth, Microscopic media (Plasma) and Maxwell's equations, Plasma frequency, Refractive index, Conductivity of an ionized Gas, Propagation of e.m. waves through Ionosphere. [12]

4. **Polarization of EM Waves:** Different types of polarizations (Linear, Circular and Elliptical), e.m. Fresnel's formula, Uniaxial and biaxial crystals, Polarization by double refraction, Nicol Prism, Ordinary and Extraordinary Refractive indices, Phase retardation plates: Quarter-Wave and Half-Wave Plates, Analysis of Polarized Light, Polarimeter. [10]

5. **Rotatory Polarization:** Optical rotation, Biot's Laws for Rotatory Polarization, Fresnel's Theory of Optical Rotation, Experimental verification of Fresnel's Theory, Specific Rotation, Laurent's Half-Shade Polarimeter. [8]

6. **Fiber Optics:** Planar Optical Wave Guides, Propagation through optical fiber, Types, Numerical aperture, Modes of Propagation (Basic Concepts only). [4]

Text Books:

1. A.Z. Capri and P.V. Panat: Introduction to Electrodynamics, Narosa Pub. House, New Delhi, 2002
2. David J. Griffiths: Introduction to Electrodynamics, 3rd Edition, Benjamin Cummings 1998
3. J. D. Jackson: Classical Electrodynamics, 3rd Edition, Wiley, New York, 1998
4. M. Lifshitz and L. D. Landau: Classical Theory of Fields

(Course of Theoretical Physics), 2nd Edition, Pergamon Pr., 1981.

Reference Books:

1. Joseph A. Edminister: Electromagnetics, 2nd Edition, Tata McGraw Hill, New Delhi, 2006.
2. M.A.W. Miah: Fundamentals of Electromagnetic, Tata McGraw Hill,1992
3. Liang Chi Shen, Jin Au Kong: Applied electromagnetism, PWS Pub. Co., 1995.

PH 341 Atomic and Molecular Physics 4-0-0-4

1. **Atomic Physics:** Spectra of Hydrogen, Deuteron and alkali atoms spectral terms, doublet fine structure, screening constants for alkali spectra for s, p, d and f states, selection rules. [7]

2. **Earth Spectra:** Singlet and triplet fine structure in alkaline earth spectra [5]

3. **Week spectra:** continuous X-ray spectrum and its dependence on voltage, Duane and Hunt's law. Characteristic X rays, Moseley's law, doublet structure of X-ray spectra, X-ray absorption spectra. [8]

4. **Molecular Physics:** Discrete set of electronic energies of molecules, quantization of vibrational and rotational energies, determination of internuclear distance, pure rotational and vibrational spectra. [10]

5. **Vibration Spectra**: Dissociation limit for the ground and other electronic states, transition rules for pure vibration and electronic vibration spectra. [6]

6. **Raman Effect:** raman Effect, Stokes and anti-Stokes lines, complimentary character of Raman and infrared spectra, experimental arrangements for Raman spectroscopy. [8]

7. **Spectroscopic Techniques**: Sources of excitation, prism and grating spectrographs for visible, UV and IR, absorption spectroscopy, double beam instruments. [8]

Text Books:

1. Robert Eisberg and Robert Resnick: Quantum Physics of Atoms, Molecules, Solids, Nuclei, and Particles, John Wiley & Sons Inc, 1985

2. H.E. White: Introduction to Atomic Spectra, McGraw-Hill book

company, Inc.

3. C.N. Banwell: Molecular Spectroscopy, Tata-McGraw Hill Publishers, New Delhi, 1993

Reference Books:

1. R.C. Johnson: Introduction to Molecular Spectra, Pitman Publishing Corp., New York, 1949
2. D. P Khandelwal : Optics and Atomic Physics, Shiva Lai Agarwala & Company, Educational Publisher, 1973
3. Arthur Beiser: Concepts of Modern Physics, McGraw-Hill Book Company, 1987.

PH 351 Elements of Classical Mechanics 2-0-0-2

1. System of particles, Constraints, Generalized coordinates, D'Alemberts principle and Lagrange's equation, Velocity dependent potential of electro-magnetic field. [10]

2. Calculus of Variation, Hamilton's principle, Lagrange's equation, Lagrangian for simple systems, Cyclic coordinates, symmetries and conservation laws. [6]

3. Advantages of Lagrangian: electro-mechanical analogies, Lagrange's undetermined multipliers, Lagrange's equation for nonholonomic systems, Virial theorem, Principle of mechanical similarity. [10]

Text Books

1.H. Goldstein: Classical Mechanics: 3rd Edition, Addison-Wesley Pub, 2001

2. L . D. Landau and E. M. Lifshitz: Classical Mechanics: A Course of Theoretical Physics, Vol.1, 3rd Edition , Pergamon Press, 1976.

3. K. C. Gupta: Classical Mechanics of Particles and Rigid Bodies, Wiley Eastern, New Delhi, 1988

Reference Books:

1. R. G. Takwale and Puranik: . Introduction to Classical Mechanics, 24th Edition, Tata-McGraw Hill, New Delhi, 1991
2. N. C. Rana and P. Joag: Introduction to Classical Mechanics, Tata McGraw Hill, 1992.

PH 361 General and Optics Based Laboratory 0-0-4-2

Assignments are based on the course PH 341,etc

PH 371 Electronics Laboratory 0-0-4-2

Assignments are based on the course PH 331,etc

PH 342 Solid State Physics 3-0-0-3

1. **Structure**: Crystal structure, periodicity, lattices and bases, fundamental translational vectors, unit cell, lattice types, Bravais lattices, Miller indices for direction and planes, Common crystal structures like NaCl, ZnS and Diamond; Close packed structures, Lau theory of X-ray diffraction, X-ray diffraction, Bragg's law. [9]
2. **Bonding**: Potential between a pair of atoms, concept of cohesive energy, covalent, Vander Waals, ionic and metallic Crystals, reciprocal lattice, Brillouin Zones [6]
3. **Thermal Properties**: Lattice vibrations, Vibrational modes of continuous medium, Debye's model: lattice specific heat, Phonons, Density of states. [7]
4. **Electronic Properties**: Free electron gas, Electrons in periodic potential, Kronig-Penny model, Bloch theorem, energy bands, metals, insulators and semiconductors; Hall Effect, Fermi surface [10]
5. **Magnetic Properties**: Magnetic moment, magnetic susceptibility, Dia-, Para and Ferromagnetism, Ferromagnetic domains. [7]

Text Books:

1. C. Kittel: Solids State Physics, 6th edition, John Wiley & Sons, NY, 1986
2. R. L. Singhal, Solid state Physics, KNRN Pub., Meerut, 1998

Reference Books:

1. Decker: Solids State Physics, Prentice-Hall, New York, 1962
2. Azarof: .Introduction to Solids, Mc-Graw-Hill Book Co., Inc.
3. S.O. Pillai, Solid State Physics, 6th Edition, New Age International Pub, 2005.

PH 352 Nuclear and Particle Physics 4-0-0-4

1. **Nuclear Structure**: Properties of Nuclei and Models, Introduction to the nucleus, Fermi gas model, Deutron Binding energy, Semiemperical mass formula, Mass diffect, Packing fraction and its application to explain most stable isobars and nuclear fission, Magnetic dipole moment, quadrapole moment, angular momentum, Effect of mass number on size of nucleus Condition of stability for isobars. [9]

2. **Nuclear Models**: Liquid drop model, fission and potential barrier, N-N and P-P chains, Nuclear reactors, Nuclear fission and fusion. [6]

3. **Nuclear Force and Two-Nucleon System:** Properties of nucleon-nucleon interaction, General forms of nucleon- nucleonpotential, Neutron-proton scattering for low energies: scattering length, Ground state properties of deuteron, Simple consideration of deuteron using central potential (square well). [10]

4. **Nuclear Stability:** Nucleon emission, separation energy, Alpha decay and its energy spectrum, WKB Approximation, Beta decay and its energy spectrum (for example,137Cs), Need for neutrinos, Q-values, Gamma decay, Parity and Selection rules for gamma transitions (no derivation). [10]

5. **Accelerators and Detectors**: Cyclotron, Betatron, Van de Graaff and Linear accelerators, Synchrotrons, Geiger-Mueller detector, Scintillation detector. [5]

6. **Elementary Particles**: Properties of particles, classification in to leptons mesons and baryons, matter and antimatter, conservation laws (qualitative discussion), energy, momentum, angular momentum, charge, lepton number, Baryon number, Isospin, strangeness. [5]

7. **Classification of Particles:** Interactions, Quantum numbers, Quarks as the building blocks of hadrons, Colour degree of freedom. [7]

Text Books:

1. S. S. M. Wong: Introductory Nuclear Physics, 2nd Edition, John Wiley & Sons, New York, 1998
2. D.C. Tayal, Nuclear Physics, Himlaya Publishing House, 5th Ed, 1992
3. S.L.Kakani, C. Hemrajani, T.C. Bansal, Nuclear Physics, CBC, Jaipur, 2005
4. S. N. Ghosal: Nuclear Physics, **S**. Chand Limited, 1997

Reference Books:

1. B. L. Cohen: Concepts of Nuclear Physics, Tata McGraw-Hill New Delhi, 1971
2. H.A. Enge, Introduction to Nuclear physics, Addison Wesley, Publishing company, Inc. New York, 1 974
3. A. Bieser, prospective of Modern Physics, 22nd Reprint, Tata McGraw-

Hill, New Delhi, 2008

PH 362 Statistical Mechanics 4-0-0-4

1. **Random Walk Problem:** Probability distribution, Mean and Dispersion and Simple Numerical Problems. [8]

2. **Basic Concepts of Statistical Physics**: Entropy and thermodynamic probability, Ensemble theory, partition function, applications to classical ideal gas, Gibbs paradox; Statistical equivalence of three ensembles. [7]

3. **Classical Theory of Radiation:** Properties of Thermal Radiation, Blackbody Radiation, Stefan-Boltzmann Law and Wien's Displacement law. [6]

4. **Quantum Nature of Radiation:** Planck's Postulates. Planck's Law and Blackbody Radiation, Experimental Verification. Derivations of Wien's Distribution Law, Rayleigh-Jeans Law from Planck's Law. [8]

5. **Bose-Einstein's Condensation:** B-E Distribution law, Completely Degenerate Bose Gas, Bose-Einstein condensation, Properties of liquid He, Radiation as photon gas. [10]

6. **Fermi-Dirac Statistics:** F-D Distribution Law, ideal completely Degenerate Fermi Gas and Thermodynamic functions, Fermi Energy, Electron gas in a metal, Specific Heat of Metals. Maxwell-Boltzmann statistics as a classical limit, Comparison of the three statistics, White Dwarf Stars, Chandrasekhar Mass Limit. [13]

Text Books:

1. Frederick Reif: Fundamentals of Statistical and Thermal Physics, Waveland Press 2009
2. R. K. Patharia: Statistical Mechanics, Oxford: Butterworth, 1996
3. K. Huang: Statistical Mechanics, Wiley, 1987 .

Reference Books:

1. S. Lokanathan and R.S. Gambhir: Statistical and Thermal Physics: an introduction, P.H.I., 1991
2. F. Reif: Statistical Physics, Berkeley Physics Course Volume 5, Tata McGraw-Hill Company Ltd, 2008

PH 372 Basics of Nano-Science and Exotic Materials 3-0-0-3

1. **Physics for Nano-Science:** Electron Band Structure and Its [6]

Modification due to change in dimensionality. Phonon absorption in Nanomaterials.

2. **Basic Concepts of Nanomaterials:** Physical, Chemical and Bio-routes for Synthesis of Nanomaterials (basic idea), Metal Nanoparticles, Carbon Nanostructures, Electronic Properties of Nanomaterials, Nano photonics, Some applications of Nano Materials. [15]

3. **Introduction to Exotic Materials:** High Temperature Superconductors and Colossal Magnetoresistance Materials. Meissner Effect, Discovery of HTSC Materials, Structure and Properties, Elements of Proposed Mechanisms of high temperature superconductivity, Elementary Concepts of CMR Materials, Some Application of CMR materials. [14]

4. **Quasicrystals:** Basic definition of quasicrystal and Structure of Quasicrystals. [4]

Text Books:

1. C.P. Poole and F.J. Owens: Introduction to Nanotechnology, John Wiely & Sons, NJ, 2003

2 .C.M. Niemeyer and C.A. Mikin: Nanobiotechnology : Concepts, Applications and Perspectives, John Wiley & Sons, NJ, 2004

Reference Books:

1. Charles Kittel: Introduction to Solid State Physics, 5thEdition, John Wiley & Sons, NY, 1986.

PH 382 Solid State and Nuclear Laboratory 0-0-4-2

Assignments are based on the course PH 342, PH 352, etc

PH 392 Optoelectronics Laboratory 0-0-4-2

Combined Assignments are based on Lasers, Optical Fibers, PH 341, etc.

Mathematics

MS 111 Calculus 3-0-0-3

Curvature: Curvature, Radius of curvature for Cartesian curves, parametric curves, Polar curves and Pedal curves, Centre of curvature. Circle of curvature, Chord of curvature, Tests for concavity and convexity, Points of inflexion, Multiple points. [8]

Asymptotes and Curve Tracing:: Asymptotes in Cartesian and polar coordinates, Intersection of a curve with its asymptotes**, a**pplication of differential calculus in curve sketching in Cartesian and polar co-ordinates. [8]

Differentiation: Partial differentiation, Euler's theorem for homogeneous functions,Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers. [8]

Integral Calculus:*:* Double integrals in Cartesian and polar coordinates, Change of order of integration, Triple integral, Applications of double and triple integrals in finding areas and volumes. [8]

Vector Calculus: Gradient, Divergence and Curl. Greens, Stokes and Gauss Theorems (without proof) and problems based on these theorems. [7]

Text Books:

1. Thomas and Finney: Calculus and Analytic Geometry, Ninth Edition.
2. Shanti Narayna : A Text Book of Vector Calculus. S. Chand & Co., New Delhi.

Reference Books:

1. N. Saran and S.N. Nigam: Introduction to Vector Analysis, Pothishala Pvt. Ltd., Allahabad.
2. Differential and Integral Calculus: Shanti Narayan.
3. D. C. Gokhroo, Differential Calculus, Navkar Prakashan.
4. N. Piskunov: Differential and integral Calculus. Peace Publishers, Moscow.
5. Gorakh Prasad: Differential Calculus. Pothishasla Pvt. Ltd., Allahabad.
6. Gorakh Prasad: Integral Calculus. Pothishala Pvt. Ltd., Allahabad.

MS 121 Matrices and Theory of Equations 3-0-0-3

Matrix: Matrices, Symmetric, Skew symmetric, Hermitian and skew Hermitian matrices. Elementary Operations on matrices Rank of a matrices, Inverse of a matrix. Linear dependence and independence of rows and columns of matrices, Row rank and column rank of a matrix, [13]

Eigenvalues, eigenvectors and the characteristic equation of a matrix, Cayley Hamilton theorem and its use in finding the inverse of a matrix

Applications of Matrices: Applications of matrices to a system of linear (both homogeneous and non–homogeneous) equations. Theorems on consistency of a system of linear equations. Unitary and Orthogonal Matrices, Bilinear and Quadratic forms [9]

Theory of Equations: Relations between the roots and coefficients of general polynomial equation in one variable, Solutions of polynomial equations having conditions on roots. Common roots and multiple roots. Transformation of equations. [9]

Solution of equations: Nature of the roots of an equation, Descarte's rule of signs. Solutions of cubic equations (Cardon's method). Biquadratic equations and their solutions . [8]

Text Books:

1. Higher Algebra: A. Kurosh (Moscow Mir Publisher 1972).
2. Theory of Equations: (Lecture notes for inter University Leadership project in Mathematics by R.N. Gupta, Surjeet Singh and R.J. Hans.

Reference Books:

MS 112 Abstract Algebra 3-0-0-3

1. H.S. Hall and S.R. Knight: Higher Algebra, H.M. Publications 1994.
2. Shanti Narayan: A Text Books of Matrices.
   Chandrika Prasad: Text Book on Algebra and Theory of Equations. Pothishala Private Ltd., Allahabad.

Group: Algebraic structure**,** Definition of a group with examples and simple properties, Abelian group, semi group, Order of an element of a group, Cyclic groups, Coset decomposition. [11]

Subgroup and quotient Groups: Subgroups, Normal subgroups, Normalizer of an element, Quotient group [10]

Group Morphism: Homomorphism, kernel of homomorphism, Isomorphism and automorphism, Fundamental theorem of Homomorphism, Cayley's theorem. [10]

Permutations: Definition and examples of Permutation, group of permutations, Cyclic Permutation, Even and odd permutation. [8]

Text Books:

1. I.N.Herstein: Topics in Algebra, 2nd edition, Wiley Eastern Ltd. 1988.
2. P.B.Bhattacharya, S.K.Jain and S.R.Nagpaul: Basic Abstract Algebra, 2nd Edition, Cambridge University Press 1995.

Reference Books:

1. J.B.Fraleigh : A first course in Abstract Algebra, 3rd Edition Addison-Wesely/Narosa 1998..
2. Surjeet Singh and QuaziZameeruddin : Modern Algebra, Revised Edition,Vikas Publishing House, 1992.

   D. C. Gokhroo: Algebra, Navkar publication, Ajmer, Revised Edition , 2005.

MS 122 Differential Equations-I 3-0-0-3

Basic Concepts: order and degree of differential equation, primitives, solutions of differential equations, Integral curves, isoclines.	[4]
First Order Differential Equations: Differential equation of first order and first degree, Homogeneous form and reducible to homogeneous form, Linear equations and equations reducible to linear form, Exact differential equations, Equations reducible to exact forms, First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations, Equation reducible to Clairaut's form.	[14]
Second order differential equations: Second order differential equations with variables coefficients, Homogeneous and exact forms, Change of dependent equations, change of independent variables, normal form, Method of variation of Parameters	[12]
Series Solution: Regular singular points, ordinary points, , series solution of second order linear differential equations with variable coefficients(Complementary Functions only)	[9]

Text Books:

1. D.A. Murray : Introductory Course in Differential Equations. Orient Longaman (India) . 1967
2. A.R.Forsyth : A Treatise on Differential Equations, Machmillan and Co. Ltd. London

Reference Books:

1. D. C. Gokhroo : Ordinary Differential equations, NavkarPrakashan.
2. S.L.Ross: Differential Equations, John Wiley & Sons
   B.Rai& D.P. Chaudhary : Ordinary Differential Equations; Narosa, Publishing House, Pvt. Ltd.

MS 211 Linear Algebra 3-0-0-3

Vector Space: Vector spaces, subspaces, Sum and Direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space. Finitely generated vector space, Existence theorem for basis of a finitely generated vactor space, Finite dimensional vector spaces, Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension [12]

Linear transformations: Linear transformations and linear forms on vactor spaces, Vactor space of all the linear transformations, Kernal and range of a linear transformation, Rank and Nullity, Matrix of a Linear Transformation, Change of basis. [10]

Dual Spaces: Dual Spaces, Dual Basis, Bidual Spaces, annihilator of subspaces of finite dimentionalvactor spaces. [9]

Inner Product Space: Inner produt space, norm of a vector, Orthogality. [8]

Text Books:

1. I.N. Herstein : Topics in Algebra, Wiley Eastern Ltd., New Delhi, 1975
2. P.B. Bhattacharya, S.K. Jain and S.R. Nagpal : Basic Abstract Algebra (2^{nd} edition).

Reference Books:

1. VivekSahai and VikasBist : Algebra, Narosa Publishing House.
2. I.S. Luther and I.B.S. Passi : Algebra, Vol.-II, Narosa Publishing House.

D. C. Gokhroo : Linear Algebra, NavkarPrakashan.

MS 221 Differential Equations-II 3-1-0-4

Partial Differential equations: Formation, order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, singular solution, General solution, Solution of Lagrange's linear equations, Charpit's general method of solution. [13]

Second and higher Order PDE: Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant co-efficients, Partial differential equation with variable co-efficients reducible to equations with constant coefficients, their complimentary functions and particular Integrals, Equations reducible to linear equations with constant co-efficients. [14]

Solution of Second order PDE: Classification of linear partial differential equations of second order, Hyperbolic, parabolic and elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method. [12]

Text Books:

1. Ian N. Sneddon : Elements of Partial Differential Equations, McGraw-Hill Book Company, 1988.
2. S.B. Rao and H.R. Anuradha : Differential Equations, University Press, 1996.

Reference Books:

1. W.T.H. Piaggio : Elementary Treatise on Differential Equations and their applications, CBS Publishers N.Delhi,1985.
2. D.A.Murray: Introductory Course on Differential Equations, Orient Longman, (India), 1967
3. Erwin Kreyszing : Advanced Engineering Mathematics, John Wiley & Sons, Inc. New York, 1999
4. Frank Ayres : Theory and Problems of Differential Equations, McGraw Hill Book Company, 1972
   J.N. Sharma &Kehar Singh : Partial Differential Equations

MS 212 Numeric Analysis 3-1-0-4

Interpolation: Interpolation with equal intervals: Newton's forward and Newton's backward interpolation formulae. Newton's divided difference, Lagrange's Interpolation formulae. [10]

Central Differences: Gauss forward and Gauss's backward interpolation [8]

formulae, Sterling, Bessel Formula.

Iterative Methods: Newton Raphson Method, Successive Bi-Section, RegulaFalsi, Successive Approximation Method. [11]

Numerical Methods: Newton-Cote's Quadrature formula, Trapezoidal rule, Simpson's one-third and three-eighth rule, Picard method, Euler method, Runge-Kutta Methods. [10]

Text Books:

1. Babu Ram: Numerical Methods, Pearson Publication.
2. R.S. Gupta, Elements of Numerical Analysis, Macmillan's India 2010.

Reference Books:

1. M.K. Jain, S.R.K.Iyengar, R.K. Jain : Numerical Method, Problems and Solutions, NewAge International (P) Ltd., 1996
2. S.S.Sastry: Introductory Methods of Numerical Analysis, 3rd edition(2000), Prentice Hall of India Pvt. Ltd., New Delhi.5. C.E. Froberg : Introduction to Numerical Analysis (2nd Edition).
   S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

MS 222 Real Analysis 3-0-0-3

Neighborhood and Limit Points: Boundedness of the set of real numbers, least upper bound, greatest lower bound of a set, neighborhoods, interior points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weierstrass theorem. [10]

Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence. [9]

Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, D-Alembert's ratio test, Cauchy's general principle of Convergence of series, Leibnitz test, Absolute and conditional convergence. [12]

Riemann integral: Lower and upper Riemann integrals, Riemann Integrability, Mean value theorem of integral Calculus, Fundamental theorem of Integral Calculus. [8]

Text Books:

1. R.R. Goldberg : Real Analysis, Oxford & I.B.H. Publishing Co., New Delhi, 1970
2. S.C. Malik : Mathematical Analysis, Wiley Eastern Ltd., Allahabad.

Reference Books:

1. Shanti Narayan : A Course in Mathematical Analysis, S.Chand and company, New Delhi.
2. D. C. Gokhroo, Real analysis, NavkarPrakashan.
3. T.M. Apostol: Mathematical Analysis, Narosa Publishing House, New Delhi, 1985
   Earl D. Rainville : Infinite Series, The Macmillan Co., New York

Chemistry

CH 181 Physical and Inorganic Chemistry-I 2-0-0-2

Atomic Structure: De Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of Ψ and Ψ^2, quantum numbers, Zeeman and Stark effect, shapes of s, p and d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Effective **[5]**

nuclear charge.

Gaseous States: Postulates of kinetic theory of gases, deviation from ideal behavior, Vander Waals equation of state. Critical Phenomena: PV isotherms of real gases, continuity of states, the isotherms of Vander Waals equation, relationship between critical constants and Vander Waals constants, the law of corresponding states, reduced equation of state. Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussions of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquefaction of gases (based on Joule-Thomson effect). **[8]**

Covalent Bond: Valence bond theory and its limitations, directional and shapes of simple inorganic molecules and ions. Valence shell electron pair repulsion (VSEPR) theory to NH_3, H_3O^+, SF_4, ClF_3, ICl_2 and H_2O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenteric bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference. **[5]**

Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule. Metallic bond, free electron, valence bond and band theories. **[4]**

Surface tension and Viscosity: Introduction, measurement, applications in chemical constitution, effect of temperature on surface tension and viscosity and parachore. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part I, P.D. Sharma, A. P. Bhargava, 2011, RBD.
2. Inorganic Chemistry B.Sc. Part I, Shivahare, Lavania, 2008, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus, 3rd Edition, 1995, Wiley Interscience.
2. The elements of Physical Chemistry, P.W. Atkins, 4thEdition, 1998, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
5. Essentials of Physical Chemistry, R.L. Madan, G. D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R. D. Madan, G.D. Tuli, reprint 2008, S. Chand & Co. Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 191 Organic Chemistry-I 2-0-0-2

Structure and Bonding: Hybridization, bond length, bond angles, bond energy, localized and delocalized chemical bond, hyperconjugation, inductive effect, hydrogen bond, clathrates, inclusion compounds, charge-transfer compounds and field effects. **[5]**

Stereochemistry of Organic Compounds: Isomerism, Types of isomerism, Optical Isomerism : Elements of symmetry, molecular chirality, enantiomers, stereogeniccentre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogeniccentresdiastereomers, threo and erythrodiastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature. **[7]**

Geometric isomerism: Determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: Conformational analysis of ethane and n-butane, Newman projection and Sawhorse formulae. Fischer and flying wedge formulae. Difference between configuration and conformation. **[6]**

Chemistry of Alkanes, Alkenes and Cycloalkenes: Preparation,Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes. Alkenes: Preparation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivityin alcohol dehydration. The Saytzeff's rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes- mechanisms involved in hydrogenation, electrophilic and free radical additions. Markownikoff's rule, hydroboration- oxidation, oxymercuration- reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with $KMnO_4$, polymerization of alkenes. Substitution at the allylic and vinylic positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. **[8]**

Suggested Readings:

Text Books:

1. Organic Chemistry B.Sc. Part I, P. Singh, 2006, RBD.

Reference Books:

2. Advanced Organic Chemistry, Bahl and ArunBahl, 19th Ed. 2005, S. Chand & Co. Ltd.
3. Stereochemistry: Conformation and Mechanism, P.S.Kalsi, 6th 2006, New Age International.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 171 Laboratory Course in Chemistry-I 3-0-0-1.5

Experiments based on the contents of CH 181 and CH 191.

CH 182 Physical and Inorganic Chemistry-II 2-0-0-2

Liquid State: Intermolecular forces, structure of liquids (a qualitative description). Structural differences between solids, liquids and gases. Liquid crystals. Difference between liquid crystals, solid and liquid. Classification, structure of nematic and cholestric phases. **[4]**

Solid State: Definition of space lattice, unit cell. Laws of crystallography, Law of constancy of interfacial angles, Law of rationality of indices, Law of symmetry. Symmetry elements in crystals. X-ray diffraction by crystals. Derivation of Bragg's equation. Determination of crystal structure of NaCl, KC1 and CsCl (Laue's method and Powder method). **[5]**

Nuclear & Radio Chemistry: Elementary idea of nucleus, nuclear forces, mass defect, binding energy, fission and fusion. Liquid drop and shell model of nucleus, theory of radioactivity, GM counter, Wilson cloud chamber, isotopes, group displacement laws and radioactive steady state. **[3]**

s-Block Elements : Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems. **[4]**

Periodicity of p-block elements: Periodicity in properties of p-block elements with special reference to atomic and ionic radii, ionization energy, electron affinity, electronegativity, catenation (including diagonal relationship).Some Important Compounds of p-Block Elements : Hydrides of boron, diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphurtetranitride, basic properties of halogens, interhalogens and polyhalides. **[6]**

Chemistry of Noble Gases: Chemical properties of the noble gases, chemistry of Xenon, structure and bonding in Xenon compounds. Weak Interactions: Hydrogen bonding, Vander Waals forces. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L. Soni, 1999, S. Chand & Co. Ltd.
2. Essentials of Physical Chemistry, B.S. Bahl, G.D. Tuli&ArunBahl, 1999, S. Chand & Co. Ltd.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P. L. Gaus. 3rd Ed. 1995, Wiley Interscience.

2. The elements of Physical Chemistry, P.W. Atkins, 3rd Ed. 1993, Oxford.
3. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5th Ed. 2003, Vishal Publishing Co.
4. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Edition, 2006, S. Chand &Co.Ltd.
5. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
6. Inorganic Chemistry, R.L. Madan, G.D. Tuli, reprint 2003, S.Chand& Co .Ltd.
7. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2005, S. Chand & Co. Ltd.

CH 192 Organic Chemistry-II 2-0-0-2

Alkyl and Aryl Halides: Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution SN^1 and SN^2. **[5]**

Polyhalogen compounds: Synthesis and uses of chloroform, carbon tetrachloride, iodoform, dichloromethane, freons, DDT and BHC. **[5]**

Chemistry of dienes and alkynes: Isolated, conjugated and cumulated dienes, Structure of allenes and butadiene, methods of formation, polymerization, Chemical reactions-1, 2 and 1,4 additions, Diels-Alder reaction. Nomenclature, structure and bonding in alkynes, methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization. **[8]**

Arenes and Aromaticity: Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture. Aromaticity: Huckel's rule, aromatic ions. Aromatic electrophilic substitution: General pattern of the mechanism, role of sigma and pi complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives and Birch reduction. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H. M. Chawla,28th Ed. 1999, S. Chand & Co Ltd.
2. Organic Chemistry, A. K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 6th Ed. 1998, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and Bahl, 19th Ed. 2007, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 172 Laboratory Course in Chemistry-II 3-0-0-1.5

Experiments based on the contents of CH 182 and CH 192.

CH 291 Physical Chemistry-I 2-0-0-2

Thermodynamics: Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamics process, concept of heat and work. First Law: Statement, definition of internal energy and enthalpy. Heat capacity, heat capacities at constant volume and pressure and their relationship. Joule's law, Joule-Thomson coefficient and inversion temperature, calculation of w, q, dU&dHfor the expansion of ideal gases under isothermal and adiabatic condition. **[7]**

Thermochemistry: Hess's Law and its applications, Heat of reaction at constant pressure and volume. Enthalpy of neutralization. Bond dissociation energy and its calculation, temperature dependence of enthalpy, kirchoff's equation. Second law: Need, Statements, Carnot cycle and its efficiency. Thermodynamic scale of temperature. Concept of entropy: Entropy- as a state function, as a function of V & T, as a function of P & T, as a criteria of spontaneity and equilibrium, entropy change in physical change, Clausius inequality, Entropy change in ideal gases and mixing of gases. Third law: Nernst heat theorem, statement and concept of residual entropy, evaluation of absolute entropy from heat capacity data, Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities, A &G as Criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T. **[8]**

Chemical Kinetics: Scope, Rate of a reaction and factors influencing it.

Concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero, first, second; pseudo order, half-life and mean-life. Determination of the order of reaction- differential method, method of integration, method of half-life period and isolation method. Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: conductometric, potentiometric, optical, polarimetry and spectrophotometry. Theories of chemical kinetics. Arrhenius equation, concept of activation energy. Simple collision theory based on hard sphere model, transition state theory. Expression for the rate constant based on equilibrium constant and thermodynamic aspects. **[11]**

Suggested Readings:

Text Books:

1. Physical Chemistry B. Sc. Part II, P. D. Sharma and A.P. Bhargava, 2011, RBD.
2. Physical Chemistry B.Sc. Part II, K.R. Genwa, 2004, RBD.

Reference Books:

1. The elements of Physical Chemistry, P. W. Atkins, 3rd Ed. 1993, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 6th Ed. 2009, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2nd revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, Reprint 2009, S. Chand & Co. Ltd.

CH 213 Inorganic Chemistry-I 2-0-0-2

Chemistry of Elements of First Transition series: Characteristic properties of f-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. **[6]**

Chemistry of Elements of Second and Third Transition Series: General characteristics, comparative treatment with their 3d-analogues in respect of ionic radii, oxidation states, magnetic behavior, spectral properties and stereochemistry. **[5]**

Coordination Compounds: Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. **[7]**

Chemistry of Lanthanide Elements: Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds. **[8]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P.L. Soni, 1999, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part II, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F.A. Cotton. G. Wilkinson and P.L. Gaus. 5rd Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 18th Ed. 2009, S. Chand & Co. Ltd.
3. Inorganic Chemistry, R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint, 2005, S. Chand &Co.Ltd.

CH 223 Organic Chemistry-III 2-0-0-2

Ultraviolet absorption spectroscopy: Introduction of absorption spectrum. Absorption laws (Beer Lambert Law), Molar absorbance, presentation and analysis of UV spectra, types of electronic transitions, effect of solvents on π-π* and n-π* transitions, effect of conjugation, Concept of chromophore and auxochrome. Bathochromic, hypsochromic and hyperchromic and **[6]**

hypochromic shifts, UV spectra of conjugated enes and enones.

Infrared absorption spectroscopy: Molecular vibrations, Hook's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, Fermi resonance, characteristics absorption of various functional groups and interpretation of IR spectra of simple organic compounds. **[6]**

Alcohols: Classification and nomenclature. Monohydric alcohols-methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters, Hydrogen bonding, Acidic nature, Reactions of alcohols. Dihydric alcohols-methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [$Pb(OAc)_4$ and HIO_4] and Pinacol-Pinacolone rearrangement. Trihydric alcohols-methods of formation, chemical reactions of glycerol. **[5]**

Phenols: Nomenclature, structure and bonding, Preparation of Phenols, Physical properties and acidic character. Comparative acidic strength of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols, electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, LedererManasse reaction and Reimer Tiemann reaction. **[5]**

Ethers and Epoxides: Nomenclature of ethers and methods of their formation, Physical properties, Chemical reactions-cleavage and auto oxidation, Ziesel'smethod. Synthesis of epoxides. Acid and base catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides. **[4]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P. L. Soni and H.M. Chawla, 29th Ed. 2003, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, 7th Ed. 2005, Morrison & Boyd, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl, 20th Ed. 2008, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 281 Laboratory Course in Chemistry-III 3-0-0-1.5

Experiments based on the contents of CH 291, CH 213 and CH 223.

CH 272 Physical Chemistry-II 2-0-0-2

Phase Equilibrium: Degree of freedom, derivation of Gibbs phase rule, phase equilibriaof one component system-water, CO_2 and S systems, Phase equilibria of two component system-solid-liquid equilibria, simple eutectic Bi-Cd, Pb-Ag systems, desilverisation of lead. Solid solutions-compound formation with congruent melting point (Mg-Zn) and incongruent melting point ($NaCl-H_2O$), ($FeCl_3-H_2O$) and ($CuSO_4-H_2O$) system, Freezing mixtures, acetone-dry ice. Liquid-liquid mixtures-ideal liquid mixtures, Raoult's and Henry's law, Non-ideal system-azeotropes-$HCl-H_2O$ and ethanol-water systems. Partially miscible liquids-Phenol-water, trimethylamine-water nicotine- water systems. Lower and upper consolute temperature, Effect of impurity on consolute temperature. Immiscible liquids, steam distillation. Nernst distribution law-thermodynamic derivation, applications. **[10]**

Electrochemistry: Specific and equivalent conductance, measurement of equivalent conductance, variation of equivalent and specific conductance with dilution. Migration of ions and Kohlrausch law, Arrhenius theory and its limitations, weak and strong electrolytes. Ostwald's dilution law its uses and limitations, Debye-Huckel-Onsager's equation (elementary treatment). Transport number-definition, determination by Hittorfand moving boundary method. Applications of conductivity measurements: determination of degree of dissociation, K_a of acids, solubility product of the sparingly soluble salt, conductometrictitrations. Types of reversible electrodes-gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes, Electrode reactions, Nernst equation, derivation and computation of cell E.M.F. and its measurement, single electrode potential, SHE , reference electrodes, standard electrode potential, sign conventions, electrochemical series and its significance. Electrolytic and Galvanic cells-reversible and irreversible cells, conventional representation of electrochemical cells. Calculation of thermodynamic quantities of cell reactions (ΔG, ΔH and K). Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Definition of pH and pKa, determination of pH using hydrogen quinhydrone and glass electrodes. **[12]**

Chemical Equilibrium: Equilibrium constant and free energy.

Thermodynamic derivation of law of mass action. Le Chatelier's principle. Reaction isotherm and reaction isochore-Clapeyron equation, Clausius-Clapeyron equation and their applications. **[4]**

Suggested Readings:

Text Books:

1. Physical Chemistry B.Sc. Part III, P. D. Sharma and A.P. Bhargava, 2009, RBD.
2. Physical Chemistry B.Sc. Part III, K. R. Genwa, 2008, RBD.

Reference Books:

1. The elements of Physical Chemistry, P.W. Atkins, 5^{th} Ed. 2004, Oxford.
2. Principles of Physical Chemistry, Puri, Sharma, Pathania, 5^{th} Ed. 2003, Vishal Publishing Co.
3. Physical Chemistry, R.L. Madan, G.D. Tuli, 2^{nd} revised Ed. 2005, S. Chand & Co. Ltd.
4. Practical Chemistry : Giri, Bajpai and Pandey, reprint 2009, S. Chand & Co. Ltd.

