

ECO-FRIENDLY INSTITUTION

The cornerstone of Mody University's philosophy has been to train hearts and minds to conserve nature's resources, and to learn to live with nature. The endeavour has been to create a peaceful and healthy environment to enable students and staff to concentrate on their academic pursuits.

In 25 years, a piece of desert land with numerous sand dunes has now been transformed into an oasis of 265 acres with vast green lawns, a variety of fountains, extensive flower beds, tree shaded streets and avenues. There are also numerous water bodies and marshland with exotic birds and aquatic animals. **Conservation is a major plank of living with nature. Several measures have been implemented for conservation, such as:**

- Rainwater harvesting is done to recharge underground aquifers.
- A Sewage Treatment Plant is commissioned to recycle 11 lakh liters of used water daily, and use it for horticulture.
- Drip irrigation and sprinkler irrigation systems are everywhere to reduce consumption of water for irrigation.
- Solar water heating systems are used to conserve electricity.
- Solar photovoltaic systems are being installed as an alternate source of energy.
- 'In House' produced Vermicompost and conventional compost substitute chemical fertilizers for plants, thus promoting organic farming.

These efforts have resulted in thousands of **birds of over 100 species, and butterflies of 14 species** - their numbers continuously growing **The University also has approx. 25000 Trees, shrubs and plants of some 300 different species** - making the campus their habitat. These species have been identified by Ornithologists and Lepidopterologists from World Wildlife Fund (WWF) and other nature conservation organizations, who visit us regularly resulting in University having a WWF certified campus.

More and more trees of newer species are regularly planted. The University has also planted a sizable number of trees in Lakshmangarh town, as well. Such large scale plantations have also helped in controlling soil erosion and promoting rains.