CH 282 Inorganic Chemistry-II 2-0-0-2

Chemistry of Actinide Elements: General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. **[8]**

Oxidation and Reduction: Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, latimer and Pourbaix diagrams, Principles involved in the extraction of the elements. **[9]**

Acids and Bases: Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases. **[4]**

Non-aqueous Solvents: Physical properties of a solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2. **[5]**

Suggested Readings:

Text Books:

1. Text Book of Inorganic Chemistry, P. L.Soni, 2005, S. Chand & Co. Ltd.
2. Inorganic Chemistry B.Sc. Part III, Shivahare, Lavania, 2004, RBD.

Reference Books:

1. Basic Inorganic Chemistry F. A. Cotton. G. Wilkinson and P. L. Gaus. 4th Ed. 2005, Wiley Interscience.
2. Selected Topics in Inorganic Chemistry, Wahid U. Malik, G.D. Tuli, R.D. Madan, 17th Ed. 2006, S. Chand & Co. Ltd.
3. Inorganic Chemistry,R.L. Madan,G.D. Tuli, reprint 2003, S.Chand& Co. Ltd.
4. Practical Chemistry: Giri, Bajpai and Pandey, reprint 2009, S. Chand &Co.Ltd.

CH 292 Organic Chemistry-IV 2-0-0-2

Aldehydes and Ketones: Structure of the carbonyl group. Synthesis of aldehydes and ketones from acid chlorides, 1,3-dithianes, nitrites and from carboxylic acids. Physical properties. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on Benzoin, Aldol, Perkin and Knoevenagelcondensations, condensation with ammonia and its derivatives. Wittig reaction, Mannich reaction. Use of acetals as protecting group. Oxidation of aldehydes, Baeyer-Villiger oxidation of ketones, Cannizzaro reaction, MPV, Clemmensen, Wolff-Kishner, $LiAlH_4$ and $NaBH_4$ reductions, Halogenation of enolizable ketones. **[10]**

Carboxylic Acids: Structure and bonding, physical properties, acidity of carboxylic acids, effects of substituents on acid strength. Preparation of carboxylic acids, Reactions of Carboxylic acids- Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides, Reduction of carboxylic acids. Mechanism of decarboxylation. Methods of preparation and chemical reactions of halo acids. Hydroxy acids; malic, tartaric and citric acids. Methods of preparation and chemical reactions

of three unsaturated monocarboxylic acids. Dicarboxylic acids: methods of preparation and effect of heat and dehydrating agents (succinic, glutaric and adipic acids). **[10]**

Carboxylic Acid Derivatives: Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution. Preparation and chemical reactions of carboxylic acid derivatives. Mechanisms of esterification and hydrolysis (acidic and basic). **[6]**

Suggested Readings:

Text Books:

1. Text Book of Organic Chemistry, P.L. Soni and H.M. Chawla, 28th Ed.1999, S. Chand & Co. Ltd.
2. Organic Chemistry, A.K. Srivastava, 1st Ed. 2002, New Age International.

Reference Books:

1. Organic Chemistry, Morrison & Boyd, 7th Ed. 2005, Prentice Hall.
2. Advanced Organic Chemistry, Bahl and ArunBahl , 19th Ed. 2005, S. Chand & Co. Ltd.
3. Practical Chemistry : Giri, Bajpai and Pandey, reprint, 2009, S. Chand & Co. Ltd.

CH 262 Laboratory Course in Chemistry-IV 3-0-0-1.5

Experiment based on the contents of CH 272, CH 282 and CH 292.

Computer Science

CA 121 Programming Concepts using C Language 3-0-0-3

Development of Algorithms and Flowcharts: Importance, Symbols and Structure. [5]

Structure: Basic Structure of C Program, Constant, Variable, Data Types, Data Declaration, Operations (Arithmetic, Relational, Logical), Increment and Decrement Operators, Assignment Operator, Precedence of Arithmetic Operators, Operator Expression, Type Conversions in Expressions, Assignment Statements. [8]

Control Structure: Input and Output using getchar and putchar, Printf, Scanf Functions, Condition Statements, Simple if- else, Switch, Concept of Loop (While, For, Do-While), Break and Continue. [8]

Array: One Dimensional Array, Iterative Programs, 2-D Arrays, Matrix Operations. [5]

Concept of Sub Programming: Functions, External Variable Scope Rules, Header Files, Static Variables, Parameter Passing (Call By Values And Call By Reference), Recursion, C Preprocessor, Pointers. [7]

Advanced C concepts: Structure, Union, Argument Passing Using Pointer, Array of Pointers. [6]

CA 151 C Language Laboratory 0-0-4-2

Assignments are based on the Course CA 121 Programming Concepts Using C Language.

CA 122 Data Structure Through C 3-0-0-3

Introduction: Concept of Data Structure, Types of Data Structure. [3]

Array: Representation of Single and Multidimensional Array. [2]

Stack and Queue: Introduction and Primitive Operations on Stack: Stack Application; Infix, Postfix, Prefix Expressions, Evaluation of Postfix Expression, Conversion from Infix to Postfix (Algorithms only), Introduction and Primitive Operations on Queues. [9]

Sorting Techniques: Insertion Sort, Selection Sort, Merge Sort and Quick Sort. [7]

Searching Techniques: Linear Search, Binary Search. [6]

List: Introduction to Linked List, Sequential and Link Lists Operation such as Traversal, Insertion, Deletion, Searching. [8]

Tree: Introduction and Terminology, Traversal of Binary Trees, Recursive Algorithms for Tree Operation (Concept). [4]

Text Books:

1. Schaum Series, “Data Structures”,TMH, New Delhi
2. Langsam , Augenstein, Tannenbaum, “Data Structure Using C and

C++", PHI,

Reference Books:

1. Horowithz and Sahani, "Fundamentals of Data Structure", Galgotia Book Source Pvt. Ltd.
2. Kanitker Y., "Let us C", BPB Publication New Delhi
3. Balagurusamy E , "Programming in C", TMH, New Delhi
4. Schaum Series, "Programming in C", TMH, New Delhi

CA 112 Operating System 3-0-0-3

Introduction: Various Categories of Software, Operating System and its functions, Types of Operating Systems, Structure of Operating System. (Case study of Unix, DOS). [4]

Process Management: Process Concept, ProcessStates, Process Control Block, Interprocess Communication, and Scheduling Algorithms, Performance Evaluation. [7]

DeadLock: Deadlock Characterization, Prevention, Avoidance, Detection of Deadlock, SafeState, Banker's Algorithm. [7]

Memory Management: Swapping, Memory Allocation Schemes, Paging, Segmentation, Virtual Memory Concept, Page Replacement Algorithms. [6]

File Management: Directories, File System Implementation, Allocation Methods, Free Space Management. [6]

Device Management: Disk Structure, Disk Scheduling, Disk Management Control of Various Devices, Device Drivers, Interrupt Driven and Poll Driven Data Transfer. [5]

Security and Protection Mechanism: Computer Security classification, Authentication, System threats, Goals of Protection, Access Matrix. [4]

Text Books:

1. Silbersachatz and Galvin, "Operating System Concepts", Pearson Education.
2. Tannenbaum, "Operating Systems", PHI, New Delhi

Reference Books:

1. William Stalings, "Operating Systems", New Delhi
2. Ritchie, "Operating System", BPB Publication , New Delhi
3. Dhamdhere D. M. "System Programming and Operating System", TMH New Delhi
4. Achyut S Godbole, "Operating Systems", TMH, New Delh

CA 162 Data Structure Laboratory 0-0-4-2

Assignments are based on the Course CA 122 Data Structure through C.

CA 241 Object Oriented Programming through C++ 3-0-0-3

Introduction: Structured Programming vs. Object Oriented Programming, Basic Concepts (Encapsulation, Information Hiding, Inheritance, Polymorphism), Difference Between C and C++. [4]

Basics of C++: Token, Keyword, Identifiers, Basic Data Type, User Define Data Type, Type Compatibility, Declaration of Variables, Dynamic Initialization of Variables, Reference Variables, Scope Resolution Operators, Member Referencing Operators, Operator Precedence, Control Structures. [8]

Function: Definition, Function Prototype, Call By Reference, inline Function, Function Overloading. [8]

Classes and Objects: Classes, Defining Member Function, Private, Public and Protected Member Elements and Function, Static Data Member, Static Member Function, Array Object, Constructors, Destructors, this Pointer, Operator Overloading, Comparison Between Structures and Classes, Copy Constructor, Dynamic Constructor, Friend Function, Friend Classes. [8]

Inheritance: Introduction, Derived Classes, Types of Inheritance (Single Inheritance, Multiple, Hierarchical, Hybrid), Virtual Base Classes, Abstract Classes. [6]

Virtual Functions: Introduction to Virtual Function, Virtual Function in Derived Classes, Overview of Exception Handling. [5]

Text Books:

1. KanitkerYashwant, “Let Us C++”, BPB Publication, New Delhi
2. GopalVenu, Rajkumar , Ravishanker, “Mastering C++” , TMH, New Delhi

Reference Books:

1. HerbertsSchildt, “C++ The Complete Refernce”, TMH, New Delhi.
2. Lafore R, “Object Oriented Programming Using C++”, GalgotiaPulications, New Delhi
3. Parasons D., “Object Oriented Programming With C++”,BPB, New Delhi
4. LaelorSteaven C., “The Art of Programming Computer With C++”, Vikas Publication.
5. Dietel&Dietal, “Introduction to C++”.

CA 231 Management Information System 3-0-0-3

MIS and Concept of Management: Elements, Characteristics, Need, Objectives, Importance, and Limitations, Relationship between MIS and Computer and Role of MIS in the Functions of Management. [9]

Information Concept: Classification of Information, Levels of Information, Techniques of Data Collection, Quality aspect of Information, Value of Information, Relation between MIS and Information. [6]

Decision Making: Decision Making Concepts, Rationality in Decision Making, Decision Support System, MIS as a Technique for Programmed Decisions, Model of Decision Making, Methods, MIS and Role of Decision Making. [6]

Manager and Computers: Database Concept, Database Models, Database Design, RDBMS, MIS and RDBMS, Introduction, Topology, LAN, MAN, WAN and Data Communication, Introduction to ERP. [5]

Typical Information Systems: MIS for Marketing, Financial, Production Management, Human Resource Management Information System. [6]

Development of MIS: Strategic and Project Planning for MIS, Conceptual System Design, Detailed Design, Implementation, Evaluation and Maintenance of the MIS. [7]

Text Books:

1. Murdick R G, Ross J E, Clagget J R, "Information Systems for Modern Management", PHI, New Delhi
2. Jawadkar, "Management Information System", TMH, New Delhi

Reference Books:

1. Sadagopan, "Management Information System"PHI, New Delhi
2. Parker, Case, Thomas, "Management Information System: Strategies and Action", TMH, New Delhi.

CA 271 Object Oriented Programming Laboratory 0-0-4-2

Assignments are based on the Course CA 241 Object Oriented Programming through C++.

CA 132 System Analysis and Design 3-0-0-3

System: Concept, Types and Characteristics, Elements, Computer based Information Systems, Candidate System, Role of System Analyst. [5]

System Development Life Cycle: Recognition of Need, Feasibility Study, Design, Implementation and Maintenance, System Planning and Alternatives. [7]

Feasibility and Proposal: User and Management Involvement, Alternative Design Consideration, System Feasibility, The System Proposal. [5]

System Analysis: Effective Communication in System Analysis, Tools of System Analysis, Problem Definition, Classification of Data Collection and Analysis. [9]

System Cost Determination: Types of Costs/Benefits, System Cost and System Benefits and Data Processing Costs. [8]

Implementation: System Testing, Quality Assurance, Implementation and Software Maintenance. [5]

Text Books:

1. Awad Elias M, "System Analysis and Design", TMH, New Delhi
2. Hawayszkiewyez Igor, "Introduction To System Analysis and Design" PHI, New Delhi

Reference Books:

1. Mark Lejk& David Deeks "An Introduction To System Analysis Techniques" PHI, New Delhi
2. Jeffrey L Whitten & Lonnie, D Bentey, "System Analysis and Design Methods", TMH. New Delhi
3. Manish soni&SanjeevPatwa "System Analysis and Design" UBH Jaipur

CA 272 Computational Numerical Analysis Laboratory 0-0-4-2

Assignments are based on the Course Numerical Analysis.

Course work (CW) would include Regularity, evaluation of assignments, surprise tests, etc.;

$Evaluationof proficiency will be based on the participation in co-curricular/extra curricular activities.

#Student will perform dissertation work in a recognized Organization for a period of 4 months and submit two copies of dissertation to the department latest by first week of May. Presentation and viva voce of dissertation will be conducted in second week of May. Dissertation and presentation will carry 50% weightage each

COURSE DESCRIPTION
M. Sc. (Biotechnology)

BT 511 Cytogenetics 3-0-0-3

Cell Diversity: Cell as a basic unit of life, Cell theory, Cell size and shape. [2]

Cytology: Introduction to cell organelles (Structure and functions), Self-assembly and dynamic structure of cytoskeletal filaments and their cellular regulation, Molecular motors and cell behaviour, Microtubules motors and movement, Cell-cell interactions, Cell adhesion, Tight and gap junction, Plant cell adhesion and plasmodesmeta. [8]

Energy Metabolism: Chemotropic (mitochondria) and phototropic (chloroplast) energy metabolism of cell, Electron transport chain and proton pump, Evolution of electron transport chain. [5]

Membrane Biology: Structure, Chemistry and function of biological membrane, Transport across membrane- simple diffusion, facilitated diffusion, active transport, Energetics of transport, Signal transduction mechanism of cell-membrane potential, Action potential, Synaptic transmission, Messengers and receptors of signal transduction mechanism. [7]

Cellular Oncology: Cell cycle and its control, Molecular mechanism, Check points and cancer. [6]

Principles of Genetics: Introduction toMendelian and non-Mendelian genetics, Chromosomal theory of inheritance. Extra chromosomal inheritance. [4]

Linkage: Concept of linkage and crossing over, basic eukaryotic chromosome mapping, recombination of genes, two-point and three-point test cross, tetrad analysis, linkage maps, Interference. [4]

Mutation: Spontaneous and induced mutations, chromosomal aberrations, Cytological behavior and molecular basis. [4]

Population Genetics: The Sources of variation, Hardy Weinberg's Law, Genetic drift and change in gene frequency. [2]

BT 581 Biostatistics 3-0-0-3

Introduction: Collection of primary and secondary data, Classification and tabulation of data, Graphs of frequency distribution and Curves, Measures of central tendency — mean,median and mode, Mathematical properties of arithmetic mean, Geometric and harmonic Mean [6]

Measures of Dispersion: Absolute and Relative Measures of Dispersion, Range, Mean deviation, Standard deviation, Mathematical properties of standard deviation, Coefficient of variation, Variance, Skewness and its measures, Kurtosis and its measures [6]

Correlation and Regression Analysis: Meaning, significance and types, Scatter diagram method, Correlation graph, Karl Pearson's correlation coefficient, [9]

Coefficient of determination, Spearman's Rank correlation coefficient, Lines of Regression, Regression equations, Difference between correlation and regression analysis

Tests of Significance: Student's t-test, Chi-square tests, Yate's correction factor, ANOVA– One and two way classification with examples [9]

Probability and Probability Distributions: Elements of probability-definition, addition and multiplication, Probability distribution function-Binomial, Poisson and normal, Area under normal probability distribution curve [9]

MB 531 General Microbiology 3-0-0-3

History and Scope of Microbiology: Spontaneous Generation vs. Biogenesis, Contributions of various scientists to the field of microbiology and development of microbiology as a scientific discipline. Avenues for microbiologists. [6]

Classification: Microorganisms and place of microbes in Whittakers' five kingdom classification, Eight kingdom classification, Phenetic and phylogenetic classification. Bergeys' manual for classification of bacteria, Structure and organization of Prokaryotic and Eukaryotic cells. Structure of bacterial cell wall-difference between Gram positive, Gram negative and archaebacteria, Cell membrane, Flagella, Pilli, Capsule, Endospore, Mesosome, Reserve food material. [10]

Microbial Growth: Bacterial growth curve, Factors affecting the microbial growth, One step growth curve of bacteriophages, Concepts of batch culture, Continuous culture, fed batch culture, synchronous growth and measurement of growth. [8]

Recombination in Bacteria and Viruses: Transformation, Conjugation and Transduction. [5]

Methods of Studying microorganisms: Microscopy- light microscopy (bright field, dark field, phase contrast, fluorescent) and electron microscopy (SEM & TEM), Pure culture techniques, Microbiological media (Liquid, solid, semi solid, defined, selective, maintenance, enrichment & differential), Sterilization, Disinfection, Aseptic techniques. [6]

General Properties of Microorganisms: Brief study of characteristics of viruses, algae, protozoa and fungi. Economic importance of microorganisms, Microbes as agents of diseases. [4]

BC 511 Chemistry of Biomolecules 3-0-0-3

pH and Buffers: Importance of buffers with reference to biological aspect, Isoelectric points, pK values, Morality and Molality, Thermodynamics law, Free energy, Gibbs law, High energy compounds and their biological importance**.** [4]

Carbohydrates: Structure, Classification and important reactions of monosaccharides and their derivatives, Synthesis of biologically important structural and Storage carbohydrates, [5]

Lipids: Structure and classification of lipids, Fatty acids, Properties of fatty acids, Glycerolipids, Sphingolipids, Cholesterol and their biosynthesis, Alkaloids, Steroids and Flavonoids- properties and synthesis, Lipids as signal molecules, Alpha, beta and omega-oxidation, Lipopolysaccharides- structure and function. [6]

Proteins: Structural unit of proteins, Classification of amino acids, Properties of amino acids on the basis of $–NH_2$ and –COOH group, Protein structure and classification, Ramachandran plots, Stability of proteins, Folding and unfolding of proteins, Polypeptide synthesis and sequencing, Protein evolution, Structure and function of globular and fibrous proteins. [7]

Nucleic Acids: Nucleosides and nucleotides, Nucleic acid classification, Bond stability between purines and pyrimidines, Structure and reactions of purines and pyrimidines and their derivatives, Metabolism of purines and pyrimidines, Protein and nucleic acid interactions. [5]

Vitamins: Role of vitamins in growth and differentiation in human beings, Chemistry of fat and water-soluble vitamins, Vitamins as co-enzymes. [5]

Enzymes: Classification of enzymes, MichelisMenten equation, Km value, Linweaver-Burk equation, Kinetics of substrate and enzyme reactions, Isozymes, Effect of different physical and chemical factors, Active sites-nature and determination, Immobilization of enzymes and its application. [7]

BC 521 Biophysical Techniques 3-1-0-4

Basic Principles of Biophysics: Quantum Mechanics, Electronic structure of Atoms, Molecular orbitals and Covalent bond, Molecular interaction, Stereochemistry and chirality, Thermodynamics-Entropy, Enthalpy, Oxidation-Reduction potential, Zero order and first order reactions. [5]

Centrifugation: Principles of centrifugation, Design and care of rotor, Preparative and Analytical centrifuge, Density gradient centrifugation, Safety aspects and applications. [6]

Spectroscopic Techniques: Ultra violet- visible spectroscopy, Spectrofluorometry, Circular dichorism and Optical rotatory dispersion, Atomic spectroscopy, Raman and Infra-red spectroscopy, Electron spin resonance spectroscopy, Mass spectroscopy, NMR. [12]

Electrophoretic Techniques: Principle, Electrophoresis of proteins and nucleic acids, Isoelectric-focusing, 2-D electrophoresis, Capillary electrophoresis. [6]

Chromatographic Techniques: Principles of Chromatography, Chromatography theory and practice, Paper, Thin layer, and Column chromatography, Permeation, Ion exchange, Affinity, Adsorption, Partition, HPLC and Gas chromatography. [10]

Radioisotope Techniques: Radioactive decay, Interaction of radioactivity with matter, GM counter, Scintillation counter, Quenching and its correction, Autoradiography, Radio-immunoassay and ELISA. [5]

BT 551 Microbiology and Cytogenetics Laboratory 0-0-4-2

Assignments based on BT 511 and MB 531 containing exercises on study of cell and its various structures and functions and general characteristics of microorganisms will be conducted.

BC 541 Biochemistry and Instrumentation Laboratory 0-0-4-2

Assignments based on BC 511 and BC 521 containing exercises on working and maintenance of instruments and qualitative and quantitative analysis of biomolecules will be conducted.

BC 531 Biomolecules 3-0-0-3

Basic Concept of Biomolecules: Structure of prokaryotic and eukaryotic cells, intracellular organelles and their functions, comparison of plant and animal cells. Importance of buffers with reference to biological aspect, Isoelectric points, pK values, Morality and Molality, Thermodynamics law, Free energy, Gibbs law, High energy compounds and their biological importance**.** [5]

Carbohydrates: Structure, Classification and important reactions of monosaccharides and their derivatives, Synthesis of biologically important structural and Storage carbohydrates.Carbohydrate metabolism-Kreb's cycle, glycolysis, glycogenesis and glycogenolysis, gluconeogenesis, pentose phosphate pathway [8]

Lipids: Structure and classification of lipids, Fatty acids, Properties of fatty acids, Glycerolipids, Sphingolipids, Cholesterol and their biosynthesis, Alkaloids, Steroids and Flavonoids- properties and synthesis,Properties of lipid aggregates-micelles, bilayers, liposomes and their possible biological functions. Biological membranes. Lipids as signal molecules, Alpha, beta and omega-oxidation, Lipopolysaccharides- structure and function. Lipoproteins-composition and function, role in atherosclerosis. [7]

Proteins: Structural unit of proteins, Classification of amino acids, Properties of amino acids on the basis of $–NH_2$ and –COOH group, Protein structure and classification, Ramachandran plots, Stability of proteins, Folding and unfolding of proteins, Polypeptide synthesis and sequencing, Protein evolution, Structure and function of globular and fibrous proteins. Amino acid metabolism-degradation and biosynthesis of amino acids.Classification of enzymes, MichelisMenten equation Km value, Linweaver-Burk equation. [8]

Nucleic Acids: Nucleosides and nucleotides, Nucleic acid classification, Bond stability between purines and pyrimidines, Structure and reactions of purines and pyrimidines and their derivatives, Metabolism of purines and pyrimidines, Protein and nucleic acid interactions. [6]

Vitamins: Role of vitamins in growth and differentiation in human beings, Chemistry of fat and water-soluble vitamins, Vitamins as co-enzymes. [5]

Suggested Books:

1. Principles of Biochemistry, A.L. Lehninger, Worth Publishers.
2. Biochemistry, L. Stryer, W.H. Freeman.
3. Biochemistry, J. David Rawan, Neil Patterson.
4. Biochemistry, Voet and Voet, John Wiley.
5. Outlines of Biochemistry E.E. Conn and P.K. Stumpf, John Wiley.

BT 512 Plant Biotechnology 3-0-0-3

Plant Tissue Culture: Historical perspective, Tissue culture media, Totipotency, Organogenesis, Somatic embryogenesis- regulation and application, Artificial seed production, Micropropagation, Somaclonal variation, Androgenesis and its applications in genetics and plant breeding, Germplasm conservation and Cryopreservation. [5]

Protoplast Culture and Somatic Hybridization: Protoplast isolation, Culture and usage, Somatic hybridization-methods and applications, Cybrids and somatic cell genetics [6]

Agrobiology: *Agrobacterium*-plant interaction, Organization of virulence genes, Ti and Ri plasmids, Opines and their significance, T-DNA transfer mechanism, Disarming the Ti plasmid, *Agrobacterium* based vectors, Binary and shuttle vectors. [5]

Genetic Transformation: *Agrobacterium*-mediated gene delivery, Co - integrate and binary vectors and their utility, Direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods, Screenable and selectable markers, Characterization of transgenics, Marker-free Methodologies, Transgene stability and Gene silencing. [7]

Application of Plant Transformation: Herbicide resistance, Bacterial resistance, Viral resistance, Fungal resistance, Insects and pathogens resistance, Drought, Salinity, Thermal stress, Flooding and submergence tolerance Plants as Biofactories. [8]

Molecular Marker-aided Breeding: Conventional plant breeding, Non PCR and PCR based molecular markers- RFLP, RAPD Markers, STS, microsatellites, SCAR, SSCP, AFLP, QTL, map based cloning, molecular marker assisted selection. [8]

BT 522 Animal Biotechnology 3-0-0-3

Introduction: Brief account of animal tissue culture, Brief history and some established normal and transformed cell lines. [5]

Media formulations: Balanced salt solution, Semi-synthetic and synthetic media, Serum as a media supplement, Serum-free media, Feeder layers, Medium sterilization. [8]

Cell culture Methods: Disaggregation (mechanical, chemical and enzymatic), Primary culture, Secondary culture, Suspension and monolayer cultures, Immobilized cultures. [8]

Growth Characteristics of Animal Cells: Growth curve, Growth kinetics, Synchronization of cells, Differentiation of cells, Transformation, Bioreactors. [8]

Application of Animal Biotechnology: Tissue engineering, Production of monoclonal antibodies, Transgenic animals, Embryo culture and IVF, Gene therapy, Production of interferons and vaccines, Diagnostics. [10]

BT 592 Bioinformatics , Scientific Communication & Intellectual 3-1-0-4

Property Rights

Introduction to Bioinformatics: Biological Databases**:** Types-GenBank, EMBL, DDBJ, SwissProt and PDB (Data Submission and Retrieval via WWW) and their management.	6
Molecular Phylogenetics: Pattern and mode of substitution, Acquisition and origin of new function, Phylogenetic tree; Distance matrix and maximum Parsimony methods of phylogenetic tree constructions.	8
Data Searches and Pairwise Alignments: Dot Plots, Simple alignments, Gaps, Scoring Matrices; Global and Local Alignments; Database searches (BLAST and FASTA and their relatives); Multiple Sequence alignments; Genome analysis; Homology modeling and Secondary structure prediction of proteins.	8
Scientific Literature: Structure, Type (Research article, review article, Short communication, Book review). Abstracting methodology. Concept of Impact factor; Citation Index.	3
Introduction to Intellectual Property Rights, Basic Principles of Patent Law, Types of IPR ,Patent Application procedures (India and International)	7
Biotechnology and Intellectual Property Rights. Biotechnology and the Law-Objective, Evolution, Moral & ethical issues Issues. Protection of Geographical Indications - Objective, Multilateral Treaties, Protection of Traditional Knowledge-Objective, Bio-Prospecting and Bio-Piracy	7

Text Book

1. Introduction to Bioinformatics by Teresa K. Attwood, David Parry, Smith 1st Edition
2. Bioinformatics: a practical guide to the analysis of genes and proteins by Baxevanis A., Ouellette F.B.F. (Eds.). John Wiley and Sons, New York (1998) 2nd Edition.
3. Intellectual Property Rights and the Law by Reddy G.B., 2005

Reference Book

4. "BLAST": An Essential Guide to the Basic Local Alignment Search Tool by O'Reilly 2nd Edition.
5. Bioinformatics : Methods and Applications genomics, proteomics and drug discovery by Rastogi S.C., Prentice-hall Of India Pvt Ltd.

BT 534 Molecular Biology 3-0-0-3

Historical and Introductory Aspects: History of molecular biology; nucleic acids as hereditary material-experimental evidences, structure of DNA; Law of

constancy and C-value paradox, Cot curve, DNA denaturation and renaturation kinetics. [5]

DNA Replication: Enzymes and accessory proteins involved in DNA replication, Prokaryotic and eukaryotic DNA replication, Asymmetric and dimeric nature of DNA polymerase III. [5]

Transcription: General principles, Types of RNA polymerases, Promoter Enhancers and Regulatory sequences, RNA polymerases and general transcription factors, Prokaryotic and Eukaryotic transcription General and specific transcription factors, Control of transcription. [8]

Translation: Genetic code, Prokaryotic and Eukaryotic translation, Translation machinery, Mechanisms of initiation, elongation and termination, Regulation of translation. [6]

Maturation and Processing of RNA: Methylation, Cutting and trimming of rRNA, Capping, Polyadenylation and Splicing of mRNA, Cutting and modification of tRNA, Degradation system, Catalytic RNA group I and group II intron splicing RNase P. [7]

Regulation of Gene Expression: Operon concept, Catabolite repression, Positive and negative regulation, Inducers and co-repressors, Negative regulation - *E. coli* lac operon, Positive regulation, Regulation by attenuation his and trp operons, Antitermination, Environmental regulation of gene expression- Global regulatory responses - heat shock response, stringent response and regulation by small molecules such as ppGpp and cAMP. [8]

MB 532 Immunology 3-0-0-3

Overview of immune response: Historical background, Innate immunity, Adaptive immunity, Innate-adaptive cross-talk, Natural and artificial immunity, Active and Passive immunity, Humoral and Cell-mediated immune response, Early theories of immunity**.** [5]

Cells and Organs of Immune System: Lymphoid organs, Haematopoiesis and differentiation of stem cells into mast cells, Basophils, Eosinophils, Monocytes, Macrophages, Neutrophils, NK cells, B and T lymphocytes (Th and Tc cells)-characteristics, CD markers and biological functions, Development of B-lymphocytes, Immunoglobulin structure and diversity, Development of T lymphocytes, TCR complex and diversity, positive and negative selection. [7]

Antigens: Antigenicity vs. immunogenicity, Characteristics of antigens, Epitopes, Characteristics of B-cell and T-cell epitopes, Haptens, Adjuvants, Isotypes, Allotypes and Idiotypes [3]

Humoral Immune Response: Activation and differentiation of B-lymphocytes, immunoglobulin classes and subclasses, B-cell receptor–co receptor complex, Primary and Secondary response, Affinity maturation, Antigen- antibody interactions, forces involved in Ag-Ab interactions, Antibody affinity and avidity, Primary interactions and secondary interactions, RIA, ELISA, IFA, Flow cytometry, Western blotting, precipitation reactions (in gel and in solution), agglutination reactions, Complement system. [8]

Cell Mediated Immune Response: Development- antigen processing and presentation, Major Histocompatibility Complex- structure, diversity and

regulation of expression on cells, Leukocyte trafficking, Activation of T-cells, TCR signaling, Co-stimulatory signals, Effector functions, cytokines- types and biological role, Regulation of cytokine expression, Differentiation into Th1 and Th2 subclasses, Tc-cell mediated target cell killing. [8]

Immune System in Health and Disease: Immunologic tolerance, Autoimmune diseases, Immunodeficiency diseases, Hypersensitivity and allergies, Transplantation Immunology, Tumor immunology, Immunology of infectious diseases, Vaccines- concepts and strategies of development. [6]

MB 514 Food Technology 3-0-0-3

Food and Fermentation Technology: Origin, Scope and development of fermented food products, [10]
Microbial starters for food fermentations.
Fermented Foods- Bread, Vinegar, Beer, Wine, polysaccharides, low calorie sweeteners, Vitamins, Fermented vegetables, Nutraceuticals, Prebiotic and Probiotic foods, Genetically modified foods, Nano foods.
Fermented dairy products- Milk and Curd, Yoghurt, Buttermilk, Cheese, Oriental fermented foods,
Single cell protein, Mushroom cultivation

Spoilage and Preservation:
Factors affecting microbial growth in foods- extrinsic and intrinsic,
Contamination of foods (cereals, Vegetables and Fruits, Meat and Meat products and Fish, Milk and milk products, canned foods) and their involvement in disease outbreaks, [10]
Spoilage detection and characterization.
Methods of food preservation (thermal processing, refrigeration, dehydration, irradiation, microfiltration, chemical preservatives).
Food Borne Infections and Intoxications: Microbial toxins in food- Chemical Structure and Types, Food borne illnesses caused by- *Brucella, Clostridium, Escherichia, Salmonella, Shigella, Staphylococcus, Vibrio and Yersinia*, Diseases caused by Fungi, Emerging pathogens, *E.coli*O157:H7, *Listeria monocytogens*, *Campylobacter jejuni, Helicobacter pylori* [10]
Packaging and Quality Control:
Need and method of packaging (glass, metal, plastics, moulded pulp and aluminium foil), Controlled atmosphere packaging, Tetra pack, Nano capsule, Nano membrane. [9]
Detection of food pathogens- Culture methods, Rapid detection using PCR
Food standards- Standards for Milk, Poultry, Food control agencies- BIS, Codex commission,
Food laws and current concepts in food safety (HACCP, quantitative risk assessment and prediction based systems)
Disposal and treatment of food industry waste

BT 552 Seminar 0-0-0-1

Student will prepare a presentation on any area of recent research and deliver

seminar on it.

BT 514 Plant, Animal Biotechnology and Food Technology Laboratory **0-0-4-2**

Assignments based on BT 514, BT 512 and BT 522 containing exercises on application of food microbiology and biotechnological techniques in animals and plants will be conducted.

BT 572 Molecular Biology and Immunology Laboratory **0-0-4-2**

Assignments based on various techniques involved in BT 542 and MB 532 containing exercises on molecular biology, immunological analysis will be conducted.

BT 524 Laboratory Course in Bioinformatics & Scientific Communication **0-0-2-1**

Assignments based on BT 592 containing exercises on NCBI & It's elements, BLAST & It's relatives, Homology searching, Secondary structure prediction, Structure visualization, Phylogenetic analysis etc.

BT 611 Genetic Engineering 3-1-0-4

Introduction: Isolation and purification of nucleic acids, measuring nucleic acid concentration and purity. [2]

Enzymes in Molecular Cloning: Principal enzymes used to manipulate DNA *in vitro* with their activities and major applications including Restriction endonucleases, Nucleases, DNA ligases, topoisomerases, Enzymes involved in modifications including DNA methylases, DNA polymerases, kinases, phosphatases and DNA binding proteins (SSB, Rec A). [4]

Cloning and Expression Vectors: Brief study of features and applications of plasmids, phagemids, bacteriophage, lambda vectors, cosmids, high capacity cloning vectors like BACs, PACs and YACs, General considerations for design of expression vectors in prokaryotes. [5]

DNA Cloning Strategies: Criteria for the choice of suitable vectors and host, Modification of DNA ends, Methods of gene transfer to bacterial cells, Preparation of genomic and cDNA libraries, Screening methods for selection of recombinant DNA molecules by direct, indirect methods and by detection of specific proteins. [4]

Analysis of DNA Protein and Protein-Protein Interactions: Electromobility shift assay, Methyl interference assay, Footprinting technique, Dimethyl sulphate protection assay, Entrapment vectors, Yeast two hybrid systems, Phage display, Differential gene expression by microarray. [4]

Polymerase Chain Reaction: Principle and technique, Advances and extensions to basic PCR strategy including RT-PCR, Assymetric PCR, Inverse PCR, Nested PCR, anchored-PCR, overlap extension, DOP-PCR, Applications of PCR. [4]

Manipulation of Gene Expression in Prokaryotes: Production of fusion proteins and heterologous unique proteins in bacteria, Maturation, Transport and stability of eukaryotic proteins in bacteria, Strategies to increase protein production and stability. [5]

Cloning in Systems other than *E. coli*: Cloning in gram positive bacteria, *Saccharomycescereviciae*, Streptomyces, Yeast expression vectors. [4]

Common Genetic Engineering Techniques: Site directed mutagenesis, Sequencing, Probe labeling, Hybridization. [3]

Applications of rDNA Technology: Role of genetic fingerprinting in diagnostics, therapeutic, agricultural applications. [5]

BT 621 Environmental Biotechnology 3-0-0-3

Agricultural Microbiology: Types of soils-physical and chemical characteristics, microflora, Rhizosphere and Phyllosphere- general account, Microbial interactions- Study of positive and negative interactions among microbial populations, Biological nitrogen fixation- Symbiotic (Rhizobium, Frankia), Asymbiotic (Azotobacter, Azospirillum), Nitrogenase and nif genes, Biofertilizers, VAM- brief account and applications, Biofertilizers, Biopesticides. [12]

Water Microbiology: Assessment of water quality- water purification, Potability standards, Major water borne diseases. [6]

Biogeochemical Cycling: Carbon, Nitrogen and Sulphur cycle- role of microbes, Biodegradation- recalcitrant and xenobiotics, Degradation of pesticide, Wood and Textiles, Role of microbes in biodeterioration- Metal corrosion, Paper, Metal detoxification. [10]

Waste Treatment: Types of wastes-Solid and Liquid waste, Waste treatments- Physical, Chemical and Biological (Primary, Secondary and Tertiary treatment), Trickling filter, Activated sludge, Oxidation pond, Solid waste treatment- composting, biogas production. [10]

BT 641 Bioprocess Engineering 3-1-0-4

Microbial Growth and Product Kinetics: Microbial biomass, Enzymes and metabolites, Batch and Continuous culture, Feed back system, Comparison of batch and continuous culture, Fed batch system and its applications. [7]

Isolation, Preservation and Improvement of Industrially important Microorganisms: Enrichment culture technique, Storage at low temperature, Storage in Liquid nitrogen, Lyophlization, Strain improvement by mutation, Feed back inhibition and repression, Strain improvement by modifying the characteristics of inhibitor metabolite, Isolation of auxotrophic mutants, Resistant mutants, Revertant mutants, Use of Recombination methods and Improvement by modifying properties other than yield. [8]

Sterilization: Design of batch sterilization process, Calculation of Del factor, Holding time, Richard's rapid method for design of sterilization, scale up of batch sterilization process, Design of continuous sterilization process, Sterilization of air, Theory and design of depth filter. [5]

Mass Transfer in Microbial System: Fluid and its properties, Mass transfer co-efficient and its determination, Factor affecting mass transfer coefficient, Scale up and scale down. [7]

Downstream Processing: Introduction, Filtration, Product isolation and extraction– centrifugation, precipitation, cell disruption, liquid-liquid extraction, chromatography, membrane processes, Drying, Crystallization and whole broth processing. [7]

Bioreactor and Control: Basic design of fermenter and control system: automatic and manual, off line and on line, Bioreactor– Packed bed, Fluidized bed, Tickle bed, CSTR, Plug flow reactor, Scale up of bioreactor. [5]

BC 611 Enzymology 3-0-0-3

Introduction: Units of activity, Specific activity of enzymes and methods of enzyme assay, Enzyme specificity, Uni substrate enzyme kinetics, Factors affecting the rate of enzyme catalyzed reaction, Derivation of Michelis-Menten equation, Significance of $V_{max}$and $K_{m,}$ Enzyme inhibition- type of inhibition, Competitive non Competitive and uncompetitive kinetics. [5]

Enzyme Catalytic Efficiency: Factors associated with catalytic efficiency such as proximity, Orientation-distortion of strain, base nucleophilic catalysis with equation, Protein ligand binding co-operativity, Hill and Sat Chard plot protein sequencing. [6]

Immobilization: Immobilized enzymes and their industrial applications, Effect of partition on kinetics and performance with particular emphasis on change in pH and hydrophobicty. [6]

Allosteric Theory: Allosteric enzymes, Sigmoidal kinetics and their physiological significance, Symmetric and sequential modes for action of Allosteric enzyme and their significance. [6]

Multi-enzyme System: Occurrence, Isolation and their properties, Polygenic nature of multi-enzyme systems, Mechanism of action and regulation of pyruvate dehydrogenase and fatty acid synthetase complex, Coenzymes and co-factors, Detailed mechanism of catalysis of serine proteases, ribonuclease and triose phosphate isomerase. [8]

General Mechanism of Enzyme Regulation: Feedback inhibition and feed forward stimulation, Enzyme repression, Induction and degradation, Control of enzyme activity by products and substrates, Reversible and irreversible covalent modifications enzymes, Enzyme engineering and its applications. [8]

BT 661 Genetic Engineering and Environmental Biotechnology Laboratory 0-0-4-2

Assignments based on BT 611 and BT 621 containing exercises on genetic engineering and role of biotechnology in environment will be conducted.

BT 613 Enzymology and Bioprocess Laboratory 0-0-4-2

Assignments based on BC 611 and BT 641containing exercises on fermentation process and production of metabolites and role of enzymes in biotechnology will be conducted.

Academic Curriculum (2017 – 18 onwards)

FIRST SEMESTER

CRIMINOLOGY, CRIMINAL LAW & POLICE ADMINISTERATION

FS 501 **2-1-0-3**

Course Contents:

Unit I: Introduction to Criminology [7]

Criminology: Definition, Nature and Scope. Criminal Action and Criminal Behavior, Introduction of Victimology, Causes of crime: Social, Economic, Psychological, Political, Culture, and Geographical and their prevention, Juvenile Delinquency, Role of the Correctional Institutions.

Unit II: Theories of Criminology [8]

Theory of Criminology: Theory of Criminology - Differential Association Theory, Self Concept and Containment theory, Labeling theory, Barrier Theory

Unit III: Type of Offences and Indian Courts structure [10]

Criminal Offences, Nature and types, Framing of Charges, Terrorism, SexualOffences, White collar crime, Courts: Structure and types- criminal courts, Juvenile Courts.

Unit IV: Criminal Law [7]

Criminal Law: Definition, Scope and development, Sections of I.P.C, Cr.PC related to Crime, Law of Evidences and Criminal Justice System in India: structural and functional process; Indian Penal Code- Offence against Persons such as Culpable Homicide and Murder (Ss.299-304, 304 A & B and 307.), Hurt- Simple and Grievous (Ss.319-325), Kidnapping and Abduction. (359-363) and Rape (Ss.375, 376.) (b) Offences against property-Theft and Extortion (Ss.378-384), Robbery and Dacoity, (Ss.390, 391-395.), Cheating, Criminal trespass and House Breaking. (Ss.415-420, 441- 447), CrPC Sections: 291-93, 154, 155, 156, 157, 158, 159, 160, 161, 162, 172, 173, 174, 175, And 176; IEA Sections: sections: 32, 45, 46, 47, 57, 58, 60, 73, 135, 136, 137, And 159.

Unit V: Police Administration system [7]

Police duties and responsibilities, Structure of Police in India, role of Police in society, Police Investigation, Interrogation and Interviewing of criminals, maintenance of Law and order, Custodial crimes and death, Police and human rights.

Text:

1. Rama Ahuja: Social Problems in India

References:

1. Ahmad Siddique: Criminology Problems & perspectives.

3. Rao, S. Venugopal: Police Administration.

4. Nath, Trilok: Indian Police.
5. Mishra. S.C. : Police Administration in India
6. Government of India, Ministry of Home Affairs: Reports of National Police Commission
7. Sutherland and Cassey: Criminology

INTRODUCTION TO FORENSIC SCIENCE and CRIME SCENE INVESTIGATION

FS 511 **2-0-0-2**

Course Contents:
Unit I: Crime Scene Management [9] Definition and causation of crime, Types of crime scene, Crime scene survey, protection of crime scene, searching of physical evidences, Recording, documentation and presentation in the court, processing and reconstruction of the crime scene.
Unit II: Introduction to Forensic Science and Quality Management (ISO/IEC 17025)] [8] Introduction and History of Forensic Science, Basic principles and significance, Utilization of Forensic Science, Forensic Scientist at the scene of crime, Structure of Forensic Labs, General requirements for the competence of testing and calibration laboratories - Introduction, Scope, Management requirements: Organization, Quality System, Document Control, Service to the clients, Complaints, Corrective and preventive actions, Control of records, Internal Audits etc.
Unit III: Investigation and Interrogation [4] Law related to interrogation, interviewing of the criminals; methods used by the police in getting information from the criminal; the ethical issues related to the same; Examination in the Court, Expert Testimony: The role of the expert-witness; acceptance of evidence in the court; Direct examination, re-examination and cross – examination of prosecution lawyer and defense lawyer.
Unit IV: Divisions and Scope of Forensic Investigations [3] Mobile Lab, CSI and its relevance, Toxicology, Forensic Chemistry, Arson, Explosives, NDPS, Scope, Serology, Forensic Biotechnology, Scope, DNA Profiling, Questioned Documents, Digital Forensics, Forensic Ballistics, Forensic Physics

FORENSIC PHYSICS and TRACE EVIDENCES

FS 521 **2-1-0-3**

Course Contents
Unit I:SOIL [7] Physical Evidence and Role of Probability**;** Formation and types of soil, composition of soil, particle size distribution, microscopic examination, density gradient analysis, interpretation of soil evidence, Discussion on important case studies related to soil evidence.
Unit II: GLASS [8] Types of glass and their composition, Forensic examination of glass fractures, determination of direction of impact: cone fracture, rib marks, hackle marks, colour and fluorescence, physical matching, refractive index, and interpretation of glass evidence.
Unit III: PAINT [7] Types of paint and their composition, macroscopic and microscopic studies, pigment distribution, micro-chemical analysis, solubility test, pyrolysis chromatographic techniques, IR spectroscopy and X-ray diffraction, interpretation of paint evidence.
Unit IV: TOOL MARKS & RESTORATION OF ERASED / OBLITERATED MARKS [7] Types of tool marks: compression marks, striated marks, combination of compression and striated marks, repeated marks, class characteristics and individual characteristics, tracing and lifting of marks, Photographic examination of tool marks . Method of making-cast, punch, engrave; methods of obliteration, method of restoration.
Unit V: SPEAKER IDENTIFICATION AND TAPE AUTHENTICATION [10] Vocal anatomy, Speech signal processing and pattern recognition – basic factors of sound in speech, acoustic characteristics of speech signal, Fourier analysis, analysis of audio-video signal for authenticity, Introduction to the techniques of pattern recognition and comparison.

INTRODUCTION TO DIGITAL FORENSICS

FS 531 **2-1-0-3**

Course Content:

Unit 1: Cyber Crime in India [7]
Introduction to Digital Forensics, Classification, Definition and types of cybercrimes, electronic evidence and handling, electronic media, collection, searching and storage of electronic media, introduction to internet crimes, hacking and cracking, credit card and ATM frauds, web technology, cryptography, emerging digital crimes and modules.

Unit 2: Basics of Computers [8]
Computer Classification, Hardware, Classification and Types, Memory, I/O Devices, Cloud Storage, Software, Programing and Algorithms, Flowcharts, Operating Systems, Networks: Architecture and Basic Configurations

Unit 3: Incident Response Management [7]
Introduction to Incident Response Process, Preparing for Incident Response, detection of an Incident, IRM life cycle-preparation, Identification, Detection, Containment, Eradication, Recovery, lessons learnt, Investigations of Cyber Crime cases as per IRM cycles, opinion formatting for cyber-crime cases, court testimonies, case studies.

Unit 4: File Forensics [8]
Definition and Cardinal Rules, Data Acquisition and Authentication Process, Windows Forensic Analysis of File Systems-FAT12, FAT16, FAT32 and NTFS, UNIX file Systems, mac file systems, Embedded System Analysis, Network Forensic Analysis Overview, Cloud Computing-an introduction.

Unit 5: Forensic Tools and Processing of Electronic Evidence [9]
Introduction to Forensic Tools, Usage of Slack space, tools for Disk Imaging, Data Recovery, Vulnerability Assessment Tools, Encase and FTK tools, Anti Forensics and probable counters, retrieving information, process of computer forensics and digital investigations, processing of digital evidence, digital images

Text:

FORENSIC BALLISTICS

FS 541 **2-1-0-3**

Course Contents:
Unit I: Introduction to Ballistics [10] Firearms, Indian Arms Act, Characteristic features of the firearms, various types of modern firearms, classification of firearms on different basis, bore characteristics.
Unit II: Ammunition (Cartridges and Bullets) [8] Definition, Classification and constructional features of different types of ammunitions (cartridges), types of primers and priming composition, propellants and their compositions, Various types of bullets and their compositional aspects, latest trends in their manufacturing and design, smooth bore and improvised ammunition.
Unit III: Arms and Ammunition Linkage (Cartridge Case and fired bullets) [7] Principles and practice of identification of firearms, different types of marks produced (class and individual characteristics) during firing process on cartridge case -firing pin marks, breech face marks, chamber marks, extractor and ejector marks, Different types of marks produced during firing process on bullet-number/direction of lands and grooves, width of lands and depth of grooves, angle and pitch of rifling, striation marks on lands and grooves, techniques for obtaining test material from various types of weapons and their linkage with fired ammunition, class and individual characteristics
Unit IV: Determination of Range of Firing [8] Ejecta, burning, scorching, blackening, tattooing and metal fouling, shots dispersion and GSR distribution, time of firing – different methods employed, and their limitations, stereo & comparison microscopy, automatic bullet and cartridge comparison system
Unit V: Explosives &Explosion Scene Investigation [6] Explosive Act, nature and classification, composition and characteristics of explosives, pyrotechnics, IEDs, Explosion process and affects, types of hazard, effect of blast wave on structures, human etc.Specific approach to scene of explosion, post-blast residue collection, Reconstruction of sequence of events, Evaluation and assessment of scene of explosion, systematic examination of explosives and explosion residues in the laboratory

STATISTICS & RESEARCH METHODOLOGY

FS 551 **2-0-0-2**

Course Contents:
Unit I: Introduction to Research [7] Research– its definition and objectives, Types of Research, Research process, defining the research problem, research design.
Unit II: Sampling [8] Principles, methods: census and sample survey, sample design. Types of sampling, rationale for using a particular sampling procedure.
Unit III: Tools of Data Collection [7] Observation, interview schedule, questionnaire, Survey. case study methods
Unit IV: Statistics [8] Introduction, Descriptive Statistics: Frequency distribution, class intervals, graphical presentation: bar diagram, histogram, pie chart; Measures of Central Tendency: mean, median, mode; measures of dispersion: variance and std. deviation.
Unit V: Parametric and Nonparametric Statistics [9] Methods of correlation, skewness and Kurtosis variance, Types of correlation (Pearson r& Rho); Tests of significance. Level of significance, one sample, two samples and k-samples, Kruskall-Wallis ANOVA.

FORENSIC PRACTICAL-I

FS 561 **0-0-4-4**

1. Examination of physical properties of Soil.
2. Examination of physical properties of Glass.
3. Examination of physical properties of paints.

4. Physical examination of threads.
5. Comparison of different cloth pieces from crime scene.
6. Identification of fibers through chemical and instrumental analysis.
7. Sketching of the Indoor Crime scene (Indoor and Outdoor)
8. Sketching of the Indoor Crime scene
9. Photography of the Indoor crime scene
10. Photography of the Indoor crime scene
11. Collection, packaging and forwarding of trace evidences by Druggist Fold method.
12. Collection and preservation of various physical evidences (Fingerprint, blood, saliva, fiber, hair etc.).

SECOND SEMESTER

ELEMENTS OF FORENSIC MEDICINE, ODONTOLOGY

FS 502 **2-1-0-3**

Course Contents
Unit I: Introduction to Forensic Medicine [7] Definition of forensic medicine, Cause, manner and characteristics of death. Autopsy, Post mortem changes.
Unit II: Wounds and its medico legal significance [8] Basic injury production and healing mechanisms, Mechanical injuries (Abrasions, Bruises, Lacerations, Incised and stab wounds) and their medico legal significance.
Unit III: Causes and Manner of death [7] Deaths due to Asphyxia, Deaths due to fire, electrocution. Various Sexual offences including amendment in IPC
Unit IV: Forensic Odontology – I [8] Definition and Scope of Forensic Odontology, Types of dentition, Basic structure of human teeth, types of teeth & their morphology, and determination of age from teeth using various methods, dental anomalies and their role in Personal Identification.
Unit V: Forensic Odontology – II [9] Bite marks: Types & forensic importance .Collection and preservation of samples, analysis of Bite marks, presentation of bite mark evidences in court of law. Role of Forensic Odontology in mass disaster victim identification.

INSTRUMENTATION IN FORENSIC SCIENCE
(CHEMICAL, PHYSICAL and BIOLOGICAL)

FS 512 **3-1-0-4**

Course Contents:

Unit I: Chromatographic Techniques [10]

General principles, Paper chromatography, column chromatography, TLC, Adsorption chromatography, Partition chromatography, Gas chromatography, Gas- liquid chromatography, Ion-exchange chromatography, Exclusion (permeation) chromatography, Affinity chromatography, HPLC, HPTLC, Capillary Chromatography, Interfacing GC with IR spectrometry; High performance liquid chromatography, Electrospray ionization mass spectrometry Computer aided Analysis -Introduction, Computer organization - Hardware, Circuits for interfacing computers to Instruments, Computer Organization - software, Data representation, The Automated Laboratory.

Unit II: Spectroscopy [15]

Ultra violet and visible spectrophotometry: Types of sources and stability, wavelength selection, filters-cells and sampling devices, detectors, resolution, qualitative and quantitative methods for detection; Fluorescence and phosphorescence spectrophotometry: Types of sources, structural factors, instrumentation, comparison of luminescence and UV-visible absorption methods;
Atomic absorption spectrometry: Instrumentation and techniques, interference in AAS, background correction methods, quantitative analysis; Atomic emission spectrometry: Instrumentation and techniques, arc/spark emission, ICP-AES, comparison of ICP vs AAS methods, quantitative analysis, applications;
X-ray spectroscopy: X-ray absorption and fluorescence methods, X-ray diffraction, Auger emission spectroscopy (AES), electron spectroscopy for chemical analysis (ESCA);
Infrared spectrophotometry: Dispersive and Fourier Transform spectrophotometry, sample handling, quantitative analysis and interpretation of IR spectra;
Raman spectroscopy: Instrumentation, sample handling and illumination, structural analysis, polarization measurements and Dispersive & FT analysis; Radiochemical techniques: Basic principles and theory, introduction about nuclear reactions and radiations, Neutron sources, Neutron Activation Analysis (NAA)

Unit III: Microscopy and Centrifugation Techniques [15]

Centrifugation: Basic principles of sedimentation, Various types of centrifuges, Density gradient centrifugation, Preparative centrifugation, Analysis of sub-cellular fractions, Ultra-centrifuge- Refrigerated Centrifuges
Microscopy: Basic principles, Simple and Compound microscope, Comparison microscope, Phase contrast Microscope, Stereoscopic microscope, Polarizing microscope, Fluorescent Microscopy, Infra red Microscopy, Scanning Electron Microscope (SEM) & Transmission Electron Microscope (TEM)

Unit II: Mass Spectrometry [8]

Sample flow, Ionization methods, Mass Analyzer, Vaccum Systems, Data handling, Correlation of mass spectra and molecular structure, Fourier transform mass spectrometry, Tandem mass spectrometry, Inductively coupled plasma MS (ICP-MS), Ion Microprobe Mass Analyzer (IMMA), HR GCMS, LCMS, Secondary Mass Spectrometry, Laser Mass spectrometry, Fast Atom bombardment and liquid secondary Ion Mass spectrometry

5. Chapmen J R; Practical Organic Mass Spectrometry - A Guide for Chemical and Biochemical Analysis, Wiley & Sons, NY (1993)
6. Mendham et al., Vogel's Quantitative Chemical Analysis, Pearson Education Ltd., 2009.
7. N. Gray, Instrumental Methods of Analysis, 1st Edition, CBS Publisher, 2011.

INTRODUCTION TO QUESTIONED DOCUMENTS EXAMINATION

FS 522 **2-0-0-2**

Unit I: Introduction [6]

Nature and problems of document examination, classification of documents, procurement of standard admitted/ specimen writings, handling and marking of documents, preliminary examination of documents, Basis of handwriting identification – individuality of handwriting, natural variations, process of comparison, various types of documents – genuine and forged documents, holographic documents, various writing features and their estimation, general characteristics of handwriting, individual characteristic of handwriting, basic tools needed for forensic documents examination and their use.

Unit II: Author Determination [7]

Disguised writing and anonymous letters - identification of writer, Examination of signatures – characteristics of genuine and forged signatures, Examination of alterations, erasers, overwriting, additions and obliterations, Decipherment of secret, indented and charred documents, Examination of seal impression and other mechanical impressions.

Unit III: Examination of Photocopies [6]

Examination of black & white, colour Xeroxed copies, carbon copies, fax messages Forgeries and their detection - Various types of forgeries and their detection, Examination of built up documents – determination of sequence of strokes, Physical matching of documents, Identification of type writings– identification of typist, identification of printed matter – Various types of printing of security documents, Printing of currency notes, examination of counterfeit currency notes, passports, visa, stamp papers, postal stamps etc.

Unit IV: Determination of Age [7]

Determination of age of documents by examination of signatures – Paper, ink and writing/signatures etc. Examination of computer printout, identification of dot-matrix, ink-jet and laser printers, electronic typewriter, credit cards, Forensic stylistics, forensic linguistics, e- documents, digital signatures, An introduction to computer forensics, opinion writing, reasons for opinion.

INTRODUCTION TO FORENSIC CHEMISTRY, TOXICOLOGY and PHARMACOLOGY

FS 532 **2-0-0-2**

Course Contents
Unit I: Introduction to Forensic Chemistry [5] Forensic Chemistry: Introduction, types of cases/exhibits, preliminary screening, presumptive test (colour and spot test), inorganic analysis, micro – chemical methods of analysis, Analysis of petroleum products.
Unit I: Toxicology of alcohol &Examination of Alcoholic Beverages [5] The fate of alcohol in the body, alcohol in the circulatory system, breath test instruments, field sobriety testing, Examination of alcoholic beverages; country made liquor, illicit liquor.Analysis of blood for alcohol.
Unit III: Drugs of Abuse [5] Introduction, classification of drugs of abuse, drugs of abuse in sports and doping, narcotics drugs and psychotropic substances, designers drugs and their forensic examination, Drugs and Cosmetic Act, Excise Act, NDPS Act.
Unit IV: Introduction to Toxicology [5] Definition, Law relating to poison, Classification of poisons. Action of poisons & factors modifying its action, routes of administration of poisons.
Unit V: Forensic Pharmacology [6] Pharmacology and toxicology of Psychotropic Drugs: Sedatives, Stimulants, Opiates and drugs of abuse. Extraction, Isolation of drugs from viscera, tissues and body fluids.

Text:

5. Gleason, M.N. et.al, Clinical Toxicology of Commercial products, Williams and Williams, Baltimore,

INTRODUCTION TO FORENSIC BIOTECHNOLOGY

FS 542 **2-0-0-2**

Course Contents
Unit 1:HAIR & FIBER [6] Structure of hair and its biochemical properties, Phases of hair growth, types of hair. Differences between animal and human hair, Forensic examination of different types of hairs. Different Types of fibers and their identification.
Unit 2 : INTRODUCTION TO BOTANICAL EVIDENCES & DIATOMS [5] Different botanical evidences of forensic significance: seeds, pollens etc .Diatoms: Classification, basic structure and morphology, forensic significance of diatoms.
Unit 3: INTRODUCTION TO FORENSIC ANTHROPOLOGY [5] Definition and scope of forensic anthropology, Human skeletal system and Types of bones. Estimation of age from skull and long bones, site and side determination. Estimation of Stature from skeletal remains. Determination of sex from skull, mandible and pelvis.
Unit 4:INTRODUCTION TO FORENSIC SEROLOGY [5] Definition and scope of forensic serology. Nature, composition and functions of blood and other fluids. Collection, preservation and packing of Biological fluids. Introduction to ABO, Rh, MN systems, Lectins – their forensic significance, Determination of secretor/ non secretor status. Antigens- Antibody reactions.
Unit 5:INTRODUCTION TO DNA PROFILING [5] Introduction to DNA , DNA biochemistry, Nuclear DNA and Mitochondrial DNA,. Significance of DNA profiling, Fundamental concepts and techniques applied in specific DNA tests, Scientific principles of forensic DNA typing. FTA cards, DNA extraction/isolation from different samples.

DISASTER MANAGEMENT and VICTIM IDENTIFICATION

FS 552 **2-1-0-3**

Unit 1: Understanding Disasters [10]

Meaning, nature, characteristics and types of Disasters, Causes and effects, Disaster:
A Global View, Disaster Profile of India, The Disaster Management cycle, Geological and Mountain Area Disasters-Earthquakes, Volcanic Eruption, Landslides, Snow Avalanches; Wind and Water Related Natural Disaster-Floods and Flash Floods, Droughts, Cyclones, Tsunamis; Man Made Disasters-Understanding Man-Made Disasters, Fires and Forest Fires, Nuclear, Biological and Chemical disaster and Road Accidents.

Unit 2: Roles & Responsibilities of Different Agencies and Govt. [10]

Roll of Information, Education, Communication & Training, Role and Responsibilities of Central, State, District and local administration, Role and Responsibilities of Armed Forces, Police, Para Military Forces, Role and Responsibilities of International Agencies, NGO's, Community Based Org. (CBO's).

Unit 3: Technologies for Disaster Management [10]

Role of IT in Disaster Preparedness, Remote Sensing, GIS and GPS, Use and Application of Emerging Technologies, Application of Modern Technologies for the Emergency communication, Application and use of ICST for different disasters, Human Behaviour and Response: Psychological Response and Psychological Rehabilitation, Trauma and Stress Management, Rumour and Panic Management, Medical and Health Response to Different Disasters, Role of Information and Communication Technology in Response Management.

Unit 4: Relief Measures and Victim Identification [9]

Minimum Standard of Relief, Relief Management- essential components, Funding Relief- short term and long term, Disaster Site Management, Recovery, Victim Identification and Biometrics, Bite Marks, methodologies, DNA Analysis and techniques, Ear prints, methodologies and analysis, Lip Prints, Fingerprints from dead bodies.

6. Sahni, Pardeep et.al. (eds.) 2002, Disaster Mitigation Experiences and Reflections, Prentice Hall of India, New Delhi.

FORENSIC PRACTICALS II

FS 562 **0-0-3-3**

1. Dental patterns and Recognition
2. Identification of individual teeth based on the morphological features.
3. Estimation of age from the teeth.
4. Living subject
5. Maxilla & mandible
6. Comparison and Identification of Individuals from bite marks
7. Autopsy
8. UV-Visible Spectrophotometer-working, sample preparation, analyzing graphs
9. IR Spectrophotometer- working, sample preparation, analyzing graphs
10. TLC of Ink Samples
11. Paper Chromatography

THIRD SEMESTER

FINGERPRINTING and FORENSIC PHOTOGRAPHY

Course Code: FS 601 **Credit Units: 2-1-0-3**

Course Contents
Unit I: Introduction to Photography [7] Introduction to forensic photography; Required equipments for photography – Camera, lens, shutter, depth of field, film; Importance of Forensic photography in a crime scene investigation.
Unit II: Types of Photography & Photo Prints [8] History and Development of Photography. Basic principles and techniques of Black & White and colour photography. Developing techniques and methods of photography, Different kinds of developers and fixers, modern developments in photography, linkage of cameras and film negatives.
Unit III: Introduction and Classification of fingerprints [7] Origin & History of fingerprints, Principles of Fingerprints identification, Searching, location and significance of fingerprints in criminal investigation; Biological significance of skin pattern, Types of fingerprints, Fingerprint characteristics: class and individual, Collection, lifting and preservation of fingerprints
Unit IV: Classification Systems and AFIS [8] Historical Systems, Vucetich Classification, Henry's system of classification, Batley's Single Digit classification, NCIC; AFIS, History and Development, French, UK, Japanese Initiatives, Biometric System Classification, Basic Biometric Systems, Introduction to Traits, FAR and FRR Applications
Unit V: Fingerprint Developmental Techniques [9] Methods of lifting and developing latent fingerprints – Physical methods - Powder method (Black, silver, florescent, red, yellow), Iodine fuming etc.; Chemical methods - Ninhydrin, silver nitrate method, cyno-acrylate, Osmium tetra-oxide etc., Photography of latent fingerprints and presentation of fingerprint evidence in court.

APPLIED COGNITIVE PSYCHOLOGY

FS 611 **2-1-0-3**

Unit 1: Cognitive Neuroscience [13]

Introduction, Philosophical antecedents, Emergence of Cognitive psychology, Approaches and key issues, Organization of Nervous system: Cognition in the Brain, Sensation, to representation, Theoretical approaches to perception, Deficits in perception. Attention and consciousness.

Unit 2: Memory [10]

Models, Processes, Practical Applications of Cognitive Psychology in improving memory processes, Representations and manipulation of Knowledge in: Images and Propositions: Spatial cognition and Cognitive Map.

Unit 3: Language [8]

Nature and Acquisition: Bilingualism and Multilingualism Reading: Bottom-up and Top-down processes, Comprehension, Neuropsychology of Language. Problem-solving and Creativity: Practical applications of cognitive psychology. Decision-making and reasoning: Deductive reasoning and inductive reasoning,

Unit 4: Intelligence [8]

Information possessing and intelligence, alternative approaches to Intelligence. Computer Simulation, improving intelligence.

SPEECH ANALYSIS and MULTIMEDIA FORENSICS

FS 621 **2-1-0-3**

Unit I: Speech [10]

Speech Anatomy, Mechanism of speech Production, Acoustic Properties of Vocal Tract, Uniqueness in person's voice, interspeaker and intraspeaker variation; Articulation- Manner & Place of Articulation, Phonemes, Vowel, Consonant and Glides; Phonetics in Speaker Identification, IPA (The International Phonetic Alphabets), Forensic Phonetics, Effect of context, Supra segmental (Prosodic features). Audio-enhancement, Sound Recording/Playback Devices: Analog Tape recorders, Digital recorder, Microphone types, Digital audio formats. Apex Court Judgments on Speaker Identification. Court presentation of report based on speaker identification.

Unit II: DSP [10]

Digital Signal Processing, A to D Conversion- Sampling, Quantization, Digital Audio Formats, Pulse Code Modulation, Coding and Decoding, Computer Representation of Speech Speaker Recognition: Principles of speaker recognition/identification, Methods on Speaker Recognition. Various approaches in Forensic Speaker Identification, Interpretation of result, Statistical interpretation of probability scale, Objective/Subjective methods, discriminating tests, closed test, open test, likelihood ratio calculation, Concept of test and error in Speaker Identification. Introduction to Pattern Recognition, Pattern Recognition application in Automatic Speaker Identification and Verification System, Different algorithm of automatic speaker identification.

Unit III: Audio Evidence [10]

Audio Evidence Examination: Handling of audio recording evidences, Procedure for preparation of working copies, Phonetic transcription, Analysis of linguistic & phonetic characteristics, Temporal measurement, Text-dependent and text-independent speaker recognition. Instrumental Analysis of speech sample: Verbatim, Clue words, IPA marking, CSL & Linear predictive coding technique, Fourier transformation, Examination using SPID, Vocal behaviors, alcohol speech relationships. Authentication of recorded audio: Type of alterations, Auditory Examination by Critical Listening. Waveform analysis, Speech Spectrographic analysis, Magnetic developing, Optical Method.

Unit IV: Video Evidence [9]

Introduction to video technology: Video standards, Recording formats- Analog and Digital, Introduction to video devices, Linear and Non-linear editing, Concept of video film production, Graphics and animation technique. Image perception, Colour space & representation, Storage, Image processing application. Introduction to image enhancement, Image restoration, Concept of digital water marking, Image compression, Retrieval of video files, Integrity of images, Facial image recognition. Forensic analysis of audio/video in video recording: Authentication of video recording, Visual examination technique on video frame sequence, Video image analysis- object, costumes, Facial image recognition from video frame image, Video signal analysis.

FORENSIC PRACTICAL III

FS 631 **0-0-3-3**

1. Taking Photographs
2. Photography of Outdoor Crime Scene
3. Indoor photography including the laboratory
4. Presentation of Evidence through Photograph and charts.
5. Photography of documents and fingerprints (Transmitted light/Oblique light/U.V. Light Photography).
6. Taking of fingerprints on fingerprint chart.
7. Development of latent Finger Prints using powder methods.
8. Examination and comparison of security documents, fake currency and stamp papers.
9. Development of latent finger prints by Chemical methods and photography.
10. Development of latent finger prints by physical methods and photography.
11. Comparison of fingerprints, palm prints along on the basis of ridge characteristics and ridge details.
12. Recording of speech samples using tape recorder & digital recorders and measures for keeping it in the safe custody.
13. Speaker wise segregation of speech sample of recorded conversation spoken between two speakers.
14. Transfer of audio file from a digital media to other media using standard software and authentication of recorded speech.
15. Comparison of linguistic and phonetic features of audio recording voice samples of two speakers
16. Spectrographic analysis of voice samples of two speakers using voice spectrograph and comparison of their spectrographic features.
17. Video analysis and detection of tampered video files using Video analyzing tool.

ELECTIVES

Specialization A: Forensic Chemistry and Toxicology

ADVANCED FORENSIC CHEMISTRY

FS 641 **2-0-0-2**

Course Contents:
Unit I: Arson [5] Arson: Chemistry and Behavior of fire, origin and cause and their methods of investigation and evaluation of clue material, analysis of arson exhibits by various methods: Management of Arson cases.
Unit II: Motor Vehicle Fires [5] Causes, investigation, collection, preservation, packaging and analysis of evidences
Unit III: Analysis of Petroleum Products, Organic and Inorganic Substances [5] Examination of petroleum products: distillation and fractionation, various fractions and their commercial uses, standard methods of analysis of petroleum products for adulteration, Forensic analysis of organic and inorganic Industrial products, chemical fertilizers, insecticide, metallic and non-metallic products, consumer items.

Unit IV: Expert Witness [5]

The role of Chemist as an expert witness. Presentation of the report in the court, Cross-examination of the expert

Unit V: Explosives [6]

Classification, composition and characteristics of explosives, pyrotechnics, IEDs, systematic examination of explosives and explosion residues in the laboratory using chemical and instrumental techniques in the laboratory and interpretation of results, Explosives Act.

ADVANCED FORENSIC PHARMACOLOGY & TOXICOLOGY

FS 651 **2-0-0-2**

Course Contents:

Unit I: Pharmacology-I [5]
Sites and mechanisms of action of drugs, Dose-effect relationships; agonists, partial agonists and antagonists. Factor that modify drug actions; side effects, overdose, idyosincratic and allergic reactions; teratogenesis and foetal toxicity. Drug interactions.

Unit II: Pharmacology-II [5]
The movement of drug molecules across cell membranes, the blood-brain barrier and the placental filter. Routes of administration and drug adsorption. Binding to plasma proteins. Drug distribution, metabolism and elimination. Drug bioavailability and half-life.

Unit III: Toxicology and Isolation techniques of toxins [5]
Definition of Toxicology, Principle of Toxicology, Isolation of Toxic substances from viscera and other relevant materials. The role of drug recognition expert.

Unit IV: Different Toxins-I [5]

Nature, administration, sign & symptoms, Fatal dose, postmortem findings, Detection and medicolegal aspects of-

a) Metallic poisons Arsenic, Mercury

b) Vegetable poisons Abrus Precatorius, Calotropis Gigantia,Castor ,Oleander, Aconite.

Unit V: Different Toxins-II [6]

- **Insecticides** Organophosphorous compounds, Organochloro Compounds and Carbamates

- **Volatile Poisons** Methyl alcohol, Chloroform,
- **Asphyxiants** Cyanide, Carbon monoxide
- **Animal Poisons** Snake venom, Cantharide, Insect bite.

FORENSIC PRACTICAL IV A

(Chemistry, Pharmacology, Toxicology)

FS 661 **0-0-4-4**

1. Isolation techniques of different toxic substances.
2. TLC of insecticides, Barbiturates and other drugs.
3. Analysis of volatile and non-volatile poisons.
4. Analysis of vegetable poisons.
5. Spot test of nitrates, nitrites, carbonates, sulphates, sulphites, chlorates.
6. Spot test of mercury, iron, copper, Aluminum and cadmium and zinc and other metallic poisons

Specialization B: Forensic Biotechnology and DNA Profiling

ADVANCED FORENSIC BIOLOGY & ANTHROPOLOGY

FS 671 **2-0-0-2**

Course Contents
Unit I: Introduction to Wild Life Forensics [5] Introduction to wildlife forensics, Examination of pug marks, horn, skin, fur, hair, nail and teeth. Identification of some endangered species of plants and animals.. Wildlife life protection Act.
Unit II: Forensic Entomology & Forensic microbiology [5] Collection of insects, Shipment of collected insects, Identification of insect and its stage of growth. Determination of the postmortem interval or "time since death" in homicide investigations, forensic entomotoxicology. Introduction to forensic microbiology
Unit III: Forensic Anthropology [5]

Somatometry, osteometry & Craniometry. Identification of individuals from skeletal remains, Collection, Handling, preservation of skeletal remains of forensic science and report writing.
Unit IV: Forensic Taphonomy, Forensic Radiology [5] Forensic Taphonomy. Fire modification of bones .Assessment of antemortem and postmortem skeletal trauma. Artefacts in the skeletal remains. Application of radiology in forensic anthropology
Unit V:, Super Imposition &Facial Reconstruction [6] .Superimposition techniques. Facial reconstruction; three dimensional and computer assisted facial reconstruction

ADVANCED FORENSIC SEROLOGY & DNA PROFILING

FS 681 **2-0-0-2**

Course Contents
Unit 1:Forensic Characterization of Blood Catalytic tests & crystal tests, Spectrophotometric method, chromatographic method, immunological methods, electrophoresis methods. Typing of blood antigens from dried stains. Lattes test, Absorption Elution, Absorption Inhibition, Mixed agglutination
Unit 2: Forensic Characterization Body Fluids Forensic characterization of semen, saliva, urine, faeces, milk and other biological fluids. Their identification and examination.
Unit 3: Determination of Species of Origin Determination of species origin. Extraction of species specific antigens from blood stains, and other body fluids .Tube technique (Precipitin test/Ring test), Diffusion methods; single diffusion, double diffusion,

and crossed-over electrophoresis, rocket electrophoresis.
Unit 4: Serogenetic Markers Introduction to isozymes and Polymorphic proteins. Typing of isozymes, like Phospho Glucomutase (PGM), Glyoxylase I(GLO), Esterase D(EsD), Adenylate Kinase (AK) .Typing of polymorphic serum proteins like Haptoglobin(Hp) &Transferrin (Tf) Introduction to Human Leucocyte Antigen. HLA Classification, HLA typing, Mol.based HLA typing.
Unit 5: DNA Profiling RFLP analysis, analysis of STR, SNP and Mitochondrial DNA, YSTRs, PCR amplifications, FTA cards, DNA chips. Forensic applications of DNA profiling, limitations of DNA profiling

7. Boorman K, Dodd B, Lincoln P. Blood group serology: Theory and Techniques: Practical Applications. 5th ed.

FORENSIC PRACTICAL IV B

FS 691 **0-0-4-4**

1. Determination of species of origin from blood &other biological evidences using precipitin test
2. Extraction /Isolation of Diatoms from water/soil, tissues &Identification
3. Identification of bones based on its morphology and anatomical planes
4. Sex Determination from Skull, Mandible, Pelvis & long bones
5. Presumptive and Confirmatory tests for blood
6. Examination and Identification body fluids
7. Microscopic Examination of Hair for the determination of species
8. Gel-Immuno Diffusion tests for species origin
9. Blood grouping from dried stains by Absorption Inhibition or Absorption Elution
10. Craniometry & Osteometry
11. Somatometry & Somatoscopy
12. Stature estimation from bones
13. Age Estimation from Skull, Mandible, Long bones

14. Sexing from Barr Bodies
15. Isolation of DNA from various sources-plants, bacteria and blood
16. PCR
17. RFLP and DNA Sequencing
18. DNA Estimation through Spectroscopic Methods
19. ImmunoElectrophoresis
20. Radial Immuno diffusion
21. ELISA
22. Double Diffusion Assay
23. Quantification of RNA

Specialization C: Questioned Document Examination

ADVANCED QUESTIONED DOCUMENT EXAMINATION

FS 603 **2-0-0-2**

Unit I: Graphology and Psychological Autopsy [5]

Police Psychology, Victimology, Criminal Profiling, Cognitive Psychology and Applications, Uses, Graphology: Introduction, Writing Systems, Graphology Learning Systems, Criminal Profiling through Handwriting, Lie Detection through Handwriting, Behavioral Estimations through Handwriting

Unit II: Stylistics and Linguistics [5]

Writing Systems, Historical Linguistics, Field Linguistics, Linguistic Phonetics, Phonology, Morphology, The Lexicon, Syntax, Generative Grammar, Functional Linguistics, Typology, An Introduction to Formal Semantics, Pragmatics: Language and Communication, Discourse Analysis, Linguistics and Literature, First Language Acquisition, Linguistics and Second Language Acquisition, Multilingualism, Natural Sign Languages, Sociolinguistics, Neurolinguistics, Computational Linguistics, Applied Linguistics, Educational Linguistics, Linguistics and Reading, Clinical Linguistics

Module III: Automated Signature/Handwriting Recognition Systems [5]

Introduction, Latest Trends in Automated System Development, Image Acquisition, Image Processing, Feature Quantification, Feature Extraction, Feature Processing, Comparison, Behavioral Biometrics, Introduction, Verification and Identification, Basic working of Biometric Matching, Accuracy, False Match Rate, False Non-match Rate, Failure to Enroll Rate.

Module IV: Advanced Detections of Forgeries [5]

Handwriting comparisons using Individual Characteristics, Fractured/cut edge comparisons (paper, tape, postage stamps, dryer sheets), Plastic bag comparisons, Printing process examinations (document authentication/typewriting classification), Charred and liquid soaked document preservation, Indented writing examinations, Alternate light source examinations (ink discrimination, alterations, enhancements), Office machine artifact comparisons; Database queries (Anonymous Letter File, Automated Counterfeit Identification Database, Bank Robbery Note File, Testimony in legal proceedings

Module V: Art Forgery [3]

Introduction, History, Artist Forgers, Dealer Forgers, Examination, Carbon Dating, White Lead Dating, X-Ray based Techniques, Dendrochronology, Stable Isotope Analysis, Thermo-luminescence, Craquelure, Digital Authentication, Morellian Analysis, Atomic Absorption Spectrophotometry, Inductively Coupled Plasma, Mass Spectrometry, Wavelet Decomposition, Photographic Forgery, Victorian Waifs, The Rospigliosi Cup Case Study, Etruscan Terracotta Warriors Case Study, Flower Portrait, Michelangelo's "Cupid" Case Study, Samson Ceramics, Getty Kouros, Copying vs. Forging, Pastiche, Association Research into Crimes against Art, Racketeer Influenced and Corrupt Organizations Act, Postal Fraud, Archaeological Forgery, Archaeoraptor, Neutron Activation Analysis

Module VI: Electronic Document Analysis [3]

Data and Evidence Recovery, Computer and cyber forensic basics, Cell Phones / Mobile Forensics, Bluetooth, Computer Ethics and Application Programs, Data and Evidence Recovery- Formatted Partition Recovery, Data Recovery Tools, Data Recovery Procedures and Ethics, Fine Transfer Protocol (FTP), Preserve and safely handle original media, Recover Internet Usage Data, Recover Swap Files/Temporary Files / Cache Files

DIGITAL IMAGE PROCESSING

FS 613 **2-0-0-2**

Unit I: Introduction and Fundamentals [5]

Motivation and Perspective, Applications, Components of Image Processing System, Element of Visual Perception, A Simple Image Model, Sampling and Quantization. Image Enhancement in Spatial Domain; Introduction; Basic Gray Level Functions – Piecewise-Linear Transformation Functions: Contrast Stretching; Histogram Specification; Histogram Equalization; Local Enhancement; Enhancement using Arithmetic/Logic Operations – Image Subtraction, Image Averaging; Basics of Spatial Filtering; Smoothing - Mean filter, Ordered Statistic Filter; Sharpening – The Laplacian.

Unit II: Image Enhancement in Frequency Domain [5]

Fourier Transform and the Frequency Domain, Basis of Filtering in Frequency Domain, Filters – Low-pass, High-pass; Correspondence Between Filtering in Spatial and Frequency Domain; Smoothing Frequency Domain Filters – Gaussian Lowpass Filters; Sharpening Frequency Domain Filters – Gaussian Highpass Filters; Homomorphic Filtering.

Unit III: Image Restoration [5]

A Model of Restoration Process, Noise Models, Restoration in the presence of Noise only-Spatial Filtering – Mean Filters: Arithmetic Mean filter, Geometric Mean Filter, Order Statistic Filters – Median Filter, Max and Min filters; Periodic Noise Reduction by Frequency Domain Filtering – Bandpass Filters; Minimum Mean-square Error Restoration.

Unit IV: Registration and Segmentation [5]

Introduction, Region Extraction, Pixel-Based Approach, Multi-level Thresholding, Local Thresholding, Region-based Approach, Edge and Line Detection: Edge Detection, Edge Operators, Pattern Fitting Approach, Edge Linking and Edge Following, Edge Elements. Extraction by Thresholding, Edge Detector Performance, Line Detection, Corner Detection.

Unit V: Feature Extraction [6]

Representation, Topological Attributes, Geometric Attributes, Boundary-based Description, Region-based Description and Relationship. Object Recognition; Deterministic Methods, Clustering, Statistical Classification, Syntactic Recognition, Tree Search, Graph Matching

FORENSIC PRACTICAL IV C

FS 623 **0-0-4-4**

1. Image enhancement
2. Image compression
3. Color image processing
4. Image segmentation
5. Image morphology
6. Image Restoration
7. Edge detection
8. Comparison of forged (disputed) signature with the specimen signatures.
9. Comparison of disguised (disputed) signature with specimen signatures.
10. Examination and comparison of disputed anonymous letter with specimen of suspect/suspects.
11. Identification of altered/added/obliterated/erased/handwriting on cheques and deeds.

FOURTH SEMESTER
DISSERTATION: RESEARCH WORK BASED PROJECT

FS 620 **Credits: 20**

GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curriculae where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

In general, the File should be comprehensive and include:

1. A short account of the activities that were undertaken as part of the project;
2. A statement about the extent to which the project has achieved its stated objectives;
3. A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
4. Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
5. Any problems that have arisen and may be useful to document for future reference.

PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

Acknowledgement(s)

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

Abstract

A good"Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

Materials and Methods

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various secions, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporing or contradicting the present case of research.

Conclusion(s) & Recommendations

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

1. Did the research project meet its aims (check back to introduction for stated aims)?
2. What are the main findings of the research?
3. Are there any recommendations?
4. Do you have any conclusion on the research process itself?

Implications for Future Research

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

Appendices

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

References

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples:

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect* , **8** (suppl 1): 116–117.

For book:

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

The Layout Guidelines for the Project File & Project Report:

1. A4 size Paper
2. Font: Arial (10 points) or Times New Roman (12 points)
3. Line spacing: 1.5
4. Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following ***assessment objectives:***

1. Range of Research Methods used to obtain information
2. Execution of Research
3. Data Analysis (Analyze Quantitative/ Qualitative information)
4. Quality Control
5. Conclusions

Assessment Scheme:
Continuous Evaluation:

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

Final Evaluation:

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

It is recommended that the Final evaluation should be carried out by a panel of evaluators.

Mody University of Science & Technology

MSc Maths

Session 2017-2018

Curriculum Structure

MODY UNIVERSITY OF SCIENCE AND TECHNOLOGY
LAKSHMANGARH • RAJASTHAN
A Leading Women's University

M. Sc. Mathematics

(Session 2016-2017 Onwards)

Programme Level: Postgraduate **Duration:** Two Years (Four Semesters)

No. of Seats: 20

Objectives: The proposed PG programme in Mathematics is a highly interesting and promising with broader opportunity for absorption in teaching, research and industry for students. The M.Sc. Mathematics programme offers core fundamental skills in Mathematics which incorporate the ideas of applied mathematical knowledge as well as provide platform to the student's regarding research oriented programmes in various interdisciplinary areas of mathematics.

Scope: The programme will generate interest of students towards fundamental mathematical research and will be able to qualify eligibility test for various fellowships.. Student will be able to select various options for higher studies like doctoral programmes in Computational numerical analysis, Advanced graph and pebbling theory, Algebraic and numerical topology, Approximation theory, Optimization techniques , Economics Fluid dynamics, Financial mathematics, Theory of computation and artificial intelligence, Mathematical modeling and simulation etc. Further, they have scope for absorption in research Labs in India like BARC, IISc, TIFR, IITs, ISRO, DRDO etc. as well as may get opportunity for doctoral or post doctoral research in India and abroad.

Input Qualification:

Bachelor's Degree in Science from any recognized university with Mathematics as a core subject for three years/six semesters, with 50% of aggregate marks and adequate proficiency in English.

Evaluation Procedure: All the Rules and Regulations as a provided in the Ordinance and regulations of the Undergraduate/postgraduate programmes of Mody University shall be followed. The first batch of this programme is proposed to be admitted in the session 2016-2017.

	M.Sc. Mathematics									
	Two-Year Programme									
	Academic Curriculum(Session 2016-2017 onwards)									
	First Year									
Autumn Semester	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration	Weight age (%)		
			L	T	P		Hours	CW*	MTE	ETE
	MS 511	Computer Based Advanced Numerical Analysis	3	1	-	4	3	25	25	50
	MS 521	Discrete Mathematics	3	1	-	4	3	25	25	50
	MS 531	General Topology	3	1	-	4	3	25	25	50
	MS 541	Operations Research	3	1	-	4	3	25	25	50
	MS 551	Statistics and Probability -I	3	1	-	4	3	25	25	50
	MS 561	Ordinary Differential Equations	3	1	-	4	3	25	25	50
		Sub Total	**18**	**6**	**-**	**24**				
		Foreign Language-I** (Non-Credit)	3	-	-	3	3	25	25	50
Spring Semester	Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration	Weight age (%)		
			L	T	P		Hours	CW*	MTE	ETE
	MS 512	Advanced Abstract Algebra	3	1	-	4	3	25	25	50
	MS 522	Complex Analysis and Integral Transform	3	1	-	4	3	25	25	50
	MS 532	Mathematical Modeling and Simulation	3	1	-	4	3	25	25	50
	MS 542	Partial Differential Equations	3	1	-	4	3	25	25	50
	MS 552	Statistics and Probability - II	3	1	-	4	3	25	25	50
	MS 562	Modeling and Simulation Laboratory	-	-	4	2	4	100		
		Sub Total	**15**	**5**	**4**	**22**				
		Foreign Language-II **(Non-Credit)	3	-	-	3	3	25	25	50

** Refer to Foreign Language Section.

M.Sc.(Mathematics)

Two-Year Programme (2016- 17 and onwards)

Second Year

Autumn Semester

Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration	Weightage (%)		
		L	T	P		Hours	CW*	MTE	ETE
MS 611	Advanced Linear Algebra	3	1	-	4	3	25	25	50
MS 621	Advanced Graph Theory and Combinatorics	3	1	-	4	3	25	25	50
MS 631	Real Analysis and Measure Theory	3	1	-	4	3	25	25	50
MS 641	Special Functions and Integral Equations	3	1	-	4	3	25	25	50
	Elective-I	3	1	-	4	3	25	25	50
	Sub Total	**15**	**5**	**-**	**20**				

Spring Semester

Course Code	Course Title	Contact Hours per Week			Credits	ETE Duration	Weightage (%)		
		L	T	P		Hours	CW*	MTE	ETE
MS 612	Functional Analysis	3	1	-	4	3	25	25	50
MS 622	Inequality and Continued Fractions	3	1	-	4	3	25	25	50
MS 632	Basics of MATLAB	-	-	4	2	4	100		
	Elective-II	3	1	-	4	3	25	25	50
MS 642	Dissertation	-	-	-	8		100		
	Sub Total	**9**	**3**	**4**	**22**				

Total Credits: 88 (I Year +II year)

Elective- I	**Elective- II**
MS 651 Magneto Hydrodynamics	MS 652 Viscous Fluid Dynamics
MS 661 Sequence and Series	MS 662 Summability and Approximation Theory
MS 671 Tensor Analysis	MS 672 Mechanics and Calculus of Variations
MS 681 Reliability Theories	MS 682 Fourier Analysis
MS 691 Advanced Number Theory	MS 692 Differential Geometry

* CW (Course work): It would include attendance, assignments, class /quiz test.

Note: Combinations of electives are: MS 651 & MS 652; MS 661 & MS 662; MS 671 & MS 672; MS 681 & MS 682; MS 691 & MS 692.

(Above II year is taken from AC 30, syllabus in AC 30 minutes)

MS 511 Computer Based Advanced Numerical Analysis 3-1-0-4

1. Algebraic and Transcendental Equations: General iterative methods, Newton-Raphson method for finding multiple roots, system of non linear equations, convergence of Newton-Raphson method, Graeffe's root squaring method, Muller's method , Bairstow iterative method. **[08]**

2. System of Linear Equations: Existence of solution, ill-conditioned system, Gauss elimination with pivoting, Gauss-Jordan method, triangular factorization method, Jacobi iteration method, Gauss-Seidel method, relaxation method, convergence of iteration methods. **[08]**

3. Boundary Value and Eigen Value Problems: Solution of Eigen values problems by power method, Jacobi method, finite difference scheme for linear and non linear boundary value problems, shooting method, finite difference method. **[08]**

4. Partial Differential Equations: Numerical solution of partial differential equations, finite difference approximation to partial derivatives, solution of Laplace and Poisson equations, solutions of one and two dimensional heat and wave equations, Crank-Nicolson method for parabolic partial differential equations. **[09]**

5. Difference Equations and Curve Fitting: Homogeneous difference equations with constant coefficients, particular solutions of a difference equations, curve fitting and regression, least square method, fitting of straight line and second order polynomials. **[06]**

Text Books:

1. Shastry S.S. (2006), Introductory Methods of Numerical Analysis, 4th ed., PHI Pvt. Ltd.
2. Collatz L. (2013), Numerical Solution of Differential Equations, 6th ed., Springer.
3. Jain M.K. and Iyenger S.R.K.(2003), Numerical Methods for Scientists & Engineering Computations, 4th ed., Wiley Eastern Ltd.

Reference Books:

1. Balagurusamy E. (2008), Numerical Methods, 25th reprint, McGraw-Hill Education (India) Ltd.
2. Srimanta Pal (2009), Numerical Methods, 1st ed., Oxford University Press, Oxford.

MS 521 **Discrete Mathematics** **3-1-0-4**

1. Relation and Function: Definition of set, different forms, properties and operations, principle of inclusion and exclusion, partition of a set, definition and types of a relation, composition, properties, graphical representation, equivalence classes, closure of a relation, Warshall's algorithm, Hasse diagrams, definition of lattice, different forms, properties, definition and kinds of a function, composition and properties of functions, recursively defined functions. **[10]**

2. Logics and Proofs: Propositional logic, propositional equivalences, predicates and quantifiers, nested quantifiers, rules of inference, notion of a proof and methods for constructing proofs, normal forms (disjunctive and conjunctive), proof methods and strategy, statements of Fermat's last theorem, the $(3x + 1)$ conjecture and Godel's incompleteness theorem, program correctness. **[10]**

3. Induction and Counting: Mathematical induction, strong induction and well-ordering, recursive definitions and structural induction, recursive algorithms, basics of counting, pigeonhole principle, permutations and combinations, binomial coefficients, generalized permutations and combinations, generating permutations and combinations. **[09]**

4. Graphs and Finite Automata: Graph and digraphs,, Konigsberg bridge problem, finite and infinite graphs, incidence and degree, isolated vertex, pendant vertex, and null graph, isomorphism, sub graphs, walk, path and circuits, connected graphs, disconnected graphs and components, Euler graphs, operation on graphs, Hamiltonian paths and circuits, traveling salesman problem, types and properties of tree, matrix representation of graphs; deterministic and non-deterministic finite automata, transition table and transition diagram, Mealy and Moore machines, minimization of finite automation. **[10]**

Text Books:

1. Kenneth H. Rosen (2008), Discrete Mathematics and Its Applications with Combinatorics and Graph Theory, 7th ed., TMH Education.
2. Kolman, Busby and Ross (2009), Discrete Mathematical Structure, 6th ed., Pearson.
3. K.D. Joshi (1989), Foundations of Discrete Mathematics, 2003 reprint, New Age International.

Reference Books:

1. Tremblay(1997), Discrete Mathematical Structures with Application to Computer Science, 35th reprint 2008,Mc Graw Hill Education,
2. Liu and Mohapatra (2000) , Elements of Discrete Mathematics , 2nd ed., Mc Graw Hill Education, New Delhi.
3. Narsingh Deo (2004), Graph Theory with Applications to Engineering and Computer Science, reprint ed.,PHI.

MS 531 **General Topology** **3-1-0-4**

1. Metric and Topological Spaces: Definition and examples of metric spaces, open sets, closed sets, convergence, completeness and Baire's theorem, continuous mappings, spaces of continuous functions, Euclidean and unitary spaces, definition and examples of topological spaces, elementary concepts, open bases and open subbases, weak topologies, function algebras. **[08]**

2. Compactness: Compact spaces, products of spaces, Tychonoff's theorem and locally compact spaces, compactness for metric spaces, Ascoli's theorem. **[08]**

3. Separation: T_1 – spaces and Hausdorff spaces, completely regular spaces and normal spaces, Urysohn's lemma and the Tietze extension theorem, Urysohn's imbedding theorem, Stone – Cech compactification. **[08]**

4. Connectedness: Connected spaces, the component of spaces, totally disconnected spaces, locally connected spaces. **[08]**

5. Approximation: Weierstrass approximation theorem, Stone-Weierstrass theorems locally compact Hausdrorff spaces, extended Stone-Weierstrass theorems. **[07]**

Text Books:

1. George F. Simmons (2015), Topology and Modern Analysis, reprint ed., McGraw Hill Education, New Delhi
2. Sharma J. N. and Vashistha A. R.(2010), Topology, 37th ed., Krishna Prakashan Media, Meerut.
3. Adams (2008), Introduction to Topology: Pure and Applied, 3rd reprint ed., Pearson.

Reference Books:

1. Cain L.(2012), Introduction to General Topology,1st impression. Pearson.
2. Armstrong (2014), Basic Topology, reprint ed., CBS Publication.
3. Seymour Lipschutz(1965), Schaum's Outline of Theory and Problems of General Topology, 1st ed.,McGraw Hill Education.

MS 541 **Operations Research** **3-1-0-4**

1. Linear Programming: Dual simplex method, parametric linear programming, game theory, two person zero sum game, game with mixed strategies, graphical solution, solution by linear programming. **[10]**

2. Inventory and Replacement Models: Deterministic models purchase and manufacturing models, probabilistic models, replacement of items that deteriorate and whose maintenance and repair costs increases with time. **[10]**

3. Job Sequencing and Queuing Theory: N jobs two machines, N jobs three machines, two jobs N machines; elements of a queuing system, Kendall's notation, (M/M/1):(FCFS/∞/∞), (M/M/1):(FCFS/N/∞) models. **[10]**

4. Dynamic Programming and PERT-CPM: Bellman's principal, employment smoothing problem, cargo loading problem; project planning and scheduling using PERT-CPM. **[09]**

Text Books:

1. Gupta Prem Kumar and Hira D.S.(2007), Operations Research,4th ed., S. Chand & Company Ltd., New Delhi.
2. Kanti Swarup, Gupta P.K. and Man Mohan (2006), Operations Research, 3rd ed., Sultan Chand & Sons, New Delhi.
3. Hillier F.S. and Lieberman G.J. (2005), Introduction to Operations Research, 8th ed., McGraw Hill, New Delhi.

Reference Books:

1. Taha H.A. (2010),Operations Research-An Introduction, 9th ed., Macmillan Publishing Co., Inc., New York.
2. Hadly G.(1964), Nonlinear and Dynamic Programming , 2nd ed., Addison-Wesley, Reading Mass.

MS 551 **Statistics and Probability - I** **3-1-0-4**

1. Introductory Ideas: Recapitulation of basic probability theory, law of addition and multiplication, conditional probability, total probability, Bayes' theorem and its applications. **[06]**

2. Random Variables: Theorems on random variables, distribution function, properties of distribution, discrete random variable, probability mass function (pmf), discrete distribution function, continuous random variable, probability density function (pdf), cumulative distribution function(cdf), moments, covariance, moments generating function, two-dimensional random variables (discrete and continuous), transformation of random variables. **[12]**

3. Distributions: Discrete-binomial, Poisson, geometric, uniform distributions, continuous-uniform, exponential, gamma, weibull, normal distributions. **[12]**

4. Correlation and Regression: Simple and partial correlations, linear and non-linear regressions, regression coefficients, properties, angle between two lines of regression, standard error of estimate rank, regression curve correlation. **[09]**

Text Books:

1. Baisnab A.P. and Manoranjan Jas (2003), Elements of Probability and Statistics, 2nd ed., TMH .
2. Pugalararasu(2011) , Probability and Queuing Theory , 1st ed., TMH.
3. Gupta and Kapoor (2002), Fundamental of Mathematical Statistics , 3rd ed., SCS Publisher.
4. J. Susan Milton and Jesse C. Arnold (2016), Introduction to Probability and Statistics, 4th ed.,, Mc Graw Hill Education.

Reference Books:

1. Papoulis(2002), Probability, Random Variables and Stochastic Processes,4th ed., TMH.
2. Palaniammal(2012), Probability and Random Processes , 3rd ed., PHI.
3. Probability and Statistics (Schaum's outline Series) by Spiegel (2009), 3rd ed., TMH.
4. Miller and Freund's (2007), Mathematical Statistics with Applications, 7th Edition, Pearson.

1. Second Order Differential Equations: Review of the general solution of the second order homogeneous differential equations, use of a known solution to find another solution, homogeneous equations with constant coefficients, method of undetermined coefficient and method of variation of parameters. **[08]**

2. Non-Linear Ordinary Differential Equations: Two dimensional autonomous systems and phase space analysis- critical points, proper and improper nodes, spiral points and saddle points, definition of stability, Lyapunov function, stable, unstable and center subspaces, Riccati's equation-general solution and the solution when one, two or three particular solutions are known. **[10]**

3. Total Differential Equations: Different forms and solutions, necessary and sufficient condition, geometrical meaning of equation containing three and four variables, total differential equations of second degree. **[07]**

4. Power Series Solutions: Review of power series, series solutions of first order equations (Taylor series method), second order linear equations, solution near a regular singular point (method of Forbenius) for different cases, particular integral and the point at infinity. **[08]**

5. Existence and Uniqueness of Initial Value Problems: The existence and uniqueness of solutions, method of successive approximations, Picard's theorem, solution of initial-value problems by Picard method. **[06]**

Text Books:

1. Deo S. C., Lakshmikantham and Raghvendra V.(2000), Text book of Ordinary Differential Equations, 2nd ed.,Tata Mc-Graw Hill.
2. Dennis G. Zill, Michael R Cullen (2009), Differential Equations with Boundary-Value Problems, 7th ed., Brooks/Cole.
3. M. Rama Mohana Rao (1980), Ordinary Differential Equations: Theory and Applications, 2nd ed., Affiliated East-West Press Pvt. Ltd., New Delhi.

Reference Books:

3. Raisinghaniya M.D. (2008), Ordinary and Partial Differential Equations , 18th ed.,S. Chand Limited.

MS 512 **Advanced Abstract Algebra** **3-1-0-4**

1. Groups: Introduction and preliminaries (equivalence relation, integers modulo n), group definition and basic axioms, examples (dihedral, symmetric, matrix, quaternion groups), subgroups, cyclic groups, cosets, Lagrange's theorem, normal subgroups and quotient groups, centralizers and normalizers, nilpotent groups, direct products. **[10]**

2. Homomorphism and Group Actions: Definition and examples, isomorphism theorems, groups acting on themselves by left multiplication (Cayley's theorem), groups acting on themselves by conjugation (the class equation), automorphisms, Sylow p-groups and Sylow theorem. **[10]**

3. Ring: Basic definitions, examples (polynomial rings, matrix rings, group rings), ideals, ring homomorphism, integral domains and fields, maximal and prime ideals, Euclidean domain, principal ideal domains, unique factorization domains, polynomial rings over fields, introduction to modules (vector space as a special case). **[10]**

4. Field: Basic theory of field extensions, algebraic extensions, splitting fields and algebraic closures, separable and inseparable extensions, finite fields, field automorphisms, fundamental theorem of Galois theory, Galois groups of polynomials, cyclotomic extension. **[09]**

Text Books:

1. Fraleigh J. B. (2003), Abstract Algebra, 7th Edition, Pearson.
2. Dummit and Foote(1991), Abstract Algebra,3rd ed., John Wiley & Sons, Inc.
3. Khanna and Bhambri (2009), A Course in Abstract Algebra , 3rd ed., Vikas Publishing.
4. Herstein I. N.(1996), Topics in Algebra, 3rd Edition, Wiley India.

Reference Books:

1. Thomas W. Hungerford (2012), AbstractAlgebra, 4th Edition, Springer.
2. Vashistha, Modern Algebra(2011), 4th ed., Krishna Prakashan Mandir, Meerut.
3. Artin(2012), Algebra, 7th Edition, PHI.

MS 522 **Complex Analysis and Integral Transform** **3-1-0-4**

1. Basics of Complex Analysis: Complex numbers, complex function and its derivative, basic transcendental functions, power series of functions, integration in the complex plane, residues and their use in integration. **[10]**

2. Laplace Transforms and Stability of Systems: Laplace transform and their inversion, introduction of stability, Nyquist stability criterion, generalized functions, Laplace transforms and stability. **[10]**

3. Mellin Transform: Definition and properties of Mellin transform, evaluation of Mellin transform complex variable method and applications. **[09]**

4. Hankel Transform: Elementary properties, inversion theorem, transform of derivatives of functions, transform of elementary functions, Parseval's relation, relation between Fourier and Hankel transforms, use of Hankel transform in the solution of partial differential equations, dual integral equations and mixed boundary value problems. **[10]**

Text Books:

1. David Wunsch A.(2009), Complex Variables with Applications, 3rd Edition, Pearson.
2. H.K. Pathak(2004), Complex Analysis , 3rd ed., Shiksha Sahitya Prakashan, Meerut.
3. Gupta and Vashistha(2010), Integral Transform,4th ed., Krishna publication Media, Meerut.
4. Ian N. Sneddon(1972), The Use of Integral transforms by, 2nd Printing Edition, McGraw Hill.

Reference Books:

1. Ahlfors(1987), Complex Analysis,3rd ed., McGraw Hill Education.
2. Rudin(2006), Real and Complex Analysis,2nd reprint , McGraw Hill Education.
3. Andrews & Shivamoggi(2007) , Integral Transforms for Engineers,3rd ed., PHI Learning.

MS 532 Mathematical Modeling and Simulation 3-1-0-4

1. Introduction to Simulation and Modeling: System concepts and theories, attributes and types of systems, discrete and continuous, deterministic and stochastic, open and closed, system dynamics- system flow, flow diagrams, notations and conventions, feedback systems and casual loops diagrams, developing system dynamic equations - first order (+ve, -ve) systems, pure second order (+ve, -ve) systems and general feedback systems, simulation of equations for different systems. **[14]**

2. Random Numbers and Random Variates: Random number generation, properties of random numbers, generation of pseudo random numbers, techniques for generating random numbers test for randomness, random variates, inverse transform methods (exponential, uniform, weibull), convolution methods and acceptance-rejection methods. **[10]**

3. Discrete Event Simulation: Concepts, event scheduling versus time advance scheduling, list processing. **[05]**

4. Verification and Validation of Simulation Models: Introduction, input modeling, identifying the distribution of data, parameter estimation, goodness of fit tests, model building, , verification calibration and validation of models, output analysis- measures of performance and their estimation. **[10]**

Text Books:

1. Jerry Banks, John S. Carson II, Barry L. Nelson and David M. Nicol (2013), Discrete- Event System Simulation , 5th ed.,, Pearson, 2013.
2. Averill M. Law(2006), Simulation Modeling and Analysis, 4th ed., McGraw Hill Education.
3. V.P. Singh (2009), System Modeling and Simulation, 3rd ed., New Age International Publishers.
4. Frank L. Severance (2009) System Modeling and Simulation: An Introduction , 4th ed., Wiley.

Reference Books:

1. Taha(2012), Operations Research: An Introduction, 15th Indian reprint, PHI.
2. Geoffrey Gordon (2012), System Simulation, 2nd ed.,, PHI.
3. J.N. Kapoor (1994), Mathematical Modeling, 2nd ed.,Wiley Eastern Limited, Fourth reprint.

MS 542 **Partial Differential Equations** **3-1-0-4**

1. Second Order Partial Differential Equations: Preliminaries of partial differential equations, review of the classification of second order partial differential equations to hyperbolic, elliptic and parabolic forms, reduction of linear and quasi-linear equations in two independent variables to their canonical forms, characteristic curves. **[06]**

2. Laplace equation: Solution by method of separation of variables, mean value property, weak and strong maximum principle, Poisson's formula, Dirichlet's principle, solution of Laplace equation in cylindrical and spherical polar coordinates. **[06]**

3. Heat Equation: Solution by method of separation of variables, initial value problem, fundamental solution, weak and strong maximum principle and uniqueness results. **[06]**

4. Wave Equation: Solution by method of separation of variables, uniqueness, D'Alembert's method, solution by spherical means and Riemann method of solution. **[06]**

5. Green's Functions: Introduction, Green's function for Laplace equation, method of images, eigenfunction method, Green's function for the wave and diffusion equations, Helmholtz theorem. **[08]**

6. Laplace and Fourier Transforms: Basics of Laplace transform solutions of diffusion and wave equations, basics of Fourier transform solution of diffusion, wave and Laplace equations. **[07]**

Text Books:

1. Sankara Rao K. (2003), Introduction to Partial Differential Equations , 4th ed., PHI Pvt. Ltd.
2. Asmar(2010), Partial Differential Equations and Boundary Value Problems with Fourier series, 2nd ed., Pearson.
3. Sundarapandian(2012), Ordinary and Partial Differential Equations, 3rd ed.,McGraw Hill Education, New Delhi.
4. Bhamra (2013), Partial Differential Equations: An Introductory Treatment with Applications ,4th ed., PHI Learning.

2. Zauderer(E. 1989), Partial Differential Equations of Applied Mathematics , 2nd ed., John Wiley and Sons, New York.
3. L Debnath(2007), Nonlinear PDE's for Scientists and Engineers , Birkhauser, Boston.
4. Sneddon I.N. (1957) , Elements of Partial Differential Equations, 2nd ed., McGraw Hill Book Company.

MS 552 **Statistics and Probability -II** **3-1-0-4**

1. Tests of Hypotheses: Simple hypothesis versus simple alternative, composite hypotheses, sampling from the normal distribution, tests on the mean and variance, tests on several means and variances, Chi-square tests, tests of hypotheses and confidence intervals, sequential tests of hypotheses. **[10]**

2. **Sampling and Sampling Distributions:** Sampling-inductive inference, populations and samples, distribution of samples, statistics and sample moments, sample mean and variance, law of large numbers, central limit theorem and its applications, sampling from the normal distributions, role of the normal distribution in statistics, sample mean, Chi-square distribution, F distribution, student's t distribution. **[10]**

3. Random Processes: Basics of random process, random process concept, continuous and discrete, statistics of random process, classification of random process, stationary and evolutionary random processes, cross-correlation, Markov process and Markov chain, binomial, Poisson, normal, Ergodic, random telegraph , sine wave random processes. **[11]**

4. Time Series Analysis: Introduction, characteristics movements in a time series, time series models, measurement of trends, secular trend, seasonal movements, cyclical movement, irregular movements, long cycles and applications. **[08]**

Text Books:

5. Baisnab A.P. and Manoranjan Jas (2003), Elements of Probability and Statistics, 2nd ed., TMH .
6. Pugalararasu(2011) , Probability and Queuing Theory , 1st ed., TMH.
7. Gupta and Kapoor (2002), Fundamental of Mathematical Statistics , 3rd ed., SCS Publisher.
8. J. Susan Milton and Jesse C. Arnold (2016), Introduction to Probability and Statistics, 4th ed.,, Mc Graw Hill Education.

Reference Books:

6. Palaniammal(2012), Probability and Random Processes , 3rd ed., PHI.
7. Probability and Statistics (Schaum's outline Series) by Spiegel (2009), 3rd ed., TMH.
8. Miller and Freund's (2007), Mathematical Statistics with Applications, 7th Edition, Pearson.

MS 562 **Modeling and Simulation Laboratory** **0-0-4-2**

Modeling and Simulation Laboratory related to Course Code MS 532 (Mathematical Modeling and Simulation).

(BELOW FROM 34TH PGRPC

MS 611 **Advanced Linear Algebra** **3-1-0-4**

1. Vector Spaces and Linear Equations: Fields, vector spaces, subspaces, bases, dimension, span, coordinates, row reduced echelon matrices, invertible matrices, row and column space, system of linear equations, direct sum, determinants. **[08]**

2. Linear Transformations: Definition of linear transformations, kernel, range, rank-nullity theorem, algebra of linear transformations, representation of transformations by matrices, eigenvalues, eigenvectors, diagonalization, invariant subspaces, invertibility and isomorphisms, linear functional, transpose of a linear transformation, dual spaces. **[08]**

3. Inner Product Space and Norms: Definition of an inner product and its properties, (including the Cauchy Schwartz inequality), orthogonality, Gram-Schmidt orthogonalization process, orthogonal projections, minimization problem (least squares), adjoints. **[08]**

4. Operators on Inner Product Spaces: Unitary and orthogonal operators and their matrices, normal and self-adjoint operators, bilinear and quadratic forms on inner product spaces, spectral theory. **[08]**

5. Rational and Jordan Forms: Cyclic subspaces and annihiliators, Jordon canonical form, minimal polynomial, block matrices and matrix factorization, SVD and pseudoinverse. **[07]**

Text Books:

1. Friedbeg, Insel, Spence (2011) Linear Algebra, 4th Edition, PHI.
2. David C. L. (2002) Linear Algebra and its Applications, 3rd Edition, Pearson.

Reference Books:

1. Kumaresan S. (2000) Linear Algebra: A Geometric Approach, PHI.
2. Charles. W. C. (2012) Linear Algebra: An Introductory Approach, 3rd Edition, Springer.
3. RomanS. (2008) Advanced Linear Algebra, 3rd Edition, Springer.
4. Cheney, Kincaid (2012) Linear Algebra: Theory and Applications, 2nd Edition, Jones and Bartlet.

MA 621 Advanced Graph Theory and Combinatorics 3-1-0-4

1.Preliminaries: Graphs(undirected and directed), sub graphs, degree-sum formula, graphic sequences, matrix representations of a graph, path and circuits, bipartite graphs, graph isomorphism, decomposition,Euler graph and its properties,operations on graphs, Hamiltonian paths and circuits, traveling –salesman problem. **[08]**

2. Trees, Cut-Sets and Cut-Vertices: Definition and properties of trees, distance and centers in a tree, rooted and binary trees, on counting trees, spanning trees, rank, nullity and cyclomatic number, Kruskal's and Prim's algorithms, cut sets and their properties, all cut sets, connectivity and separability, 1-Isomorphism and 2-Isomorphism. **[08]**

3. Planarity, Matching, Coloring and Covering: Combinatorial versus geometric graphs, geometric and combinatorial duals of a graph, planar embeddings, Euler's formula, triangulation, Kuratowski's theorem, dual graphs, factors and matching (in bipartite and non-bipartite graphs), Hall's matching theorem, chromatic number, chromating partitioning, chromatic polynomial, matching, coverings, the four color problem. **[08]**

4.Pebbling on Graph: Pebbling on undirected graph with properties, pebbling number, cover pebbling, the staching theorem, pebbling on directed graph with properties, pebbling on isomorphic graphs, pebbling of cyclic graph, alternating wheel graph, alternating fan graph and alternating complete graph with their properties, extension of graph pebbling. **[08]**

5. Advance Counting Techniques: Recurrence relations, solving linear recurrence relations, divide-and-conquer algorithms and recurrence relations, generating function, inclusion-exclusion with applications. **[07]**

MS 631 **Real Analysis and Measure Theory** **3-1-0-4**

1. Metric Spaces: Review of the real number system (supremum, infimum, field, order and completeness axioms, extended real number system, basic notions of sets, relation and functions), finite, countable and uncountable sets, open and closed sets, adherent and accumulation points, Bolzano-Weistrass theorem, Heine-Borel covering theorem, compactness in R^n and in general metric spaces, connectedness. **[08]**

2. Limits and Continuity: Convergent sequences, Cauchy sequences, complete metric spaces, limit of a function, continuous functions, uniform continuity, convergence of series, rearrangements, Abel's and Dirichlet's theorem, sequence of functions, point wise and uniform convergence, sequential compactness, Ascoli-Arzela theorem, real power series, Weistrass theorem. **[08]**

3. Differentiation and Riemann Integration: Algebra of derivatives, the chain rule, differentiation of monotone functions (leading to the mean value theorem and intermediate value theorem), upper and lower integrals, oscillations, integrality of continuous functions, fundamental theorem of calculus, interchange of limit and integration operations, vector valued differentiation and integration. **[08]**

4. Measure Theory: Indicator functions, fields and σ-fields, definition and fundamental properties of a non-negative measure, measurable sets, measure zero sets, positive Borel measures,Lebesgue measure,algebra of measurable functions, almost everywhere convergence, convergence in measure. **[08]**

5. Integration Theory on General Measure Spaces: The Lebesgue integral, Fatou's Lemma, the monotone and dominated convergence theorems, continuous functions with compact support, Tonelli and Fubini's theorems, comparison of proper and improper Lebesgue and Riemann integrals. **[07]**

Text Books:

1. Rudin W.(1976)Principles of Mathematical Analysis, 3rd Edition, TMH.
2. Bartle R. G., Donald R. S. (2011)Introduction to Analysis, 2nd Edition, Wiley and Sons.

Reference Books:

4. Mallik S.C., Arora S. (1992) Mathematical Analysis, 2nd Edition New Age International Ltd.

MS 641 Special Functions and Integral Equations 3-1-0-4

1. Hypergeometric Functions: Definition, convergence, gamma and beta functions, Gauss hypergeometric function and its properties, series solution of Gauss hypergeometric equation, integral representation, linear and quadratic transformation formulas, contiguous function relations, differentiation formulae, Kummer's confluent hyper geometric function and its properties, integral representation. **[10]**

2.Bessel and Legendre Functions: Definition, connection with hypergeometric function, differential and pure recurrence relations, generating function, integral representation, orthogonal properties. **[10]**

3.Linear Integral Equations: Definition and classification, conversion of initial and boundary value problems to an integral equation, Eigen values and Eigen functions, solution of homogeneous and general Fredholm integral equations of second kind with separable kernels. **[10]**

4.Solution of Integral Equations: Solution of Fredholm and Volterra integral equations of second kind by methods of successive substitutions and successive approximations, Resolvent kernel and its results, conditions of uniform convergence and uniqueness of series solution, solution of Volterra integral equations of second kind with convolution type kernels by Laplace transform. **[09]**

Text Books:

1. Kanwal R.P. (1971)Linear Integral Equations: Theory and Techniques,Academic Press, New York.
2. Miller LieW. Jr. (1968)Theory and Special Functions,Academic Press, New York and London.

4. Swarup S., Singh S. J. (2014) Integral Equation, 22nd Edition, Krishna Prakashan Meerut.

MS 612 **Functional Analysis** **3-1-0-4**

1. General Theory: Introduction of topological vector spaces, separation properties, linear mappings, finite-dimensional spaces, metrization, boundedness and continuity, seminorms and local convexity, quotient spaces, completeness, Baire category, Banach-Steinhaus theorem, open mapping theorem, closed graph theorem, bilinear mappings, convexity, Hahn-Banach theorems, weak topologies, compact convex sets, vector-valued integration, holomorphic functions. **[10]**

2. Completeness and Compactness: Completeness, Baire category, Banach-Steinhaus theorem, open mapping theorem, closed graph theorem, bilinear mappings, convexity, Hahn-Banach theorems, weak topologies, compact convex sets, vector-valued integration, holomorphic functions. **[10]**

3.Duality in Banach Spaces and Applications I: The normed dual of a normal space, adjoints, compact operators, continuity theorem, closed subspaces of Lp-spaces, the range of a vector-valued measure, **[10]**

4.Duality in Banach Spaces and Applications II: Generalized Stone-Weierstrass theorem, two interpolation theorems, Kakutani's fixed point theorem, Haar measure on compact groups, uncomplemented subspaces, sum of Poisson kernels, two more fixed point theorems. **[09]**

Text Books:

1. Rudin W. (2006) Functional Analysis, McGraw Hill Education (India).
2. Limaye B.V.(2013)Functional Analysis, 3rd Edition, New Age International.

Reference Books:

4. Corlson, Robert (2006) Concrete Introduction to Real Analysis, Vikas publishing House Pvt. Ltd.
5. Kreyszig E. (2007) Introductory Functional Analysis with Applications John Wiley & Sons.

MS 622 **Inequality and Continued Fractions** **3-1-0-4**

1. Inequalities: Definition and important properties**,** maximum and minimum values of algebraic functions and expressions with and without constraints, some important inequalities, Weirstrass inequality, Schwarz's or Cauchy's inequality,Tchebychef's inequality, important proofs and theorems. **[10]**

2. Continued Fractions I: Definition and different form of continued fractions, simple, infinite or non terminating and terminating continued fractions, continued fractions with positive quotients, conversion of fraction into continued fraction, successive convergent, law of formation of successive convergent of simple continued fraction. **[10]**

3. Continued Fractions II: Difference between the fraction and its convergent, equivalent numbers and periodic continued fractions, some special quadratic surds, recurring continued fraction. **[10]**

4. Continued Fractions III: Different theorems based on odd and even convergent, limits to error in convergent for the continued fraction, series of fractions and approximation. **[09]**

Text Books:

1. Hardy G. H., Littlewood J. E., Polya G. (1952) Inequalities, Cambridge University Press.
2. Hardy G. H., Wrihgt E.M. (1979) An Introduction to Theory of Numbers, 5th Edition, Oxford, University Press.

Reference Books:

1. Niven, Zuckerman H. S., Montgomery H. L. (2004) An Introduction to the Theory of Numbers, 5th Edition, John Wiley and Sons, Inc., New York.
2. Bruce C. B. (2005)Ramanujan's Note Books Volume-1 to 5, Springer.
3. ApostolT. M. (2013)Introduction to Analytic Number Theory, Narosa Publishing House, New Delhi.

MS 632 **Basics of MATLAB** **0-0-4-2**

1. Introduction: MATLAB interactive sessions, menus and the toolbar, arrays, files, and plots, script files and the editor, numeric, cell and structure arrays. **[08]**

2. Functions and Files: Elementary mathematical functions, user defined functions, additional functions, working with data files. **[06]**

3. Decision-Making Programs: Relational operators and logical variables, logical operators and functions, conditional statements, loops, the switch structure, debugging MATLAB programs. **[06]**

4. Advanced Plotting and Model Building: xy Plotting functions, additional commands and plot types, interactive plotting, function discovery, regression, basic fitting interface, three dimensional plots. **[06]**

Text Books:

1. Rudra Pratap (2003), Getting Started with MATLAB, Oxford University Press.
2. William J. Palm III (2012), A Concise Introduction to MATLAB, McGraw Hill Education (India) Private Limited.

Reference Books:

1. Chapra (Edition 3), Applied Numerical Methods with MATLAB, McGraw Hill Education (India) Private Limited.
2. Stormy A. (Edition 4), MATLAB: A Practical Introduction to Programming and Problem Solving, BH Publication.

MS 651 **Magneto Hydrodynamics** **3-1-0-4**

1. Fundamental Equations of MFD: Electromagnetic field equations(charge conservation equation, constitutive equations, Maxwell's equations, generalized Ohm's law),fluid dynamics field equations(equation of state, equation of motion, equation of energy), MFD approximation, magnetic field equation, magnetic Reynolds number, Alfven's theorem, magnetic energy, electromagnetic stresses, force free magnetic fields. **[10]**

2. Basic Equations of MHD Flow: Boundary conditions, flow between parallel plates, Hartmann flow, Couette flow with velocity and temperature distributions, flowin a tube of rectangular cross section, pipe flow, flow in a annular channel, flow between two rotating coaxial cylinder. **[10]**

3. Boundary Layer Approximation: Two dimensional boundary layer equations for flow over a plane surface for fluids of large electrical conductivity, flow past a semi infinite rigid flate plate in an aligned and transverse magnetic field, two dimensional thermal boundary layer equations for flow over a plane surface, heat transfer in MHD boundary layer flow past a flate plate in an aligned magnetic field. **[10]**

4. Magneto Hydrodynamics Waves: Waves in an infinite fluid of infinite electrical conductivity, Alfven waves, waves in a compressible fluid, waves in the presence of dissipative effects, stationary plane shock waves in absence of magnetic field. **[09]**

Text Books:

1. Cramer R.K., Pai S.I.(1973) Magnetofluid Dynamics for Engineers and Physicists, Scripta Publishing Company, Washington D. C.
2. Charlton P.(1985) Text Book on Fluid Dynamics, CBS Publications, Delhi.

Reference Books:

1. Shereliff J.A. (1965) Magneto Hhydrodynamics, Pergamon Press, London.
2. Rathy R.K. (1976)an Introduction to Fluid Dynamics Oxford and IBH Publishing Company, New Delhi.

MS 652 **Viscous Fluid Dynamics** **3-1-0-4**

1. Fluid Motion: Introduction and continuum hypothesis, constitutive equations for Newtonian fluids, viscosity, Navier Stoke's equation for viscous compressible flow, vorticity and circulation, equation of energy, flow between two concentric rotating cylinders, stagnation point it two dimensional flow, flow due to plane wall suddenly set in motion(Stoke's first problem). **[10]**

2. Temperature Distribution: Physical importance of non-dimensional parameters. Renold's number, Prandtl number, Mach number, Froude Number, Nusselt number , plane couette flow, plane poisseullecouette flow, plane poissuille flow, Haigen poissuille flow in a circular pipe, Stoke's equation of very slow motion, Stoke's stream function, flow past a sphere. **[10]**

3. Laminar Flow: Two dimensionalincompressible boundary layer equation, Blasuis Topfer solution of boundary layer on a flat plate, wedge flow, flow in a convergent channel, flow in the wake of flat plate, two dimensional plane jet flow. **[10]**

4. Boundary Layer Theory: Thermal boundary layer in two dimensional incompressible flows, Crocco's integrals, forced convection in laminar boundary layer on a flat plate, free convection from a heated vertical plate, Karman momentum and kinetic energy integral equations. **[09]**

Text Books:

1. Schliching H., Boundary Layer Theory, McGraw Hill.
2. Pai, S.I, Nostrand D.V. (1956) Viscous Flow Theory, Vol.I, Laminar Flow, Company, New York.

Reference Books:

1. BansalJ.L. (2004)Viscous Fluid Dynamics, Oxford and IBH.
2. Frank M. W. (1991)Viscous Fluid Flow,2nd edition, McGraw Hill.

MS 661 **Sequence and Series** **3-1-0-4**

1. **Real and Complex Numbers:**Introduction, field and order structures, bounded and unbounded sets with supremum and infimum, completeness, absolute value, limit points, closure, countable and uncountable sets,complex number system, triangle inequality, functions of single variable. **[12]**

2. Sequences: Sequences of real and complex numbers, limit points, limits, convergence and non-convergence, Cauchy's general principle of convergence, algebra of sequences, monotonic, point wise convergence, uniform convergence on an interval, tests for convergence, properties, Weierstrass approximation theorem. **[11]**

3.Infinite Series I: Introduction, series of real and complex numbers, positive term series, comparison, Cauchy's root, D'Alembert's ratio, Raabe's, Logarithmic, integral, Gauss's tests, series with arbitrary terms, rearrangement of terms. **[08]**

4.Infinite Series II: Properties of uniform convergent series, power series, properties of functions expressible as power series, Abel's theorem, Taylor's and Lauren's series with convergence. **[08]**

Text Books:

1. Mallik S.C., Arora S. (1992) Mathematical Analysis, 2nd Edition New Age International Ltd.
2. Rudin W.(1976) Principles of Mathematical Analysis, 3rd Edition, TMH.

Reference Books:

1. TitchmarchE. C. (1959) Theory of Functions, Oxford.
2. Zygmund A. (1959) Trignometric Series, Vol. 1, Cambridge University Press.
3. Lorentz G.G., Tinehart H., Winston (1966) Approximation of Functions.
4. Hardy G. H.(1967)Divergent Series, Clarendon Press, Oxford.
5. MaddoxI. J. (1970) Elements of Functional Analysis, Cambridge University Press.

MS 662 **Summability and Approximation Theory** **3-1-0-4**

1. Transformation and Summability Means: Matrix and linear transformation, definition of summability, Norlund means and its regularity condition, Cesaro means (C, 1) means, Cesaro and holders matrices, consistency of methods, examples and related theorems. **[15]**

2.Convergence of Fourier Series: Convergence of Fourier series, Dirichlet's integral, Riemann-Lebesgue theorem, (C, 1) summability of Fourier series, Fejer theorem, Fejer-Lebesgue theorem. **[08]**

3. L_p Space: Definition of L_2space, L_p space, Bessel's inequality, Holders inequality and Minkowski inequality. **[08]**

4.Approximation Theory: Best approximation in normed space, linear operators, Weierstrass's approximation theorem, Stone Weierstrass theorem, Chebyshev polynomials, trigonometric polynomials, error approximation function, Bernstein polynomial. **[08]**

Text Books:

1. Hardy G. H.(1967)Divergent Series, Clarendon Press, Oxford.
2. Lorentz G.G., Tinehart H., Winston (1966) Approximation of Functions.

Reference Books:

1. TitchmarchE. C. (1959) Theory of Functions, Oxford.
2. Zygmund A. (1959) Trigonometric Series, Vol. 1, Cambridge University Press.
3. PetersonG. M (1966) Regular Matrix Transformation, Mc-Graw Hill.
4. Boss J. (2000) Classical and Modern Methods in Summability, Oxford University Press.
5. Mursaleen M. (2014) Applied Summability Methods, Springer.
6. Hrushikesh N., Haskar M, Pai D.V. (2000) Fundamentals of Approximation Theory, Narosa Publishing House.
7. MaddoxI. J. (1970) Elements of Functional Analysis, Cambridge University Press.

MS 671 **Tensor Analysis** **3-1-0-4**

1. Vector Algebra: Vectors and scalars, operations on vectors, bases and transformations, product of vectors, reciprocal bases, variable vectors. **[10]**

2. The Tensor Concept: Zeroth-order tensors, first-order tensors, second-order tensors, higher-order tensors, transformation of tensors under rotation about a coordinate axis, invariance of tensor equations, curvilinear coordinates, tensors in generalized coordinate systems. **[10]**

3. Tensor Algebra: Addition of tensors, multiplication of tensors, contraction of tensors, symmetry properties of tensors, reduction of tensors to principal axes, invariants of tensors, pseudotensors. **[10]**

4. Vector and Tensor Analysis: Field concept, Gauss, Green And Stokes theorem, scalar fields, vector fields, second-order tensors fields, the operator ∇ and related differential operators. **[09]**

Text Books:

1. Vector and Tensor Analysis by A. I. Borisenko and I. E. Tarapov, Dover, 1979.
2. Introduction to Vector and Tensor Analysis by R. C. Wrede, Dover, 1972.

Reference Books:

1. DavisH. F., SniderA. D. (1995) Introduction to Vector Analysis, 7thEdition, Brown Publishers.
2. Schey H.M. (1997) Div, Grad, Curl and All That: An Informal Text on Vector Calculus, 2nd edition, W.W. Norton.
3. Bourne D.E., KendallP.C. (1977) Vector Analysis and Cartesian Tensors, Nelson.
4. Tensor Calculus by J. L. Synge and A. Schild, Dover, 1978.

MS 672 **Mechanics and Calculus of Variation** **3-1-0-4**

1. Generalized Coordinates: Holonomic and non holonomic systems, Scleronomic and Reonomic systems, generalized potential, Lagrange's equations of first kind, Lagrange's equations of second kind, uniqueness of solution, and energy equation of conservative fields. **[10]**

2. Hamilton's Variables: Donkin's theorem, Hamilton canonical equations, cyclic coordinates, Routh's equation, Poisson's bracket, Poisson's identity, Jacobi- Poisson theorem. **[10]**

3. Calculus of Variations: Motivating problems of calculus of variations, Brachistochrone problem, isoperimetric problem, geodesic, fundamentals lemma of calculus of variations, Euler's equation of one dependent function and its generalization to (i) 'n' dependent functions, (ii) higher order derivatives, conditional extremum under geometric constraints and integral constraints. **[10]**

4. Hamilton-Jacobi Theory: Hamilton's principal, principal of least action, Poincare Cartan integral invariant, Whittaker's equations, Jacobi's equations, statement of Lee Hwa Chung's theorem, Hamilton-Jacobi's equation, Jacobi's theorem, method of separation of variables. Lagrange's bracket and Poisson brackets, invariance of Lagrange's bracket and Poisson brackets under canonical transformations. **[09]**

Text Books

1. Ramsey A.S.(1941)Dynamics Part II, Cambridge University Press.
2. Goldstein H. (2002) Classical Mechanics, 3rd edition, Narosa Publishing House.

Reference Books:

1. Loney S.L. (2016) An Elementary Treatise on Statics, First paperback edition, Cambridge University Press.
2. Louis N. H., Janet D. F.(1999)Analytical Mechanics, Cambridge University Press.
3. Gelfand I M., Fomin S.V., Richard A. S. (2000) Calculus of Variations PHI.
4. Tiwari R.N., Takhur B.S. (2007) Classical Mechanics: Analytical Dynamics, PHI.

MS 681 **Reliability Theory** **3-1-0-4**

1. Basic Concepts of Reliability: Introduction, reliability and quality, failure and failure modes, causes of failures and unreliability, maintainability and availability, reliability analysis, mathematical models and numerical evaluation, designing for higher reliability, redundancy techniques, equipment hierarchy, reliability and cost. **[07]**

2. Reliability Mathematics: Random experiments and probability, random variables, discrete distribution (Binomial and Poisson) and Continuous distributions (uniform, exponential, Rayleigh, Weibull, gamma, normal, log normal, truncated normal, inverse Gaussian), numerical characteristics of random variables and Laplace transform. **[08]**

3. System Reliability and Hazard Models: Component reliability from test data, mean time to failure, time-dependent hazard models, stress-dependent hazard models, derivation of reliability function using Markov model, treatment of field data, system with components in series and parallel, k-out-of-m systems,non series-parallel systems, system with mixed-mode failures, fault-tree technique. **[08]**

4. System Design and Reliability Redundancy: Component versus unit redundancy, weakest-link technique, mixed redundancy, standby redundancy, redundancy optimization, double failures and redundancy, maintainability and availability concepts with two-unit parallel system with repair, preventive maintenance. **[08]**

5. Reliability Testing Demonstration and Acceptance: Problem of life testing, estimation of parameters and reliability using standard probability models using complete and censored samples, properties of these estimators, probability plotting and graphical procedures for estimating the parameter and testing validity of model by some standard statistical tests, life test acceptance sampling plans in exponential case, sequential life test in exponential case, accelerated life tests. **[08]**

Text Books:

1. Ebeling C. E. (2015), An Introduction to Reliability and Maintainability Engineering, Eighteenth reprint, McGraw Hill Education.

Reference Books:

1. Balagurusamy E. (2008) Reliability Engineering, Sixth reprint, TMH.
2. Srinath L.S., Reliability Engineering, Fourth Edition, EWP.

MS 682 **Fourier Analysis** **3-1-0-4**

1. Fourier Series: Recapitulation about piecewise continuous functions, odd and even functions, periodic and non-periodic functions, orthogonal and orthonormal functions, orthonormal sets, Dirichlet's conditions, Fourier series, change of interval, Fourier cosine series, Fourier sine series, complex form of Fourier series, convergence of Fourier series, generalized Fourier series, practical harmonic analysis,Fourier–Bessel series, Fourier – Legendre series. **[10]**

2. Fourier Integral and Applications: The Fourier integral formula, Dirichlet's integral, Fourier integral theorem, cosine and sine integrals, Eigen value problems on unbounded intervals, superposition of solutions, steady temperature in a semi-infinite strip, temperature in a semi-infinite solid, temperature in an unlimited medium. **[10]**

3.Fourier Transform and Applications I: Definition and properties of Fourier transform, Fourier cosine and sine transforms, complex Fourier transform, convolution theorem, Parseval's identities, finite Fourier transforms, solution of some partial differential equations. **[10]**

4. Fourier Transform and Applications II: Discrete Fourier Transform (DFT), approximation of Fourier coefficients of a periodic function, inverse DFT, properties of DFT, cyclical convolution and convolution theorem for DFT, Parseval's theorem for DFT, matrix form, N-point inverse DFT, fast Fourier transform(FFT). **[09]**

Text Books:

1. Ward Brown J., ChurchillR. V. (2015) Fourier Series and Boundary Value Problems, McGraw Hill Education.
2. Davis H.F. (1989) Fourier series and Orthogonal Functions, Dover Books on Mathematics.

Reference Books:

1. Spiegel (2015) Theory and Problems of Fourier Analysis with Applications to Boundary Value Problems (Schaum's Outline Series), McGraw Hill Education.
2. Jain R.K., Iyengar S.R.K. (2003) Advanced Engineering Mathematics, Narosa Publishing House.
3. Tolstov G.P. (1976) Fourier series, Dover Books on Mathematics.
4. JamesI.F. (2002) A Student's Guide to Fourier Transform with Applications in Physics and Engineering, 3rd edition, Cambridge.

MS 691 **Advanced Number Theory** **3-1-0-4**

1. Divisibility Theory and Factorization: Prime numbers and their distribution, greatest common divisor and the Euclidian algorithm, linear Diophantine equation, sieve of Eratosthenes, Mersenne primes and perfect numbers, sums of two squares. **[08]**

2. Theory of Congruences: Basic properties of congruences, linear congruences and the Chinese remainder theorem, Fermat's little theorem and pseudoprimes, $\varphi(n)$ (Euler's phi function), Euler generalization of Fermat's theorem, Wilson's theorem. **[08]**

3. Primitive Roots and Quadratic Reciprocity: Multiplicative orders of integers modulo$n$, primitive roots of primes and composites, Legendre and Jacobi symbols, quadratic reciprocity and quadratic congruences with multiple moduli. **[08]**

4. Special Functions and Recent Applications: Fermat numbers, amicable numbers, the Mobius inversion formula, sums of more than two squares, public key cryptosystems, primalty testing and factorization, Diffie-Helman key exchange, finite fields, cyclotomic polynomials, Gaussian integers, continued fractions, Pells equations, valuations, Deedkind domain, the Riemann zeta(ζ) function, modular (quadratic) forms, quadratic number fields. **[15]**

Text Books:

1. BurtonD.M. (2011) Elementary Number Theory, 2nd Edition, Tata Mc Graw Hills.
2. Telang S.G. (1996) Number Theory, 6th Edition, Tata Mc Graw Hills.

Reference Books:

2. Lang S. (1994) Algebraic Number Theory, 2ndEdition, Springer Textbooks.
3. LandauE. (1966)Elementary Number Theory, 2nd Edition, AMS.
4. Frohlich, Taylor, Taylor (1991) Algebraic Number Theory, 2nd Edition, Cambridge University Press.
5. Niven I., Zuckerman (1991) Introduction to Theory of Numbers, 5th Edition Montgomery, Wiley.

MS 692 **Differential Geometry** **3-1-0-4**

1. Space Curves I: Definition of space curves, arc length, natural equation of a line, and intersection of curves, intersection of curve and surface, order of contact, tangent, normal, osculating plane. **[10]**

2. Space Curves II: Principal normal and binormal at a point of a curve, curvature, torsion, Frenet – Serret formulae, plane curves, osculating circle and osculating sphere, fundamental theorem for space curves, helices, evolutes and involutes. **[10]**

3. Surfaces I: Definition of a surface, tangent plane and normal at a point of a surface, surfaces of revolution, conicoids and helicoids, envelopes and developable surfaces, ruled surfaces. **[10]**

4. Surfaces II: First fundamental form(metric), metric potentials, direction coefficients and angle between two curves on a surface, second fundamental form, lines of curvatures, principal curvatures, Meusnier's theorem, Euler's theorem, Dupin's indicatrix, means curvature, Gaussian curvature. **[09]**

Text Books:

1. Hsiung C. C. (1997) A First Course in Differential Geometry, International Press, and Cambridge, MA.
2. Willmore T.J. (1964) An Introduction to Differential Geometry, Oxford University Press,

Reference Books:

Course work (CW) would include Regularity, evaluation of assignments, surprise tests, etc.;

$Evaluationof proficiency will be based on the participation in co-curricular/extra-curricular activities.

#Student will perform dissertation work in a recognized Organization for a period of 4 months and submit two copies of dissertation to the department latest by first week of May. Presentation and viva voce of dissertation will be conducted in second week of May. Dissertation and presentation will carry 50% weightage each

COURSE DESCRIPTION
M. Sc. (Microbiology)

MB 511 Bacteriology and Phycology 3-0-0-3

General Concepts of Microbiology: History and development of Microbiology as a discipline of science, spontaneous generation vs biogenesis, Koch's postulates Basic features of microscopy-Compound, fluorescence, dark field, phase contrast, SEM and TEM, Staining methods-simple, differential and sample preparation for electron microscopy. [6]

Morphology and Ultrastructure of Bacteria: Basic ultrastructure, morphological types, cell walls of gram positive, gram negative and archeobacteria, cell wall biosynthesis, cytoplasmic membrane-structure, composition and functions, L-forms, Ultrastructure and types of flagella, capsule and its function, pilli. [8]

Cultivation of Bacteria: Aerobic and anaerobic cultivation, Nutrient media-selective and differential, Nutrient types of bacteria, Growth curve and kinetics of growth, Batch culture, fed-batch culture and continuous culture, synchronous growth, Factors affecting growth, Control of bacteria-physical and chemical agents. [10]

Classification: Bacterial classification, Hackle's three kingdom, Whittaker's five kingdom, Eight kingdom classification, Phenetic and phylogenetic classification, Outlines of Bergeys manual, Use of molecular approaches for classification of bacteria. [7]

Algae: General Characteristics, Classification, Nutrition, Reproduction, Algal ecology, Economic importance of Diatoms, Rhodophyta and Green algae. [8]

MB 521 Virology and Mycology 3-0-0-3

General Concepts of Viruses: Discovery of viruses, Distinctive features, Morphology and Ultrastructure, Envelope and its properties, Virus related agents (Viroids and Prions). Classification-General properties, Nomenclature and classification of bacterial, plant and animal viruses. [5]

General Methods of Diagnosis of Viruses: Cultivation methods-embryonated eggs, experimental animals, cell cultures (Primary and secondary), Serological methods- heamagglutination, complement fixation, immunofluoresecnce, ELISA and RIA, infectivity assay (end point method); Role of electron microscopy in study of viruses. [8]

Bacterial and Plant Viruses: Bacteriophage structure- general characteristics, Life cycle- Lytic and Lysogeny, One step growth curve, Regulation of lytic cycle, brief details of M13, Mu, Lambda and T4, Effect of viruses on plant appearance, histology, cytology, Transmission of plant viruses- Vector(insects, nematodes) and without vector, Common diseases of Paddy, Cotton, Tomato and Sugarcane, Life cycles- TMV, CMV and Potato Virus X. [10]

Animal Viruses: Life cycle and pathogenecity of RNA viruses- Picorna, Orthomyxo, Paramyxo, Rhabdo, Rota and HIV, Oncogenic viruses, DNA viruses- Pox, Herpes, Adeno, SV 40, Hepatitis viruses, Basic concepts of viral vaccine. [8]

General Concepts of Mycology: General features of fungi, Classification of fungi, Life cycles of *Aspergillus, Saccharomyces, Deuteromycetes*, Mycorrhiza: Ecto, endo and VAM, Lichens- general features, Fungal diseases- Systemic and Sub cutaneous Mycoses, Candidiasis, Dermatomycosis. [8]

BC 511 Chemistry of Biomolecules 3-0-0-3

pH and Buffers: Importance of buffers with reference to biological aspect, Isoelectric points, pK values, Molarity and Molality, Thermodynamics law, Free energy, Gibbs law, High energy compounds and their biological importance. [4]

Carbohydrates: Structure, Classification and important reactions of monosaccharides and their derivatives, Synthesis of biologically important structural and Storage carbohydrates. [5]

Lipids: Structure and classification of lipids, Fatty acids, Properties of fatty acids, Glycerolipids, Sphingolipids, Cholesterol and their biosynthesis, Alkaloids, Steroids and Flavonoids- properties and synthesis, Lipids as signal molecules, Alpha, beta and omega-oxidation, Lipopolysaccharides- structure and function. [6]

Proteins: Structural unit of proteins, Classification of amino acids, Properties of amino acids on the basis of $–NH_2$ and –COOH group, Protein structure and classification, Ramachandran plots, Stability of proteins, Folding and unfolding of proteins, Polypeptide synthesis and sequencing, Protein evolution, Structure and function of globular and fibrous proteins. [7]

Nucleic Acids: Nucleosides and nucleotides, Nucleic acid classification, Bond stability between purines and pyrimidines, Structure and reactions of purines and pyrimidines and their derivatives, Metabolism of purines and pyrimidines, Protein and nucleic acid interactions. [5]

Vitamins: Role of vitamins in growth and differentiation in human beings, Chemistry of fat and water-soluble vitamins, Vitamins as co-enzymes. [5]

Enzymes: Classification of enzymes, Michelis Menten equation, Km value, Linweaver-Burk equation, Kinetics of substrate and enzyme reactions, Isozymes, Effect of different physical and chemical factors, Active sites-nature and determination, Immobilization of enzymes and its application. [7]

BC 521 Biophysical Techniques 3-1-0-4

Basic Principles of Biophysics: Quantum Mechanics, Electronic structure of Atoms, Molecular orbitals and Covalent bond, Molecular interaction, Stereochemistry and chirality, Thermodynamics-Entropy, Enthalpy, Oxidation-Reduction potential, Zero order and first order reactions. [5]

Centrifugation: Principles of centrifugation, Design and care of rotor, Preparative and Analytical centrifuge, Density gradient centrifugation, Safety aspects and applications. [6]

Spectroscopic Techniques: Ultra violet- visible spectroscopy, Spectrofluorometry, Circular dichorism and Optical rotatory dispersion, Atomic spectroscopy, Raman and Infra-red spectroscopy, Electron spin resonance spectroscopy, Mass spectroscopy, NMR. [12]

Electrophoretic Techniques: Principle, Electrophoresis of proteins and nucleic acids, Isoelectric-focusing, 2-D electrophoresis, Capillary [6]

electrophoresis.

Chromatographic Techniques: Principles of Chromatography, Chromatography theory and practice, Paper, Thin layer, and Column chromatography, Permeation, Ion exchange, Affinity, Adsorption, Partition, HPLC and Gas chromatography. [10]

Radioisotope Techniques: Radioactive decay, Interaction of radioactivity with matter, GM counter, Scintillation counter, Quenching and its correction, Autoradiography, Radio-immunoassay and ELISA. [5]

BT 581 Biostatistics 3-0-0-3

Introduction: Collection of primary and secondary data, Classification and tabulation of data, Graphs of frequency distribution and Curves, Measures of central tendency — mean, median and mode, Mathematical properties of arithmetic mean, Geometric and harmonic Mean [6]

Measures of Dispersion: Absolute and Relative Measures of Dispersion, Range, Mean deviation, Standard deviation, Mathematical properties of standard deviation, Coefficient of variation, Variance, Skewness and its measures, Kurtosis and its measures [6]

Correlation and Regression Analysis: Meaning, significance and types, Scatter diagram method, Correlation graph, Karl Pearson's correlation coefficient, Coefficient of determination, Spearman's Rank correlation coefficient, Lines of Regression, Regression equations, Difference between correlation and regression analysis [9]

Tests of Significance: Student's t-test, Chi-square tests, Yate's correction factor, ANOVA– One and two way classification with examples [9]

Probability and Probability Distributions: Elements of probability-definition, addition and multiplication, Probability distribution function-Binomial, Poisson and normal, Area under normal probability distribution curve [9]

MB 541 Laboratory Course in Study of Microorganisms 0-0-4-2

Assignments based on MB 511 and MB 521containing exercises on staining and isolation of different microbial types on the basis of cultural and microscopic methods will be conducted.

BC 541 Biomolecules and Instrumentation laboratory 0-0-4-2

Assignments based on BC 511 and BC 521 containing exercises on working and maintenance of instruments and qualitative and quantitative analysis of biomolecules will be conducted.

MB 512 Microbial Physiology and Metabolism 3-0-0-3

Transport Mechanisms: Basic features of transport- Role of cell membrane in transport, Thermodynamics of transport, Types of transport- passive diffusion, facilitated diffusion, active transport, group translocation, uniport, symport and antiport, Transport of siderophores. [8]

Respiratory Metabolism: Glucose Metabolism- Reactions and control of Glycolysis, Pentose Phosphate Pathway, Gluconeogenesis, Citric acid cycle, Oxidative and Substrate level phosphorylation, Glyoxylate cycle, Homo and heterolactic fermentation, Pasteur effect. [10]

Photosynthesis: Brief account of photosynthetic and accessory pigments- Chlorophyll, Bacteriochlorophyll, Carotenoids and Phycobiliproteins, Details of Oxygenic and Anoxygenic photosynthesis, Major groups of photosynthetic bacteria, Fixation of CO_2- Calvin cycle, C3 and C4 pathway; Photorespiration. [10]

Nitrogen and Lipid Metabolism: Nitrogen cycle, Assimilation of nitrogen, Biosynthesis of amino acids, Nitrogen fixation- basic concepts, nitrogenase enzyme, Fatty acid oxidation- □-oxidation, Fatty acid biosynthesis. [6]

Sporulation and Morphogenesis: Endospore formation- structure, properties and germination; Dormancy in selected microbes [5]

MB 514 Food Technology 3-0-0-3

Food and Fermentation Technology: Origin, Scope and development of fermented food products, [10]
Microbial starters for food fermentations.
Fermented Foods- Bread, Vinegar, Beer, Wine, polysaccharides, low calorie sweeteners, Vitamins, Fermented vegetables, Nutraceuticals, Prebiotic and Probiotic foods, Genetically modified foods, Nano foods.
Fermented dairy products- Milk and Curd, Yoghurt, Buttermilk, Cheese, Oriental fermented foods,
Single cell protein, Mushroom cultivation

Spoilage and Preservation:
Factors affecting microbial growth in foods- extrinsic and intrinsic,
Contamination of foods (cereals, Vegetables and Fruits, Meat and Meat products and Fish, Milk and milk products, canned foods) and their involvement in disease outbreaks, [10]
Spoilage detection and characterization.
Methods of food preservation (thermal processing, refrigeration, dehydration, irradiation, microfiltration, chemical preservatives).
Food Borne Infections and Intoxications: Microbial toxins in food- Chemical Structure and Types, Food borne illnesses caused by- *Brucella, Clostridium, Escherichia, Salmonella, Shigella, Staphylococcus, Vibrio and Yersinia*, Diseases caused by Fungi, Emerging pathogens, *E.coli* O157:H7, *Listeria monocytogens*, *Campylobacter jejuni, Helicobacter pylori* [10]

Packaging and Quality Control:

Need and method of packaging (glass, metal, plastics, moulded pulp and aluminium foil), Controlled atmosphere packaging, Tetra pack, Nano capsule, Nano membrane. [9]

Detection of food pathogens- Culture methods, Rapid detection using PCR

Food standards- Standards for Milk, Poultry, Food control agencies- BIS, Codex commission,

Food laws and current concepts in food safety (HACCP, quantitative risk assessment and prediction based systems)

Disposal and treatment of food industry waste

BT 592 Bioinformatics , Scientific Communication & Intellectual Property Rights **3-1-0-4**

Introduction to Bioinformatics: Biological Databases**:** Types-GenBank, EMBL, DDBJ, SwissProt and PDB (Data Submission and Retrieval via WWW) and their management. 6

Molecular Phylogenetics: Pattern and mode of substitution, Acquisition and origin of new function, Phylogenetic tree; Distance matrix and maximum Parsimony methods of phylogenetic tree constructions. 8

Data Searches and Pairwise Alignments: Dot Plots, Simple alignments, Gaps, Scoring Matrices; Global and Local Alignments; Database searches (BLAST and FASTA and their relatives); Multiple Sequence alignments; Genome analysis; Homology modeling and Secondary structure prediction of proteins. 8

Scientific Literature: Structure, Type (Research article, review article, Short communication, Book review). Abstracting methodology. Concept of Impact factor; Citation Index. 3

Introduction to Intellectual Property Rights, Basic Principles of Patent Law, Types of IPR ,Patent Application procedures (India and International) 7

Biotechnology and Intellectual Property Rights. 7

Biotechnology and the Law-Objective, Evolution, Moral & ethical issues Issues. Protection of Geographical Indications - Objective, Multilateral Treaties, Protection of Traditional Knowledge-Objective, Bio-Prospecting and Bio-Piracy

Text Book

1. Introduction to Bioinformatics by Teresa K. Attwood, David Parry, Smith 1st Edition
2. Bioinformatics: a practical guide to the analysis of genes and proteins by Baxevanis A., Ouellette F.B.F. (Eds.). John Wiley and Sons, New York (1998) 2nd Edition.
3. Intellectual Property Rights and the Law by Reddy G.B., 2005

Reference Book

4. "BLAST": An Essential Guide to the Basic Local Alignment Search Tool by O'Reilly 2nd Edition.
5. Bioinformatics : Methods and Applications genomics, proteomics and drug discovery by Rastogi S.C., Prentice-hall Of India Pvt Ltd.

BT 534 Molecular Biology 3-0-0-3

Historical and Introductory Aspects: History of molecular biology; nucleic acids as hereditary material-experimental evidences, structure of DNA; Law of constancy and C-value paradox, Cot curve, DNA denaturation and renaturation kinetics. [5]

DNA Replication: Enzymes and accessory proteins involved in DNA replication, Prokaryotic and eukaryotic DNA replication, Asymmetric and dimeric nature of DNA polymerase III. [5]

Transcription: General principles, Types of RNA polymerases, Promoter Enhancers and Regulatory sequences, RNA polymerases and general transcription factors, Prokaryotic and Eukaryotic transcription General and specific transcription factors, Control of transcription. [8]

Translation: Genetic code, Prokaryotic and Eukaryotic translation, Translation machinery, Mechanisms of initiation, elongation and termination, Regulation of translation. [6]

Maturation and Processing of RNA: Methylation, Cutting and trimming of rRNA, Capping, Polyadenylation and Splicing of mRNA, Cutting and modification of tRNA, Degradation system, Catalytic RNA group I and group II intron splicing RNase P. [7]

Regulation of Gene Expression: Operon concept, Catabolite repression, Positive and negative regulation, Inducers and co-repressors, Negative regulation - *E. coli* lac operon, Positive regulation, Regulation by attenuation his and trp operons, Antitermination, Environmental regulation of gene expression- Global regulatory responses - heat shock response, stringent response and regulation by small molecules such as ppGpp and cAMP. [8]

MB 532 Immunology 3-0-0-3

Overview of immune response: Historical background, Innate immunity, Adaptive immunity, Innate-adaptive cross-talk, Natural and artificial immunity, Active and Passive immunity, Humoral and Cell-mediated immune response, Early theories of immunity**.** [5]

Cells and Organs of Immune System: Lymphoid organs, Haematopoiesis and differentiation of stem cells into mast cells, Basophils, Eosinophils, Monocytes, Macrophages, Neutrophils, NK cells, B and T lymphocytes (Th and Tc cells)-characteristics, CD markers and biological functions, Development of B-lymphocytes, Immunoglobulin structure and diversity, Development of T lymphocytes, TCR complex and diversity, positive and negative selection. [7]

Antigens: Antigenicity vs. immunogenicity, Characteristics of antigens, Epitopes, Characteristics of B-cell and T-cell epitopes, Haptens, Adjuvants, Isotypes, Allotypes and Idiotypes [3]

Humoral Immune Response: Activation and differentiation of B-lymphocytes, immunoglobulin classes and subclasses, B-cell receptor–co receptor complex, Primary and Secondary response, Affinity maturation, Antigen- antibody interactions, forces involved in Ag-Ab interactions, Antibody affinity and avidity, Primary interactions and secondary interactions, RIA, ELISA, IFA, Flow cytometry, Western blotting, precipitation reactions (in gel and in solution), agglutination reactions, Complement system. [8]

Cell Mediated Immune Response: Development- antigen processing and presentation, Major Histocompatibility Complex- structure, diversity and regulation of expression on cells, Leukocyte trafficking, Activation of T-cells, TCR signaling, Co-stimulatory signals, Effector functions, cytokines- types and biological role, Regulation of cytokine expression, Differentiation into Th1 and Th2 subclasses, Tc-cell mediated target cell killing. [8]

Immune System in Health and Disease: Immunologic tolerance, Autoimmune diseases, Immunodeficiency diseases, Hypersensitivity and allergies, Transplantation Immunology, Tumor immunology, Immunology of infectious diseases, Vaccines- concepts and strategies of development. [6]

MB 631 Microbial Genetics 3-0-0-3

Mutations: Basic concepts of mutation, Molecular nature of mutations, Spontaneous mutation, Reverse mutation, Frameshift mutation, Site directed mutagenesis- deletions, insertions, localized point mutation, Mutations by synthetic oligonucleotides, Evolutionary role of mutation. [8]

Gene Transfer: Transformation, Transduction- specialized and generalized, Conjugation- interrupted mating, Transfection. [8]

Vectors: Plasmids, Colicins and col factors, Plasmids as vectors for gene cloning, Transposons and their use in genetic analysis, Mechanisms of antibiotic resistance by transposons. [6]

Bacteriophage Genetics: Life cycle and uses of following phages in microbial genetics- Lytic phages- T4 and T7, Lysogenic phages- P1, M13, ΦX174, fd [9]

Gene Expression: Gene expression in eukaryotes and prokaryotes and its regulation [8]

MB 542 Seminar 0-0-0-1

Student will prepare a presentation on any area of recent research and deliver seminar on it.

MB 524 Microbial Physiology, Food Microbiology and Microbial Genetics Laboratory 0-0-4-2

Assignments based on MB 512 MB 514 and MB 592 containing exercises on microbial physiology, genetics and metabolisms of microorganisms and their role in food production and spoilage will be conducted.

BT 572 Molecular Biology and Immunology Laboratory 0-0-4-2

Assignments based on various techniques involved in BT 542 and MB 532 containing exercises on molecular biology, immunological analysis will be conducted.

BT 524 Laboratory Course in Bioinformatics & Scientific Communication 0-0-2-1

Assignments based on BT 592 containing exercises on NCBI & It's elements, BLAST & It's relatives, Homology searching, Secondary structure prediction, Structure visualization, Phylogenetic analysis etc.

MB 611 Medical Microbiology 3-1-0-4

Normal Flora of Human Body: Skin, Oral cavity, Gastrointestinal tract, Respiratory tract, Urinogenital tract, Concept of opportunistic pathogens. [3]

Infection: Sources of infection for man, Vehicles or reservoirs of infection, Vertical and horizontal transmission of infection, Pathogenesis of infecting microorganisms-Virulence factors (adhesions, enzymes-coagulases, fibrinolysins, mucinases, lipase, proteases, nucleases, collagenase, neuraminidase). Toxins-endotoxins and exotoxins as agents of disease. [5]

Microbial Strategies for Evading Immune Response: Evading phagocytosis, Survival in phagocytes, Immunosuppression, Induction of ineffective antibodies, Antigenic variation, Avoiding induction of immune response. [5]

Bacterial Diseases: Pathogenesis, epidemiology, laboratory diagnosis, treatment and vaccination of bacterial diseases caused by- *Staphylococcus, Streptococcus, Pneumococcus, Neisseria, Corynebacterium, Bacillus, Clostridium, Escherichia, Salmonella, Shigella, Vibrio, Yersinia, Mycobacterium, Treponema, Mycoplasma, Campylobacter, Helicobacter, Rickettsiae and Chlamydiae.* [9]

Viral Diseases: Pathogenesis, epidemiology, laboratory diagnosis, treatment and vaccination of viral diseases- Pox viruses (Small pox), Herpes viruses (HSV, Epstein-barr virus), Adenoviruses, Picorna viruses (Polio, Rhinoviruses), Orthomyxoviruses (Influenza), Paramyxoviruses (Mumps, Measles, RSV), Arboviruses (Dengue, Yellow fever,), Rhabdoviruses (Rabies), Hepatitis viruses, Rubella, Reovirus, Rotavirus, Viral Haemorrhagic Fevers, HIV, Oncogenic Viruses. [9]

Fungal and Protozoan Diseases: Pathogenesis, laboratory diagnosis and treatment of fungal and protozoan (Malaria, Kala Azar) diseases. [5]

Antimicrobial Agents: Mode of action of important antibacterial, antifungal, antiviral and antiprotozoan agents. [3]

MB 681 Environmental and Agricultural Microbiology 3-1-0-4

Aerobiology: Droplet nuclei, aerosols, Assessment of air quality- solid, liquid impingment, Air borne transmission of microbes [3]

Types of Soils- physical and chemical characteristics, microflora, Rhizosphere and Phyllosphere [3]

Water Microbiology: Fresh water and marine habitats- general characteristics, Types of microbes, Microbial activity, Eutrophication and its effects, Assessment of water quality- water purification, Potability standards. [7]

Biogeochemical Cycling: Carbon, Nitrogen and Sulphur cycle- role of microbes, Biodegradation- recalcitrant and xenobiotics, Degradation of pesticide, Wood and Textiles; Role of microbes in biodeterioration- Metal corrosion, Paper; Metal detoxification, Biopesticides. [10]

Microbes in Waste Treatment: Types of wastes- Solid and Liquid waste, Waste treatments- Physical, Chemical and Biological (Primary, Secondary and

Tertiary treatment), Trickling filter, Biocontactor, Activated sludge, Oxidation pond, Solid waste treatment- composting, biogas production. [8]

Nitrogen Fixation: Biological nitrogen fixation- Symbiotic (Rhizobium, Frankia), Asymbiotic(Azotobacter, Azospirillum), Nitrogenase and nif genes, Biofertilizers, VAM- brief account and applications. [8]

MB 641 Industrial Microbiology and Fermentation Technology 3-0-0-3

General Concepts: Isolation, Preservation and Improvement of Industrially important organisms, Enrichment culture technique, Storage at low temperature, Liquid nitrogen, Lyophilization, Strain improvement by mutation, Feed back repression and inhibition, Modification in characteristics of inhibitors, Isolation of auxotrophic mutants, Use of recombinant methods. [9]

Growth Kinetics: Microbial growth kinetics and product kinetics, Microbial biomass, Enzymes, metabolites, Batch and continuous culture- comparison, external and internal, Fed batch and its applications. [6]

Basic Concepts in Fermentation: Fermentation media, Sterilization, Batch and Continuous Sterilization, Filter sterilization, Fermenter design, Control of Fermenter, Mass and gas transfer, Product recovery and Effluent treatment. [7]

Industrial Production: Industrial production of Ethanol, Acetone, Butanol, Citric acid, Gluconic acid, Acetic acid, Lactic acid and Kojic acid, Glutamic acid, Lysine and Tryptophan, Amylases, Proteases and Lipases, Antibiotics (□-lactam, aminoglycosides). [12]

Production of other Metabolites: Production of single cell proteins, Recombinant vaccines, Interferon and Steroids. [5]

BT 611 Genetic Engineering 3-1-0-4

Introduction: Isolation and purification of nucleic acids, measuring nucleic acid concentration and purity. [2]

Enzymes in Molecular Cloning: Principal enzymes used to manipulate DNA *in vitro* with their activities and major applications including Restriction endonucleases, Nucleases, DNA ligases, topoisomerases, Enzymes involved in modifications including DNA methylases, DNA polymerases, kinases, phosphatases and DNA binding proteins (SSB, Rec A). [4]

Cloning and Expression Vectors: Brief study of features and applications of plasmids, phagemids, bacteriophage, lambda vectors, cosmids, high capacity cloning vectors like BACs, PACs and YACs, General considerations for design of expression vectors in prokaryotes. [5]

DNA Cloning Strategies: Criteria for the choice of suitable vectors and host, Modification of DNA ends, Methods of gene transfer to bacterial cells, Preparation of genomic and cDNA libraries, Screening methods for selection of recombinant DNA molecules by direct, indirect methods and by detection of specific proteins. [4]

Analysis of DNA Protein and Protein-Protein Interactions: Electromobility shift assay, Methyl interference assay, Footprinting technique, Dimethyl sulphate protection assay, Entrapment vectors, Yeast two hybrid systems, Phage display, Differential gene expression by microarray. [4]

Polymerase Chain Reaction: Principle and technique, Advances and extensions to basic PCR strategy including RT-PCR, Assymetric PCR, Inverse PCR, Nested PCR, anchored-PCR, overlap extension, DOP-PCR, Applications of PCR. [4]

Manipulation of Gene Expression in Prokaryotes: Production of fusion proteins and heterologous unique proteins in bacteria, Maturation, Transport and stability of eukaryotic proteins in bacteria, Strategies to increase protein production and stability. [5]

Cloning in Systems other than *E. coli*: Cloning in gram positive bacteria, *Saccharomyces cereviciae*, Streptomyces, Yeast expression vectors. [4]

Common Genetic Engineering Techniques: Site directed mutagenesis, Sequencing, Probe labeling, Hybridization. [3]

Applications of rDNA Technology: Role of genetic fingerprinting in diagnostics, therapeutic, agricultural applications. [5]

MB 651 Medical, Environmental and Agricultural Microbiology laboratory 0-0-4-2

Assignments based on MB 611 and MB 621 describing role of microorganisms in disease causing and prevention and their positive and negative role in environment and agriculture will be conducted.

MB 671 Genetic Engineering and Fermentation Technology laboratory 0-0-4-2

Assignments based on MB 641and BT 611 containing exercises on genetic engineering of microorganisms and their role in industrial production of various metabolites like antibiotics, vitamins and enzymes will be conducted.

Mody University of Science & Technology

M.Sc. Chemistry
Session 2017-2018

Curriculum Structure

MASTER OF SCIENCE IN CHEMISTRY
M. Sc. – Chemistry
(2014-2015 onwards)

Programme Level: Postgraduate **Duration:** Two Years (Four Semesters)

No. of Seats: 20
M Sc First Year curriculum will be common for ALL specialization

History:

There has been rapid increase in demand of Chemical science professionals. Considering such a requirement, it is proposed to start a new postgraduate programme namely Master of Science in Chemistry with aim of acquiring the knowledge and developing the skills to plan, design and build complex applications which are highly valued in all sectors like pharmaceutical, fertilizer, education, chemical, biotechnology etc.
The first batch of the programme in MITS is proposed to be admitted in the session 2010-2011.

Input Qualification:

Bachelor's degree with Chemistry as a subject for three years / six semesters/ B. Sc. Applied Chemistry / B. Sc. Biochemistry / B.Sc. Industrial Chemistry with 50 % of marks.

Evaluation Procedure:

All the Rules and Regulations as provided in the Ordinances and Regulations of Postgraduate Programmes of MITS shall be followed.

[#] *Student will perform project work for a period of 2 months and submit two copies of Dissertation report to the department. Presentation and viva voce of project report will be conducted at the end of the spring semester. Dissertation report and presentation will carry 50% weightage each.*

COURSE DESCRIPTION
M. Sc. (Chemistry)

CH 511 **Inorganic Chemistry-I** **3-0-0-3**

Stereochemistry and Bonding in Main Group Compounds: Walsh diagrams (tri-atomic and penta-atomic molecules), dπ-pπ bond, Bent rule and energetics of hybridization, some simple reactions of covalently bonded molecules. [9]

Metal-Ligand Equilibria in Solution : Stepwise and overall formation constants and their interaction, trends in stepwise constant, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand. Chelate effect and its thermodynamic origin, determination of binary formation constants by pH-metry and spectrophotometry. [8]

Reaction Mechanism of Transition Metal Complexes : Energy profile of a reaction, reactivity of metal complex, inert and labile complexes, kinetic application of valence bond and crystal field theories, kinetics of octahedral substitution, acid hydrolysis, factors affecting acid hydrolysis, base hydrolysis, conjugate base mechanism, direct and indirect evidences in favour of conjugate mechanism, anation reactions, reactions without metal ligand bond cleavage. Substitution reactions in square planar complexes, the trans effect, mechanism of the substitution reaction. Redox reaction, electron transfer reactions, mechanism of one electron transfer reactions, outer sphere type reactions, cross reactions and Marcus-Hush theory, inner sphere type reactions. [15]

Metal-Ligand Bonding: Limitation of crystal field theory, molecular orbital theory, octahedral, tetrahedral and square planar complexes, π-bonding and molecular orbital theory. [7]

Suggested Books:

1. Advanced Inorganic Chemistry; F.A. Cotton and G. Wilkinson, 6^{th} Edn. John Wiley & Sons.
2. Inorganic Chemistry; James E. Huheey, 4^{th} Edn. Addison-Wesley Pub. Co.
3. Physical Methods in Inorganic Chemistry; R. S. Drago, International Edn. East-West Press.
4. Inorganic Chemistry; Keith F. Purcell and John C. Kotz, W. B. Sauders Com.

CH 513 Organic Chemistry-I 3-0-0-3

Nature of Bonding in Organic Molecules: Delocalized chemical bonding, conjugation, cross conjugation, resonance hyperconjugation, bonding in fullerenes, tautomerism. Aromaticity in benzenoid and non-benzenoid compounds, alternant and non-alternant hydrocarbons. Huckel's rule, energy level of π-molecular orbitals, annulenes, anti-aromaticity, homo-aromaticity. [6]

Stereochemistry: Conformational analysis of cycloalkanes, Decalines. Chirality, molecules with more than one chiral center, threo and erythro isomers, methods of resolution, optical purity, enantiotopic and diastereotopic atoms, groups and faces, stereospecific and stereoselective synthesis, Asymmetric synthesis. Optical activity in the absence of chiral carbon (biphenyls, allenes and spiranes), chirality due to helical shape. [10]

Reaction Mechanism, Structure and Reactivity: Type of mechanisms, types of reactions, thermodynamic and kinetic requirements, kinetic and thermodynamic control, Hammond's postulate, Curtin-Hammett principle. Potential energy diagrams, transition states and intermediates, methods of determining mechanisms. Generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes and nitrenes. The Hammett equation and linear free energy relationship, substituent and reaction constants. Taft equation. [8]

Aliphatic Nucleophilic Subsitution: The SN2, SN1 mixed SN1 and SN2 and SET mechanism. Neighbouring group participation mechanism by σ and π bonds, anchimeric assistance. Classical and nonclassical carbocations, phenonium ions, norbornyl system, common carbocation rearrangements. The SN i mechanism. Nucleophilic substitution at an allylic, aliphatic trigonal and a vinylic carbon. Ambident nucleophile, regioselectivity. [5]

Aliphatic Electrophilic Substitution: Bimolecular mechanisms SE2 and SEi, The SE1 mechanism, electrophilic substitution accompanied by double bond shifts. Effect of substrates, leaving groups and the solvent polarity on the reactivity. [6]

Aromatic Electrophilic Substitution: The arenium ion mechanism, orientation and reactivity, energy profile diagrams. The ortho/para ratio, ipso attack. Diazonium coupling, Vilsmeir reaction, Gatterman-Koch reaction. [4]

Suggested Books:

1. March's Advanced Organic Chemistry; M.B. Smith & Jerry March, 5th Edition. John Wiley & Sons.
2. A Guide book to Mechanism in Organic Chemistry; Peter Sykes, 6th Edition, Orient Longman Ltd..
3. Reaction Mechanism in Organic Chemistry; S. M. Mukherjee and S.P. Singh, Macmillan India Ltd.
4. Mechanism and Theory in Organic Chemistry; T.H. Lowry and K.S. Richardson, Addison – Wesley Longman Inc.
5. Organic Chemistry; R.T. Morrison and R.N. Boyd, Prentice- Hall of India.

6. Organic Reactions and Their Mechanisms; P.S. Kalsi, New Age International Publication.

CH 531 Physical Chemistry-I 3-0-0-3

Quantum Chemistry:

A. Introduction to Exact Quantum Mechanical Results: The Schrodinger equation and the postulates of quantum mechanics. Discussion of solutions of the Schrodinger equation to some model systems viz., particle in a box, the harmonic oscillator, the rigid rotor, the hydrogen atom.

B. Approximate Methods: The variation theorem, linear variation principle. Perturbation theory (First order and nondegenerate). Applications of variation method and perturbation theory to the Helium atom.

C. Angular Momentum: Ordinary angular momentum, generalized angular momentum, eigenfucntions for angular momentum, eigenvalues of angular momentum, operator using ladder operators, addition of angular momenta, spin, antisymmetry and Pauli exclusion principle.

D. Molecular Orbital Theory: Huckel theory of conjugated systems, bond order and charge density calculations. Applications to ethylene, butadiene, cyclopropenyl radical, cyclobutadiene etc. Introduction to extended Huckel theory.

[15]

Thermodynamics:

A. Classical Thermodynamics: Brief resume of concepts of laws of thermodynamics, free energy, chemical potential and entropies. Partial molar properties; Partial molar free energy, partial molar volume and partial molar heat content and their significances. Determinations of these quantities. Concept of fugacity and determination of fugacity. Non-ideal systems : Excess functions for non-ideal solutions. Activity, activity coefficient, Debye Huckel theory for activity coefficient of electrolytic solutions; determination of activity and activity coefficients; ionic strength. Application of phase rule to three component systems, second order phase transitions.

B. Statistical Thermodynamics: Concept of distribution, thermodynamic probability and most probable distribution. Ensemble averaging, postulates of ensemble averaging. Canonical, grand canonical and microcanonical ensembles, corresponding distribution laws (using Lagrange's method of undetermined multipliers). Partition functions-translational, rotational, vibrational and electronic partition functions, Calculation of thermodynamic properties in terms of partition functions. Application of partition functions. Heat capacity behaviour of solids-chemical equilibria and equilibrium constant in terms of partition functions, Fermi-Dirac Statistics, distribution law and applications to metal. Bose-Einstein statistics; distribution Law and application to helium.

C. Non Equilibrium Theromodynamics: Thermodynamic criteria for non-equilibrium states, entropy production and entropy flow, entropy balance equations for different irreversible processes (e.g., heat flow, chemical reaction etc.) transformations of the generalized fluxes and forces, non equilibrium stationary states, phenomenological equations, microscopic reversibility and Onsager's reciprocity

relations, electrokinetic phenomena, diffusion, electric conduction. [15]

Symmetry and group theory in chemistry: Symmetry elements and symmetry operations, definitions of group, subgroups, relation between orders of a finite group and its subgroup, similarity transformation and classes, point groups, Schonflies symbols, representation of groups by matrices(representation for the Cn, Cnv, Cnh, Dnh, etc. groups to be worked out explicity), character of a representation, the great orthogonality theorem (without proof) and its importance, character tables and their use. [9]

Suggested Books:

1. Modern Electrochemistry;J.O. M. Bockris and A. K. N. Reddy,Vol. 2 A & B, Second Edition, Plenum Press.
2. Chemical Kinetics; K. J. Laidler, Harper & Row.
3. Physical Chemistry; P. W. Atkins, Oxford University Press.
4. Physical Chemistry; I.N. Levine, Tata McGraw Hill Pub. Co. Ltd.
5. Kinetics and Mechanism of Chemical Transformations; J. Raja Ram and J.C. Kuriacose, MacMillan Indian Ltd.
6. Statistical Thermodynamics; Andrew Maczek, Oxford University Press.

CH 523 Spectroscopy-I 3-0-0-3

Microwave Spectroscopy: Classification of molecules, rigid rotor model, effect of isotopic substitution on the transition frequencies, intensities, non-rigid rotor. Stark effect, nuclear and electron spin interaction and effect of external field, applications [8]

Vibrational Spectroscopy: Symmetry and shapes of AB2, AB3, AB4, AB5 and AB6, mode of bonding of ambidentate ligands, ethylenediamine and diketonato complexes, application of resonance Raman spectroscopy particularly for the study of active sites of metalloproteins. [8]

Raman Spectroscopy: Classical and quantum theories of Raman effect. Pure rotational, vibrational and vibrational-rotational Raman spectra, selection rules, mutual exclusion principle, Resonance Raman spectroscopy, coherent anti stokes Raman spectroscopy (CARS). [8]

Electron Spin Resonance Spectroscopy: Basic principles, zero field splitting and Kramer's degeneracy, factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants spin Hamiltonian, spin densities and Mc Connell relationship, measurement techniques, applications. [7]

Mossbauer Spectroscopy: Basic principles, spectral parameters and spectrum display. Application of the technique to the studies of

(1) Bonding and structures of Fe^{+2} and Fe^{+3} compounds including those of intermediate spin.

(2) Sn^{+2} and Sn^{+4} compounds; nature of M-L bond, coordination number, structure.

(3) Detection of oxidation state and inequivalent MB atoms. [8]

Suggested Books:

1. Modern Spectroscopy, J.M. Hollas, John Viley.
2. NMR, NQR, ESR and Mossbauer Spectroscopy in Inorganic Chemistry, R.V. Parish, Ellis Harwood.
3. Physical Methods in Chemistry, R.S. Drago, Saunders College.
4. Introduction to Molecular Spectroscopy, G.M. Barrow, Mc Graw Hill.
5. Basic Principles of Spectroscopy, R. Chang, Mc Graw Hill.
6. Infrared and Raman Spectral : Inorganic and Coordination Compounds K. Nakamoto, Wiley.

CH 551 Mathematics for Chemists 3-0-0-3

Vectors and Matrix Algebra: A. Vectors: Vectors, dot, cross and triple products etc The gradient, divergence and curl, Vector Calculus.

B. Matrix Algebra: Addition and multiplication; inverse, adjoint and transpose of matrices, special matrices (Symmetric, skew-symmetric, Hermitian, Skew-Hermitian, unit, diagonal, unitary etc.) and their properties. Matrix equations: Homogeneous, non-homogeneous linear equations and conditions for the solution, linear dependence and independence. Introduction to vector spaces, matrix eigen values and eigen vectors, diagonalization, determinants (examples from Huckel theory).

[12]

Differential and Integral Calculus: Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima (examples related to maximally populated rotational energy levels, Bohr's radius and most probable velocity from Maxwell's distribution etc.).Integral calculus, basic rules for integration, integration by parts, partial fraction and substitution. Reduction formulae, applications of integral calculus.Functions of several variables, partial differentiation, co-ordinate transformations (e.g. cartesian to spherical polar).

[8]

Elementary Differential equations: Exact First-order differential equations, homogenous, exact and linear equations. Applications to chemical kinetics, secular equilibria, quantum chemistry etc, second order differential equation and their solutions.

[10]

Permutation and Probability: Permutations and combinations, probability and probability theorems, average, root means square and most probable errors, examples from the kinetic theory of gases etc., curve fitting (including least squares fit etc) with a general polynomial fit.

[9]

Suggested Books:

1. The chemistry Mathematics Book, E.Steiner, Oxford University Press.
2. Mathematics for chemists, Doggett and Suiclific, Longman.
3. Mathematical preparation for Physical chemistry: F. Daniels, Mc. Graw Hill.
4. Chemical Mathematics D.M. Hirst, Longman.
5. Applied Mathematics for Physical Chemistry, J.R. Bararnte, Prentice Hall.
6. Basic Mathematics for Chemists, Tebbutt, Wiley.

CH 561 **Biology for Chemists** **3-0-0-3**

Cell Structure and Functions: Structure of prokaryotic and eukaryotic cells, intracellular organelles and their functions, comparison of plant and animal cells. Overview of metabolic processes-catabolism and anabolism. ATP - the biological energy currency. Origin of life-unique properties of carbon chemical evolution and rise of living systems. Introduction to biomolecules, building blocks of bio-macromolecules. [8]

Carbohydrates: Conformation of monosaccharides, structure and functions of important derivatives of monosaccharides like glycosides, deoxy sugars, myoinositol, amino sugars. N-acetylmuramic acid, sialic acid, disaccharides and polysaccharides. Structural polysaccharides; cellulose and chitin. Storage polysaccharides-starch and glycogen. Structure and biological function of glucosaminoglycans of mucopolysaccharides. Carbohydrates of glycoproteins and glycolipids. Role of sugars in biological recognition. Blood group substances. Ascorbic acid. Carbohydrate metabolism-Kreb's cycle, glycolysis, glycogenesis and glycogenolysis, gluconeogenesis, pentose phosphate pathway. [8]

Lipid: Fatty acids, essential fatty acids, structure and function of triacylglycerols, glycerophospholipids, sphingolipids, cholesterol, bile acids, prostaglandins. Lipoproteins-composition and function, role in atherosclerosis. Properties of lipid aggregates-micelles, bilayers, liposomes and their possible biological functions. Biological membranes. Fluid mosaic model of membrane structure. Lipid metabolism-β-oxidation of fatty acids. [8]

Amino-acids, Peptides and Proteins: Chemical and enzymatic hydrolysis of proteins to peptides, amino acid sequencing. Secondary structure of proteins. Force responsible for holding of secondary structures. α- helix, -β-sheets, super secondary structure, triple helix structure of collagen. Tertiary structure of protein-folding and domain structure, Quaternary structure. Amino acid metabolism-degradation and biosynthesis of amino acids, sequence determination: chemical / enzymatic / mass spectral, racemization / detection. Chemistry of oxytocin and tryptophan releasing hormone (TRH). [8]

Nucleic Acids: Purine and pyrimidine bases of nucleic acids, base pairing via H -bonding. Structure of ribonucleic acid (RNA) and deoxyribonucleic acid (DNA), double helix model of DNA and forces responsible for holding it. Chemical and enzymatic hydrolysis of nucleic acids. The chemical basis for heredity, an overview of replication of DNA, transcription, translation and genetic code. Chemical synthesis of mono and trinucleoside [7]

Suggested Books:

1. Principles of Biochemistry, A.L. Lehninger, Worth Publishers.
2. Biochemistry, L. Stryer, W.H. Freeman.
3. Biochemistry, J. David Rawan, Neil Patterson.
4. Biochemistry, Voet and Voet, John Wiley.
5. Outlines of Biochemistry E.E. Conn and P.K. Stumpf, John Wiley.

CH 571 Inorganic Chemistry Laboratory - I 0-0-4-2

I. Synthesis and characterization of the following inorganic complex compounds

a) $VO(acac)_2$
b) Cis-$K[Cr(C_2O_4)_2(H_2O)_2]$
c) $Na[Cr(NH_3)_2(SCN)_4]$
d) $Mn(acac)_3$
e) $K_3[Fe(C_2O_4)_3]$
f) Prussian Blue, Turnbull's Blue

II. Qualitative and Quantitative Analysis; Two metal ions in cationic/ anionic forms.

Rare elements: Tl, W, Se, Mo, Ti, Zr, Ce, Th, V, U, Li
Insolubles: Oxides, sulphates and halides

Suggested Books:

1. Vogel's Textbook of Quantitative Analysis, revised, J. Bassett, R.C. Denney, G.H. Jeffery and J. Mendham, ELBS.
2. Synthesis and Characterization of Inorganic Compounds, W.L. Jolly.
3. Inorganic Experimens, J. Derek Woolings, VCH.
4. Microscale Inorganic Chemistry, Z. Szafran, R.M, Pike and M.M. Singh, Wiley.
5. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrad

CH 581 Organic Chemistry Laboratory - I 0-0-4-2

Qualitative Analysis: Separation, purification and identification of compounds of binary mixture (one liquid and one solid / two liquids / two solids) using TLC and Column Chromatography, chemical tests. IR spectra to be used for functional group identification.

Organic Synthesis:

a) Acetylation: Acetylation of cholesterol and separation of cholesteryl acetate by column chromatography.
b) Oxidation : Adipic acid by chromic acid oxidation of cyclohexanol
c) Grignard reaction : Synthesis of triphenylmethanol from benzoic acid
d) Aldol condensation: Dibenzal acetone from benzaldehyde.
e) Sandmeyer reaction: p-Chlorotoluene from p-toluidine.

Suggested Books:

1. Experiments and Techniques in Organic Chemistry, D.P. Pasto, C. Johnson and M. Miller, Prentice Hall.
2. Macroscale and Microscale Organic Experiments, K.L. Williamson, D.C. Health.

CH 591 Physical Chemistry Laboratory - I 0-0-4-2

a) To construct the phase diagram for three component system (e.g. chloroform-acetic acid-water).
b) To determine the electron polarization and electron polarizability of a liquid refractometrically.
c) To determine the concentration of a given solution of an optically active substance by polarimetric measurements.
d) To determine the specific and molar rotation of an optically active substance, like cane sugar at a number of concentrations and hence find the intrinsic rotation of the substance.
e) To verify the Beer's law for the solution of the potassium permanganate and determine the concentration of the given aqueous solution of unknown concentration of this salt.
f) To determine the equilibrium constant of the given reaction, potentiometrically.
g) To determine the heat of neutralization of hydrochloric acid using a classical calorimeter.
h) To determine the stability constant of a $FeSCN^{2+}$ complex ion keeping ionic strength constant.
i) To determine the solubility of Ca $(IO_3)_2$ in deionized water and in dilute solution of potassium chloride at room temperature. Also evaluate the thermodynamic solubility product.
j) To determine the formula and the stability constant of a metal ion complex (Lead oxalate complex.)

Suggested Books:

1. Advanced Practical Physical Chemistry, J. B. Yadav, Goel P.H.
2. Practical Physical Chemistry, A.M. James and F.E. Prichard, Longman.
3. Findley's Practical Physical chemistry, B.P. Levitt, Longman.
4. Experimental Physical Chemistry, R.C. Das and B. Behera, Tata McGraw Hill.

CH 512 Inorganic Chemistry-II 3-0-0-3

Electronic Spectra and Magnetic Properties of Transition Metal Complexes: Spectroscopic ground states, correlation. Orgel and Tanabe-Sugano diagrams for transition metal complexes (d^1-d^9 states), calculations of D_q, B and β parameters, charge transfer spectra, spectroscopic method of assignment of absolute configuration in optically active metal chelates and their stereochemical information, anomalous magnetic moments, magnetic exchange coupling and spin crossover.

[10]

Metal π-Complexes: Metal carbonyls, structure and bonding, vibrational spectra of metal carbonyls for bonding and structural elucidation,important reactions of metal carbonyls; preparation, bonding, structure and important reaction of transition metal nitrosyl, dinitrogen and dioxygen complexes; tertiary phosphene as ligand.

[8]

Metal Clusters: Higher boranes, carboranes, metalloboranes and metallocarboranes compounds with metal metal multiple bonds

[5]

Role of metal ions in biological processes: Brief study of various metal ions (Fe, Mo, Cu, Co, Ni, V, Cr, Mn, Zn, Se, B, Na, K and Ca) in biological processes.

[10]

Isopoly and Heteropoly Acids and Salts: Brief study

[6]

Suggested Books:

1. Mechanism of Inorganic Reactions; F. Basalo and R.G. Pearson, Wiley Eastern Ltd.
2. Inorganic Chemistry; D. F. Shriver and P. W. Atkins, ELBS.
3. Advanced Inorganic Chemistry; F. A. Cotton and G. Wilkinson, Edn. John Wiley & Sons.
4. Electronic Absorption Spectroscopy and Related Techniques; D.N. Sathyanarayana, Universities Press (India) Ltd.
5. Inorganic Chemistry; Keith F. Purcell and John C. Kotz, W. B. Sauders Com.
6. Inorganic Reaction Mechanisms; Martin L. Tobe and John Burgess, Longmans.

CH 514 **Organic Chemistry-II** **3-0-0-3**

Aromatic Nucleophilic Substitution: The SNAr, SN1, benzyne and SRN1 mechanism, Reactivity; effect of substrate structure, leaving group and attacking nucleophile. The Von Richter, Sommelet - Hauser, and Smiles rearrangments. [5]

Free Radical Reactions: Types of free radical reactions, free radical substitution mechanism, mechanism at an aromatic substrate, neighbouring group assistance. Allylic halogenation (NBS), oxidation of aldehydes to carboxylic acids, auto-oxidation, coupling of alkynes and arylation of aromatic compounds by diazonium salts, Sandmeyer reaction. Free radical rearrangement. Hunsdiecker reaction. [7]

Addition to Carbon Carbon Multiple Bonds: Mechanistic and stereochemical aspects of addition reactions involving electrophiles, nucleophiles and free radicals, regio-and chemoselectivity, orientation and reactivity. Addition to cyclopropane ring. Hydrogenation of double and triple bonds, hydrogenation of aromatic rings. Hydroboration, Michael reaction, sharpless asymmetric epoxidation. [7]

Addition to Carbon-Hetero Multiple bonds: Mechanism of metal hydride reduction of saturated and unsaturated carbonyl compounds, acid, esters and nitriles. Addition of Grignard reagents, organozinc and organolithium reagents to carbonyl and unsaturated carbonyl compounds. Wittig reaction. Mechanism of condensation reactions involving enolates-Aldol, Knoevenagel, Claisen, Mannich, Benzoin, Perkin and Stobbe reactions. Hydrolysis of esters and amides, ammonolysis of esters. [7]

Elimination Reactions: The E2, E1 and E1CB mechanisms and their spectrum. Orientation of the double bond. Mechanism and orientation in pyrolytic elimination. [5]

Pericyclic Reactions: Molecular orbital symmetry, Electrocyclic reactions, cycloaddition reactions and sigmatropic reactions, FMO and PMO approach. Correlation diagram, selection rules. Claisen, Cope and aza-Cope rearrangements, Ene reaction [8]

Suggested Books:

1. March's Advanced Organic Chemistry; M.B. Smith & Jerry March, John Wiley & Sons.
2. A Guide Book to Mechanism in Organic Chemistry; Peter Sykes, Orient Longman Ltd.
3. Reaction Mechanism in Organic Chemistry; S. M. Mukherjee and S.P. Singh, Macmillan India Ltd.
4. Mechanism and Theory in Organic Chemistry; T.H. Lowry and K.S. Richardson, Addison – Wesley Longman Inc.
5. Mechanism and Theory in Organic Chemistry; S.M. Mukherjee and S.P. Singh, Mac Millan India.

6. Organic Reactions and Their Mechanisms; P. S. Kalsi, New Age International Pub.

CH 532 Physical Chemistry II 3-0-0-3

Surface Chemistry:

A. Adsorption -Surface tension, capillary action, pressure difference across curved surface (Laplace equation), vapour pressure of dropletes (Kelvin equation), Gibbs adsorption isotherm, estimation of surface area (BET equation), Surface films on liquids (Electro-kinetic phenomenon).

B. Micelles: Surface active agents, classification of surface active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, counter ion binding to micelles, thermodynamics of micellization-phase separation and mass action models, solublization, micro emulsion, reverse micelles. [12]

Macromolecules: Polymer-definition, types of polymers, electrically conducting, fire resistant, liquid crystal polymers, kinetics of polymerization, mechanism of polymerization. Molecular mass, number and mass average molecular mass, molecular mass determination (Osmometry, viscometry, diffusion and light scattering methods), sedimentation, chain configuration of macromolecules, calculation of average dimension of various chain structures. [8]

Electrochemistry: Electrochemistry of solutions. Debye-Huckel-Onsager treatment and its extension, ion solvent interactions. Debye-Huckel-Jerum mode. Thermodynamics of electrified interface equations. Derivation of electro capillarity, Lippmann equations (surface excess), methods of determination. Structure of electrified interfaces. Guoy-Chapman, Stern, Graham- Devanathan - Mottwatts, Tobin, Bockris, Devanathan models, Overpotentials, exchange current density, derivation of Butler Volmer equation, Tafel plot. Quantum aspects of charge transfer at electrodes-solution interfaces, quantization of charge transfer, tunneling. Semiconductor interfaces-theory of double layer at semiconductor, electrolyte solution interfaces, structure of double layer interfaces. Effect of light at semiconductor solution interface. Polarography theory, Ilkovic equation; half wave potential and its significance. [10]

Chemical Dynamics: Methods of determining rate laws, collision theory of reaction rates, steric factor, activated complex theory, Arrhenius equation and the activated complex theory; ionic reactions, kinetic salt effects, steady state kinetics, kinetic and thermodynamic control of reactions, treatment of unimolecular reactions. Dynamic chain (hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane), photochemical (hydrogen-bromine and hydrogen-chlorine reactions) and homogenous catalysis, kinetics of enzyme reactions, general features of fast reactions, study of fast reactions by flow method, relaxation method, flash photolysis and the nuclear magnetic resonance method, dynamics of unimolecular reactions (Lindemann Hinshelwood and Rice-Ramsperger-Kassel-Marcus (RRKM) theories of unimolecular reactions). [9]

Suggested Books:

1. Modern Electrochemistry; J.O'M. Bockris and A. K. N. Reddy, Plenum Press.
2. Physical Chemistry; P. W. Atkins Oxford University Press.
3. Physical Chemistry; I. N. Levine, Tata McGraw Hill Pub. Co. Ltd.
4. Statistical Thermodynamics; Andrew Maczek, Oxford University Press.
5. Text Book of Polymer Science; F.W. Billmayer, Wiley-Interscience.
6. Modern Electrochemistry;J.O. M. Bockris and A. K. N. Reddy,Vol. 2 A & B, Second Edition, Plenum Press.
7. Chemical Kinetics; K. J. Laidler, Harper & Row.

CH 524 Spectroscopy-II 3-0-0-3

Ultraviolet and Visible spectroscopy: Various electronic transitions (185-800 nm) Beer-Lambert law, effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fieser-Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic compounds. Steric effect in biphenyls. [7]

Infrared Spectroscopy: Instrumentation and Sample handling.Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance. [7]

Nuclear Magnetic Resonance Spectroscopy: General introduction and definition, chemical shift, spin-spin interaction, shielding mechanism, mechanism of measurement, chemical shift values and correlation for protons bonded to carbon (aliphatic, olefinic, aldehydic and aromatic) and other nuclei (alcohols, phenols, enols, carboxylic acids, amines, amides & mercapto), chemical exchange, effect of deuteration, complex spin-spin interaction between two, three, four and five nuclei (first order spectra), Stereochemistry, hindered rotation, Karplus curve-variation of coupling constant with dihedral angle. Simplifications of complex spectranuclear magnetic double resonance, NMR shift reagents, solvent effects. Fourier transform technique, nuclear overhauser effect (NOE). [8]

Carbon-13 NMR Spectroscopy: General considerations, chemical shift (aliphatic, olefinic , alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants. Two dimension NMR spectroscopy-COSY, NOSY, DEPT, INEPT, APT and INADEQUATE techniques. [6]

Mass Spectrometry: Introduction ion production EI, CI, FD and FAB, factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, molecular ion peak, metastable peak, Mc Lafferty rearrangement. Nitrogen rule. High resolution mass spectrometry. Example of mass spectral fragmentation of organic compounds with [6]

respect to their structure determination.

Problems: Structure elucidation based on spectroscopic data. [5]

Suggested Books:

1. Practical NMR Spectroscopy, M.L. Martin. J.J. Delpeuch and G.J. Martin, Heyden.
2. Spectrometric Identification of Organic Compounds, R.M. Silverstein, G.C. Bassler adn T.C. Morrill, John Wiley.
3. Introduction to NMR spectroscopy, R.J. Abraham, J. Fisher and P. Loftus, Wiley.
4. Application of Spectroscopy of Organic Compounds, J.R. Dyer Prentice Hall.
5. Spectroscopic Methods in Organic Chemistry D.H. Williams, I. Fleming, Tata McGraw-Hill.

CH 534 Colloids and Surface Chemistry 3-0-0-3

Introduction: Introduction: Colloid & surface science - small particles, association structures, surfaces, interfaces, interphases and macromolecules, Survey of technologies reliant upon colloid and surface science. [5]

Particulate Dispersions (solids dispersed in fluids): Single particles, Scattering of electromagnetic radiation from matter, Single particles in external fields (gravity, electrical, etc.), Particle sizing (microscopy, scattering (ILS, DLS, x-ray, neutron), sedimentation, centrifugation, chromatography, acoustics, adsorption), Particles in fluids, Particle trajectories' Transport phenomena; Brownian motion, diffusion; Rheology & rheology of dispersions; Particle-particle interactions, potential energy diagrams; Colloid stability - aqueous, non-aqueous; Consequences of colloid stability (dispersal, flocculation, coagulation, phase separation); Measuring colloid stability; Particle-particle interactions: Dispersion forces (Hamaker theory); Solid-liquid interfaces (charging of surfaces, Electrical Double Layer, adsorption); Particle-particle interactions: Electrostatic forces; Analysis of surface charge and surface chemistry (electrokinetics [electrophoresis, streaming; potential, electro-osmosis, sedimentation potential], electroacoustics, surface spectroscopy, ESR); Particle-particle interactions: steric forces & polymer-mediated forces'' Particle-particle interactions: hydrophobic forces, Analysis of particle interactions (rheometry, AFM, CFM, MASIF, SFA); Flocculation & coagulation - Schulze-Hardy rule, inorganic coagulants, polymeric flocculants ; wastewater treatment

[15]

Wetting & Capillarity: Surface and interfacial tension; Phenomena of liquid surfaces - Phenomena of liquids near solid surfaces Wetting, spreading, penetration, film formation, adhesion, detergency and floation; Contact angles, their analysis and interpretation - component analysis; Surface roughness, chemical heterogeneity, contamination; Surface energy methods on planar, particulate, hollow and fiber surfaces; Relation of capillarity to phase diagrams; Adhesion & Contact mechanics.

[10]

Bubbles and Foams (gases dispersed in liquids): Foam stability; Film drainage; Film rupture; Film rheology; Emulsion and pseudo-emulsion films; Phase diagrams; Measuring thin film properties - disjoining pressure, thin film balance, Frothing agents', Foam breaking, Antifoaming agents & mechanisms, Flotation. [9]

Suggested Books:

1. Colloidal Dispersions: Suspensions, Emulsions, and Foams I.D. Morrison and S. Ross (2002, Wiley Interscience, NY; ISBN: 0-471-17625-7).
2. Basic Principle of Colloid Science, D.H. Everett (1988, Royal Society of Chemistry, London, ISBN : 0-85186-443-0)

CH 562 Inorganic Chemistry Laboratory - II 0-0-4-2

I. Synthesis and characterization of the following inorganic complex compounds

a) $[Co(NH_3)_6]\ [Co(NO_2)_6]$
b) Cis-$[Co(trien)\ (NO_2)_2]\ Cl.H_2O$
c) $Hg[Co(SCN)_4]$
d) $[Co(Py)_2Cl_2]$
e) $[Ni(NH_3)_6]Cl_2$
f) $Ni(dmg)_2$
g) $[Cu(NH_3)_4]SO_4H_2O$

II. Qualitative and Quantitative Analysis; Separation and determination of two metal ions Cu-Ni, Ni-Zn, Cu-Fe etc. involving volumetric and gravimetric methods.

III. Chromatography; Separation of cations and anions by
Paper Chromatography.
Column Chromatography : Ion exchange

Suggested Books:

1. Vogel's Textbook of Quantitative Analysis, revised, J. Bassett, R.C. Denney, G.H. Jeffery and J. Mendham, ELBS.
2. Synthesis and Characterization of Inorganic Compounds, W.L. Jolly.
3. Inorganic Experiments, J. Derek Woolings, VCH.
4. Microscale Inorganic Chemistry, Z. Szafran, R.M, Pike and M.M. Singh, Wiley.
5. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrad

CH 572 Organic Chemistry Laboratory - II 0-0-4-2

I. Organic Synthesis:

a) Cannizzaro reaction: 4-Chlorobenzaldehyde as substrate.
b) Friedel Crafts reaction: β-Benzoyl propionic acid from succinic anhydride and benzene.
c) Aromatic electrophilic substitutions: Synthesis of p-nitroaniline and p-bromoaniline. The Products may be Characterized by Spectral Techniques
d) Acetoacetic ester Condensation : Synthesis of ethyl-n-butylacetoacetate by A.E.E. condensation

II. Quantitative Analysis:

a) Determination of the percentage or number of hydroxyl groups in an organic compound by acetylation method.
b) Estimation of amines/phenols using bromate bromide solution/or acetylation method.
c) Determination of lodine and Saponification values of an oil sample.
d) Determination of DO, COD and BOD of water sample.
e) To estimate the percentage of sulphur in the given organic sample by Messenger's method
f) To estimate the percentage of nitrogen in the given organic sample by Kjeldahl's method.
g) To estimate a halogen in the given sample by the alkaline reduction method (Modified Stepenow method).

Suggested Books:

1. Systematic Qualitative Organic Analysis, H. Middleton, Adward Arnold.
2. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
3. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley.

CH 582 Physical Chemistry Laboratory - II 0-0-4-2

a) To determine the molecular weight of a macromolecule by viscometry.
b) To determine the order with respect to Ag(I) in the oxidation of Mn(II) by $S_2O_8^{2-}$ and the rate constant for the uncatalyzed reaction.
c) To determine the formation constant for the $[Ce^{IV}\text{-}H_3PO_2]$ intermediate complex and also the rate constant of its decomposition at 45° C.
d) Study the effect of hydrogen ion on the $H_2O_2 - I^-$ reaction and to determine the rate constants K_1 and K_2 of the given rate equation.
e) To determine the equivalent conductivity of an electrolyte at infinite dilutions, and to determine the dissociation constant of an acid at different dilutions.
f) To determine the standard electrode potential of the ferrous ferric system by titrating ferrous ammonium sulphates against potassium dichromate potentiometrically.
g) To determine the surface tension of an organic liquid (Ethyl acetate) at different temperatures by double capillary method and hence test the constancy of parachor.
h) To determine the critical micelle concentration of a soap (sodium laurate, sodium palmitate etc.) by surface tension measurements.
i) To determine the solubility and solubility product of sparingly soluble salts e.g. PbSO4, BaSO4) conductometrically.
j) To determine the strength of the given acid conductometrically using standard alkali solution. Select suitable pair for titration. (SA-SB, SA-WB, WA-SB, WA-WB)

Suggested Books:

1. Advanced Practical Physical Chemistry, J. B. Yadav, Goel P.H.
2. Practical Physical Chemistry, A.M. James and F.E. Prichard, Longman.
3. Findley's Practical Physical chemistry, B.P. Levitt, Longman.
4. Experimental Physical Chemistry, R.C. Das and B. Behera, Tata McGraw Hill.

CH 611 Photochemical Reactions 3-0-0-3

Photochemical Reactions: Interaction of electromagnetic radiation with matter, types of excitations, fate of excited molecule, quantum yield, transfer of excitation energy, actinometry. [7]

Determination of Reaction Mechanism: Classification, rate constants and life times of reactive energy state; determination of rate constants of reactions. Effect of light intensity on the rate of photochemical reactions. Types of photochemical reactions-photo dissociation, gas-phase photolysis. [8]

Photochemistry of Alkene: Intramolecular reactions of the olefinic bond-geometrical isomerism, cyclisation reactions, rearrangement of 1,4- and 1,5-dienes. [5]

Photochemistry of Carbonyl Compounds: Intramolecular reactions of carbonyl compounds-saturated, cyclic and acyclic, β,γ unsaturated and α, β unsaturated compounds, cyclohexadienones. Intermolecular cyloaddition reactions-dimerisations and oxetane formation. [8]

Photochemistry of Aromatic Compounds: Isomerisations, additions and substitutions. [5]

Miscellaneous Photochemical Reactions: Photo-Fries reactions of anilides, Photo-Fries rearrangement, Barton reaction, Singlet molecular Oxygen reaction, Photochemical formation of smog. Photodegradation of polymers. Photochemistry of vision. [6]

Suggested Books:

1. Fundamentals of photochemistry, K.K. Rohtagi - Mukherjee, Wiley-Eastern.
2. Essentials of Molecular Photochemistry, A Gilbert and J. Baggott, Blackwell Scientific Publication.
3. Molecular Photochemistry, N.J. Turro, W.A. Benjamin.
4. Introductory Photochemistry, A. Cox and t. Camp, McGraw Hill.
5. Photochemistry, R.P. Kundall and A. Gilbert. Thomson Nelson.
6. Organic Photochemistry, J. Coxon and B.halton, Cambridge University Press.

CH 621 Bioorganic Chemistry 3-0-0-3

Introduction: Basic considerations, Proximity effects and molecular adaptation. [4]

Enzymes: Introduction and historical perspective, chemical and biological catalysis, remarkable properties of enzymes like catalytic power, specificity and regulation. Nomenclature and classification, extraction and purification. Fischer's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by the use of inhibitors, affinity labelling and

enzyme modification by site-directed mutagenesis. Enzyme kinetics, Michaelis-Menten and Lineweaver - Burk plots, reversible and irreversible inhibition.

[11]

Mechanism of Enzyme Action: Transition-state theory, orientation and Steric effect, acid-base catalysis, covalent catalysis, strain or distortion. Examples of some typical enzyme mechanisms for chemotrypsin, ribonuclease, lysozyme and carboxypeptidase A.

[6]

Kinds of Reactions Catalysed by Enzymes: Nucleophilic displacement on a phosphorus atom, multiple displacement reactions and the coupling of ATP cleavage to endergonic processes. Transfer of sulphate, addition and elimination reactions, enolic intermediates in Isomerisation reactions, β-Cleavage and condensation, some isomerization and rearrangement reactions. Enzyme catalyzed carboxylation and decarboxylation.

[9]

Industrial Applications of Enzymes : Techniques and methods of immobilization of enzymes, effect of immobilization on enzyme activity, application of immobilized enzymes, use of enzymes in food and drink industry-Brewing and cheese-making, syrups from corn starch, enzymes as targets for drug design.

[9]

Suggested Books:

1. Bioorganic Chemistry: A chemical Approach to Enzyme Action, Hermann Dugas and C. Penny, Springer Verlag.
2. Understanding Enzymes, Trevor Palmer, Prentice Hall.
3. Enzyme Chemistry: Impact and applications, Ed. Collin J suckling, Chapman and Hall.
4. Enzyme Mechanisms Ed. M.I. Page and A Williams, Royal Society of Chemistry.
5. Fundamentals of Enzymology, N.C. Price and L. Stevens. Oxford University Press.
6. Immobilized Enzymes: An Introduction and Applications in Biotechnology, Michael B. Trevan, John Wiley.
7. Enzymatic Reaction Mechanisms. C. Walsh. W.H. Freeman.
8. Enzyme Structure and Mechanism, A Fersht, W.H. Freeman.
9. Biochemistry: The Chemical Reactions of Living Cells, D.E. Metzler, Academic Press.

CH 631 Organic Synthesis-I 3-0-0-3

Reagents and reactions: Gilman's reagent – Lithium dimethylcuprate, Lithium diisopropylamide (LDA), Dicyclohexyl carbodiimide (DDC), 1,3-Dithiane (Umpolungreagent), trimethylsilyliodide, Petersons synthesis, Bakers yeast, Organophosphorus compounds (Wittig reaction), Sulphur ylides, Phase transfer catalysts: Quaternary

ammonium and Phosphonium salts, Crown ethers. Heck reaction, Suzuki coupling and Mukaiyama reaction. [9]

Oxidation: Introduction, Different oxidative processes. Hydrocarbons-alkenes, aromatic rings, saturated C-H groups (activated and unactivated) Alcohols, diols, aldehyde's, ketones, ketals and carboxylic acids. Amines, hydrazines, and sulphides. Oxidations with ruthenium tetraoxide, iodobenzene diacetate and thallium. (III) Nitrate. [9]

Reduction: Introduction, Different reductive processes. Alkanes, alkenes, alkynes, and aromatic rings. Carbonyl compounds-aldehydes, ketones, acids and their derivatives. Epoxides. Nitro, nitroso, azo and oxime groups. Epoxide, Nitro, Nitroso, azo and oxime groups. Hydrogenolysis. [8]

Rearrangements: General mechanistic considerations-nature of migration, migratory aptitude, memory effects. A detailed study of the following rearrangements. Pinacol-pinacolone, Wagner-Meerwein, Demjanov, Benzil – Benzillic acid. Favorskii, Arndt-Eistert synthesis, Neber, Beckmann, Hofmann, Curtius, Schmidt, Baeyer-Villiger, Shapiro reaction. [8]

Metallocenes, Nonbenzenoid Aromatics and Polycyclic Aromatic Compounds: General consideration. Synthesis and reactions of some representative compounds. (Tropone, tropolone, azulene, ferrocene, phenanthrene, fluorine and undone). [5]

Suggested Books:

1. Modern Synthetic Reactions. H.O. House, W.A. Benjamin.
2. Some Modern Methods of Organic Synthesis, W. Carruthers, Cambridge Uni. Press.
3. Advanced Organic Chemistry, Reactions Mechanisms and Structure, J. March. John Wiley.
4. Principles of Organic synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional.
5. Advanced Organic Chemistry Part B.F.A. Carey and R.J. Sundberg Plenum Press.
6. Rodd's Chemistry of Carbon Compounds. Ed. S. Coffey, Elsevier

CH 641 Separation Techniques and Data Analysis 3-0-0-3

Adsorption and partition chromatography:
(a) Definition of terms, techniques and chemical concepts
(b) Column adsorption chromatography
(c)Partition chromatography-column, paper and TLC [8]

High performance liquid chromatography -
Introduction, choice of the system, instrumentation and applications. [5]

Gas liquid chromatography: Introduction, choice of the system, instrumentation, qualitative and quantitative analysis of mixtures. [5]

Gel permeation/size exclusion Chromatography: Introduction, theory and applications. [5]

Ion exchangers: Theory, action of ion-exchange resins, ion exchange chromatography, exchange capacity, ion-exchange resins and liquid ion-exchange resins, applications of cation and anion ion exchangers. [5]

Solvent Extraction: - Introduction, principles, factors that influence solvent extraction, ion association complexes and applications of solvent extraction. [5]

Data analysis: Types of errors, propagation of errors, accuracy and precision, and least- square analysis, average standard deviation. [6]

Suggested Books:

1. Principles of Instrumental Analysis; D.A. Skoog, Saunders College Publishing.
2. Instrumental Methods of Chemical Analysis; G.W. Ewing, McGraw Hill Books Co.
3. Modern Methods of Chemical Analysis; R. L. Pecsok, L. D. Shields, T. Cairns and L.C. Mc William, John Wiley.
4. Analytical Chemistry: Principles; J.H. Kennedy, Saunders Holt.

CH 651 Environmental and Green Chemistry 3-0-0-3

Atmosphere: Regions of the atmosphere, Reactions in atmospheric chemistry, Earth's radiation balance, Particles, ion and radicals in the atmosphere, stratospheric chemistry: The chemistry of ozone layer, The role of chemicals in ozone destruction, The green-house effect and Global warming, El-Nino phenomenon. [8]

Hydrosphere : Complexation in natural water and waste-water, Micro-organism in aquatic chemical reactions, Eutrophication, Re-cycle of waste-water in process industry, Treatment of sewage and reuse of water in industry and agriculture, Microbiology mediated redox reactions and Nitrogen transformation by bacteria. [8]

Lithosphere : The terrestrial environment, Soil formations, soil properties (physical/chemical), inorganic and organic components in soil, acid-base and ion-exchange reactions in soil, micro and macro nutrients, nitrogen pathways and NPK in soil, waste and pollutants in soil, waste classification and disposal. [8]

Chemical Toxicology: Toxic chemicals in the environments, Impact of toxic chemicals on enzymes, Biochemical effects of arsenic, cadmium, lead, mercury, carbon monooxide, nitrogen oxides, sulphur oxides, ozone, PAN, cyanide, pesticides, insecticides and carcinogens. [7]

Green Chemistry: Green chemistry – Green reagent-dimethyl carbonate and other polymer supported reagents, green catalysts-acid catalyst, basic catalysts, oxidation catalysts, polymer supported catalysts, photocatalyst, green synthesis-phase transfer catalyst. Microwave induction, ultrasound assisted, green solvents- reactions in acidic and neutral ionic liquids, green synthesis of polycarbonates, paracetamol, ibuprofen , citral, urethane, adipic acid and styrene. [8]

Suggested Books:

1. Green Chemistry, P. Anastas, RSC.
2. Environmental Chemistry, S.E. Manahan, Lewis Pub.
3. Environmental Chemistry, Sharma and Kaur, Krishna Pub.
4. Environmental Chemistry, A.K. De, Wiley Eastern
5. Environmental Chemistry, C. Baird, W.H. Freem

CH 661 Advanced Organic Chemistry Laboratory - I 0-0-4-2

I. Qualitative Analysis: Separation, purification and identification of the components of a mixture of three organic compounds (three solids or two liquids and one solid or two solids and one liquid), using TLC for checking the purity of the separated compounds, chemical analysis, IR, PMR and mass spectral data.

II. Multi –step Synthesis of Organic Compounds: The exercise should illustrate the use of organic reagents and may involve purification of the products by chromatographic techniques. (Any Five)

a) Photochemical reaction Benzophenone - Benzpinacol - Benzpinacolone
b) Beckmann rearrangement : Benzanilide from benzene Benzene - Benzophenone - Benzphenone oxime - Benzanilide
c) Benzilic acid rearrangement : Benzilic acid from benzoin Benzoin - Benzil -Benzilic acid.
d) Synthesis of heterocyclic compounds Skraup synthesis: Preparation of quinoline from aniline Fisher Indole synthesis: Preparation of 2-phenylindole from phenylhydrazine.
e) Enzymatic synthesis; Enzymatic reduction : reduction of ethyl acetoacetate using Baker's yeast to yield enantiomeric excess of S (+) ehtyl-3-hydroxybutanoate and determine its optical purity.
f) Biosynthesis of ethanol from sucrose.
g) Synthesis using microwave Alkylation of diethyl malonate with benzyl chloride.
h) Synthesis using phase transfer catalyst. Alkylation of diethyl malonate or ethylacetoacetate with an alkyl halide.

Suggested Books:

1. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
2. Vogel's Textbook of Practical Organic Chemistry, A.R.Tatchell,J.Wiley

CH 671 Advanced Organic Chemistry Laboratory - II 0-0-4-2

Extraction of Organic Compounds from Natural Sources. (Any Five)

a) Isolation of caffeine from tea leaves.
b) Isolation of benzoic acid from tea leaves.
c) Isolation of casein from milk (the students are required to try some typical colour reactions of proteins).
d) Isolation of lactose from milk (purity of sugar should be checked by TLC and PC and Rf values reported).
e) Isolation of nicotine dipicrate from tobacco.
f) Isolation of cinchonine from cinchona bark.
g) Isolation of piperine from black pepper.
h) Isolation of lycopene from tomatoes.
i) Isolation of β-carotene from carrots.
j) Isolation of oleic acid from olive oil (involving the preparation of complex with urea and separation of linoleic acid).
k) Isolation of eugenol from clove.
l) Isolation of (+) limonine from citrus rind.

Suggested Books:

1. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
2. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley

CH 681 Advanced Organic Chemistry Laboratory - III 0-0-4-2

I. Separation and identification of the sugars and Amino acids present in the given mixture by paper chromatography and determination of Rf values

II. Identification of organic compound with the help of spectral datas.

Suggested Books:

1. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
2. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley
3. Practical NMR Spectroscopy, M.L. Martin. J.J. Delpeuch and G.J.

Martin, Heyden.
4. Spectrometric Identification of Organic Compounds, R.M. Silverstein, G.C. Bassler adn T.C. Morrill, John Wiley.
5. Introduction to NMR spectroscopy, R.J. Abraham, J. Fisher and P. Loftus, Wiley.
6. Application of Spectroscopy of Organic Compounds, J.R. Dyer Prentice Hall.
7. Spectroscopic Methods in Organic Chemistry D.H. Williams, I. Fleming, Tata McGraw-Hill.

CH 612 Organic Synthesis-II 3-0-0-3

Disconnection Approach: An introduction to synthons and synthetic equivalents. Disconnection approach, functional group inter-conversions, the importance of the order of events in organic synthesis, one group C-X and two group C-X disconnections, chemoselectivity, reversal of polarity, cyclisation reaction, amine synthesis. [8]

Protecting Groups: Principle of protection of alcohol, amine, carbonyl and carboxyl groups. [6]

One Group C-C Disconnections: Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic Nitro compounds in organic synthesis. [6]

Two Group C-C Disconnections: Diels-Alder Reaction, 1,3-difunctionalised compounds, α, β- unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds. Micheal addition and Robinson annelation. [6]

Ring Synthesis: Saturated heterocycles, synthesis of 3-, 4-, 5- and 6-membered rings. aromatic heterocycles in organic synthesis. [5]

Synthesis of Some Complex Molecules: application of the above in the synthesis of following compounds : Camphor, Longifoline, Cortisone, Reserpine, Vitamin D, Juvabione, Aphidicolin and Fredericamycin A. [8]

Suggested Books:

1. Designing Organic Synthesis, S.Warren. Wiley.
2. Organic Synthesis-Concept, Methods and Starting Materials, J. Fuhrhop.
3. Some Modern Methods of Organic Synthesis. W. carruthers, Cambridge Univ. Press.
4. Modern Synthetic Reactions H.O. House, W.A Benjamin.
5. Advanced Organic Chemistry: Reactions, Mechanisms and Structure, J. March. Wiley.
6. Principles, of Organic Chemistry Part B. F.A. Carey and R.J. Sundberg, Plenum Press.

CH 622 Heterocyclic Chemistry 3-0-0-3

Aromatic Heterocycles: Nomenclature, General chemical behaviour of aromatic heterocycles, classification (structural type), criteria of aromaticity (bond lengths, ring current and chemical shifts in ^{1}H NMR-spectra. Empirical resonance energy, delocalization energy and Dewar resonance energy, diamagnetic susceptibility exaltations). Heteroaromatic reactivity and tautomerism in aromatic heterocycles. [6]

Non-aromatic Heterocycles: Strain-bond angle and torsional strains and their consequences in small ring heterocycles. Conformation of six-membered heterocycles with reference to molecular geometry, barrier to ring inversion, pyramidal inversion and 1, 3-diaxial interaction. Stereo-electronic effects, anomeric and related effects, Attractive interactions-hydrogen bonding and intermolecular nucleophilic electrophilic interactions. Heterocyclic Synthesis Principles of heterocyclic synthesis involving cyclization reactions and cycloaddition reactions. [7]

Small Ring Heterocycles: Three-membered and four-membered heterocycles-synthesis and reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes and thietanes. [4]

Benzo-Fused Five-Membered Heterocycles: Synthesis and reactions including medicinal applications of benzopyrroles, benzofuranes and benzothiophenes. [4]

Meso - ionic Heterocycles: General classification, chemistry of some important meso-ionic heterocycles of type-A and B and their applications. [4]

Six - Membered Heterocycles with one Heteroatom: Synthesis and reactions of pyrilium salts and pyrones and their comparison with pyridinium & thiopyrilium salts and pyridones. Synthesis and reactions of quinolinium and benzopyrylium salts, coumarins and chromones. [6]

Six Membered Heterocycles with Two Heteroatoms: Synthesis and reactions of diazines, triazines, tetrazines and thiazines. Seven-and Large-Membered Heterocycles Synthesis and reactions of azepines, oxepines, thiepines, diazepines thiazepines, azocines, diazocines, dioxocines and dithiocines. [8]

Suggested Books:

1. Heterocyclic Chemistry Vol. 1-3, R.R. Gupta, M. Kumar and V.Gupta, Springer Verlag.
2. The Chemistry of Heterocycles, T. Eicher and S. Hauptmann, Thieme.
3. Heterocyclic chemistry J.A. Joule, K. Mills and G.F. Smith, Chapman and Hall.
4. Heterocyclic Chemistry, T.L. Gilchrist, Longman Scientific Techinal.

5. Contemporary Hetrocyclic Chemistry, G,.R. Newkome and W.W. Paudler, Wiley-Inter Science.
6. An Introduction to the Heterocyclic Compounds, R.M.Acheson, Johnwiely.
7. Comprehensive Heterocyclic Chemistry, A.R. Katrizky and C.W. Rees, eds. Pergamon Press.

CH 632 Chemistry of Natural Products 3-0-0-3

Terpenoids and Carotenoids: Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Citral, Gereniol, α-Terpeneol, Menthol, Farnesol, Zingiberene, Santonin, Phytol, Abietic acid and β-Carotene. [9]

Alkaloids: Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, role of alkaloids in plants. Structure, stereochemistry, synthesis and biosynthesis of the following: Ephedrine, (+)-Coniine, Nicotine, Atropine, Quinine and Morphine. [9]

Steroids: Occurrence, nomenclature, basic skeleton, Diel's hydrocarbon and stereochemistry, Isolation, Structure determination and synthesis of Cholesterol, Bile acids, Androsterone, Testosterone, Estrone, Progestrone, Aldosterone, Biosynthesis of Steroids. [9]

Flavonoids and Anthocyanins: Occurrence, nomenclature, biogenesis and general methods of structure determination. Isolation and synthesis of Apigenin, Luteolin, Quercetin, Myrcetin, Quercetin-3-glucoside, Vitexin, Diadzein, Butein, Aureusin, Cyanidin-7-arabinoside, Cyanidine, Hirsutidin. [9]

Porphyrins: Structure and synthesis of Haemoglobin and Chlorophyll. [3]

Suggested Books:

1. Natural Products : Chemistry and Biological Significance, J. Mann, R.S. Davidson, J.B. Hobbs, D.V. Banthrope adn J.B. Harbome, Longman, Esses.
2. Organic Chemistry: Vol. 2 1L. Finar, ELBS
3. Stereoselective Synthesis: A Practical Approach, M. Norgradi, VCH.
4. Rodd's Chemistry of Carbon Compounds, Ed. S. Coffey, Elsevier.
5. Chemistry, Biological and Pharmacological Properties of Medicinal Plants from the Americas, Ed. Kurt Hostettmann, M.P. Gupta and A. Marston. harwood Academic Publishers.
6. Introduction to Flavonoids, B.A. Bohm. Harwood Academic Publishers.
7. New Trends in Natural Product chemistry, Atta-ur-Rahman and M.I. Choudhary, Harwood Academic Publishers.
8. Insecticides of Natural Origin, Sukh Dev, Harwood Academic

Publishers.

CH 642 Medicinal Chemistry 3-0-0-3

Structure and activity : Relationship between chemical structure and biological activity (SAR). Receptor Site Theory. Approaches to drug design. Introduction to combinatorial synthesis in drug discovery. [9]

Antibiotics and antibacterials: Introduction (i) Antibiotic β-Lactam type Penicillins, Cephalosporins (ii) Antitubercular Streptomycin(iii)Broad spectrumantibiotics-Tetracyclines (iv)Anticancer-Dactinomycin (Actinomycin D) (v)Antifungal –polyenes(vi) Antibacterial Ciprofloxacin,Norfloxacin(vii) Antiviral – Acyclovir [9]

Antimalarials: Chemotherapy of malaria. SAR. Chloroquine, Chloroguanide and Mefloquine. [4]

Non-steroidal Anti-inflammatory Drugs : Diclofenac Sodium, Ibuprofen and Netopam [4]

Antihistaminic and antiasthmatic agents: Terfenadine,Cinnarizine, Salbutamol and Beclomethasone dipropionate [4]

Antineoplastic Agents: Introduction, cancer chemotherapy, special problems, role of alkylating agents and antimetabolites in treatment of cancer. Mention of carcinolytic antibiotics and mitotic inhibitors. Synthesis of mechlorethamine, cyclophosphamide, melphalan, uracil, mustards, and 6-mercaptopurines. Recent development in cancer chemotherapy. Hormone and natural products. [9]

Suggested Books:

1. Medicinal Chemistry; Burger, Wiley Interscience Publications.
2. Principles of Medicinal Chemistry; W. O. Foye Lea & Febiger: Varghese Publishing House
3. The Organic Chemistry of Drug Synthesis; D. Lednicer and L. A. Mitscher Wiley Interscience.
4. Medicinal Chemistry ; Kar, , Wiley Eastern Ltd

CW: *Course Work;* ***MTE:*** *Mid Term Examination;* ***ETE:*** *End Term Examination*

* *Course work (CW) would include regularity, evaluation of assignments, surprise tests, etc.*

[#]*Student will perform* ***project work*** *for a period of 2 months and submit two copies of Dissertation report to the Ddepartment. Presentation and viva voce of project report will be conducted at the end of the spring semester. Dissertation report and presentation will carry 50% weightage each.*

Detailed Syllabus (M.Sc. Physics):

PH 511 Mathematical Physics-I 3 - 1 - 0 - 4

1. **Vector Analysis:** Gradient, divergence, Curl and their representations in Orthogonal curvilinear coordinates. [11]

   Linear algebra: Linear vector spaces, linear operators, dual space, ket and bra notation, Hilbert space, Metric space, Function spaces.

   Matrices: The algebra of matrices, Special matrices, Rank of a matrix. Elementary transformations, Elementary matrices, Equivalent matrices, Solution of linear equations. Linear transformations, Change of Basis, Eigenvalues and eigenvectors of matrices, The Cayley-Hamilton theorem, Diagonalisation of matrices.

2. **Tensor Analysis:** Tensor analysis, Coordinate transformations, scalars, Covariant and Contravariant tensors, Addition, Subtraction, Outer product, Inner product and Contraction, Symmetric and antisymmetric tensors, Quotient law, Metric tensor, Conjugate tensor. [8]

3. Partial Order Differential Equations and Special Functions: Separation of variables-ordinary differential equations, singular points, Bessel, Leguerre, Legendre, Hermite equations. Recurrence relations, generating functions and Rodrigues formulae for the Bessel, Leguerre, Legendre and Hermite functions [11]

4. **Greens Functions:** Sturm-Lioville operators and eigen values and eigen functions. Dirac delta functions-properties and representations, Definitions and physical significance of Greens functions, Eigen function expansion of Greens function, Greens function for ordinary differential operators [9]

Text Books:

PH 521 **Classical Mechanics** **3 - 0 - 0 - 3**

1. **Fundamental Principles and Lagrangian Formulation and Applications:** Newtonian Mechanics: Mechanics of a particle and system of particles, Conservation laws, Constraints, Generalized coordinates, D' Alembert's principle and Lagrange's equation, Hamilton's Variational principle, **Lagrangian Problems:** Double Pendulum, Spherical pendulum, Cylinder rolling down an inclined plane. [8]

2. **Hamiltonian Formulation and Application:** Hamilton's equations, cyclic variables, Principle of least action, **Hamiltonian Problems:** motion of a particle in a central force field, charged particle moving in an electromagnetic field, Equations of motion and first integrals, Kepler's laws, Scattering by central potential, Transformation from center of mass to laboratory frame. [10]

3. **Rigid Body Dynamics and Canonical Transformations:** Rigid body motion – Kinematics - Euler's angles - Angular momentum and kinetic Energy – Moment of inertia tensor - Euler's equations of motion –Canonical transformation and their generators – simple examples, Poisson brackets. [8]

4. **Jacobi Theory and Theory of Small Oscillations :** Hamilton-Jacobi equations – application to Linear Harmonic Oscillator problem - Action Angle variables - Application to Kepler's problem - Oscillatory motion - Theory of small oscillation –Two coupled pendulums, Vibrations of a triatomic molecule. [8]

5. **Relativity:** Reviews of basic ideas of special theory of relativity – Lorentz transformations, relativistic kinematics, mass-energy equivalence [5]

Text Books:

1. H. Goldstein, C.Poole and J.Safko; Classical Mechanics, Pearson, New Delhi, 3rd ed 2002.
2. N.C.Rana and P.S.Joag; Classical Mechanics, Tata Mc: Graw Hill, New Delhi, 1991.

Reference Books:

1. L. D. Landau E.M. Lifshitz; Mechanics: Volume 1 (Course of Theoretical Physics), Pergamon Press Ltd, 2nd ed. 1969.

PH 531 Classical Electrodynamics and Plasma Physics 3 - 1 - 0 - 4

1. **Electrostatics:** Electric potential, Poisson and Laplace‟sequations.Boundary value problems, Uniqueness theorems, Green‟stheorem.Method of images, Method of separation of variables (Cartesian Coordinates, Spherical and Cylindrical Coordinates), Multipole expansion. [6]

2. **Electromagnetic Waves:** Maxwell‟s equations, Boundary conditions, Wave equation and its complex notation, Electromagnetic waves in vacuum, Electromagnetic waves in non-conducting and linear media, Electromagnetic waves in linear conducting media. Poynting theorem, Reflection, refraction and polarization of electromagnetic waves, [6]

3. **Waveguides and Cavities:** Metallic boundary conditions, Electromagnetic waves confined to hallow metallic pipe,TE, TM and TEM modes, TE and TM modes in rectangular waveguides, Bessel‟s function, TE and TM modes in cylindrical waveguides, Dielectric waveguides, TE and TM modes in rectangular and cylindrical Resonant cavities. [6]

4. **Potential, Fields and Radiations:**

   Scalar and vector potentials, Gauge transformation, Coulomb and Lorentz gauge, Retarded potential, Lienard-Wiechert potentials, Fields due to moving charge, Power radiated by an accelerated charge and angular distribution, Bremstrahlung Cerenkov and Synchrotron radiations. [6]

5. **Relativistic Electrodynamics:** Four vectors, Lorentz transformation in terms of Four vectors, Lorentz transformation matrix, Transformation of electromagnetic fields, Field Tensor, Dual field strength tensor, Maxwell's equations in terms of strength tensors, [6]

6. **Plasma Physics:** Elementary Concepts: Plasma Oscillations, Debye Shielding, Plasma Parameters, Magnetoplasma, Plasma Confinement, Motion of charged particles in electric and magnetic fields, Adiabatic Invariants Wave in Plasma: Polarisation, Phase Velocity, Group Velocity, Cut-offs, Resonance for Electromagnetic Wave Propagating Parallel and Perpendicular to the Magnetic Field Propagation at Finite Angle. [9]

Text Books:

1. David J. Griffith; Introduction to Electrodynamics, PHI Private Limited, 1999
2. John D. Jackson; Classical Electrodynamics, Wiley Eastern Limited, 1998
3. F.F. Chen; Plasma Physics and Controlled Fusion,Springer,2006

Reference Books:

3. J A Bittencourt; Fundamentals of Plasma Physics, 3rd Ed, Springer, 2004

PH 541 **Quantum Mechanics** **3 - 1 - 0 - 4**

1. Limitations of classical mechanics, development of Schrodinger equation, continuity equation, wave packet, admissible wave functions, stationary states. Formalism of wave mechanics, expectation values, quantum mechanical operators for position and momentum in the coordinate representation, Construction of quantum mechanical operators for other dynamical variables from those of position and momentum, Ehrenfest‟s theorem, momentum Eigen functions in the coordinate representation, box normalization and Dirac delta function. Coordinate and momentum representations, Schrodinger equation in momentum representation [10]

2. Brief revision of linear vector spaces, inner or scalar product, Schwarz inequality, state vectors, general formalism of operator mechanics vector, operator algebra, commutation relations, Eigen values and Eigen vectors, Hermitian operators degeneracy, orthogonality eigenvectors of Hermitian operators, noncommutativity of two operators and uncertainty in the simultaneous measurements of the corresponding dynamical variables, the fundamental expansion postulate, representation of state vector, Dirac's bra-ket notations. Matrix representation of operators, change of basis, unitary transformations, quantum dynamics, Schrodinger, Heisenberg and interaction picture. [10]

3. Solution of Schrodinger equation for simple problems, 1-D Square well, step and barrier potentials, 1-D harmonic oscillator, zero point energy. harmonic oscillator problem by operator method. Angular momentum operator, commutation relations, expression for L2 operator in spherical polar coordinates, Role of L2 operators in central force problem, eigen value problem for L2 , separation of Schrodinger equation in radial and angular parts, solution of radial equation for hydrogen atom, 3-d square well potential, parity of wave function, parity operator. [10]

4. Generalized angular momentum, raising and lowering operators, matrices for J2, Jx, Jy, Jz operators, Pauli spin matrices, Addition of angular momenta, Clebich-Gordon Co-efficient, spin angular momentum, spin momentum functions. [9]

Text Books:

1. Ghatak and Loknathan; Quantum mechanics, Springer; 2004
2. D.J. Griffith; Introduction to Quantum Mechanics, Addison Wesley; 2 Ed., 2004.

PH 551 Statistical Physics and Thermodynamics 3 - 1 - 0 - 4

1. **Review: (Elementary Probability Theory & Thermodynamics):** Preliminary concepts, Random walk problem, Binomial distribution, mean values, standard deviation, various moments, Gaussian distribution, Poisson distribution, mean values. Extensive and intensive variables, laws of thermodynamics, thermodynamic potentials, Maxwell relations, applications of thermodynamics to (a) ideal gas, (b) magnetic material, and (c) dielectric material. Laws of thermodynamics [4]

2. **Statistical Description of System of Particles and Statistical Thermodynamics:** State of a system, microstates, ensemble, basic postulates, behavior of density of states, density of state for ideal gas in classical limit. Thermal interaction between macroscopic systems, approach to thermal equilibrium, dependence of density of states on external parameters, Statistical calculation of thermodynamic variables [10]

3. **Classical Statistical Mechanics :** Microcanonical ensembles and their Equivalence, Canonical and grand canonical ensembles, partition function, thermodynamic variables in terms of partition function and grand partition function, ideal gas, Gibbs paradox, validity of classical approximation, equipartition theorem. Maxwell-Boltzmann gas velocity and speed distribution. Chemical potential, Free energy and connection with thermodynamic variables, First and Second order phase transition; phase equilibrium. [10]

4. **Quantum Statistical Mechanics :** Formulation of quantum statistics, Density Matrix, ensembles in quantum statistical mechanics, simple applications of density matrix. The theory of simple gases : Maxwell-Boltzmann, Bose-Einstein, Fermi Dirac gases. Statistics of occupation numbers, Evaluation of partition functions, Ideal gases in the classical limit. [10]

5. **Ideal Bose System :** Thermodynamic behavior of an Ideal Bose gas, Bose-Einstein condensation. Thermodynamics of Black body radiation, Stefan-Boltzmann law, Wien's displacement law. [5]

Text Books:

PH 561 General Physics and Optics Laboratory 0-0-4-2

Experiments based on Mechanics, Optics, Basic Electronics, PH 531.

PH 571 Programming Language Laboratory 0-0-4-2

Programming based on C^{++} related to Physics.

PH 512 Mathematical Physics -II 3 - 1 - 0 - 4

1. **Complex Analysis :**Analyticity and Cauchy-Reimann Conditions, Cauchy's integral theorem and formula, Taylor's series and Laurent's series expansion, Zeros and singular points, Multivalued functions, Branch Points and Cuts, Riemann Sheets and surfaces, Residues, Cauchy's Residue theorem, Evaluation of definite integrals. [11]

2. **Group Theory:** Definition of groups e.g. matrix groups- transformation groups , Representation of groups: matrix, faithful, Unitary, reducible and irreducible representations' Lie groups and algebras: Definition of Lie groups with examples- O(3), SO(3), SU (2) groups- representation of SU(2), SO(3). [9]

3. **Fourier Series & Transforms**: Integral transforms, Fourier transform, Sine, Cosine and Complex transforms with examples, Properties of Fourier Transforms, Transforms of derivatives [9]

4. **Laplace Transforms:** Convolution Theorems, Momentum representation, Laplace transform, Properties and examples of Laplace Transform, Laplace transforms of derivatives, Use for solving differential equations [10]

Text Books:

1. G. Arfken and H.J. Weber: Mathematical Methods for Physicists, 5th Ed., Harcourt (India), New Delhi, 2001.

2. E. Kreyszig: Advanced Engineering Mathematics, 8^{th}ed., Wiley, New York, 1999.
3. M.D. Greenberg: Advanced Engineering Mathematics, 2^{nd}ed., PHI, New Jerrsey, 1998,

PH 522 **Atomic & Molecular Physics and Lasers** **3 - 1 - 0 - 4**

1. Time independent perturbation theory, First order perturbation theory applied to nondegenerate states, second order perturbation extension to degenerate state, Application of perturbation theory to the ground state energy, He atom (calculation given in Pauling and Wilson), Normal and anomalous Zeeman effect, First order Stark effect in the ground and first excited states of H atom and second order Stark effect of H atom, an-harmonic [11]

2. **Pauli's Principle and Shell Structure:** Systems with several electrons and spin functions. [2]

3. **Complex Spectra:** LS-Coupling scheme, normal triplets, basic assumptions of the theory, identification of terms, selection rules, jj- coupling (Qualitative). [2]

4. **Infrared and Raman Spectra:** Rigid rotator, energy levels, spectrum (no derivation of selection rules), Harmonic oscillator: energy levels, eigenfunctions, spectrum, comparison with observed spectrum, Raman effect, Quantum theory of Raman effect, Rotational and Vibrational Raman spectrum. Anharmonic oscillator: energy levels, Infrared and Raman Spectrum, Vibrational frequency and force constants. Non-rigid rotator: energy levels, spectrum, Vibrating-rotator energy levels, Infrared and Raman spectrum (no derivation of Dunham coefficients), Symmetry properties of rotational levels, influence of nuclear spin. [12]

5. **Electronic Spectra:** Electronic energy and potential curves, resolution of total energy,Vibrational Structure of Electronic transitions. General formulae, Deslandre's table, absorption sequences (qualitative) and Vibrational analysis, Rotational Structure of Electronicbands: General relations, branches of a band, band-head formation, Intensity distribution in avibrational band system. [6]

6. **Lasers:** Basic concept and principle of laser, Component of lasers, Einstein's and Gain coefficient, Types of lasers and pumping, Gas laser, YAG laser and chemical laser, Erbium lasers, Fibre lasers, Erbium-doped fibre lasers. Q-Switching:Laser Spiking and relaxation oscillations, Rate equations, TW and PW laser systems, Application of lasers. [6]

Text Books:

4. Vishwakarma H. L., Applied Physics, Wiley India Pvt. Ltd., 1st Edition, 2013.

PH 532 **Condensed Matter Physics** **3 - 0 - 0 - 3**

1. **Elastic Constants:** Binding in solids; Stress components, stiffness constant, elastic constants, elastic waves in crystals. [5]

2. **Lattice Dynamics and Thermal Properties:** Rigorous treatment of lattice vibrations, normal modes; Density of states, thermodynamic properties of crystal, anharmonic effects, thermal expansion. [5]

3. **Energy Band Theory**: Electrons in a periodic potential: Bloch theorem, Nearly free electron model; tight binding method; Semiconductor Crystals, Band theory of pure and doped semiconductors; elementary idea of semiconductor superlattices. [8]

4. **Transport Theory:** Electronic transport from classical kinetic theory; Introduction to Boltzmann transport equation; electrical and thermal conductivity of metals; thermoelectric effects; Hall effect and magnetoresistance. [7]

5. **Dielectric Properties of Materials:** Polarization mechanisms, Dielectric function from oscillator strength, Clausius-Mosotti relation; piezo, pyro- and ferro-electricity. [6]

6. **Liquid Crystals:** Thermotropic liquid crystals, Lyotropic liquid crystals, long range order and order parameter, Various phases of liquid crystals, Effects of electric and magnetic field and applications, Physics of liquid crystal devices. [8]

Text Books:

1. Kittel C., Introduction to Solid State Physics, Wiley, New York, 2005.
2. Kittel C., Quantum Theory of Solids, Wiley, New York, 1987.
3. Ziman J., Principles of the Theory of Solids, Cambridge University Press, 1972.

Reference Books:

4. Sluckin T.J., The Liquid Crystal Phases, Physics & Technology, Contemporary Physics Taylor & Francis, 2000.

PH 542 **Computational Physics** **3 - 0 - 0 - 3**

1. **Errors analysis and curve fittings:** General formula for errors – Errors of observation and measurement, Empirical formula, Graphical method, Method of averages, Least square fitting, curve fitting, parabola, exponential. Least square curve fittings methods for linear and polynomial functions. [7]

2. **Numerical solution of algebraic and transcendental equations:**

   The bisection method, the iteration method, The method of false position, Newton – Raphson method. [7]

   Linear systems of equations: Direct methods, Gauss elimination method, Gauss–Seidel method.

3. **Interpolation:** Finite differences (Forward, backward and central difference), Newton Interpolation formula, Central difference Interpolation formula, Cubic spline interpolation formula, Newton's interpolation formula for unequal intervals. [8]

4. **Numerical Differentiation and Integration:** Newton's forward and backward difference formula for numerical derivatives, Numerical Integration: the trapezoidal rule and Simpson's rule. [7]

5. **Numerical Solutions of Ordinary and Partial Differential Equations:** Taylor's method, modified Euler's method, second and fourth order Runge-Kutta methods, Predictor-Corrector methods. Finite-difference approximation to derivatives, S.O.R. and Jacobi methods for solving Laplace equations, Parabolic equations and Hyperbolic equations. [10]

Text Books:

1. S.S. Sastry; Introductory Methods of Numerical analysis, PHI New Delhi, 3rd Ed, 2003.
2. E. Balagurusamy; Numerical methods, Tata Mc Graw Hill, New Delhi, 2008.

Reference Books:

1. Erwin Kreyszig; Advanced Engineering Mathematics, 10^{th}ed, John Wiley and Sons, 2011.
2. W.H. Press, B.P.Flannery, S.A.Teukolsky, W.T. Vetterling ; Numerical Recipes in C, , Cambridge University, 1996.

PH 552 **Elements of Nuclear and Particle Physics** **3 - 0 - 0 - 3**

1. **Nuclear Properties and Models:** General properties of Nuclei: nuclear size, Rutherford scattering, nuclear radius and charge distribution, nuclear form factor, mass and binding energy, Angular momentum, parity and symmetry, Magnetic dipole moment and electric quadrupole moment. Liquid drop model, Bethe-Weizs¨acker binding energy/mass formula, Fermi model, Shell model. [6]

2. **Nuclear Two-body Problem:** Properties of deuteron, Schr¨odinger equation and its solution for ground state of deuteron, rms radius, spin dependence of nuclear forces, electromagnetic moment and magnetic dipole moment of deuteron and the necessity of tensor forces. Experimental n-p scattering data, Partial wave analysis and phase shifts, scattering length, magnitude of scattering length and strength of scattering, Significance of the sign of scattering length; Scattering from molecular hydrogen and determination of singlet and triplet scattering lengths, effective range theory, low energy p-p scattering, Nature of nuclear forces: charge independence, charge symmetry and iso-spin invariance of nuclear forces. [10]

3. **α, β and γ Decay:** α-decay, Gamow theory, Barrier penetration, fine structure of α spectrum. alpha decay, neutrino hypothesis β emission and electron capture, Fermi's theory of allowed β decay, Selection rules for Fermi and Gamow-Teller transitions, Parity non-conservation and Wu's experiment, Gamma decay- Multiple transitions in nuclei- Angular momentum and parity selection rules [8]

4. **Nuclear Reactions and Fission:** Different types of reactions, Quantum mechanical theory, Resonance scattering and reactions — Breit Wigner dispersion relation; Compound nucleus formation and break-up, Statistical theory of nuclear reactions and evaporation probability, Optical model; Principle of detailed balance, Transfer reactions, Nuclear fission and fusion. [8]

5. **Elementary Particle Physics:** Elementary particles: Photons, quarks, baryons, mesons, leptons, hadrons, Elementary idea of quark model. Conservation laws in particle reactions, Spin and parity assignments, isospin, strangeness; Gell-Mann-Nishijima formula, C, P, T invariance and applications of symmetry arguments to particle reactions, parity non-conservation in weak interaction; Relativistic Kinematics. [7]

Text Books:

1. B L Cohen; Concepts of Nuclear Physics, Tata-McGraw Hill, 2008
2. Kenneth S. Krane; Introductory Nuclear Physics, Wiley India Pvt., 1988.

4. R. R. Roy and B. P. Nigam; Nuclear Physics: Theory and Experiments, John Wiley & Sons, 1967.

PH 562 Computational Physics Laboratory **0-0-4-2**

Practical exercises based on 542, 512 and computational methods in Physics

PH 572 Advance Physics Laboratory **0-0-4-2**

Practical exercises based on 522, 532, 552 and related experiments.

PH 611 Semiconductor Physics and Devices 3 - 1 - 0 - 4

1. **Network Theorems:** Thevenin's, Norton's theorem and analysis of equivalent Circuits of networks. [9]

   Power Supplies: Half-Wave, Full-Wave and Bridge rectifiers with Capacitive input, Inductance input and PI filters, Shunt regulated power supplies using Zener diodes, Series regulated power supply. I. C. Voltage regulators.

2. **Transistor Amplifiers:** The CE, CB and CC configurations. Class A, Class B and Class C amplifiers. Low-frequency amplifiers. The transistor hybrid model and the h-parameters for a transistor. Conversion formulae for the h-parameters of the different transistor configurations. Analysis of a transistor CE amplifier at low frequencies using h-parameters. The CE amplifier with un-bypassed emitter resistor. The emitter follower at low frequencies. The emitter-coupled differential amplifier and its characteristics. Low frequency power amplifiers. The push-pull and the complementary - symmetry power amplifiers. Transistor biasing, Self-bias and thermal stability. [10]

3. **BJT and FET:** The BJT at high frequencies – the hybrid – model. Analysis of CE amplifier at high frequencies. Single stage CE amplifier and the gain-bandwidth product. Cascaded amplifiers. The emitter follower at high frequencies. The field effect transistor and its small signal model. The CS and CD amplifiers at low frequencies. Biasing the FET. The CS and CD amplifiers at high frequencies. [7]

4. **Feedback:** The Gain of an amplifier with feedback. General characteristics of negative feedback amplifiers. Stability of feedback amplifiers, The Barkhaussen Criteria. Grain and Phase margins. Compensation. Sinusoidal oscillators: RC oscillators – The Phase shift and the Wien's bridge oscillators. LC oscillators. Frequency stability and the crystal oscillators. [7]

5. **Operational Amplifiers:** Characteristics of an ideal operational amplifier. Applications of operational amplifiers – Inverting and Non-inverting amplifiers. Summing circuits, integration and Differentiation. Waveform generators. [6]

Text Books:

1. Maillman and Halkias, Integrated Electronics, Tata McGraw-Hill 1972.
2. V K Mehta; Principal of Electronics S. Chand and Sons 2008.
3. Donald Neamen; Semiconductor Physics and Devices, McGraw-Hill; 4th ed. 2011.

Reference Books:

2. Rolf Enderlein, Norman J. M. Horing; Fundamentals of semiconductor physics and devices, World Scientific Pub, 1997.
3. John D. Ryder & Charles M. Thomson; Electronic Circuits & Systems, PHI Publication, 1976.

PH 621 **Digital Electronics** **3 - 1 - 0 - 4**

1. **Binary Number System:** Binary number system and other codes, binary arithmetic series and parallel processing of bites, logic of the addition operation, logic fundamentals, Boolean theorems, synthesis of Boolean functions, Karnaugh diagram. [8]

2. **Basics of Digital Electronics**: Basics and derived gates: OR gate, AND gate, NOT gate, NAND gate, NOR gate, XOR gate, Boolean identities and logic circuits using gates, Boolean algebra- DeMorgans Theorems, Sum of products and product of sums expressions, Minterm, Maxterm, SOP and POS from truth tables. [10]

3. **Combinational and Sequential Circuits:** Parity checker and generator, Half adders, full adders, Binary adders, decoders, multiplexer, demultiplexer, encoders, ROM and applications, Digital comparator, Flip-Flops- RS, JK, master slave JK, T-type and D-type flip flops, Shift-register and applications, Asynchronous counters and applications, A/D and D/A converters; Microprocessor and microcontroller basics. [12]

4. **Digital Circuits with MOS:** MOSFET, MOS invertors- static inverter, dynamic inverter, two phase inverter, MOS NAND gates, NOR gates, complementary MOSFET technology, CMOS inverter, CMOS NOR gates and NAND gates, MOS shift register and RAM. [9]

Text Books:

1. Malvino & Brown:Principle Of Digital Computer Electronics, 3rd Ed., McGraw-Hill, 1992.
2. Morris Mono: Digital logic Design, 4th edition, PHI, 2006.
3. J. Millman and C.C. Halkias: Integrated Electronics, Tata McGraw Hill, New Delhi, 1991.

Reference Books:

1. Mottershed: Electronics fundamentals and application, 8th edition, PHI, 2009.
2. A.P. Malvino and D.P. Leach, Digital Principles and. Applications, 6thed., TMH, 2003.

PH 631 **Physics of Nano-Materials** **3 - 0 - 0 - 3**

1. **Introduction**: An overview of quantum mechanical concepts related to low dimensional systems. [12]

   Concepts related to Electronic Structure: direct lattice, Reciprocal lattice, Brilloujn zones, Diffraction from 2D structures, Free —electron approximation, periodic boundary Conditions, allowed k values, Fermi energy, density of electronic states for electron gas, Energy bands, Electron statistics, carrier concentration and Fermi level, Direct- and Indirect- gap semiconductors, Lattice matching, Effective mass, Variation of energy bands with alloy compositoin and its exploitation for devices.

2. **Hetrostructures and Electron States**: Hetero junctions, Type I and Type II hetero structures, Classification of Quantum confined systems, Electrons and holes in Quantum wells. Surface to volume ratio in quantum confined systems, Electronic wave functions, energy sub bands and density of electronic states in Quantum wells, Quantum wires, and Quantum dots, Effective mass mismatch in hetero structures. Coupling between Quantum wells, Super lattices, Wave functions and Density of States for super lattices, Unit cell for quantum well, for quantum wire and for quantum dot. [12]

   EXCITONS: Excitons in bulk, in Quantum structures and in hetero structures.

3. **Nanoclusters and Nanoparticles**: Introduction, Particle shape and the surface, Collective surface area, Porosity, Spherical cluster approximation, Metal nanoclusters – Magic numbers, Geometric structures, Electronic structure, Bulk to nanotrasition, Magnetic clusters; Semiconducting nanoparticles; Rare-gas and molecular Clusters. [6]

4. **Carbon nanotubes**: Chiral vector, Chiral angle and the Unit cell for the Carbon nanotubes. [5]

5. Bulk Nanostructurs Materials: Solid disordered nanostructures, Nanostructured crystals, photonic crystals. [4]

Text Books:

1. V.V. Mitin, V.A. Kochelap, and M.A. Stroscio; Quantum Heterostructures: Microelectronics and Optoelectronics, Cambridge University Press, 1999.
2. C.P. Poole, Jr. and F.J. Owens; Introduction to Nanotechnology, Wiley India, 2003.
3. T. Pradeep; Nano: The essentials, Tata McGraw-Hill, New Delhi, 2007.
4. P. Harrison; Quantum Wells, Wires, and Dots: Theoretical and Computational Physics of Semiconductor Nanostructures, Wiley, 2009.

Reference Books:

2. A. Y. Shik ; Quantum Wells: Physics and Electronics of two-dimensional systems, World Scientific, 1997.
3. G.L. Hornyak, J. Dutta, H.F. Tibbals and A.K. Rao; Introduction to Nanoscience, CRC Press, 2009.

PH 651 Electronics Laboratory 0-0-4-2

Practical exercises based on 611, 621 related to analog and digital electronics.

PH 641 Ancient Indian Science 2 - 0 - 0 - 2

1. **Reference of Science in Vedas** [3]

2. **SAGE Scientists and Their Achievements:** Baudhayan, Aryabhatta,Brahmgupta, Bhaskaracharya , varahamihira, Mahaviracharya, Acharya Kanad, Varahamihira, Nagarjuna, Acharya Bhardwaj, SusrutaAtreya, Acharya Charak, Patanjali. [8]

   Scientists of modern era: C. V. Raman (1888-1970), S. Ramanujan (1887-1920), J. C. Bose (1858-1937), H. J. Bhabha (1909-1966), V. A. Sarabhai (1919-1970), H. G. Khorana (1922-2011), Harish Chandra (1923 - 1983), S. N. Bose (1894 - 1974)), S. S. Bhatnagar (1894 – 1955), Visvesvaraya (1860 –1962)[, MeghnadSaha (1893–1956) etc.

3. **Discoveries in Astronomy and Physics of Ancient India:** Earth's rotation, Gravity, Speed of light, Lunar Eclipse, Planetary motion, Mechanics, Matter, Magnetism and Optics [5]

4. **Vedic Mathematics**: Algebra & Arithmetic, Geometry, Trigonometry [5]

5. **Chemical and Biological advancement of Ancient India**: Chemistry (Distillation, Caustic Alkali, Cell and Explosives), Metallurgy (Crucible, Furnaces, Air Blowers, Metal Powder, Binder), Botany, Medicine and Pharmacology. [5]

Text Books:

1. Pride of India- A Glimpse into India's Scientific Heritage. SamskritaBharati, New Delhi, 2006.
2. Science in Samskrit, SamskritaBharati, New Delhi, 2007.
3. N. K. Jain; Science and Scientists in India. Kalyani India, Delhi, 2001.
4. Awakening Indians to India, All India ChinmayaYuvaVendra, Central Chinmaya Mission Trust, Mumbai, 2003.

Reference Books:

1. N.K. Jain; History of Science and Scientific Methods. Oxford and IBM Publishing Co. Pvt. Ltd., New Delhi, 1990.
2. S. Soni; India's Glorious Scientific Tradition, Ocean Books Pvt. Ltd., New Delhi, 2006.

PH 612 **Advance Quantum Mechanics** **3 - 1 - 0 - 4**

1. Time dependent perturbation theory, transition rate, Fermi Golden rule, constant perturbation harmonic in time, radiative transitions, absorption and induced emission,atomic radiation, dipole approximation, Einstein's atomic radiation, Einstein‟s A and b coefficients and their calculations.Approximation methods: W. K. B. method and its application to barrier penetration.Variational principle and its application to simple cases like ground state of He atom and deuteron in Yukawa potential. [10]

2. System of identical particles, exchange and transposition operators, totally symmetric and antisymmetric wave function and their expressions for a system of non-interacting particles, statistics of systems of identical particles, Relation of statistics with spin, Ortho and para states of the helium atom and their perturbation by Coulomb repulsion.Hamiltonian of a molecule, Born-Oppenheimer approximation, outline of Heitler-London theory of the hydrogen molecule. [11]

3. Scattering theory, scattering cross-section in laboratory and centre of mass system, scattering by a central potential , Partial wave method, phase shifts and their importance, scattering by a square well; potential and a perfectly rigid sphere, resonance scattering. [6]

4. Relativistic wave equation, the Klein-Gordon equation and initial difficulties in interpreting its solutions, Dirac‟s relativistic equation, Dirac's matrices, explanation of the spin of the electron, equation for an electron in an electromagnetic field and explanation of the magnetic moment due to the electron spin, spin-orbit interaction, solution for hydrogen atom in Dirac‟s theory, negative energy states and their qualitative explanations. [12]

PH 622 Instrumentation and Characterization Techniques 3 - 0 - 0 - 3

1. **Imaging Techniques:**

Optical microscopy: Use of polarized light microscopy, Phase contrast microcopy, Interference Microscopy, hot stage microscopy - surface morphology. [2]

Scanning electron microscopy: Basic design of the scanning electron microscopy , Modes of operation, Backscattered electrons, secondary electrons, X-rays – typical forms of contrast, Resolution and contrast, Specimen Preparation, application of SEM. [5]

Transmission electron microscopy: Basic principles, Modes of operation, Specimen preparation, Diffraction in imperfect crystals, Dislocations, precipitates, Structure of Grain boundaries and interface. [4]

Force microscopy: Basic concepts-Interaction force, AFM and the optical lever, force curves, measurements and manipulation, feedback control, different modes of operation, contact non-contact and tapping mode, Imaging and manipulation of samples in air or liquid environments-Imaging soft samples, Applications . [6]

Scanning tunneling microscopy: Principle, Instrumentation, importance of STM for nanostructures, surface and molecular manipulation using STM. [4]

2. **Qualitative and Quantitative analysis**

X-Rays powder diffraction: Single crystal diffraction techniques, Determination of accurate lattice parameters, structure analysis , profile analysis, particle size analysis using Scherer formula. [3]

Thermal analysis methods: Principle and Instrumentation of Thermogravimetry, Differential Thermal Analysis and Differential scanning calorimetry. Electron Energy Loss Spectroscopy; Atom probe field ion microscopy-X-Ray Photoelectron Spectroscopy, X-Ray Characterization, EDAX and WDA analysis, EPMA, ZAP corrections. [7]

Spectroscopic techniques: Introduction to Molecular Spectroscopy and Differences-With Atomic Spectroscopy-Infrared (IR) Spectroscopy and Applications- Microwave Spectroscopy-Raman Spectroscopy and CARS Applications-Electron Spin Resonance Spectroscopy; New Applications of NMR Spectroscopy; Dynamic Nuclear Magnetic Resonance; Double Resonance Technique. [8]

Text Books:

1. Cullity, B. D., Elements of X-ray Diffraction, 4th Edition, Addison Wiley, 1978.
2. Loretto, M. H., Electron Beam Analysis of Materials, Chapman and Hall, 1984.

Reference Books:

3. Rose, R.M., Shepard, L.A. and Wulff, J., The Structure and Properties of Materials, 2nd Ed., Wiley Eastern Ltd, 2005.

PH 661 **Elements of Nanoscience** **3 - 1 - 0 - 4**

1. **History , Scope and Classes of Nanomaterials:** Pre-nanotechnology, origins of concepts of Nano, Basics and basis of Nanotechnology, Generations and Development, Molecular aspects, Top down and Bottom up approaches, fullerenes: properties of fullerenes [8]

2. **Nanomagnetics**: Basics of Ferromagnetism, effect of bulk nanostructuring of magnetic properties, dynamics of nanomagnets, nanopore containment, giant and colossal magnetoresistance, applications in data storage, ferrofluids, Superparamagnetism, effect of grain size, magneto-transport, Magneto-electronics, magneto-optics, spintronics. [12]

   Quasicrystals: Basic definition of quasicrystal, Fibonaci Sequence, Penose Tiling and its Relevance to Structure of Quasicrystals.

3. **Optical and Vibrational Spectroscopy**: spectroscopy of semiconductor; infrared surface spectroscopy, Raman spectroscopy, Brillouin spectroscopy, luminescence (photoluminescence, thermoluminescence), [7]

4. **Biological Materials**: biological buildings blocks, nucleic acids, biological nanostructures. [6]

5. **Nanomachines and Nanodevices**: MEMS, MEMSs, molecular and super molecular switches. [6]

Text Books:

1. S. Shanmugam; Nanotechnology, MJP Publishers, Chennai, 2010.
2. Guozhong Cao; Nanostructures and Nanomaterials, Imperial College Press, London, 2004.
3. Charles P. Poole, Frank J Owens; Introduction to Nanotechnology, Wiley, 2003.
4. T. Pradeep; Nano: The Essentials, TMGH, New Delhi, 2009.

Reference Books:

1. Hari Singh Nalwa, “Nanostructured Materials and Nanotechnology”, Academic Press, 2002

PH 671 **Nano-Fabrication Techniques** **3 - 1 - 0 - 4**

1. **Physical and Chemical Methods:** Ball Milling – Electrodeposition - Spray Pyrolysis - Flame Pyrolysis - Inert Gas Condensation Technique (IGCT) – Thermal evaporation – Pulsed Laser Deposition (PLD) – DC/RF Magnetron Sputtering - Molecular Beam Epitaxy (MBE), Sol-Gel Process — Self-assembly – Metal Nanocrystals by Reduction - Solvothermal Synthesis - Photochemical Synthesis - Sonochemical Routes – Reverse Micelles and Micro emulsions - Combustion Method – Template Process - Chemical Vapor Deposition (CVD) – Metal Oxide Chemical Vapor Deposition (MOCVD) [12]

2. **Optical Lithography:** Introduction - Necessity for a clean room- different types of clean rooms-construction and maintenance of a clean room- Lithography -Optical lithography- Optical projection lithography- Multistage scanners resolution- Photomask- Binary mask- Phase shift mask - Attenuated phase shift masks - alternating phase shift masks - Off axis illumination- Optical proximity correction - Sub resolution assist feature enhancement-Optical immersion lithography- Optical interferometric lithography- Holographic lithography. [9]

   Maskless optical projection lithography - Zone plate array lithography-Extreme ultraviolet lithography.

3. **Electron Beam and Ion Beam Lithography:** Scanning electron-beam lithography- maskless EBL- parallel direct-write e-beam systems-electron beam projection lithography - Scattering with angular limitation projection e-beam lithography- Projection reduction exposure with variable axis immersion lenses. [8]

   Focusing ion beam lithography - Ion projection lithography - Projection focused ion multi-beam - Masked ion beam lithography- Masked ion beam direct structuring- atom lithography.

4. **Nanoimprint Lithography and Soft Lithography**: Nanoimprint lithography (NIL)- NIL- hot embossing- UV-NIL- Soft Lithography- Moulding/Replica moulding: Printing with soft stamps- Edge lithography -Dip-Pen Lithography-set up and working principle. [5]

5. **Etching Techniques**: Reactive Ion etching- RIE reactive ion etching- Magnetically enhanced RIE- IBE Ion beam etching- Other etching techniques. [5]

Text Books:

1. Zheng Cui; Nanofabrication-Principles, Capabilities and Limits, Springer, 2008
2. Guozhong Gao; Nanostructures & Nanomaterials: Synthesis, Properties & Applications, , Imperial College Press, 2004.

Reference Books:

3. Bhushan, B., Handbook of nanotechnology, 2nd Ed., Springer, 2007.

PH 632 CNT and Sensor Applications 3-1-0-4

1. **Structure of CNTs**
   Allotropes of carbon, Buckminsterfullerene, Fullerene-related carbon nanotubes, Single- and double-walled nanotubes, Catalytically produced carbon nanotubes, Bonding in carbon materials, Vector notation for carbon nanotubes, Unit cells of nanotubes, Symmetry classification of nanotubes, Defects in the hexagonal lattice, The layer structure of multiwalled nanotubes, Theory of nanotube capping, multiwalled nanotubes produced by arc-evaporation, multiwalled nanotubes produced by catalysis, experimental studies: single-walled nanotubes General features Electron diffraction of SWNTs, HRTEM of SWNTs, Scanning tunnelling microscope of SWNTs, Neutron diffraction.
   [9]

2. **Physical properties of CNTs**
   Electronic properties of graphite, Electronic properties of nanotubes, Band structure of single-walled tubes, Effect of curvature and of tube–tube interactions, Electron transport in nanotubes, Effect of a magnetic field, Correlation between electronic properties and structure of single-walled nanotubes, Quantum conductance, Electronic properties of nanotubes in a magnetic field, Superconductivity, Mechanical properties of carbon nanotubes, Optical properties of nanotubes, Thermal properties of nanotubes.
   [8]

3. **Chemistry and biology of CNTs**
   Covalent functionalization, Functionalization of nanotube ends and defects, Functionalization of sidewalls, Non-covalent functionalization, Characterizing chemically functionalized nanotubes, Biological functionalization, Proteins, Nucleic acids, Toxicity of carbon nanotubes.
   [6]

4. **Synthesis, Purification and processing of CNTs**
   Production of multiwalled nanotubes by arc-evaporation, Growth mechanisms of multiwalled nanotubes in the arc, Production of multiwalled nanotubes by high-temperature heat treatments, Production of single-walled nanotubes by arc-evaporation, Production of single-walled nanotubes by laser vaporization, Growth mechanisms of SWNTs in the arc and laser methods, Purification of single-walled and multiwalled tubes, Processing of single-walled and multiwalled nanotubes.

   [10]

5. **Probes and sensors Applications**
   Nanotube tips for atomic force microscopy, Preparing nanotube tips: mechanical assembly, Preparing nanotube tips: chemical vapour deposition, Imaging using nanotube AFM tips, Gas sensors, Biosensors, Physical sensors.
   [6]

Text Books

1. Applied Physics of Carbon Nanotubes: Fundamentals of Theory, Optics and Transport Devices, Rotkin Slava V. , Subramoney Shekhar, Springer (2005)
2. Aligned Carbon Nanotubes: Physics, Concepts, Fabrication and Devices, Zhifeng Ren, Yucheng Lan, Yang Wang, Springer-Verlag Berlin Heidelberg (2013)

3. Carbon Nanotube and Graphene Device Physics, H.-S. Philip Wong, Deji Akinwande , Cambridge University Press (2011)

Reference Books

1. Carbon Nanotubes – Growth and Applications Edited by Mohammad Naraghi Published by InTech Janeza Trdine 9, 51000 Rijeka, Croatia (2011)
2. Carbon nanotubes : properties and applications Edited by Michael J O'Connell, CRC Press (2006)
3. Carbon Meta-Nanotubes: Synthesis, Properties and Applications, Edited by Mark Monthioux, Willey (2011)

PH 642 Nanophotonics 3 - 1 - 0 - 4

1. **Photons and electrons:** Isomorphism of Schrodinger and Helmholtz equations, free space propagation. Confinement of photons and electrons. Bloch waves, reciprocal space, and Brrilouin zones Propagation through well and barriers, Cooperative effects for photons and electrons. [8]

2. **Quantum Confinement Effect:** Quantum confinement effects in solids, nanoscale interaction dynamics, quantum wells, quantum wired, quantum dots, quantum rings. Manifestation of quantum confinement: linear and nonlinear optical properties. [10]
